FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

COPYRIGHT, 1901, BY FOREST AND STREAM PUBLISHING CO.

TERMS, $4 A YEAR. 10 CTS. A COPY. SIX MONTHS, $2.

NEW YORK, SATURDAY, JANUARY 5, 1901.

VOL. LVI.—No. 1. No. 346 BROADWAY, NEW YORK.

The FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. The editors invite communications on the subjects to which its pages are devoted. Anonymous communications will not be regarded. While it is intended to give wide latitude in discussion of current topics, the editors are not responsible for the views of correspondents.

Subscriptions may begin at any time. Terms: For single copies, $4 per year, $2 for six months. For club rates and full particulars respecting subscriptions, see prospectus on page iii.

An Epoch Making Editorial.

A PLATFORM PLANK.—*The sale of game should be forbidden at all seasons.*—FOREST AND STREAM, *Feb. 3, 1894.*

A Boston correspondent writes: "Estimated by the importance of the proposition, the attention it received and the progress already made toward its attainment, resulting from the attention attracted to it and the effort stimulated by it, we may fairly call the FOREST AND STREAM'S Platform Plank, as announced in your issue of Feb. 3, 1894, an epoch making editorial. Certainly it is the most lastingly influential single article that has ever appeared in sporting journalism in this country."

The article to which reference is made was the original publication of the FOREST AND STREAM'S Platform Plank, that "The sale of game should be forbidden at all seasons." In this first number of the new century, at the moment when we are all reviewing the past and laying plans for the future, reckoning up the achievements of past efforts and preparing for renewed endeavor, we reprint the Plank as a renewed declaration of principle. We print it as it was originally printed in 1894. The six years that have elapsed since then have brought no reason for modifying the views there expressed. Rather have they emphasized the necessity of adopting in general practice the system advocated. Now at the close of the century the game supply in respect to every important species is much less than it was in 1894, when the editorial was penned. There is to-day, even more than there was then, an urgent necessity of cutting off the destruction of our game for commercial purposes. The steady and progressive diminishing of the stock gives point to every argument then advanced for the abolition of the game market. The Plank proposed in 1894 may well be made the Plank in 1901.

We said in 1894 that the principle of the absolute prohibition of the sale of game might be adopted as a platform after the manner of the platform of a political party, which, while not always possible of immediate achievement, was something to aspire to, labor for and strive for, with confidence in the ultimate attainment of it.

The principle found much more immediate and much wider acceptance than the FOREST AND STREAM had anticipated or dared to hope for. Individuals, clubs and associations indorsed it and urged its adoption; and legislatures in different parts of the country approved it and acted upon it, incorporating it into the game laws. The results already achieved are important and wide reaching. State after State has adopted the principle of the Plank, in some instances without reservation, in others in part only; but the general tendency of game protective legislation of the day is in the direction of the absolute prohibition of the sale of game. The laws forbidding the export of game and its shipment to market are in line with the Plank.

The killing of certain species of game for sale is now prohibited in Alabama, California, Indiana, the Indian Territory, Iowa, Ohio, Oregon, Pennsylvania, Tennessee and Wyoming.

The sale of game is prohibited at all times, with respect to certain specified species, in Alabama, Arizona, California, Connecticut, Delaware, Florida, Idaho, Illinois, Indiana, Kansas, Massachusetts, Minnesota, Montana, New Mexico, Ohio, Oregon, Pennsylvania, Rhode Island, South Carolina, South Dakota, Texas, Washington and Wyoming.

Prohibition of the export of game applying to certain species and having the effect of cutting off the market supply holds in the following States, all such laws having been enacted in the period subsequent to the FOREST AND STREAM'S publication in 1894 of its Platform Plank: Alabama, Arizona, Arkansas, California, Colorado, Florida, Idaho, Illinois, Indian Territory, Kansas, Maryland (counties), Massachusetts, Minnesota, Nevada, New Hampshire, New Jersey, New Mexico, New York, North Dakota, Ohio, Oklahoma, Oregon, Pennsylvania, Rhode Island, South Carolina, South Dakota, Tennessee, Texas, Utah, Vermont, Washington, West Virginia, Wisconsin and Wyoming. Similar laws antedating 1894 prevail in Arkansas, Connecticut, Delaware, Indiana, Iowa and North Carolina.

From this review it will be seen that either in the direct prohibition of the sale of game, or in the limitation of export, the principle enunciated by us in 1894 is now at the beginning of the new century practically in universal application so far as the existence of statutes is concerned. There yet remains much to be done in the way of making these laws effective by insuring their enforcement.

In view of the history of the past six years, it may well be said, as our Boston correspondent has written, that the FOREST AND STREAM'S editorial of Feb. 3, 1894, was "epoch making."

QUAIL SHOOTING IN MISSISSIPPI.

THE excellent field scene which we present to our readers this week in a supplement to FOREST AND STREAM is a copy of a painting which was composed and executed with special reference to the pleasure and profit of our readers. It is beautiful in itself, therefore it is pleasurable. It portrays the subject with fidelity, therefore it is instructive and profitable. By referring to it one will readily perceive that it is a work of rare merit in every particular. It is from the masterly brush of Mr. Edmund H. Osthaus, whose practical knowledge, skill and fame as a sportsman are second only to his like properties as an artist.

Its title, "Quail Shooting in Mississippi," is a theme of interest to all sportsmen, whether they have, with dog and gun, roamed over the broad, picturesque plantations in quest of the elusive "partridge," as the quail is termed in that State, or whether they have learned of its bird wealth and hospitality as a matter of hearsay only. For is it not a land where field trials have flourished these many years since their inception; where the traditions of the competition, of conqueror and conquered, most abound; where in field work the dogs gallop merrily to and fro in front of the shooters as they ride, comfortably seated on the backs of horses or mules, a pleasing contrast to the more laborious and slower Northern manner of hunting afoot; where an open hand and open door ever greet the worthy stranger whichever point of the compass he deigns to face, and where the birds are so plentiful that the number of them taken is measured only by the pleasure or skill of the shooter? To him who has shot in Mississippi, it is a land of pleasant reminiscence as to the past, and a factor in the outing plans of the future; to other sportsmen its shooting advantages cause a longing to journey thitherward when their ships come in or when the cares of business shall permit.

The picture contains all that appeals to the fancy of the sportsman, whether it be associate or reminiscent. Does he delight in nature? The plantation fields stretch far away in the distance, marked at their boundaries by conglomerations of rails, weeds and brush, bearing corn, wheat, stubble, sorghum, sedge, weeds, grass, with stretches of woodland intervening here and there, all together forming an ideal habitat and food store for the game birds.

Does he delight in the most complete equipments? The picture portrays them. The dogs, types of the finest bred pointers and setters, are doing their respective parts in finished field form, while the costumes and guns of the shooters are of the most approved patterns. The method displayed by the latter in holding their guns with a view to the safety of each other and of the dogs, their complete observance of fairness in joint action, combined with a steady alertness for instantaneous shooting on the rise of the birds, are worthy of much more than passing notice.

The wire fence, relatively insignificant as a part of the picture, portends much of importance to the sportsman. It, on the one hand, is the bane of the shooter, since it is an obstruction to his purposes and his pleasure, besides being a menace to the life or limb of his dogs; on the other hand, it is an index of greater advance in agriculture and prosperity, being a connecting link between the methods of the old era and the new. It marks the evolution from purely slipshod methods to the more thorough. To the sportsman in his capacity as a citizen, the change brings much over which to rejoice; in his private capacity it brings something regrettable, inasmuch as the best shooting, abundance of birds and good cover mainly considered, is a correlation of the poorest farming.

The negro, with his slipshod methods of agriculture, is the ideal farmer of the sportsman. His ideas and methods are astonishingly primitive. He is rarely other than a tenant. The idea of making any improvements of a permanent nature on land which he does not own and which he never expects to own, or even which he does own, never enters his head. As a consequence, the widely set fences of his leasehold are always in a more or less tumble-down condition, with brush growing freely along them and in numerous other neglected or unused nooks and corners, while fallow fields are left to grow weeds or whatever other growth may spring up on them. Also, his methods are slow and dilatory. The pleasant season is long, therefore he gathers his crops late; the necessities of life are not importunate in his land of abundance, therefore he gathers his crops carelessly. The delay of days and weeks and the grain ungathered add generously to the food supply of the game birds, after the methods which obtained in the older era.

The wire fence! It marks a new era in agricultural interests in the South, and incidentally it marks a change in the life of the game birds and restricts the free roaming of the sportsman.

It takes up much less ground than did the old-fashioned worm fence. Unlike the latter, it affords no protection to the game birds. In many places in Mississippi and other Southern States where a few years ago the shooter could ride freely to and fro in any direction over plantations containing thousands of acres, the wire fence has come into greater and greater use with each passing year. Mammoth plantations then containing a few great fields loosely fenced are now plantations divided into many smaller fields firmly wire fenced.

Thus the wire fence in the picture marks a transitional stage. It affords no shelter for the birds as do the fences in the background. When the wooden fences rot, they are removed, the brush is cut away and the wire fence supplants them. Then the shelter of the birds is reduced accordingly, and the negro boy is used then mostly to take the horses back through gates and barways to intercept the shooter at some place ahead where he best can do so. And yet, despite wire fences and progress, there is much left of good sport on the typical Southern plantation so deftly portrayed in our supplement.

In Brooklyn last week Judge Gaynor reversed on the reargument of the case a decision imposing a penalty on a New York dealer for having brook trout in possession in the close season. The fish had been brought into the State from Massachusetts, and Judge Gaynor was governed by the recent decision of the Court of Appeals, which held that the law forbidding possession in close season does not apply to fish not taken in the State. As we pointed out the other day, if this Court of Appeals ruling shall prevail, the effect will be practically to open the market to both fish and game brought in from other States. But as the decision arrived at the other day by the Court of Appeals was a complete reversal of the Phelps-Racey case which has for years been an unchallenged precedent, there is reason to believe that this new ruling in turn may be reversed, and we shall see the principle enunciated in the Phelps-Racey case once more controlling.

An illustrated supplement, "Quail Shooting in Mississippi," accompanies this number.

A Platform Plank.

From "Forest and Stream," Feb. 3, 1894.

WE have just been celebrating the four-hundredth anniversary of the coming to this continent of men equipped with firearms. For four centuries, from the time of Christopher Columbus to that of Charles Delmonico, we have been killing and marketing game, destroying it as rapidly and as thoroughly as we knew how, and making no provision toward replacing the supply. The result of such a course is that for the most part the game has been blotted out from wide areas, and to-day, after four hundred years of wanton wastefulness, we are just beginning to ask one another how we may preserve the little that remains for ourselves and our children.

With all the discussion of the subject in the columns of the FOREST AND STREAM from 1873 to 1894, there has been and is a general consensus of opinion that the markets are answerable for a larger proportion of game destruction than any other agency or all other agencies combined. The practical annihilation of one species of large game from the continent, and the sweeping off of other species from vast regions formerly populated by them, have not been brought about by the settlement of the country, but by unrelenting pursuit for commercial purposes. The work of the sportsman, who hunts for the sake of hunting, has had an effect so trivial that in comparison with that of the market hunter it need not be taken into consideration. The game paucity of to-day is due to the skin hunter, the meat killer, the market shooter.

From the beginning wild game has played an important part in the development of the country. It has supplied subsistence when there was no other food for the pioneer and the settler. Buffalo and elk and deer and grouse and quail and wild goose and wild duck have sustained the men who first cut into the edge of the unbroken forests of the continent, who blazed the trails westward, and, directed as mariners at sea by note of sun and stars, pushed their way across the billowing prairies. Many a halt would have been made by these advancing hosts had they been compelled to depend upon sutler trains, instead of foraging on the abundant game resources of the country as they took possession of it. For generations, then, it was right and proper and wise and profitable that game should be killed for food; that every edible creature clothed in feathers or in fur should be regarded as so much meat to be spitted or potted or panned.

But times have changed. Conditions are not what they were. Game still affords food for the dweller in the wilderness, for those who live on the outskirts; and for people in such situations venison is a cheaper commodity than beef. But for the vast and overwhelming multitude of the people of the continent game is no longer in any sense an essential factor of the food supply. It has become a luxury, it is so regarded, and it is sold at prices which make it such. With the exception perhaps of rabbits or hares, the supply of wild game as marketed is not such as to reduce the cost of living to persons of moderate means. The day of wild game as an economic factor in the food supply of the country has gone by. In these four hundred years we have so reduced the game and so improved and developed the other resources of the country that we can now supply food with the plow and reaper and the cattle ranges cheaper than it can be furnished with the rifle and the shotgun. In short, as a civilized people we are no longer in any degree dependent for our sustenance upon the resources and the methods of primitive man. No plea of necessity, of economy, of value as food, demands the marketing of game. If every market stall were to be swept of its game to-day, there would be no appreciable effect upon the food supply of the country.

Well, then, why not recognize this, and direct our efforts, in line with such a recognition, toward the utter abolition of the sale of game? Why should we not adopt as a plank in the sportsman's platform a declaration to this end—**That the sale of game should be forbidden at all seasons?** To share and express the sentiment is one thing, to put it into execution is quite another. Perhaps the time is not ripe for such stringent measures. Yet this very rule of no game traffic holds in certain county laws in this State; and one of these days it will hold in every State, East and West, North and South. It may not be brought about in our day, but the present moment is none too soon to adopt the plank as a working principle and to work for it.

That which stands in the way of the present prohibition of the sale of game in the larger cities is the magnitude of the commercial interests involved. The traffic is one of large proportions, much capital is invested, and the business is not one which would readily be sacrificed. No one of these considerations, however, can withstand a campaign of education and the creation of a public sentiment which will surely follow when that education shall have taught the community the true place of wild game in the economy of the civilization of the present.

Absolute Prohibition of Game Traffic.

From "Forest and Stream," Feb. 10, 1894.

IN Great Britain and various other countries artificial game destruction is offset by artificial game production. Birds are bred by the million, to be killed by the million, marketed by the million, and replaced by the million. The system is that of a gigantic poultry farm. The supply is inexhaustible. Game in market is thus a legitimate article of traffic.

In America conditions are different. Here we are wholly dependent upon the natural increase, unaided by human agency, for the maintenance of the game supply. And the natural increase is by no manner of means adequate to withstand the augmented destruction. While the game stock has been growing less and less, the drain upon it has been growing greater and greater. Shooters who pursue it for sport have multiplied a thousand-fold; consumers ten thousand-fold. There is not to-day enough game for the two classes. One or the other must surrender its claim in favor of the other. The sportsman must yield to the game dealer or the game dealer must give way to the sportsman. Which shall it be?

Selfish and personal considerations aside, the answer is readily found. That interest must give way which is of least advantage to the community, and that one must be preserved which is of paramount public importance. This is to say that the game must be saved for the enjoyment and benefit of those who pursue it for the sake of the pursuit. A grouse which gives a man a holiday afield is worth more to the community than a grouse snared or shot for the market stalls. The game supply which makes possible the general indulgence in field sports is of incalculable advantage to individuals and the State; but a game supply which makes possible the traffic in game as a luxury has no such importance.

If this be granted, public policy demands that the traffic in game should be abolished. And if public policy demands this, the commercial interests involved, although of magnitude, are not to be considered.

This is advanced doctrine; it is radical; it goes to the root of the thing. But, as we have said, the time has come to take an advanced position. When a political party formulates its platform, it does not confine its declaration of principle to the advocacy of such measures alone as are susceptible of immediate attainment; but going further than this, it commits every man who marches under the party banner to the support of certain other principles, the struggle for the supremacy of which must be arduous and protracted, and the triumph in them long deferred. The planks of the party platform stand for the articles of party faith; they embody a declaration of "the things hoped for," and which may not be the achievement of one administration nor of a succession of administrations.

In like manner, when we suggest this declaration, **The sale of game should be forbidden at all seasons** as a plank in the platform of that vast party of men scattered in hosts over this country, interested in preserving the game of the continent, the suggestion is made without any optimistic delusion that such a system could be effected at once. But we do hold that the principle of the absolute prohibition of traffic in wild game is the true one, that it is the only one which is adequate, and that it is the one to which sportsmen as a class should be committed, heartily, unreservedly, with determination, courage, steadfastness, patience and persistency. The campaign must be a long one; but will it not be a campaign for that which is wise, just, and of public advantage?

AN appeal which every member of the Order of Elks ought to hear and heed has just been sent out by the Colorado Springs Lodge. Members of this lodge who have recently returned from a trip through the northwestern part of Colorado, the region recognized as the rendezvous and feeding ground of probably the greater part of all the elks still left in the United States, reported that these splendid animals are now the objects of the relentless pursuit of men who hunt, not for sport or for meat to eat or sell, but for teeth out of which to make the ornaments worn by this widely extended society. In one case they heard of nineteen elk slain for their teeth alone, the best of which, even in the hunting country, are valued at $25 a pair. The members of the Colorado Springs Lodge have therefore not only resolved to abstain hereafter from wearing or trafficking in the teeth of elk, but they have earnestly requested all other lodges to take the same action. "It is the sense of this lodge," they say, "that loyal Elks everywhere should and will cooperate in this movement, so that it shall be quickly known to those unprincipled and unsportsmanlike individuals, who, for a paltry consideration and in defiance of the law, are hastening the destruction of this noble species, that no further profit will inure to them from so blameworthy a practice."—New York Times.

The Sportsman Tourist.

In Frontier Days.

I.—The Eagle Creek Wolfers.

YEARS ago, in the buffalo days, three wolfers looking about for a likely place to pass the coming winter and ply their vocation, decided to locate near the mouth of Eagle Creek. This streamlet, as old-timers know, enters the Missouri River from the north about fifty miles below Fort Benton, Mont. It was then, and for that matter is to-day, one of the wildest and most picturesque places in the Northwest. Loading a Mackinaw boat with sufficient supplies for the winter, the three left Fort Benton one day early in September, and in due time, without much effort on their part, the swift current carried them to their destination. Just below the mouth of Eagle Creek, and on the south side of the river, was a narrow stretch of bottom land, and there they built a cabin of green cottonwood logs, roofing it with poles and a layer of dirt several feet thick. In one corner they constructed a broad fireplace of stones and clay, the chimney being built of the same material, and extending far enough above the roof to insure a good draft. All in all, it was a very comfortable shack.

Directly in front of the cabin was a narrow but dense growth of cottonwood and willow, which sheltered it from the north wind, and incidentally hid it from the sharp eyes of any prowling war party of Indians who might be passing up or down the valley. At least, that was what the wolfers hoped. Immediately behind it, the sage brush hills slanted upward at an acute angle to the foot of the frowning sandstone cliffs where ends the great plain lying between the Yellowstone and the Missouri. For many miles along this part of the river nature seems to have done her best to give us some idea of the mighty convulsions which ages ago shook this old world of ours. Here are the bad lands, red, yellow, black and ashy gray, silt of that ancient lake which was before the mountains rose; and, shot up through it, are thin volcanic dykes, which cooling, broke into immense rectangular blocks. One could imagine that some fabled giant piled them there; layer after layer they rest one above the other with the precision and definiteness of walls built by human hands, in places towering for hundreds of feet above the water's edge. Many of them stand at right angles to the course of the valley, where they catch the full force of the wind, and are so thin that one wonders they have not long since been blown down. Here and there the river has exposed old flows of lava, bent, doubled and twisted into all sorts of shapes. But most picturesque, most fascinating of all, are the glittering white sandstone cliffs which wind and weather have carved and cut into a thousand fantastic forms—castle and turret, Grecian columns and Turkish minaret, all are there, and often, in the distance, looms a white city of them of surpassing beauty. It is a strange, weird place.

After building the cabin, there was absolutely nothing for the wolfers to do but loaf around and wait for cold weather, when they could begin operations against the wolves. Of the three men, crusty Ben Underwood and careless, happy Jack Fenn were old-timers who had passed their lives on the plains. The third was the writer, then very much of a youth and tenderfoot, whom the others called the "Scribbler," because "he was always wastin' his time writing things that no Eastern newspaper fish would ever believe or print." They were good, faithful friends, Jack and Ben, and very kind to the Scribbler, albeit they loved to joke him. Peace to their shades; they have long since returned to Mother Earth.

For a long distance above and below the mouth of Eagle Creek there were but few places where the game could get down from the plains to the river, both rims of the valley being walled by cliffs. Here and there these had broken down, or terminated in a steep bare hill, and at intervals they were pierced by long deep cañons. At such places the buffalo, the antelope and deer had for centuries traveled up and down on their way to and from the river, and had worn trails many feet in depth, even in the comparatively hard sandstone. Of course, where the game traveled the wolves were also continually passing, and that was why the wolfers had located there. They felt that one or two poisoned baits on each thoroughfare would be worth many times that number promiscuously scattered about on the plains.

The Scribbler never tired of gazing at the immense herds of buffalo and other game which were continually passing in and out of the valley. Of course, there were many bands in sight at all times, but every morning a solid stream of buffalo could be seen pouring down over the rim of the valley by some narrow trail, and then spreading out like a fan as they hurried to the shore of the river. With them came band after band of antelope from the plains, and mule deer from the pine-clad slopes and buttes, where they made their homes; and often a bunch of bighorn, led by some wary old ram, plunged down the steep hills into the bottom. But the latter never tarried long; their thirst assuaged, they lost no time in returning to the cliffs and buttes near by. Then there were bears, numbers of them, especially the light colored grizzly, which Lewis and Clarke called the "white bear," and which they dreaded to encounter. Elk and whitetail deer were also abundant, especially further down the river, where they frequented the large timbered bottoms. And then the wolves! There seemed to be thousands and thousands of the great shaggy fellows. By day and by night their long-drawn, melancholy howls echoed and re-echoed through the valley and along the beetling cliffs. There was something indescribably sad in the cry of the wolf, something that made even the most lighthearted and careless of men pause and listen. Many persons could not bear the sound; yet to the true lover of nature it had a peculiar—if perhaps undefinable—charm. How the deep, clear, plaintive, minor strains of their voices used to grow and swell down in that lonely valley, as the shades of night drew on. Often a single old male, sitting on a commanding ridge or barren butte, would start it. Throwing back his head until the long, keen, muzzle pointed straight up to the

zenith, he shuts his eyes, and from his powerful throat, through parted black lips, offset by gleaming fangs, came the wail o-o-o-o-o-o-o-o-o-o-o; faint at first, then rising to a resonant crescendo, and finally dying away. And presently, perhaps from the far shore of the river, came the long-drawn answer; and before it was finished others took up the refrain; here two or three, there an old female and her nearly grown family of young; and then far up and far down the valley, and out along the frowning cliffs, others and still others joined in, until the still air trembled with the burden of their voices. Oh, never, never again shall we hear the like! The days of the buffalo and wolf have forever vanished; days when it was possible for the adventurous spirit to view nature as yet unsoiled by the ruthless cupidity of civilized man; days when her children, the wild creatures of forest and plains, and the still wilder redmen, were almost the sole inhabitants of a boundless domain.

Was there ever a hunter who failed to scrutinize each sandbar, mudhole and beaten path he chanced upon? The footprints there revealed are to him what the daily paper is to the business man. They tell him of the game about; of its abundance or scarcity, when it passed, and what course he should pursue in order to find or overtake it. The Scribbler, it is to be feared, was always more of a sandbar student than he was a hunter; even if game was in sight he never came upon one of these records of its going and coming but what, perforce, he must needs stop, lean upon his rifle and carefully look it over. Thus it happened that at different times and in different places he noticed the trail of an enormous grizzly that had a deformed foot; at least the imprint of the right hindfoot was nearly at right angles with the animal's course, the claw marks almost touching the line of impressions of the left feet. When he spoke about it to his comrades, both Ben and Jack said that they too had noticed the trail. By common consent the maker of the tracks was called the "splayfooted bear."

Ben had an ancient grudge against the grizzly tribe and never neglected an opportunity to slay one, often at no little risk to himself. Years before he had been severely hurt and permanently disfigured by one, and ever since, to use his own expression, he had "been trying to play even with 'em, gosh durn their picturs."

"You see this here crooked mug o' mine?" he once said. "Pretty lookin' jaw that is, set in sideways; an' them red an' blue scars acrost what's left o' my nose! Beautiful, aint they? D'ye reckon any woman 'ud marry such a face? No, sir, not even a Digger Indian squaw. Wal, I looked different once, an' I was goin' to marry as pretty a little woman back in the States as ever you set eyes on, but a measly old bear had to up and knock out my plans at the very last minnit. You see, 'twas this way. Me and Polly was poor; she lived with her widder mother on a little farm that was mortgaged for all 'twas wuth, an' I didn't have nothin' much but the clothes I stood in. But if I do say it, I was a willin' cuss, an' always glad to rustle. When me an' Polly agreed to get spliced, I says to her, says I, 'Polly, it 'pears to me that the fust thing to do is to pay off that mortgage, an' I'm goin' to do it. Just you wait a year, old gal, an' I'll make the riffle. Then we'll have a home of our own, an' be able to hold up our heads with the best of 'em.'

"I'd heard about there bein' lots of beaver out West, an' I'd made my mind up to go out and catch a lot of 'em. Polly cried an' took on, of course, an' when it came to the partin' I nearly give in, but I give her a kiss an run away as fast as I could, havin' promised to return in a year an' marry her whether I made any money or not. Came out here to the Rocky Mountains an' did first rate, barrin' bein' set afoot onct or twict by the Injuns. That fall I catched nigh onto a thousand dollars' worth of fur, an' the next spring I got as much more before the season was half over. I had enough to pay off the mortgage an' somethin' left, but I says to myself: 'I'll keep on so long as the fur is good; a thousand or so extry 'll come in handy to buy a team an' waggin, an' a few pretty dresses fer Polly.'

"One mornin' I was makin' the rounds of my traps, an' when I found a beaver I jest carried him back in the brush a piece an' skinned him. Well, I was busy takin' the hide off one, when I heard a little noise, an' turned around jest in time to git a swat acrost the arm, an' a biff in the face, from the paws of an old grizzly. It put me to sleep all right, an' when I came to I found my arm was broke, an' likewise my jaw. The bear had lit out with my beaver, which was all he wanted of me and mine. Of course, I was awful stiff an' sore, an' my eyes was nearly swelled shut, but somehow er another I made out to get to the house of a settler, who had just moved into them parts, an' there I staid fer many a week, suckin' milk an' soup through a goose quill, an' a nursin' my wounds."

"One day I was a-pokin' around, lookin' fer something er another, when I run acrost a bit of lookin' glass an' thought I'd see what that old bear had done to me anyhow. When I caught sight of myself I nearly fainted, an' I knew that 'twas all up with me, that Polly never would marry sech a horrible lookin' cuss. I felt awful bad. It took me a long time to figure out just what should be done, but the upshot of the business was that I packed up them beaver skins an' shipped 'em to Polly, an' got the rancher I was stoppin' with to write her that I was dead an' buried, killed by a grizzly. And that's why I do love to fill a b'ar's carcass full o' lead."

"But what became of Polly?" the Scribbler asked.

"Oh, Polly? She's all right. Some years after I see a feller from down in that country, an' he said she was married to a no account cuss, and had a house plumb full o' children. Come to think on it, I don't know but what things turned out fer the best after all. How in thunder could I ever have lived in a house chuck full o' young ones?"

October came, but still the leaves hung green upon the trees, and the heat of summer continued to make the days uncomfortably warm. But the hunters no longer loafed restlessly about the cabin, wishing for cold weather to set in that they might begin wolfing. They had found something to occupy their time; the death of old splayfoot had been decreed, and every day from dawn to dark was passed in quest of him. The bear was to blame.

One evening Ben shot a fat ram back in the breaks across the river, and carefully dressed it, for be it known that not even the "boss ribs" of a fat, dry buffalo cow was quite as good meat as that of a bighorn ram at that season of the year. The sun had set when Ben rowed back across the river to get his partners to help him carry his prize down to the boat and up to the cabin, but they went with him cheerfully, smacking their lips in anticipation of juicy steaks, cut an inch and a half thick and broiled rare, and fat ribs roasted brown before the open fire. It was a long and stiff climb up to the foot of the cliff where Ben said the animal lay, and in their hurry to reach the place before dark they were dripping with perspiration and gasping for breath by the time they got there. But lo, no ram was to be found; there were the head and entrails, mussed and dragged about, but the body had disappeared. There was still a faint, crimson glow in the west, and by its aid the hunters found a well known trail which explained matters; old splayfoot had carried off the carcass for his evening meal! It was amusing to witness Ben's rage; he stamped around and swore, calling on heaven and earth to witness that he would have the bear's life ere the set of another sun.

It was evening again. The sun had set in a halo of fleecy, crimson clouds. As the stars came out the wolves commenced their usual sad refrain, and the owls began again to repeat that answerless question they have been asking for untold ages. Primeval man, from the depths of his noisome cave, heard their asking, "Who-who-who?" and doubtless shuddered at the uncanny sound. During the day Jack and the Scribbler had been up on the cliffs after bighorn, and as the result of their efforts the red and white meat of a two-year-old ram graced the outside cabin wall. Before the fire hung a side of the ribs browned to a turn, and the hungry hunters were impatiently awaiting the return of their partner before placing it upon the table. True to his vow, Ben had started out long before sunrise that morning in quest of Splayfoot. It was quite dark when the clank, clank of the oars told of his approach, and presently he came in, hung up his rifle and wearily sat down without a word. Jack hurried to place the ribs, the coffee and beans upon the rude table, and the three whipped out their sheath knives and fell to.

It was quite evident that Ben had one of his "spells," as Jack called them, for he tore the meat savagely from the bones in great mouthfuls, and swallowed cup after cup of coffee in utter silence. When he got into one of his surly moods his partners had learned by experience to leave him alone, and let him thaw out by himself. This he finally did under the influence of the good supper they had prepared. "Fellers," he said, as he filled and lighted his pipe and stretched out lazily on his bunk, "Fellers, I missed him slick an' clean, at ten yards. Think on't! ten yards, and a standin' shot at that!"

"Maybe yer rifle sights are out of plumb," Jack suggested.

"No, they're all right; jest wait an' I'll gin you the facts. As soon as 'twas light enough to follow the ole thief's trail I picked it up, an' in the course of a mile or so come to where he had cached the sheep carcass; that is what was left on't. He had eat considerable an' kinder covered the rest with dirt, grass and sagebrush. As soon as I see it, I climb up on a rock shelf handy by an' sot down, feelin' sure thet the ole cuss 'd come prowlin' around after a while to git his breakfast. It was a first class place I had to lay for him; the shelf I was sittin' on might have been ten foot high, an' right at my back another one rose straight up for a consid'able ways. Well, the sun came up an' I kept my eyes peeled fer a sight o' the critter. They was lots o' buffalo feedin' around, an' antelope an' sich like, but nary b'ar. Some blacktail does an' fawns come a steppin' an' a prancin' along, stoppin' now an' then to nip off the top of a greasewood brush. They kept workin' their ears an' a sniffin' an' a lookin' back an' ahead, an' all around, but they never seen nor smelt me as they passed. Putty soon an ole bitch wolf an' her four pups—nigh about as big as she was—come a trottin' on ole Splayfoot's trail whar he had drug the meat, an' when they got to his cache they sniffed around an' begun to paw the dirt an' brush offen it. I got up an' shooed 'em off an' you'd oughter seen 'em light out. By and by a little piece o' rock dropped down on the shelf where I was sittin'. Sheep, thinks I; too bad I can't shoot one, but bear before the belly this mornin'. I twisted my head around an' looked up, an' danged if thar wan't a big ole grizzly lookin' down at me. I jest laid down kind o' slow like on my back, took a good sight fer his neck, let go ker-blim, an' then jumped an' run to git out o' the way of a ton er so o' bear I expected would be a fallin' down in about that place. But they wan't no ton fell, nor a pound, nor nothin'; nor was they any sound o' groanin' er scratchin' or cavortin' up on the cliff. So looked around, found a place whar I could git on top, an' scrambled up as fast's I could. Well, fellows, I could hardly believe my eyes when I see they was no bear there, nor no blood nor hair; nothin' but ole Splayfoot's tracks whar he had moseyed off over the hills. You bet I was mad! I had a notion to smash the ole gun, but when I see the sights was all right, I just cussed myself an' lit out on the ole bear's trail as fast as I could go. Course I lost it soon's he struck the grass an' sagebrush, but I kep' on huntin' down along the river for miles, an' then come back along the cliffs, but I never see him agin. But just you wait. I swar I'll never quit till I have his ole hide. What I can't git over is a missin' him this mornin'. I ain't no tenderfoot, I don't git excited; no, not even when the game is Injuns, t' say nothin' o' bear. How could I have done it?"

Jack and the Scribbler duly sympathized with Ben, little thinking that they also were about to join him in his quest for the bear. When they arose the next morning, they found that their prized fat sheep meat no longer adorned the cabin wall, and the tracks of old Splayfoot around explained the cause of its disappearance. "We've got to kill him," said Jack, as he reluctantly cut some slices from a slab of bacon for breakfast, "an' I for one propose to begin a reg'lar hunt for him this mornin'."

The Scribbler also signified his intention to make Splayfoot pay for his thieving with his blood. Litttle did any of the hunters dream how their quest for the cunning old grizzly was to end.

THE SCRIBBLER.

A Small Cook Book

For Our Club House.

Chapter I.

AND the FOREST AND STREAM is welcome to print it for other club houses, if it so desires.

If the food is not well cooked and properly served, the pleasure of the shooting or fishing trip is lessened. One will be hungry, and will enjoy any kind of cooking, the first day, but the second day it must be good. Cooking is not a high art in many rural localities, and yet a little attention to two or three details is all that is necessary in order to make it so.

The first thing to learn is to "get breakfast." Because you live in the country, dear lady, it may well be that your chief reliance is upon the hog for your pièce de resistance for this meal, if not indeed for the other two. Well and good. Pork is all right once in a while, since it is so much more readily obtained than any other meat. But do not often offer the man from the city pickled pork, or salt pork. Give him ham or bacon, well cured. He eats that kind of pork at home, and is fond of it—for breakfast. Cut it in thin slices and broil it. No, I take that back. Cut it and put it in the broiler and have it ready to broil when he sits down at the breakfast table. If you broil it five minutes before it is set before him, he will not eat it unless compelled to by hunger. And the same is true about the fried potatoes and eggs. Do not cook them until he sits down at the table. Boil your potatoes the night before and in the morning peel them and cut in slices and salt and pepper them well and lay them in a dish beside the waiting broiler and bacon. When you hear him at the table take a frying pan and put a teaspoonful of lard in it, and set it over a hot fire. Take off the stove lid so the lard will fairly smoke instantly. When it smokes, throw in the sliced potatoes. They will brown (such of them as are on the bottom) in a moment, and while this is taking place, seize the broiler and plunge that bacon in the hottest of the fire. Turn over the slices of potatoes once and let another batch of the slices brown. Now turn the bacon and make the other side of the slices of bacon sizzle. And fry the man an egg or two, or boil or poach them, at the same time as you fry the potatoes and broil the bacon. Now the man is going to have a good breakfast unless you spoil it in the serving. The thing is to get it to him the instant it comes from the fire, served in hot dishes with covers, so the things will stay hot until he can get at them. This kind of breakfast, if supplemented with good bread or rolls, good butter, and coffee, costing 35 cents per pound and made as hereinafter described, is what the city man likes. You will notice that where it differs from your accustomed method of cooking is in its being cooked in the one breath and eaten in the next. Give him a little of your excellent fruit along with the above. Oh, anything, so it is fruit. Dried apples is better than none at all. When he begins to look satiated, give him three hot griddle cakes, and he will be yours for life. About the coffee. Put three tablespoonfuls of ground coffee (freshly ground) in a coffee pot that is perfectly clean and dry inside. Now put the coffee pot on the stove just long enough to make the bottom of the pot hot. Lift the lid and smell in! Do you notice how fragrant that coffee begins to smell? You have performed the mystery of liberating the very last atom of fragrance from that coffee. Now pour two cups of bubbling boiling water on the three tablespoonfuls of coffee. Let it set five minutes on the back of the stove and then pour about two tablespoonfuls of cold water down the spout. If you do this you will be able to give the man two cups of good coffee, although one cup should satisfy him. Good coffee is sometimes made in other ways, but the other ways are not to be trusted.

I almost forgot to say that the first thing an epicure wants at a meal is a glass—a clean, shining glass of cold water. The next morning give him ham, or, better, beefsteak or chops, or broil him one of his quail. Do not be afraid to ask him for it, or if you are the lady at my club, help yourself from his string of birds—it is one of the rules of the club that game and fish taken on the club's preserves is subject to its fair contribution to the club house table.

In my next chapter I will tell you about dinner.

GEORGE KENNEDY.

The "Sportsman" and the "Sport."

WATERBURY, Conn., Dec. 16.—*Editor Forest and Stream:* In your issue of the 15th inst. your correspondent Dick Swiveller, under the heading, "Sportsman and Sporting Man," hits the nail on the head. Twenty-five years ago a sportsman was a thoroughbred gentleman, whose hobbies were shooting and fishing in a legitimate, gentlemanly way; who used fine guns, rods, and well-bred, well-broken dogs. No one ever thought of his being a gambler, roué, or tough—he was as much of a gentleman in the field as in the parlor. Nowadays he is considered a "sport" or "sporting man," which is generally understood by the public to mean a man who spends the most of his time shaking dice for drinks, going to ball games, horse races, and that most "noble" sport of all, prize fighting, and betting on them.

Thank goodness there are still plenty of the real, "sure enough" sportsmen left, who know enough to let the "sports" alone, but it always makes one tired to see the papers of the present day try to bring the "sportsman" down to the level of the gambler and loafer.

POINT.

The North Carolina Quail Supply.

HICKORY, N. C., Dec. 23.—The crop of quail is not as large this year in this State as usual, as far as I am able to judge from observation and report, and I found the same conditions in my short trip to South Carolina. The reason is that cotton is high, and also wheat, so much so that large fields are plowed up, the natural cover disturbed, and, too, the dry, hot summer may have had something to do with it. I hunt harder, range wider and work the dogs harder to get even fair results, and I hear the same story from others.

PINK EDGE.

Natural History.

A Panther in Western New York.

MEDINA, N. Y., Dec. 22.—*Editor Forest and Stream:* The editorial in your last issue concerning the fear of wild animals contains statements which are rather sweeping, conveying the idea that wild animals will always flee from the presence of man. There are many well-authenticated instances to the contrary.

Many of your readers will know of the old Lewiston road, so called, running from Batavia, Genesee county, this State, in a northwesterly direction to Lewiston, which is at the foot of the rapids in the Niagara River. Many of the roads in northern and western New York in an early day meandered in the direction of Lewiston because that was the great entrepot for all voyagers coming by the way of the St. Lawrence, Quebec, Montreal and Lake Ontario up on to the Great Lakes and the surrounding country, Lewiston being in an early day a place of considerable consequence. The State of New York dug a deep and wide ditch from the Tonawanda Creek to the Oak Orchard Creek for the purpose of taking the waters of the Tonawanda into the Oak Orchard and thence to Medina to feed the Erie Canal. This deep ditch was dug about the year 1822; it is known as the Canal or Oak Orchard Feeder. It was dug in the Tonawanda swamp along near the western borders of the town of Alabama, in the county of Genesee, down into the county of Orleans. This ditch crosses the Lewiston road at the very borders of the Tonawanda Swamp. In the years 1848, 1849 and 1850, on the northeast corner of the intersection of the Lewiston road with this canal feeder, the land had been cleared away; it was in early times covered with hemlock trees, and after the hemlock trees had been cut away it grew up into all kinds of bushes and briers. It was a great place for picking blackberries.

The writer was raised in the town of Alabama, Genesee county, N. Y., and in his youth learned to pick blackberries, and has picked a great many baskets and pails of blackberries on that ground. A man by the name of Hoag, working for my father, desired to have me pilot him to the blackberry ground. We all lived at Alabama Center, two miles and a half easterly from this canal feeder. I stayed with Hoag over night. I was then about ten or eleven years of age, and I think it was in the year 1848 that the circumstances I am about to relate occurred. We arose about 3 o'clock A. M., and footed it two miles and half to this blackberry ground. We arrived there before daylight, but I being familiar with the paths, we went along down into the bushes and among the trees quite a distance until it became light enough to commence to pick berries. Gradually we worked ourselves deeper and deeper into the forest, and I recollect very well coming to a spot where the tall blackberry bushes hung overloaded with great berries as big as the end of a man's finger. I looked to the tops of the trees and saw that the sun was rising, by the glinting of the rays among the branches of the trees. Just then Hoag, who had become separated from myself, spoke up in very sharp tones and said: "Stanley, come here; here is a wild animal!" I had a dog with me which was a fighting dog. I instantly hurried to the place where Hoag was—perhaps five or six rods away. I found Hoag standing under a hemlock tree with a space of perhaps 15 feet in diameter around that tree where there were no bushes. The bushes outside seemed to be a mass of tangled briers and other vegetation. There was some animal passing back and forth in front of Hoag and myself, not over 15 feet away, snarling and snapping his teeth as he crowded his way through the bushes. It circled backward and forward there perhaps ten minutes. Hoag took my knife, and cut an immense large club off of a green sapling. I recollect the expression that he made, for Hoag was a very nervy fellow. After the club was cut he said: "Now let him come!" I sicked the dog into the bushes; the dog went in; the animal made a lunge for the dog; the dog made one yell, and out of the bushes he came. I caught a glimpse of the animal, and determined at once that it was a panther; I had seen such in the traveling menageries of the country. Hoag said that he saw him several times, and that he knew that it was a panther. We stayed a few minutes; that animal moved backward and forward half around the circle, but kept out of our way and in the bushes. His snapping and snarling and crowding through the bushes were very plain to be heard. We started to get away from him. I remember well that I could hardly kick the dog away from my feet; he kept constantly in front of me; and yet that dog was the bully of Alabama Center, so far as dogs were concerned—it had whipped every dog in the vicinity—but it seemed to be frightened very badly. The dog went ahead first, and I next, and Hoag in the rear. We would stop every two or three rods and listen. We could hear the animal now and then as the dry limbs snapped under him. We went substantially in a direct line, nearly half a mile, and within about fifty rods of the outer edge of the woods. We could hear no more of him, and stopped, thinking that we would fill our baskets with berries.

Perhaps fifteen minutes had passed by, and Hoag had gone away from me about three or four rods, and I was on one side of an immense great log, around which the bushes grew in thick profusion. That animal made one spring, evidently; it struck within about 6 feet of me, right in the midst of those bushes, with an immense crash. I spoke loudly to Hoag, and we got together quickly, prepared for any attack that might be made. Just then a number of young men known as the Diviney boys, Kelly boys, Horning boys and Green boys, came into the woods and commenced to yell and halloo like so many wild Indians. Perhaps they had been yelling away for a minute or so, and then we could plainly hear that animal jump and run away in bounds. We could hear its feet strike pat, pat, pat, as it jumped along, fainter and fainter, the dry leaves and sticks cracking under its feet, until the sounds faded away in the distance. We went and met those young men, and told them what had occurred. A man by the name of Julius Green started with Hoag to hunt up the hemlock tree above spoken of. Perhaps they had worked for two hours to find it, and were unable to do so, and came back and found me. Hoag asked me if I thought I could find the tree. I told him I thought I could, and I led them back to the outer edge of the woods where I had entered, and I took up the trail there and moved from point to point as I had come into the woods, and perhaps went nearly three-quarters of a mile when I found the hemlock tree. The animal had been where we stood and had torn the earth up all about the tree and thrown it over the bushes, so that they were literally covered—it was light soil. It had torn the bark from the lower part of the hemlock tree, and had bit into the side of the tree, showing in a good many ways its great wrath and anger. The prints of its immense paws were all about on the fresh earth. It made no sign of its being about us then.

I recollect very well that this was Sunday. My good old mother, who is now living near Alabama Center at the ripe age of almost eighty-nine years, when I got home and told her my story, declined to whip me, as she would ordinarily have done for trespassing upon the Sabbath day; but her economical habits would not allow the berries to be thrown away, so she had me go and deliver them to another good old lady by the name of Morse, who said that she was very glad to get them, Sunday or no Sunday.

In after years, and in the summer of 1855, while reading law with Brown & Glowacki at Batavia, whose office was on the ground floor about three doors east of the old Eagle Hotel, one day a couple of men, Harlow and Carlow Reynolds by name, and who lived through the Tonawanda swamp on the Lewiston road and about

DALL'S MOUNTAIN SHEEP.

one mile from the feeder bridge as it crosses the Lewiston road above mentioned, drove up in front of the office where I was, and the door being open one of them said to me, "Come out here, Stanley, and see your panther." Of course, everybody around Alabama had heard of the panther story years before. I went out of the office on to the street, and there saw an immense panther or California lion, or whatever you may call it, lying in a one-horse wagon, with its nose against the front end board of the box, there being no hind end board, and stretching substantially the whole length of the wagon box; its tail, which was about 3½ feet long, was lying out of the hind end of the wagon. It was an immense animal. Reynolds' story was that on the night before they had gone on a cooning trip, and that their dogs had got on the track of something which they chased for quite a distance and treed. They followed the dogs to where the animal was treed, and with their axes chopped the tree down; that just as the tree was falling they saw between themselves and the sky an animal jump from the tree, which landed out on the ground some distance away, and the dogs took after it and treed it again. They followed it up until they came to the tree, and in looking up and getting it against the sky, so that they could see it, they discovered that it was a large animal of some kind. One of them stayed at the tree with the dogs and the other went perhaps a couple of miles away to his house and got a gun. He came back, and by the aid of a lantern fired at the animal, and luckily enough one of the bullets struck the animal in the head, so that it fell. As it came to the ground they saw that it was an immense animal. One of them struck it on the head with the sharp edge of the axe, which entered the brain and killed it. From there they brought it to Batavia, and of course the people of Batavia gathered about and saw it. Afterward that animal was stuffed and was exhibited by Harlow Reynolds for several years in the different county fairs at Brockport, Batavia, Lockport, Albion, and Medina and other places. He had a tent and charged 10 cents admission. Thousands and thousands of persons saw it. It was an immense panther, a great deal larger than any that I have ever seen in any menagerie. It was killed about one mile from the place where Hoag and myself had seen one a few years before. It was probably the same animal, only grown to much greater proportions. I never have had any doubt that if one person had been there under that hemlock tree instead of two and a dog that animal would have attacked that person. It certainly did not flee, but followed us until it had listened to the yelling of what anybody could understand was at least six or seven individuals, who were perhaps fifty rods away from it.

S. E. FILKINS.

The FOREST AND STREAM is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday and as much earlier as practicable.

Obscure Instincts.

Editor Forest and Stream:

I was much interested in a letter signed E. P. A., in your issue of Dec. 8, on the subject of obscure instincts, especially as I had just been reading Darwin's book on the "Origin of Species." It occurred to me that the case mentioned could be explained without much violence to the theory of evolution. Your correspondent says the case is this: "The red-shouldered hawk usually rears but one brood of young each season. But if accident destroys the nest they will persist and raise a second or even a third brood, if necessary to bring one brood to maturity."

To my mind the statement suggests its own explanation—it is simply a case of the persistency of the procreative instinct. It may appear remarkable if we assume that the hawk is incapable of mating and nesting except at one season of the year, but I do not think we should assume anything of the sort. We are accustomed to birds mating in the spring, but I fancy this is a habit induced by climatic conditions. It is certain that young birds hatched in the early summer, when food is abundant, have the best if not the only chance of attaining sufficient size and strength either to migrate or endure the coming winter. And it is easy to understand that if some varieties of a species, or even some individuals of a variety, paired persistently in the spring their progeny inheriting the same propensity would rapidly supersede the progeny of birds which paired later in the season or at irregular times. A habit of this kind might easily become fixed in a few generations, solely by the "survival of the fittest." Yet at the same time, under special conditions, birds might mate at unusual times, just as occurs with domestic fowl. Left to themselves with abundant food only in the summer time, they mate in the early spring, but with proper care and protection hens will lay at other seasons.

It must be admitted that this hardly explains the case of the red-shouldered hawk rearing successive broods when the first are destroyed. I would suggest that this is due to the procreative instinct persisting until satisfied, and that it is not satisfied short of the raising of a brood to maturity. An analogous case occurs with many plants, notably annuals, such as the sweet pea. Sown in the spring this plant flowers in eight or ten weeks, and if the flowers are fertilized with pollen, as they are sure to be if the necessary insects are plentiful, the seed-pods set and develop rapidly. Left to itself the plant ceases to flower, and throws all its energy into maturing seed. Where this is done it dies—quite early in the season. If, however, the flowers are kept cut the plant goes on producing more until destroyed by frost. Every gardener knows this, and it is explained on the ground that the propensity of the plant is procreative—to mature its seed—and as often as this is thwarted it will put forth more flowers and try again. The seed setting of the plant corresponds to the laying of the eggs, so far as the cycle of life is concerned, and when a check occurs at this stage both plant and bird begin again. The procreative propensity is not satisfied short of the reasonably assured propagation of the species—in other words, until the offspring can shift for itself.

There is just another point raised by your correspondent—the failure of transmission of acquired characteristics or of mutilations, even when practical for many successive generations. As I understand it evolution only assumes the possible transmission of spontaneous individual variations, all of which presumably arise—no one knows why—before birth, and are an essential peculiarity of the individual. Between these and violent mutilations there is no parallel. Thus a Flathead Indian fathers a child of normal skull, because his peculiarity has been acquired after birth, and he has no power to transmit it. But let a papoose be born flat-headed and the peculiarity will stand a very good chance of transmission. Nature declines to accept innovations from the clumsy hand of man, nor can man often imitate the processes. As I write a narcissus bud in my window is ready to burst. If I attempted to open it, using every care and delicate tools, I should only spoil it. By leaving it alone it will open perfectly in due time. If we cannot imitate nature in so simple an operation as this, how can we expect to counterfeit her higher and subtler processes?

WM. Q. PHILLIPS.

CLINTON, Ont., Dec. 20.

English Woodcock.

Editor Forest and Stream:

Here is an item to deepen the mystery of Jay Beebe's English woodcock. About twenty years ago I was on a woodcock rampage on the hills back of Peter Cooper's place at Ringwood, N. J., during the fall flight, and one of the family—but at least twice as large as a legitimate member had any right to be—flushed very wild, and I thought it useless to make him wilder by shooting, but I marked his course and determined to have a shot at him if he rose again within a reasonable distance, but I could not get within 100 yards of him, and reluctantly gave up the chase. I never mentioned the incident except to an occasional sportsman, but it has remained an annoying puzzle with me ever since. If a European woodcock, how did he get here?

Many years ago I suggested, through FOREST AND STREAM, that one of the most desirable foreign birds to introduce into this country was the splendid European woodcock, and also suggested that if it was ever done they should be liberated in some place like the Dismal Swamp, where they would have a chance to "increase and multiply," but I do not know that the attempt was ever made.

A friend of mine once kept a native woodcock in confinement for some time, and every night he bored the earth full of holes in search of the worms that he was constantly supplied with, and I feel quite sure a success could be made of an attempt to bring over the foreign bird.

Various kinds of foreign game birds have been introduced from the remotest corners of the earth, while this most magnificent fellow has been utterly ignored. I sincerely hope that FOREST AND STREAM can stir up some wealthy sportsman to make the attempt.

DIDYMUS.

Homing Instinct of a Turtle.

IN a recent number of Science, Mr. C. L. Bristol prints some interesting observations on the homing instinct of a sea turtle in Bermuda, communicated to him by Miss Victoria Hayward, a resident of the island. To us who are familiar only with dry land, the incident seems very extraordinary, but we may perhaps imagine that it is no more difficult for a turtle to find its way back from a distant place to its old home in the sea than it would be for a cat or a dog to do the same thing on dry land, and this, of course, is something that is frequently done. Miss Hayward writes:

"My father caught a turtle in June that weighed 75 pounds. He placed it in a pond in the harbor of St. George. In August, on going to the pond, he found that some person had thrown a piece of iron weighing about 50 pounds into the pond, and it had broken a large hole in the turtle's back. It had been wounded apparently about a week, and was weak and seemingly dead. My father thought he had better kill it, but he changed his mind, and let it go alive into the harbor.

"In the latter part of October he and another man recaptured it in the same place where they had caught it before—about four miles from land, on the flats (reefs) that lie to the north of the islands. The back was nicely healed, and the turtle was altogether in excellent condition. You know that it requires no little knowledge of the art of navigation for a turtle to find the way from the southern side of St. George's Harbor through some one of the many little channels to its own special home on the north reefs—four miles out to sea."

Dall's Mountain Sheep.

THE four heads are specimens of Dall's mountain sheep killed in Alaska by Mr. Dall De Weese, of Cañon City, Colo., in the year 1897. They are beautifully mounted and adorn the walls of Mr. De Weese's den—a large and comfortable log house which he has built on his place near Cañon City. The ewe, which is the lowest of the four heads, was killed by accident when Mr. De Weese overshot one of the rams. He did not know of the existence of the lamb at this time, as it was hidden behind some rocks. When it appeared, it seemed to him more humane to shoot it than to leave it to starve to death or to be devoured by wolves. It may be questioned whether a similar group of the heads of Dall's sheep are to be found anywhere in the possession of one individual.

Elk for the Adirondacks.

WM. C. WHITNEY has made a formal offer to the Forest, Fish and Game Commission of thirty elk from his preserves at Lenox, Mass., to be used for stocking purposes in the Adirondacks.

Three of the Commisioners—Mayor W. Austin Wadsworth, of Geneseo; Dewitt C. Middleton, of Watertown, and B. Frank Wood, of Jamaica—waited upon Mr. Whitney to learn the condition of his offer, and they ascertained that his gift was not hampered by any conditions whatever. Mr. Whitney offers to deliver the elk in the Adirondacks and turn them out in any locality that should be designated by the Forest, Fish and Game Commission.

100 Sportsmen's Finds.

Some of the Queer Discoveries Made by Those Who Are Looking for Game or Fish.

36

Kaiser Wilhelm while out hunting discovered a huge rock, which he fancied for a monument to his grandfather. It weighed 100 tons; and having been suitably inscribed, has been set up as a monument.

37

Jacob Brown and George Rowe, of Newberry, Mich., were looking for deer, and in the course of their hunting started a mink, which made for a swamp near by and took refuge in a hollow stump. In digging under one side of the stump in order to get at the mink, they struck stones which bore evidences of the handiwork of man. Becoming interested, they secured picks and spades and unearthed the stones.

As the result of their labors, three stone images were uncovered, also a large stone tablet. All four articles were cut from brown sandstone, the rock probably coming from the northeastward, where the pictured rocks, great cliffs of sandstone, worn by the wind and waves into fantastic forms, frown for many miles upon the blue water of the great lake. Of the three images, the largest is that of a man in a sitting posture, nearly life size. This statue is on a pedestal, formed from the same piece of stone. The second image, from point of size, is that of a woman, and is a trifle under three feet in height, while the third is the image of a child, and, like the man, is postured in a sitting attitude, and is about two feet high. All three of the images were found placed with faces toward the east, which may have been accidental, but more probably intentional, and points strongly toward sun worship on the part of the unknown race that carved and placed the statues in times so distant that even an approximate estimate of the period is impossible.

Near these figures was found a slab of brown stone, averaging six inches in thickness and 18x25 inches on each face. One side was smoothed as carefully as the coarse structure of the rocks had allowed, while upon the other face were engraved a series of inscriptions, each set in a square of approximately one and a half inches, there being 140 of these.

Take inventory of the good things in this issue of FOREST AND STREAM. *Recall what a fund was given last week. Count on what is to come next week. Was there ever in all the world a more abundant weekly store of sportsmen's reading?*

American Wildfowl and How to Take Them.—XVII.

BY GEORGE BIRD GRINNELL.

[*Continued from page* 507.]

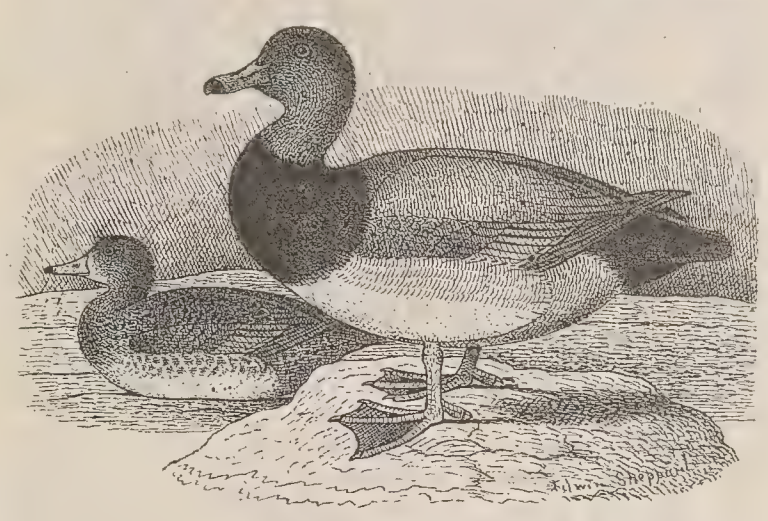
Redhead Duck.

Aythya americana (Eyt.).

IN general aspect like the canvasback, for which it is often mistaken. The adult male has the feathers of the head full and puffy. The head and neck are bright reddish-chestnut, often glossy with coppery reflections; the upper part of back, lower neck, breast and rump, and upper and under tail coverts, black. The back, shoulder feathers of the wing, sides and flanks, whitish, cross marked with black lines, slightly wider than in the canvasback, thus giving the whole plumage a darker tone. The speculum is pale bluish-gray, bordered with black above and tipped with white. The primaries are dusky, some of the inner quills being dark slaty-gray. The tail is dusky. The bill is pale blue, black at the tip, the eyes yellow, and the feet are bluish-gray. The abdomen is white.

The female is a plain brownish duck, almost white on the forehead, chin and sides of the head. The lower neck, sides and flanks are brown, as are the lower parts generally, but the lower tail-coverts are white. The speculum is as in the male.

Like the canvasback, the redhead is a bird of general distribution through North America. It is very common in migration on the Atlantic coast, as well as in the interior and on the Pacific coast. Mr. Ridgway found it common and evidently breeding at Sacramento, Cal., in June, 1867, as well as in Nevada, where he saw beautiful decoys made of its skins by the Piute Indians. It is said not to reach Alaska in summer, but is found breeding throughout the Hudson Bay country, east of the Rocky Mountains. Formerly it bred in great numbers in the



REDHEAD DUCK.

United States in Michigan, Wisconsin, Minnesota, Dakota, Montana and Wyoming, but the continual persecution to which the redhead, with our other ducks, is subjected in spring has driven it from many of these ancient breeding grounds. There are some localities, however, in the middle West occupied by gunning clubs where spring shooting is not allowed, and here the redhead and some other varieties of ducks stop and breed, with the result that in the autumn the club members have shooting far better than they ever did when spring shooting prevailed. Birds that have been bred on the grounds are gentle and wonted, and act as decoys to their relatives migrating from the North, calling them down and giving them confidence that here, at least, is a place where they may be free from persecution.

In winter the redhead is found as far south as Mexico and southern Texas, but is more common further to the northward, and, indeed, goes but little south of the region where open water is found. It is abundant during the migrations on Long Island, but is not common on the New England coast. Each autumn and winter, however, redheads are shot in great numbers on Great South Bay, but are rarely or not at all on Long Island Sound. On the eastern shore of Virginia, in Chesapeake Bay, and on the sounds along the coasts of North and South Carolina, the redhead is very abundant, and it spends the winter in great numbers in these waters, leaving them only when, as usually happens once or twice each winter, it is driven further south by the occurrence of cold weather, which freezes the sounds. In such places, in all sorts of weather, they may be seen, high in air, trading, as it is termed; that is to say, flying long distances far above the water, as if examining the ground before they determined to alight. The great flocks of birds that do this trading are usually canvasbacks and redheads.

The redhead is said by Northern explorers to breed throughout the fur countries, and they have also been found breeding near Calais, Me. The nests are usually built close together, in colonies, generally near the water, and are somewhat more substantial than ducks' nests often are. The eggs are almost white, and are usually ten or twelve in number.

In many of its habits the redhead resembles the broadbill or blackhead. It comes up to decoys quite as gently as that bird, when it has once made up its mind to do so, and when about to alight the birds crowd close together, and thus offer the gunner an opportunity to kill several at a time. When only wounded, the redhead dives and skulks well, and is not always to be recovered. After diving and swimming a long way under water, it comes to the surface, and perhaps shows only a portion of the bill, swimming off so low against the wind that it is not likely to be detected.

The flesh of the redhead is excellent, and when it has been feeding on the same food it cannot be distinguished from that of the canvasback.

The redhead is a near relative of the European pochard, which it closely resembles, though easily distinguished on comparison.

This species is sometimes called the redheaded broadbill, redheaded raft duck, and, oddly enough, Washington canvasback.

Weights of Game.

GREEN BAY, Wis., Dec. 14.—*Editor Forest and Stream:* In the last issue of FOREST AND STREAM the weights of game are mentioned, and this prompts me to comment. The redhead ducks at 2 pounds 9 ounces for males in good condition would be less than our birds here, I believe, taken on an average through the season. When redheads first come in on our bay here, they would weigh about 2½ pounds average, but after being here a short time they will average close to 3 pounds, I believe. I have weighed my birds a great deal this fall, and I have killed redheads that weighed 3 pounds 7 ounces on several occasions, and at the same time I have killed undersized or young redheads that would weigh a scant 2½ pounds.

We get the flight directly after leaving the Canadian grounds, and I presume that the birds do not make more than one or two stops from the north to this point, the birds being thin when they get here.

I had the opportunity to weigh some canvasbacks, and there was a great variation in these birds when first here and after being here for a short time on their feeding grounds. I think the average canvasback's weight after being here for a while is very close to 3½ pounds. A great many weigh a good deal less and some quite a few ounces more.

Mallards are the same way as the other birds. I have killed mallards when coming into the ponds and sloughs in the evening flight, that were from 35 to 50 yards high, which would split open on contact with the water when shot, and this is no uncommon thing.

We shoot a duck which is called big bay bluebill, but which I think is a broadbill, that will average as heavy as the canvasbacks, and it is really too fat to eat when cooked, unless some of the fat is removed. These big ducks are not killed on the inner bay nor on the west shore, but we get them on the east shore and at Grass Island and Point Au Sauble. They are strictly deep-water birds, and very nice eating.

We have fine grounds and miles and miles of natural feed for the birds here. We had a flight of ducks in the first week in November that was as large as any single flight here for twenty years, but they did not stay more than a day. It was a grand sight to see these countless thousands of ducks working out over the open water. Redheads, bluebills, canvasbacks, whistlers and broadbills were the main flight. Our bay is now frozen over and the birds have gone south.

A. G. HOLMES.

Our Thanksgiving Turkey.

I PROMISED you when reporting on the fishing and chicken hunting to tell later how goose and duck shooting was in the valley during the flight. The weather was "agin us" during October and the first two weeks of November we were treated to one of those beautiful falls that make the Indian dream of the happy hunting grounds, when a cloudless sky, with the sun coming aslant through the haze, making one feel as though he was dreaming. And when the sportsmen of Missoula watched the sky they could see the V-shaped forms going lazily over, too far above to even hear their honk. The wise ones would say that a good snow storm on the mountains, followed by a cold snap, would bring the young fellows down to roost on our river bars and feed on our grain fields. But luck favored the goose rather than the hunter. However, on the 12th of November there seemed to be a change coming; a cloud was hanging on Mt. LoLo, the barometer of the Bitter Root Valley. On the 13th, the storm came, and a most severe one for the first three days. It snowed, and the snow was driven by high winds, the thermometer going down to 12 below zero. In the valley the snow reached a depth of 8 or 10 inches; and a still greater depth in the hills. Low thermometer and the wind continued until the 18th. Frequent telephone messages came from down the river, which is the winter pasturage for deer, which roam the mountains during the summer. The first hard storm brings them down to the river, then they go back and do not come down until the snow gets too deep to travel in.

Elmer Chapman and myself were planning a trip down there. Perry Steele, a lumberman, whose mill is 40 miles down river, was going down to his mill in the morning and gave us a very pressing invitation to go down. He said he could not insure us a deer, but could show us some. Perry is a prince of good fellows, and a few days spent at the camp would be an outing well spent, even without deer; and the chance of getting one which would serve for our Thanksgiving turkey helped to give our contemplated trip a bright hue. We were ready and off on a morning train, which was late, so we did not get down there until after dark. The weather was very cold.

We were up and breakfasted before daylight. Our host said he could not go out to hunt, but he would direct us, so we could not miss them. We were to take such a cañon pass, by so many draws, which would bring us to one of more prominence, and up this we could find them. I felt the same as when once in Minnesota, on asking an Indian for some venison, he replied, pointing to his canoe, "You take canoe, go down river past one river, look the other side see meadow, see deer eat grass, you get him." We did not take the Indian's advice, but we did Perry's. On reaching the draw described we began cautiously to work our way up. We had gone only a few hundred feet when I slipped and fell. On looking around there stood a fine blacktail doe looking at me. A hasty shot only made the deer jump into cover, having only knocked off a bunch of hair. We began to look for more and the whole side of the mountain seemed to be alive with deer; but we could not get a shot until they were fully 800 yards away. Chapman had the old style .40-65 Winchester, and could not reach. At the first shot from my .30-40 the deer turned, showing the lead was getting there. In turning they came over a bare point,

showing them to full view, although they looked no larger than jack rabbits. But the performance of those guns is marvelous. A well-directed shot at the deer's head caught him through the heart. Of course it was an accident, but you cannot have those accidents with an ordinary gun. This buck, when dressed, weighed 205 pounds. We got him down to a log road, hung him up, and not wishing to overdo ourselves the first day, returned to camp.

Perry had a box of good cigars for after supper, and a fund of reminiscenece where this or that deer had fallen, either before his gun or that of some companion. The crackling fire, the smell of burning pine and cold weather made me think of the old days in the Northern woods.

The following day we did not start so early, Chapman taking one ridge and I the other. He jumped a bunch of four, killing three. I saw one lone deer, and got it. We had enough, and were sure of not having to eat crow for Thanksgiving. We borrowed Perry's horse and "go-devil" to bring our game in, and it being still light we got a picture of them. The next morning we got a picture of them hung up, and feeling a little proud of our catch we could not refrain from getting in, Perry doing the peek-a-boo act. Perry took us down to the switch, where we got a parting picture of the grounds we had hunted over, wishing there would come a day when we could hunt those woods and hills again.

BERT STEVENS.

Talks to Boys.—VII.

By this time I fancy that you must be tired of carrying about an unloaded gun, and as you seem to have formed pretty good habits and to have become reasonably careful, we may as well now take some loaded shells and have a little target practice.

By this time you have used your gun so much that breaking it down and opening the breech does not trouble you at all, but has become a perfectly natural and commonplace operation. You are also so familiar with the safety catch that you involuntarily push it back, if for any reason it has slipped forward, and without being conscious that you do so, you watch this catch and always know just what its position is.

I do not care to have you fire too many shots at a time, but you may order from the gunsmith 100 shells loaded with 2½ drams of powder and ¾ ounce of No. 8 shot, and these will last us for some little time. When writing for the shells, ask the gunsmith to mark on the top wads of the shells the charge which they contain. Probably the shells will come to you with the wads marked in this form $\frac{3}{4}\frac{2\frac{1}{2}}{8}$. It is well that you should begin to shoot with a light charge, first, because your gun is light, and, second, because I do not wish to have the discharge of the gun jar you or startle you; and, indeed, for a gun of small caliber such as you are using, the charge that I have named is effective at any reasonable distance on any bird that you are likely to meet with.

You had better put thirty of these cartridges in your pocket, and we will go out into the lot behind the house and see how the gun shoots. Very likely before this your instructor sent to the city and purchased a dozen large shotgun targets. These are made of white or brown paper, on which is printed a bullseye 3 or 4 inches in diameter, and about this a circle 30 inches in diameter. Make two frames for backing for your targets. For one of these an old door will do, if there is one anywhere about the place; for the other, nail three or four short boards together to make a square frame about 4 feet each way. Carry these out to where you are to target your gun, and set them up on the ground in a position nearly vertical, supporting them from behind by long sticks for props. Fasten one of the targets flat against each, with a tack or a pin in each corner of the paper, and then retiring to a distance of about 30 yards, take up your gun and face one of the targets. Standing there in an easy position and with your eye fixed on the bullseye, throw up the gun to your shoulder three or four times and take sight at the bullseye. Very likely you will find that the gun comes up so that the sight is nearly or quite on the bullseye and only needs a little movement to cover it. After you have done this a few times break down your gun, load both barrels, throw the gun up to your shoulder and fire the right hand one at the target you were facing the instant that you catch sight on the black. Then instantly turn and fire the left barrel at the black of the second target, being sure that you have caught the sight before you pull the trigger. Now go to the target and see what sort of shots you have made. If you pulled at precisely the right moment, the pellets of shot in each target ought to be thicker in and about the bullseye than anywhere else. At a little distance from this center, the intervals between the pellets will grow wider, until at the edge of the paper there may be quite a little space about each. It will be well for you to take a soft lead pencil and draw a line through each shot hole in the paper. After you have done this, go back to your stand and again shoot at the bullseye, taking as little time as possible, and pulling just as soon as the sight is seen against the black. Another examination of the target will show you where you shot.

When you break down your gun to remove the discharged shells and replace them by others, see that the muzzle of the broken down gun points downward and that the barrels are neither horizontal nor directed upward. The reason for this is obvious. If the muzzle of the gun points downward, the loaded cartridges being heavy will slip readily into place, and if only one barrel has been discharged, the loaded cartridge in the other barrel will remain in place; while, if you have the barrels directed upward, the loaded cartridge is likely to slip out of the chamber and fall to the ground, or if it does not do this it may slip part way out and prevent closing the gun. I have more than once seen this very thing happen, when men who were duck shooting were trying to reload their guns in great haste.

I do not advise you to target your gun by shooting from a fixed rest, because to-day all guns are targeted by their makers, and usually have attached to them a certificate of their performance at 40 yards with certain specified charges of powder and shot; therefore you know beforehand what your gun has done, and so what it ought to do. It does not seem necessary, therefore, that you should waste time and ammunition in doing what has already been done by men very much more experienced and skillful than you are. What you are doing now is merely continuing and advancing in the work that you have been doing from the day you got your gun. You are learning to shoot quickly and to have the gun directly in your line of sight when it reaches your shoulder. It is to acquire this skill with arms, hands and head—to make all these organs work together—that you have been aiming with your empty gun at all sorts of things during the past few weeks, and for this that you have been snapping primers at a candle flame. This is merely carrying the practice a little further.

After you have fired the two barrels at the target, you may either change the target or pin over it a sheet of newspaper, tearing away the part which covers the bullseye and thus exposing the black for a point at which to aim. I should like to have you fire at least ten shots in this way, but about one thing I wish to caution you especially—see that when you throw up the gun to your shoulder the stock is pressed tight against it, but not so tight that your muscles are strained, or your freedom of movement in any way hampered. If it should not be held firmly, there will be a little recoil and jar which may affect you unpleasantly. I should be very sorry to have this happen early in your shooting, because if it did it might have a tendency to make you flinch when pulling the trigger, and this would be bad for your shooting and a very hard matter to overcome. It is unfortunate for a man to be afraid of his gun. However, in these days of nitro powder with perfectly loaded cartridges, there is not very much recoil to the gun and far less danger than formerly that a shooter will be punished by his gun "kicking." In old times, with black powder and heavy charges, it was quite different. I have sometimes had my shoulder black and blue after a day's duck shooting, and a friend who, in muzzleloading days, was shooting a heavy duck gun with a large charge of powder, stood up in the bow of the skiff to fire at a bird that had just sprung, and when he pulled the trigger and leaned forward to meet the expected recoil, the cap snapped, the gun failed to explode and he went head foremost overboard, in a most ungraceful dive.

After you have fired your ten shots I am going to ask you to fire ten more, standing with your back to the target and wheeling at the word given by your instructor, and then putting up your gun as quickly as possible and firing at the black spot. Do not fire until you have caught sight, and if for any reason you should fail to catch sight within a reasonable time, do not pull the trigger then, but again turn your back on the target, again face about and try to catch sight again. All this is intended to teach you to aim quickly; not necessarily because I want you always to shoot quickly, but because you should be able to shoot at an instant's warning, whenever it may be necessary for you to do so.

After you have fired the second ten shots I shall ask your instructor to give you a little wing practice. To do this he must have collected five or ten old tin cans, or as many potatoes or apples. Let him stand nearby at your left side and toss one of these objects up in the air so that it will move away from you at an angle of 45 degrees. Do you sight at it with your gun and see if you think you can hit it. After you have several times caught sight on this moving object, put two cartridges into your gun, and when the can is next thrown, if you catch sight properly, fire. Very likely you may not hit the can—or the apple or potato, whichever it may be—and if you do not do so, I think I can tell you why. You probably just caught sight on the can over the top of the muzzle, and when you pulled the trigger, checked the movement of the gun for the slightest fraction of time, and so shot over the can. You will have to try it again and again, and your instructor will no doubt have an idea, after you have fired two or three shots, where you are shooting, and will try to explain to you where you should hold your gun. The cans move slowly, but still they keep moving all the time, and in sighting at them it will be better for you to see the whole can over the sight; then when you pull the trigger the falling can will tumble into the midst of the load.

I should much prefer, however, to have you shoot at the object before it has reached its highest point; in other words, as quickly as you can, but by no means pull off your gun until you have taken sight at the object, and feel a reasonable confidence that you are to hit it. When you catch the sight, follow the object for a little distance and then raise your gun slightly so that you lose sight of the mark, and pull the trigger. If you keep this in mind, I am sure that you will in a short time find that there is no difficulty in hitting these easily tossed marks.

A few days' practice of this kind ought to help you along very rapidly in your ideas of shooting.

Now that you have gotten along as far as this, I think that if I were you I would try to get hold of Mr. Hammond's most excellent little boook called "Hitting vs. Missing." This is a story of a boy, who, a great many years ago, while he was out squirrel shooting with his old musket, saw a man shoot a grouse on the wing—the first bird that he had ever seen killed while flying. He was seized with an ambition to learn how to do what the man had done, and he patiently worked out for himself, without instruction and without help, the lesson of wing shooting, until he became one of the best shots in all New England. He tells you in this little book how he learned to shoot at crossing birds by firing his gun at stones skipped across the mill pond by boys, and how, in other ways, he succeeded in overcoming many of the difficulties that greatly puzzle the young shooter. When you read his experience, the matter of your instruction will be greatly amplified, provided you try to remember all that he says and to profit by the story of his discouragements and failures.

Now that you have begun to use ammunition, you must be more than ever careful about carrying your gun. You must go back now several weeks, to the time when you first began to walk about with your gun, and when you were constantly trying to remember not to point it in the direction of any living creature, and to keep its muzzle directed either up in the air or down to the ground. You must again begin to watch yourself, and to think always about how your gun is pointed.

By this time I think you have had practice enough in aiming your gun, so that it comes up with the sight pretty nearly on the object at which you are looking, and now, if you have been in the habit in the past of closing one eye when you looked along the barrel to catch sight, I recommend you to cease that practice and to depend on throwing the gun up into the line of sight, more than on catching the sight on the object at which you aim. Try this at first at the target. Load your gun, face the target, and remembering to keep both eyes open, throw up the gun and shoot. Probably you will find the center of your charge somewhere near the bullseye, and after shooting a few times, each time striving to correct the mistakes of the previous shots, you will see that with both eyes open you do about as well as if you used only one. A carpenter who is driving a nail, or a chopper whose axe falls in the same place every time as he chops a log, does not close one eye to take aim. He is so familiar with his tool and with the way in which it should be handled, that he strikes his mark unerringly. He has had so much practice in performing this operation that body and arms and eyes work together exactly as they should. With practice you can do the same with the shotgun, and shooting in this way you will be more quick and ready than if you closed one eye and felt about with the muzzle of the gun to get your sight just in the right place. If you inquire, you will find that most good shots to-day keep both eyes open when they fire the gun, and if they do so, it is good policy for you to follow their example.

The expert shot of the present day when about to fire throws his gun to his shoulder, looks at the bird well above the rib so as to see its direction and calculate its speed and the angle at which it is flying, and then dropping his head a little, looks along the barrel and moves its extremity so as to either cover the bird or to allow so much for its speed as his experience tells him is necessary. For the practiced shot, this, of course, takes but a very small space of time, and being a practiced shot and thoroughly familiar with his gun, he understands precisely how to hold it and how to move head, arms and hands so as to bring about the result which he desires.

W. G. DE GROOT.

A Bear Hunt on Leopard Bayou.

BY H. M. MAYO.

IT was a beautiful morning in late October, beautiful even for southern Louisiana where October days are the most beautiful of the long fall, winter being a brief period marked by few leaden skies and rainy intervals, with a delightful preponderance of summer like winds and blue, cloud flecked heavens.

The fifty-mile voyage from Morgan City to the woods of Leopard Bayou, the latter stream being but a few miles from where the mighty Atchafalaya pours into the Mexican Gulf, had been made the afternoon previous. The night had fallen suddenly and the top of the tent had been lost against the gray mosses which hung solemnly from the oaks at the camping place, and only the embers of the fire of dry waxwood broke the gloom of the thicket with a ruddy sparkle, which occasionally flashed into flame.

The winds had hushed and the dry crackle of the swaying roseau canes ceased almost as night's curtain fell upon the earth. No sound broke the silence save the low tones of our conversation and, now and then, the guttural croak of a heron in the marsh behind the fringe of palmettos and other growth along the bayou, and the faint splash made by a predatory otter or mink as either plunged into the dark waters where they disappeared amid the dense shadows of the other bank.

The Nimrod and I were out on one of our occasional hunts. This time we were out for bear, and after a hard day's work, having tugged at the oars for the fifty miles of the journey and completed camp, we were soon between comfortable blankets spread on palmetto leaves and softened with the curling Spanish moss. The glow of the fire had lapsed into grayness; the silence had become more intense, and tired bodies had induced sweet slumber, from which I was awakened by a gentle nudge and a whispered admonition to "get up."

Even a gilt edge sportsman will heave a deep sigh of regret because confronted with the inevitable withdrawing from a warm nest and a sudden immersion in an atmosphere but few degrees removed from frost. I confess to a preference for my bed under such circumstances, but as I caught the invigorating odor of newly made coffee and a glimpse of a brightly burning camp-fire, I hustled into my boots and was soon in the open, only to find a blue-black sky with a thousand and one stars blinking in the impenetrable pall, and the air damp and cold from the dew, which had bathed the leaves and canes. There was, too, a sharp scent of foliage, rank and vigorous—the pungent resin of the wax myrtle.

"Great Scott! Fred," I remonstrated, "it's yet night. What in the deuce do you mean by getting a fellow out of his blankets at this ungodly hour?" I felt imposed upon.

"There you go," came back the reply, disgustedly; "that baritone of yours will scare every bear this side of Hades into the marsh for good. It's four o'clock, you tenderfoot, and the bear family in this neck of the woods get up ahead of the proverbial lark. The 'critters' feed early, and the blamed things are too wary and the labor too arduous to risk an error. So shut up your noddle and have a cup of coffee."

I quieted my objections with the steaming cup of beverage, such as only the Nimrod can conjure from the delectable bean, and after a snack of cold meat and toast I felt a greater appreciation of what sport really was; and congratulated myself that I really had the instincts of a full blooded hunter. I was then ready for the next chapter; a chapter I expected to complete with a full grown specimen of *Ursus americanus*. The snack over, we buckled on our armor—that is the Nimrod did, taking his Winchester from its case and slipping a supply of cartridges into the chamber—and were then ready for the fray. It was to be a stillhunt, and on water.

Stepping carefully to the soft edge of the bayou, we pulled in the nose of the Joan, as the swift skiff of the Nimrod was called, and with extraordinary caution boarded the craft and with muffled oars felt our way into mid-stream and went slowly with the up-tide. The ex-

planation of our proceedings, this remarkable care, is found in the fact that the survivors of the Southern b ar feed during the fall months upon the acorns of the l ve oaks, continuing until the fruit is exhausted. The fav r-ite time for the acrid meal is in the early morning or late evening; the remainder of the day and night, sa e when the latter is made bright by a good-sized moon, is spent by the animals in damp retirement in the marsh. To reach the acorns the beasts must clamber into the tops of the great oaks, and not a tree along the Leopard but what bore the destructive signs of the animal's frequent sorties. Wary as a fox and as cunning as Reynard, the marsh bear is an extremely difficult quarry, and success in his capture means untiring vigilance, skill and patience on the part of the hunter. They are as quick as a squirrel, and it is a sight well worth witnessing to watch a big brute scent a possible enemy and scramble earthwards. So much for this.

The Joan floated on. Slowly across the marsh grew the light of the advancing morn. From the pale spot in the east, like a pat of powder on the cheek of an Egyptian damozel, there grew a rosy vacillating tint. Aurora was putting on the rouge. Then the sharp arrows began to spread, and nature to assume a tangible entity, adding to her charms as the moments flew. As I before remarked, it was a beautiful morning, and I gazed in silent admiration at the panorama which unfolded slowly. The tops of the feathery marsh canes grew yellow and golden, and the somber shadows of the woods changed their blacks to misty purples and deep chromes, while the more forward leaves took on a vivid contrast. The face of the stream gradually began to accurately mirror the heavy arches of the o'erhanging oak limbs. A specter like crane took flight from a water soaked root near the bank and winged clumsily over the interminable waste. There was the shrill clatter of a fisher bird and the sweet chirp of a redwing somewhere out of sight. Then silence and the light grew. A splash, as a bayou turtle fell into the stream from a bit of broken tree trunk, half submerged; then more silence, broken by the soft dip of the oars. Even these stopped as the Nimrod warningly held up his hand. I breathed with nature, deeply. I caught a faint clap, clap. It was rotund acorns dropping into the face of the stream.

"Don't move," whispered the Nimrod, as he nervously fingered his rifle; "there's a bear feeding somewhere." There was an ominous crack. A limb had broken and near at hand. Bruin was in evidence. The skiff gracefully turned a bend of the bayou. A sudden crash, a few heavy plunges among the crisp palmettos, and we both knew of a surety that at least one bear was safe.

"It's all right," whispered my companion, never violating the ethics of the hunt by risking an open note, "the old boys are out, and where there's one, why there are others. See? Keep the Joan mov ng and if I don't bring down a three hundred pounder before ten o'clock why I'll shoot quail on the ground in he future."

By this time the day had fully invad d the earth. The sun shone graciously across the ma sh and curving wood, making the verdant jungle glisten like a series of jewels in nature's diadem. The air was noisy with the twitter of birds and the breeze from the west wrinkled the brown waters of the famed Leopard Bayou.

On we went. Great tangled masses of broken and twisted twigs and limbs in the tops of the oaks marked the rapacity of the herbivorous bears. Circumstances had forced this condition, and Bruin gave up meat eating because a vegetable diet needed no snaring. Therefore he took most kindly to the acorns and kindred provender. The Joan had gradually narrowed the stream as she progressed, and my arms grew tired from pushing the light craft along, but save the evidences of recent occupation, not a bear had tumbled into sight, and I was just about to murmur a timorous objection to further exertion, when the Nimrod stealthily reached for his rifle, which he had permitted to slip against the thwart.

"'Sh," he whispered with a wonderfully pianissimo effect; "don't move; just look."

I looked. Fully two hundred yards ahead, away up in the top of an immense time scarred oak which reared its hoary crest near the bayou's edge, was a huge black body, looking for all the world like a gigantic tailless squirrel as the great paws reached upward for some tempting bunch of acorns blackening in the October sunlight. To me it was a most unusual sight. The idea of a bear foraging for breakfast where a diminutive coon would be compelled to hang on with both feet, even if expected, would prove exceedingly unusual and interesting, and the ponderous bulk swaying in the tall oak was a revelation.

I did not move a hair. The sharp snap of cracking twigs and the plunk-plunk of dropping acorns came to me sweet, over the stream as the Joan quietly reduced the distance. I might have imagined that a big bear in a tree would present an ungainly and grotesque appearance, but the sight then set before my eyes evidenced the contrary. Dexterously and quickly the brute drew the acorns easily into his capacious crimson maw, treading on timorous foothold of swaying branches with a confidence born of long experience as he did so.

Suddenly the bear's motion ceased. His muzzle pointed in our direction for an instant. We had been scented and seen. It was then ludicrous to witness the efforts of the beast to get out of sight. His magnificent bulk fairly shook with emotion as he essayed to clamber from a location he correctly surmised to be dangerous. His eyes sank back into his head in fear and a deep, hoarse growl issued from between the well worn ivories which fringed the dripping tongue. It all happened in an instant. No sooner did the Nimrod realize that the game was in absolute retreat than the deep roar of the "forty-five" started the echoes of the vicinity.

The pale smoke drifted slowly away. The bear gave a convulsive tremor, grasped a small limb for a moment, then pitched limply downward, falling heavily into the crutch of an immense limb, where he hung, silent and without motion.

My taste for blood was at once rampant. "He's ours." I shouted exultantly, as I gave the Joan a spasmodic jerk which sent her darting shoreward and toward the tree which contained the conquered Bruin. How my heart leaped in anxiety as the skiff neared the bank, to witness a gathering of the mighty muscles. "He is not dead," I thought, with a wild push at the oars. The nose of the boat touched the ooze of the bank. There was a despairing groan, and the next moment the black bulk in the crutch heaved forward, toppled, and in a twinkling had crashed among the palmettos and jack vines in the jungle.

The Nimrod lost his reserve. He grasped his rifle and was among the reeds and leaves of the Leopard underbrush. Tying the skiff I grasped a keen edged hunting hatchet and followed. We were hemmed in by an interlacing of barbed climbers, vines, palmettos and dense myrtle growth.

The whirr of a rattlesnake sounded sharp. Possibly twenty feet away the great beast tore with dying energy at the dead leaves and broken débris on the damp earth. Mingled with this was the swish of the horny leaves and the crackle of the canes as the bear agonizingly sought to reach the seclusion of the morass beyond the ridge or strip of jungle, and to these sounds were added the fearful snorts of the brute.

"Come on," cried the Nimrod, as he forced his lank proportions through the growth. "The old fellow may escape us after all and be into the marsh if we linger here."

It was well enough to say "come on," but the prospect of doing so speedily was dubious. Jungle at every step and a big bear lying in wait for us. Not so pleasant, but screwing my courage to the sticking point, I cut away with the hatchet and slowly hewed a path through the sappy obstacles. To the accompaniment of the bear's despairing sighs, which filled the echoes with a murderous sogginess, we made way, until after about twenty minutes' work we reached a clearing in the chill woods. This clearing was in the edge of the strip and surrounded by the everlasting palmettos and yellow marsh canes. In the clearing, black and bulky, and at full length, was the game. With all his great strength he could go no further, and the wide head, graying in spots, rested wearily among the rotted leaves. His sides filled and shrunk as he breathed heavily.

Hearing us at his very feet, Ursus reared his muzzle and attempted to resist the invaders. It was his last effort. His eyes glowed dimly, and the red tongue was incrusted with mould. The Winchester roared in the air with an ugly twang, and the head sank inert to the leaves. The great form convulsively stiffened as the muscles contracted for the finality. A mighty shudder ran through the bulk, and the beast was dead.

"Three hundred and fifty pounds, if he weighs an ounce," victoriously remarked the Nimrod, as he carelessly seated himself upon the prostrate monarch of Leopard Bayou. Truly, gazing at the bear, he looked as large as an ox, and his pelt was as curly as "nigeer wool." Maybe we didn't gloat, but we did, and had there been an observer in the wild surroundings save our two selves, he would have been regaled with a series of anecdotes told by the Nimrod as to "how he had done it before."

Our gloating ended and it became a question of getting the prize into the Joan, a weird proposition it seemed at first suggestion, but two hours' hard work and a small pulley solved the difficulty, and "Br'er Bear" was given the place of honor in the skiff. This done, the hollows of the forest soon echoed with the rapid dip of oars, as the Joan swiftly forged campward. Success engendered appetite, and when the tent hove in sight we heaved a sigh of almost absolute content. A fire soon crackled and hissed beneath the camp oak, and the mellow singing of the coffee pot made our hearts glad with its promise. The hour was at noon when camp was broken and the stuff cozily stowed away in the stern of the Joan.

The mosses amid the chrome foliage of the oak trees grew gray, and then slowly merged into the purple of the distance as the craft plunged her green nose into the bosom of the bayou, and then into the gulf warmed waves of the Lake of Belle Isle. The roseaus yellowed and yellowed and gave way to the wax myrtle and willow, and then the cypress. Steadily we rowed and rowed, through the fading day and into the crisp night, stopping at whiles to have a wee bite of meat and bread and a nip of the stuff which both inebriates and cheers. Arms ached and muscles stiffened with the exertion, and the way seemed long and never ending, but the incentive was with us, and we rowed on and on until midnight.

The Joan passed under the clanking irons of the great Southern Pacific bridge and Morgan City loomed friendly at our very noses. We were at home and the exciting jaunt into the wilds of the Leopard was at an end.

Stripped of his hide "Br'er Bear" tipped the beam at exactly three hundred and fifty pounds.

Two Successful Outings.

NEW YORK, Dec. 26.—*Editor Forest and Stream:* Last summer, at your recommendation, I went to Mr. Dodds' Log Cabin Hotel, Newfoundland. I got twenty to thirty salmon, the largest 20 pounds. Later in the season I got at the same place three caribou, and the only complaint I had to make against the shooting was that it was too easy. I used a .30-30, and it took five shots apiece in the body to drop the first two caribou.

I am just now returned from an outing in New Brunswick, with Mr. Braithewaite, of Fredericton, for guide. I hit one moose and three caribou with a .45-70, and only got one caribou. Then I tried my .30-30 and lost two moose, both hit in the body. I then borrowed a double express, .45-110, and with the first shot brought down a very handsome moose, so that the trip ended as successfully as it had from the first been enjoyable. The country to which Mr. Braithewaite took me lies about the head waters of the Little Southwest Miramichi, and between them and the head waters of the Tobique, moose, caribou and partridge were very plenty, but deer were scarce.

The FOREST AND STREAM is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday and as much earlier as practicable.

Johnnie's First Moose.

From the Montr. al Christmas Gazette.

De cloud is hide de moon, but dere's plaintee light above—
Steady, Johnnie, steady; kip your head down low;
Move de paddle leetle quicker, an' de ole canoe we'll shove
T'roo de water nice an' quiet,
For de place we're goin' try it
Is beyon' de silver birch dere,
You can see it lak' a church dere,
W'en we're passin' on de corner w're de lily flower grow.

Wasn't dat correc' w'at I'm tolin' you jus' now?
Steady, Johnnie, steady; kip your head down low;
Never min', I'll watch behin' me—an' you can watch de bow,
An' you'll see a leetle clearer,
W'en canoe is comin' nearer—
Dere she is—now easy, easy,
For de win' is gettin' breezy,
An' we don't want not'ing smell us till de horn begin to blow

I remember long ago, w'en ma fader tak' me out—
Steady, Johnnie, steady; kip your head down low;
Jus' de way I'm takin' you, sir—hello! was dat a shout?
Seems to me I t'ink I'm hearin'
Somet'in' stirrin' on de clearin'
W'ere it stan' de lumber shaintee;
If it's true, den you'll have plaintee
Work to do in half a minute, if de moose don't start to go!

An' now we're on de shore, let us hide de old canoe—
Steady, Johnnie, steady; kip your head down low;
An' lie among de rushes, dat's bes' t'ing we can do,
For de old boy may be closer
Dan anybody know, sir;
An' look out you don't be shakin'
Or de bad shot you'll be makin'—
But I'm feelin' sam' way, too, me, w'en I was young also.

You ready for de call? Here goes for number wan—
Steady, Johnnie, steady; kip your head down low;
Did you hear how nice I do it, an' how it travel on
Till it reach across de reever?
Dat'll geev' some moose de fever!
Wait, now, Johnnie; don't you worry,
No use bein' on de hurry,
But lissen for de answer; it'll come before you know.

For w'y you jomp lak' dat? W'at's matter wit' your ear?
Steady, Johnnie, steady; kip your head down low;
Tak' your finger off de trigger; dat was only bird you hear;
Cant' you tell de pine tree crickin',
Or de boule frog w'en he's spikin'?
Don't you know de gray owl singin'
From de beeg moose w'en he's ringin'
Out hees challenge on de message your ole' gran'fader blow?

You're lucky boy to-night, wit' hunter man lak' me!
Steady, Johnnie, steady; kip your head down low;
Can tole you all about it. H-s-s-h! dat's somet'ing now, I see!
Dere he's comin' t'roo de bushes,
So get down among de rushes.
Hear heem walk? I t'ink by t'onder
He mus' go near fourteen honder!
Dat's de feller I been watchin' all de evenin', I dunno.

I'll geev' anoder call!—jus' a leetle wan or two—
Steady, Johnnie, steady; kip your head down low;
W'en he see dere's no wan waitin', I wonner w'at he'll do!
But look out, for he's comin'
Sa-pris-ti! ma heart is drummin'!
You can never get heem nearer,
An' de moon is shinin' clearer—
W'at a fine shot you'll be havin'! Now, Johnnie, let her go!

Bang! Bang! You got heem, sure! an' he'll never run away,
Nor feed among de lily on de shore of Wessonneau!
So dat's your first moose, Johnnie! Wal, remember all I say,
Doesn't matter w'at you're chasin',
Doesn't matter w'at you're facin,
Only watch de t'ing you're doin'—
If you don't ba gosh! you're ruin!
An' steady, Johnnie, steady; kip your head down low.

WILLIAM HENRY DRUMMOND.

A Christmas Turkey.

Editor Forest and Stream:

As the Christmas time draws near and my wife warns me to be on the lookout for a large young gobbler for use on that day, memory flies back to the one we had on Christmas of 1890, and its unequaled flavor; and the longing that comes to break the chains of business and leave dull care behind becomes so strong that as a safety-valve I will tell you how I got my Christmas turkey that year; and how a friend and companion through his inexperience lost his and claimed mine. We were a hunting party of six Kansans, camped near the confluence of the Salt Fork and the Arkansas River, within the Ponca reservation of the Indian Territory.

Our party was armed with rifles and breech-loading shotguns, and we were after large game—deer and wild turkeys; and as we frequently would see and start flocks of wild turkeys out of the high grass, the rifles were left in camp the most of the time, and we depended almost entirely upon the shotguns. One afternoon, as two of the boys were upon a hillside, they came close to a small patch of hazel brush of about 8x12 yards, and up started a fine buck and a doe. Lowie H. fired his first barrel at the buck and dropped him and then fired the second barrel at the doe without visible result; and then he walked up to the buck without reloading his gun, and up jumped the buck and followed the doe out of sight over the hill in the tall grass. The most complete search could not find either again.

As Lowie insisted that the buck was badly wounded and would be found dead the next morning, when morning came we went together to the place where the buck had fallen and separated to try and find some trace of him. When I had climbed a long slope and was distant from my companion about one and a half miles, I heard two quick reports of his gun, and looking in his direction saw him running up a draw as fast as he could run; and

flying toward me came a large wild turkey, which dropped in the grass near a small black oak bush. Marking down to the stopping place of the turkey, I took one load of 000 out of my right barrel and put in a load of 4's and started after the turkey, which had concealed itself in the grass near the bush. There it stayed until I was within about 30 yards of it, when it ran out flapping its wings to rise in flight, and I gave it the load of No. 4's, which nearly knocked it over; but it straightened up and rose from the ground, and I then gave it the load of 000., which badly crippled its flying; but still it kept on the wing. I was running after it trying to insert another cartridge in the gun, which I finally accomplished, and stopped to shoot again, when the turkey came to the ground, and on approaching it I found I had a fine fat young gobbler of about 15 pounds. The tail part of the body was badly torn with the large shot, and when the bird was drawn it was found that a No. 4 had passed clear through the heart, and nearly through the body had passed several more No. 4's.

I gathered game and gun together over my shoulder, and went up the slope to its crest toward which I had seen Lowie running. Arriving there I called him several times before he answered, and he then came to me from the far side of the crest, and said, "Is that my turkey you have there?" My reply was, "No sir; this is mine. Where is yours?" He then stated that he had come upon a flock of three feeding under some persimmon trees in the draw, and that as they rose in the air he had dropped one dead upon the grass, and had broken the wing of another one, and had followed it trying to catch it, but could not. We went to the place where he had seen the turkey fall on the grass "dead," as he said, but could find no trace of it, although we hunted over about an acre of ground. When we had to give up the hunt, he looked so longingly at my turkey that I said, "Lowie, do you think this is your turkey?" "Well," said he, "I shot one and we can't find it, and I don't remember hearing you shoot." But on my insisting that he go with me to the bush, I pointed out where I had seen mine alight, and gone with me to where it fell, he gave up and said "Well this is the first time I ever hunted wild turkeys, but if I ever drop another turkey I'll pick it up, and I'll never run another one with a broken wing, for after it got started a little piece I don't believe a horse could have caught it."

While my persimmon fattened turkey was filled with the ripe-fruit of the persimmon tree on which it had been feeding, mixed with the small sweet chinquapin and white oak acorns, it was the most toothsome and delicate flavored game it was ever my lot to enjoy; and when I think of it I often regret that I did not insist that Lowie should go and see the place where my turkey died, for if he had seen it he could never have had any reason to even think I had "swiped" his turkey. W. R.

New Brunswick Moose.

BOSTON, Dec. 22.—Some of the late moose hunting by prominent sportsmen has been done the past season under difficulties. Dr. G. A. McAleer, one of the best known of Worcester sportsmen, and W. T. Farley, a Boston hunter who gets his big game every year, are just out of the woods of Nova Scotia. They went after moose, and they got them, but they had a rather hard time, chiefly on account of the weather and the remarkably deep snow. They reached Annapolis by steamer without particular adventure, and were met by their principal guide, A. D. Thomas, with a team, and taken fifteen miles to Milford, where Mr. Thomas entertains sportsmen and summer boarders. The moose hunters found his place comfortable beyond their expectations. Milford is up toward the head waters of the Liverpool River, a stream that is becoming noted among Boston sportsmen for its trout and salmon fishing.

Their moose hunting camp was about fifteen miles further in, between Liverpool Lake and Frog Lake. Part of this distance was made by a team, with their camping traps, etc., on board, but the road proved to be a terribly rough one, even for a sled. Mr. Farley believes that there were rocks enough buried under the snow there to ballast all the rest of the world, and they are of all sizes, from cobblestones to boulders. Their feet found the most of these rocks, down through 2 feet of snow, or deeper, if you desire it. Not knowing where the rocks lay, they could not be avoided, and the wrenching their feet and legs got they will remember for a long time. They were glad to lie in camp and rest for the first day. The camp was pretty comfortable, formerly used by lumbermen. Their guides, Mr. Thomas, mentioned above, and Thomas Canning, of New Grafton, proved to be all that could be asked for. They hunted under difficulties for three days; such difficulties as finding the lake they wished to cross only partly frozen, and being obliged to go around through the deep snow. But they kept up their courage, for there were moose signs. The fourth day they were hunting on the divde between Frog Lake and Bear Lake. There were signs of moose, and big ones. The tracks were fresh, and the hunters and both guides were moving forward with great caution. Suddenly Mr. Farley saw what might be a big gray rock under the trees that were loaded down with snow. It moved. "Shoot!" whispered the guide. Mr. Farley did shoot. It was at a big moose lying down. It jumped up only to receive a volley of rifle bullets. It was quickly down. Another moose was up, and both hunters were shooting at him. Quickly he was down. A third one was up. The rifles were turned upon him in less time than it takes to tell it. This one fell also. In less than a minute thirteen shots had been fired, eleven of which were accounted for in the three dead moose—a big cow and two small bulls. The game laws of the Provinces permit of the killing of cow moose, though had Dr. McAleer and Mr. Farley known that it was a cow they first fired at, they would not have killed it. The moose were lying down in woods so thick and loaded with snow that antlers could not have been seen even if the big moose had carried them.

It took four days of the hardest of work with snowshoes and toboggan to get the hind quarters and hides to camp. The guides would haul the toboggan, wearing snowshoes, while the hunters pushed behind. The hunters believe in moose hunting as the king of sport. They are thoroughly pleased with that part of the country for the king of game animals, except possibly the $30 license which must be paid for the privilege. But in the reasonable prices of the guides, the entertainment they gave, their faithfulness and skill as moose hunters, the hunters feel that a part at least of the $60 they paid for licenses is accounted to them. SPECIAL.

CHICAGO AND THE WEST.

What One Bullet Did.

CHICAGO, Ill., Dec. 13.—I was down at St. Louis this week, and there met Mr. Horace Kephart, the authority on rifles and rifle shooting, who at the time I met him was just back from a good long trip down in Arkansas, where he put into practice a new one of his theories as to the rifle and how she is shot. He and a friend wandered out from camp the first morning after they struck their hunting ground—where, by the way, they were all complete strangers—and while they were still but a short way from the camp, they saw two nice deer standing in easy range. They fired almost at the same time, and each killed his deer, the bullet in each case striking the deer in the neck and ranging back, making a dead shot of it on the spot. They thought this was a good beginning, and went back to camp very happy; but though they hunted faithfully for two weeks after that, they never saw another deer. They had other game, however, to make things interesting, and took pleasure in exploring the vast wilderness of forest that lay about them. One of their party was afraid to go a hundred yards from camp, since he always got lost promptly as soon as he was out of sight of the tents. One morning he made bold to get half a mile from camp, and to make sure of getting back, he made arrow marks along the "lizard road" which he was traveling, so that he could retrace his footsteps without trouble. Mr. Kephart came across these signs, and at once divined their import, and in order to impress upon his friend's mind the great importance of having his directions under his hat instead of on the ground, he carefully reversed all the arrow marks and made them point the other way. The maker of the guide posts did not get back to camp till pretty near the next morning, and said then that he never had seen the roads so full of guide marks as he had that day.

On such a trip the question of camp outfit is a very important one, and this time Mr. Kephart says they solved the problem of what to take by each fellow's taking whatever he wanted to. One man had along a fine set of reloading tools for a 10-gauge shotgun, but no shells for it, and indeed no shotgun. This was a sample of the precautions taken to avoid being caught unprovided with all needful articles. Of course, some one might have strayed into camp and given this hunter a No. 10 shotgun down there in the woods with plenty of shells for it. What, under such circumstances, must have been the feelings of a man who found himself unprovided with the proper reloading outfit?

Another gentleman of the party had a rifle which was in use with shells that did not altogether fit it, and one evening was trying to extract from the chamber a shell which had a wrong or imperfect head. Bang! the rifle went up through the roof of the tent. Nothing so serious about this, if you get used to it, but here was the singular ill fortune of the victim of this accident. His coat was hanging on the line stretched above his head along the top of the tent as a drying line. The bullet cut exactly seven holes through the coat as it hung folded, missed a gold watch by only the fraction of an inch, cut a hole through the top of the tent and through the fly, although it was just rainy enough to make a dry tent very useful, and then completed its work by boring two neat holes through the stovepipe outside of the tent. All of which would seem a hard shot to duplicate without malice aforethought.

Phenomenal Game Year.

It has been a phenomenal game year for the West, there is no doubt of that, though just what the reason for it may be is something not easily determined. Our quail season for Illinois ended day before yesterday, and it was the best quail year Illinois has had within recollection, perhaps and very probably the best she ever had. How many birds were killed in grand total in this State it is impossible to guess, but there was hardly a party that came back unsuccessful. No one had a complaint to make or any excuses to offer. The season ends with thousands of birds left over. This is a good augur for next year, though it is not conclusive argument that the coming season will be as good as this, or half as good, for there are many factors entering into the game crop every year.

Indiana has yet a few days to run with her quail season, and the shooters of this season are making the very best of that fact. There is no talk of any falling off in the quail supply in that State, barring the fact that the birds are older now and harder to get.

Growth of the Preserve Idea.

The growth of the game preserve idea in the middle West is a very pronounced one. The last tendency in this direction seems to be in the direction of upland preserves. At first the duck shooters were the only ones who cared to attempt preserving any lands, and their early preserves were the easier because of the more worthless character of the marsh lands that they used, which were not of great value for agricultural purposes. Nowadays the better class shooters who can afford the luxury are turning toward preserves for quail and other upland birds. The notion of securing the shooting rights from owners of large bodies of land seems to be a popular one. I know of two enterprises on foot this winter, one of Chicago parties and one of Michigan men, for getting control of the shooting rights over some big tracts. The Chicago men have their agent down this week in Indiana looking over a certain big body of land, about 10,000 acres, upon which they will perhaps attempt to secure the rights. This is in a region very well known, and should the project go through, the lucky men will be very much to be congratulated. The Michigan men have in view a tract of about 25,000 acres, located in Mississippi, in what is thought to be a very good region for game of different species. It is very much to be hoped that both enterprises may go through successfully, for each such big body of land set aside for stocking purposes is a great benefit to the local supply of birds in the country round about. Give the public its cake and it will eat it, that is pretty well proved in the light of past experience. Regulate this cake business a little, and we all have something to eat for many a year to come. The preserve idea is not an American one, and it is not intrinsically a democratic one or even a good one. It is only a compromise, and a necessary one. We seem to have come, in this rapidly growing Western country, to a place where we are obliged to choose between two evils. No preserves, no game. Some preserves, some game. We can not always count upon as good open shooting as has been general this fall. Had the game crop been less, the establishment of many large land holdings devoted to the rearing and saving of game birds would have been no detriment to the average man who cannot own shooting rights, but to the contrary, a benefit. Neither upland birds nor water fowl can be strictly confined within the limits of a preserve.

Buffalo Meat for Christmas.

The following dispatch from Helena, Mont., to a Chicago daily paper shows that the buffalo is not altogether a failure in captivity. At the price of $800 a head the curly cattle would appear to be good property to have in the family, though it seems a pity that any of these animals should be marketed under any circumstances, even for the President's holiday, until their numbers shall be far greater than they are to-day. The dispatch does not state the present numbers of the Allard herd, reading as below:

"Helena, Mont., Dec. 20.—President McKinley will have for his Christmas dinner a buffalo roast. Several weeks ago a local butcher purchased ten of the animals from the Allard herd in the western part of the State. They cost $800 each when they were unloaded at the slaughter house here. They were killed and dressed last week, and to-day the butcher wired the President asking him if he would accept a roast. The President replied that he would, and this evening the butcher expressed him a choice one. The meat is being sold here at $1 per pound. Some of the animals after they were slaughtered and dressed were shipped to butchers in the large cities East. The herd from which they came is the only one in the State."

Fake Taxidermy.

I was over at the shop of W. C. Kaempfer, the Chicago taxidermist, this week, and while there had additional evidence as to the accuracy of the old saying that there are tricks in all trades except our own. Mr. Kaempfer tells me that there is a certain class of persons who are subject to the record disease in the purchasing of specimens, and these persons are sometimes victimized by unscrupulous dealers in this line of trade, as in many other lines. The other day a big grizzly bear rug, belonging to a Chicago gentleman, was brought in for remounting. Its owner bought it some time ago out at Salt Lake, and paid $250 for it. It was thought to be a fine specimen of the grizzly hide, measuring up into enormous figures. Mr. Kaempfer said that when it was unrolled it covered the whole floor, and he thought it was the biggest hide he had ever seen. When he ripped the cloth off the face of the hide, however, he discovered that the hide had been increased in apparent size by letting in patches cut from other hides. This increased the length and breadth of the skin very much. The head was stretched out and mounted very big. There had been several cubits added to the stature of this bear, and the whole thing had been done so cleverly that it could scarcely have been detected except by an examination of the inner side of the hide. The bear had been well skinned and so had the customer.

Out in Davenport, Iowa, there is a man by name of Dr. Palmer, who has started in to make a big collection of horns and antlers. Not long ago he heard of a phenomenal set of elk antlers, somewhere down in Texas. The measurements were such that he felt he had to have the horns, no matter what the cost. The cost was $800, and they were sent forthwith. It so happened that in shipping the horns were sprung a little bit, and, somewhat wonderful to relate, the main shaft of one of the antlers, the beam running up above the brow points, showed a fissure, slanting diagonally across it for some distance. Close examination showed that these antlers had been increased over a foot and a half in size, by the artistic letting in of a section from another horn. The job was excellently done, though the workmen could afford to do it excellently, at the price. There is some comfort in saying that the purchaser in this case got his money back.

It is said that the committee on measurement of heads and horns at one of the sportsmen's expositions in New York discovered a moose head which had had the frontal bone sawed and wedged apart a couple of inches or so in the mounting. This is a very simple way of making a record specimen. An inch or two does not seem very much, but it is a good deal on the end of one's nose, as the proverb says, and it is a good deal in so close a matter as the measuring of rival specimens.

The Sportsmen's Show at Chicago.

So Chicago is to have a sportsmen's exposition. This matter has earlier been announced in the columns of the FOREST AND STREAM. Within the past week the organization of the International Forest, Fish and Game Association has opened its offices and taken up the active work of getting together the exhibits and of carrying out the enormous detail connected with the successful completion of such an enterprise. The sportsmen's show is no experiment in the East, and it cannot be called an experiment in the West. The success of this exposition is a certainty here in Chicago, for Chicago is notoriously a good "show town," and it is notoriously full of persons who have interest in outdoor matters.

The organization which will carry on this exposition is a combination of some of the best gentlemen and most thorough going sportsmen of Chicago. The full list of officers and directors is as follows: James H. Eckels, President; F. C. Donald, First Vice-President; Richard E. Follett, Second Vice-President and General Manager; John R. Hoagland, Secretary; Harold F. McCormick, Treasurer. Directors—James H. Eckels, F. C. Donald, A. A. Sprague, George A. Thorne,

Walter H. Dupee, C. E. Perkins, C. H. Mathiessen, William Nash, Frank Mathiessen, Harold F. McCormick, J. H. Moore, Wm. G. Hibbard, Charles Counselman, John J. Mitchell, John B. Murphy, Thomas Murdock, Stewart Spalding, Richard E. Follett.

The president. Mr. Eckels, Ex-Comptroller of the U. S. Treasury, is a young man, but a big man. He has been a student of finances all his life, but has never believed that business matters ought to be the sole concern of any man. He is the president of a great bank, but he takes his big game hunts in the Rocky Mountains and enjoys them as much as a boy would. Mr. F. C. Donald, a thorough-going sportsman, is one of the most prominent railroad men Chicago has ever produced. As Chairman of the Central Traffic Association, he has made an enviable record. Mr. Follett, General Manager, is a sportsman of wide experience, not only in the woods, but in the business management of just such enterprises. The McCormick family have always been outdoor people, ranchmen and riders. Mr. Harold McCormick is well chosen for a place on the officers' list. Mr. Geo. A. Thorne is of the firm of Montgomery Ward & Co. He is a big game hunter, an athlete and a mountain climber. He has ascended the Jungfrau of the Alps, and others of the more perilous peaks, and it is his custom to carry home his guides and take care of them tenderly. Walt Dupee is yet another well known Chicago sportsman, and the list of directors could not be better.

The show will be held Feb. 9 to 24. There will be water polo, basket ball, swimming races, high diving, and all sorts of popular features. The exhibits of wild animals and wild men will be the largest ever assembled. Among the rare animals which are promised this show are live mountain sheep, live mountain goats and live ouananiche. A half dozen specimens of the latter fish are now waiting in perfect order in the cold Detroit River, over in Michigan. There will be very fine displays of wildfowl, and of the pheasants which are coming into notice as future game birds of this country. All in all this exposition promises to be a great success, and the people of Chicago will enjoy it.

On the Treatment of a Field Dog.

Books have been written on the best ways of handling, breaking, training and treating hunting dogs. My friend, Warren Powell, of Powellville, has not yet written his book on this subject, but methinks it should prove an interesting one when issued. The funny part of it is that he always has a splendid field dog about him, and has broken some of the best ones ever known in that part of a very practical sort of shooting country. Old Put, the big pointer of which I wrote last winter as one of our dogs on our hunt down there, was in his time a grand specimen of an all-round dog. He would point deer, run and help kill a wolf, point minks, rabbits, quail or anything else, never chased a rabbit, never mangled a dead bird, was a fine retriever from water, and to cap the climax was one of the best rat dogs you ever saw. He was an old-time meat dog, and his better on chickens or quail was never seen. To-day Put is eleven years old and weighs about 70 pounds. He is so full of rheumatism that it would be cruel y to let him hunt, but he howls to be let out when the procession starts. He is the very type of a hard headed dog, yet Mr. Powell says that he never whipped him in his life, even for running rabbits, which latter is instinct with any dog. He was just taught as a puppy that he must stop when told to do so.

Mr. Powell's present incumbent is a fine pointer bitch called Dorothy, and Mr. Powell has been doing his very best for two years to spoil this bitch, and is still unsuccessful. He knows that he ought not to shoot rabbits over her, but he says he just naturally can't help shooting a rabbit once in a while when he sees it run. The following scene we found to be not infrequent. Dorothy is discovered pointing very earnestly in a cornfield; tail moving a lit le bit, but a very interested look on her face. To her speaks Mr. Powell: "Dolly, you ought to be ashamed of yourself; you really ought. Where is it?"

Dorothy looks properly repentant, but does not break the point. Mr. Powell goes up to her and admonishes her. "Dolly, I have often told you that you have nothing to do with fur. It is not noble. You are a bird dog, I want you to remember. Dolly, you will break my heart." At this he pushes around in the grass a little with his foot, and the rabbit runs. Bang! and it is a dead rabbit.

"Come here, Dolly, this moment," Mr. Powell then says, and Dorothy comes in very repentant, humbly crawling. "Don't you know I can't help shooting rabbits when you point 'em Dolly?" says her owner. "Never let me see you do this again." Great flourish of a twig broken from a tree, which Dolly knows perfectly will never touch her hide. The same thing half a dozen times or so during the day. And yet, and this I can say of my own knowledge, Dolly is one bird dog out of thousands in her excellence, and one could ask no better to kill a bag over. She never breaks in on her points, is always going better at dark than at daybreak, and is one of the merriest and most eagerly snappy of dogs in working out a trail and getting to her points. How it came about I cannot say, but she is no example of corporal punishment in dog training.

At night we came home very late—11 o'clock or so, and likely later—after a long day afield and a long part of the night spent in coon hunting. Everybody has gone to bed. Mr. Powell goes out into the kitchen, puts his hunting boots on a chair so they will dry out well, tears off a part of the nearest towel to clean the guns. "By Jove," he says with sudden recollection, "we've got to feed the dog. Now what can I get to feed her?" Combination of the ice box is lost, but we prowl all through the pantry, the buttery and the closets of all sorts and descriptions. A roll of beef suet is found and some bread, fresh baked. The suet and a loaf or so of bread vanishes. "By Jove," comes again from this marauder, "here's what they were doing with that suet. Here's four jars of mincemeat already put up. You reckon mincemeat is good in a semi-canned state for a valuable field dog?" His question I was forced to decide in the negative, because I knew what would turn out if we left that mincemeat alone. It would be mince pies, and mighty good ones, to-morrow. Mr. Powell was reluctant to shut Dolly off from this opportunity, "It's the chance of her life to get a square feed," he insisted. All of which, I submit, goes to prove that when Mr. Powell's book on dog training does come out, it is apt to show certain departures from the time honored methods of our fathers.

As to Dorothy herself, we gave her a good hard working out one day this week when we were out after the quail. It was cold and rainy and muddy, but we found some birds nonetheless. Mr. Harner, Mr. Powell's shooting companion at Powellville, made the third of the party, and I misdoubt killed more than a third of the birds. He had along one of old Put's sons, a grand big pointer that he called Rock, and a better meat dog one would need go a long way to find. He was as staunch as a rock, surely, and when he pointed we knew he had meat every time. His great trouble is that he is too staunch. He is one of the sort that will stand pointing even if you go home and leave him, so when we lost him we simply went to work to hunt him up, for nearly always he would be found to have a point. Once Dorothy got a nice bevy point on some running birds, and we fired a half-dozen shots at them as they went up, but still no Rock appeared. We went just over the ridge, and found him pointing hard and fast on a single, which we killed for him. Almost any dog under the circumstances would have broken his point and gone to the guns with shooting so close to him. With two such dogs it went pretty hard with the quail that shoot, and we put about three dozen in the pockets without any special difficulty so far as the dogs were concerned, though some of the high ones, twisting back overhead into the timber, cut out the work for the guns pretty hard. It was all in all one of the prettiest little shoots I have had for a long time, and as an instance of physical exercise proved most valuable. I can commend Mr. Powell to any one who thinks he can walk, or who thinks that he ought to train down a little. We started at 7:30 in the morning, on foot, and walked out from town, and we walked all day. We had our lunches in our pockets, each man his own package in his own pocket. We did not stop to sit down all day, and ate lunch on the gallop, so to speak, without tea, coffee or water. Mr. Powell regretted very much that he had an apple in his hand just the time one bevy got up in front of us, so he only got one bird at the rise. We had supper at dark at a kindly farmer's place, and an hour after dark in came a troop of a half-dozen more hunters, with a coon dog locally famous in Powellville. It seemed that the programme included a little hunt by night. The rain that had been falling all day was now steady and considerably wet, but out we all went and took our medicine like little men. The only thing that saved us from hunting till daylight was the fact that the rain was so hard it was impossible for the hound to run a trail, though he opened once or twice. Some of us sat down on logs a few times, while the dog was trying to strike a trail, but I don't remember that I saw Mr. Powell sit down that night, and I know he did not all day, not even in crossing a fence. He is always fit. If you hunt with him you've got to get fit too or you pass out of the game. Yet what a blessing to a city man such a good hard tramp is. In the South it is customary to ride horseback when quail hunting, and in the West a great many go out with a wagon and team. All this is not in it with a square heel-and-toe from dawn to dusk on your own feet. We had a splendid time, and we bagged the biggest and heaviest lot of quail I ever saw. Mr. Harner and Mr. Powell weighed two of the birds they had killed, and they weighed an even pound between them. They were surely good flyers.

It was always my personal belief that good quail shooting with good dogs and good companions is about the pleasantest sport we have in America. As much depends on the dogs and friends as upon the supply of the birds. On our little hunt at Powellville all the requisites were present. Beside that, I learned some things about training and feeding the hunting dog, which till that time had been outside my ken. All I can say is that the system works, and produces good bird dogs, though I should consider mincemeat a bit expansive as feed.

There are always odd little incidents coming up in a day afield, and we had our share on this day. Once we marked down a bevy at the edge of some woods. We kicked one bird out of a brush pile in a ditch, and Mr. Powell killed it. At about the same time a rabbit ran out of the same brush pile. The dogs were reproved for nosing after a rabbit, and we went away. Ten minutes later we came back, and the dogs pointed there again. We kicked around again, and a bird went out, and I killed it. An instant later a second bird went out, and Mr. Harner killed it. Old Rock ran to retrieve the last bird, and it was seen that he had yet another bird already in his mouth. He had caught it in the brush pile just as the others went out. The bird was full grown and strong. We thought four singles out of three shots was pretty good for a record of one brush pile.

E. HOUGH.

HARTFORD BUILDING, Chicago, Ill.

The Mt. Vernon Deer.

IT appears that the slaying of the Mt. Vernon deer, of which an account was recently given, never actually took place, and that the story had its origin in the fertile brain of a newspaper reporter. Two boys who were out shooting caught a glimpse of some animal which they did not recognize, and after talking it over wondered whether it could have been a deer. When they returned to Mt. Vernon they continued to talk it over, and presently the local newspaper announced that they had seen a deer, while the Associated Press reporter went him more than one better and told of two deer seen, one of which had been killed.

Old Fish and Game Laws.

OAKMONT, Pa.—*Editor Forest and Stream:* If Mr. Carlos L. Smith will look up Cooper's "Leather Stocking Tales," he will find that Natty Bumppo was put in the stocks for killing a deer out of season, and, as I remember, the date was early in the eighteen hundreds. Cooper was very exact in most matters, and would not have made a game law in force earlier than he had found it had been.

W. WADE.

The FOREST AND STREAM is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday and as much earlier as practicable.

The Maine Game Law.

WHAT changes there will be made in the Maine fish and game laws this winter is much in doubt. The Legislature assembles Jan. 1, and the game law matter will be one of the most important. The semi-annual report of the Commissioners is out. In itself the reports is highly congratulatory and self-assuring. The code of game laws is already almost perfect. The Commissioners recommend a few minor changes of little importance; otherwise the laws should stand as they are. The September license law is almost perfect ,and should stand. It has caused no forest fires; has prevented many, on the contrary. The Commissioners still admit their inability to enforce the game laws when they again assert that fewer deer are killed under the September license law than would be killed without it. They do not refer to the slaughter of deer that has been going on by guides and everybody in Maine that can shoot, and sending the game to Boston for sale by anybody that will take charge of it. Will anything be done to stop this shipment? The Commissioners' report mentions accidental shooting, and says that there have been ten cases of such shooting during the past open game season. Regrets are expressed, but no remedies are suggested.

The report suggests that registered guides are universally in favor of the September license law; that from many replies received from these guides it appears that no forest fires have resulted from the law. Why should not the guides favor such a law? Why should they admit that forest fires have resulted from it? The law is a source of extra employment to them, and can they be expected to testify against it? I have a letter before me from a gentleman in Maine who is thoroughly acquainted with several of the best hunting and fishing sections in that State. The letter says that the Fish and Game Commissioners' report does not express the sentiment of those most interested in the game of the State, such men as have a right to be heard. The true sentiment is against the September license law, and this sentiment is bound to be heard at Augusta, unless the influence of the Commission is strong enough to shut off all sentiment or opinion outside of their own. There is danger that such may be the case, since Commissioner Carleton is himeslf a member of the coming Legislature. Editor Brackett, of the North Woods, is also a member of the House, a man who has given great energy to blowing for the Rangeley fish and game region for many years. Such men ought to have the best interests of the fish and game in Maine at heart and ought to be willing to see if the September license law is not a dangerous one, and one most ridicuously abused. Then the matter of indiscriminate shipment of deer, and even moose, to Boston by both citizens and guides, through pseudo sportsmen, should be thoroughly gone over.

Neither should the tremendous slaughter of fish at the Rangeleys and in other waters last season be lightly brushed aside and buried under a mass of figures concerning restocking with landlocked salmon. The trout of the Rangeley waters, the finest in the world, are gone if they continue to be drawn upon as they were last year. The Commissioners may answer that more trout and salmon were taken at the Rangeleys last year than ever before, but will they please take into consideration that there were more fishermen after them, and will they please note the great improvements in deadly tackle that have been introduced within a few years? If they will make inquiry, they will find that the record of trout taken at the Upper Dam, strictly on the fly, was smaller last year than for many years.

SPECIAL.

They Pay Fines on Long Island.

GAME protective matters on Long Island seem to be looking up, and certainly they are now receiving more attention than for a long time before. Commissioner B. F. Wood resides there, and he has an extremely energetic assistant and co-worker in Game Protector John E. Overton.

Two weeks ago there appeared in FOREST AND STREAM an account of a deer killed near East Hampton, L. I. The animal was reported to have swum over to Gardiner's Island, and, exhausted by its long struggle with the waves, to have crawled out on the beach, where it was clubbed to death by one of the inhabitants of the small settlement of Springs, not far west of Napeague Beach. The notice of this occurrence came to Commissioner Wood's eye, and before long Mr. Overton was on his way to East Hampton to investigate the case. After a good deal of difficulty and delay he succeeded in finding the man who had slain the deer at Springs, and took him before Justice Sherrill, who fined him $15, or in default of payment of the fine, sentenced him to jail for fifteen days. Like most breakers of the game law, the offender pleaded ignorance of the statute, and the justice was inclined to be lenient on the ground that the amount named was about all the man could raise, and a heavier fine would result in his going to jail.

Mr. Overton's energy in following up all cases that come to his notice is making for him a name among those people on Long Island who break the law, as well as among those who wish to see the game protected. He has made many arrests, and has secured a large number of convictions. Besides this, he has investigated many cases reported to him in which, for various reasons, no action could be taken. His arrest of the Mayor and Chief of Police of West Hoboken for shooting ducks from a sailboat was noted in FOREST AND STREAM a number of weeks ago.

About the middle of December the following item appeared in the New York Times:

"EASTPORT, L. I.—William H. Hallock killed an eagle near this place yesterday. It was flying at the time, and his first shot simply broke its wing. After falling to the ground it made a hard fight, and the hunter had to dodge behind a tree while he reloaded his gun. Afterward he emptied both chambers into the bird and killed it. It is a splendid specimen, measuring more than 7 feet from tip to tip. Hallock will have it mounted by a taxidermist." Before the slayer of the eagle had time to make up his mind what he would really do with the eagle, Game Protector Overton had arrested him, brought him before a

justice and had him fined. Soon after this he received a letter from a prominent citizen of Suffolk county, who spends his winters at Garden City, which reads as follows:

CENTER MORICHES, L. I.—John E. Overton, Esq. Dear Sir—In the name of every lover of birds I want to thank you for your action in bringing the party at Eastport to book for shooting the eagle. You are the first game protector we have had who protected anything, so far as I know.

Birds of that nature are rare, and a beautiful sight to any one who may see them, and their destruction is a piece of wanton and utter selfishness. You are entitled to the thanks of the community.

Yours gratefully,

NICOLL FLOYD.

Game Protector Overton is, as Mr. Floyd observes, entitled to the thanks of the community, but to more than their thanks. He is entitled to their hearty support and assistance, and every one interested in the protection of birds and mammals and in the carrying out of laws governing these matters should be willing and glad to give Mr. Overton all the help that he can in punishing lawbreakers and awakening a better game protective sentiment in the community.

Ossining Gun Club.

SING SING, N. Y., Dec. 21.—*Editor Forest and Stream:* It will be of interest to your readers to know that a step has been taken in this locality—even if in a small way—toward the protection of Westchester county game. We have organized the Ossining Gun Club, and now have a membership of sixty-seven, which is pretty good for a prison-ridden town of this sort. This "prison-ridden" is used advisedly. The New York press can't rub it in much longer, however, for a mass meeting of good citizens here last week forever separated this fair little burg from its 2,000 unwelcome neighbors "in durance vile." We will be soon known as Ossining-on-Hudson. What I started to say was: We have co-operated with the farmers in the vicinity to the extent of 2,000 acres, we posting the lands and they keeping all but club members off. This property in years gone by has been the best game land in the county. We propose to restock it with quail and shut down on all shooting for three years. At the end of that time, if the system works all right, we will have first-class shooting. Just pass that Plank of yours about selling game and a lot of these lazy old pot-shooters in this vicinity will hang up their muskets and work their 'tater patches. All through the game season the meat stores here are stocked with partridges, quail and woodcock. CHAS. G. BLANDFORD.

Sea and River Fishing.

Proprietors of fishing resorts will find it profitable to advertise them in FOREST AND STREAM.

ANGLING NOTES.

Spawning of Landlocked Salmon.

THIS evening a trainman on the Delaware & Hudson R. R. between Albany and Lake George told me that on Dec. 6 he saw five fish in Lake George in the shallow water 20 feet from the shore in front of the Fort William Henry Hotel. His story, in brief, was that the fish were on light colored gravel, they were in size what he would estimate to be 5 or 6 pounds each, and from his description of their movements they were spawning fish, and the light colored gravel was a spawning bed which they had prepared. The fish were silvery in appearance, and he concluded that they were lake trout. His attention was called to the fish by another man, who, in walking along a path in front of the hotel somewhat elevated above the water, had noticed the light spot in the water and investigated, to find it as described above—a spawning bed. My own conclusions are that it was the spawning bed of landlocked salmon and not of lake trout, and for this reason: E. L. Marks, an experienced man, has been employed this fall by the Forest, Fish and Game Commission to investigate the spawning of lake trout in this lake. He netted the lake from its head to a distance fifteen miles down toward its outlet, and remained until the lake trout were through spawning, and left about the middle of November. All the lake trout were found spawning on rocky ledges or shoals where it was almost impossible to work even a gill net and not destroy it from being hung up in the large boulders. Landlocked salmon have been planted for six years in a stream entering the lake very near to the place where the five fish were seen on Dec. 6, and it is more than likely that the five fish were salmon that could not put into the brook, and so prepared a bed near its mouth in the lake itself. While it is late for salmon to be spawning, all fish have been late in spawning this fall—whitefish, brook trout, brown trout and lake trout. Lake trout spawn at night, and do not spawn in such places as these fish were seen, and landlocked salmon do. Last year the salmon were seen in the brook at spawning time, and it is probable that they were there again this year, but the five fish were, I think, the overflow from the brook for some reason, and salmon, instead of lake trout, as the trainman supposed.

For a number of years I hesitated about planting landlocked salmon in Lake George for the reason that the inlet streams are so small that big salmon cannot get into them to spawn, as a rule, in the fall, and it was only when I found at Sunapee Lake, New Hampshire, the same conditions existing, and that they had been overcome by netting the fish at the mouth of one of the streams and penning them until the spawn was taken, that I made application to the United States Fish Commission for the fish, and the first lot was planted in 1895.

Fish Ponds.

The following letter is a sample, and a fair sample, of letters that I receive every little while. It is dated at Union Stock Yards, New York city, and reads: "I am the owner of property on Long Island and have a pond thereon where I would like to raise fish. Will you advise me where I can obtain the same, or if I can purchase them of the State, as I shall be more than satisfied to pay for them."

The kind of fish is not mentioned, and plain "fish" is such a broad term that I cannot even guess the kind of fish desired for the pond. Of course, the State does not, cannot, sell fish. While I am always very glad to advise any one so far as I can about stocking waters with fish, I must know the kind of fish and something about the character of the water before I can even try to give advice.

From the fact that the pond is on Long Island I might assume that the fish desired were trout, but I find from reading a great many letters in the course of a year that a man who is not familiar with species is quite apt to divide all fishes into two classes—trout and fish. The average man not particularly versed in fishes will say trout if he means trout, and all other fishes are plain "fish."

Private Parks.

The section of the fish and game law which provides for the laying out of private parks for the propagation and protection of fish, game and birds reads in part as follows: "Waters stocked with fish by the State at any time after April 17, 1896, shall not be laid out in any such park. If waters in any such park are hereafter stocked by the State with the consent of the owners, the provisions of this article shall no longer apply thereto."

Last year some gentlemen in the Adirondacks made application to the Forest, Fish and Game Commission for fish to be planted in what they declared in the application to be public waters. The fish were furnished and planted.

A few days ago the same gentlemen wrote to the Commission stating the number of fish that they had received and planted, and said that as they desired to include the lake in a private park they would like a bill for the fish and that they would remit the amount by return mail after they were informed of it. The Commission could only quote the law and inform the gentlemen that no bill could be sent, as the State was not permitted to sell trout or any other fish that were reared at the expense of the State, and there the matter rests for the present.

North American Association.

Mr. Chas. H. Wilson, one of the committee of the North American Association for the Protection of Fish and Game, called to see me, and from him I learn that several clubs in northern New York and elsewhere are taking an active interest in the coming meeting of the Association, and have made suggestions regarding a uniform law in the territory contiguous to the border line. I have made but one suggestion to Mr. Wilson, and it is one that I expect will meet with opposition when it is presented in convention, if not in committee. It is that the St. Lawrence River should have a black bass law operative in American and Canadian waters that will protect black bass until July 1 of each year. If the "game fish of the people," as the black bass has been called, is to prolong its existence as such for generations to come, it must have the protection of the law during the breeding season and during the time the parent bass are guarding their young. It is my belief that the opposition to extending the close season to include the entire month of June instead of nine days or fifteen days, as the case may be, comes almost entirely from hotel keepers and not from sportsmen.

At a luncheon given to the New York Fish Commissioners and delegates from several St. Lawrence River towns by Mr. Boldt at his cottage on one of the islands in the St. Lawrence, it was frankly admitted that the law was made to open June 10 to accommodate visiting anglers. The luncheon was given, as I now recall the date, June 19. Anyway, several days had passed since the season had opened, and during the discussion the president of the Anglers' Association said that bass he had taken that day had not spawned. One or two nights before I examined a number of black bass exhibited to the Commissioners, and the females were apparently not within two weeks of spawning. The black bass, perhaps more than any of the so-called game fishes, requires protection during the spawning season because it cannot be handled and its eggs taken as the eggs of trout and other fish are taken. The black bass is the only one of the game fish that broods or watches over its young for a time after they are hatched. The sunfish and bullhead watches over its young, but they are not with the elect when game fishes are considered.

New York State no longer distributes black bass, because the law does not protect them (there are some shallow waters where the black bass, either the large or small mouth, may spawn before June 15, and I mention this so I will not have to be reminded of it), and it is certainly unjust to take them from one lake where the sentiment is such that the fish abound and plant them in other waters where the sentiment and practice has reduced their numbers to that degree that restocking is necessary.

The moment a bill is introduced to extend the close season, those who are interested in some particular pond, where, perhaps, the water warms early and the bass spawn early, at once opposes it because of that pond. The greatest score of black bass I ever knew of in Eastern waters fly-fishing was made as the bass were coming on to the shoals to spawn, and it was made by a Fish Commissioner of one of the Eastern States, and made in the open season, of course, though the law is now changed. The greatest good to the greatest number demands a black bass law which does not open until July 1. A. N. CHENEY.

Trout and Fly.

Do trout ever jump out of the water in order to take a fly on the surface when they come down again? I have never seen an English trout do it, though I have seen them on the Avon, below Amesbury, jump 6 or 8 inches out of the water at flies. In the long stretch of dead water below the mill I have often watched the trout sailing along close to the bank under the bushes, following the caperers hovering and darting about backward and forward in short flights just over the surface, and every now and then a trout would leap out at them. But our American friends tell stories of trout which come up out of the water with a graceful curve and snap a fly off the surface as they go in again. I confess I never believed this, but from my experience last autumn on the little sheet of water at Broadwater, near Worthing, I am half inclined to believe that rainbows at times do something very like it. The water—a shallow artificial pond of an acre or two—is crystal clear spring water, and every day in September, about sundown, there was a big rise of the Little Marryat, a wee light buff colored dun. When this came on the rainbows were leaping all over the surface. I had to cast a long line, as the fish saw one so easily, but I could see my little oiled fly floating easily enough, and on several occasions it seemed to me that one of the jumping fish came down on it, and when I struck I found I had hooked a rainbow fairly in the mouth. Convinced I am not, for I cannot suppose a fish sees as clearly out of water as it does in it; but I am not so skeptical as I was, all the same.—R. B. Marston in London Fishing Gazette.

An Industrious Fisherman.

SPENCER, Dec. 4.—Julius C. Butler, night watchman at the Boston & Albany freight yard in Spencer, has a fish story to tell that he believes will make all others that have appeared in many months go to cover. Mr. Butler is an enthusiastic fisherman, and after he gets the sleep necessary every day, takes his rod and line and goes to some resort where experience has taught him fish flourish. He is out in all seasons of the year suitable for fishing, and says he wants to stake his season's record against the best.

As in all other things, Mr. Butler is methodical in his fishing habits, and after each trip marks down the number caught and the kind. He has kept his report of his fishing excursions since April 21, and last night showed the tables to a reporter for the Telegram. As a general rule he chooses Podunk Pond, in Brookfield, for his fishing grounds because, he says, he has found that day in and day out it is the best location for miles around in this vicinity.

On April 21, Mr. Butler was at Podunk and brought home as the result of the day's fishing 18 perch and a dace. On April 29 he was out again and this time the catch was 29 perch and 7 pickerel. On May 3 he got 34 perch, 5 pickerel and a pout, and two days later the string was made up of 35 perch and 18 pickerel. On the 10th he got 20 perch and 9 pickerel, and on the 12th 50 perch and 2 pickerel. May 17, the number was 20 perch, 15 pickerel and 15 pout; and on the 24th it was 15 perch, 4 pickerel and 2 white perch. He began fishing for the month of June on the second day and had big luck, getting 27 perch, 13 pickerel, 5 white perch and 8 pout. June 7 he got 26 perch, 14 pickerel and 1 pout, and a week later had the smallest day of the season, with a perch and a pickerel to show, but on that day it rained so hard he had to give up the sport.

Good luck returned in two days, when he captured 36 perch, 16 pickerel and 11 white perch. June 21 his catch was 21 perch, 12 white perch and a pout. For June 28 he had 7 perch, 18 pickerel and 21 white perch when he quit for the day. July 6 was another small day, luck only calling up 6 perch and 10 white perch. Things were better on July 10, with 46 perch and 2 dace, and the 17th brought in 39 perch and a pickerel. His next outing netted only 13 perch and on the last day of the month he went out for better luck and got a meal bag full of pout, in number over 400.

In August Mr. Butler did his first fishing on the 8th, and had 57 perch and a dace for the trip. He kept away from the pond a week then and when he went at it again got one of his best messes of fish. He captured 111 white perch. On the 27th he got 157 perch, and on Sept. 3, 120 perch and a pickerel. He did not go out again till the 20th, when he got 186 perch and a pickerel, and a few days after got 91 perch, 2 bass and a pair of pickerel. During the month of October he went out for fish six times, and on the first day got 85 perch and 5 pickerel. On the second trip of the month he caught 106 perch and 4 pickerel, and on the third attempt, 134 perch and 4 pickerel. For the rest of October his catches aggregated 339 perch and 6 pickerel. On Nov. 3 he caught 72 perch and an even dozen of pickerel, and on Nov. 7, 29 perch.

Mr. Butler figures his total catch as close to 2,800, and the average catch for a trip as 80 fish. He does not believe there are any fishermen in the county who can better this for home pond fishing, and if he is mistaken, he says he would like to know.

[The instruction to be drawn from this record of industry appears to be that there's mighty little chance in those parts for fishing folks who have to work by day.]

Wanton Trout Killing.

Editor Forest and Stream:

The following article appeared in the New York Sunday Tribune, Dec. 23, 1900:

"The members of the United States Geological Survey party, who recently went over the Lewis and Clarke timber lands in Montana, found time to do some hunting and fishing. At one point, on the south fork of the Flathead River, about one hundred miles north of Helena, Sartell Prentice, who is a clerk in the office of the General Superintendent of the New York Central Railroad, and R. H. Chapman, of Washington, stopped to cast for trout and caught sixty-eight fine specimens in two hours, some of them weighing more than 3 pounds. 'We were just a little too far from home,' said Mr. Prentice, 'to send the fish to friends, but did the next best thing, made a picture of what was left, after the cooks had finished their work, and sent the pictures on to show that there's pretty good fishing in Montana.'"

The above article is accompanied by a photograph, showing a long string of trout, about fifty in number, hanging from a line, with a tent and woods in the background.

Even without the frank confession contained in the last paragraph, the presumption would be very strong that

these parties had been guilty of wanton slaughter of game fish. Sixty-eight trout, "some of them weighing over 3 pounds," would certainly be about as many as sixty-eight men would use for food before the fish spoiled, and there is no indication that the party in this case was a large one. The statement that the picture represents "what was left after the cooks had finished their work" seems to remove all doubt about the matter.

Those who fish and shoot merely for the sake of killing—who are willing to pull out a lot of fish which they know they cannot use and leave them to spoil—belong in the class with poisoners, dynamiters, spawning-bed fishermen and stream netters. Will Messrs. Prentice and Chapman show cause why they should not be included in this class?

The Wellman Fox.

FROM time to time out of mind the fox has been referred to as the personification of all that is wily and cunning. How much this is deserved only those who have seen and hunted him in his native haunts can understand.

It is no doubt exciting and pleasurable to follow the hounds across country on a cool autumn day, but this can scarcely be called fox hunting, as in this case the fox is regarded simply as a means to an end, and is generally brought to the field in a bag.

But if the hunter seeks his red coated game with shotgun and one or two well-tried hounds, and by matching his soundness of wind and reason against Reynard's endurance and cunning either brings him down or sees him escape by some well-executed trick, then it is that he sees to the full all the cleverness that an old and experienced fox will develop in order to throw off his pursuers.

In my room I have two rugs, each made from the skin of six foxes, and over the fireplace stands a superb mounted specimen, which was locally known as the Wellman fox. He was much larger than an ordinary fox, measuring 18 inches at the shoulder and 4 feet 4 inches from tip to tip; and of how my brother, Tom, and I hunted him and finally brought him low, this story will deal.

The sight of these trophies brings to mind long, still days spent in the deep woods in the late autumn, when the dead leaves rustle under foot and the hazy air is laden with their faint, aromatic perfume; and days on the hills in the depth of winter, when the keen, frosty air sets the blood to tingling, and makes the very act of living a delight.

Three miles to the southward of my home is a stretch of rough, hilly country extending southward six miles to the Uradella River and culminating in a small mountain named Tassel Hill. This section is very thinly settled, and among the barren hills and thickly wooded valleys live many foxes, chief among which, by reason of his superior size and cunning, once lived the Wellman fox (Wellman being the name of the owner of the land on which the fox was most generally seen).

Tom and I own two fox hounds, named respectively Pilot and Napoleon. Keen scented, deep chested and strong, they are capable of running many hours at full speed, and are able to unravel most of the twists and turns of their fleet-footed prey.

Our first passage at arms with the Wellman fox was one cold November morning two years ago. A light fall of snow the night before made an ideal day for fox hunting, as the snow holds the scent and a fox can be seen at a greater distance than on bare ground.

Calling the dogs from their snug kennel, whence they came forth yawning and shivering, but aroused into new life at the sight of the guns, and almost too eager for the hunt to gobble their breakfast of johnnycake, we set out for Tassel, the dogs leaping about us and uttering short, impatient barks, as if urging us to hasten our steps.

We reached and climbed the first ridge of hills in the course of an hour, and were traversing a narrow plain that lay between us and the next height, when the dogs stopped short, and after sniffing the air for a moment started up wind at full speed toward a clump of evergreens growing in a small pocket in the hillside.

As they disappeared under the snow-covered branches they burst into full cry, and the Wellman fox broke cover and darted up the hillside. He was out of gun shot, so we could only stand and watch the chase. No time for tricks now. The dogs were pressing him close, and before two minutes had elapsed pursued and pursuers had vanished over a hilltop half a mile away, and only the clamor of the dogs borne back on the breeze showed the direction of the chase. After listening a few moments, we found that the fox was turning neither to the right nor the left, but was running straight for the river, the fierce outcry of the dogs showing that they were still close behind.

Tassel Hill lay half a mile away, and we ran toward it and up its thinly wooded sides in a long, swinging "dog trot" that is as easy as walking to one who is accustomed to it. When we reached the top, somewhat breathless from our long climb, we could at first see no sign of the chase. We both carried small but powerful telescopes and with these carefully scanned the distant horizon; and finally caught a glimpse of the hounds disappearing into a valley three miles to the southward.

There was nothing to do now but to wait with what patience we could summon till the fox returned, and on a cold day this is by no means a pleasant thing to do. There was no help for it, however, and seeking a sheltered spot we whiled the time away talking about other hunts and speculating on the possible outcome of this one. Three long hours passed before down the breeze came a faint o-o-ough, and hurrying to the highest point, we caught sight of the fox coming along as lightly and swiftly as a thistledown blown by the wind. He was then about a mile away, and half that distance ahead of the hounds, and as he was coming straight toward us we could not tell whether he would pass over the hill or along the eastern side. So Tom ran down to the foot of the hill in hopes to get a shot at him if he passed that way, while I remained where I was. I soon saw that the fox was not coming my way, so I slipped behind some evergreens which grew on the eastern slope, and bending low made my way to a projecting ledge, from where I knew I could see Tom. Reaching the point, I threw myself flat and crept to the edge and peeped over.

Tom was crouching behind a stump with his gun at his shoulder, and evidently ready for the fox, who was coming straight toward him, and was then less than thirty rods away. Eager to see the shot, I drew myself forward a little, when my elbow dislodged a fragment of rock, which went bounding and rattling down the face of the cliff. Startled at the sound, the fox whirled sharply to the right, and slipping under a worm fence near by was lost to view behind the brushwood that fringed it. As he disappeared, Tom ran to the fence and climbed to the top rail, where he stood for a moment, then raised his gun to fire. The sudden motion made him lose his balance, and to save himself from a fall he leaped toward the ground on the further side. And then I, who was watching him, saw a strange thing. Apparently in mid-air he stopped, swayed, then threw up his arms wildly and pitched heavily to the ground, his gun escaping from his grasp and exploding as it struck. Thinking that I knew what had caused his downfall, I hurried across the intervening space, and on reaching the fence found my conjecture correct. A barbed wire was stretched from corner to corner, and he had landed squarely on this, when the spring of the wire had thrown him headlong. He had risen when I reached him and was trying to rub himself in several places at once, while he vowed vengeance on the fox, and said that as he lay on the ground partially stunned the fox had come up the fence to within a few yards of him, stopped, and, as he solemnly asserted, grinned broadly and then struck off across the fields. The dogs had passed by in the meantime and were now some distance away. We decided after a short consultation to cross over to a valley about a mile to the east and station ourselves there in hopes that when the fox turned back toward the river he would pass that way.

But now the wind, which had held in the northwest all day, veered suddenly into the south, and a driving storm of mist and rain came on, which quickly drenched us. And as it blew directly from us toward the point where we expected the fox to appear, we were forced to give up the chase, and shouldering our guns we plodded along toward home.

Before we reached it, however, the increasing violence of the storm forced us to look for shelter, and Tom proposed that we stop at the house of Uncle Jack Wells, an old farmer who lived near by. Uncle Jack had been a mighty hunter in his youth, and when his rheumatism would allow him, still enjoyed a day with dog and gun.

He greeted us heartily as we entered, and made room for us by the glowing fire, while plump Aunt Mary bustled about, suggesting dry clothes and hot drinks, and finally setting a pan of crisp ginger cookies on a chair between us, urging us "to pitch in and fill up." Knowing Aunt Mary's cookies by experience, we waited for no second invitation, and while we munched we recounted our adventures to Uncle Jack.

"You'll never get that fox, boys," he chuckled. "I've tried for him dozens of times, and never came much nearer to him than you did, and lots of other fellows with as good dogs as yourn has tried to get him, but he always gets away."

"If he hadn't skipped out when that rock fell I think I would have killed him," remarked Tom.

"Don't you ever believe it, my boy," retorted Uncle Jack. "Ef he couldn't hev got out of it any other way he would hev dodged the charge of shot. Why, I remember——" and he recounted some of his hunting experiences, in the midst of which he was interrupted by a scratching at the door and a chorus of impatient howls. "Let yer dogs in, boys. I would not keep my worst enemy out of doors on a day like this," said Uncle Jack. So Tom opened the door and both dogs came in with a rush and made straight for the pan of cookies, which I caught up just in time to save from an assault.

Uncle Jack's story and the storm came to an end at the same time, and we departed for home, which we reached just in time for supper, to which, in spite of our feast on Aunt Mary's cookies, we managed to do considerable execution.

Farm work put a stop to our hunting for some time, and it was not till early in December that we were at liberty to go again. Then we made several trips to Tassel and were rewarded by the capture of several foxes, one of which ran into a woodchuck hole as soon as started and was ignominiously dug out and slain with a shovel.

But the Wellman fox seemed to have deserted his old haunts, as we saw no sign of him. There was but little snow that year till Christmas Day, when the skies presented us with about 6 inches of soft snow. There was no wind the next morning and we were astir early, and this time held the dogs in leash, meaning not to slip them till we found a good track. Leading, or rather being led by, the dogs, we were soon climbing the hills, and quickly found the first track, which we decided not to let the dogs follow, as it led away from the hills down toward the open country. The dogs, however, were of a different mind, and we had to drag them away by main force, while they filled the air with their howls of indignant protest.

Climbing a rail fence some half-mile further on, we saw another track on a slope a few yards away, so I sat on the top rail and held the dogs while Tom went forward to examine it, whereupon the dogs promptly jerked me head foremost from my perch in a frantic effort to follow him.

After a careful examination of the trail, Tom announced that he believed it to be the Wellman fox on account of the size of the prints, which were so much larger than those of an ordinary fox. Bringing the dogs up to the trail, we released them, and they set off with a chorus of deep bays, overrunning the trail at a point where the fox had made a sharp turn. But they soon picked it up again and disappeared in a nearby wood. We hastened to place ourselves in favorable positions, and listened for that furious outburst which would announce that Reynard had roused himself from his sleep behind some sheltering stump or stone pile and was flying for his life. Soon the welcome sound came echoing through the still air, setting the heart to throbbing faster and causing us to thrill with excitement. Several times the fox circled through the woods, and the music of the dogs grew louder or died away, as they followed on the track.

Presently the fox broke cover, and came along the edge of the wood. Though he could not see us, he was suspicious that something was wrong, for he cast frequent glances in our direction and would not come within gunshot. Coming to a rail fence, he sprang upon it and ran along the top rail as nimbly as a squirrel. Some distance above where the fox mounted it the rail fence was intersected by one made of boards nailed to posts. When the fox reached this fence he sprang upon the top board and proceeded along this narrow highway, waving his heavy tail from side to side just as a rope walker does his balancing pole. For some rods he proceeded in this manner, apparently undisturbed by the outcry of the hounds, which had almost reached the rail fence. Suddenly he came to a point where the top board was replaced by a barbed wire. I half expected him to walk this also, but he evidently had no liking for such a thorny path, for crouching on the last post, he gave a mighty spring and hurled himself through the air, landing at least 20 feet from the fence, and slipping into a gully was lost to view.

Thinking that such cleverness deserved some reward, we did not help the dogs, but watched to see how they would unravel this tangle. On coming to the fence, they crawled through and started across the next field, still in full cry. A few moments sufficed to show them their mistake, and they commenced casting about in wide circles in search of the missing trail. After a few moments of this fruitless work, old Pilot, who had had much experience in the ways of foxes, ran to the fence, climbed to the top and in a moment a joyous bay called Napoleon to his side, and together they raced up the fence, stopping every few moments to sniff at the rail. They soon passed the board fence, and not until they were some distance above it did they seem sure that the fence bore no scent of thir elusive prey.

Back they went to the starting point and worked up the fence more slowly than before, and this time they found where he had left the fence, and then the circling tactics were renewed, with the result that Napoleon discovered that the board fence had served as a passageway. Being assured of this fact, they set off at full speed and passed the point where the fox had made his leap. After they discovered this they seemed completely puzzled, and ran up and down the fence several times; finally they began circling, and at last struck the track and set off after Reynard, who had gained a couple of miles by this clever maneuver.

The dogs passed over Tassel Hill and down the other side, but just as their voices were growing faint in the distance they suddenly ceased and then we knew that the fox had played another trick on them.

We climbed Tassel and could see the dogs running aimlessly up and down in a road that lay a mile to the westward. They gave tongue once in a while, but in a baffled howl, rather than their usual deep bay.

We followed their track down to the road, where we lost it, as teams had been passing along and the dogs had run in every direction in their effort to pick up the trail. We waited for an hour or more, then gave it up and started for home, the dogs following dejectedly.

Our way lay by Uncle Jack's, and as we passed by he came out of the barn and hailed us: "I heard yer dogs up on Tassel ez I was comin' from Waterville," he said. "Where's yer fox?"

"We didn't get him," replied I; "he was playing tricks on the dogs all the morning, and finally threw them off entirely on the road below Tassel."

The old man appeared greatly amused at my reply, and when Tom asked him if he had seen the fox, he said: "I was comin' along the road by Tassel when I first heard the dogs, and just then that big fox that you hev b'en chasin' so much jumped out into the road just ahead of the horse and ran along the road a few yards ahead. I yelled at him and tried to get him to turn out, but 'twa'n't no use—the cunning varmint knew that I hadn't no gun, and he kept on that way for half a mile or more, then turned off into a patch of woods. Oh, I guess that old fox has a considerable time to live yet, boys!" he concluded with a chuckle.

Uncle Jack's friendly taunts aroused in us a determination to capture that fox before we shot at another, and it began to look as if the Tassel Hill foxes had taken on a new lease of life, as far as we were concerned, for day after day, as the weather permitted, we slipped the hounds on the trail of the Wellman fox. Some days we never saw him at all, and on others we might see him sitting on some distant hillside watching the dogs unravel some bewildering network of tracks he had woven for them in the valley below, until finally we were almost ready to believe that he bore a charmed life.

New Year's Day was ushered in by a furious storm, and for a week after the weather was too cold and stormy to venture out, and when we did go we saw no sign of the Wellman fox, and concluded that he must have deserted his old haunts for good.

One night in early February I was awakened by the full moon shining in at my window and casting over the earth a white radiance almost equal to the light of day. As I marked this I thought that it might be possible to hunt foxes by moonlight—something I had never thought of doing. Inasmuch as the moon was now near to set-

ting. I decided not to attempt it that night, but the next evening at about 9 o'clock I set out with Napoleon, not saying angthing to Tom of my intentions.

I reached Tassel in the course of an hour, and setting the dog free, I crouched in a fence corner and waited to see what would be the result.

The naked trees near by cast strange fantastic shadows that showed inky black against the pure whiteness of the snow, and no sound could be heard but the distant bark of a dog and the sharp crack of trees split by the frost.

I looked at my watch every few minutes, each time thinking that it must have stopped, and altogether I never passed a longer hour than that which elapsed before I heard Napoleon's bay ringing out beyond Tassel. I could tell by his voice that he was running close to the fox, and as he seemed to be coming in my direction I made ready to fire.

Nearer and nearer he came, till he was almost opposite, and I peered eagerly in every direction, trying to make out the form of the fleeing fox, but saw nothing of him, and the dog also passed unseen. Somewhat puzzled at this, I walked forward, and saw that they had gone by in a deep gully, which I had not seen, as from where I stood the ground appeared perfectly level.

Much disgusted at this, I climbed a small hill near by and resolved to wait there in hopes that the fox would come within gun shot.

For some time he circled in the adjacent fields, while I strained my eyes over the white expanse in a vain effort to detect his form.

At last on a hillside some distance away I saw a moving speck, which I concluded must be the fox. It came on toward me, and when it was about 50 yards away I took a steady aim and fired. Instantly there was a shrill yelp, and my fox resolved itself into a small shepherd dog, which fled wildly back in the direction from which he had come.

Uttering a fervent prayer that his owner would not appear to investigate, I ran over to the woods and paused at the edge to listen.

The fox had evidently taken fright at the sound of the gun, as the dog was now a long distance from me. I listened for some time, and finally he swung around in a direction that would bring him between me and home. I determined to try to head the fox off, and if not successful to give up the chase. I started off and had not gone far before Napoleon lost the trail, and I reflected that my moonlight hunt had not ended very well.

I was crossing the plain at the foot of the first range of hills, when suddenly the hound's voice echoed out fiercely right ahead, and the fox shot around the shoulder of a hill with the dog not a rod behind and straining every muscle to overtake him, and they were coimng straight for me.

Trusting that the light color of my hunting clothes had rendered me unseen, I threw myself flat, and pushing the snow up in front of me lay without lifting my head till they were almost upon me, then I rose to my knees and discharged both barrels at the fox, less than 20 yards away. The recoil knocked me flat again, but when I rose I saw that the fox was down in the snow, though he was keeping the dog at bay. I ran toward him, and as I came close I saw this was none other than the Wellman fox. Though badly wounded, he kept his front to the dog, who in some fear of his long, sharp teeth danced excitedly about him, trying to get him at a disadvantage.

I struck at him with the butt of the gun, and he turned with a snarl and seized the stock with his teeth. This gave Napoleon his chance. He sprang in and in a few moments the Wellman fox was dead and our long chase was over.

CARLOS S. HEAD.

Trapshooting.

Notice.

All communications intended for FOREST AND STREAM should always be addressed to the Forest and Stream Publishing Co., and not to any individual connected with the paper.

Leading dealers in sportsmen's supplies have advertised in our columns continuously for a quarter-century.

If you want your shoot to be announced here send a notice like the following:

Fixtures.

Jan. 12-13.—Aurora, Ill.—Bennett's target tournament.

Jan. 15-18.—Hamilton, Ont.—Hamilton Gun Club's eleventh annual tournament; live birds and targets; open to all. H. Graham, Sec'y.

Jan. 16.—Trenton, N. J.—Second contest of the series between teams of the Trenton Shooting Association and Freehold Gun Club, on the grounds of the former.

Jan. 17.—Baltimore, Md.—Ten-men team contest—Baltimore Shooting Association vs. Keystone Shooting League.

Feb. 6-7.—Cincinnati.—Cincinnati Gun Club's sparrow tournament. Chas. F. Dreihs, Sec'y.

April 9-12.—Baltimore, Md.—Eighth annual spring tournament of the Baltimore Shooting Association; two days targets, $100 per day added; two days live birds, $500 guaranteed. H. P. Collins, Sec'y.

April 16-18.—Leavenworth, Kan.—Annual tournament of the Kansas State Sportsmen's Association.

May 7-10.—Tournament of the New Jersey State Sportsmen's Association. C. W. Feigenspan, Sec'y.

May 7-10.—Lincoln, Neb.—Twenty-fifth annual tournament of the Nebraska State Sportsmen's Association, under the auspices of the Lincoln Gun Club. W. D. Bain, Sec'y.

May 21-25.—Chicago, Ill.—Twenty-seventh annual tournament and convention of the Illinois State Sportsmen's Association. Chas. T. Stickle, Sec'y

June 5-7.—Circleville, O.—Under auspices of the Pickaway Rod and Gun Club, annual tournament of the Ohio Trapshooters' League. G. R. Haswell, Sec'y.

June —.—Columbus, Wis.—Tournament of the Trapshooters' League of Wisconsin. First week in June.

Newark, N. J.—South Side Gun Club target shoot every Saturday afternoon.

Chicago, Ill.—Garfield Gun Club's live-bird trophy shoots, first and third Saturdays of each month. Grounds, West Monroe street and Fifty-second avenue.

CONTESTS AT INTERSTATE PARK.

Jan. 8.—Interstate Park, Queens, L. I.—Welch (holder)-Elliott match for the Dupont trophy.

April 1-5.—Interstate Park, Queens, L. I.—The Interstate Association's ninth annual Grand American Handicap Tournament at Live Birds.

June —.—Interstate Park, Queens, L. I.—Forty-third annual tournament of the New York State Association for the Protection of Fish and Game.

Monthly contest for the Dewar trophy till June, 1902; handicap; 25 live birds; $5 entrance. First contest took place June 20, 1900.

Interstate Park, Queens, L. I.—Fountain Gun Club's regular monthly shoots, the third Thursday of October, November and December.

Interstate Park, Queens, L. I.—Two miles beyond Jamaica, on L. I. R. R. Trains direct to grounds. Comp'etely appointed shooting grounds always ready for matches, club shoots or private practice. Café and hotel accommodations.

Interstate Park, Queens, L. I.—Weekly shoot of the New Utrecht Gun Club—Saturdays.

DRIVERS AND TWISTERS.

Club secretaries are invited to send their scores for publication in these columns, also any news notes they may care to have printed. Ties on all events are considered as divided unless otherwise reported. Mail all such matter to Forest and Stream Publishing Company, 146 Broadway, New York.

On Friday of last week Capt. A. W. Money was most cowardly and brutally assaulted in his office at 318 Broadway by Mr. George S. McAlpin, of New York. Both are members of the Carteret Gun Club, of Garden City, L. I. From reliable witnesses we are informed that in company with Dr. F. C. Wilson, of Savannah, Ga., who was present in the interest of peace, Mr. McAlpin obtained an audience with Capt. Money in his private office, and brought up the matter of handicapping in some important cup events of the Carteret Gun Club's shoots. After a short conversation, and without any preliminary warning, he assaulted Capt. Money, who was sitting in his chair, striking him below the eye, breaking his cheek bone. It came so suddenly that Dr. Wilson had not time to interfere. The blow was heard in the outer office, and was described as sounding like the breaking of a chair snapping under a heavy weight. The sound was not considered of any special importance, as no one dreamed that an assault was in progress. Mr. Fred Quimby entered Capt. Money's office soon after the blow was struck, and held Mr. McAlpin, who was intent on further violence. In about a half hour Capt. Money's eye was swollen to an alarming degree, and on the advice of his friends he sought medical aid, and had the injury dressed. The doctors pronounced it severe. Legal proceedings will be instituted against the offender. The assault had its origin in a matter which Mr. McAlpin construed as reflecting on his honor. In an important cup event, in which he had two wins, he was both a contestant and a handicapper—positions which jointly were, on their face, improper. Several contestants were set back, while Mr. McAlpin's mark remained unchanged. Capt. Money wrote a letter to the secretary of the Carteret Gun Club, calling attention to the matter, and the harm it might do as a precedent in club matters. We are informed that Mr. McAlpin was removed from the handicap committee. This he considered sufficient ground for an assault.

The programme of the Hamilton Gun Club's tournament, fixed to take place on Jan. 15 to 18, contains the information that $1,200 in prizes is guaranteed, and that no one is barred. The Rose system will govern the division of the moneys in both the live-bird and target events, excepting the 10-bird race ($100 guaranteed), which has four moneys, high guns. A handicap will govern in the target competition. Two Canadians and one American will do the handicapping. Upward of 3,000 birds will be on hand. The traps will be ready on Monday afternoon, the 14th inst., for practice. Targets, 2 cents. The management announces that it has given a bond to the Customs Department of the Government, guaranteeing to the American shooters free entry of their guns, on shipment to Hart & Lyne, Customs Brokers, John street South, Hamilton, Can. Mr. John Parker, of Detroit, will assist the management of the tournament. The secretary, Mr. H. Graham, will gladly give all necessary information to inquirers in respect to the tournament. On the first day there is a 20-live-bird event, $15 entrance, including birds, and five at 20 targets, $2 each, handicaps 16 to 22yds. On the second and third days respectively there is one event at 10 live birds and five 20-target events. The fourth day has one event at 10 live birds, $7, birds included, surplus added; high guns. All sweeps and miss-and-outs are subject to the handicaps.

The Dupont calendar for 1901, issued by the Messrs. E. I. Dupont de Nemours & Co., of Wilmington, Del., has an elegance of idea and portrayal which make it delightful in its theme and pleasing in its artistic features. The main picture depicts a group of sportsmen in a baggage car, with their pointers and setters, guns and general paraphernalia, en route to the shooting grounds. At the bottom is a picture of a setter and pointer on a point, while the machine military guns are depicted in smaller spaces on the sides. The excellence of it will appear when it is mentioned that Prof. Edm. H. Osthaus is the artist. The excellence of the work will be apparent on reference to the cut published in our advertising columns.

A New Haven, Conn., daily publishes the following: "Col. W. F. Cody (Buffalo Bill), fresh from a successful hunting trip in the Rockies, has arrived at the Waldorf-Astoria with his wife to spend the holidays here with a daughter who is attending a private school. 'We are going to have the greatest sportsmen's organization in the world in Wyoming,' said Col. Cody yesterday. 'It is the Cody Club, organized only three weeks ago, but with a membership already of fifty-five, and applications enough to fill the limit of 100. George T. Beck, son of former Senator Beck, of Kentucky, is president. Our list of members includes the names of the best-known huntsmen in America.'"

The calendar of the Winchester Repeating Arms Co. for 1901 bears a portrayal of two scenes, quite distinct in character, both the work of the well-known artist, Mr. A. B. Frost. The first is of the plains, entitled "Fresh Meat for the Outfit." In the foreground is adead antelope, by which is standing a plainsman, rifle in hand, his horse, caparisoned in cowboy style, standing staunchly close by, while a horseman is galloping in from the distance. The other is a scene of a more advanced civilization. It portrays a rabbit hunt—dog in full chase, the man drawing a deadly aim on the rabbit, while the boy stands keenly expectant.

The Winchester Repeating Arms Co., have prepared for free distribution a booklet containing information or rare value. The methods of working out the different systems of dividing the moneys at tournaments, the Jack Rabbit system, the Equitable system, the Rose system, high guns and class shooting are minutely explained. It also contains trapshooting rules for targets and live birds, and a list of the loads used by several famous shooters. It is gotten up in a most artistic manner, and is a valuable addition to the reference works of every shooter.

The half-tone cut of the U. M. C. calendar for 1901, published in our advertising columns, will give an accurate idea of its excellence. The boy, apparently arrayed in the hunting costume of his father and equipped with his father's gun and ammunition, having had success in his quest, as shown by the dead birds on his shoulder, is in that state of ecstatic delight which comes only to normal, wholesome boys, under similar circumstances.

In a contest for the H. C. Hirschy B. R. live-bird trophy between Messrs. French and Morrison, on the grounds of the Intercity Shooting Park, Dec. 19, each killed 25 straight at 30yds. There also was a side bet of $10, loser to pay for the birds. In the shoot-off at 5 birds, French had his first 2 dead out, and withdrew, Morrison continuing and killing his 5 straight.

The article on pigeon shooting, published elsewhere in our columns, should be carefully read and remembered by all trapshooters, as it is an exponent both of the attitude of the S. P. C. A. and the legal status of the sport in New York. It will be noted that a club need not necessarily be incorporated to meet the legal requirements.

In a two-men team shoot on Thursday of last week at Plainfield, N. J., 20 birds per man, three teams contested, with results as follows: Newark team—Wm. Hassenger and H. C. Koegel, 37. Whitehouse team—J. W. Kuerels and A. Emmons, 32. Plainfield team—J. H. Lindsay and J. F. Reed, 31. Mr. T. H. Keller acted as referee.

At Watson's Park, Chicago, the Chicago Gun Club holds its third shoot on Jan. 5, the first Saturday. The following clubs hold their first shoots for 1901 as follows: Audubon Gun Club, third Tuesday, Jan. 15; Garden City Gun Club, second Saturday, Jan. 12; Chicago Club's fourth shoot, Jan. 19, the third Saturday.

The first of the series of three contests between teams of the Baltimore Shooting Association and Keystone Shooting League took place at Holmesburg Junction, Pa., Thursday of last week, nine men to a team, and resulted in a victory for Baltimore by a score of 198 to 189. Each man shot at 25 birds.

The Barker trophy, a solid gold watch, was contested for on the Carteret Gun Club's grounds on Saturday of last week. Messrs. H. Money D. Bradley, R. A. Welch and L. Duryea tied on the first 15 birds. They again tied on 15. In the miss-and-out to determine this tie, Mr. Duryea won.

In the contest for the Spalding trophy on the grounds of the Denver, Colo., Club, Dec. 20, Mr. R. A. Creek against a field of seven was victor, breaking 91 targets out of 100. Four other contestants, Garrett, Shemwell, Arnold and Shultz, were each but 1 target less in their scores.

"Hood," one of the most expert of Baltimore shooters, won the cup which was the trophy of the star event, shot on Christmas Day, on the grounds of the Baltimore Shooting Association. He scored 19 out of 20 live birds, tieing thereby with Hawkins, and winning in the shoot-off.

Mr. W. P. Brown, manager of the Intercity Shooting Park, Minneapolis, Minn., announces that there will be an open shoot at the park about the first week in April next; one day at targets and one day at live birds. The dates will be announced definitely later.

In a contest, Dec. 17, between teams of the Minneapolis and St. Paul clubs, at Intercity Shooting Park, for the H. C. Hirschy trophy (targets), five men to a team, 20 targets per man, the Minneapolis team was victor by a score of 86 to 73.

In the shoot for the Christmas Day Cup, on the Crescent Athletic Club's grounds, C. Kenyon, Jr., won with a score of 47 out of 50, with a handicap of 9 added. The December cup was won finally last Saturday by Dr. J. J. Keyes.

Tuesday of next week at Interstate Park will be a day of special interest in shooting circles, for on that Day Messrs. Welch and Elliott contest for the Dupont trophy, the latter being the challenger.

Capt. A. W. Money, on the grounds of the Country Club of Lakewood, N. J., Dec. 25, won the Gould trophy, standing at the 30yd. mark.

In the Interstate Park Handicap at 25 live birds on Dec. 26 Messrs. Van Allen and Morfey killed 25 straight, from the 30yd. mark.

The annual meeting of the Garden City Gun Club will be held at the Sherman House, Saturday, Jan. 5, at 8 P. M., sharp.

BERNARD WATERS.

Death of Jacob Pentz.

AFTER an illness of many months, Jacob Pentz died at his home in New Brighton, Staten Island, on Dec. 24. About three years ago he complained of stomach trouble, although there were no external evidences of the disease at that time. During the past year he became gradually emaciated, and a few months ago the doctors diagnosed his ailment as cancer of the stomach. The growth was so far advanced that death was declared to be inevitable within a few months. Notwithstanding this disheartening prognosis, Uncle Jake—a soubriquet which gratified him much, and which was much used by his personal friends—kept him in harness bravely till the encroachments of the disease so sapped his strength that he was forced to take to his bed.

No sportsman was better known than was Jacob Pentz. All departments of sport pertaining to dog and gun, journalistic, advisory, competitive, etc., received his attention. Years ago he officiated as judge of setters and pointers at the W. K. C. show, but in later years he devoted himself almost exclusively to the interest of trapshooting, in respect to which he was conceded to be of the highest authority. He officiated innumerable times as referee in matches and club shoots. His opinions and rulings were treated as authoritative. He was a member of the Handicap Committee of the Grand American Handicap, and was by common consent conceded to be its chairman. As a writer he had a graceful, fluent style, and was equally forceful in descriptive writing, in discussion, or in the intricacies of technical writing.

Until his last illness he had a life free from illness, and had nearly reached the three score and ten allotted to man, being about sixty-eight years old at the time of his death.

Columbus Gun Club.

COLUMBUS, O., Dec. 26.—Here are scores of the Columbus Gun Club shoots on Thanksgiving and Christmas. On Thanksgiving the weather was perfect, with a slight wind blowing across the traps, making the birds fast. Anderson and Dering shot at 200 picked birds taken from a coop of over 400 choice birds. The match started at 8:30 A. M., in order that the boys might partake of their Thanksgiving turkey. The feature of the day was the beautiful retrieving done by H. O. Anderson's red Irish setter Jack, which alone retrieved over 300 birds, making some beautiful retrieves of winged birds:

One hundred birds per man, 30yds. rise, American Association rules:

H O Anderson	112*1022*1222212022110011—19	
	2120*1002222222212121112—21

CREMO, Sec'y.

Experts on Guns and Shooting.

"EXPERTS on Guns and Shooting," by G. T. Teasdale-Buckell, is the title of a new work which is replete with valuable information to those who shoot or contemplate shooting. It treats of the evolution of shooting during the century, of shooting schools, the formation of guns, two eyes in shooting, sights and ribs to guns, style, stocks, try guns, choke bores and cylinders, pigeon shooting, game shooting, heat of gun barrels and the effects on them of various powders, cap-testing, patterns, etc. It can be obtained of the Forest and Stream Pub. Co.

The following on try guns will give the reader an idea of the author's thoroughness of treatment:

When Mr. W. P. Jones, of Birmingham, first introduced the try gun for firing, we were very doubtful whether it would prove of real use or not. Later on we observed that every gunmaker almost was doing all he could to acquire the right to the use of one. Our faith in our own judgment was shaken when nearly all the gunmakers declared for the new tool. We have never reverted to our old faith entirely, in spite of the fact that now the gunmakers are beginning to slacken in their love for their bantling. The fact is that a good many gunmakers overrated the use, as a measure, of the new instrument, and have thus become disgusted merely because they asked it to do too much. What was the mistake they made? They had been in the habit of asking a customer to put up an adjustable but non-firing gun at the eye of the measurer, and they judged the bend and cast-off necessary, and gradually altered the adjustment to meet what they saw.

The firing gun could find this mechanical line no better than the sham adjustable gun. But what it could do was to tell the gunmaker what happened between the alignment of the gun and the shot leaving the muzzle—that is, what muscular movements had influenced the direction of the gun. There is quite a large variety of nervous muscular movements that may take place in this short space of time, any one of which is enough to move the gun off the alignment. The most common of all is a sympathetic impulse between the trigger finger of the right hand and the holding or left hand. When this takes place down goes the gun, and a low shot is the result.

This fault in its mildest phase only affects still or straightaway shots, for when there is any swing on the gun there is obviously little chance of the gun moving in a contrary direction. This is only as much as to say that the muscles cannot make two opposite movements at the same time. Where can the try shooting gun go wrong here? It discovers that at a stationary target the shooter is low. The cure is to straighten the stock, and the cross shots of the shooting schools are of such mechanical character—every shot exactly like the other—that to put up and shoot a certain distance in front is a habit learned in a few shots. Swing does not enter into it, and there is in consequence no check on the mistake made by the try gun at the still target.

I know that some gunmakers will not admit that it is a mistake to correct a muscular movement by means of bend of stock; but of them we would ask: What happens in game shooting, when there is any swing on, to a man whose gun is set to shoot a couple of feet or so over his game, and who has to rely upon the drop of his left arm to get his game into the killing circle of the shot? When there is much swing there is obviously no involuntary drop of the barrels; momentum prevents, whatever the muscles may do. Here, then, instead of correcting a fault, the try gun has perpetuated it, and added to the difficulty by making the cure only applicable to some kinds of shots and not to others. We are reminded at this stage of the absurd fashion in vogue of having various bends for various shooting. Thus, a straight gun for pigeon shooting, a crooked (according to Capt. Money) one for clay birds, and perhaps another for game. We have no hesitation, all the same, in saying that a man who cannot shoot all sorts of shots with one bend in not properly fitted.

Yet had the information given by the try gun in the above instance been properly used it would have been the making of the shooter. There is nothing much easier to cure than this sympathetic movement between the right first finger and the left hand. The stock in trade necessary for it is merely a batch of cartridges three parts of which have got dummy caps in and cannot be exploded.

This is an improvement on the late Sir Henry Halford's methods of teaching a man what he is doing. Sir Henry loaded the gun for the pupil, and occasionally put in no cartridge when one was expected, and at other times put in a cartridge when an empty gun was expected. By this means the pupil had not to be told, but he saw for himself, how he pulled down his weapon with the pull of the trigger, and he could discover for himself the reason of it. He also saw that when he thought there was no cartridge in the gun he could snap it off in a manner to make bullseyes; for this very good reason he made them when he did not expect to fire.

With ordinary cartridges it requires some sort of an assistant to deceive the pupil. With dummy caps intermixed with a lot of cartridges otherwise exactly like the dummies there is no need for an assistant or a teacher, and it is wonderful what a great lot of fairly good shots will find themselves dropping the gun with pull of the trigger. Probably their gunmakers have already given them a compromise—that is, a gun that shoots when held still slightly over the mark, but not enough over to make them miss fast-crossing game altogether, in consequence of swing. Of course, this compromise results in shooting slightly under going-away game and slightly over crossing game; but that is not good shooting and does not effect clean work.

It has been attempted to explain how a temporary fault in the shooter may be established as a permanent defect by a too great reliance upon the try gun. Although this sympathy of the two hands with each other is about the most common fault in shooting, and accounts for the inability to hit the plate in the center of many a fairly good shot at game, it is by no means the only defect that the try gun has been set to cure. Defects in eyesight are very common, and it is very strange that, in spite of Sir Ralph Payne Gallwey to the contrary, with whom we cannot agree on this occasion, it is not only possible but a frequent occurrence to find men shooting from the right shoulder who align the game, the foresight and the left eye, some entirely, others partially. Those who do it, it is true, as he says, cannot align the rib with the left eye; it is mechanically impossible. What they do is to align the rib to the right eye, but they put the bead on the object between it and the left eye. This is even easier to a man who does not align his rib at all, and there are many shooters who do not, and whose guns are so straight that they could not accomplish the task if they would. The firing try gun is not superior here, because the throwing up of the gun at an object is all that a gunmaker desires to see in order to suggest a cure. The cure can be of different kinds: (1) a treatment of the eyes; (2) an amount of cast-off that shall bring the rib at the false breech opposite to the left eye; (3) shooting from the left shoulder; (4) shutting the left eye.

But there is a middle way between aiming with the right eye and aiming with the left. There are, for instance, gunners who with both eyes open are influenced by the left eye to pull the muzzle over toward the left, and yet in reality do not put the bead on to the spot with either eye, although they think that they do so. Here, again, the try gun has tampered with the defect and encouraged it to continue. Cast-off has been given to counteract mechanically the optical defect. Soon the shooter gets used to the greater cast-off, and the bead once more finds itself somewhere between the line of the two eyes, and as Mr. H. Harriss says, a deformed gun is the result; no permanent object has been gained. It is perfectly true that aiming is not all a question of sight; the touch has a great deal to do with it, and if it were possible to deceive the touch it might also be possible to cure erroneous aiming by cast-off and cast-on. It is possible to do so for a short period, but the senses soon find out—perhaps not during measurement at the shooting school, but afterward, when the new gun has been built. Mr. Watts does not use a try gun. Mr. Purdey believes that the responsibility of a try gun would involve the constant alteration of stocks to meet the daily changes in the men themselves. Cures by deceiving the eyesight and the touch by radical changes cannot be more than temporary in their effects. To all such as are troubled with defective vision we might, without fear of laying down the law, say that the gunmaker is not the doctor wanted, and that the oculist and the optician are the first necessity. After their assistance a man will generally find himself able to align a gun with the eye that he wishes to align it.

It is true that neither the one nor the other will be able to give a man both long and short sight with the aiming eye. As we get older our sight alters, and we can no longer see as perfectly at three different distances as we used to do. For instance, if we feel that the highest form of accurate shooting is only to be attained in the way that Mr. Froome shoots a rifle—that is with both eyes open, with perfect definition of the rear and the fore sight and the object with the right eye, the oculist can assist if he is not asked to do too much. A rifle-like aim is an absolute cure for the intereference of the left eye, and nobody can say it is impossible to take it quickly enough after seeing some of the crack shots put in double bullseyes to a single run of the deer at Bisley. The proper thing to ask from the oculist is not that you may see the three distances with equal clearness with the aiming eye—that cannot be done with defective vision with anything less elaborate than the telescope—but a single eyeglass is generally enough to make definition good at the false breech and the foresight. Then the shooter may trust to the left eye to place the alignment on the mark; especially safely if the left eye is unable to see the foresight; not so safely if it can see it, and still less safely if it can see it with exact definition. Mr. Gilbert's two-eyed sights might be useful to such eyes as these, but the oculist will probably succeed without them; if not, the india rubber thumb stall will be all that is required to prevent the left eye seeing the foresight. The unsuspected ability to align the sights with one eye and to place that alignment upon the mark with the other is common to everybody. Our view, then, is that no bad shooting consequent on defect in eyesight should be attempted to be cured by the measurements of the try gun. The only thing against the oculist's assistance is that by radical treatment of the eyes by means of glasses it will perhaps happen that the means of judging distances of the game will be impaired. That is serious when it happens; we do not think there is any means of making one eye judge distance as well as two, and if there is a defect in one eye the same rule applies—only to a less extent.

There is a fallacy that aiming in the sense of aligning the rib spoils time. It may be so when the shooter has to struggle with his gun for the alignment, but not if the gun fits him. A gun is supposed to fit a man's shoulder. Really, it is much more important that it should fit his face. One day, not so very long ago, we were watching a most excellent gunmaker shoot, and he explained to us that at certain angles his gun always hit his face unpleasantly. Could there be anything more condemnatory of the fit of that gun? We know of nothing. A few shots in rapid succession at that particular angle would unnerve him for the rest of the day.

There are nervous habits that are much more readily detected by the assistance of the try gun than without it. Provided a man aims correctly always at the gunmaker's eye, he will probably do so at the mark, and yet he will often miss all the same. Some nervous trick, possibly a tightening of the grip when pulling the trigger, interferes with the direction of the shot. The tightening of the grip always affects the alignment. Perhaps the shot always goes into the same place to right, left, high or below the mark. The cure is improperly given in bend or cast-off if so, and although the try gun has found the mistake the adjustment of stock will not cure it permanently. The cure, if it is not to be of the nervous habit itself, ought to be in the lie of the rib—that is, the barrels should be set to shoot at a point where the rib does not aim—thus untrue to alignment of the rib. This is the only possible way of deceiving the touch and the eye permanently, for both will accomodate themselves to cast and bend of stock in a very short time. The same cure is not so applicable to defects of vision, because there are limits to the variation of the line of the rib as compared with the barrels.

Still, a try gun is of use, for few men put up a gun in the same way when they are not going to fire it at the gunmaker's eye as they do in actual shooting. But even the try gun is liable to the same error. The great thing seems to be to try a shooter at snap shots, whereas nine-tenths of the game he will afterward shoot at will not require snap shots. It is certain that a gun which does not suit, say at driving grouse, may do admirably for such shots as rabbits give. Neglect of getting the head down, as usual, for alignment influences the direction, and it would do so equally if the shooter were unconscious of ever aligning at any time. Snap shots, such as those at rabbits crossing rides, are comparatively easy, and we do not think that a shooter educated upon them, and with a gun built on lines indicated by such education, will ever be quite satisfied when the only difficulties to overcome are pace and allowance. To allow accurately you must align correctly, and this is so whether you align at empty space in front of your game, or whether, having aligned the game, you jerk or swing the gun in front. True alignment is in either case absolutely necessary, whereas in snap shooting you do not get the head down to align.

We think that the greatest use of the try gun after all is that it can be set under direction of the shooter to his own bend, and with it thus adjusted he can at any time have practice at the shooting schools and find out whether he is making the correct allowances. But in order to do this it is essential that he should have time to see his game, that the game should come at all sorts of paces, from extremely fast to slow, and that the attendant should be able to tell him exactly where he has placed every shot with respect to the game.

The State Law re Pigeon Shooting.

THE following, in the matter of pigeon shooting, as governed by the laws of the State of New York, is taken from Our Animal Friends, the organ of the S. P. C. A.:

Pigeon Shooting Allowed by Law.

"We cannot too strongly express our feeling on that subject, but when we are asked to put a stop to pigeon shooting in the State of New York and the adjactent State of New Jersey we are compelled reluctantly to confess that we are absolutely powerless. The law permits pigeon shooting under certain restrictions. We have no power whatever to prohibit what the law expressly allows. All that we can do is to endeavor to see that the humane restrictions which the law prescribes are strictly obeyed; and that we have done and are now doing, to the full extent of our ability. It is desirable on all accounts that the facts should be known, and we shall now proceed to state the facts precisely as they are. The general law of the State of New York for the prevention of cruelty to animals is this:

"'A person who overdrives, overloads, tortures, or cruelly beats, or unjustifiably injures, maims, mutilates, or kills any animal, whether wild or tame, and whether belonging to himself or to another, or deprives any animal of necessary sustenance, food, or drink, or neglects or refuses to furnish it such sustenance or drink, or causes, procures, or permits any animal to be overdriven, overloaded, tortured, cruelly beaten, or unjustifiably injured, maimed, mutilated, or killed, or to be deprived of necessary food or drink, or who willfully sets on foot, instigates, engages in, or in any way furthers any act of cruelty to any animal, or any act tending to produce such cruelty, is guilty of a misdemeanor.'

"Beyond all question this law was intended to prohibit pigeon shooting. Mr. Henry Bergh repeatedly interfered to prevent pigeon shoots on the ground that they were illegal. In 1874, however, he was sued for damages in the City Court for interfering with this sport, and the court held that the shooting of pigeons thrown from traps was an offense against the statute. Thus the general law against cruelty to animals was declared by a judicial decision to apply to pigeon shooting. It is only fair to give the reasons which were urged, and which are still urged, in opposition of this decision. They were briefly these: (1) that pigeons are an article of human food; (2) that to become so they must be killed; (3) that killing by gunshot is no more cruel that the usual method; and (4) that unless slaughtering of other animals for human food is an offense against the law, the shooting of pigeons, which are always sold for the same purpose, cannot be illegal. It was argued on the other side that many of the pigeons were not killed outright, but were wounded more or less severely and escaped to perish miserably afterward. The answer was that the gunners shot to kill, and that the suffering of wounded pigeons was in every case contrary to their intention, so that no criminal intent of cruelty could in any case be proved against them.

The Act of 1875.

"On the meeting of the Legislature of the State of New York in 1875 an act was passed by which pigeon shooting was expressly excepted from the prohibitions of the general act; and all that could be done for the protection of the birds was to confine the sport to 'sportsmen's clubs or incorporated societies,' with a provision that wounded birds should be immediately put out of their pain. The act was in the following words:

"'None of the provisions of law heretofore enacted for the prevention of cruelty to animals within this State shall be construed to prohibit or interfere with the shooting by members of sportsmen's clubs or incorporated societies, of pigeons. Provided: that in each case as soon as they can be captured or taken after being shot such pigeons, if living, shall be immediately killed.'

Lack of Power Limits Responsibility.

"From the terms of this curiously worded law, our readers will see the limitations within which the power of our society is restricted in the protection of pigeons. Again and again we have successfully interfered to prevent pigeon shooting by persons who are not 'members of sportsmen's clubs or incorporated societies'; and notwithstanding the vagueness of the proviso that wounded birds shall be killed 'as soon as they can be captured or taken,' we have repeatedly interefered when it was apparent that no proper care was taken to fulfill the manifest purpose of the law in that particular. There, however, our power ends, and where there is no power there can be no responsibility. Any one of our correspondents, however, earnestly or indignantly he may object to the sport of pigeon shooting, and however urgently he may insist that it should be stopped, has just as much power to stop it, and just as much responsibility for its continuance, as the American Society for the Prevention of Cruelty to Animals. Beyond the two particulars to which we have referred, every individual citizen has the same power as the society, which is just no power at all; and he is just as responsible, or, in other words, he is not responsible.

Appeal to Sportsmen's Clubs.

"What, then, can be done to mitigate whatever cruelty there may be connected with pigeon shooting? Again and again an effort has been made to secure an amendment of the law. Every effort of that kind has been abortive. We must, therefore, endeavor to do the best that is possible under the law as it now stands, and the best that is possible can be most surely secured with the assistance and co-operation of the incorporated clubs to whom alone the privilege of pigeon shooting is allowed by law. No opposition has ever been made by those clubs, and none can be expected from them, to the rigid restriction of the privilege of pigeon shooting to their own organizations. For the spirit of American law is utterly opposed to special privileges of all kinds; and the only ground upon which the sportsmen's clubs can expect to retain the privilege which the law allows to them alone must be founded on some good reason, or the privilege itself will not stand. The only solid ground of reason on which it can be maintained is the reasonable belief that incorporated clubs of genuine sportsmen will see to it that the humane provision for the immediate killing of wounded birds shall be effectually observed. In some clubs it is observed. The grounds are surrounded by a high fence, beyond which it can rarely happen that a bird which is at all seriously wounded can ever go; and retrievers are employed to gather in any that may fall within the inclosure, so that they may be immediately dispatched if they are not already dead. To provide such safeguards against the infliction of needless suffering upon their innocent victims is the very least that any club of genuine sportsmen will desire to do, and so much at least they must expect to do, or they cannot hope to retain the special and exceptional privilege which they now enjoy under the law. We appeal, then, in their own interest, and also in the interest of humanity, to every sportsmen's club in the State of New York—and also in the State of New Jersey, where the law is practically the same—to justify the Legislature is presuming that the proviso which the law itself imposes will be loyally and effectually observed.

"And then we wish that sportsmen would give up pigeon shooting. We must frankly say to them that we should compel them to give it up if we had the power to do so; also that we shall do our best endeavor to enforce the proviso with which the law accompanies their special privilege; and then, again, we appeal to them to make such arrangements as to obviate the necessity of interference."

IN NEW JERSEY.

Forester Gun Club.

Newark, N. J.—The Forester Gun Club held another one of its big shoots on Christmas Day. The club of late has had a big success, and everybody seems pleased with the good programme which it gets up. The programme for Christmas was one event at live birds, and thirteen events at targets, thrown Sergeant system; eight events for sweepstakes and five events handicap for poultry (three turkeys and two chickens). The grounds have been put in condition for live-bird shooting, and we expect in the near future to have an all-day shoot at same. The day was all that could be asked for, and the entire shoot was one without a balk. The shoot started at 9:30 A. M., sharp (live birds), and stopped when they could hardly see the small empires.

First event, live birds, 25yds. rise, 50yds. boundary, birds cost 40 cents a pair, three moneys; open to all. There were eleven entries. Shooting began at 9:30 and lasted until noon:

Sinnock	01212222—7	Parker	01202201—5
Ferguson	21121212—8	D Fleming	10120120—5
Meir	11121211—8	Backus	00222210—5
Wm Smith	12222022—7	Foster	020*2222—5
Hayes	22022222—7	Tigh	22002*02—4
J J Fleming	12111*11—7	C Smith	20002110—4
Stanton	221**0*1—4	A R Strader	20222 —4
Weller	11012021—6	R H Strader	0)022 —3

Handicap for turkeys and chickens, 10 targets each event; optional sweeps:

Events:	1	2	3	4	5	6	7	Events:	1	2	3	4	5	6	7
Hayes	8	7	8	6	8	8	9	Winans	8		3	8	4	3	
J Fleming	9	7	8	9	9		7	Stanton					5		
A Strader	5	5	6	5	5	7	7	C Smith					8		9
R Strader	8	2	5	8	9	4	5	Murphy							7
D Fleming	3	3	6	7	5	8	8	Foster							5
Tigh		8	9	7	8	4	5	Parker							2
Terrell			7	10		7	8								

Event No. 9, 15 targets; turkey won by Sinnock; handicap in parentheses: Sinnock (2) 13, A. R. Strader (3) 13, C. Smith (4) 12, Winans (5) 10, Hayes (2) 12, R. Strader (3) 11, Whitehead (2) 12, Carter (5) 9, D. Fleming (4) 9, J. J. Fleming (2) 11, Terrell (3) 10, Ayres (4) 8, Foster (6) 6, Weller (2) 7, Tigh (2) 6. Shoot-off, handicap cut in half: Sinnock (1) 10, A. R. Strader (1) 8, C. Smith (2) 6, Winans (2) 5.

Event No. 10, 10 targets, same conditions; turkey won by C. Smith. After qualifying twice with Tigh shot a miss-and-out and won: C. Smith (4) 8, Tigh (4) 8, Whitehead (3) 9, Weller (3) 7, Stanton (5) 7, A. R. Strader (4) 6, J. J. Fleming (4) 9, D. Fleming (3) 6, R. Strader (4) 5, Sinnock (0) 8, Terrell (4) 4. Shoot-off, same as in former event: C. Smith (2) 8, Tigh (2) 8, Whitehead (1) 10, Stanton (2) 7, Weller (1) 8, A. R. Strader (2) 7, J. J. Fleming (2) 6. Second shoot-off, same conditions: C. Smith (1) 10, Tigh (1) 9, Whitehead (0) 9.

Event No. 11, same conditions as former event; won by Whitehead after qualifying twice, with Ayres in a miss-and-out: Whitehead (2) 9, Ayres (4) 10, J. J. Fleming (2) 8, Weller (3) 7, Tigh (4) 7, Stanton (5) 5, Sinnock (0) 10, C. Smith (2) 10, D. Fleming (3) 6, A. R. Strader (2) 7, Terrell (2) 7, Foster (6) 2, R. Strader (2) 2. Shoot-off, same as former: Whitehead (1) 10, Ayres (2) 8, Stanton (2) 7, J. J. Fleming (1) 8, Sinnock (0) 9, Weller (1) 7, Tigh (2) 6, C. Smith (1) 6.

Event No. 12; chicken won by J. J. Fleming after qualifying twice with Whitehead and Stanton; finally won in miss-and-out. 10 targets: J. J. Fleming (4) 8, Whitehead (3) 8, Stanton (5) 8, Tigh (4) 7, D. Fleming (4) 7, Sinnock (0) 9. Shoot-off, same as former events: J. J. Fleming (2) 9, Whitehead (1) 9, Stanton (2) 10, D. Fleming (2) 7, Tigh (2) 5. Shoot-off: J. J. Fleming (1) 8, Whitehead (0) 9, Stanton (1) 6.

Event No. 13; chicken won by J. J. Fleming; 15 targets, same conditions as former events: J. J. Fleming (4) 7, Stanton (5) 9, D. Fleming (4) 6, Tigh (5) 6, Murphy (3) 7. Shoot-off: J. J. Fleming (2) 7, Stanton (2) 7, D. Fleming (2) 7, Tigh (2) 4, Murphy (1) 7. Shoot-off: J. J. Fleming (1) 10, Stanton (1) 8, D. Fleming (1) 3.

JOHN J. FLEMING, Sec'y.

Armonk Rod and Gun Club.

ARMONK, N. Y., Dec. 21.—The annual turkey shooting tournament held Dec. 22 was a pronounced success. The turkey prize given by the club was, as usual, the feature of the day.

Event No. 6 was a very interesting one. A bet of $10 was posted between Thomas Ward and A. Betti, which Betti captured, also a fine turkey.

Among the competitors were L. Platt, Thomas Ward, G. Menzie and A. Bettie. Lunch was served at 2 o'clock, by the members of the club. Events 2, 4, 6, 8, 10 and 12 were turkey prizes added by the club. The following scores were made:

Events:	1	2	3	4	5	6	7	8	9	10	11	12
Targets:	10	15	10	15	10	15	10	15	10	15	10	15
Z Flewelling	9	14	8	15	7	12	8	13	9	12	10	11
A Betti	8	13	10	14	8	15	8	14	10	13	9	14
S Carpenter	8	12	9	14	8	13	10	15	7	12	8	13
L Platt	7	12	8	12	7	12	7	12	8	12	9	15
G Menzie	6	10	7	11	7	11	8	12	8	11	8	11
T Ward	8	12	8	13	7	14	6	11	8	12	8	13

H T Wayne	5	7	4	6	6	9	7	..	6	9	7	10

H. T. WAYNE, Sec'y.

At St. Louis.

CHAS. SPENCER and H. C. Griesedick shot a challenge 25-bird match for the Mermod live-bird trophy at Dupont Park, Dec. 15. The day was favorable and the birds a mixed lot, with a few very fast ones, which succeeded in getting away. Griesedick killed 20 of the 25 shot at and won the match by 1 bird, and was at once challenged by Dr. W. S. Spencer. The latter match will be shot before the new year.

F. C. RIEDL.

ON LONG ISLAND.

New Utrecht Gun Club.

Interstate Park, L. I., Dec. 29.—There was a novel introduction in the way of handicapping in the club event, all the shooters standing at 30yds., with dead birds or no birds in place of misses to the weaker shooters. The scores show that the scratch man was too close, as he was the only one to kill straight:

Ten birds, all at 30yds., with misses as kills:

C A Lockwood, 1 miss.....1220*210w
C M Lincoln, 1 miss.....2210222220— 8
T W Morfey, scratch.....2222222222—10
W F Sykes, 1 no bird.....2222222110— 9
F H Chapman, 1 miss.....2222122020— 8
Brooks, 1 miss.....1111200110*— 6
W Hopkins, 1 miss as no bird.....0001211222— 7

Six events at 5 birds each:

Lockwood, 28..	4	3	5	5	3	4	Chapman, 27...	4	5	..	5	3	4
Lincoln, 28....	3	3	2	5	3	..	Brooks, 28.....	4	5	3	5	5	4
Sykes, 29.....	4	5	5	2	..	..	Hopkins, 29....	5	5	5	4	..	..

Interstate Park Handicap.

Interstate Park, L. I., Dec. 26.—The Interstate Park Handicap, at 25 birds, $10 entrance, $5 in gold added, was a tie between Van Allen and Morfey, each ending with a straight score from the 30yd. mark, to-day. There was a cross wind. The scores follow:

Morfey, 30.....2212222212122212222122222—25
Vandergrift, 28.....20*22222*2122*222202222*2—19
Fanning, 30.....2212222222*11*12*21211222—22
Van Allen, 30.....2222222222222222222222222—25
Capt Money, 29.....010100212110220*1w
Hopkins, 29.....1111112212120121221222122—24

Miss-and-out, $2 entrance:

Morfey, 30.....22122222
Vandergrift, 28.....21222222
Fanning, 30.....2111210
Van Allen, 30.....2220
J B Hopkins, 29.....10
Capt Money, 29.....1120
Wm Hopkins, 28.....11121222

Trap at Interstate Park.

Dec. 25.—There were a number of events shot at Interstate Park, L. I., to-day. In two matches, 5 birds each, between Messrs. C. A. Lockwood, and C. W. Rodman, each won one and lost one, a single bird making the difference each time, each killing 9 out of 10. Most of the events were at live birds. The scores, each event at 5 birds:

C A Lockwood, 29.....	5	5	4	4	5	2	..	5	4	..	3	4	4	..
T H Chapman, 27.....	2	4	1	..	..	..	..	..	..	..	..	..	..	..

WESTERN TRAPS.

The Chicago Garfield's Turkey Shoot.

CHICAGO, Dec. 25.—The appended scores were made on our grounds to-day at our Christmas pigeon turkey shoot. The club gave ten fine turkeys to be shot for in 5-live-pigeon events—that is to say, 5-bird events. No shoot-off. High guns to draw for the turkey in each event. No member eligible to win more than one turkey. Shooting began at 10 o'clock and continued until darkness put a stop to it. We only succeeded in running off seven turkey events, and the scores show who was lucky in the draw in each case. Twenty-five contestants took part in the various events during the day. Everything passed off without friction, not a single thing arising to mar the pleasure of the occasion.

	No. 1.	No. 2.	No. 3.	No. 4.

DR. J. W. MEEK, Sec'y.

Haverhill's Christmas Shoot.

HAVERHILL, Mass.—Our club, with a few visitors, spent a very enjoyable day at the traps on Christmas. The weather was warm and pleasant, with very little wind, and the flight of the targets was as good as the most chronic kicker could wish, and in consequence some very creditable scores were made, more especially those of the "has-beens" and "the would-like-to-bes." No sweeps were shot. Everybody stood at the kindergarten distance—16yds.—and were in it simply for the love of the sport.

The summary follows:

Events:	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16	17	
Targets:	10	10	10	10	10	10	10	10	10	10	10	10	10	10	10	10	15	Av.

SECRETARY.

Kansas City Tournament.

First Day, Wednesday, Dec. 26.

No. 1, 7 birds, $5 entrance, high guns:

Gottlieb .....1012122—6
C Cockrell.....0222201—5
F Cockrell.....2122220—6
Wright .....2202221—6
L & R Tramp.....1121112—7
Hearne .....2020000—2
Berkey .....2202220—5
Crosby .....2222222 —7

Crosby and Tramp divided $33.20.

No. 2, 7 birds, $5 entrance, two moneys: Crosby 7, Gottlieb 7, C. Cockrell 7, F. Cockrell 7, Bramhall 6, L. & R. Tramp 6, W. Allen 6, Wright 5, Smith 4, Berkey 3. The 7s got $5.40; the 6s $4.80.

Practice shoot: L. & R. Tramp 12 straight, Crosby 7 straight, Gottlieb 7 straight, Parry 6 out of 7, W. S. Allen 6 out of 7, Bramhall 6 out of 7, Beach 6 out of 7.

Miss-and-out, $1 entrance: Wright 3, Scott 3, Brahmall 4, Allen 0, Hill 0, C. Cockrell 5, Norton 8, F. Cockrell 8, W. Allen 4, Smith 3, Jim Elliott 2, Berkey 8, Crosby 3, Harne 6. Norton, Cockrell and Berkey won.

Second Day, Thursday, Dec. 27.

No. 1, miss-and-out, $1 entrance, birds extra: Budd 7, Cockrell 9, Norton 6, Crosby 9, Elliott 7, Tramp 9.

No. 2, 7 birds, $5 entrance, two moneys: Budd 7, Norton 7, O'Brien 7, Tramp 7, Dunn 6, Cockrell 6, Ludlow 2.

No. 3, 10 birds, $7.50 entrance, three moneys:

Stevens .....2022220201— 7
Norton .....0201210220— 6
O'Brien .....02222110**— 6
Budd .....2222222222—10
Crosby .....0222022222— 8
Elliott .....0111011111— 8
Berkey .....1022222002— 7
Wiggins .....2122111112—10
Cockrell .....1222111110— 9
Dunn .....0010102102— 5

No. 4, 7 birds, $5 entrance, two moneys: Elliott 7, Smith 6, Stevens 6, Crosby 6, Budd 6, Norton 6, O'Brien 6, Berkey 6, Tramp 6, Hairgrover 5. The eight men who skipped 1 bird each shot off the tie—something unusual at the present shooting game. After a spirited contest it was finally divided between the venerable Mr. Charley Budd and the veteran L. & R. Tramp.

No. 5, miss-and-out, $2 entrance: Smith 2, Crosby 6, Budd 6, Stevens 7, Norton 7, Laidlaw 3.

No. 6, miss-and-out, $2 entrance: Smith 0, Budd 5, Laidlaw 1, Norton 5, Stevens 0, Crosby 5.

No. 7, miss-and-out, $2 entrance: Stevens 2, Norton 8, O'Brien 3, Crosby 12, Budd 3, Laidlaw 11, Cockrell 10.

Third Day, Friday, Dec. 28.

No. 1, miss-and-out, $1 entrance: Budd 2, Norton 9, Cockrell 6, J. Elliott 2, Stevens 9, Dunn 2, O'Brien 8, Crosby 6, R. S. Elliott 9, Tramp 9.

No. 2, miss-and-out, $2 entrance: Elliott 8, Budd 5, R. Elliott 5, Crosby 8, Stevens 2, Norton 8, Dunn 5, Cockrell 6.

No. 3, 10 birds, $7.50 entrance, three moneys:

Budd .....2222211021— 9
Norton .....2112222121—10
Cockrell .....2201*02212— 8
Stevens .....2112200222— 8
Elliott .....2222122112—10
Hickman .....1212022221— 9
Dunn .....2022021212— 8
Tramp .....2122212110— 9
Crosby .....2222222222—10
O'Brien .....1212212222—10

No. 4, 15 birds, $10 entrance, four moneys:

Cockrell .....022120122211021—12
Budd .....122212122222102—14
Norton .....222212212022221—14
Hickman .....2222222021121112—14
Crosby .....222222222222222—15
Wiggins .....211112000221222—12
O'Brien .....2122111221121011—14
Stevens .....222222222222222—15
Berkey .....2222102022222222—13
S Smith.....212222001020222—11

No. 5, 7 birds, $5 entrance, two moneys: J. S. Smith 5, Elliott 7, Crosby 7, Norton 5, Cockrell 5, Perry 4, Dunn 6, Hickman 5, Berkey 5, O'Brien 6, Budd 7, Stevens 2, Tramp 6.

Monte Carlo Pigeon Shooting.

PIGEON shooting begins at Monte Carlo on Monday, the 17th inst., and will extend over forty-six days, or six days more than last year, with a total of about £3,000 added money, exclusive of one or two pieces of plate and medals. During the first nine days there will be competitions for prizes of £20 only, but on Jan. 7 a start will be made with the £40 prizes, to be shot for three times a week up to Monday, Jan. 21, when the International meeting begins. The first event in this series is the Grande Poule d'Essai, to be shot for on Monday, Jan. 21, this having £120 added money and being shot for at 26 meters. The Prix d'Ouverture, which used to precede the Grand Prix du Casino, has been dropped, and the Grand Prix itself has very wisely been allowed three days (Thursday, the 24th, to Saturday, the 26th), as it has nearly always been impossible to complete it in two. The conditions of this prize remain unchanged, but instead of being immediately followed by the Prix de Monte Carlo Handicap and the Prix de Consolation, the latter has been discontinued, while the Prix de Monte Carlo, with £160 instead of £120 added, will not be shot for until Friday, Feb. 1, being preceded by two £40 sweepstakes earlier in the week. In the first week of February there will be the Prix des Dahlias (£80) on the 4th; the Prix des Œillets (£40) on the 6th, and the Prix de Monaco (£100) on the 8th, while on Monday and Tuesday, the 11th and 12th, the Triennial Champion Prize of £400 will be shot for. Count Voss was the winner of this in 1898, the five previous victors being Signor Mainette Ghido, 1895; Signor Creste Galette, 1892; Mr. Walter Blake, 1889, Mr. H. Cholmondeley Pennell, 1886, and M. Lafond, 1883. After the championship contest—25 birds at 27 meters—there will still be twenty prizes, thirteen of £20 and seven of £40, to be shot for, this bringing the season up to March 30, when it will close with the Prix de Clôture, a handicap with £200 added, as against £400 last year. The superintendence of the shooting is left, as it has been since M. Blondin's regretted death, to Baron de Boissieu.—London Field.

Crosby—Elliott Contest for Cast Iron Medal.

KANSAS CITY, Mo., Dec. 27.—The contest for the Cast Iron medal to-day, between Messrs. J. A. R. Elliott and W. R. Crosby, the latter the challenger, resulted in a victory for the former. The weather was unfavorable. There was a head wind and good birds. The scores:

W R Crosby.....2222202122222222222222222—24

Elliott Diamond Medals.

KANSAS CITY, Dec. 23.—The monthly shoots for the Elliott diamond medals, representing the local championship at both live birds and targets, have had a good effect in increasing interest in sport over the traps during the past year. At the final monthly shoot, which took place yesterday at Washington Park, there were about twenty-five contestants. The competition was decidedly spirited, as it was the last opportunity to get in for the final shoot-off for absolute possession of the trophies of 1900.

Under the conditions, the winners of the trophies at the twelve monthly shoots (former winners always being barred) will meet on Wednesday next, the opening day of Bob Elliott's holiday tournament, to shoot off for the championship medals. Both are handicap shoots. The live-bird event is at 25 birds, regulation rules, excepting distance handicap, which sends the shooter back 1yd. after each kill of 5 straight. The target race is at 50 birds, with a dead bird handicap.

The live-bird shoot yesterday was a hot one, and resulted in four ties on straight scores, Newt Beach, J. M. Curtice, George Stockwell and Tom Norton, all shooting in perfect form. The latter, however, was not eligible to win, as he had not participated in the five monthly shoots required to secure a place. In the shoot-off between Beach, Curtice and Stockwell for a place, in the finals, the former won, killing 5 more straight. Beach's persistency during the year for a chance in the general shoot-off has been one of the features of the year's work at the traps, as yesterday was the fourth time that he has been in the monthly shoot-off.

JAMES WHITFIELD.

Mississippi Valley Notes.

DR. SPENCER defeated Henry Griesedick for the Mermod trophy, at live birds, at the Dupont Park range, St. Louis, Christmas Day. The birds were a rather mixed lot, with some very fast ones, and the air was filled with flying snow, making the shooting difficult. Griesedick defended the trophy at 33yds., and had rather the hard end of the draw on birds. Spencer shot at 28yds., and killed his birds nicely and in good time. The score:

Griesedick .....2201*2021*02112**22222221—18
Spencer .....2222222222022222222*2202—22

Heilman won the montly live-bird medal shoot of the Peoria Gun Club, on the 23d inst., making the only straight score. The wind was blowing hard at the time, and owing to the weather conditions, attendance was small.

Mr. J. S. Fanning, one of the new Indians, announces to the rest of the tribe that he expects to move over and "mix it" a little more with the boys next season, having plowed up the ground pretty well through the East the past season. We will all be glad to see him back on the old standing ground.

Mr. A. B. Daniels states that interest in shooting has been more general than ever in and about Denver during the present fall and winter. The sportsmen there are planning for a big circuit shoot during the coming year.

Brewer Defeats Dickson.

Brooklyn, N. Y., Dec. 26.—Match shot Monday, Dec. 24, between Capt. Jack Brewer and H. Dickson, of Newburgh. Terms: 100 birds, $200 a side, American Association rules, 30yds. rise, loser to pay for birds. The birds were an exceptionally fast lot, and some very good kills were made. At the 77th round Mr. Dickson withdrew, for he could not hold the fast pace that Capt. Jack was shooting:

Brewer .....2222222022222212222222*22—23

GEO. C. LEBOHNER.

Rifle Range and Gallery.

Columbia Pistol and Rifle Club.

Final shoot of Columbia Pistol and Rifle Club for the year 1900: The rain prevented the marksmen from shooting all they desired, but a large number of members were present and good scores made at the final shoot of the year for the Columbia Pistol and Rifle Club at Harbor View yesterday. Geo. W. Hoadley, who won the "booby" prize last December, to-day won "chief" and made two 41s in succession with the pistol, which gave him a good margin on Becker and Dr. Twist for the all comers' pistol medal. He also won the pistol and rifle class medals. Young went after Daiss and gained 8 points on his first score with revolver. This put Daiss on his mettle, and he made 41, 46, and 47, consecutive shooting. This Young could not overcome, as the range closed at 3 o'clock. The rain in the morning prevented targets being opened until 11 o'clock, which also shortened time for scores. Dorrell was sick and could not come.

Young gained 1 point on Becker in the military, but Becker regained it later, which, with his 20 points handicap, placed him on safe ground. Becker's shooting with his load in the short-barreled .30-30 Winchester carbine is worthy of note.

Hoadley's Stevens pistol was pitted, but he cleaned each shot.

QUAIL SHOOTING IN MISSISSIPPI.

Copyright, 1901, by Forest and Stream Publishing Co.

Capt. Kuhnle's .22 rim-fire shooting is probably entitled to a record under the conditions.

Corp. Wuerschmidt won the "booby" prize, which consisted of a huge diamond (?) mounted on engraved leather, and presented by George Mannel, our own artist.

We are proud of our Kindergarten. At last they are talking English at the Bund meetings. F. O. Young resigned as delegate to the Bund recently, and Dr. H. W. Hunsaker was appointed in his place, from the Columbia Pistol and Rifle Club. When it was announced at the last meeting of Bund that Young had resigned, one of Young's friends (?) jumped to his feet and exclaimed, with great vehemence, "Dot's goot! Dot's goot!" Still we live and hope to shoot another day."

The scores in the various events were as follows:

Twist revolver medal: C. M. Daiss 41, 46, 47, 52, 53; F. O. Young 43, 48, 53.

Pistol medals: Geo. Hoadley 41, 41, 48, 63, 64, 63; Dr. J. F. Twist 50, 54, 74, 76, 66, 71, 74, 66.

Rifle medal, .22 and .25cal.: Capt. Fred Kuhnle 19, 19, 21, 22, 22, 23, 25; Dr. J. F. Twist 19, 24, 24, 24, 31.

Military and repeating rifle medals, Creedmoor count: F. O. Young 48, 45, 45; P. Becker 45.

At 3 o'clock the team match was called, with Capt. Fred Kuhnle and P. Becker. This match calls for 5 shots with rifle and 5 shots with pistol. The member making the best score is crowned chief for the ensuing year. This honor was won by George W. Hoadley. Capt. Becker's team won, with a total of 680, against Capt. Kuhnle's 610. Scores of teams:

Capt. P. Becker 88, F. O. Young 67, E. Hovey 82, G. W. Hoadley 66, Dr. J. F. Twist 95, Dr. H. W. Hunsaker 77, E. A. Allen 76, F. W. Page 129; total 680.

Capt. F. Kuhnle 88, A. H. Pape 72, C. M. Daiss 69, G. Mannel 120, Mrs. G. Mannel 99, Mrs. C. F. Waltham 100, F. S. Washburn 94, Corp. Wuerschmidt 168; total 610.

The annual banquet was held in the evening, and the yearly medals and prizes were awarded as follows:

Class medals, open to members only, one score per month, best five win:

Rifle, experts:

F O Young	48	49	53	56	58	264
A H Pape	49	51	54	55	56	265

Sharpshooters:

C M Daiss	53	55	67	75	76	326

Marksmen:

G W Hoadley	65	75	88	103	106	437

Pistol, experts:

F O Young	32	44	45	47	48	217
G M Barley	39	47	48	48	57	239

Young's score of 217 ties the club record.

Sharpshooters:

G W Hoadley	41	59	61	64	69	294

Marksmen:

F Hassmann	56	59	71	78	82	346

All comers' and members' re-entry matches, 10 best scores, rifle medal:

F O Young	38	41	42	43	43	44	44	45	47	47	434

Members' rifle medal (experts barred):

G Mannel	50	51	67	69	69	69	71	66	67		648
C M Daiss	56	60	66	67	67	67	64	68	71	64	650

All comers' pistol medal (presented by Wm. Glindemann):

F O Young	39	40	40	40	41	41	44	44	45	46	420

Members' pistol medal, experts barred (presented by George Mannel):

G W Hoadley	41	41	43	45	48	49	52	53	54	57	483
Dr J F Twist	50	59	54	54	55	55	55	55	54	54	532

Dr. J. F. Twist's all comers' revolver medal:

C M Daiss	41	42	43	46	46	46	46	47	48	49	454
F O Young	37	43	46	46	48	51	51	51	51	51	475

Both men beat the revolver record for 10 best scores, which was 503.

Members' revolver medal (experts barred):

P Becker	47	51	54	58	60	60	61	62	63	64	580

All comers' military and repeating rifle medal (Creedmoor count):

F O Young	48	48	48	48	47	47	47	47	47	47	474
A H Pape	48	47	47	47	47	46	46	46	46	45	465
P Becker	48	47	46	46	46	45	45	45	45	45	458

Young gave Becker 20 points handicap and forfeits the medal to Becker by 4 points.

All comers' .22 and .25 rifle medal (presented by F. O. Young):

Capt F Kuhnle	16	17	17	17	18	18	19	19	19	20	180

Capt. Kuhnle beat the club record 11 points.

Members' .22 and .25 rifle, medal, experts barred (presented by A. B. Dorrell):

Dr J F Twist	18	19	21	22	23	23	24	24	24	24	223
P Becker	19	22	22	23	24	24	25	25	25	26	235
Mrs C Waltham	20	22	24	24	26	26	29	27	27	29	256

Capt. Fred Kuhnle presented a 5 o'clock tea set to the lady making the most shots in the (inch) ring. It was won by Mrs. C. F. Waltham with 69.

The diploma for best all-round shooting was won by F. O. Young, who tied the record with 408 points, two scores with each weapon—revolver, 37, 43; pistol, 39, 40, 22; rifle, 20, 21; rifle, 38, 41; military, 64, 65.

F. O. YOUNG, Rec. Sec'y.

Elite Schuetzen Corps, of Brooklyn.

AT the regular shoot of the Elite Schuetzen Corps, Captain, Geb. Kraus, held on Dec. 21, at Louis G. Mertz's shooting gallery, corner Broadway and Jefferson street, the following scores were made: C. W. Horney 243, L. Zoellner 242, J. Kaufmann 240, I. Martin 238, Zimmermann 238, C. Kaufmann 232, J. Zimmermann 230, F. A. Schlitz, M.D., 229, Spangenberg 216, L. G. Mertz 202.

THE annual election took place Dec. 13, and the following were elected: Pres., Calvin Tompkins; Capt., R. W. Spier; Sec'y, Woolsey Carmalt; Purser, H. H. Smythe; Trustees, D. D. Allerton, R. W. Spier, Louis B. Jennings; Auditing Committee, W. B. Houghton, Louis B. Jennings.

Map of Territory between CONNECTICUT LAKES and KENNEBAGO LAKE.
June 1900.
E.O.C.

Route of Trip shown by Dotted line -----

From the Connecticut Lakes to Lake Kennebago.

THE Connecticut lakes had always had the charm of being in the wilderness, far from civilization, and as the Rangeleys had also been in that mysterious somewhere it was deemed wise to spend the short time allowed for a vacation in the territory situated between the two above localities. This trip was found to be practicable after numerous correspondences and consulting maps, but no person was found who had made the trip.

The trip commenced at Lowell, Mass., June 2, 1900. A train was taken to Boston, and on the Eastern Division to Portland, arriving there on time at 12:05 P. M. After dinner in the dining room, and a smoke, the 1 o'clock train was taken on the Maine Central for West Stewartstown, N. H. This is one of the pleasantest rides that can be imagined, as the scenery is ever changing. Sebago Lake, but a few miles from Portland, is a beautiful sheet of water, and from all accounts furnishes excellent fishing. Through the Crawford Notch are to be had some of the grandest views that one can wish for. Snow had left most of the mountains, but on Mt. Washington were still to be seen large patches of white, which were the silent reminders of the bleak winter nights, when thinking of the summer camps, in a warm room, is almost as pleasant as the camps themselves. Just before Crawford's is reached, the steep falls on the other side of the notch glisten like so many jewels. Soon after leaving the White Mountains the train follows the Connecticut River, crossing it the last time at West Stewartstown, which was reached about 7 P. M. The night is usually spent at the West Stewartstown Hotel, but as that had been burning since morning, and was a mass of ruins, a carriage was taken to the Canaan House, just across the river in Vermont. Canada forms the northern limit of Canaan, and in fact the water used on the hotel table comes from a hill in Canada, but a few rods north of the hotel.

There had been a heavy rain all day, and it ended in a disagreeable drizzle, so the evening had to be spent under shelter. "Ten Nights in a Bar Room," given by Boston talent, was extensively advertised for that evening, so with about fifty enthusiasts one act was endured, but one was sufficient to satisfy all the dramatic cravings of the early evening. Canaan and West Stewartstown are lighted by electricity generated by water power, and this, taken together with a hotel heated by steam, gives it quite a citified appearance. About 9 o'clock Sunday morning, in company with Mr. E. M. Bateman, scaler for the Connecticut River Lumber Co.—and by the way, all northern New Hampshire is owned by that company—one of the finest rides was had up the valley of the river to the First Connecticut Lake, and although the elevation increases a thousand feet or more in the eighteen-mile drive, still there is scarcely a hill that a horse cannot easily trot over, and the road is kept in first-class repair. The river itself is grand, and at one place the falls are so abrupt, and occur so frequently, that even the rivermen cannot run the river in their bateaus, but must be carried around by teams. Log jams occur among these rapids, and over half a million feet of logs are destroyed annually by the dynamite used to break up the jams. The Connecticut lakes are used as a reservoir to serve in dry weather, when more water is needed to float the logs over the various rapids. The rain of Saturday had raised the water in the lakes 18 inches, and all the brooks seemed like miniature rivers. At the First Lake there is a modern hotel, with accommodations for fifty guests. In the fishing season this hotel is used as a stopping place before proceeding to Second Lake, where the fisherman is more certain to get a good catch. After dinner at the First Lake House, an eight-mile drive over fair roads brings one to the Second Lake House or Idlewild. Between Canaan and the First Lake numerous houses are scattered along the road, besides the village of Pittsburg, but a short way from the First Lake the houses disappear, and with the exception of the camps at the Second and Third lakes there are no signs of man, and with only the vast forest stretching northward. The fishing in the Second Lake consists principally of lake trout, locally known as lunge, and square-tailed or brook trout. While sitting on the piazza that evening two fellows brought in eight lunge that weighed 27 pounds. Monday, June 4, was spent fishing on Second Lake, and the only luck that can be had is by "plug fishing"—that is, fishing from an anchored boat with live bait. Some trolling is done, but it is rather the exception; seven lunge, four of which weighed 18½ pounds, and two cusk were the result of the day's sport. It is quite unusual to catch cusk in the day time, as they are extremely logy, and bite ordinarily at night only. Owing to the limits of the two weeks allotted to this vacation trip, the Third Lake could not be visited, but this Lake affords excellent fly and bait fishing for brook trout only.

On Tuesday, June 5, was experienced for the first time the feeling of being in the primeval forest, where no one had been for a number of years. In company with a guide, James O. Reynolds, the trip for Parmachenee was begun at 5 A. M. The first mile was across the lake. The morning was unusually cold, as there had been a hard frost during the night, but, thanks due to that coldness, not a fly or mosquito was seen that day. There used to be a trail to the head of Parmachenee Lake, but since that lake has become private grounds the trail has been abandoned, so with no trail and nothing but a general direction to guide him, Jim landed at the lower end of Parmachenee Lake at just the point he expected to be at 10:40 A. M. Two stops had been made on the trip—one at the height of land between the Connecticut and Magalloway rivers, and the other at Hamel's logging camp, about four miles from Parmachenee. Here there were two Frenchment, who were keeping the camp

during the summer, and they very kindly walked to Parmachenee and took the 40-pound pack that Jim had carried since early morning. A few miles west of Hamel's Camp a spotted trail was found which led directly to the camp and which proved of great assistance, as it showed us that we were nearing our destination, and also for a tree which had been cut and used for a bridge over the little Magalloway River. A fine view was had of a doe licking salt at one of the deserted camps, and she stayed in sight in the open for a number of minutes. Lunch was eaten at the landing on Parmachenee Lake, and soon after the trip was renewed for the Magalloway River. A guide had already been engaged to be at the Scow Landing on that afternoon, so he was waiting at the Forks Camp, which is about a mile and a half above the Scow Landing. This point was reached at just 1 P. M., after an eight-hour tramp, with less than an hour for resting. The gait that was kept must have been over two miles an hour, so it is fair to presume that from Second Connecticut Lake to the Scow Landing on the Magalloway River must be in the vicinity of twenty miles.

Parmachenee Lake and thousands of acres of land around it are controlled by the Parmachenee Club, which has a membership of about sixty sportsmen from various parts of the country. These members and their guests come as far as Colebrook, N. H., by train, where the night is spent.

The next day the stage is taken for Errol through the Dixville Notch, and up the valley of the Magalloway River to the head of Aziscoos Falls, which lie in the settlement of Wilson's Mills. Here the club steamer meets them and carries them about twelve miles to Meadow Camp, arriving there in the early evening. This camp is owned by the club, but the public can be accommodated here.

After a night at the camp, canoes or boats, with guides, are taken the next day for the Forks Camp, or if the water is very low, only as far as the Scow Landing, one and a half miles below. Here the buckboard is met and taken about five miles to the shore of Parmachenee Lake, and after a short row or paddle Camp Caribou, on an island, is reached, on which is located the main camp and base of supplies for those members who wish to spend their time in some of the numerous camps in the vicinity of the lake, and owned by the club. Thus, after arriving at Colebrook, which may be a day or two's journey, it takes two days more to reach the camp at Lake Parmachenee. At the Forks Camp is a convenient building, but as it was locked a log shanty at the Scow Landing used as a store house was taken for a shelter that night. It had no door, and was thoroughly ventilated, but with a mattress of about 6 inches of fir balsam boughs and a long walk just finished nothing more was needed, and as soon as the evening twilight began three men lay down on nature's own bed and very soon were sleeping as one can sleep only when the fragrance of the woods lulls him to dreamland. Just before retiring a young rabbit came hopping along and jumped into the cabin, but it was useless to try to catch him, as he went out through an opening in the logs. After a refreshing night's sleep breakfast was had at half-past 4, so that Jim might get an early start back to the Connecticut Lake.

As soon as he left, the trip was continued down to Upper Metallock, where a few small trout were caught, but the river was exceptionally high for that time of the year, and the fish bit very poorly. Dinner was had at Meadow Camp, where the night was also spent, four miles below Upper Metallock, and after dinner a few more trout and a smelt 10¼ inches long, a record-breaker, were taken from Metallock. At this season of the year when the water is still high in the river, great advantage is taken of the "cut-offs," which are channels cut across bends, so that the logs have a straighter course to follow and are much less liable to cause trouble by jamming.

The next morning the trip was continued down the river with a short visit at a camp on Lower Metallock, and at the Narrows, eight miles below Meadow Camp, fishing was again enjoyed.

Two other parties were already there, and one of them carried away over 15 pounds of trout, while we caught ten trout, the largest weighing 2½ pounds.

From the Narrows to the dam at Aziscoos Falls is about seven miles. Here the canoe was left, and the luggage was carried to the hotel at Wilson's Mills, about five miles, where supper was had. After supper a team was taken for Errol, and the night spent at Will Allen's.

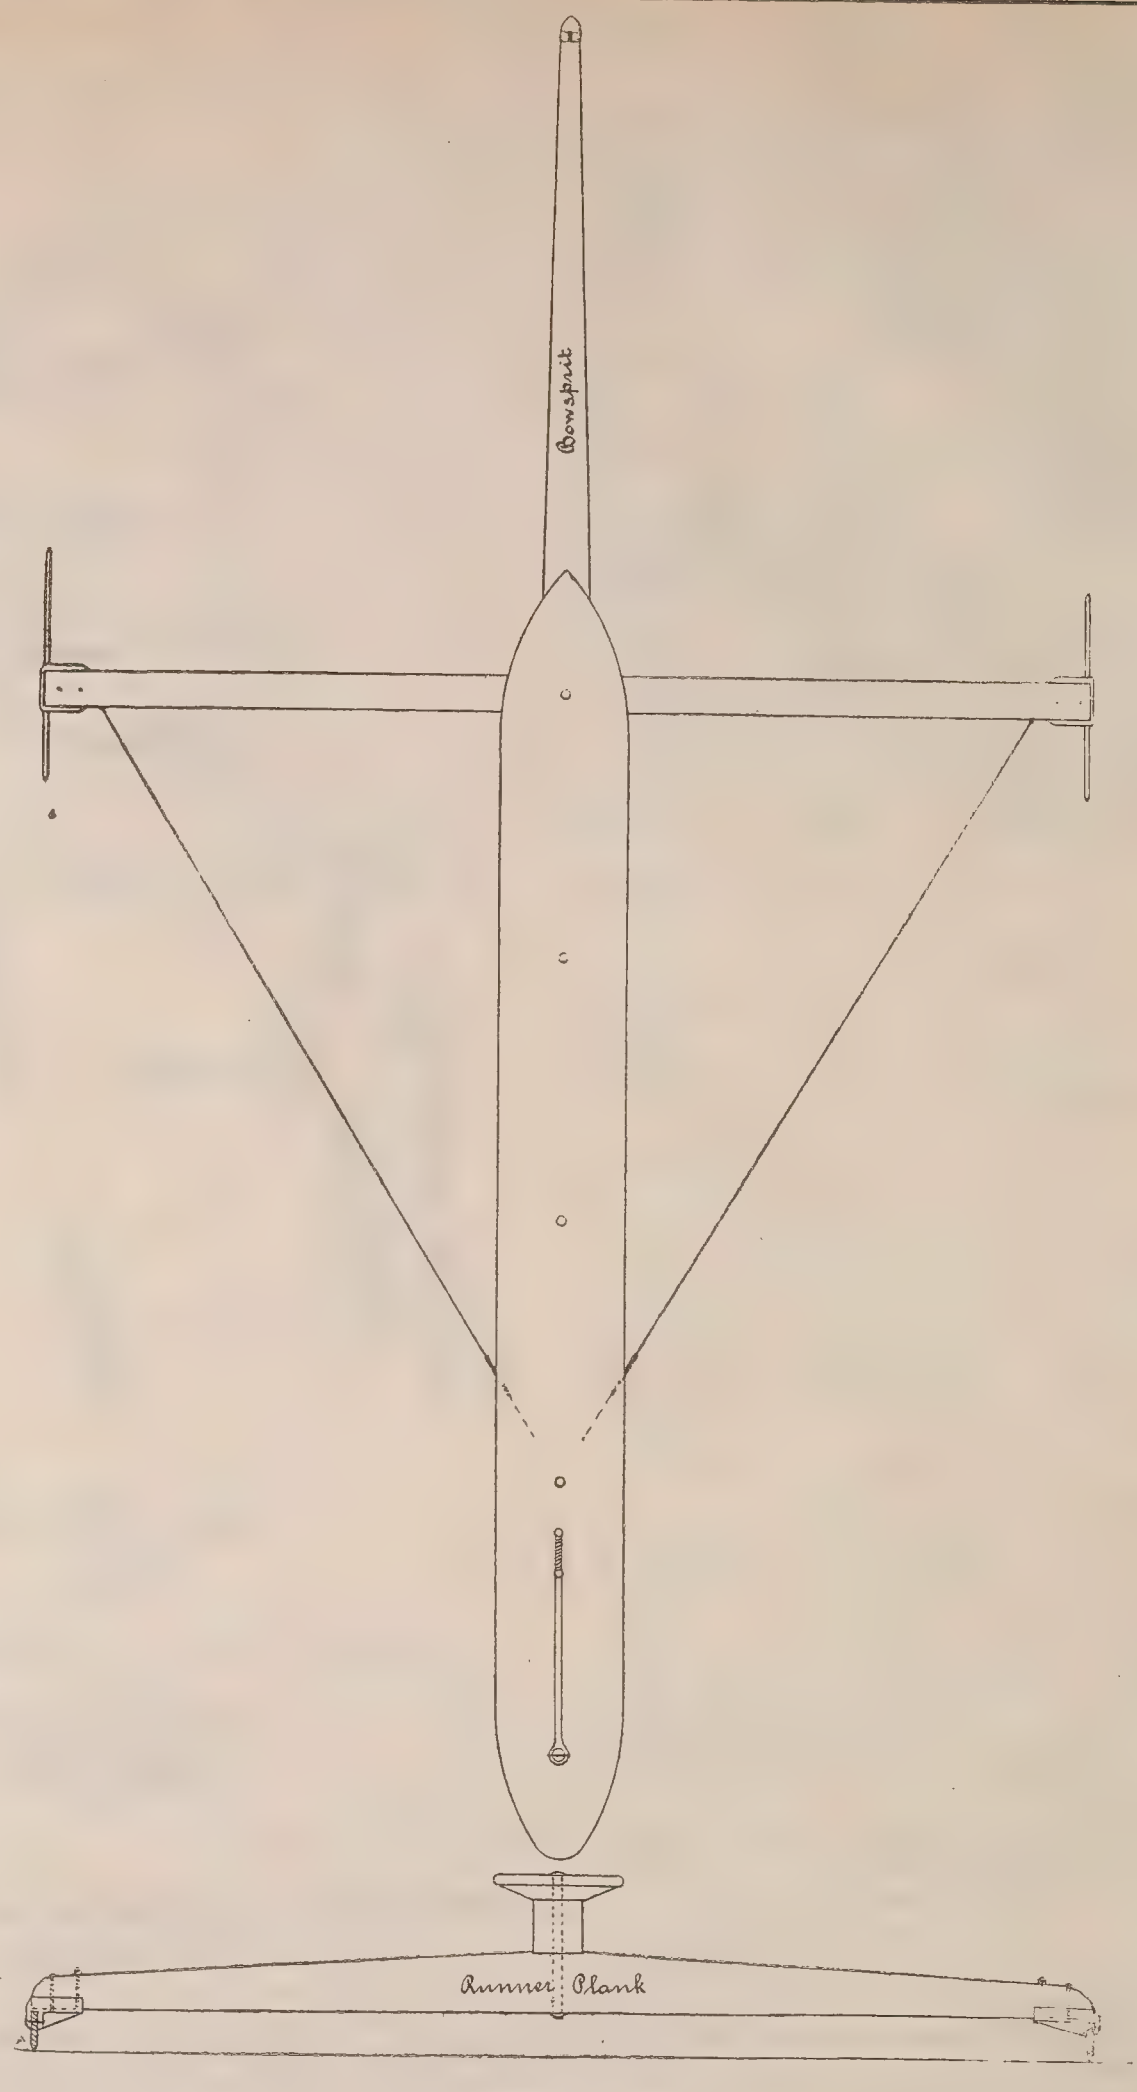
The trip down the river from Wilson's Mills was abandoned, owing to the logs being in the river at Errol, and also the inability to get a canoe. Side trips up the Swift and Dead Diamond rivers would have well repaid the trouble, besides giving good fishing in their upper waters.

The morning of June 8 started in with rain, but as the trip had to be continued, a canoe was taken up the river and out into Umbagog Lake, where the steamer was met and taken to Sunday Cove. Between here and Middle Dam is a decidedly second-rate buckboard road about five miles long. On this road odd views of Rapid River are had, and at this time logs were still coming down, and in fact just as Middle Dam was reached the last of the logs were sluiced through.

Middle Dam is located at the outlet of the Lower Richardson Lake, and the accommodations consist of the hoetl Anglers' Retreat and a few log cabins. Of course the pool below the dam is one of its chief attractions, but fine fishing is had in the Lake, and also in Pond-in-the-River, about half a mile below the dam, and being a part of Rapid River, which has widened out, so that a small lake is formed.

After dinner the services of a guide were secured—the last guide was left at Wilson's Mills, as he was not familiar with the Rangeley system, and it might not be out of place to say here that guides of one section are noticeably jealous of those of other sections, and unless one had been in the different parts of the same regions he might be led to believe that outside of ten or twenty miles, according to the guide's knowledge of the country, there was absolutely no game.

It had been the intention at the outset to cruise in a canoe from Parmachenee Lake to Rangeley, and to carry a tent for shelter at night, but, as was shown afterward, this method of tenting, as the guides call it, is very seldom used, as camps are scattered all through the region.



A CHEAP ICE-BOAT.

At Middle Dam but one tent was available, and this was at Dyke's Camp, about two miles below the landing at South Arm. On the way down to South Arm one 3-pound salmon and one 3½-pound trout were caught, and on cleaning the trout full-sized spawn was found with the embryonic spawn just forming. This is quite an unusual occurrence, and the guide had seen it occur but once before. The carry from South Arm to Dyke's Camp is over the regular stage route from Andover. The camp was the neatest and fitted up the most conveniently of any camp met on the trip. The hand of a woman was evident everywhere, from the scalloped paper on the shelves to the well-swept floor.

After a night's sleep and a good breakfast, the return to the South Arm was made with the tent; and against a hard west wind, blowing directly down the Arm, it took four hours to row the four miles to Middle Dam, which was reached in time for a late dinner. The guide suggested a side trip to B Pond, in which by law no fishing is allowed except with the fly, and any sportsman fond of fly-fishing as it ought to be, should not fail to spend a day or more on this small sheet of water. B Pond is reached from Middle Dam by walking a short way to Pond-in-the-River, rowing to the head of the rapids in Rapid River, and a good trail from here leads directly to the pond. In the pond is an island, on which is a house owned at one time by the late Gov. Russell of Massachusetts. The trout are fighters, and will run from 1 to 3 pounds in weight. There is a camp here run in connection with the Middle Dam House.

The trout rose well that afternoon, and a double of 2 pounds and 1½ pounds was landed, but the next morning was too clear and still, so few rises were gotten. As another party was due that night, we left at noon for Middle Dam, and with the tenting outfit started for the Narrows, and camped near the burial spot of the wife of the famous Indian chief Metallock. A tent was hardly necessary, as the night was warm and dry, and this was the only night it was used.

In trolling the next morning from the Narrows to Upper Dam, but one small trout was struck. The usual flotilla of boats was moving from the lake up to the pool near the dam, and back, but it was an off day and but few catches were made. The steamer was taken for Bemis, where a rowboat was again hired, and we trolled to Haines' Landing, with but one strike, and failed to land him. The road from Haines' Landing to Rangeley is much better than the average country road and about one and one-half miles in length. Rangeley Lake is the only lake in the Rangeley system whose waters have not been dammed up for rafting purposes, and its shores lined with live trees are in great contrast to the dead stumps which stand as tombstones around the other lakes.

After a six-mile sail on the steamer, at the other end of the lake is Rangeley village, quite an enterprising town, with a number of stores, which contain everything in the sporting line, both for hunting and fishing. The Rangeley Lake Hotel is of course the center of sporting life in the town, but later in the season, when the fishing ceases, it changes into a regular summer hotel, with its "piazza sports," as the guides call them.

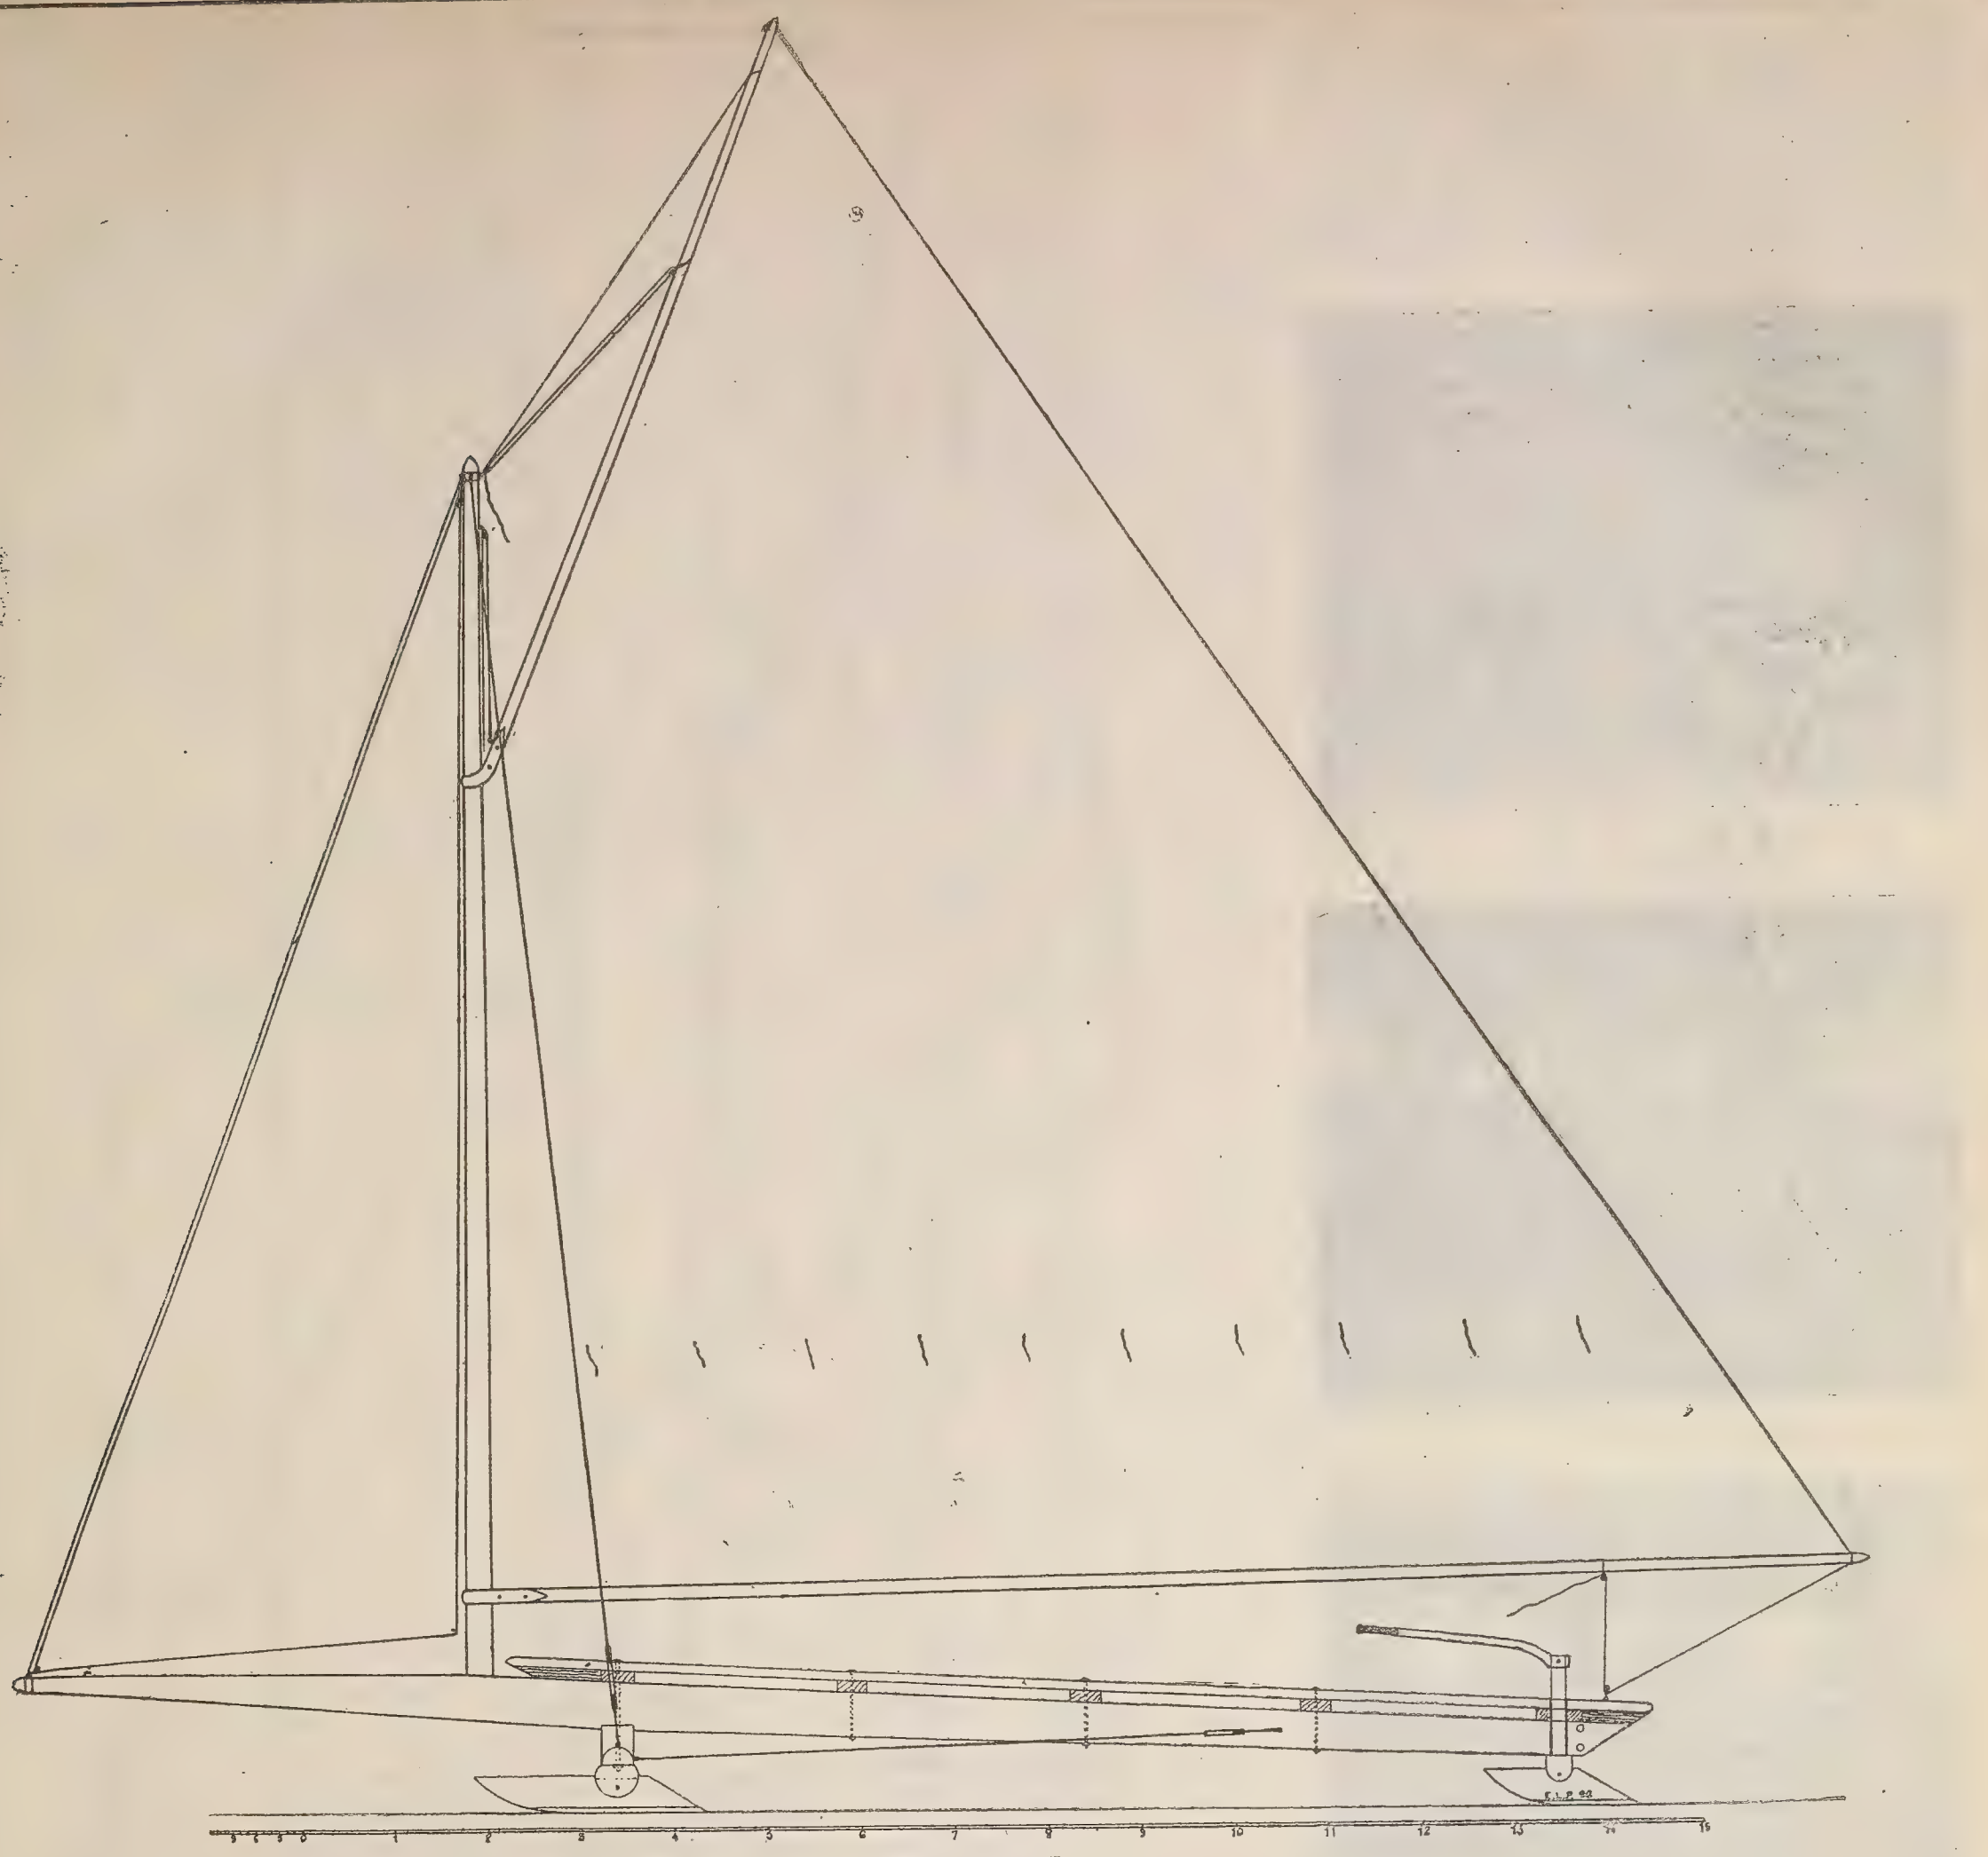
Acting again on the guide's suggestion, we decided to try our luck at Kennebago Lake, and accordingly the next morning set out afoot for the nine-mile walk to the Lake. The stage was just leaving the post office as we started, and arrived half an hour later than we did at the Lake. Loon Lake, about half-way out, has been recently stocked with salmon, and is yielding some remarkable catches, which goes to show that salmon must develop rapidly in these Rangeley waters.

At Kennebago we were given a camp at the lower end of the Lake and spent the next two days fishing the lake and Kennebago stream, with fair success.

Thursday noon farewells were said to Kennebago, and the homeward trip was commenced—part of the way to Rangeley in the buckboard and part on horseback.

Friday morning at 6:10 A. M. the narrow gauge carried a very unwilling passenger to Farmington, and delivered him to the Maine Central, which in turn at Portland shifted the responsibility to the Boston & Maine, which delivered him safely at his home. Of the two weeks spent on the trip there were but two rainy days—one on Umbagog Lake in the steamer and in the buckboard to Middle Dam, and the last day at Kennebago.

The trolling season was near its end, and the fly-fishing had hardly begun, so what catches were made were considered good.



A CHEAP ICE-BOAT.

Yachting.

Notice.

All communications intended for FOREST AND STREAM should always be addressed to the Forest and Stream Publishing Co., and not to any individual connected with the paper.

A Cheap Ice-Boat.

THE yachting season in most parts of the country being comparatively short, yachtsmen are naturally ready to take up any substitute during the winter months. Interest in ice boating has increased during the last few years, and as we have had many requests for a design of an ice boat that combines simple construction and small expense, we publish one this week that has been tried and found satisfactory. She will no doubt interest all boat sailers, whether yachtsmen or canoeists, who contemplate taking up the sport.

The excitement of ice boating is only equaled by its uncertainty. Except in specially favored locations an ice boat when wanted at all is wanted in a hurry, and being cumbrous and unwieldy things to house and care for, it is likely to suffer from neglect and abuse in the long intervals of disuse. The accompanying drawings show an ice boat of very simple and inexpensive construction which is very satisfactory as a sailer and yet can be taken apart or put together in a few minutes.

There are many localities where a small ice boat of this sort kept always ready to be put together would furnish a great deal of sport, the construction being only a little more difficult or expensive than the many crude makeshifts which are thrown together in a hurry wherever a clear field of ice presents itself, and which, when the sailing is over, are left to fall to pieces on the shore.

The dimensions are as follows:

Runner plank	10ft.
Keel	17ft. 4 in.
Main plank	12ft. 3½in.
Mast—	
Heel to hounds	12ft. 9½in.
Diameter at heel	3¼in.
Boom	14ft. 9 in.
Gaff	8ft. 8 in.
Mainsail—	
Hoist	8ft. 7 in.
Leech	20ft.
Area	135 sq. ft.
Jib—	
Luff	13ft. 3 in.
Hoist	12ft.
Foot	4ft. 6 in.
Area	27 sq. ft.
Total sail area	162 sq. ft.
Total weight about	200lbs.

The keel is a stick of dry white pine 6x6in. tapered to 4x4in. at the after end, and from the mast forward chamfered and then rounded to a diameter of 2in. at the band. The runner plank is also of white pine 4in. wide, 7in. deep at the middle and tapering to 3½in. at each end. One bolt of ½in. diameter connects it with the keel; at each end is a casting of iron with a socket on top, into which the end of the plank fits, being secured by two bolts, one an eye bolt and one a plain machine bolt ⅜in. tapped into the casting. On top of the keel is a plank of white pine 15in. wide and 1in. thick, stiffened beneath by chocks of 1½in. pine. The plank is bolted through the keel, as shown. The rudder stock is a composition of iron casting, or oak may be used, being cheaper. It is slotted for the runner, which is held by a ⅜in. bolt, the hole in the runner being ½in. All runners are of cast iron ¾in. thick and 4½in. wide, the two main runners being 2ft. 6in. long and the rudder 1ft. 8in. long. The boom is 1¾in. in diameter and the gaff 1½in. The sails are of 6½oz. single-bighted cotton, costing $12. The jib stay shrouds and side stays are of ¼in. galvanized iron wire rope, all set up with turnbuckles and shackles. The plank will hold three persons, the weight being so distributed that there is little strain on the boat. The cost of the whole construction, including sails and rigging, is under $45, the castings for runners, chocks and rudder stock, with the necessary fittings, costing about $12.

Interlake Yachting Association.

A MOST enthusiastic and harmonious session of the Interlake Yachting Association was held to-day in Toledo for the purpose of arranging the time and place of the regatta for 1901, and for the transaction of such other business as might be presented. The representatives of the various organizations included: W. R. Huntington and I. N. Richardson, Cleveland Y. C.; W. D. Moebs, Detroit Y. C.; J. B. Rathbone, Detroit Boat Club Yachtsmen; George T. Bliss, Erie Y. C.; F. B. Rawson, Sandusky Y. C.; M. B. Vorce, Lakewood Yachting Association, Cleveland; R. D. Potter, Toledo Yachting Association; F. B. Kruse, Maumee River Y. C., Toledo; F. B. Pritchard, Up-River Y. C., Toledo, and William Haas, Put-in-Bay Y. C. In addition to the gentlemen named, who were the regularly accredited delegates to the meeting, there were present a number of the leading yachtsmen from the various cities of the Association, with a very liberal sprinkling of Toledoans.

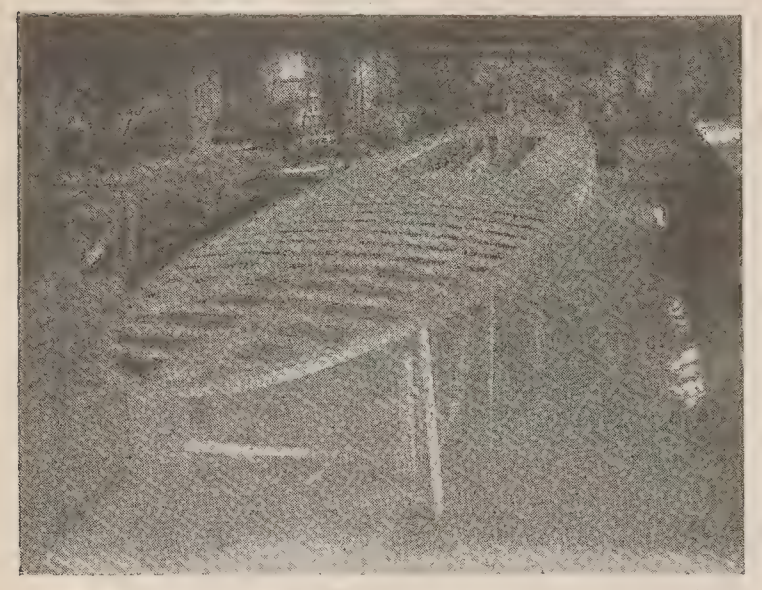
Prior to the business session, an elaborate course dinner was served at the Boody, at which about fifty of the visitors and their hosts were seated. Ex-Com. S. O. Richardson, of Toledo, formerly Commodore of the Interlake Association, presided, and very happy after-dinner talks were made by Ex-Com. Anderson, of Sandusky; Ex-Com. Bliss, of Erie; Com. Huntington, of the Cleveland Y. C., Cleveland; Com. Dexter, of Detroit; Com. Richardson, of the Lakewood Y. C., of Cleveland, and Com. Haas, of Put-in-Bay. The general spirit of the remarks was that it was time to "get together," brushing aside all prior differences, and make the forthcoming regatta the most successful in the history of the Association.

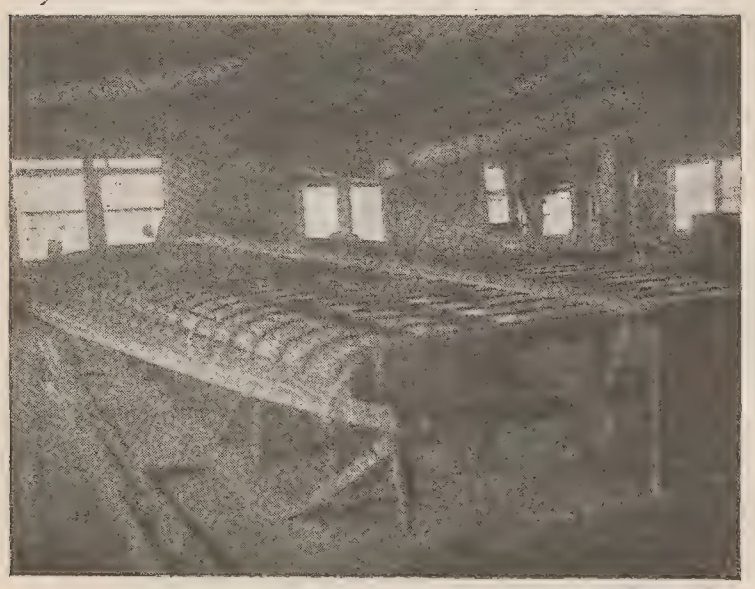
Arrangements for the regatta were perfected this evening at a business meeting held in the rooms of the Toledo Yachting Association, Com. Huntington, of the Interlake Association, presiding, and Mr. W. F. Seitz acting as secretary. The Maumee and Up-River clubs were admitted to membership, and the resignation of the West End Y. C., of Detroit, previously tendered, was accepted without comment. E. W. Ryder, of Detroit, and S. O. Richardson, of Toledo, were chosen as delegates to future meetings of the Yacht Racing Union.

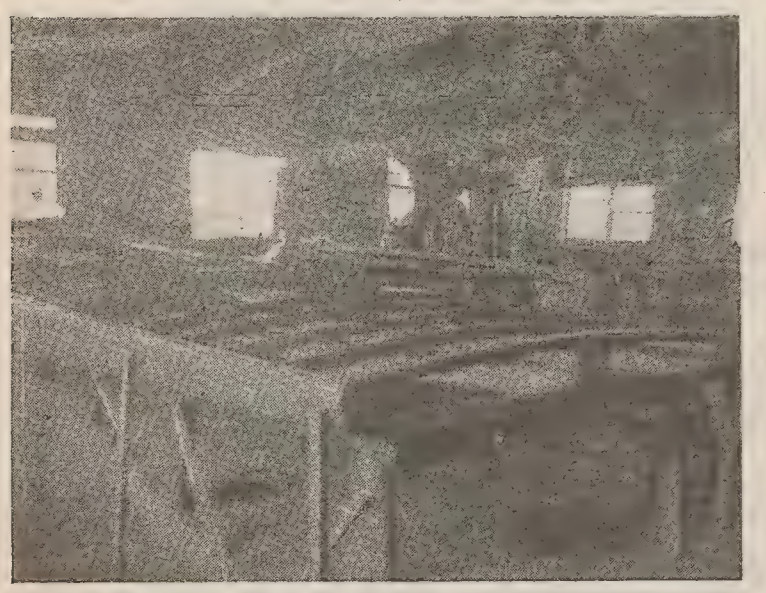
When the question of the location of the coming regatta was under consideration, invitations were tendered from Erie, Sandusky and Put-in-Bay. The latter was seconded by Manager McCreary, of Hotel Victory, who made some very definite as well as satisfactory promises of co-operation. On a vote of the delegates, Put-in-Bay crossed the finish line an easy winner.

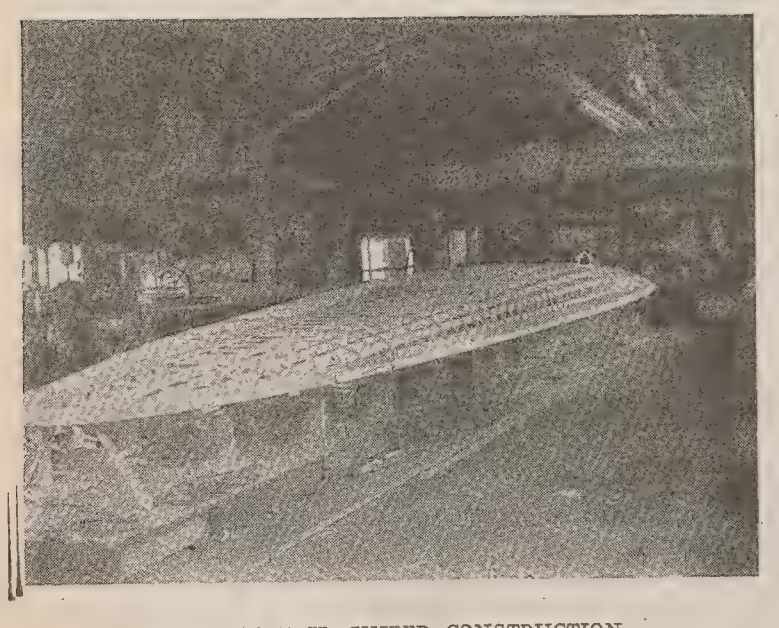
The details of the regatta were placed in the hands of a committee consisting of Messrs. George F. Anderson, of Sandusky, chairman; John B. Rathbone, of Detroit; John

Barth, of Cleveland; Fred B. Pritchard and Jack McKenzie, of Toledo. This committee met immediately after the adjournment of the session and decided to hold the regatta from July 15 to 19, both dates inclusive. It is understood that the Put-in-Bay meet is so scheduled as to avoid any conflict with prospective regattas at Buffalo, Erie and Chicago. The annual ball of the Association will probably be held at Hotel Victory on the evening of July 16, that date being subject to further conference with









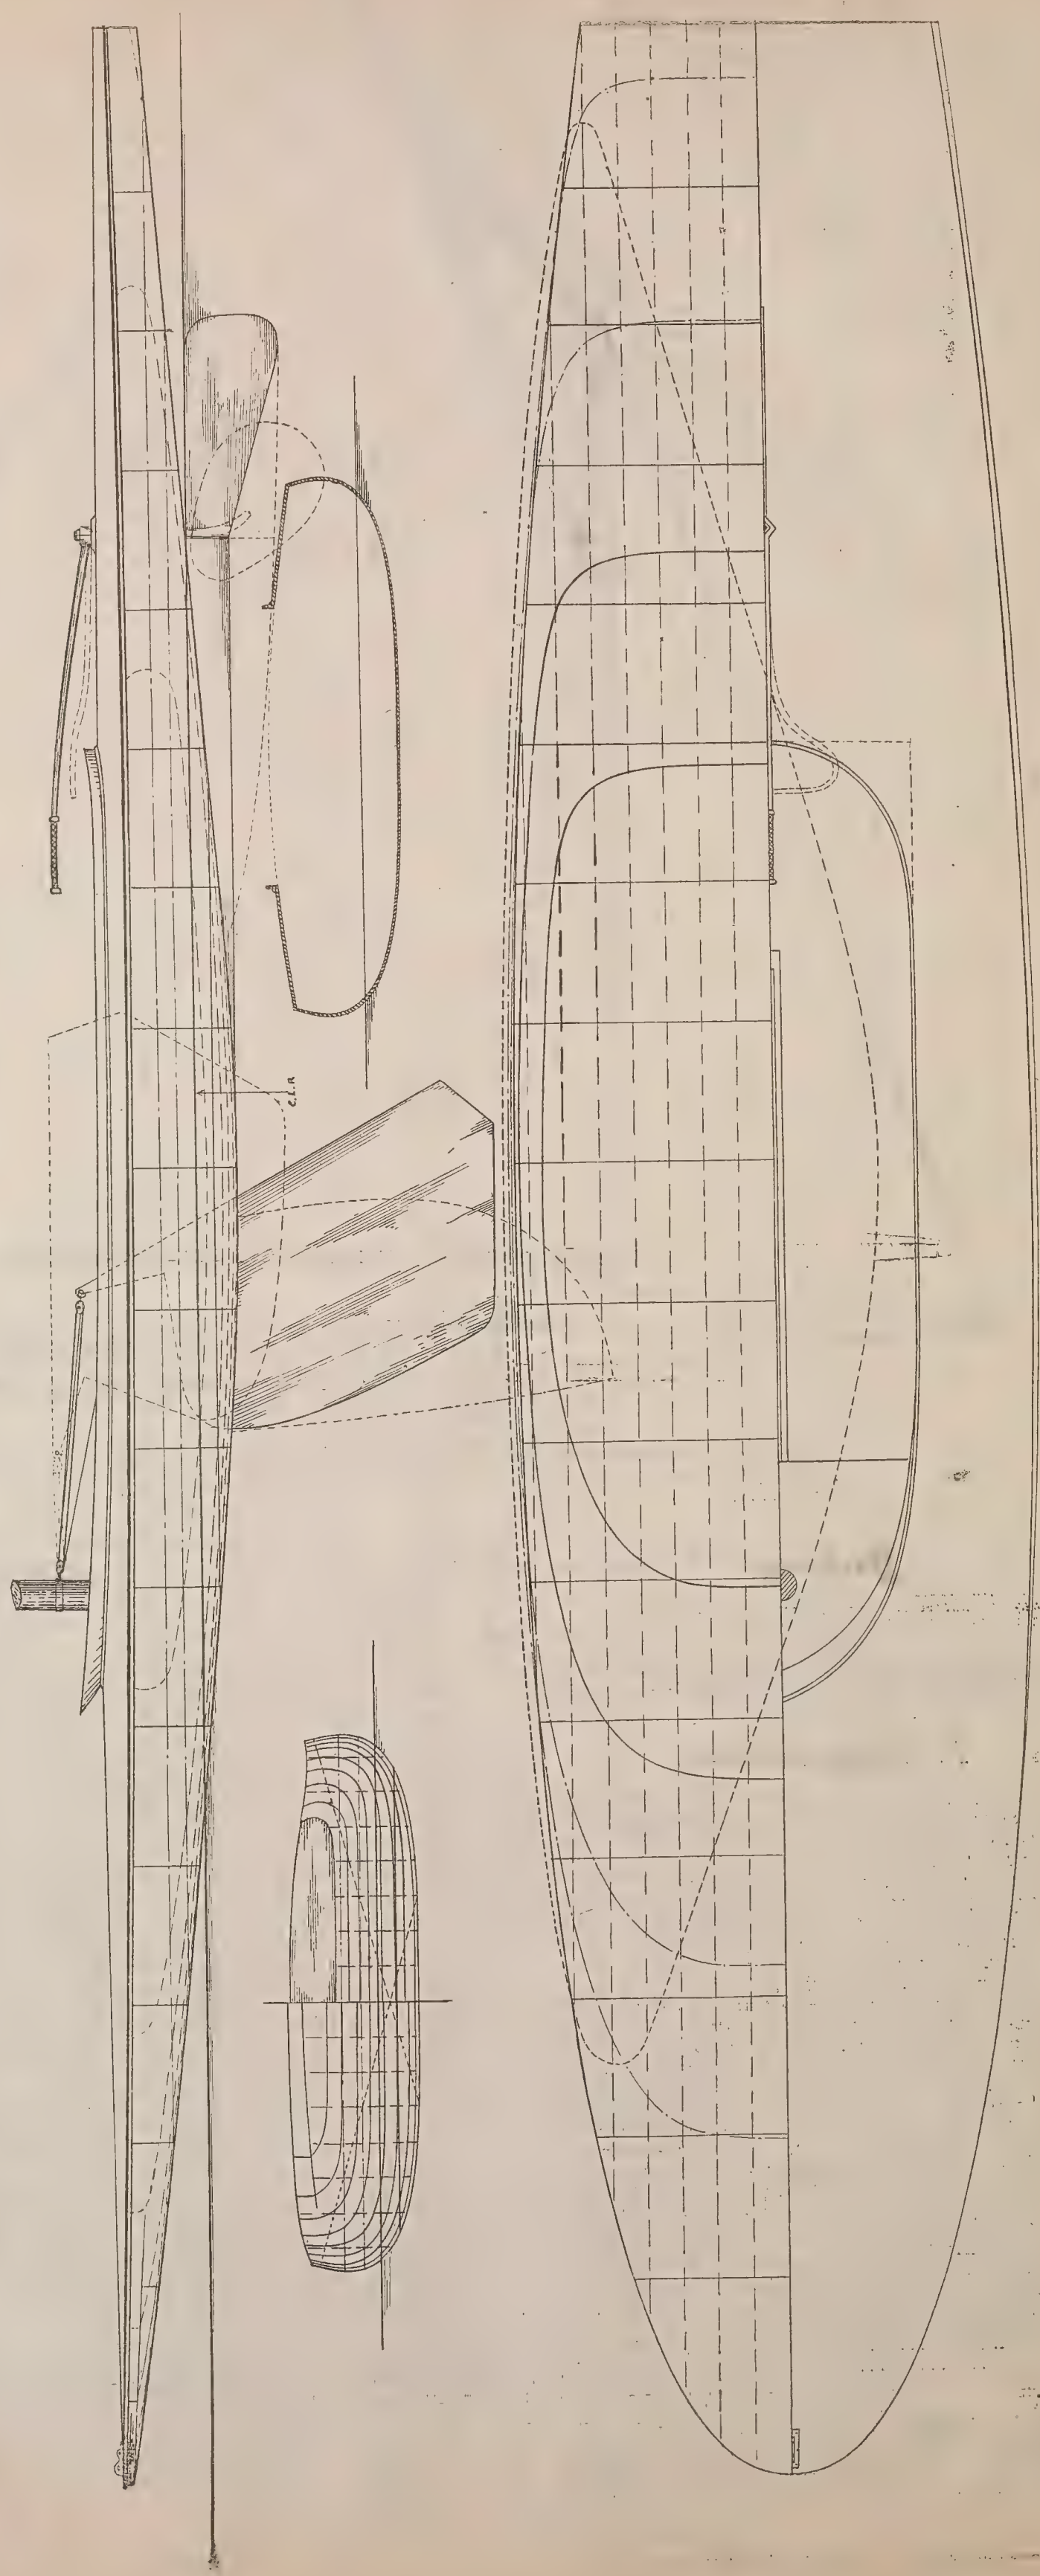
BALD EAGLE, II. UNDER CONSTRUCTION.

Manager McCreary. The social features of the regatta will be under the direction of a reception committee, including John L. Dexter, of Detroit, chairman; Frank R. Frey, of Toledo, and M. B. Vorce, of Cleveland. Com. Dexter made an excellent reputation for himself last year in a similar capacity, and all the gentlemen concerned in the management of the meet are determined to make it the best of the series.

It is generally believed among the yachting men who expressed an opinion on the subject to-night, that the members of the Association who have withdrawn have done so under a misapprehension, and that when matters are more fully understood they will reconsider their recent action and again unite with their former comrades in promoting this most delightful recreation on the waters of Lake Erie.

JAY BEEBE.

TOLEDO, O., Dec. 22.



BALD EAGLE II.—DESIGNED BY A. C. BOWER AND FRED W. MARTIN.

BALD EAGLE II.—SAIL PLAN.

Bald Eagle II.

THROUGH the courtesy of Mr. Fred W. Martin we publish the plans of Bald Eagle II. in this issue. She was launched too late to take part in the Lake Geneva meet in August, and will now be out of class in 1902, due to the new rules in measurement, and the abandonment of L.W.L. as a factor in measurement, which will, of course, develop a far different boat. Bald Eagle II. will be privileged to sail next season with the L.W.L. limit craft, but will be handicapped by the scantling rule, so we think the coming season will see some close racing between the old-time "feather weights" with L.W.L. as a factor in measurement (virtually the Seawanhaka rule) and the new unlimited L.W.L. craft with the heavier frame and hull generally, the plank being limited to ½in. thick under the new conditions.

This craft was designed jointly by Mr. A. C. Bower and Mr. Fred W. Martin, and was built in Mr. Bower's shop at Waukegan, Ill. The four accompanying pictures show the vessel under process of construction. She has an oak frame 5-16 and 5-8in., spaced 4½in. to centers, and is planked with best quality of native cedar 5-16in. thick, and is all brass screw fastened. Her decks are laid in two thicknesses of cedar ⅛in. thick, laid diagonally and covered on top with best quality of union silk, finished with oil and shellac and marine varnish. As will be seen by the interior photographs of the boat taken inside the shop, she is bridged and braced in the best possible manner with the least possible weight. Everything in the interior being of cedar, the result is the lightest construction consistent with the necessary strength.

None but those acquainted with this type of racing machine know the strains that they must endure in racing trim, with four or five men hung out to windward; hence the elaborate system of bracing and bridging shown by the photographs, and one will know how nicely this must be applied when a vessel of the length, beam and depth of this craft can be gotten down to 800lbs., as is Bald Eagle II. This, of course, is the weight of the hull proper without the centerboard and rudder, canvas or rigging, spars, etc., all these latter weighing about as much as the hull; the spars, however, are very light, being hollow, and an idea can be formed of their lightness when the mast weighs, without its metal fittings, only 38lbs. Her centerboard and rudder are of the best quality of saw steel, and the size and shape as shown by the dotted lines on the drawings for deep water, and the full lines for shallow water and the weedy bottom, the skag being a necessity on some of the Western inland lakes, owing to the large quantities of grass encountered.

As will be seen, the vessel is far from a scow, as most of the modern Western craft have been of late years, and we think from her appearance and lines that she will not be far behind the new long waterline craft the coming season, which likely will see the last of the limited waterline 20-footers.

Since she has been completed she has had no opportunity to get a line on her speed outside of her own lake port (Fox Lake Y. C.), but she has easily shown a clean pair of heels to such boats as she has come in contact with, and many of the latter are well known fast sailers and have a known record, which the speed of this craft can easily be determined by, she having with ease beaten them on each and every point of sailing.

Her dimensions are as follows:

Length—		
	Over all	35ft.
	L.W.L.	17ft. 6in.
Beam—		
	Extreme	7ft. 8in.
	L.W.L.	7ft. 4in.
Draft—		
	Hull	6in.
	Centerboard down	4ft. 3in.
Area Sails—		
	Mainsail	385 sq. ft.
	Staysail	93 sq. ft.
	Total	478 sq. ft.

Mr. M. Hubbe has placed a contract with T. S. Marvel & Co., of Newburgh, N. Y., to build a steel house-boat for Mr. Pierre Lorillard, which will take the place of the Caiman, burned in Florida last spring. The new boat has two decks, and her accommodation will be as large and complete as Caiman. She is 126ft. long, 22ft. beam, 8½ft. deep and draws 2½ft. of water. The power is furnished by two 25-horse-power Murray and Tregurtha gasoline engine motors. The boat is to be completed next July.

Our Boston Letter.

BOSTON, Dec. 28.—The matter of a skipper for the Lawson boat seems to be the paramount issue at the present time. All kinds of rumors are afloat as to who will be the man or the men. As the matter stands now, it looks as though Capt. Hank Haff would be at the wheel of the Boston boat next season. It was stated to your correspondent Thursday that Capt. Haff and Mr. Lawson would hold a consultation the next day, after which the matter would be settled.

It is known that there has been some question in regard to Capt. Watson being on board the yacht, and it is also known that Capt. Haff was sent for by Mr. B. B. Crowninshield. Several conferences have been held at Mr. Crowninshield's office and at Mr. Lawson's office, and from what can be learned at the present time, Capt. Haff has been selected to command the new yacht.

It has been suggested that it might be possible that both Capt. Watson and Capt. Haff would be found on the Lawson boat, but it does not seem reasonable. If both were on the boat, one would have to take a subordinate position, and while they are fast friends now, such a proceeding would be calculated to bring about a break in that friendship. None of the yachtsmen who have been spoken to about this matter have favored the idea. They are all of the opinion that the boat will make a better showing with only one captain than she would with two, even though those two were the finest in the land.

The possibility of a second aspirant for Cup defender honors does not seem to be as great as when first exploited. If Mr. Hanley has a possible syndicate in view, he should make his assertions good by naming some responsible party who has signified his intentions to join it. This he has not done, and a diligent search among Boston yachtsmen, who might possibly be connected with such a scheme, has resulted in finding none who have anything to do with it.

Mr. Hanley said recently that a certain New York man, who had plenty of funds, had become interested in the matter, and had asked for all particulars in regard to the plans, construction, cost and minor details. Mr. Hanley says that he thinks that this man's interest in the boat at this time is a favorable omen. However that may be, it is said almost in the same breath that the syndicate is taking form. If the syndicate is taking form in Massachusetts, there does not seem to be any good reason why Mr. Hanley should claim that the New York man's interest was of vital importance.

It may be that Mr. Hanley has a syndicate on foot, and it might be that such syndicate is taking form, but it would be of more advantage to Mr. Hanley and would also be more likely to insure further interest in the boat, if he would give some definite statement as to what his prospects are. When a person says that a syndicate is possible for the construction of a Cup defender, it is usual to make good in some manner, and Boston people are now quite skeptical in regard to Mr. Hanley's possible yacht.

There is not a yachtsman around Boston who would not like to see a centerboard Cup defender built. Both Mr. Lawson and Mr. Crowninshield are anxious to see one, and Mr. Lawson has signified his willingness to subscribe money toward it. Centerboard advocates are thick in this district, but those who are most enthusiastic are unfortunately the ones who have not sufficient ready money to form a syndicate. There are also those who would like to see the boat built, who have the ready cash, who think there is a chance for a centerboard, but whose love for the development of the sport is not great enough to cause them to put any money in what they think is a possibility.

The Lawson boat will be set up next week at Lawley's. The building in which the new mould loft is to be located is about finished. The floor of the mould loft is all laid and there is nothing to prevent commencement of the work. Wilson & Silsby are at work on the sails. The light sails will be turned out as soon as possible, and the working sails will be started as soon as the perfected sail plan is ready.

Two more additions have been heard from for the 25ft. restricted class of the Massachusetts Yacht Racing Association. One of these is for Walter Burgess. She will be a yawl, 28.6 on the waterline. Mr. Burgess has made several experiments in yawls before, but has never attempted to build a boat of this type, which would be an out-and-out racer. His Jeannette was the first one turned out in 1899. She was a good boat in very heavy weather, but she was too much of the brute type to do much under ordinary circumstances.

At the beginning of the past season he brought the yawl Clarette to City Point from Nillson's Yard, Baltimore. She was a likely looking craft, designed for the 21ft. restricted class. But Mr. Burgess was not evidently satisfied with her, and she was early sold to B. D. Amsden and her name changed to Coquette. It was afterward developed that Mr. Burgess was having a schooner built for the 25ft. class from designs by Small, who turned out Bud and Katydid. This schooner, which could be changed to a yawl, did not amount to anything as a racer.

This time Mr. Burgess is going to go to the limit of his class to produce speed. The new yacht is designed by his nephew, W. Starling Burgess, and will be built at Embree's, Quincy Point. She is already partly in frame. She will have great overhangs, being nearly 47ft. over all. She will be about 9.6 beam, and will draw 6½ft. of water. She will be single planked with mahogany and will carry the limit of sail which her class allows. Mr. Burgess is a brother of Edward Burgess, who designed Puritan, Mayflower and Volunteer. He has spent his life on the water, and if there is any go in his new yawl he is sure to get it out of her.

The other 25-footer is from designs of Isaac B. Mills, and will be built by Smith, of Quincy Point. Her dimensions have not been obtained, but it is said that she will be a keel boat. She is for W. D. Turner. Both Mr. Burgess and Mr. Turner are members of the Boston Y. C., Mr. Burgess being Vice-Commodore.

The Corinthian Y. C., of Marblehead, will hold its annual meeting at Parker's Jan. 9. The following officers will be elected for the coming year: Com., J. O. Shaw, Jr.; Vice-Com., D. C. Percival, Jr.; Rear-Com., Butler Ames; Sec'y, Everett Paine; Treas., J. B. Rhodes; Meas., C. B. Stebbins; Executive Committee, Frank E. Peabody and W. H. Rothwell; Regatta Committee, G. W. Mansfield, W. W. Keith, D. H. Follett, Frank Brewster and G. H. Mayo; Membership Committee, D. W. Lane, H. S. Goodwin, F. Estabrook and C. D. Wainwright; House Committee, C. W. Foss.

Frisbee, of Salem, is at work altering the overhangs of the side-wheel steam yacht Turtle, owned by Arthur Amory, of the Manchester Y. C.

The recent fire at Fenton's shops, Manchester, totally destroyed the Y. R. A. 25-footer which was nearly completed from lines by B. B. Crowninshield for F. G. Macomber, of the Corinthian Y. C. This boat was an improved Flirt, and those who have seen her lines have said that there was every prospect for her taking honors from last year's champion. Khalifa, owned by R. A. Tucker, of the Manchester Y. C., was almost totally destroyed. Several other yachts were badly damaged, and a lot of spars in the shop were destroyed. Fenton says that he is going ahead to build a new shop, and that he will at once resume the work of building the Macomber boat.

JOHN B. KILLEEN.

International Signals.

A NEW and enlarged edition of the international code of signals has just been issued under the authority of the Board of Trade. The work contains a complete exposition of the new code of signals which will come into use on Jan. 1, 1901. Yacht owners should take note that during next year the two codes, the old and the new, will be used concurrently, and vessels using the new code will signify the same by hoisting the code pennant, red and white vertical stripes, with the fly of the flag tied to the halyards, and having above it a black ball, or shape resembling a ball. From Jan. 1, 1902, the new code will be used exclusively, and its distinguishing sign thenceforward will be the code pennant, hoisted in the ordinary way. It therefore behooves the owners of all vessels making use of sea signals, as well as all yacht club committees, to become possessed of the additional flags required for the new code, and to make themselves acquainted with the working of the new system of signaling as set forth in the International Code of Signals for all Nations.

No new principle has been introduced in revising the code, but the signals have been increased in number and brought up to date. The international code was first published in 1857 by a committee appointed by the Board of Trade; it was the outcome of the Marryat code, which was then in general use, and included the first eighteen consonants of the alphabet as code flags, the distinguishing pennant bringing the number up to nineteen. Without the use of the pennant it was possible to make no fewer than 78,660 permutations, and this by employing no individual flag more than once in the same hoist. Of this total 73,440 permutations were obtained by four-flag signals. The old code was adopted by France in 1864, and subsequently by thirteen other maritime nations. After thirty years' use it was generally admitted that the international signal book did not meet the requirements of modern times; and in 1887 a committee was appointed to bring it up to date. The Board of Trade committee which undertook the work consisted of Sir Digby Murray, Admiral Sir Leopold M'Clintock, Sir George Nares, Admiral Sir Harry Rawson, Colonel Hozier, Capt. C. P. Wilson and Capt. Bowden-Smith. The last named retired from the committee when he attained the rank of Admiral, while Mr. Thomas Gray and Mr. Swanston, who were both chairmen of the committee in their time, died before the stupendous task was completed.

The first valuable suggestion appears to have been brought forward by the French Government, which proposed including two extra flags, X and Z, in the code, with a view to increasing the number of two and three flag signals and decreasing the four-flag hoists, for to reduce the four-flag signals in favor of a smaller number of flags in each hoist naturally meant greater speed in signaling and less risk of error. The proposal of the French Government was adopted, but when it was found that it meant practically rewriting the whole of the code the committee decided to add not only the flags X and Z, but others representing vowels. The net result of the negotiations is that, after thirteen years' continuous work, the number of flags in the code has been increased from eighteen to twenty-six, irrespective of the code pennant. Although the addition of eight flags may seem a trifling matter in itself, the vast nature of the work will be realized when it is said that the increase has enabled as many as 375,076 signals to be made, no flag being used more than once in the same hoist, while the old four-flag signals have practically been superseded by three-flag hoists. The old code contained only 306 two-flag signals. These have been increased to 650 in the new book, and the three-flag signals are now 15,600, as against 4,896 in the old code.

While Part I. of the new code book contains, primarily, the instructions how to signal, including alphabetical spelling and numerical signals, two-flag, three-flag, and four-flag signals, with a general vocabulary, Part II. is devoted to three distinct systems of distance signaling, (1) by cones, balls and drums; (2) by balls, square flags, pennants and whefts; (3) by the fixed coast semaphore. Of these three systems the first is entirely new, and is regarded as likely to prove extremely useful in vessels of small tonnage. The necessary apparatus, consisting as it does of two cones; three balls and one drum, has the advantage of being simple, inexpensive and durable. The Morse code of signaling by light and sound, and also by flag waving, a system chiefly used at present for naval and military purposes, is now included in the international code. The work is carefully compiled, and represents the outcome of sound practical experience; it will, of course, involve a certain amount of study on the part of those for whose use it is intended, but it is arranged with every regard to simplicity. The earlier pages are, as hitherto, devoted to illustrations of British and foreign flags, followed by the quarantine and code flags. The meanings of the latter, when taken singly, are explained, and it is interesting to note that in future S, when hoisted alone, will be the international signal signifying "I require a pilot." Formerly the French used the blue-peter as the pilot flag, but they have now agreed to adopt the letter S; henceforth, therefore, the blue-peter when hoisted alone will have the sole meaning that the vessel is about to sail.—Field.

Dust on Shipboard.

Attempts to Solve the Mystery of Its Origin All Fail.

A "DUSTY" ocean highway sounds almost incredible. Yet those who are familiar with sailing vessels know that, no matter how carefully the decks may be washed down in the morning, and how little work of any kind be done during the day, nevertheless if the decks are not swept at nightfall an enormous quantity of dust will quickly collect.

Of course on the modern liner the burning of hundreds of tons of coal every twenty-four hours and the myriads of footfalls daily would account for a considerable accumulation of dust, but on a "wind-jammer," manned with a dozen hands or less, no such dust-producing agencies are at work. And yet the records of sailing ships show that they collect more sea dust than does a steamer, which is probably accounted for by the fact that while the dust-laden smoke blows clear of the steamer, the large area of canvas spread by the sailer acts as a dust collector.

To quote an instance in support of this contention, we may mention that no less than twenty-four and a half barrels of fine dust were swept from the decks of an American sailing ship during a ninety-seven days' voyage from New York to San Francisco. The captain of this vessel, a man of scientific tastes, made careful observations on the mystery of sea dust, but beyond the wear and tear of the sails and rigging, a quite negligible factor, he could assign absolutely no perceptible cause for the formation of dust on board his ship.

It has been asserted that the dust which falls on the decks of vessels emanates from the interstellar spaces. This sounds both scientific and plausible, but it is at variance with certain known facts. Bits of leather, cork, wood and vegetable fiber are almost always present in sea dust.—London Shipping World.

YACHTING NEWS NOTES.

William M. Tebo, owner of the extensive ship yard, yacht depot and steam dredging plant at the foot of Twenty-third street, Brooklyn, died on Tuesday from a complication of diseases at his home at Crooke avenue and St. Paul's place, Flatbush, in his seventy-second year. He had never recovered from an attack of paralysis from which he suffered seven years ago. He was born in Beauharnois, in the Province of Quebec. In early life he came to this country and was engaged as an architect and dredger in the upper part of New York State. He settled in Brooklyn in 1854, and began work as a dredger. He secured several big contracts, including the dredging work for the abutments of the Brooklyn Bridge. In 1885 he established his big depot at the foot of Twenty-third street.

To the yacht depot he added coal pockets and had powerful tugs for sea and coast towing. This yacht depot is known all over the world, and many craft of prominence have been built, docked or repaired there. For the past five years the active management of Mr. Teboe's business has been conducted by former Postmaster Andrew T. Sullivan. Mr. Tebo contributed to numerous Brooklyn charities.—N. Y. Sun.

J. S. Smith, of Bayonne, N. J., is building an 85ft. over all sloop yacht for Mr. J. H. Thompson, of this city.

Mr. William H. Rightmire has purchased from Mrs. C. E. Low, of Bayshore, L. I., the sloop Natalie.

The New York Athletic Club has a splendidly equipped yachting department at Travers Island. A force of men under Superintendent Andrew Larsen are employed the year round making repairs on and caring for members' yachts. In addition to three large houses, the club has just completed a building 75. by 45ft, in which most of the club launches are to be stored this winter. Among the boats laid up at this yard are the ketch Paladin; auxiliary yawl Kathleen; yawls Caroh, Themis and Sahib; knockabouts Dipper, Perchance and Thelga; cutters Io, Mopsa, Xara, Marjorie, Pelican, Kit and Portia; sloops Trochilus, Vision, Loafer, Icarus, Venture, Chin-Chin, Saria and Santuzza; catboats Onita, Sylvia and Narrioch; launches Amorita, Surprise, Dolly, Dixie, Trochilus, Estli and Indian. Mayhew Bronson's auxiliary sloop Trochilus is being changed to a yawl from plans by Capt. Larsen.

At a recent meeting of the Knickerbocker Y. C. the following officers were elected for the year: Com., S. H. Mason; Vice-Com., Louis H. Zocker; Rear-Com., Edward F. Glover; Treas., George H. Cooper; Sec'y, J. O. Sinkinson; Meas., John G. Money; Fleet Surgeon, J. B. Palmer; Directors, F. E. Barnes, F. Stephenson, Rodman Sands, Charles Schlesinger and Thomas Wilson, Jr.

The Entertainment Committee of the Harlem Y. C. has been earnestly preparing for the future social functions of the club. The club house has been renovated, and is ready for the second monthly reception. The club's seventh annual ball will be held on Feb. 7. The committee hopes to make it the most successful social affair in the history of the organization.

PUBLISHERS' DEPARTMENT.

STOCKTON, Md., Jan. 6, 1901.—Thanks to last year's advertisement, my house was full to Jan. 1, and as I could not accommodate any more, an advertisement at that time was useless. Now I wish to fill my spring months, and inclose you an advertisement for that part of the year. O. D. FOULKS.

The FOREST AND STREAM is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday and as much earlier as practicable.

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

COPYRIGHT, 1901, BY FOREST AND STREAM PUBLISHING CO.

TERMS, $4 A YEAR. 10 CTS. A COPY. SIX MONTHS, $2.

NEW YORK, SATURDAY, JANUARY 12, 1901.

VOL. LVI.—No. 2. No. 346 BROADWAY, NEW YORK.

The FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. The editors invite communications on the subjects to which its pages are devoted. Anonymous communications will not be regarded. While it is intended to give wide latitude in discussion of current topics, the editors are not responsible for the views of correspondents.

Subscriptions may begin at any time. Terms: For single copies, $4 per year, $2 for six months. For club rates and full particulars respecting subscriptions, see prospectus on page iii.

THE COLORADO SYSTEM.

WE print a suggestive communication from Mr. D. C. Beaman, of Denver, in exposition of the Colorado system which permits the sale of imported game and game from preserves, while at the same time forbidding traffic in Colorado's native wild game. The law provides for an elaborate system of certificates, permits and labels; and it is manifest that the actual operation of the plan and the measure of safeguarding it gives the native stock must depend upon how honestly and watchfully it is administered. Mr. Beaman testifies that the operation of the law has been entirely satisfactory to all concerned and has afforded almost perfect protection to Colorado game and fish taken in the open field.

Massachusetts has had some experience quite in line with that of Colorado with respect to the sale of brook trout artificially propagated in trout ponds for the market. It will be recalled that a few years ago the trout breeders of that State made a sturdy fight to wrest from the Legislature permission to market their cultivated fish in February and March, which months are in the close season for wild brook trout; and this they have been doing. In response to our inquiry as to the effect of this system upon the wild trout supply and fishing for market, Capt. J. W. Collins, chairman of the Fish Commission, tells us that while it would be difficult to arrive at a definite and satisfactory conclusion regarding the effect on the sale of wild trout, without making an inquiry such as has not been attempted by the Commission, it is, however, the opinion of those who have given some attention to this matter that the general effect of the law is to decrease the demand for trout, and especially for wild trout. Cultivated trout sell for from 25 cents to 35 cents per pound during February and March, and consequently they have a material influence upon the prices for wild trout after the first of April. Formerly, at the opening of the season, wild trout sold for $1 per pound or thereabouts; and even at the present time dealers offer about 25 cents per pound more for wild trout than for those artificially reared. It is not probable that any wild trout are sold before the first of April. The low price in February and March would not be an inducement to parties to catch wild trout for sale in those months. It is also believed by some that the lack of the wild trout flavor in the cultivated trout sold before April has a tendency to prejudice some people against eating trout, and therefore, to decrease the demand for wild trout, as already indicated, especially on the part of those who might fear they would get artificially raised fish even when paying the price for wild trout.

Manifestly, however, the case of a species of fish whose supply can be kept up artificially, and where the open market is provided in response to a demand for an outlet for the artificial supply, is very different from the case of wild fish or wild game, which under open-market conditions will rapidly be depleted. While it may be possible to keep the market filled with cultivated trout, it is not possible, at this time, to supply the game market with venison and quail and other birds from preserves. There are no preserves to draw any adequate supply from. An open game market, in this year 1901, generally throughout the United States would mean a market stocked with wild game. If that wild game does not come from the open fields of the State in which the market is situated, it must come from the open fields of other States. But under existing laws, the legitimate sources of supply in States where non-export laws do not obtain are so restricted that they would not begin to stock the markets. We have come to a point in this country to-day where there is not any considerable amount of game capable of meeting the Colorado proviso of being "lawfully imported," if we concede that as a condition precedent to lawful importation into one State it must have been lawfully exported from another State. In any discussion, then, of open-market systems like that of Colorado we must eliminate as a possible factor game imported from other States. This leaves for the market supply the game bred in preserves. At the present time the amount of game bred in preserves is so insignificant that it, too, may be disregarded as a factor in the problem; although the time may come when the high prices paid for game as a luxury may stimulate the infant industry of raising venison and pheasants for market, to such an extent that it will be worth while providing an outlet for the supply.

Until that time shall have come, it will be a safe plan to forbid the sale of game at all seasons.

MICHIGAN WARDENS.

There never was a time in Michigan when there was as much interest in game protection as there seems to be now. The tracking snow coming just at the time of the deer season, which had not occurred before for years, enabled sportsmen to kill an enormous quantity of deer. This has alarmed the people of the State, and they are pretty nearly unanimous in asking for a law that will allow the killing of but two deer by each sportsman taking out a license or a permit to shoot, and that will absolutely protect does. The Michigan game warden system is a failure so far as the local wardens are concerned, for they are dependent upon the county boards of supervisors for salary, and nine counties out of ten will not fix a salary that would even pay a man's expenses. There are a few counties that have voted $40 or $50 a month, but that is all. The plan now under consideration is to remodel the warden system, and to divide the State into districts, with a warden for each district, who shall receive his pay direct from the State. The entire abolishment of spring shooting will be demanded. The limit on brook trout will be increased from six to seven inches in length, and possibly a limit on the number of fish or birds that can be taken in one day, or fish from any one stream, will be insisted upon. An effort will also be made to close a certain portion of the Big Manistee to all fishing, for the breeding and perpetuating of the Michigan grayling. This portion of the stream is not a trout stream, and there are very few trout in it; it is strictly a natural grayling stream, on which the logging is a thing of the past so that the grayling really should increase if protected. Unless some such expedient of providing a protected breeding ground shall be adopted for the grayling the species is doomed to extinction in Michigan waters.

THE NEW YORK COMMISSION.

IN his message Governor Odell, of New York, recommends many retrenchments and the reductions of various commissions in order to secure economy. Among other things, he recommends that the Forest Preserve Board and Fish and Game Commission should be combined, so that one commission of three members should take the place of the present two commissions. He points out that the salaries and office expenses of the Forestry, Fish and Game Commission together with the expenses of publishing reports last year amounted to $82,875, and this was exclusive of the maintenance of hatcheries and legal expenses. The salaries and office expenses of the Forest Preserve Board amounted to $14,000, and there was an additional expenditure of $12,000 for counsel. The legal work of the department, says the Governor, should be performed by the Attorney-General. The combination and reduction as recommended by Governor Odell would amount to a saving of probably $35,000.

The recommendation is excellent, so far as it goes. Entirely too much money is put into salaries and the publication of expensive reports, while insufficient funds are found for the pay of game protectors and the actual work the commissions are charged with doing. But the change should be more radical and further reaching than any simple combination of the Forest Preserve Board and the Fish and Game Commission. The duties of the Forest, Fish and Game Commission are quite distinct from those of the Forest Preserve Board; instead of combining the two, the better plan would be to abolish altogether the Forest, Fish and Game Commission as a commission, and to put in its place a State fishculturist, a State game protector, and a shellfish commissioner, provided the surveying of oyster lands and the other duties belonging to the shellfish office cannot be done by the public lands department. The State fishculturist could do independently all that is now done by the State fishculturist under a board of five commissioners; and the State game protector could do independently all that is now done by him under direction of a board of five commissioners. The two officers should be entirely independent of one another and of control by any board of commissioners; they should be free and untrammeled in their work, and it would be possible to hold them individually responsible for the performance of their duties. If the Legislature is desirous of retrenchment, it can here retrench much more radically than by a combination of the two commissions, and it can provide a much more efficient and satisfactory system by giving us the independent game protector and fishculturist.

SNAP SHOTS.

Ohio's list of game birds has recently been enriched by the addition of two new species, "Japanese turkeys" and "snow birds." The Cuvier Club, of Cincinnati, prompted by the laudable desire to identify these new species and to catalogue them scientifically, recently conducted an examination into certain cold storage vaults, said to harbor the turkeys and snow birds, and with the aid of search warrants they secured a number of the birds quite sufficient for identification. After careful scrutiny, the Cuvier experts made oath that the terms "Japanese turkey" and "snow bird" were nothing in the world more than new-fangled names for a bird already well known in this country as Virginia partridge, quail or Bob White. As a rule, the Cuviers are glad to identify, without charge, any bird specimens submitted to them; but in this case the dealers who had the birds in possession were by certain provisions of the Ohio law required to pay severally $25, $50, and $100 for their instruction in how to name game birds in close season.

The second chapter of "Reminiscences," by Rowland E. Robinson, printed to-day, will be followed by a third. These were the last things written by Mr. Robinson—the pleasant memories, near life's close, of the care-free days of youth. The January number of the Atlantic Monthly contains a sketch of Mr. Robinson, by Mrs. Julia R. C. Dorr. It is an appreciation of the creator of Uncle Lisha, Sam Lovel and the other characters which have taken their secure place in the literature of New England, and there is with it a description of the Robinson home, which readers of the Danvis stories will be glad to have.

Mr. Willard G. Van Name makes the excellent suggestion that when offenders against the game laws are punished, the officials and interested individuals should take pains to have the facts fully reported in the local press, to the end that the public may be instructed in the matter of game protection. It is a practicable and very profitable plan. The average offender, who has been made to pay a fine for shooting out of season, naturally wants to hush up the affair and to avoid publicity. But publicity is just what is essential, if the enforcement of the law in individual cases is to be of instruction to the public.

We have frequently urged the enlistment of the local paper as a most serviceable adjunct to the right protection of fish and game. There is no other such power as the home paper in a cause like this; and it is an agency which should be cultivated.

Twenty-nine buffalo were counted by scouts last winter and there were possibly ten more in the Park not seen. This is the census of the buffalo made by Capt. Geo. M. Goode, Acting Superintendent of the Yellowstone National Park. This is an almost hopeless remnant, yet Capt. Goode is of opinion that with the establishment of new scouting stations the stock may yet be preserved and that it will increase.

The Sportsman Tourist.

Reminiscences.—II.

AT one time in Jim's fatherless boyhood he was quartered with a benevolent old uncle and aunt who, though as poor as himself and hard pinched to provide for a large flock of their own, always had bit and sup and shelter for the poor orphan. Sometimes he spent a few days with some of his other relatives, of whom he had an unlimited circle, all on the same unvarying level of shiftlessness and poverty. He had been staying a week with one of them, when, having in some way become possessed of a couple of charges of powder and shot, he borrowed a cousin's old flintlock musket and set forth early one bright October morning on a grand hunt. The larder was low, and the hour was before the family's irregular breakfast time, so that he found but a scant lining of remnants for his stomach, yet he carried a light heart and there was a prospect of many apple orchards in his route.

There were upland and lowland from which to make choice of hunting ground, and the chance of getting shots at flocks of duck with his limited stock of ammunition made him soon decide in favor of them against the few shots he might have at single partridges or gray squirrels, for all the frequent orchards and clear water of the hillside springs.

So he turned his back on the hills and followed one stream in all its windings through the half-swampy woods to the marshes by the lake, crept stealthily up to every known duck hole, as the stagnant, dead creeks are called, which are old channels that in some way have become choked and abandoned by the stream. Being hidden from the main stream when grown up with all manner of water plants, they were favorite resorts of wood duck and teal. All the way to the lake on one side of the stream and all the way back on the other, Jim hunted faithfully; but to his sad disappointment he found nothing to expend a charge on, until he came to a pair of green-winged teal, sitting on a sand spit in the stream, and as it was near the end of his return trip, he thought two teal in hand worth more than a possible chance of a flock. Taking careful aim he swept the sand spit bare of life, gathered in his game and improved the last opportunity of a draught from the tepid stream, though he knew it would only increase his thirst, and set forth across dry, flat fields for the head waters of the Slang, where he thought the unaccountable flocks might have congregated.

He had not reckoned without his host, for when he came in sight of the objective place he saw several dark, moving bodies dotting the sheen of the distant water, and nearer approach revealed the logs of driftwood all crowded with sleeping wood ducks.

His parched throat and his collapsed stomach were forgotten, and he at once began a long roundabout advance to the cover of a low-branched oak. He reached it, his shins sore with bruises and his palms smarting with thistles, but he counted such discomforts nothing since he had not alarmed the game of which there was so much that he suffered an embarrassment of riches. Every open patch of water and duckweed among the sedges was filled with bunches of wood ducks and teal feeding on various water plants and fallen wild rice, while here and there a few big black ducks lorded it over their smaller brethren, and every log held a rank of full-fed dozing wood ducks. One of these logs lying in slightly quartering range from Jim's hiding place, seemed to offer the surest target, and with a heart quaiking with dread of a misfire, he took careful aim and pulled the trigger.

Flint, steel and priming faithfully performed their appointed parts, and Jim's heart was fluttering in a commotion little short of that into which the ducks were thrown. Some of them threshed the water in a flurried attempt to rise; others jostled each other in the air above; some tumbled out of the thick of them, wounded to death, and struggled feebly among their dead companions.

He saw at a glance that there were enough to satisfy him, and when he gathered them, ten in all, he was puffed up with pride at the thought of showing them to his uncle's family. He was glad to remember, too, that they ate wild ducks, while his cousin's people did not, being rather fastidious, eating mud turtles, but drawing the line on wild ducks. They would be glad of the feathers, however, and so he could contribute something to the comfort of both. Thinking of his two homes made him remember how hungry he was, and made him crave the frugal fare of either. The uncle's little gray house being nearer—indeed, its roof was in sight across the broad, flat fields—he chose it, and made his weary way toward it. Weary enough it was, with the October sun blazing down with midsummer fervor, the musket and the precious string of ducks, swaying and wobbling in spite of any adjustment, growing heavier at every step. His lusty youthful appetite gnawed savagely at his empty stomach, to which nothing had gone since early morning save a few bunches of sour frost grapes and tepid water that had only increased his thirst. His chosen route had led him away from apples and springs. If he could but have the run of Aunt Amy's garden, it seemed as if a raw turnip or carrot would satisfy him, or that he could almost eat one of the new fashioned tomatoes a few people were learning to like.

Aunt Amy was the neighborhood nurse and doctor for the people of her class, and cultivated medicinal herbs to supply her *materia medica* with what she could not find in fields and woods. The animal kingdom also was called on to contribute a small but important share. Having assisted many mortals into the world, she felt in duty bound to help them keep a foothold in it, in spite of all its sin and sorrow and toil and poverty. In battling with that subtlest foe of infancy, the croup, one of her most trusted weapons was skunk's oil, and as she could not raise skunks like hoarhound, nor gather it in the fields like lobelia, she depended on her son, Pat, and his little dog Ring, to supply that want. Pat's method of hunting was simple and successful. Armed with a club and attended by Ring, a brisk little prick-eared, bob-tailed, brindled and ring-necked dog of no breed, he would go ranging the open fields of a moonlight night until Ring began yelping, when Pat would hasten to him, often guided more by smell than hearing, and find Ring baying the skunk. The race had been to the swift, but the battle was not to the strong, for Pat rushed in, shouting and swearing to fit the occasion, and ended the fray with a single blow of his club.

Now Pat had been out on such an expedition the night before with a like successful issue. The quarry was unusually fat, and its passing was attended by far less than the usual demonstrations. Aunt Amy tried out the oil at once before the open fire. When that was done the meat looked and smelled so nice that Judy, the oldest daughter, would hear to nothing but keeping it to feed Ring, being sure he would not recognize it in its present state. So she quartered it neatly and set it on the low roof of the hen house to cool.

When Jim came plodding across the field in the rear, the tempting pan of meat was the first and most interesting object that his hungry eyes dwelt upon. When he came near enough for a close inspection, he could not guess what it was. It could scarcely be pig or lamb, for whence were such luxuries come to his uncle's frugal board, unless some wholesale accident of broken legs had befallen the farmhouse litters or flocks? It looked and smelled good enough for either, and when he tasted a bit by the aid of his jackknife he was content to remain in doubt as to kind or source, if he might but get his fill of it. This he proceeded to do with such celerity as threatened the speedy reduction of the visible contents of the pan to a beggarly array of bones.

Judy came outdoors for an armful of wood, and, very naturally, casting an eye to the experimental dog meat, was astonished to see Jim making way with it. After a gasp of surprise, she shouted back in a voice that could be heard half a mile off:

"Oh, good land's sake alive, maw, Jim's eatin' up all Ring's skunk meat."

Jim dropped the thigh bone he was gnawing with great relish, his hunger suddenly appeased, as Aunt Amy waddled to the door, calling out in her drawling, motherly voice, heard above Judy's yells of laughter: "Never he mind Jeems, he may eat all the skunks the' be if he's a min' tu! Naow come right in here an' git some cold b'iled cabbage and 'tater, poor dear child!"

Jim was too tired of hearing of it ever to adopt skunk's meat as a regular article of food, but he always declared that he would not hesitate long between that and starvation or even sharp hunger. ROWLAND E. ROBINSON.

"A Winter's Ride."

CHARLESTOWN, N. H., Dec. 29.—*Editor Forest and Stream:* Our visitors to New Hampshire, from the cities, are usually summer birds of passage, who enjoy the forests and streams in their flush of foliage and fullness of flow, and many of them have no idea of the transitory beauty which is occasionally pictured by a wintry storm. Such a picture I saw some three weeks ago, and wished that I had been gifted with the artist's skill and furnished with his pencil, to transfer it to canvas. The occasion was this: I had received a letter on Saturday asking me to come over to Concord on Monday to make some engineering measurements for the Land & Water Power Company, and I accordingly started across the State Monday afternoon. A cloudy morning had brought rain at noon, and this changed to snow, as I took the train at 3 P. M.. By the time I reached the "height of land" at the foot of Sunapee Lake it was very dark, and the lake was undistinguishable in the whirl of snowflakes. As we sped rapidly down the long descent on the other slope toward the Merrimac Valley nothing was to be seen except the occasional lights at a small way station, and when we reached Concord we had outrun the snow, and it was raining hard. The rain continued all the evening, and the pavements of the main street glittered in the electric lights from the hotel and street lamps as I looked out while smoking my cigar after supper.

In the evening my friend who had sent for me came in to say that an accident to the machinery in the afternoon had precluded all possibility of making the desired experiments, and there was nothing to do but to come home in the morning and wait for repairs.

When I came down to breakfast the next morning the snow had crossed the hills and reached Concord and was falling fast.

I went down to the station at the usual hour and found that the down train from Claremont, on which I was to return, had not got in, and when it did come it was fairly plastered with snow. I took my seat in the smoker and we started back, rather behind time, but with a smooth track, which the down train had cleared, and were soon making good time. Here my picture began to develop. When the road was built all the low lands in the Contoocook Valley were covered with a heavy growth of pine, and one section of them has always been known as the Old Mast Yard, the pines on it having been especially reserved in the old colonial days for the use of the Royal Navy. Here the pine has all been cut, and the ground is growing up with a crop of white birch and scrub oak.

The long, slender birch saplings, loaded with the damp snow, were bending toward the ground in all sorts of graceful curves, one actually startling by an unexpected swish against the car window as we sped by, and the stiffer oaks were all drooping their branches. It was not, however, until we reached the foothills of the backbone of the State that the full beauty appeared. Here we struck the region of spruces, hemlocks and firs, and every tree was a picture of itself. Each branch, fairly loaded with the damp, clinging snow, drooped like a great plume of white ostrich feather, the northerly side of every tree was covered with a thick poultice of damp snow, while the leeward sides were bare and brown, giving a contrast to the picture.

All the old boulders along the track were coated in the same way on the windward side, but bare and black to leeward, and as we climbed up steep slopes and curves along Sunapee Mountain, we looked down on to a snow-white forest of treetops. The summit cut at Newbury was bare of snow on the north side, but loaded with huge dripping icicles, which contrasted with the rocks, and Sunapee Lake was a smooth white plain. Every telegraph wire was as big as a broomstick, and where two hung near together, the coats had united into a roll as large as a man's arm. The deserted boat landing was festooned with drooping snowdrifts from every eave and cornice, and not a sign of life was anywhere visible. The storm here began to slack, and when we reached the Connecticut River, was practically over, but the picture of it will long remain in my memory.

In discussing the subject of accidental shooting by mistake for deer, much is said about the color of clothing. Why not revert to first principles—to the good old days of "Merrie England" and Robin Hood—and adopt "Lincoln green"? It will certainly not be mistaken for a deer's coat, and will be as good a concealment among the evergreens as any shade of brown or tan color. I had a jacket made of green cloth some twenty years ago, which has now gone the way of all garments, and I shall probably never need another, but it seems to me that such a colored coat would save many mistakes.

A Happy New Year to all readers and correspondents of FOREST AND STREAM, and long life to the paper itself. The Christmas Number was an immense one. VON W.

In Frontier Days.—II.

The Escape of Longhair.

THE wolfers were unhappy. Several weeks had elapsed since they vowed to make old Splayfoot, the grizzly, pay for his thieving with his life, but still the sly old brute roamed the valley unharmed. Their hunters' pride had received a serious blow, and all three had become quite ill-tempered over the situation. The Scribbler during the early days of the hunt had discovered the bear digging into an ant hill, and had emptied the magazine of his Henry rifle at him, with no effect except to make the old fellow run for the hills at his utmost speed. It will be remembered that Ben had missed a standing shot at its head and neck, but that did not prevent him from saying cutting things about the youth's markmanship, and Jack, returning every evening from a long and fruitless hunt, never failed to give his opinion of hunters whose gun muzzles wabbled like a quaking asp leaf in the wind. Nearly every day during this time one or another of the men, and sometimes all three, had found fresh signs of Splayfoot, so they knew he had not left the country. He seemed to be at home on both sides of the river, swimming back and forth as he pleased, and evidently he was a great traveler, for as far as they had been up and down the stream they had found his tracks along the sand bars. Latterly, despairing of finding him by the ordinary methods of still-hunting, the hunters had killed and left in likely places a few head of antelope and deer and a buffalo or two for bait; but the result had been only a few meals for the wolves and coyotes. Other bears had been seen, several had been killed, but as for Splayfoot the only tangible thing about him was his tracks. No doubt all three of the hunters wished they had not been so rash with their vows. Had any one of them proposed to call the hunt off, the others would have readily agreed to it. But there was the rub; none wished to be the first to show the white feather, so the hunt was kept up with dogged persistence.

One evening the Scribbler was watching the sun gild the towering dykes and cliffs as it went down in a blaze of crimson glory. The game of all kinds had mostly been to water, and now singly in little groups and in bands was leaving the river and grazing slowly up the slopes of the valley. Suddenly a bunch of buffalo on the opposite shore of the river stampeded, raced up the steep bank and disappeared in the cloud of dust their sharp hoofs raised. The cause of their fright was soon evident, for a moment later a lone man stepped out where they had been and looked around. "Indians at last," said the Scribbler to himself; but a glance through the telescope proved that he was wrong—the stranger was a white man. The Scribbler hurried down to the cabin to notify his partners, and a moment later they all started out in the boat to interview him. As soon as the traveler saw them he stopped, and leaning on his rifle, awaited their approach. He was about as wild and odd looking a specimen of humanity as the Scribbler ever ran across, and during a long life on the frontier he has seen some pretty queer ones. The stranger's hair and beard had apparently not been cut for a very long time, and hung far down on his shoulders and bosom in fluffy, wavy, well-combed masses; both were a golden, glistening yellow. He was very tall, more than 6 feet, very lean and slender, and his buckskin shirt and trousers fitted him as gracefully as a gunny sack would a bean pole; his footwear was a pair of huge shapeless deer shank moccasins. But his clothing, his face and hands were absolutely clean, something quite unusual in a country where soap was seldom considered a necessity; even his dingy old hat looked as if it had been freshly scoured.

"Hi, stranger," Ben called out, resting on the oars; "what's the best word an' where ye bound?"

"Bound anywhere," the traveler replied; "anywhere to git away from the Injuns an' find some terbacker. Got any?"

"Sure!"

The stranger bounded into the stream and waded out toward the approaching boat. "For God's sake," he exclaimed, "give us a chaw quick!"

Ben handed him his plug, and standing there waist deep in the water he bit off a large chunk of it, shut his eyes and breathed a deep sigh of ecstatic relief. "Who'd 'a' thought it?" he said, presently, waving the plug in the air and then returning it to Ben with a courtly bow. "Who'd 'a' thought it? A minnit ago sufferin' torments an' now transported to the seventh heaven o' earthly bliss, as the preacher says. Stranger, I thank ye."

All hands returned to the cabin, and the wolfers set a lot of food before the newcomer. He ate ravenously. When he had finished and had been supplied with a plug of tobacco, Jack suggested that he should tell something of his adventures. "You spoke of getting away from the Injuns," he said. "Have they been botherin' of you?"

"They have," the stranger replied. "He who boasteth his pride shall have a fall, as the preacher says, an' me, Longhair, fer twenty years a wanderer over these here plains an' mountains of the West, I'm the feller. I bragged that the Injuns couldn't git the best o' me, an' they've sot me plumb afoot."

"I come up to the Yellowstone from Green River this spring, but they was too many Crows a-trappin' an' a-prowlin' roun' thar, so I jest packed up ag'in an' lit out fer the Missouri. 'Bout twenty mile below here I found a place what suited me—chock full o' beaver, all kinds o' game in the bottom, nary a sign o' Injuns, nor nothin' 'cept a steamboat travelin' up or down onct in a while. Right here, I says, ole Longhair makes his home, an' I went to work an' put up a cabin out o' green logs, an' built a corral 'longside it to put my stock in o' nights. I had four head—three pack mules an' a rattlin' good saddle horse. It didn't take me long to build the outfit, an' I moved in. Safe again, I says. Injuns can't burn me out, logs is too green, an' anyway, I'm inside, here's a lot o' port holes to shoot through, an' I'd like to see 'em git the stock out o' that corral.

"Wal, seein' as they wa'n't no trappin' to be done until cold weather, I built me a go-devil and worked hard all summer snakin' out firewood fer the steamboats, but the water has been so low that mighty few of 'em ever got above Cow Island, so I didn't sell much, jest about enough to pay fer my winter's grub 'n' a case o' ca'tridges. Them steamboat fellers knows how to charge. Thirty dollars fer a sack o' flour, by gosh.

"T'other mornin' I was prowlin' 'round on the hills, an' the first thing I knowed an Injun popped up on a ridge 'bout half a mile off; they was twenty-five or thirty on 'em—a war party afoot. They see me as quick as I did them, and scattered out to try and surround me. But I'm consid'able on the run myself and I just flew down into the bottom, drew my stock into the corral and then into the cabin I went 'n' fastened the door and waited fer 'em to come up. They didn't come though, no closter 'n the timber, about 200 yards off. I seen 'em sneakin' along the edge of it, an' give 'em a couple o' shots fer luck, but they didn't shoot back. Wal, I kept walkin' from one wall o' the cabin to another all day, a-peekin' out o' my port holes, but couldn't see anything more of 'em. I knowed well enough, though, that they was down in the timber, or under the river bank, whar I went to git water. That's what worried me—water. Both buckets was empty, and after my run I was dryer 'n a fish, 'n' I dasn't go after any. I had a little vinegar, 'bout a cupful, 'n' I took a swaller o' that onct in a while, but 'twan't no good.

"A little after dark 'n' jest afore the moon raised, the scoundrels opened fire, an' the way the bullets plunked into the logs was a caution. I fired back fast as I could, now from one wall, 'n' now from another, aimin' at the flash o' their guns, and pretty soon the moon came up 'n' 'twas so light they sneaked back 'n' quit shootin'. They'd killed two o' my mules, but nary a bullet come in the cabin. Wal, you bet I didn't sleep none. I kept a-watchin' out all night 'n' expected they'd sure make another rush toward mornin', but they didn't. As soon as it got daylight I seen a smoke down in the timber. Gittin' some breakfast, be ye? says I. Well, seein' that's the case, I'll take chances 'n' try 'n' git some water. I was so dry my throat was crackin' 'n' my tongue was all swelled up. It was about thirty yards to the river where I had a trail down the bank. Mebby they's some on 'em layin' fer me down there, I sez. If they be, they'll pot me sure, 'n' I kind o' wilted, 'n' sot down fer a while. Thinkin' over the risk, somehow or another I didn't seem to be so thirsty as I was a while back. But by 'n' by the cravin' come on ag'in worse'n ever, 'n' I got up 'n' tore 'round that cabin like a wild man, 'n' a-sufferin' the tortures o' the damned, ez the preacher said. Water or die, I says after a while, 'n' I grabbed my gun 'n' throwed open the door. They was nothin' in sight, so I picked up a bucket an' started out. I hadn't got away from the cabin three steps when I see somethin' flash in the sage brush 'n' grass on the edge o' the bank. 'Sun shinin' on a gun bar'l,' I says; 'git back fer yer life,' an' I got. But afore I could run in 'n' shut the door, they was three shots fired, 'n' three bullets come ker plunk into the cabin wall. Discretion is the best part o' valor, as the preacher says, says I. I ain't a bit thirsty, gol dum ye!

"'Yes I be,' I says, after a while. 'What's the use o' lyin'? I be thirsty; my God, I'm thirsty,' 'n' I commenced tearin' aroun' the cabin ag'in. The vinegar was all drunk up. I hunted aroun' an' found some pain killer. I tasted on't an' smashed the bottle ag'in the fireplace. How I got through that day without goin' plumb crazy is more 'n I can account for.

"Night come. I'd made up my mind what to do—what I had to do. I filled two belts with cartridges an' put 'em on; then I set the whole case, about 1,400 of 'em, in the back end o' the fireplace, 'n' piled wood on top an' in front of 'em ready to light. I pulled off my shoes, tied my hat on good, stuck a match to the shavin's in the fireplace, 'n' then grabbin' my gun 'n' with my heart in my throat, I pulled the door open an' lit out fer the river, quarterin' down like below my water trail. Say, you oughter heard the guns pop, flash here, flash there, bing, bang all around; but nary a bullet struck me. I got to the bank all right and dove off head first, stayin' under jest as long as I could hold my breath. When I come up I slung my gun on to my back with this here piece o' rawhide I'd put on, 'n' lit out fer the other shore, swimmin' mighty low 'n' slow, so as not to make any ripple in the water. The Injuns never seen me after I jumped; they run along the bank hollerin' 'n' a-jabberin' an' a-shootin', but by the time I struck the other side they'd give up the hunt, 'n' from the light o' my fire streamin' out o' the cabin door, I could see 'em pilin' in there to rob the place. I was cold 'n' shiverin', an' wanted to run 'n' git warm, but they was a little trap over acrost I wanted to see sprung. so I stood an' waited. 'They're eatin' my sugar now,' I sez, 'n' my 'lasses, 'n' jest havin' a terrible fine time. I wonder if that case o' ca'tridges ain't ever goin' to go off? It did. A big streak o' fire shot up through the chimbley 'n' out the door, 'n' then ker blim she went, 'n' then all was dark. Man! how them Injuns did yell fer a minit, 'n' holler 'n' howl, 'n' I jest yelled back 'n' haw-hawed 'n' cussed 'em, 'n' then I lit out 's fast as I could in my bare feet up the river. When mornin' come I killed a deer ,'n' while I was roastin some o' the ribs I made these here shank moccasins; then I got along better. Wal, that's my story. If the Injuns did run me out, I bet I sent some on 'em to the happy huntin' ground."

"Longhair," Ben exclaimed, "you're all right! That was the slickest trick I ever heard of. You sure must 'a' killed a lot of 'em."

"I expect I did," he replied. "Ef I am afoot an' busted, I believe I played even on 'em."

"Never mind about bein' broke," Ben continued. "Here's lots o' grub 'n' ca'tridges 'n' strychnine, 'n' they's lots o' wolves prowlin' round jest achin' to be poisoned. Yer a rustler all right, 'n' so fur as I'm consarned yer can go in whacks on the hull business."

"Sure," Jack exclaimed, thumping the table.

"Certainly you are welcome," echoed the Scribbler.

"Fellers," said Longhair, rising and shaking hands solemnly all around, and there was a tremor in his voice, "Fellers, all I kin say is, yer white. Old Longhair will do his best. The preacher said they was a silver linin' to every cloud, 'n' by gosh he didn't tell no lie."

The wolfers laughed at his quaint expression, and presently they all turned in in good spirits.

"Well," queried the Scribbler next morning, "what is the programme for to-day? Another hunt for Splayfoot?"

"Splayfoot?" Longhair asked. "Who's he?"

"He's a bear," Ben replied, "a dod gasted, cripple-footed, low down bear that we've been tryin' to kill fer a month or more. But he 'pears to be smarter 'n we are. If it wan't that he swiped 'n' eat our sheep meat, 'n' that we've foun' his tracks sunk deep in the sand 'n' mud, I'd swear he ain't no b'ar at all, nothin' but a phantom, a ha'nt, a shadder as ye might say, fer I had a fair 'n' square shot at him at 30 feet 'n' missed, never teched hide or hair, 'n' Scrib, here, emptied his hull magazine at him; result, nothin'."

"Is his right hind foot flopped around sideways?" Longhair asked.

"It is; the track of it reaches clear across to the tracks of his left feet."

"It's him!" Longhair said. "It's him sure; he was hangin' aroun' my place off 'n' on all summer, 'n' swiped my good meat several times, but I never got to see nothin' more of him than his tracks."

"Wal," Ben concluded, "ye can amuse yerself by huntin' fer him ag'in; ye've got to learn the country 'n' the trails about here anyhow, 'n' while yer pokin' aroun' just keep yer eye peeled fer him."

It was another blank day, as usual, so far as Splayfoot was concerned. In fact, none of the wolfers found any fresh signs of him, and it was thought he had left the vicinity for a time, and perhaps for good and all.

"Boys," said Ben, after the supper dishes had been washed and the wolfers sat in front of the fireplace lazily smoking. "Boys, I've been thinkin' all day about the close call Longhair here had. Now suppose a war party was to sneak in an' surround us, how long do you think we would last if they stayed with it? We've only got one bucket, an' half the time that's empty; consequence is, sooner or later we'd have to make a break, an' right there we'd git our lights put out. Here's thick brush right in front o' the door fer 'em to lay in, an' a nice hill just back o' the cabin for 'em to cache behind, an' we wouldn't stand no show at all."

"That's right," Jack allowed. "If they come an' just laid low fer a few days, they'd soon carry off our top knots. Oh, well, we've got to take chances."

"Yes, take chances an' trust to luck, as the preacher said," Longhair commented.

"Here we be," Ben continued, "just naturally surrounded by Injuns, Assinnaboines, Gros Ventres an' Crees north of us; Yanktonais an' other Sioux to the east, Cheyennes an' Crows on the south, an' the cussed Piegans to the west. It's the biggest wonder in the world some on 'em ain't tackled us a'ready; sooner or later they will, an' I believe I've got a scheme to beat 'em. We can dig a small tunnel from the river to come out right in this here cabin. It's only 31 yards. I stepped it to-day, an' that's nothin' fer old miners like us. Now then, what do you all say?"

The others thought it an excellent plan, and the next morning all went to work with a will. There was only one shovel and one pick in the camp, but they were kept going steadily turn about. Jack built a barrow to transport the dirt, making the wheel of a cut of cottonwood log bound with rawhide, and the body of a buffalo hide laced to the handles. Work was commenced near the edge of the water in the face of the high cut bank, and as the earth was wheeled out and dumped it was carried down stream by the deep, swift current. A progress of 15 feet was made the first day, but thereafter the work went more slowly. In two weeks, however, the barrow was completed, and the exit at the river was concealed by a pile of beaver cuttings and drift wood which the wolfers gathered with their boat. In the cabin the entrance to the tunnel was directly under the table. Some short sticks and grass, covered with a thin layer of dirt, effectually concealed it.

While the work was in progress one or another of the wolfers had been out on the hills each day to look for Indian sign since the arrival of Longhair, and with his narrow escape in mind, they had become more cautious. At sunset especially, the movement of the game was closely observed. So long as the herds grazed or wandered quietly about, there was nothing to fear, for in those days a war party could not have traveled half a mile in that country without alarming several bands of buffalo or antelope or deer, which would have gone scampering away in all directions. They were the wolfers' barometer of safety and danger. Splayfoot had evidently left the country, Jack claiming that Longhair's appearance had scared him out.

"The chances is," that worthy said, "that he's hangin' around my cabin down the river feastin' on Injun meat. We'll have to go down thar some day an' find out what did really happen when that case o' cartridges busted."

The Country of the Horse.

ON a vacant lot near my house in the city of Washington a rough-haired pony is pastured this winter, every mild day, and as I pass him he is a recurrent joy to me, because he looks so much like a Rocky Mountain cayuse. He picks aimlessly at the long dry grass, or stands, a fraudulent counterfeit of misery, as he looks at me through the tangled forelock which covers his mournful eyes. Well do I know that appealing gaze. Have I not seen it in the eyes of every rascally pack horse in British Columbia, the land where horses work one day a week and stuff themselves the other six! The fatter and lazier the horse, the more tearful and woe-begone the eye. It is worth going there to see them. As you journey through the valleys, between the stupendous peaks, it looks as if there were twenty horses to every log house, and a few dozen thrown in for good measure, in every creek bottom where the bunch grass grows rank. To whom do they belong? Like the log huts, the mournful and over fed cayuses are the property, not of white men, but of the Indians, who live, perhaps, the easiest lives of any people in North America. In the great valley of the Frazer for instance, there are uncounted miles of horse feed on the hills, and uncounted myriads of salmon run up the Green Mountain rivers. There is a little gold in the river banks, and Mrs. Siwash and her daughter can wash out gold enough to pay for a calico gown any summer day. Not enough money in it to tempt a white man. There are richer fields for him. But the British Columbia Indian, simple and easy-going, finds a living almost as readily as do the horses that find pasturage everywhere, and like him take no thought of the morrow.

Of course some of those horses get roped in, and make assiduous all summer journeys to Peace River, laden with flour bags and whiskey, toiling up and down the dizzy mountain paths, week in and out, to the sound of a tinkling bell. Others go on hunting trips, and snort with futile indignation when compelled to transport deceased wild animals. But even these unfortunates revel in weeks and months of leisure, and chew the grass of idleness, unimpressed by scenery whose appalling magnitude makes tourists gasp.

Speaking of scenery and mountain trails, a New York paper had a story Sunday, in words and figures following:

> Theodore Roosevelt is about to face a test of his bravery more trying than San Juan Hill. After retiring from his present office he will go next month to hunt bear and mountain lion in the Little Book Cliff mesa in Colorado. The trail by which this mesa is approached is considered by old hunters to offer the greatest test of nerve in Colorado. Many of those who try it are carried back fainting. The hunter has to ride along a path of crumbling rock 2 feet wide, with a precipe 2,500 feet deep at his side.
>
> Here Governor Roosevelt will have to pass, with no cheering regiment and none of the pomp of war to encourage him, and only the calmest and coolest kind of courage will sustain him.
>
> A momentary failure of the nerves will leave him a shapeless thing at the bottom of an abyss 2,500 feet deep. Those who know it, hold this a trial of courage compared to which ordinary warfare is child's play.
>
> The old hands are making bets among themselves as to whether the renowned and ferocious "Teddy" will pass over the trail without attempting to "crawl."

Now, wouldn't that give you the croup? All men who have hunted in the mountains know about those trails, where "a single misstep," etc. There are only about a million such places in the West, all alike, with slight variations. I suppose the average horse trail on the side of a cañon, anywhere from Patagonia to the Yukon, is about two feet in the clear, and if the cayuse should go crazy and walk off the side, it would make no practical difference whether the fall was twenty-five feet or twenty-five hundred feet, if there were rocks at the bottom. But after some experience on horseback in that country you learn that the passenger cayuse is as safe as the Chemical Bank of New York City. When you are on level ground, among bushes, your horse may try to scrape you off by rubbing up against the saplings; but where the way is narrow and the view precipitous, the rough-haired little mountain horse is, from purely selfish motives, a model of conservatism and prudence, asking of you only that you sit steady. And Theodore Roosevelt knows the breed. For all the danger of that Colorado trail, would to God I might ride it every day.

As for the little horse that is my neighbor, in the vacant city lot, I wonder what he would think if he could be transported to British Columbia, and be ridden by some moon-faced Indian girl in a calico frock, sitting astride like a little man? Or, the next day, to be turned up a steep trail, with an Indian hunter's luggage on his back? Or the Indian himself, and a rusty rifle, model of 1873, under the Indian's right leg? All this in the shadow of the glorious mountains. Happy the horse, or the man, whose daily companions are the mountains, and the Indians. There are worse things than Indian girls, and rifles model 1873.

FREDERIC IRLAND.

A Small Cook Book

For Our Club House.

Chapter II.—Dinner.

THE man who is coming in to dinner to-night has been chained to business in the city until he lost his appetite, and to-day he has tramped twenty miles and found it again. So you good heartedly set to work to get him up a good dinner, and spoil the whole thing by giving him too many things—meat, chicken, potatoes, turnips, beans, apple pie, preserves, hot biscuit, tomatoes, mixed pickles and so on, *ad infinitum*. He really wants but half of these. Give him a broiled beefsteak, a baked potato, some tomatoes, a cup of coffee and some dessert and a little cheese. Broil the steak over a clear, hot fire. The secret of broiling a beefsteak is to make it very hot at first, so as to bake it into a crust outside and thus retain the juices of the meat. A good way to cook the tomatoes is as follows: Put them in a flat baking dish along with some lumps of butter, salt and pepper, and about a teaspoonful of sugar, together with a layer of fine bread crumbs over the top with a few more lumps of butter. Bake in a hot oven until the bread crumbs are browned, and even blackened at the edges. Serve in the pan as it comes out of the oven. A word about bread. Most country folks bake bread too little. They stop when the crust is a light brown. It is sure to be better if baked to a dark brown

on the bottom and a pronounced black on top. I would tell you how to make hot biscuit, but I do not know how myself. I can make good ones, it is true, but there is a lady who lives at St. Clair, Mo., who makes the best in the world. They are a cross between soda biscuit and rolls, both yeast and soda being used in the "mix," but she tried to tell me how it was done once and it didn't work, so I shall have to go back there and watch her do it before I can tell you about them. In my next chapter I will tell you how to roast a duck, stuff a turkey and fry a chicken (I went to Baltimore to find out about the chicken business). GEORGE KENNEDY.

The Fowler's Dream.

I AM sitting burning incense at the shrine of Nick O'Teen,
In a polished brier censer, with a smooth and glossy sheen,
And a fire crackles brightly on a bed of glowing coals,
Throwing fitful fleeting shadows, like a dance of tortured souls.
O'er the sturdy, rough-hewn studding of the shooting lodge's walls,
To the sound of dismal howling as the Night Wind blows in squalls.

In the hollows 'tween the studding rows of guns on dress parade,
Mutely stand at stiff "attention," silhoutted in the shade.
And the roaring, restless Ocean plays a drowsy lot of tunes
As it's combers crash in thunder in their battle 'gainst the dunes.

* * * * * * * * *

Spiral shafts of smoke ascending from the ample chimney place
Take on form and fact and feature till they seem to fill the space.
And I see before me standing, quite unharmed amid the flame,
That delightful feathered fellow, most esteemed of all the game.
Yes, a canvasback confronts me, but, O! wonder and amaze,
His proportions are enormous as he stalks before the blaze!

For he waddles from the chimney and he towers full six feet,
And his strong gray wing restrains me, when I seek to fly my seat.
Then a troop of others follow—brave lieutenants of his race—
Till their serried ranks are filling ev'ry corner, nook and space;
Then the Captain turns upon me, and with speech distinct and clear
Tells my doom with cruel calmness, while the ranks all echo
"Hear!"

"Listen well, O luckless fowler, while I read your sentence thus:
"'Many years you've shot our brothers, you'll now furnish sport for us!
With your predatory habits, you've gone deeply in our debt,
And you must admit in fairness eye for eye is good law yet.'"

Then the ranks were quickly broken, and each canvas seized a gun,
On the glowing embers stacked them, watched them burning, one by one,
Till the Captain: "Ammunition, that is needed now, my braves!
Ere we send our man-bird flying high in air o'er stormy waves."

Soon with wings and feet propelling, cartridge cases there were brought,
And to pile them on the embers they with quick precision wrought.
When the shells were piled to suit them and ere they began to pop,
I was forced, tho' most unwilling, then and there to squat on top!

O'er my head the yawning chimney pointed straight up at the moon,
And I knew the jolt was coming—coming strong and coming soon.
I could hear the Captain murmur, "Mark! incomers, overhead"——
With a din that was infernal and a lurid flash of red,
I went shooting from the chimney, to'ard the moon I 'gan to soar,
And for this one fact was grateful—that the chimney 's not choke-bore.

I went sailing swiftly upward, till at last it seemed to me
I was turning and was falling—falling swiftly to the sea.;
Whirling downward, plunging seaward, with a speed as swift as light——

* * * * * * * * *

Well now, bless me, I've been dozing, and my pipe is out—good-night.

ROBERT ERSKINE ROSS (Culpepper).

BOLSA CHICA CLUB, Dec. 17.

The Thief River Country.

Editor Forest and Stream:

In describing the Thief River country in your Christmas Number, Charles Hallock makes some minor errors which I would like to correct. St. Hillaire is not, as he says, the terminus of the railroad in that direction. Thief River Falls has been the terminus of the Great Northern R. R. in that direction for the past eight years. From there Red Lake River is navigable to Red Lake, fifty miles away in a straight line and ninety-seven by river. There are several small steamboats that ply between Thief River Falls and all points on Red Lake, and several miles up some of its tributaries on the east side. This is the only feasible route to Red Lake and the wilderness that surrounds it. I have made the trip several times by canoe before steamboats came in fashion.

Thief River Falls is one of the best towns in the whole Northwest for one to strike when in search of sports afield. Charles Robeck, of the Ogamah Hotel, will make one feel at home while in town, and there is good game country in any direction he may chance to stray. A new field for muskallonge fishing is Red Lake and some of its tributaries, especially Big Tamarack, east of the North Lake. A number of them were taken last year (1900), and there are said to be great shoals of them in and near the mouth of Tamarack River. No accurate weights were taken, but estimates ran all the way from 40 to 70 pounds. I saw one that would measure 12 inches through the body from back to brisket. It was taken by Mrs. Hans L. Hanson, of Thief River Falls.

Mud Lake is not ten miles long, but only about four at its greatest extent, and more than two at its least. I have drawn my canoe up and gone into camp on every island in it, and in every grove that borders it. It is seldom that a wagon can be driven to its shores on account of surrounding marshes. It is thirty miles north of St. Hillaire, and Thief Lake is ten miles north of it, making it forty, and not fifteen, miles from St. Hilliare.

I have canoed over every rod of river or creek that was big enough to float a canoe, and know the country very well. In fact, the Thief River country is the place that charms when others all fail, and is credited with many of the red letter days of my field experience.

Heavy floods in the Thief River country made shooting impossible in the fall of 1900, so that it is likely there will be great things in the way of game and fish next year, and getting after it through the swamp and tangle will furnish the recreation pined for. E. P. JAQUES.

Natural History.

Caribou Weights.

WASHINGTON, D. C., Dec. 27.—*Editor Forest and Stream:* A short time ago one of your correspondents asked whether some of your readers could tell him the weight of a caribou he had killed, as to which he could give them no information other than the measurements of the tanned hide. I do not think he will get many answers to such a request, for I do not know just how one would go about estimating the weight of an animal from such data. While an animal is alive the skin is not at the same tension over different parts of the body, and while it may be possible to get at the creature's weight approximately, say by the old rule of multiplying the square of the girth in feet by five times the length in inches and dividing by 21, this cannot be done with the stretched and tanned hide, the measurements of which would not give correct ideas of the length and girth. The term length as used here means the distance from between the ears to the root of the tail. Caribou stags killed, as I suppose the one your correspondent wrote about was, in the fall or rutting season have their necks swollen or puffed out to abnormal dimensions. I killed one some years ago which stood 4½ feet high at the withers, the girth of the body back of the shoulders being 4 feet 10 inches, while that of the neck at its base was 51 inches. As it lay on the ground, Richard LeBœuf, the guide, and I estimated its weight by sight as 400 to 450 pounds. After measuring it and applying the above mentioned rule, I got 364 pounds as a result. This stag was killed in northern Newfoundland during the last week of October, 1891, and was one of five specimens now in the possession of the National Museum, this one, with two others, being exhibited as a group at the Chicago Exposition. The horns carry only twenty-six points, but are very even and handsome. The spread is 34 inches, length of the main beam 41 inches, that of the secondary beam 25 inches and of the brow antler 17 inches.

I applied the rule to two moose killed within a few hours of each other, one of which stood 6 feet 10 inches and the other 6 feet 8½ inches, and obtained 1,205 pounds as the weight of one and 743 as that of the other. This seems like a large difference in weight between two animals so nearly alike in height, but I have no doubt that the animals would have weighed these amounts if put upon the scales. I am speaking now of gross weight and comparing them in my mind, as they lay, with cattle, the weight of which one estimates as they stand. The first one was a very old bull with a girth of 7 feet 10 inches and a length of 83 inches, and the other somewhat younger and of a very different shape, tall but short bodied, with a girth of only 6 feet 3¾ inches, and longer legs in proportion. When the moose group was being prepared for the National Museum, to which I contributed three specimens, I walked into the taxidermist's room one day and saw there a template prepared for the setting up of a cow moose, of which I had given them the dimensions, and at once told Mr. Palmer that it was entirely too small, but he assured me that it was just as the taxidermist-in-chief had directed him to make it. At the same time I saw the horns and hide of a bull moose which the Museum had just bought from somebody in Maine, and which they told me would stand 7 feet high; that they had a system there by which they could measure a hide and get the correct height and other dimensions of the animal to which it belonged. I went to the pickle tub where the hide was, examined the hoofs and told Mr. Palmer the moose would not stand 7 feet high, and I doubted whether it would be as large as the cow he was about to set up. As it turned out, he had to rebuild the template, which was a foot too short and 6 inches too low for the cow, which stood 6 feet 4 inches high and was 7 feet 3 inches long, and the 7-foot high bull came down 6 or 8 inches in height, and when it was set up had to be put on a little mound to give it a sufficiently commanding appearance.

In my opinion, the only safe way to get at the weight of an animal is to put it on the scales, and to get at the dimensions, they should be taken before the animal is skinned. CECIL CLAY.

The New Orang Outang at the Zoo.

WHAT is the "missing link"? Or, rather, is there a "missing link"? Scientists say there is, and I suppose they must be right. Yet, as one who is not a scientist, it has often seemed to me that for all practical purposes of connection there are links, and links enough. This probably seemed to me more conclusive than ever before during a recent visit to the zoo in Bronx Park. There I came upon a "link" which I am certain would satisfy any one but a scientist.

Let the reader please imagine a creature with pretty nearly all the outward characteristics of a man. It is true the body is covered with hair (of a reddish brown) and that the features—especially the mouth—are more or less grotesque, but the human resemblance is unmistakably there. And then the expression: nothing more human-like could possibly be.

It was after gazing at this exhibition, which is named orang-outang (or *Simia satyrus*), and has but recently been transported from his native wilds of Borneo, that I felt satisfied, in my own mind at least, that the "missing link" is a myth. "Here is link enough!" quoth I.

Twice have I seen the Bornean gentleman. I say gentleman, for, judging by his blasé or bored expression, I should imagine that he was of high caste among his tribe. Indeed, he may have been an earl or something of that sort. To contend that the conferring of titles does not prevail among monkeys is, I think, a great error. The further back we go in history, the more numerous and grandiose we will find titles to have been, so that it is only natural to assume that the custom had its origin in the jungle. For my own part, I believe that when the simian dialect comes to be understood (as it undoubtedly will, according to Prof. Garner), the truth of this will be amply demonstrated. And then? Well, then—but the theme is too harrowing to pursue.

To return to my lord in the cage. The first time I saw him he was huddled up in a corner half-covered with straw. His hands were crossed over his head, and his expression, as I have said, was bored—bored in the extreme. He had landed but a few days before, and it might be argued from this that he was only tired. But I know the difference very well between a tired and a bored expression, and I say his lordship was bored. Well, he certainly had good cause. Instead of beautiful spreading palm trees all about him and a carpet of moss, variegated with tropical plants and flowers, there was an iron-barred cage and a carpet of straw. He had lost his freedom—been exiled—and for what? Simply to be stared at, ridiculed or made fun of. Even while I stood there watching him, along comes a great, coarse man, smelling strongly of liquor, and breaks into a guffaw:

"Well, if that ain't a case!" he cries. "Hello, Mike!"

Then comes along a boy with a couple of companions, and cries:

"Wouldn't that jar you!" And all laugh in chorus.

Again comes along an old lady, who cries:

"Oh, my!—oh, my! Oh, dear!—oh, dear! And they say we are descended from them things! Faugh!" and makes faces expressive of the most intense disgust.

And again an old gentleman with spectacles, who looks like a scientist, puts in an appearance and peers through the cage and tries to coax the occupant forward, to examine his occiput, or mesial crest, or something, I suppose. Failing in this, he calls the keeper and speaks a few words in his ear. The keeper then puts an arm through the bars of the cage and shakes the straw and yells in very unceremonious fashion, but in vain, as I was glad to see. The occupant wouldn't budge.

And so it went. Now, I ask, in all fairness, was not this enough to bore a newly arrived stranger? It bored him, but it did not make him mad, which convinced me that he was of superior caste. Had he been a mean plebeian orang-outang he would have jumped up and torn around that cage and bellowed and beaten his breast and foamed at the mouth and created the very dickens generally. It should be noted, however, that in addition to looking bored, he occasionally raised his head and uttered a sort of groan, as if to emphasize his feelings in regard to his environment, and his visitors in particular.

The second time I saw him he occupied identically the same position, but his expression of boredom had, as I was grieved to see, deepened into melancholy. His hair, too, was more dishevelled, and he wore a general air of one profoundly discouraged, or to whom life had become indifferent. I made no doubt that he had realized the full extent of his cruel and irrevocable fate. He no longer paid the slightest attention to his visitors—seemed to be quite deaf to their jibes and laughter—but with a far-away look in his eyes, remained motionless in his corner. I pulled out a pencil and pocketbook to make a sketch of him, but when I came to that upper lip, an uncontrollable laugh escaped me; then I felt ashamed of myself—felt as if I were taking advantage of helplessness—making a mock of misery—and I put up my pencil and pocketbook. A young lady who stood near by and who had been regarding my occupation out of the corner of her eye now turned her face toward me and smiled a grateful smile, seeming to understand the situation thoroughly. Oh, the wonderful sympathy of woman!

By and by feeding time arrived, and there was a tremendous to-do among the Bornean gentleman's neighbors, but he showed not the slightest interest. Nay, even when the keeper appeared before his cage with his meal, some bananas, to wit, he did not stir. The bananas were thrown in, and he then put out a languid hand, took one and ate it; then another, and another, till they were all gone. After this he lay for a considerable time licking his fingers (which may be the height of fashion in Borneo, as it is certainly not unfashionable in regions less remote), and then lapsed into his old listlessness. Before leaving, I inquired if he was sick. No; he was not sick; simply bored and sad—that was all.

However, happily monkeys, as well as men, have a way of adapting themselves to new conditions, or reconciling themselves to their fate, be it never so hard or disagreeable; and it is therefore quite possible that the next time I visit Bronx Park I shall behold the distinguished Bornean gentleman's equanimity restored. I am sure I hope so, at any rate, for he is a wonder.

FRANK MOONAN.

NEW YORK, Dec. 26.

No Panthers in Maine.

BOSTON, Mass., Jan. 4.—*Editor Forest and Stream:* I would like to raise the question whether the true North American panther has ever been killed or seen in the State of Maine. My own belief is that it has not been. I know that the papers of Maine often contain thrilling accounts of people being pursued by panthers, of their blood-curdling cries having been heard, their long, tawny bodies and waving tails having been fairly seen and fully identified, etc., yet I have reason to think that in every instance where the supposed panther was really seen or heard the real animal was nothing nearer to the panther than the well known Canada lynx or the equally well known wildcat or bobcat. Why the panther should not occur in Maine I have no idea. I have the impression that the animal has been killed in Vermont, and even within recent years, and I believe that that most scrupulously exact writer, Rowland E. Robinson, described in one of his more recent stories, published in FOREST AND STREAM, the shooting of one in Vermont.

If there is an authentic record of one having been killed in Maine I should much like to hear of it. Is the skin of one killed there anywhere preserved?

Mr. Manly Hardy, the well known naturalist, and for fifty or more years past the most extensive fur buyer—as I suppose—east of the Rocky Mountains, at any rate of New England and a large portion of the adjoining Provinces, tells me that he has never handled the skin of a panther killed in Maine.

The nearest I can come to what seems an authentic account of panthers in Maine is the testimony of my old guide and valued friend, T. W. Billings, of Brownville. Mr. Billings has more than once told me of the occur-

rence. He was when a young man hunting and trapping in the extreme northern part of Maine, and one day—from a hill which commanded a view of the frozen surface of a lake—he saw two large animals, which he unhesitatingly took to be panthers, come out upon the ice and play. He described their lithe movements and their leaping over one another, and I think he spoke of their waving tails—though on this point I cannot now be sure. Billings took to hunting and trapping at a very early age, and rapidly acquired the skill for which he was noted, and I should suppose that at the time mentioned he must have been entirely familiar with both the Canada lynx (or, as he would have called it, the *lucivee*) and the bobcat. I remember well his description of their great size and strength, and his frank confession that he was quite willing to observe them at a safe distance, and to pursue his hunting in another direction.

But if even a very few of the modern Maine panther stories are true, some one must at some time, have killed one of the animals, and we shall have the skin in evidence. We know how the recent stories of wolves in Maine "peter out," and either turn out to be altogether myths or the animal proves to be a yellow dog. There is big game in Maine "for sure," but I am inclined to think it does not now include the wolf and that it never included the panther. Still I should be interested to find myself proved or mistaken.

Just here, also, I would like some one to tell me what animal was meant by the "leurxsus" or "Indian devil." Till recent years I supposed it must be the panther—but now suppose it must be either the *lucivee* or the bobcat.

C. H. AMES.

No one is more familiar with the wild animals of Maine than Mr. Manley Hardy, the veteran woodsman and traveler of Brewer, Me. We have no authenic information as to the occurrence of the panther in Maine—though newspaper tales of its presence abound—and application to Mr. Hardy draws from him the following characteristic note:

In answer to whether the panther (*Felis concolor*), more commonly called catamount, occurs in Maine, I will say that though my father and myself were buyers of fur for more than seventy-five years, neither of us ever saw the skin of one of these animals taken either in Maine, New Brunswick, Nova Scotia or Canada East. I have handled nearly or quite half a million dollars' worth of fur taken in the above places, but have yet to hear of a single skin being taken. The same is true of the wolverene or carcarjou, commonly called Indian devil, or lunksoos.

I have read scores of stories of both being taken, but unfortunately they either have no skins or else they get lost on their way to market. It is but fair to say that I have had several reliable hunters tell me of seeing tracks of what they believed to be catamounts, and one who is well acquainted with animals has told me of wounding what he supposed to be one, but up to date I have never known of any positive proof of the animal ever being in Maine. I have had dozens of men minutely describe catamounts they had seen, but from their descriptions I feel sure that what they saw were either Canada lynx or wildcats. It has been for many years a common thing in lumber and hunting camps to try to frighten tenderfeet with terrible stories of catamounts, ding-mauls, side-winders and other ferocious animals they were likely to meet. I remember in the spring of 1861 that as I traveled on foot over a hundred miles from Katahdin Iron Works to the head waters of the St. John I met many crews coming out who usually had frightful stories to tell me of the walruses and the danger I ran of meeting them. While it is possible there may have been catamounts in Maine, I should judge that the chances of meeting a walrus in our woods was about as great as seeing one of them.

MANLY HARDY.

Forest and Stream and Nature.

THE Popular Educator, Boston, Mass., has this to say of FOREST AND STREAM as a journal devoted to the interests of sportsmen and nature students:

We wish to call attention of teachers of nature study and other persons interested in nature and bird and game preservation to this publication, which weekly brings with it a breath of nature as fresh as the breeze that rustles the leaves along the mountain path. It is full of natural history that is reliable and almost every week there is a refreshing article on fish and fishing, referring to the habits of fishes, by one of America's best known writers, Hon. A. N. Cheney, the New York State Fishculturist. A large number of correspondents from various parts of the world give the reader a correct idea of the habits and haunts of most kinds of animals and plants. This is a present living knowledge of a kind that is not to be obtained from books.

The descriptions of animal life in Alaska and Mexico as well as in our own country would be a great aid in teaching both geography and nature study in the most effective manner.

The pictures published are generally from photographs from life, and animals are depicted in their characteristic attitudes in such a way as to justify their careful study.

The Wide, Wide World.

A decided curiosity is issued by the publishers of FOREST AND STREAM in the shape of a 12x8 inch reproduction of a large sheet of used stamps, which have been cut from letters comprising "the FOREST AND STREAM'S mail during 1899." The sheet shows the postmarks of almost every known country, and for that reason it is likely to be kept and studied. The reverse of the sheet is an argument to accompany the reproduction—a bid for advertising of goods that are in demand abroad. There is also published a reproduction of a postal card sent from India to a New York address where the paper was published twenty-two years ago, which proves that even after that length of time a back number was being read.—Printer's Ink.

The FOREST AND STREAM is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday and as much earlier as practicable.

Game Bag and Gun.

Notice.

All communications intended for FOREST AND STREAM should always be addressed to the Forest and Stream Publishing Co., and not to any individual connected with the paper.

American Wildfowl and How to Take Them.—XVIII.

BY GEORGE BIRD GRINNELL.

[*Continued from page 5.*]

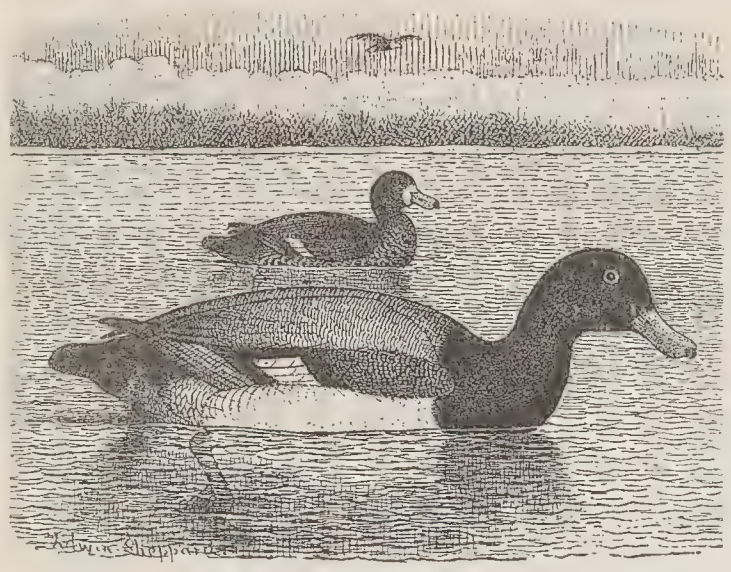
Broadbill.

Aythya marila nearctica (Stejn.).

The adult male has the head, neck and fore part of breast and of back, black; the feathers of the head and neck with a greenish gloss; rump, primaries and tail, brownish-black; the speculum, or wing mark, white; middle of back and sides, white, cross lined with black and white. The under surface of the body is white, marked on the lower belly with narrow blackish cross lines and black beneath the tail. The bill is broad, pale bluish-lead color, with a black nail; the eyes yellow; the legs and feet gray; the length, 18 to 20 inches.

The female has the front of head, immediately around the base of the bill, white. Those parts which in the male are black are in the female brown. The back is much darker, faintly marked with zigzag white lines. The bill is darker.

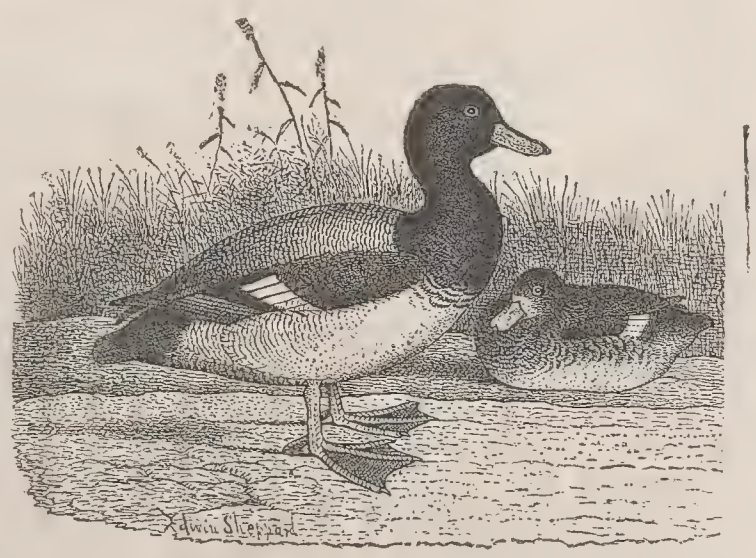
Many widely different opinions are expressed as to the value of the broadbill as food, and those who de-



BROADBILL.

bate this question are both right and both wrong. In other words, the flesh of the broadbill, as of most other ducks, is sometimes good and sometimes bad, depending on the food which it eats. Along the New England coast, where to a great extent it feeds on shellfish and other animal matter, the broadbill is not a delicate bird, but further south, where its food is largely vegetable, and where its name is changed to blackhead and bluebill, it is a most excellent fowl. In the interior, too, it lives chiefly on vegetable matter. There it is known as the scaup duck, bluebill, raft duck, big fowl duck, and is eagerly sought after. However, the tendency of this bird appears to be toward the sea coast. It is abundant in California, where many are killed, but it does not seem to go as far south as its relative, the little blackhead, and winters on the New England and New York coasts and in New Jersey, being, in my experience, rather rare as far south as Virginia and North Carolina, where the little blackhead is very abundant.

The broadbill is a species of wide range, being found throughout North America, as far south as Central America, and also in northern portions of Europe and Asia. It formerly bred in some numbers on the Northern prairies, and I have found its nests in North Dakota and Montana, though some of these may have been those of the next species. Dr. Dall found it breeding in Alaska, and it is supposed to breed generally through northern North America, in the British possessions. The nest of the broadbill is usually placed close to the water; it is



LITTLE BLACKHEAD.

little more than a depression in the ground, among the grass, lined perhaps with a few spears of bright grass and with down from the bird's breast. The number of eggs is six or eight; they are grayish-white in color, and when the mother leaves them are usually covered by the down.

The broadbill is abundant in Long Island Sound and on the Great South Bay, where it is shot in great numbers from batteries. It reaches our coasts late in October, and is usually found associated together in considerable bodies, which, however, are likely to break up into small flocks in rough and stormy weather.

Little Blackhead.

Aythya affinis (Eyt.).

Exactly similar in color to the broadbill, but smaller. The gloss on the neck is likely to be bluish or purplish instead of greenish. The length of this species is about 16 inches, as against 18 or 20 in the preceding.

These two species were long regarded as the same, and, indeed, as yet there seems to be no definite character to separate them, except that of size. On the New England coast, during the migrations, the two are often found associated together, and this is true to a less extent further to the southward. At the same time, the difference between them is well recognized by ornithologists and by gunners generally, and is expressed in the common names applied to this species, which Mr. Trumbull and others give. Some of these are little broadbill, little blackhead, little bluebill, river broadbill, creek blackhead, river bluebill, little bluebill, marsh bluebill, mud bluebill, mud broadbill and fresh-water broadbill.

Notwithstanding the fact that most of the little blackheads are readily to be identified by their size, there is considerable variation in the species and sometimes these birds almost equal the broadbill in their measurements. It is stated that the adult males can be easily identified, no matter what their measurements may show, by the metallic gloss of the head feathers, these being always green in the broadbill and blue or purple in the little broadbill. This metallic gloss, therefore, would seem to be considered by some naturalists a specific character.

This is one of the most abundant birds of the Southern sea coast, being found, in winter, from New England south to Florida, and even beyond that, to the West Indies and Central America. It is found, indeed, over the whole of North America, and, while breeding chiefly north of the United States, it yet is found in Minnesota, the Dakotas and Montana.

Owing to its similarity to the greater broadbill, it is not always easy to determine just what the range of this species is. Some Alaska explorers give it as breeding in that country, while others declare that of the many broadbills seen by them none belong to this species. However, east of the Rocky Mountains the nests have been found throughout British America, usually placed in swamps or near lakes, very simple in construction and lined with down.

The little blackhead is one of the swiftest flyers and most expert divers of all our ducks, and the task of retrieving one that has been wounded, unless one is provided with a good dog, is not always an easy one. This species is quite as much an adept at skulking and hiding as its larger relative, and, on the whole, is very well able to take care of itself. The flesh is usually very delicate, yet the very reverse of this may be true in localities where it has had an opportunity to feed largely on shellfish.

Blackheads seem to be equally at home in shoal water and in deep; they can dive as well as the canvasback, and yet they are quite willing to puddle about through the edge of the marsh and to pick up a livelihood in company with the fresh-water ducks.

A Flock of Wild Geese.

Editor Forest and Stream:

The weather was so fine one Sunday afternoon in November that two of us were tempted to take a walk over ground long familiar to both as the scene of sports followed with ardor in boyhood. Perhaps the region could scarcely be regarded as overpoweringly impressive, but as we had long ago found it good enough for fishing, shooting, skating, rambling, etc., the land about the western Wide Waters on the Erie Canal is not without attractions for men who dearly enjoyed the place as boys, and wander out that way at intervals to look over the old grounds and renew their youth.

The stroll proved to be of more than common interest, and furnished ample reward for the effort. We had not been on our feet ten minutes when the sight of a trim miniature yacht on the canal attracted attention and gave rise to a question whether Cup defenders that cost a sackful of money afford their owners proportionate pleasure to the toy that a boy can whittle out with his jackknife. The little craft came across the canal on the starboard tack with every inch of canvas drawing, and ran on the rocks, from which she was floated and returned to her owned with helm set aport.

At the Wide Waters the sight presented was a study. The children of Calvin might find much in it to condemn, but the present spectators were of a tolerant cast and had none of their sensibilities wounded by the spectacle of about three score and ten patient anglers sitting on the banks of the pond fishing for whatever St. Peter would send them. A glance at the bait in every case showed that carp were what the fishers expected, for it was seen that an ample supply of parboiled potatoes was the main reliance to lure the fish to his fate. And that it was a successful lure was attested by the strings of captives to be seen at every fishing station. One man, whose spouse was in his company to enjoy his good luck, had taken a fair sized wall-eyed pike, and word of the event had been passed along the whole line. When I first cast a line in the Wide Waters there were no carp in it, but now they abound, and are sought for from the day the ice melts in the spring until the snow flies in the fall.

After enjoying the scene where so many satisfied brothers of the angle were absorbed in their favorite pastime, we crossed into the fields on the east and had the satisfaction of finding some mushrooms of the kind that do not assist man to shuffle off this mortal coil against his will. In the field where the mushrooms were waiting to be picked we met with two youths, who confided to us the fact that they were searching for field mice, which, they said, make very interesting pets.

Across the railroad from the mushroom field is a piece of woods, the remainder of what was some years ago my favorite shooting ground. It must be a good many years since any game bird has tarried there, but in our teens it was a very likely spot in which to get a shot, and I have found there pigeons, woodcock, quail, grouse, hares and squirrels. How I envied the late Robert Walker one

day. It was the closing day of the season, when I and another boy were entering the wood, as he came out with his two splendid pointers and his game bag full of quail—for game bags were carried in those days. This was the woods where one day as I was out for pigeons, before the opening of the woodcock season, I came on a moist spot and saw three full grown woodcock probing the earth and walking about as if on dress parade. I left them undisturbed, but would now give a reasonable sum for a photograph of the scene. A stream, now no longer visible, ran through the woods in those days, and along its course the woodcock were to be found. A fringe of brush is nearly all that is left to mark the lines of Merchant's Woods. Cement walks have invaded the old ground, but the brush, as if contesting the right of man to intrude on the domain of nature, has overgrown the walks, and extends above one's head. I was making my way through it when a sound struck me that was not less agreeable than surprising. It came from the north and overhead. The source was not at first visible, but its character could not be mistaken, and I had just time to push through the bushes and reach open ground as a flock of Canada geese, chattering most melodiously, passed overhead, extending in a line from east to west. I chanced to have a glass with me, and it brought the great birds so close that their colors were distinguishable. I succeeded in counting fifty of them before they bunched, leaving a few unreckoned. I hope that they reached Chesapeake Bay or Currituck Sound without accident.

E. R.

ROCHESTER, N. Y., Dec. 29.

The National Park.

CAPT. GEO. W. GOODE, Acting Superintendent of the Yellowstone National Park, has submitted to the Secretary of the Interior his report for the year ending Sept. 24, 1900. The record shows that 8,928 visitors were in the Park in the season of 1900. Of above, 4,424 were camping parties, and the others were carried by the several transportation and licensed camp companies. Capt. Goode reports:

"The establishing of snowshoe cabins throughout the Park was an excellent step; they are most effective as a means of protection during the winter, the scouts being enabled to cover practically the entire reservation and penetrate to localities which would otherwise be inaccessible at a time when poachers are at work.

"The civilian scouts do excellent work, and are indispensable to a satisfactory administration of affairs, as regards the protection of the game, etc. Their work, in conjunction with that of the local magistrate, has been, I believe, the salvation of the game up to the present time. These men know the country, and are trained woodsmen in all seasons, whereas the soldier, as a rule, is replaced before he has time to become proficient in such duties.

Besides the work of the scouts and soldiers from Fort Yellowstone, making the round of snowshoe cabins during the winter, the instructions for the detachments at the permanent stations require frequent scouting trips within their districts, so that the entire area of the reservation is under fairly effective surveillance during the hunting season and winter; without an increase in the number of scouts, however, it is impossible to prevent poaching.

"The past season has been remarkably dry, nothing like it being known in the Park, and as a consequence the danger from fire was excessive.

"Beginning on the first day of duty at the stations (July 22), my patrols were called upon to extinguish small fires frequently during the season in all parts of the Park where camping parties were found. Only three of the fires threatened to be of serious proportions:

"One on the Soda Butte road, six miles west of Yanceys, Sept. 2, was set through the carelessness of a teamster, and was extinguished by the men from Soda Butte station before it reached the timber.

"One on the grade in Gardiner Cañon (east fork), about three miles from Fort Yellowstone, Sept. 3, presumably started from a cigar or cigarette thrown down by a party passing over the road in a wagon, was held in check by detachment from the post assisted by twenty roadmen from the force employed by Capt. Chittenden, Corps of Engineers. This fire was kept under control for about ten hours, and extinguished by rainfall the following night.

"The most serious fire during the season was reported July 29, west of the Thumb, apparently near Shoshone Lake. My troop was not yet established in its new quarters when every available man was sent, as rapidly as possible, to the scene of this fire, where Lieut. Amos joined them Aug. 1, and for about a month, with the assistance of men from the road crews furnished by Capt. Chittenden, Corps of Engineers, the fire was held under partial control—depending always upon the condition of wind and the character of the timber growth—until timely rain and snow, Aug. 24, extinguished what remained.

"This fire at one time threatened the destruction of the timber in the Park and the interruption of tourist travel. The high winds for several days were unprecedented, and the small force available for work seemed helpless to make any impression."

"In comparing the conditions which existed at the time the first military superintendent began his administration of affairs in the Park with those at the present time, the one change which stands out most noticeably is the presence of a local magistrate having jurisdiction within the reservation.

"I was on duty with Capt. Moses Harris, First Cavalry, during the season of 1887, and know how much the need of such an institution as a local court was felt at that time. The Government is fortunate in having as its representative in this department a man so well qualified as the present commissioner."

"I have the assurance of the scouts, who have seen the game at all seasons, that, with the exception of the bison (American buffalo), all varieties, including antelope, bear, beaver, coyotes, deer, elk, moose, sheep, and mountain lions, are increasing, notwithstanding that the antelope range in winter over the north boundary and the elk in the fall over the south boundary, where many of them are killed.

"Owing to scarcity of feed the antelope will almost certainly wander in large numbers across the northern boundary into the Yellowstone Valley, where their chances of getting back into the Park again are very few. It is for this reason, and because of keeping stock out of the Park, that the fence across this part of the boundary is so necessary.

"Twenty-nine head of buffalo were counted by scouts last winter, and there were possibly ten more in the Park that were not seen.

"Unless stations are located near the two southern corners of the reservation and the force of scouts increased the buffalo will be exterminated in a few years. With that addition to the facilities for protection they can be preserved and will increase.

"The trout in Willow Creek and Glen Creek, although apparently as numerous as ever, are so small as to indicate the advisability of prohibiting fishing in those streams during the next season. Otherwise there is no change in the conditions, the other streams throughout the Park being full of fish of good size, notwithstanding the large number taken out every season.

"But two casualties during the season within the Park limits were brought to my notice: The scalding of a camper at Fountain Basin, which was not reported to me, but which on inquiry I found to be the result of carelessness on the part of the injured man, and which did not, I believe, result seriously, and the disappearance from the Fountain Hotel of a tourist by the name of R. L. Piper, July 31. It is my belief that Mr. Piper when he arrived at the Fountain Hotel was in a partially demented and irresponsible condition, and that he wandered away from the hotel, fell in with some camping outfit, and got out of the Park."

Recommendations.

"A knowledge of the Park, extending through a number of years, and a most sincere interest in its preservation and welfare, prompt me to make the following recommendations for your consideration:

"(1) The appropriation of $10,000, to be expended in the proper quartering of soldiers at the stations throughout the Park.

"(2) That new stations be built (1) near southwest corner of Park, on Bechler River; (2) where southern boundary crosses Snake River (present Snake River station to be abandoned); (3) at southeast corner, on Thorofare Creek; (4) on the Gallatin River or Fan Creek, near northwest corner, (5) and at the town of Gardiner, Mont.

"(3) That never less than two troops of cavalry be stationed within the reservation for its protection.

"(4) That the number of permanent scouts be increased to ten, with suitable quarters for same at Fort Yellowstone and Lower Geyser Basin, in order that the Acting Superintendent may divide the entire reservation into districts, to be constantly patrolled by them, after the manner of game wardens.

"(5) That no individual nor business concern be allowed to cut hay within the limits of the National Park.

"(6) That it shall be a violation of Park regulations to use any location within the Park as a range for stock, and that no stock shall be allowed within the limits of the Park which is not at all times under such control that it cannot stray away from its owners.

"(7) That it shall be necessary to give suitable bond in order to obtain a license to personally conduct camping parties through the Park; that the number of such licenses be limited to ten, the number of passenger wagons in each case being limited to five.

"(8) That, in accordance with the terms of its lease, the Yellowstone Park Association be required to furnish transportation exclusively for its guests throughout the Park.

"(9) That registered guides be required to sign an agreement, which, while they are in the National Park, places upon them the obligation to enforce the regulations and protect the interests of the Government.

"(10) That the introduction of liquor of any kind into the Park, except as provided for under authority of the Interior or War Departments, shall be prohibited by Park regulations.

"(11) That all money appropriated for the purpose of improvement and protection, and for any other purpose, within the National Park, be extended under the direction of the Acting Superintendent, and that all work in connection therewith shall be under his supervision and control.

"(12) That a suitable fence be built inclosing the entire reservation along the official boundaries thereof, and that the Interior Department secure the enactment of laws for its protection and maintenance."

The Sale of Game.

The Legality and Wisdom of the Prohibition of the Sale of Foreign Game and Fish as a Protection to Domestic Game and Fish.

DENVER, Colo.—*Editor Forest and Stream:* The recent decision of the New York Court of Appeals in the Buffalo Fish Company case brings up afresh the question as to how far a game law can and ought to prohibit the possession and sale of game and fish lawfully taken in another State or country and imported into one having game protective laws.

This case decides that a provision making the possession of such game unlawful is an unauthorized interference with interstate commerce and hence invalid.

It has been asserted again and again by ardent game protectors that domestic game could only be protected by an absolute prohibition on the sale of game regardless of the place where taken.

This idea is based on the theory that so long as foreign game is allowed to be sold it will be impossible to distinguish or to prevent domestic game from being sold as and along with the foreign.

This assertion has gone substantially unchallenged for years, having been accepted without much question because few have cared to give the subject sufficient consideration to ascertain if no other or better plan could be devised, and also because the taking of game and fish has been treated merely as the outcome of sport rather than as a means to accomplish a more important object; namely, a food supply.

Especially is this true as to fish in the large cities where it is so important that no law that absolutely prohibits can or ought to be passed or enforced.

The idea of prohibiting the importation and sale of foreign game (fish included) as a means of protecting that of domestic origin is erroneous in theory and fact, as it is shown in the Buffalo case, where it is stated that if we were desirous of preserving our own timber we would naturally encourage the importation and sale of that from other countries. This argument is logically unanswerable and is applicable to game and fish.

This question is of such importance that it should be disposed of on broader grounds than the one mentioned, for so long as thousands of tons of fish are daily required for food in the large cities, the courts will always view the question from the standpoint of food and commerce rather than from that of mere sport.

I take the broad ground that not only should lawfully taken foreign game and fish be subject to sale and use at all times of year, but that domestic game and fish from private legally established parks and lakes should also be subject to such sale and use. This will encourage private propagation and to that extent lessen the demand for that taken in the open field, which we are trying to protect. This is so just and obvious that it requires no argument in its support.

The safe thing, then, is for all game protectors to take a similar view and endeavor to work out game protection on sensible lines in harmony with the incontrovertible fact that so long as game and fish exist people will have them. In so saying, I do not abate a whit from the position that domestic game and fish taken in the open field should not at any time be the subject of sale.

The game laws of Colorado recognize these facts. The main provisions are:

1. The prohibition of sale of foreign game or fish (of the kind protected in Colorado) otherwise than in the original package number and condition as imported, until the importer has procured from the game commissioner a certificate (issued upon proof of the fact) that the same were lawfully imported; the certificate remaining in force thirty days, and which is as follows:

STATE OF COLORADO.
DEPARTMENT OF GAME AND FISH.
Importation Certificate.

No..... Denver, ..., 189..

This certifies that Mr ....., of ....., having satisfied me that the following game and fish, to wit: .... were lawfully imported, is entitled to sell the same as provided by law. This authorizes possession, transportation within this State, storage and sale for thirty days after date.

....., Commissioner.

This certificate must be kept publicly exposed with the game.

2. In case of sale of any portion of the importation the importer must make and give to the purchaser an invoice as follows:

STATE OF COLORADO.
DEPARTMENT OF GAME AND FISH.
Importer's Invoice.

....., 189..

Sold this day by ....., of ....., Colorado, to ....., of ....., Colorado, the following game and fish, to wit: ....., imported and sold under (importation certificate or storage permit) No....., bearing date ....., 189... This authorizes possession, transportation within this State, storage and sale for thirty days after the date last above.

....., Importer.

3. In case of a redisposition by the purchaser of the whole of his purchase he merely indorses the invoice. If of a part only, he makes and indorses a copy of the invoice.

4. If either the importer or any purchaser has not disposed of the game within the thirty days he can procure from the Commissioner a storage permit as follows:

STATE OF COLORADO.
DEPARTMENT OF GAME AND FISH.
Importation Storage Permit.

No..... Denver, ..., 189..

This certifies that the following game and fish, to wit: ..... held by ..... under importation certificate No....., may be held in possession, transported within this State, stored and sold until the ..... day of ....., 189..

....., Commissioner.

This recognizes the right to import and sell in the original package and thus avoids the conflict with interstate commerce as maintained in the Buffalo fish case and the Leisy liquor case. Numerous decisions by the Supreme Court of the United States hold that when the packages are once broken for retail purposes they become subject to State control.

As game is generally imported in large quantities and packages and sold in small quantities, the right to import and sell in unbroken packages is for all practical purposes a barren one, so that the result is that the importer has to procure a certificate in every case in order to retail to his various customers.

The fee for each certificate and permit is $1.00.

5. Private game preserves and lakes are licensed and can sell game and fish of all kinds at all times, by attaching thereto an invoice as follows:

STATE OF COLORADO.
DEPARTMENT OF GAME AND FISH.
Private Parks and Lakes—Invoice.

Name of Park or Lake .....Class A.
No. of License, ... Date, ...189..
Kind and number of game and fish, ...
Weight of same ..... lbs. Name of consignee, ...
Address of consignee, ...
This authorizes transportation within this State, possession and sale for thirty days after date if attached to article.

....., Proprietor.
By ....., Agent.

This must also be kept exposed with the game and fish in the market, and in case of resale copies are given and indorsed as in case of that imported.

The proprietor is also required to mail to the Commissioner a copy of every invoice sent out by him.

Thus the Game Department has a complete record of all transactions which involve the marketing of game and fish, and the enforcement of the law is rendered easy, as every article of game and fish not having exposed with it the evidence of its legal possession is contraband and subject to seizure without further proof.

The operation of this law has been entirely satisfactory to all concerned and has afforded almost perfect protection to Colorado game and fish taken in the open field. Certainly much greater than has heretofore been afforded by arbitrary and unreasonable prohibition against sales of any kind.

Of course, I only give the law in general terms, but I recommend to game protectors that they procure complete copies of it and proceed upon the lines indicated, in order that game legislation may hereafter proceed on solid ground and avoid the continual conflicts and defeats in the courts.

I am aware that I am running counter to long established notions, and will provoke many and loud objections, but it is to this that we must all come at last and the sooner we do so the better it will be.

D. C. BEAMAN.

A Goose Shooting Episode.

My uncle took a match from his pocket and began to light his pipe. The north wind was howling outside, and the kitchen fire was being worked to its fullest capacity. Dockey had moved his chair into the gloom behind the stove, and had been invisible for the hour or more during which my uncle held forth on the happenings of the day.

From time immemorial Dockey had occupied the position of overseer of shooting gear, and as might be expected, was a rather important personage during the frequent trips my uncle made to Tracadie Bay on the north shore of Prince Edward Island.

On this particular occasion, my brother Geoff, then a young chap of seventeen, was of the party, and at the moment our yarn begins was busily engaged in trying to make a 4-foot stick of birch fit snugly in a 3-foot stove. Dockey had kept a respectful silence while "Mister Arthur" was speaking, but now seizing the opportunity afforded by my uncle pausing to light his pipe, broke in with, "Master Geoff over there don't say much, but he did a purty slick piece of work this evenin' after you left, Mister Arthur."

"Oh, he did eh! Well, Geoff, what did you do?"

Geoff modestly replied that he had bagged five geese out of six, but that he did not think it was anything to brag about.

"The devil you did," exclaimed my uncle, striking another match. "I thought that the fly was over when I went up to the house. But now that I come to think of it, you had quite a load of birds when you came in. Let us have the yarn, my boy."

But Geoff seemed to think that Dockey could tell it better, and so the latter was induced to come forth from behind the stove to where he could be seen and heard. Like the "Mr. Silas Wegg" of Dickens, Dockey was the happy possessor of a throat which was "mellered" by the judicious use of stimulants, and my uncle, noticing his wistful glances at a bottle which stood on the table near by, poured out a stiff glass and passed it over. The "mellering" process was soon completed, and after a brief period of violent expectoration and coughing Dockey began:

"Well, Mister Arthur, it was this way. You remember you went up to the house early, leavin' the big 8-bore in your box, tellin' me to fetch her up when I came. When we made that last sink, we put the boxes so nigh each other that they were almost touchin'. Master Geoff had his 10-gauge Parker with him in his box, but he could lay his hand on Boliver just by reachin' over to where she lay in your box.

"Well, I set up in the bush for half an hour, maybe, wishing to heaven that the boy would begin to feel the cold and call out for me to come and take in the 'coys. I could hear geese away up to wind'ard in the Big Channel, but thought that they were settled there for the night. I kept my eyes on Master Geoff's head, which I could just see over the edge of the box, so that I could run down to him whenever he showed signs of getting tired like. Just as I was making up my mind to go and tell him that he might as well quit for the day, I heard the greatest racket up the wind. Somethin' had scared the geese out of the channel, and the whole bloom'n' raft of 'em were comin' our way. Surely, I says to myself, a bunch that size will never come near the spit, for I know the habits of the beggars purty well by this time. But, by the Lord Harry, they kept a-comin' and a-comin', till I thought for certain that the whole blessed lot were going to pass right over the point. Master Geoff was layin' mighty low now, and the sand looked as bare as the back of Donald Ronald's big pig. The 'coys were standin' up to their breasts in water, for the tide was raisin', and we had not moved in the back line since the last sink. Old Callaghan was floppin' his wings and pickin' at the new goose Bollum sent you from Egmont Bay, and every now and ag'in lettin' a devil of a screech out of him just to show how wicked he was.

"Well, as I was sayin', the big flock came nearer and nearer, till it looked as if Master Geoff would get a fine shot, but all of a sudden when they got within a couple of hundred yards of where he was, they seemed to change their minds, turned off to the east'ard and plumped down in the old mussel bed. 'There goes the chance of the day,' says I, for there must have been 500 birds in the flock. Then I sets down on the log once more and begins to feel the cold ag'in, now that the excitement was over, but keepin' my eye on the geese all the same.

"Somethin' seemed to strike that old rascal Callaghan, for he suddenly stopped worryin' the new goose and began to call like the devil himself. The gander at the end of the line also thought it time to turn up, and he did his best to crack his windpipe too. After a little I sees six geese leave the flock out on the mussel bed and commence to swim in toward the point, no doubt kinder curious to see what all the noise was about. They swam on till they got into shoal water, about a hundred yards from the boxes. Then they guessed they'd gone far enough, and they took to feedin' on the eel grass. By this time all the 'coys were talkin', and no goose that flies could have kept away from them. So after quite a lot of turnin' round and lookin' this way and that, my bold six started to wade in. 'Why in the deuce don't the boy fire?' says I, when they were almost alongside the 'coys; but never a budge from Master Geoff. I was shiverin' and shakin' like a leaf, whether with cold or nervousness I can't say. And I guess I swore some. Well, sir, I'll be everlastingly dinged if those six geese didn't wade right in and begin to fool with the 'coys, and I'll bet Callaghan soaked some of 'em good and hard. You know what a cross brute he is. But after a bit the geese findin' Callaghan hard to get along with and thinkin' everything was O. K. on shore, walked right up on the sand and began to do up their back feathers. 'Now we'll hear from Master Geoff,' says I; but no sign did he make until three of the visitors reached out their necks together for the same piece of weed. Quick as a flash the 10-bore shouts, and those three geese never knew what they were up against. Took the heads off them as clean as a whistle. The other three got under way in a hurry, but the second barrel of the 10 was right there, and one more goose lay on his back with his feet wavin' in the air. Master Geoff then reached for Boliver in the other box and ripped the tail feathers out of one of the pair that was left, but he didn't fall short, as he should have done. The last barrel of the 8 drops him as dead as a mackerel though, and so when I gets down to the sinks, there were five big honkers ready for me to gather in. And would you believe it, Mister Arthur, that there boy was as cool as you would be yourself under them conditions, and maybe a little cooler than I have seen you sometimes, meanin' no offense, sir, I'm sure."

Dockey's throat seeming to need "mellering" again, the special was called into requisition once more, and after my brother had beeen congratulated by my uncle for doing so well, the stove was filled with wood and the trio sought their much needed repose.

H. A. BAYFIELD, B. A. Sc.

English Woodcock in America.

Editor Forest and Stream:

There is nothing very mysterious in the occasional occurrence of the European woodcock in the Eastern United States. It happens for the same reasons that some other European birds, as the European widgeon and green-winged teal occasionally stray to this side of the ocean. The woodcock occurs in Northern Europe in latitudes where the distance across to the American continent is comparatively small, and it is not difficult to conceive that birds which have been blown out to sea by storms should sometimes reach the wrong continent, perhaps alighting for a little rest on some floating object, or even on a vessel. Those who have crossed the ocean in the spring or fall, when the birds are migrating, cannot have failed to notice how common it is for land birds of various kinds to visit vessels even when long distances from any land, and to follow the vessel for hours, or even days, occasionally alighting on the rigging or even on the decks. Many of these birds are doubtless hopelessly lost and perish somewhere at sea, but with favorable winds many no doubt reach land again, but probably not where they intended to go.

My purpose in writing is to comment on the suggestion of Didymus that the European woodcock be introduced into this country. Because a bird like a pheasant, or like the English sparrow, can be successfully introduced, it does not follow that others can. Birds of stationary habits can be introduced anywhere where proper natural surroundings, food and protection are available, and whether the introduction is successful or not depends entirely on the conditions in that particular locality.

With a migratory bird this is not the case. I am quite willing to admit that the Dismal Swamp and hundreds of other places in the United States are probably as well suited to the European woodcock as to the American species, and that the living birds could be successfully transported across the ocean if they could be obtained. Having accomplished these preliminaries and liberated the birds in the Dismal Swamp or other suitable place, the real difficulties would begin. If the birds were liberated in the early spring, which would probably be the best time, a part of them would probably remain about the Swamp during the following summer and might breed. In the fall they would disappear, and that is the last that would be seen of them. Their migratory instincts would cause them to wander off to the South when autumn came, even if the scarcity of food during the winter did not compel them to do so, and the country being different from that to which they had been accustomed, or, what is of more importance, different from what past generations of European woodcocks have been accustomed to, they would proceed to get lost, and if they survived the winter would be just as likely to turn up in South America or in California in the spring, as at the Dismal Swamp, where they passed the preceding summer. The scattered individuals would probably never run across another of their own species, and would never breed. And how can a migratory bird be protected from being shot? No matter how carefully protected it may be where it is liberated, when the season comes for it to move on, it will do so, and being something curious and unusual, will be relentlessly pursued by hunters wherever it goes.

If a truly migratory bird has ever been successfully introduced from one country to another, I would be glad to know of it. Success in acclimatizing birds has always been, as far as I know, in inverse ratio to the development of the migratory instinct in the species. The quail is a bird of fairly stationary habits, but even the small degree to which the migratory nature is developed in that species has made a great deal of trouble for those who have stocked game preserves with it. Whether this tendency to migrate is due to instinct, experience or reasoning on the part of the bird, or to all three, has nothing to do with the case. It exists in the case of nine-tenths or more of the birds inhabiting temperate latitudes, and must be reckoned with in our attempts to introduce species.

The nearest approach to the introduction of a migratory bird which occurs to me is the case of the European starling in America. This species, which will probably prove to be a great pest, has unfortunately secured a foothold in the Eastern States. Yet in this bird the development of the migratory habit has not reached a high degree, and they probably do not move until scarcity of food makes it necessary. The birds of this species which have become established in America do not appear to migrate at all, but stay in the same vicinity all the year. So this bird cannot be called an exception to my statement that attempts to introduce migratory birds will be failures.

To make some reasonable effort to protect our own woodcock would meet with much more success. It is, I suppose, on the whole, the most prized of all our game birds, certainly the most prized of any of the smaller kinds of game birds. Yet in many places it may be shot all summer, and even where protected by law at that time most of them are killed during the summer months. The gunners know that the birds are migratory, and that those which have bred in a place or have stayed about during the summer will move south early in the fall, and they do not give them the chance to move. In the South I have heard of their being slaughtered at night during the migrations with the aid of jacklights. If this practice has been discontinued it is only because of the growing scarcity of the bird making it no longer remunerative.

The legislatures of the different States should appoint committees or commissions to confer with those of other States and secure concerted action for the protection of migratory birds. It is high time that the sale of woodcock should be prohibited in every State in the Union, and the fine for violations should be a heavy one.

Since I have got started on the subject, I would like to make a suggestion that if adopted all over the country would do a great deal toward discouraging violations of the game laws. If the game commissioners, game protective societies or individuals who are interested in the matter would take pains that in every case where a man is arrested and fined for the violation of the game laws the widest possible publicity should be given to the case, many people would think twice before committing a violation. It would help enforcement in two ways, first by warning people and making them realize that the game law is not a dead letter, and, second, the disagreeable notoriety which would result from figuring in a case of that kind would be dreaded by many people more than the insignificant fines which are unfortunately the rule in many parts of the country when a man is convicted of violating a game law.

So when such a case occurs, those whose duty it is to enforce the laws, or those who wish to have them enforced, should take care that the local papers publish a full account of it and use large type for the heading. A great deal can be done for game protection through the daily newspaper, but as it does not often happen that the editor is interested in or familiar with the subject, those who are interested should see that the papers are supplied with information about game law cases.

WILLARD G. VAN NAME.

NEW HAVEN, CONN., Jan. 8.

Talks to Boys.—VIII.

IN my last talk I told you how the expert shot acted when he was trying to kill a bird, either an actual bird or one of the clay targets that are commonly thrown from the trap to give men practice in shooting. I said that the practiced shot knows precisely how to hold his gun and how to move his head, body and arms so as to attain the result which he wishes to reach. It is true that different men acquire skill in shooting with very different degrees of ease. Some men—and boys—pick up the different operations and acquire skill very much more readily than others. But the important things to be remembered if you wish to acquire this skill, are that you must practice using the gun, must keenly notice everything that happens and must remember from day to day what you have done in your shooting. Each shot that a man fires should teach him something; he ought to know where each charge of shot goes. If his gun barrels are in the line of sight, he will know whether the bird at which he is firing, is before or behind the load of shot, above it or below. If he misses he will then understand why, and he ought to be able to reason out how he came to miss. Therefore, the most important thing that a boy can do who is learning to shoot is to try to be sure that whenever he shoots he is looking along the barrels of his gun. If this is kept continually in mind and practiced, the rest is likely to come easily. You should aim your gun at the bird just as a carpenter aims his hammer at a nail head, and with almost the same certainty of hitting. The eyes are looking at the bird, and if the shooter is in such good practice that he throws the barrels of his gun into the line of his sight, a very slight movement one way or the other should direct those barrels straight at the point necessary to hit the bird. This, of course, does not mean that he will kill the bird that he shoots at. He has still a great deal to learn about straightaway shots, quartering shots and cross shots, things which puzzle many a gunner who has grown gray headed in the service. But if he can learn to throw his barrels into the line of sight, he will have made strides toward perfection in shooting which will carry him beyond where many old men stand to-day.

The importance of practice in all sorts of matters with the gun cannot be overestimated. You should not only practice shooting, but also every other act that you have occasion to perform with the gun. Do all these things over and over again, for the oftener you do them the more naturally and so the more easily they will be done. Did you ever think that pretty nearly all the commonest operations which we perform were at first very difficult to us and that they all had to be learned, and became easy merely through practice? If you and I wish to pick up a pencil or a cartridge shell lying on the table before us, we do it; but did you ever see a little baby lying on the floor and trying to pick up some object that had attracted its attention? It may grasp at it half a dozen times before it is able to put its hand on it. Consider the difficulty that a baby finds in learning to walk; how easily it loses its balance during the first year or two after it gets on its feet. If a small child be given a hammer and told to hit the nail's head, it may strike at it a number of times before touching it. In the same way a boy or man who has never played ball will make absurdly awkward work of using a bat.

After you have had some practice in shooting at tin cans and potatoes tossed in the air, you will find that they are not very difficult to hit. There is really a good deal of knack in shooting at such things, and if you take plenty of time and arrange to catch them just as they are turning in the air, or just as they are beginning to fall, you will soon consider yourself a very good shot at marks of this kind. When you reach this point, your instructor will very likely move you along to something which is more difficult. He will perhaps throw the potatoes from behind you as hard as he can, at first high up in the air, so that you can shoot at them against the sky, and after a time, as you become more expert at marks thrown in that way, he will throw them close to the ground, straigh away and quartering, and will throw them as hard as he can. You will find that it will take you some time to get to a point where you can hit such marks, and when you can fairly hit seven out of ten thrown in that fashion I shall think that you shoot quite well enough to go out into the field.

If you live in a place where there is a trapshooting club, or if your father has a trap for clay pigeons, you can arrange to have frequent practice at these targets, and this, if you can arrange for it, will materially help you in your shooting. It will teach you quickness, readiness in the

use of the second barrel, and general handiness with the gun. But you must not for a moment imagine that shooting clay pigeons is anything like shooting birds in the field.

If now your gun was given you for a Christmas present, you have a long time to wait before it is possible for you to use it on birds. I think it very likely that this long delay will seem very hard for you to bear, but from my point of view it is rather good for you. For, if you have practiced all these things that I have recommended, you have certainly reached a point where you are entirely familiar with your gun; where you have trained yourself to use it like a common sense man and not like a harum-scarum boy, and you have acquired so much skill in shooting it that it is altogether probable that when you go out, perhaps in the last days of August for the rail, you will render a very good account of yourself. You may not do this on the first day, for it is quite possible that the sight of actual birds getting up before you, may throw you quite off your balance; you may become excited and may waste a great deal of ammunition. If you have some old-time shover who has been working at this during the rail season for twenty-five or thirty years, he will very likely be greatly disgusted with your bad work and make it still worse by sadly informing you after every shot that you "Never tetched him." If you find yourself getting into a nervous condition of mind, I recommend to you the plan that Mr. Hammond speaks of in his excellent little book on shooting, with which to steady yourself. Take the cartridges out of your gun, and when a bird gets up, cover him precisely as if you were going to shoot, and when you have him covered, and not before, pull the trigger. Do this three or four times, and it is quite probable that your nerves will steady themselves, and that then you can put cartridges in your gun and shoot with a reasonable hope of bringing down your birds in good style. Still, not very much can be hoped for the first day that you go out, but the second day I shall expect to have you do much better, and shall hope to hear a good report of your doings. Remember that in rail shooting there is always abundant time. Some men if armed with a repeating gun could fire several shots at a rail before he gets out of range, and you have every opportunity to put up your gun, deliberately cover the bird and kill him. Indeed, if you do not take pains to be slow about shooting, you will kill many of your birds so close to the gun that they will be unfit to bring on the table, being cut all to pieces with shot and the flesh filled with feathers.

But assuming that the shooting season is still a long way off, you must continue your practice at flying targets in a variety of ways. After you have become able to hit potatoes when they are flying pretty fast and in all sorts of directions, it will be well for you to have some practice on doubles, letting your instructor toss two potatoes in the air at once, and trying for them with the right and the left barrel, and then getting him to throw two at a time in various directions, or at least two as nearly together as possible. It may be that your instructor will get a little tired of this active exercise, but since by this time you have learned enough about a gun to be trusted with it, it is almost certain that you can get some one of your friends and companions to go out with you, and, by letting him use the gun a part of the time, can get him to throw for you when you are shooting just as you throw for him when he is shooting. This will be good practice for you, too, in another way, since it will be your duty to watch this companion and see that he is holding his gun properly, that he never points it in any direction where it can do harm, that he stands as he ought and does not discharge his gun until his eye is running along the barrels. Indeed, you and he, as you talk over the various incidents of the shooting, may each get new ideas, and so the practice will benefit both.

All the practice that you have had, of course, has been open shooting of the plainest possible kind. This is, as it should be, because you must learn how to make simple shots before trying those that are difficult. But after you have had enough practice to feel reasonably confident about such shots as I have spoken of, let your companion stand behind you, throw a potato as hard as he can in any direction that he pleases, so that it will pass somewhere within the range of your sight. He may throw it directly to the front over your head, or quartering to either side, or perhaps way off to your right or to your left. You will have to watch the whole half of the circle, see the mark and shoot at it before it gets out of range. At first you will find this difficult, for it may call for more quickness than you have, but if I were you, I would not fire until you believe that you are going to hit the mark. Throw up your gun when you see the object and try to catch it before it is out of range, but if you cannot do so, do not shoot. Very likely you will find this the most discouraging thing that you have done yet, and if it seems quite hopeless to you, why then you may go back to the easier shots at which you were successful, and by making them regain your confidence. Then try again these hard shots, concerning which you have no warning whatever. I think that after a little while you will succeed in making them. Another test of quickness is to walk along through the field with your companion walking behind you, and to have him throw a potato in any direction that he pleases, making, just as he throws it, some sound which represents the whirring of a bird's wings as it rises. It is your business then to discover in what direction the mark is flying and to hit it before it gets away. Perhaps your father will think this practice of yours is rather expensive, for I am sure that by this time you must have used up several bushels of potatoes, but if they have taught you the lessons that I hope they have, the learning has not been very costly.

I have warned you not to shoot too quickly, for instead of your beginning to shoot quickly and afterward learning to aim at the mark, I want you first to learn to aim at the mark, and afterward to learn to shoot quickly. Keep it always in your mind, therefore, not to fire too quickly, but remember also that you cannot too quickly be ready to fire. In almost all upland shooting, and especially in all shooting in cover, which includes much of the quail shooting, and the sharp-tail grouse shooting, and all the shooting at ruffed grouse and woodcock, the great majority of your birds will rise within 15 or 20 yards of your feet, and unless you give them time to get a little further away you will very likely cut them up very badly in killing them. Although there are some sections where the cover is very thick, and this does not apply, yet on the whole, nineteen times out of twenty, you will have abundant time to shoot, and even may have to wait for your birds, but the twentieth time the bird will be gone in the twinkling of an eye; it will appear and disappear, and if you are not "as quick as a wink" in your shooting, you will lose it. It is for that reason that I wish you to devote your practice chiefly to catching sight on any object quickly. When you can do that, you are already a good shot, and that is what you are trying to become, and the reason that you are listening to these talks. W. G. DE GROOT.

CHICAGO AND THE WEST.

End of the Northern Season.

CHICAGO, Ill., Dec. 29.—The shooters in this part of the world are putting up their guns for the season. Of course, the impression is that since the season is closing here it is closing everywhere, though really there is no such thing as an absolute season in a country so large as this. In the South the shooters are now having the cream of their year's sport, both in upland shooting and in wildfowl shooting. The Indiana law on quail is out next Monday, and after that there will be the customary migration of Northern shooters to the Southern fields, —a migration which grows annually greater in its numbers.

In fact, the edge of the shooting appetite is taken off inside the first thirty days, so far as most Northern city shooters are concerned. The average city man is too busy to go shooting very often. The usual thing with him is to get perhaps one trip in the season, and to make plans for a half dozen more, which never come off. Thus the recently formed Jasper County Club, of this city, which had some very good grounds preserved, near Wheatland, Ind., can only show a total of ten days' actual shooting done this fall by the combined membership of the club. Naturally the birds were not very much cut down in that neighborhood.

Bill Haskell is back this week from a voyage of exploration in Indiana, where he has been prospecting for grounds for another preserve that is held in view by some sportsmen of this city. Mr. Haskell and a local companion killed thirty-three quail and a number of rabbits. They found a piece of land which might, under certain circumstances, be desirable for a club property.

Very fair bags of quail have been the rule up to the end of the season in this State and Indiana, though there has not been very much shooting for the last ten days by Chicago shooters. The crop of quail goes over in very good shape indeed. Unless we have a distinct change in our weather this will be an ideal winter for quail. Up till this time it has been more like fall than winter, with no snow and no bad storms. We will be apt to have something different from this before spring, but it is to be hoped that the splendid stock of quail now established in these two States will not be cut down by climatic causes. There are a good many prairie chickens along the Kankakee bottoms this winter, and there is every hope that these birds will rather increase than diminish. It is all a question of observance of the law. In very large tracts of these two sister States there is a country yet wild enough to carry a good stock of game under any sort of reasonable shooting.

The ducks have not yet left this country, some mallards still hanging along the open water wherever it can be found. Four flocks of geese are reported by Mr. Haskell as seen this week in his exploring trip.

So far as the local shooting is concerned it is now put near up to molly cottontail. We cannot go snowshoeing around here, for we have no snow. A pack of beagles is a good thing to have in the family right now.

Just south of the city, in the sand hills at the foot of Lake Michigan, there are a good many rabbits this year. A farmer near there has also located five wolves, two old ones and three young ones, within a few miles of New Buffalo. Mr. Perkins, of this city, has a tract of four and a half miles of lake frontage near there, his land running back into the sand hills. He has also three or four good fox hounds, and the scheme at this time is to wait for a good tracking snow, whereupon the farmer is to wire Mr. Perkins, the latter is to tell me, and we are to go down there and have a wolf chase. We know the swamp where the wolves are hiding, and if everything should turn out well we may get a wolf story, and maybe a wolf skin. Something ought to be done in the way of bounty to keep these animals from devastating Chicago.

Speed of Wildfowl.

A correspondent states that he had referred to him the old question as to the relative speed of wildfowl. He decided that as between mallard and teal the question was a draw. He was perhaps right. The teal is swifter on an inshoot, or a dropping angle, but on a steady overhead flight it is perhaps no faster than the larger bird. The wild goose flies much faster than it seems to. It is popularly supposed that the canvasback is the fastest of all wildfowl. It is stated that recently a gentleman who was flying a series of kites, found that he could tell something about the flights of ducks crossing his kite lines. He thought they averaged forty-five miles an hour. It has always been thought that twice that many miles an hour is not too much to credit to the wild duck, and I should think the latter figure much more accurate than the former. I once printed in these columns the test made at Grass Lake, Ill., by a party of my friends. From the place where they were situated in their boat it was just a mile to a certain bridge where some shooters were stationed. A bunch of ducks crossing the bridge would be fired at, and the men in the boat would take the time of the puff of smoke. Then they would take the time of the same flock of ducks when they passed over the boat. In this way, if memory serve me, they figured that the ducks were making something like 80 or 90 miles an hour.

Some Montana Bear Stories.

Mr. G. H. Macdougall, of Butte, Mont., is good enough to liven up matters with a bear story or so from his neck of woods. It makes me rather unhappy to read bear stories, since I have never yet found that grizzly which I lost many years ago. I presume it is the next best thing to read about other fellows who have found their bears. Mr. Macdougall goes on to say:

"I have a bear story for you which I think is a peach. To appreciate it, you should know the actor. It is so perfectly characteristic of him. Let me introduce to you my particular friend, Henry, commonly known as 'Milwaukee.' His nickname gives a clue to his charatcer. He is a typical crazy Dutchman, bubbling over with high spirits and good nature, a most lovable duck, but decidedly short on prudence, or common sense, or whatever you like to call it.

"Henry was hunting deer, and got some too, for he is a good shot and has the patience of Job, though I would not like to be within a mile of him when he begins shooting, for I am sure he shoots at everything that moves. However, there he was, in the mountains about fifty miles from here, coming home alone after a hard day's tramp. When about two miles from the little mining camp where he was staying, and when very tired, he noticed some fresh dirt piled up against some ledges of rock projecting from the hillside. One might have supposed he would understand that fresh dirt does not grow of its own accord on a wild mountain side, but the only thing that occured to Henry was that it was a nice, dry place to sit down and take a rest. He sat down accordingly, and as he sat, noticed some animal poke its head out of a small hole in the dirt. Thinking it was probably a groundhog, he threw down his rifle without getting up, and shot at it. It retreated into the hole with shrieks and howls fit to raise the dead, and out of the same hole, throwing the dirt in all directions, came a she bear, simply boiling with rage. Henry shot at her, hitting her a glancing blow along the skull, which only knocked her silly for a second and made her madder than ever. Except on the fresh dirt, ice and snow made the hillside slippery, as it had been thawing, so our bold Henry had to stand his ground whether or no, and so, though scared to death, he shot again, and by good luck hit her between the eyes and finished her. After a few breaths which nearly burst his belt, it occurred to the bright mind of our friend that there might be another cub in the hole, and with an ingenuity nearly allied to genius, he poked his leg down in the hole to feel around for more bear. He got a wipe across the shin that stripped it of legging, trouser leg, drawer leg and hide, and made him withdraw it 'some sudden.' It was followed out by a yearling cub the size of a good, big dog, which Henry immediately killed with one shot. Net result, three bears, a sore shin, and a Dutchman divided between so much delight and so much scare that he was unable to move on for half an hour. Lucky for him that the 'Dear little cherub that sits up aloft' was attending strictly to business that day, I think."

"Relating this story to a mutual friend the other day, he capped it with another. This fellow is 'good Injun,' one of the best amateur mountaineers I ever met. He was hunting one evening just about sundown, when he saw between him and the sun on the sky line of a ridge, a big silver-tip. He was bothered by the sun in his eyes, but managed to hit the bear in the rump. Bear made a bee line for him, grunting every jump. Hunter stood partly behind a tree and pumped lead for his life, hitting the bear several times, but not hard enough to stop him. When only two or three jumps separated them, the hunter shot again and grabbed his knife, expecting to have a personal encounter in approved Daniel Boone style. But the bear, bewildered by its wounds, ran right by him, not six feet away, stumbled over a small declivity, and kept a going into some brush. When the blood got back to my friend's face, and his heart out of his throat, he grew suddenly bold (reaction, I suppose), and felt like following the bear and finishing the argument. But he had another think coming, which was that he didn't want to follow a silver-tip into cover so near dark, or perhaps any other old time for that matter, so he thankfully struck out for camp. He and his chums looked for the bear next day, but never got him. This fellow is as game as a chicken, and might have won out if it came to grips, but he thinks he will never be any nearer death until it actually comes, than he was that evening."

Meat Dogs.

The same writer adds some feeling words about meat dogs that are not meat dogs. The plum idiot dog that can run is something which has been seen by others besides Mr. Macdougall, who says:

"That old 'meat dog' pointer of mine picked up a coyote bait a year or two ago, so I am 'afoot' again. Ill health has prevented my getting out for a hunt since, but I am looking for one of the old sort to take his place, as I am all right again. The last time I hunted old Sam, I had to break him all over again, and a nice job it was, though he surprised the party with his fine work after I had him in subjection. I don't like to hunt one of those rebels, no matter how good they are, but if a fellow happens to get one, a good stout club is the only argument that will be listened to. I prefer one easier to handle, though, for I hate to have to beat a dog. The best dog I ever owned, or ever saw, for that matter, was one out of Davidson's Doll, one of the original Llewellyn cross, by a dog of his of unfashionable breeding, probably one of the old English breeds. This bitch, who died about 1882, could actually talk, and it didn't need a club to keep her in order either. She did her own hunting, and, what is more, found the birds. I used to shack along on a clever pony anywhere she showed an inclination to go, and the hardest work I did was to look for her a little if she didn't show up for ten minutes or so, and I always got all the birds I wanted in two or three hours. They don't make them that way now. The last Llewellyn I tried to break ranged to beat the band, but was a plum idiot. When I left him behind after my last trip with him, he took up with a sheep herder, and that was about his gait."

Shot a Horse for a Deer.

The man behind the gun continues to do all sorts of fool things. It is nothing unusual to read these days of a man who accidentally shoots his friend, or some of his own family. There are, however, some distinguishing features to the story of the man who rode with a friend out into the woods to hunt deer, and then killed

the horse which had drawn the vehicle, so setting both himself and his friend afoot. This really happened this fall, and as the friend who lost the horse was some sore about it, the matter got into the courts. It is the history of the lawsuit which now comes to hand in the following cutting from a Duluth newspaper, which is sent down by a friend from that city:

"The case of S. C. Confer against J. J. Frey, in which the plaintiff seeks to recover $250, the alleged value of a driving horse shot by Frey in mistake for a deer, was on trial in municipal court yesterday. Mr. Frey and Dr. Confer went out deer hunting together early in November. They drove behind the doctor's sorrel horse. When they reached what was believed to be a favorable point for deer, the horse was tied to a tree, and both men went into the woods, taking different directions. Shortly afterwards Frey having become mixed in his directions, caught a glimpse of what he thought was a deer and fired, and to his dismay discovered that he had killed Confer's horse. The two men had to walk home, a distance of several miles."

Sale of Game in Minnesota.

In the annual report of Agent Beutner, of the Minnesota Game and Fish Commission, the recommendation is made that the sale of all game be prohibited in that State. Mr. Beutner also recommends that the spring shooting law be amended, that a non-resident license of not less than $15 be fixed by law, that game wardens be put on salary, and that market fishermen take out licenses. These recommendations are fairly in line with the late developments of the protective idea in the West. It may be plainly seen that the whole trend in the Mississippi Valley is toward non-resident shooting licenses. Indiana is going to make a strong pull for a $10 license this session of the Legislature. The probability is that Michigan would in that case pass a similar law. It is only a question of time before Minnesota has this clause in her law.

Agent Beutner says that in two years he has distributed 4,611,000 trout fry, 43,300 bass, 69,100 croppies and 31,400,000 pike. He wants a car for this work, and also wants the State to purchase instead of leasing grounds for its hatchery. The present site of the Minnesota hatchery is a very beautiful one, but it is only rented by the State.

Carp.

It is one of the boasts of the Illinois Fish Commission that it has successfully introduced carp into the waters of this State. The meed of thanks due the Commission for this enterprise can only be surpassed by that which would be cheerfully tendered them by the people of this State if they could devise some means of getting these carp out, and leaving this country just the way it was before these fish were put in. The old Maksawba Club marsh on the Kankakee River has had its wild rice all eaten off by these fish. Up at Fox Lake, in this State, property owners this fall raised a fund to attempt to destroy the carp in that chain of waters, which were once suitable for fishing and summer resort purposes. In one week deputies seined out 30,000 pounds of these fish. They are said to have taken one which wieghed 56 pounds. All this trouble and expense might have been unnecessary, just as it will probably be futile. These fish cannot be seined out completely, and the few left in will soon multiply again. There is no nuisance, after the English sparrow, which is worse than the German carp. There are a good many of us who are not quite ready to take the purely commercial attitude that because some few people will eat these fish the rest of us ought to stand for the raising of them at the expense of all the original attractiveness of our streams. It is up to the Illinois State Fish Commission to make itself popular by explaining, not how to cook a carp, but how to kill it, in the quickest possible way. We ought to have a law permitting the spearing of these fish, and there ought to be a bounty put on them were it not for the sole fact that such a bounty would break this State. They are an unqualified nuisance, and no amount of explanation in regard to their virtues will disabuse the average outdoor man of this belief.

Dead and Down.

The mills of the Government are still grinding at Washington over the proposal of Capt. Mercer, Minnesota Indian agent, to sell some more of the dead and down timber belonging to the people over whom he has charge. There is the usual amount of heavy rumbling and jarring of the Government machinery. The lumbermen are coy. Secretary Hitchcock is non-committal. Indian agent Merecer is explanatory, and the Indians are silent. In spite of all this the result is easy to foresee. All the timber on those reservations is going to be dead and down. So far as the Indians are concerned, they constitute but a trifling obstacle in the scheme. Before long the Indians will also be dead and down.

Efforts are making to purchase the Indian lands in Red Lake County, Minn., with a view to throwing them open to settlement. The sale of the White Earth reservation is still going on. It is the intention to purchase 48,000 acres of the lower Brule Indians in South Dakota. The Indians are willing to sell it at $1.25 an acre. They get about that much for the splendid pine of the Northern Minnesota reservations. That is to say, they think they will get it. Really, under the workings of our white man's justice, they get their dollar and a quarter, but it costs three dollars and a quarter to get it to them. You can figure it out yourself. The Indian is always in debt, and he will be, until he is dead and down.

HARTFORD BUILDING, Chicago, Ill.

To Surmount the Difficulty.

"AND if your party came suddenly to a stream," said the story teller, "too deep for your horse to wade over, too wide for it to jump over and too swiftly flowing for it to swim over, what would you do?"

"Why, that's easy," said one of the party; "we'd sit down and think it over."—Yonkers Statesman.

The FOREST AND STREAM is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday and as much earlier as practicable.

Game Cunning.

IF any one wants an illustration of the way in which animals grow wise in the ways of the hunter, they ought to come out to this country and try a hunt after some of the bull elk that hang around here. Usually a bull elk is not remarkably cunning, and the elk that stay back in the mountains are still rather simple.

They use all the tricks that the sharpest buck deer or bull moose in Maine ever thought of, and in addition have invented a lot of brand new schemes of their own that are just suited to this country. When one remembers that only a few years ago these elk were just as stupid as the balance of their tribe, one wonders where they picked up all this knowledge. Such things as making a loop down wind before lying down for the day, watching their back track and things of that kind, are only a very small part of their plans to escape being killed. The intelligence which they display in picking out places in which to bed down for the day is remarkable. I put in a couple of weeks this fall trailing around after some bulls that stay pretty close to the house, and in spite of all I could do I never even saw a hair of one of them. Their beds were always in a place where they could either see, hear or smell anything approaching them long before they can be seen themselves. Time after time I put in hours trying to get a sight of one of these old fellows, but with always the same result.

After loop after loop, down wind, after crawling for hundreds of yards at a time in snow a foot deep, and moving as silently as possible, I would find the bed just vacated. And if I waited until dusk before trying to close in, I always found that the cunning brute had, on getting up and commencing to feed, gone up wind into the thickest cover he could find, where it was absolutely impossible to get within sight without making noise enough to spoil the stalk.

I guess the trouble is that the game is learning new tricks faster than us fellows who learned to hunt when the game was tame can figure out new ways of hunting.

At any rate, I used to think that I could hunt, but when I chase around among a lot of elk for a couple of weeks and only get one fool calf that did not have any better sense than to stick its head out of the clump of spruce behind which the rest of the bunch were calmly watching me, I rather think that something is wrong with my woodcraft.

Civilization is spoiling the game, just as it is spoiling the Indian, the cowpuncher and, in fact, the whole West. And there is no other place to go, so I guess we might as well get civilized and be done with it.

WELLS, Wyo. WM. WELLS.

A December Afternoon.

IT was cold—the thermometer stood at zero, although it was high noon, but the sun shone brilliantly and there was no wind. The air was dry and bracing, every breath of it full of life and energy to those who breathed it. Two old friends stood on the top of a hill that overlooked a level bottom two miles long and a mile wide, bounded on one side by the wooded hills along the river. Through the bottom ran several little streams, bordered by plum thickets, and the banks of the river were bordered with a wide fringe of undergrowth. There were bushes, too, along the old rail fences that divided the bottom into fields. The fields were covered with corn stalks and weedy stubble, with here and there patches of high grass, while here and there were clumps of cottonwood trees, the ground under them crowded with weeds high as the head of a man. I said there were two friends; there were four. Two of them were four-footed, and named respectively Sinner and Flora, but they were none the less friends on that account. After a few minutes looking over the ground and deciding the course to take, these four went down the hill and swept out into the fields, the dogs full of life, going at full gallop, and the two men walking briskly, for the air was sharp and demanded lively walking to keep warm. The dogs were going too fast for careful work, but it was useless to try to get them into moderation till they had warmed themselves and flushed a covey or two of quail. Flora went sailing down an old fence fringed with bushes, and all at once fetched up so suddenly that she turned end for end and stood headed in the opposite direction.

"There they are," said E., "and I'll bet they are bunched in a sunny fence corner. I saw a famous covey along that fence the other day. Must have been twenty of them. If it's the same lot and nobody been into 'em, we will have fun with them sure."

One each side of the fence, the two men approached, moving very slowly as they neared the dog. I don't know why they went so slowly, but that's the way they always do it. Presently E. said, "I see them all huddled together in the fence corner opposite the dog. 'Bout half a bushel of 'em. It's the big covey all right."

"Well, let's put 'em up," said H. "It's too cold to stand here long."

So they took a few steps more and out came the birds, and the air was full of them. It looked as if a shotgun fired into the "brown of them" was sure to kill a half-dozen at least, but these fellows shot three times and got but two. H. did not shoot but once, because he is great on scattered birds, and always is very careful about marking them down. They went 80 to 100 yards along the fence and pitched into the weeds and bushes.

"That's a layout for us," said E. "Couldn't have it any better if it was done to order."

The dogs were kept in and the procession moved along the fence with the dogs a rod or two in advance.

"Must be getting about there," said E., and a moment later out went one from behind him and started across to the nearest clump of cottonwoods. E. turned quickly, steadied himself an instant, and fired. The bird folded its wings and dropped into the weeds. Flora was on the other side of the fence and made a dash to get over, flushing another bird which was a fair shot for H., but instead of shooting it he proceeded to explain to Flora that she was old enough to know better and would consequently be held responsible for such lapses from plain duty. In fact, H. gave her a goodly dose of benevolent assimilation, applied outwardly by means of an elm switch, and at the same time he told her that the sooner she got that wire edge off the better it would be for all concerned. While all this was going on, Sinner stood solid on a bird less than two rods away. Sinner was an old veteran and seldom got rattled about anything.

"I marked that bird all right," said E. "Saw him go down between the two right hand trees of the cottonwood grove."

H. now stepped to where Sinner was pointing, telling E. to look out as it would be sure to dart through the bushes right to him, which it did, but just as E. pulled his trigger the bird turned and darted through the bushes again, so E. missed, but as it came in sight of H. a few rods down the fence, he got it. Just then a dozen or more got up and hied themselves away, some to the cottonwoods and some further along the fence. Another covey rose and joined the stragglers, going down the fence. The shooters followed along the fence and when they got among them there were flushes and misses and kills in such rapid succession that they hardly knew where they were at; but by the time the birds were all up, they had bagged six. Most of those that got away went to the cottonwoods, so the shooters followed them. Here the shooting was difficult, for the trees were close together and the branches were low enough to almost meet the tops of the high weeds, but as they had now "got down to business" and knew they had to do it about right if they got any birds, they did better shooting than they did in the open, and after thoroughly beating out the ground they got several more into the bag.

"Where will we go next?" asked H.

"Reckon we better go down Painter Creek," said E.

There was a bad tangle of grass, weeds, hazel brush and plum thickets with weedy corn along the edges, and there were quail in the weeds; the dogs found a trail of a covey that ran ahead of them and the men followed the dogs for a hundred yards, expecting a rise every moment. At last E. said, "The tension is getting too strong for me. Let's rush them." So they took a few rapid steps and the air was full of quail. They rose, widely scattered, so they did not interfere with each other, and the result was two doubles, but only three were bagged, the dogs failing to find the other one. The escaping birds went into the tangle of brush, weeds and grass along the creek, and the dogs and men tramped and threshed the place all over, but the birds lay so close that not half of them were put up, though several more were bagged.

The sun was now sinking out of sight, and the cold was nipping at ears and noses, so the shooters got into the road and started on a lively walk for home. As they passed the cottonwood grove the scattered birds they had left there were calling to each other. "Some of the folks that write for the papers speak of the quail calling Bob White as they go home from quail shooting," said E. "That always spoils the story for me, for anybody who knows anything about quail knows that Bob White is their love call, and is never used except in the mating season."

"I guess all the hunting that kind of man ever does is done hunting for a place where he can get quail on toast. Ouch, but my ears are cold!" said H.

O. H. HAMPTON.

Rhode Island Notes.

PROVIDENCE, R. I., Jan. 6.—*Editor Forest and Stream:* Last week it was reported in the local papers that two deer had been seen near Chepachet, and that about every gun, old and new, in western Rhode Island had been put in condition for shooting. Perhaps the would-be deer slayers are not aware that deer are protected by law, and that venison in Rhode Island may prove to be very expensive. A deer is not a bird, but one of the Commissioners of Birds has thought it proper to call attention to Chapter 723 passed by the Rhode Island Legislature for the protection of deer, Feb. 9, 1900: "Section 1. Whoever before the first day of Febraury, A. D. 1905, takes or kills a deer, except his own tame deer kept on his own grounds, shall be fined not exceeding $500." The Commissioner also explained that in Massachusetts deer are protected at all times, the penalty for killing one being $100. The Connecticut deer cannot be shot legally until 1903.

In the inaugural message of Gov. William Gregory to the General Assembly of Rhode Island, he called attention to the following matters:

Protection of Birds.

"The State is to be congratulated on the devoted and intelligent consideration to the interests of bird life which is being given by the Commissioners created at the last January session, and provided with ample power to enforce the laws. The Commissioners report that public interest has awakened to a more general regard for the bird laws than ever before. The work of education is economic as well as humane, since our birds are necessary for the preservation of the crops, which is accomplished through the constant warfare they wage against worms and insects. Confronted by the circumstance that within fifteen years past bird life in our State has diminished 65 per cent., that to save certain crops poisons are resorted to where nature formerly worked through the birds, the Commissioners are seeking diligently to retrieve the disaster. The open season for killing game birds has been shortened, and it is trusted that with the co-operation of sportsmen and marketmen and an educated public sentiment progress may continue to be made without advising the last resort of a close season for two or three years.

Inland Fisheries.

"From their headquarters, at Wickford, the Commission has been unusually active during the year. Definite and valuable information relative to the habits, food, enemies and rate of growth of the scallop has been secured, the series of experiments on the life and habits of the clam have been successfully continued and encouraging results are reported from the efforts to devise a practical method of lobster culture. The appropriation made last year enabled the Commission to build and equip a floating laboratory and to possess a small naphtha launch."

Roger Larkin recently shot a cat owl, at South Kingstown, which measured 3 feet 8 inches from tip to tip.

W. H. M.

The Maine Game Law.

BOSTON, Jan. 7.—The Massachusetts Legislature has assembled, but I cannot learn that any important changes in the fish and game laws are contemplated, and the marketmen are not yet mentioning any changes. The Maine Legislature came together Jan. 1, but the Committee on Fisheries and Game has not yet been announced. Naturally Commissioner Carleton, Chairman of the Board of Fisheries and Game, will be tendered the chairmanship of that committee, since he is a member of the House. J. W. Brackett, of "The Maine Woods," will also be on the committee, without doubt. It now looks as though no important changes in the existing fish and game laws of that State would be made. Commissioner Stanley is of the opinion that the laws are mainly well enough as they are. He says that the Commission believes that no more deer have been destroyed under the September license law than would have been illegally killed without it; that the law has brought in $3,900 for licenses. The Commission does not believe that any forest fires have resulted from this law, and this money has been used for fish and game protection. He does not believe that deer have decreased in Maine; that they have simply changed their location, for better feeding grounds, or for some other reason. He is very reasonable and conscientious concerning his position; says that the Commission has taken great pains in investigating the subject of a decrease in the deer supply. Secretary Farrington's annual report says that the State has received for the year $2,109 for guide registration, $2,035 for fines for violations of fish and game laws and for game seized and sold, $50 for taxidermists' licenses, $535 for camp proprietors' licenses, $3,900 for September shooting licenses and licenses for shipping of game without the owner accompanying it; a total of $8,429 The Commission has expended $17,834 for operation of fish hatcheries and traveling expenses of the Commission, $533 for clerk hire, $295 for attorneys' fees, $725 for specimens for the State Museum, and $13,464 for the services of wardens; total, $32,851. He recommends that the Legislature authorize a larger amount expended for fish. He recommends that the Maine Fish and Game Association shall urge upon the Legislature adding $10,000 to the fish and game fund, to be used for the better protection and propagation of fish and game. He very sensibly urges that the guides be held to stricter account to the State for their doings. He is aware that many come to Maine to kill moose and deer for market, and he suggests that the guides have aided in this market hunting. He is right, and he would be doubly sure of his position had he been where he could have watched the Boston markets the past open season on big game in Maine.

The Vermont Legislature, recently adjourned, made no important changes in the fish and game laws of that State. A few special enactments concerning fishing in certain waters were made. SPECIAL.

New Hampshire Forests.

GOV. JORDAN, of New Hampshire, comes from Coos county and appreciates the forestry situation. In his message to the Legislature, he says:

"My lifelong residence in the north country has filled me with a love for our beautiful hills which the passage of the years has only made the stronger; and I cannot look with unconcern upon the devastation which is being wrought upon them. In my judgment, the time has come to take positive and effective steps to assure to our State for future generations those magnificent gems of mountain scenery which have won for our commonwealth the unique title of 'The Switzerland of America.' The most immediately effective method of securing the essential benefits of forest preservation is for the State, by exercise of its power of eminent domain, to take to itself once more the ownership of its most desirable forest lands. Yet we must bear in mind the fact that these lands cannot be taken from their owners except for an adequate compensation. The lumber interests are great, and the greater they are, under present methods of operation, the worse it is for the State. The number of lumber plants is 831; capital, $12,329,843; total wages, $2,519,609; average number employees, 8,932; value of annual product, $10 907,438.

"But there is still another method of securing the main features of forest preservation which may commend itself to your minds as equally effective, and which is not open to objection on the ground of expense. It lies in the restriction of the operations of private land owners in respect to the manner in which they shall utilize the forest product. Such an intervention I believe to be a proper function of the State through the exercise of its power of sovereign police, which is co-extensive with public health, morals, social order and property rights. I commend this phase of the subject to your earnest attention, indulging the hope that your wisdom will guide to the proper action. For myself, I consider no consideration paramount to that of putting an end to the existing conditions which obtain in our forest properties. The time is ripe for New Hampshire to act. Air, water and forests are the richest of the natural resources of man. We should take good care that the first be not vitiated, the next polluted, nor the last destroyed."

Weights of Game.

GRAVESEND BEACH.—*Editor Forest and Stream:* I am a boy near fourteen years of age. My grandfather made me a present of a subscription for three years of your paper. Two years have expired. I have read of several men sending you the weights of partridges they have shot. I was hunting rabbits last week at Coram, Long Island. As a partridge took wing, I shot at him and killed him. They say he is a very fine one, and when weighed at the grocery store at my home, weighed 25 ounces.

The New York Fish Commission.

From Governor Odell's Message.

THE preservation of the forests, especially as a protection to the water supply of the State, has been one that has received proper attention from the Legislature, and is of the greatest importance. The same care has also been extended to the protection of the fish and game interests and the shellfish culture along our coasts. The steps taken toward this end have undoubtedly resulted in great benefit.

It seems to me, however, that two boards, one charged with the purchase of lands and the other with their protection, must necessarily duplicate each other's work to a considerable degree, and that a consolidation would result in a large saving. The Forest Preserve Board is composed almost entirely of officials elected by the people, and the Fish and Game Commission appointees of the Governor. The law governing the work of the Forest Preserve Board could be amended so as to permit the selection of a member by the Governor, by and with the consent of the Senate, who with the two State officers now designated should constitute the Forest Preserve Board, and the powers and duties of the Forest, Fish and Game Commission could be transferred to the Board as thus constituted. The importance of this suggestion is realized perhaps more fully by placing before you the appropriation made for these boards last year. There was appropriated by the last Legislature for the salaries and office expenses of the Forestry, Fish and Game Commission the sum of $82,875. This includes the expenses of printing and publication of reports, salaries of Commissioners and employees and other expenses incidental to the maintenance of such a department, but not the maintenance of hatcheries and legal expenses. Aside from the sum of $250,000 appropriated for the purchase of lands and expenses of the Forest Preserve Board, there were expended for other salaries and office expenses over $14 000, and paid for additional counsel about $12,000. The legal work of this department should be performed by the Attorney-General.

The saving of expenses which would undoubtedly follow consolidation, amounting probably to $35,000, is certainly enough to warrant careful consideration upon the part of the Legislature, and such legislation as will lead to this result is recommended.

Public and Private Waters.

Editor Forest and Stream:

I have read with much interest the reply of F. A. C. in your issue of Dec. 15 to my article relating to public fish in private waters.

I am inclined to think that people generally, including your correspondent, are apt to be mistaken as to the rights of riparian owners and as to the rights of the public in the waters of streams which are essentially private, and I may in the near future call further attention to the laws of this State and the decisions of our courts on these points.

I desire, however, to correct at the present time what seems to me to be a manifest error in the communication from F. A. C., and that is in regard to his classification of rivers and streams.

In his article he states that water courses, not including ponds and lakes, may be loosely divided into three important classes: 1. Those in which the tide ebbs and flows. 2. Navigable rivers and streams. 3. Streams not navigable.

As to the first, he is correct, and that includes but one stream in this State—the Hudson River up to the city of Troy.

His second classification, "Navigable rivers and streams," strictly speaking, would include but few streams, and all of them too short for serious consideration.

Outside of the Hudson River the rivers and streams of this State should be classified as follows:

First. Those which are navigable, and that includes, as the word "navigable" implies, streams "which may be navigated or passed in ships or vessels" (Webster).

Second. Streams not navigable with boats, but which are subject to certain easements or privileges acquired by user. This includes all those streams or parts of streams which for years have been owned in fee by the riparian owners, subject to the easement or right of certain persons to float or drive logs down the streams when the waters permit, either to saw mills located below or for the purpose of forming into rafts for shipping them to market.

In these streams the public has no right, and the easements are confined to those owning or occupying lands on or adjacent to the streams through which alone their logs or lumber can be driven. There are but few of these streams now remaining in this State, at least outside of the North Woods, and the noted streams rising in or flowing from the lower water shed of the State of New York have never been subject to this easement except in two or three cases, and then to a very limited extent, and if this classification is correct, then the third class, "streams which are not navigable or subject to an easement or right by user," will include most of the streams in the State of New York.

I quite agree with F. A. C. as to the right which a person has in the public highway, when he says that no person has "the right to dig bait by the roadside without the consent of him who owns to the middle of the road"—that would be trespass; but no person claiming the right to use the highway would have the right to distribute along or in it snakes and skunks, for that would pollute it and injure the value of the adjacent lands, and the same rule applies to streams which belong to the riparian owners, subject to easements or rights acquired by user. No person floating down a stream of this kind on a raft of logs has the right to take a fish which might be in the waters flowing over the lands of the riparian owner, for that would be trespass, nor to deposit in these waters bigmouthed black bass or carp, for that would pollute them and injure the value of the adjacent land, and the same rule applies to the public, which is simply an aggregation of individuals. But after all, this side discussion, in which we differ on some points, does not settle the principal question which I raised in my communication, and that was, What do the Commissioners mean by public and what by private waters? They can easily define what they mean by these terms, but so far as I have been able to find out, they have never done so.

I have written this article with great hesitancy, fearing that I might be regarded as not being in sympathy with the good work which has been and is being done in this State. But then there has been bad work, fearfully bad work, done in the past also, for which neither the present Commissioners nor Mr. A. N. Cheney are in any way responsible.

Some years ago the supervisors of this county appointed a committee on fish, which continued for three years, and of which the writer was chairman. We carefully ascertained the nature of every considerable pond and stream in the county and restocked many of them with the fish natural to them, and never permitted any waters to be stocked with fish which might destroy or be injurious to the native fish, and in this we respected the rights of riparian owners. On the other side of the Hudson River the fish have never been furnished to a committee, but direct from the State on individual application, and it has resulted in a wholesale destruction of private streams and waters, including scores of miles of the finest trout streams of the lower water shed of this State.

Perhaps it may be as well right here and now to go to the bottom of this whole business of stocking the waters of this State with fish.

In the latter part of the fifties I was interested with a friend in the propagation of brook trout, and he succeeded, as I remember, before Mr. Seth Green engaged in it, but he had the State behind him, and the result was that for a time the small concerns did not as a rule find the hatching of trout profitable.

Since then I have kept in pretty close touch with what has been done toward the stocking of the waters of this State, and, in fact, of all of our States and of Canada.

The interest created by the success of Seth Green was followed by an interest in legislation, but as any one will see who will take the trouble to look over our old game and fish laws, running back say thirty years or more, there has never been any effort made to protect or increase our common food fishes, and by these I mean suckers, yellow perch, pickerel and other fishes commonly found in our small ponds and ordinary streams, and yet these fish have in the past furnished not only sport but food to thousands of the people living in the country districts. Their rights and interests, however, have never been consulted, but our legislation has been mostly in favor of individuals and clubs, and the owners of preserves who have practically controlled in their own interest nearly all the legislation of this State.

In 1894 the Senate Committee on Fish and Game visited the principal parts of this State with a view to suggesting amendments to the law, and at my suggestion they endeavored to ascertain what had been done toward the propagation or protection of common food fishes.

The universal answer was, nothing, coupled in many instances with the statement that private waters and streams had been largely destroyed because the State, without the consent of the riparian owners, had stocked these waters with destructive kinds of fish.

The owners of the thousands of miles of private streams in this State cannot combine for their protection, and the result is that these streams as they bought them and have the right to own them have been forever destroyed.

Some six years ago I was before the Senate Committee on Fish and Game and said to them substantially, "Gentlemen, there has never been any legislation in this State looking to the protection or increase of our common food fish such as suckers, pickerel, perch, sunfish, etc., which abound naturally in all of our ponds and streams, and which are prized for sport and food by thousands of our farmers and their laboring men, and they get just as much sport in taking them on an off day, or after the day's work is over, as the accomplished angler does in taking trout or salmon with the fly, to say nothing of the amount of food which they furnish for the farmer's table, and I beg you to consider the rights and comfort of this great body of our citizens, and at least protect the private waters owned by them from injury or destruction by the introduction of other fish under the pretense of stocking public waters without the knowledge or consent of the owners."

I also called their attention particularly to the fact that the whitefish industry in Lake Ontario had in the past yielded an annual income claimed to be over $200 000, yet this fish had been practically destroyed, and that no effort had been made to replenish this lake with this most magnificent food fish.

To show how far I was then correct in my statement, I refer to the following extract from a most exhaustive article read by Mr. Frank N. Clark, of Northville, Mich., at the meeting of the American Fisheries Society held in July last at Wood's Holl, entitled "Methods and Results in Connection with the Propagation of Commercial Fishes for the Great Lakes," and in which he says, referring to this State, "Fewer whitefish fry have been planted in Lake Ontario than in any other of the great lakes; the value of its commercial fisheries suffers proportionately. The whitefish fishermen have practically abandoned the lake."

In 1889 I visited Fort Niagara at the head of Lake Ontario, stopping at the hotel on the Canadian side, and we had cisco only, the landlord informing us that the whitefish had practically disappeared from the lake years before, and that he had ceased trying to get them.

Some years ago a movement was started in Rochester for the purpose of protecting and restoring our food fish, but why should it be necessary for private individuals to

combine for this purpose when this should have been regarded by our Fish Commissioners as their first and highest duty?

The question naturally arises, why have our Fish Commissioners been so diligent in the past in stocking the waters of this State which are essentially private and in many, if not indeed most cases, to their permanent injury, while so little has been done for Lake Ontario that it is as barren of whitefish to-day as it was twenty or more years ago?

Let me give a few figures which I happen to have at hand. In the year 1895 there were planted in all the waters of this State, including Lake Ontario, by our Commissioners, 24,080,000 whitefish.

In the year 1896 there were planted by them in all the waters of this State 11,250,000 whitefish, of which 6,500,000 were placed in Lake Ontario, hardly enough to bear up against the attack of their natural enemies, while in that year our Commissioners had an appropriation of $157,524.59.

I do not happen to have the returns for 1897-8 and 1899 but the whitefish planted this year in all the waters of this State amount to 40,175,000.

Mr. Clark informs us that during the five years, 1895 to 1899, inclusive, the United States Commission placed in the waters of Lake Erie alone 443,677,000 whitefish fry, an average of nearly 89,000,000 a year, and that the commercial value of the whitefish industry is greater than that of any of the lakes, Lake Michigan being next, and yet in Lake Michigan there were 4,000,000 pounds taken in 1897, which at 10 cents a pound would yield $400 000.

What has been done in the other great lakes could and should have been done in Lake Ontario.

If our former Commissioners had done their duty by this lake the whitefish would have been taken for many years past by the ton, as they have been in all the other great lakes, as the result of restocking, and the commercial value of these fish would have amounted annually to several hundred thousand dollars, a very handsome offset to the yearly appropriations made by our State.

J. S. VAN CLEEF.

POUGHKEEPSIE, N. Y., Dec. 31.

ANGLING NOTES.

Mr. Harmsworth.

MR. ALFRED C. HARMSWORTH, of London, proprietor of the Daily Mail and about thirty other newspapers and periodicals in Great Britain, is on a visit to this country, and one of the great dealy newspapers in New York city was turned over to him to be issued for one day in the manner and style that would exemplify his idea of what the modern daily newspaper should be. A Troy, N. Y., newspaper, the Budget, in speaking editorially of Mr. Harmsworth's efforts to improve the make-up of the daily newspaper, said that the American people should appreciate what he had done for journalism, even if they did not adopt his suggestions, and proposed that he be invited to go fishing as the best relaxation that could be offered to a busy man on a vacation, and intimated that we had in this country some superior fishing.

Apparently this was a shot in the dark, and the writer did not know that Mr. Harmsworth was an enthusiastic angler. He had scarcely landed from the Teutonic when he wrote to FOREST AND STREAM to ask about the fishing, and on a previous visit to this country he visited Florida for tarpon fishing, and later wrote of his experience in the columns of this paper, praising the fishing as something superior to the fishing of any other country. Since that time Mr. Harmsworth has visited India and Siberia for the fishing, and speaks in glowing terms of the fishing in India, strange as it may seem, saying it would be a fine fishing country except for the discomfort from the heat. Mr. Harmsworth will visit Florida for tarpon fishing on this visit—in fact, that was one of the objects of his visit at this time.

The Leaping Ouananiche.

Mr. Louis Rhead announces an exhibition of his pictures of the fighting ouananiche at the gallery of Frederick Keppel & Co., 20 East Sixteenth street, New York city, from Jan. 10 to 29, inclusive. The pictures are in oil, water color and pen, including a number of life studies of the fish on birch bark, and I would advise those who can do so to accept the invitation to view the pictures. The artist has prepared a unique catalogue, numbered and signed, from which one learns that there are in the exhibition three pictures on birch bark, nine in oil, eight in water color and two pen drawings. I presume that there will also be on exhibition Mr. Rhead's etching of Izaak Walton, which he did from the Houseman portrait in the National Portrait Gallery, South Kensington. The artist says "a few words" in his catalogue which are very pleasant reading about the fishing and guides and canoes at Lake St. John. His tribute to his Canadian guides I believe to be well deserved from my experience on the same waters: "While not so picturesque as the Indian, he is less gloomy and glum, and he knows his business well, and, what is more agreeable, he is more respectful and less 'knowing' than some other guides of different places. His movements are easy and quiet, and he is always at hand when required."

Fishculture in New York.

At the meeting of the Forest, Fish and Game Commission in Albany on Jan. 1, the State Fishculturist reported to the Commission in regard to the number of eggs taken this season up to the time of the meeting, as follows:

"The season for taking brook and brown trout and whitefish and frost fish eggs was practically closed the first of the year, and from the stock fish in the State ponds the Commission secured 4,010,800 brook trout eggs, 2,328,000 brown trout eggs, an increase over last year of 1,391,900. From whitefish in State waters and from eggs secured from the United States Fish Commission, a total of 42,538,000 whitefish eggs were laid down in the different hatcheries, an increase of 5,027,000 over last year. Frost fish secured from State waters furnished 8,560,750, an increase over last year of 1,758,750, or a total increase of the species mentioned over last year of 8,977,650 eggs. There is no mention made of rainbow trout eggs, as the season for taking these eggs has just opened.

"The Commission has also secured 4,176,000 lake trout eggs, and while the tomcod work is not nearly completed, 34,525,000 eggs have already been secured.

"The total number of eggs taken thus far this season amounts to 101,315,622.

"During the past month there was distributed, from the different hatcheries, of fingerling and adult trout, 121,982."

The report recommended that one of the State hatcheries be abandoned, as it was so situated that it was not profitable to maintain it, and that another hatchery should be moved to obtain a better water supply, for at present the hatchery in question cannot carry stock fish, nor can it rear fingerling fish, as the water gets too warm for any of the salmon family early in the summer, and all fish hatched must be planted as fry or carried elsewhere to be reared. It is not an easy matter to move a hatchery, but this one can be moved and placed on a new foundation where there is an abundance of spring water, and where rearing ponds can be constructed. During the month of December the Commission distributed 121,982 fingerling and adult trout from the different hatching stations. The adult trout, consisting of several hundreds of breeding fish, with which the hatcheries were overstocked, as new blood is brought in every year as the older fish make way for younger ones.

A. N. CHENEY.

A Joke of the Vintage of 1835.

"I say, Jack, are there any fish in this pond?"

"There may be; but I should think they were werry small, 'cause there was no water in this here pond afore that rain yesterday."

Training the Hunting Dog.

By B. Waters, Author of "Fetch and Carry: A Treatise on Retrieving."

XI.—Backing.

(*Continued from Vol. LV., page 473.*)

LET us now consider the dog more specifically as a member of a pack and the intelligent team work which such membership imposes. He much prefers to work with one of his own kind. The joint efforts of a number are far more certain to result in success than are the efforts of the lone individual. Whether wild or domestic, they much prefer to hunt with each other. Wolves take distinct parts in the struggle to effect a capture. One or two may make a sham attack on a cow while others seize and kill her momentarily unguarded calf. Coyotes have been known to station themselves with excellent judgment in such manner and places that as one or more of their number pursued the fleeing antelope it passed by the others in turn, and each in turn took up the pursuit and relieved the pursuer, so that the antelope was pitted against a relay of wolves.

The greyhound when pursuing animals as swift or swifted than itself, invariably learns to run cunning if he is permitted to have even a moderate continuous experience. In running cunning, when two or more are pursuing together, one dashes forward at full speed to press the fleeing jack rabbit, antelope, etc., while his fellow is running less swiftly behind. The purpose of the leading hound is to press the prey to a turn from its course. If he succeeds, instantly his fellow dashes forward at top speed across the angle thus formed, heading the prey off if possible, and in any event getting closer up to it. He then takes up the running, while his fellow behind watches alertly for the next turn, and when it comes he cuts across the corner. Sometimes the hindmost dog without losing speed will rear high up so that he may see over the leading dog, and thereby note what the prey is doing.

Every time that a turn is made, the prey runs on two sides of a triangle, while the hindmost dog runs on but one. This is a sufficient advantage in favor of the dogs to insure their final success. After the hindmost dog can cut in ahead of their prey, there then is a dog in front and one in the rear of it, and it is in a perilous situation. The backing dog may be said to be backing cunning, for it is analogous in its purposes to the running cunning of the greyhound. Either act is but one of many similar ones.

The country dog, be he cur or otherwise, has some neighboring dog with which he is on friendly terms, and which he seeks as company on his prowling expeditions through the woods and fields. In time the self-hunters learn all the strategy essential to success. If they approach a brush pile which gives good promise of a rabbit, do they go up to it together? That is not their procedure after they become educated. One advances to the pile to start the rabbit while the other in manner similar to that of the barking dog takes a strategic position to seize it when it springs from cover, or failing to do so, that he may turn it to his fellow with a good chance of capture.

All the acts of dogs when hunting together have a direct bearing to the common purpose, at is refers directly to their own interests—that is to say, the capture. Their knowledge and skill come from intelligence and experience. That the acts are sometimes learned very quickly proves none the less that they are the result of intelligence and experience. In no other manner could they be acquired.

Backing has a direct reference to the capture of the prey, and is conclusively proven by the well-known fact that an intelligent dog, even when most thoroughly trained, will refuse to back a dog which within his observation false points a few times. He observes that the false pointing dog is unreliable, and that as there is nothing to the point to be pursued or captured, so there is no use in preparing to seize or pursue. This denotes that the act refers to himself and not a man with a gun.

In practical field work the only material advantage of backing is that it prevents interference with the pointing dog, although it has the further value of being pleasing to the eye as a spectacular act. The backing dog is taught to suppress his inclination to interfere, and is forced to take a subordinate part.

In such instances, as a man shoots alone and owns but one dog, it is not of the slightest importance whether his dog will point or not. But when dogs are hunted together, it is of importance that they be made steady to back, or if they will not back, then that they be taught to drop promptly to order.

A dog which, refusing to back, either presses ahead to steal the point or flush the birds, will thoroughly spoil more sport than all other causes combined. Some dogs, otherwise very good, behave very badly when working with a dog which refuses to back. Under such conditions they misbehave generally; they will not submit to have their points stolen; they then willfully go ahead and flush to prevent any points being made at all, or work so resentfully and jealously that the standard of the work is ragged and poor. Therefore, when a dog is pointing no other dog should be permitted to interfere with him.

Backing well and staunchly, while not indispensable, is an accomplishment which puts a needed and useful finish to the work of dogs in company with their fellows, and besides being pleasing to the eye, it adds to the pleasure and ease of the shooter in handling them, and thus to the success of the gun.

Until the dog has learned the purposes of pointing, he shows no inclination to back. Thus puppies which are raised alone have no knowledge of what the act of pointing means, though they very quickly learn it on proper opportunity. In teaching the puppy staunchness to the back, it is best to have an old, reliable dog to do the pointing. The point being made, the puppy's attention is attracted to it, with as little noise and fuss as possible. With an exaggerated caution of movement and manner, the trainer endeavors to impress on him the gravity and importance of the event. After he observes that birds are to the point, he will acquire an enthusiastic interest in it on his own account.

Commonly the puppy's first efforts will be spirited attempts to flush. They are the natural acts of ignorant puppies.

After several lessons, when the pointing dog engages the interest of the puppy, and the latter is well in hand, the trainer walks forward to flush. If the puppy attempts to follow, he is taken back to the spot whence he started and cautioned. The trainer acts slowly, patiently and quietly if he acts aright. The portentous manner will not fail to impress the puppy as he notes it in conjunction with the point.

Dogs are exceedingly imitative. This the trainer may readily observe by assuming a crouchy, stealthy manner in an open field, as if he were stalking some prey. The dog will likely imitate his actions. However, it is not wise in this manner to deceive a dog, as it tends to impair his confidence in the deceiver.

Whenever he attempts to press forward when on back he must be cautioned or be taken back to the point whence he started. This impresses on him that he is not to go forward when his fellow is pointing. The cord and peg may be applied usefully to keep him in place if he is difficult to manage.

After the birds are flushed and a kill is made, the puppy will gain a comprehension of the purposes of the acts. Some puppies learn to back quickly; with others to teach the act it may be necessary to repeat the lessons through many days or weeks.

Even after weeks of teaching, a puppy may seem to have no interest in backing, yet some day when he comes suddenly and unexpectedly on his bracemate pointing, he may astonish and gratify his trainer by pointing instantaneously and well. The trainer may devise ways to run him on sight of the pointing dog when he does not suspect a point, arranging, however, to be in a position to interpose if he attempts to steal the point or flush.

Pointers as a rule are much more easily taught to point and back than are setters. Some dogs are so deferential that they will play to take the backing position the moment that they see their fellow making game, while others will steal the point on opportunity, or back and draw alternately till the point is stolen or the birds are flushed.

It is a branch of training in which the trainer must use infinite tact and patience. Nothing is gained by hurry. Punishment will deter the pupil from running in on a pointing dog, and to that extent it is of value, but it does not teach him how to back. It may, however, teach him to blink.

By persistent attempts to enforce the act of backing there will be but few cases which will result in failure. On the other hand, half-hearted and fitful attempts will result in many failures. Persistency, common sense, patience and tact in applying methods and affording opportunities are essential factors in this branch as they are in all others.

The FOREST AND STREAM is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday and as much earlier as practicable.

Westminster Kennel Club's Premium List.

THE premium list of the Westminster Kennel Club's forthcoming show, Feb. 19 to 22, is on the liberal scale which has obtained with the club in years past. The list of valuable trophies, cash prizes and medals for all breeds, in their enumeration, take up a number of pages of the premium list. The Westminster Kennel Club heads the list with a special prize of $20 for the best team of four of any breed entered and owned by one exhibitor, provided that at least two teams, the property of different owners, compete. Entries close Monday, Feb. 4. The prizes run chiefly as follows: Puppies and novice classes, $10, $5 and medal; limit and open classes, $15, $10 and $5. The premium lists can be obtained of Mr. James Mortimer, Secretary and Superintendent, 1001 Townsend Building, New York.

Points and Flushes.

The judges for the Westminster Kennel Club's twenty-fifth annual dog show are as follows: St. Bernards, mastiffs, bloodhounds and deerhounds, Mr. Arthur Trickett, Kansas City, Mo.; Great Danes, Mr. J. Blackburn Miller, Newburgh, N. Y.; Russian wolfhounds, Mr. Edward L. Kraus, Slatington, Pa.; greyhounds, Dalmatians, bull terriers, Airedale, Skye and Bedlington terriers, Mr. T. S. Bellin, Minneapolis, Minn.; fox hounds, sporting spaniels and collies, Mr. Harry Jarrett, Chestnut Hill, Pa.; pointers, Mr. George Jarvis, New York; setters, Mr. W. S. Bell, Pittsburg, Pa.; old English sheep dogs, basset hounds, black and tan terriers, Yorkshire terriers, toy terriers, pugs, Pomeranians, toy spaniels and miscellaneous classes, Mr. R. F. Mayhew, Clifton, S. I.; poodles, Mr. H. G. Trevor, Southampton, L. I.; bull dogs, H. C. Beadleston, New York; Boston terriers, Mr. J. F. Holt, Faneuil, Mass.; French bull dogs, Mr. John R. Buchan, New York; dachshunde, Mr. Joseph Graefle, New York; fox terriers, Mr. G. M. Carnochan, Riverdale-on-Hudson, N. Y.; Irish terriers, Mr. O. H. Donner, Rye, N. Y.; Scottish terriers, Mr. J. Steele MacKenzie, North Bend, O.; Welsh terriers, Mr. J. W. Mitchell, New York.

Spratts Dog and Bird Portrait calendar for 1901 contains portraits of typical dogs and fowls, besides giving valuable information as to the foods and medicines which they manufacture. For one, address Spratts Patent (America) Limited, 450-456 Market Street, Newark, N. J.

Yachting.

Notice.

All communications intended for FOREST AND STREAM should always be addressed to the Forest and Stream Publishing Co., and not to any individual connected with the paper.

Brigand.

WHEN the knockabout first came into popular favor a few years ago, it did not carry any bowsprit, and the jib stay ran directly to the stem head. After experimenting both by the designers and sailors of these boats, it was found that they generally handled better to have the jib set further outboard on a short bowsprit, which also gave a better opportunity for getting the anchor aboard without bruising the boat's topsides, and also gave a place to stow the anchor without taking it on deck. In Brigand, whose plans appear this week, it was found that she handled so well in all weathers with the jib set on the stem head that no change was ever made in her original rig, as shown in the drawings.

Brigand was designed by Mr. Fred D. Lawley, of the George Lawley & Son Corp., in 1898, and has proven herself an excellent all-round cruiser with a very fair turn of speed. She has 5ft. 10½in. head room in her cabin, and her excellent accommodations for a boat of 25ft. waterline and her compact rig make her an ideal small cruiser, as well as a boat in which two or three amateurs could go comfortably along the coast in most any weather.

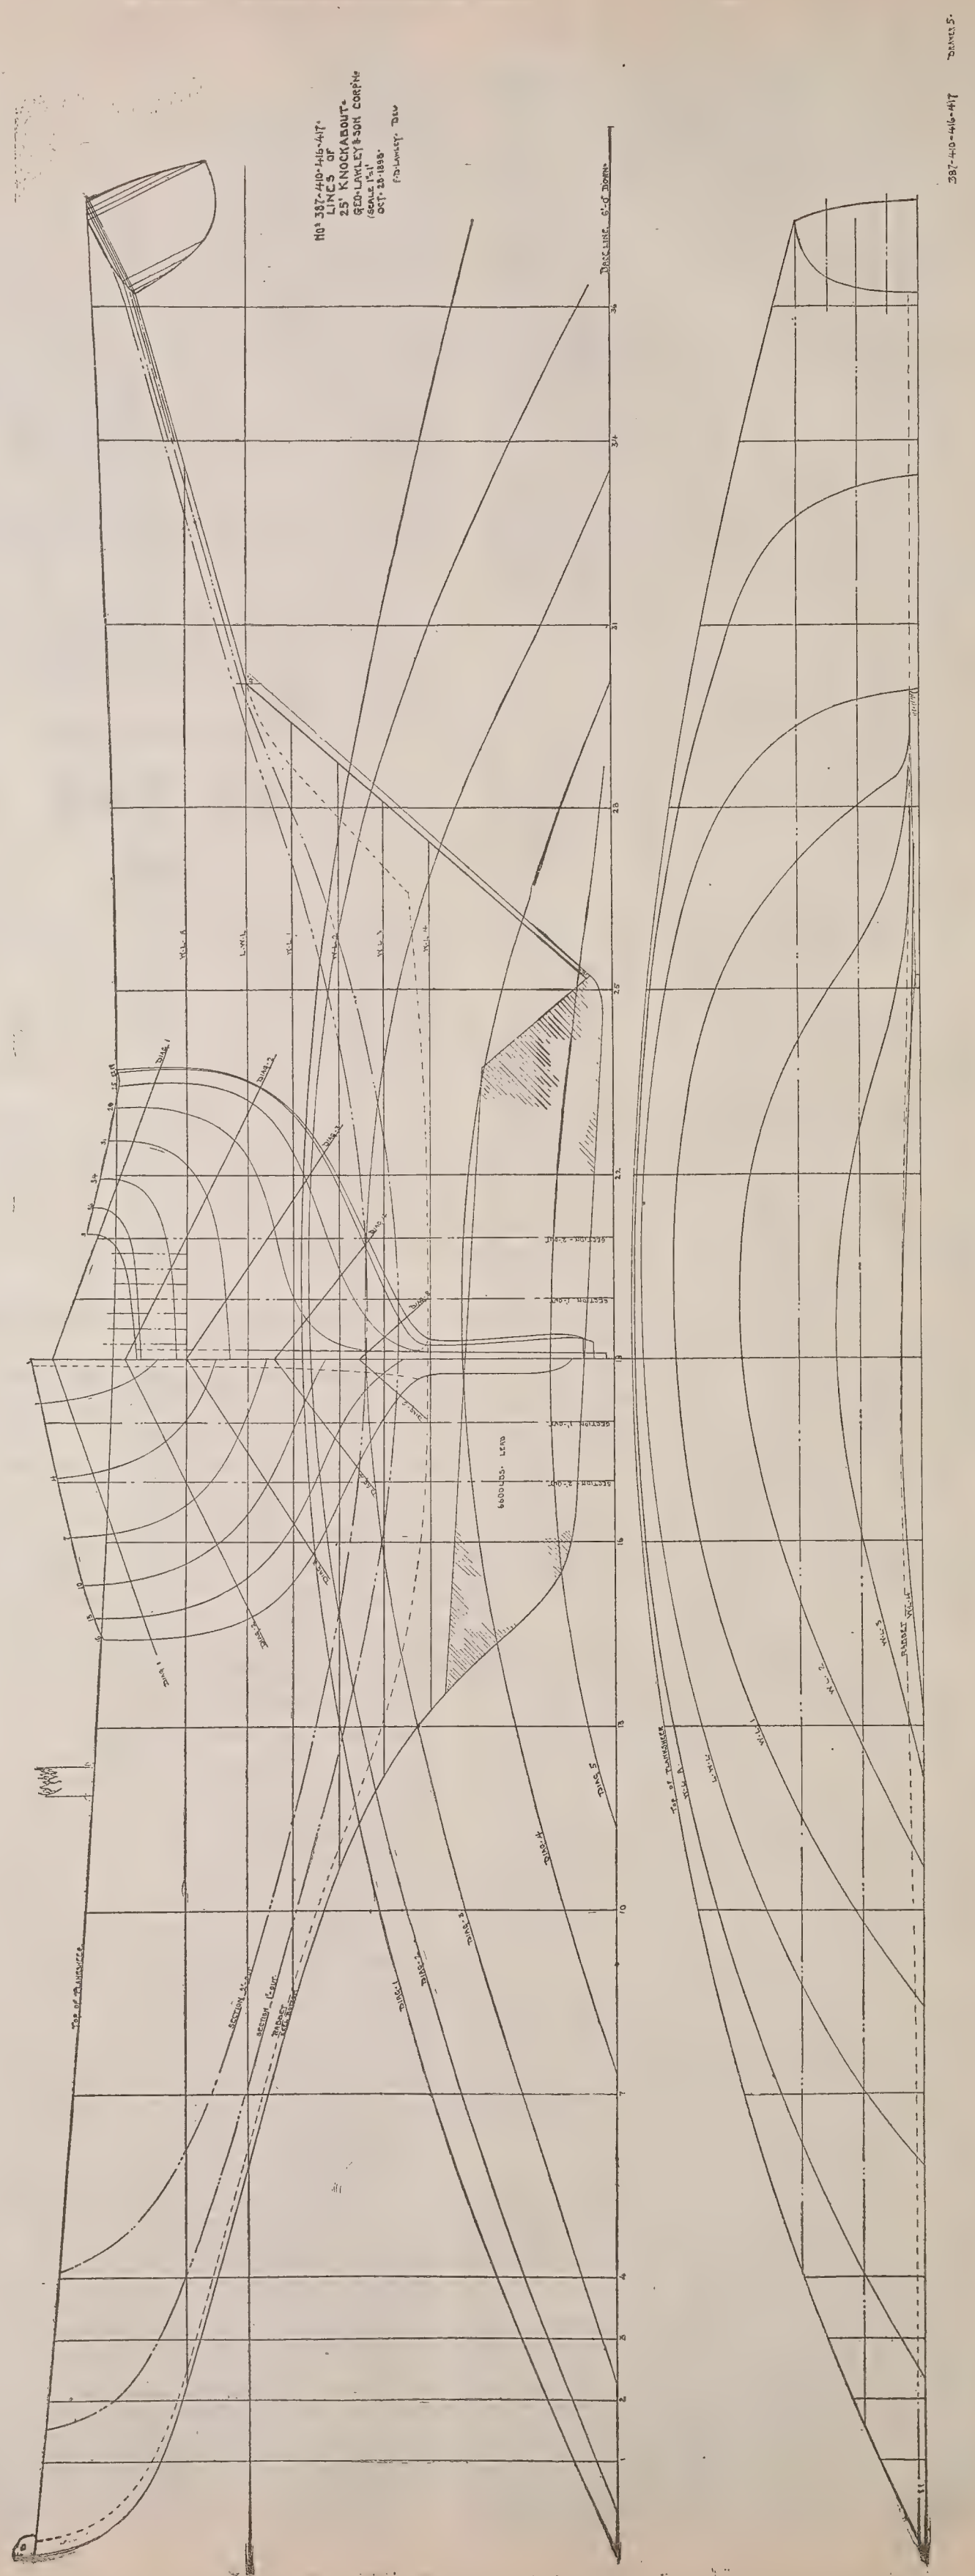
Her dimensions are as follows:

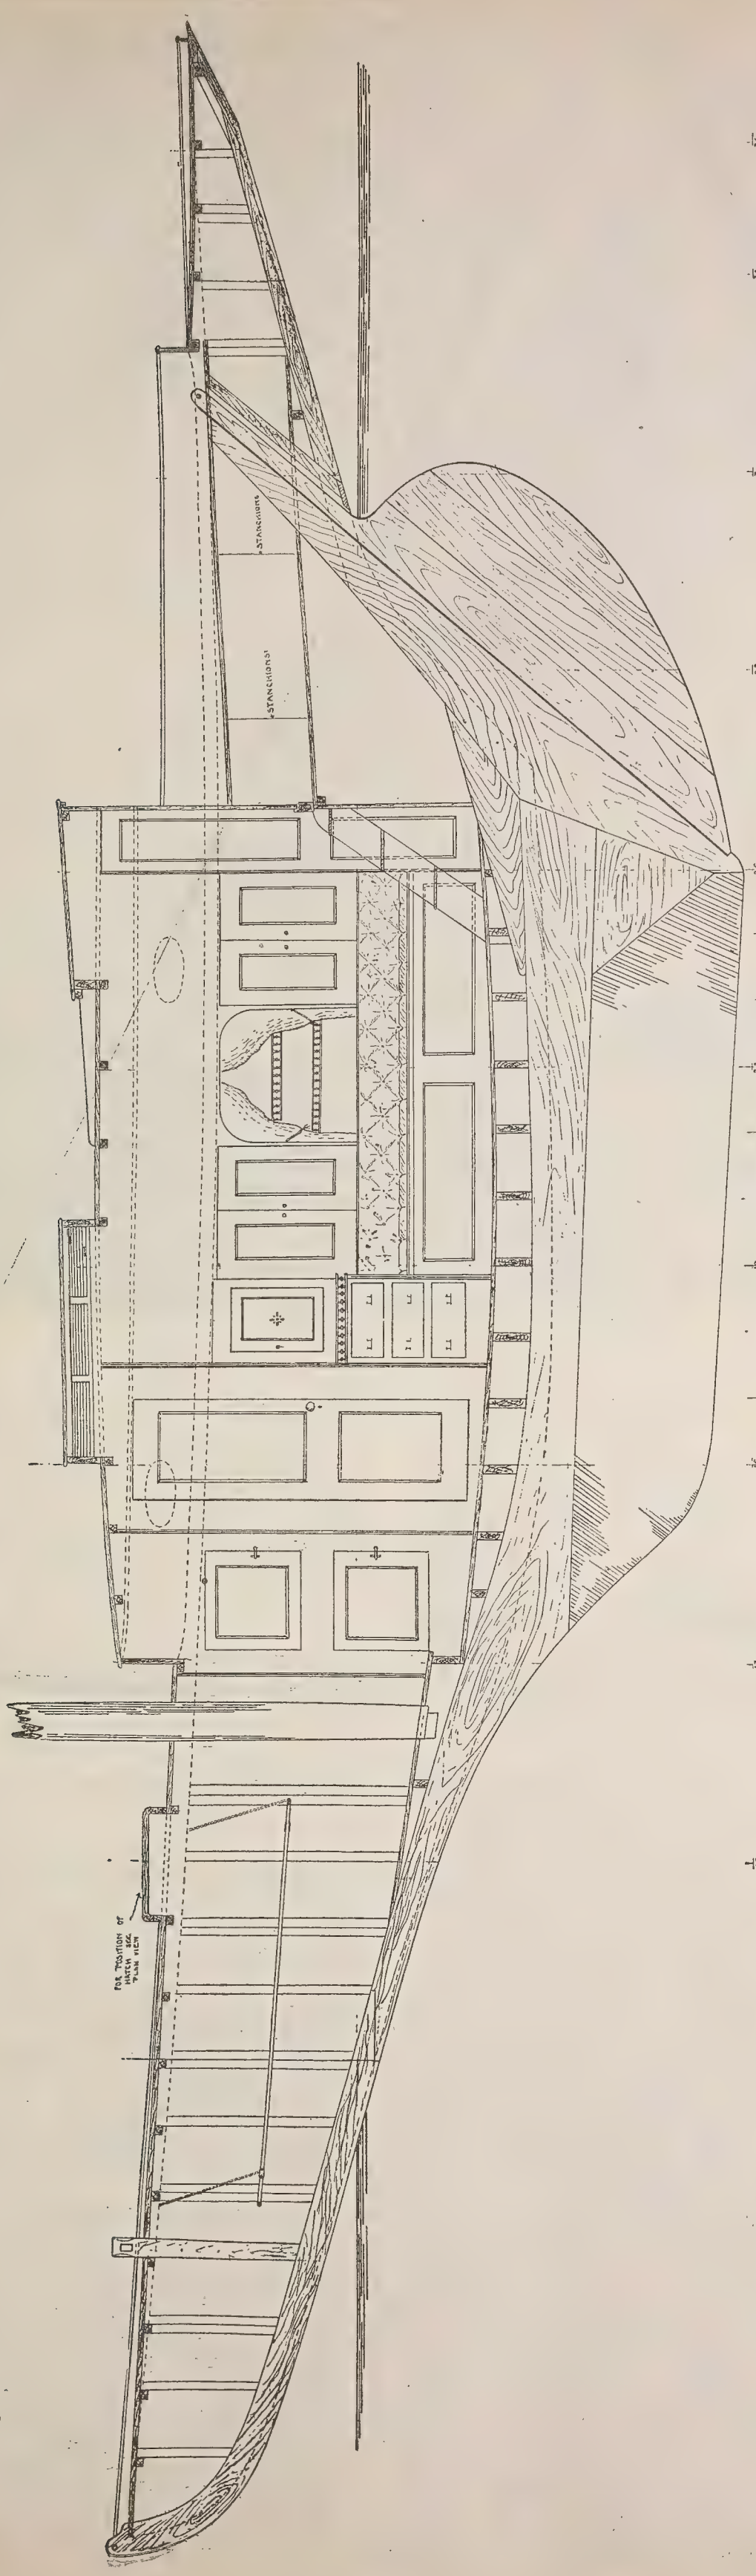
Length—	
Over all	38ft. 9in.
Waterline	24ft. 9in.
Overhang—	
Bow	6ft. 4in.
Aft	7ft. 8in.
Beam—	
Extreme	9ft. 6in.
Freeboard—	
Least	2ft. 3in.
Stern	2ft. 9in.
Bow	3ft. 4in.
Draft	5ft. 9in.
Total sail area	814 sq. ft.

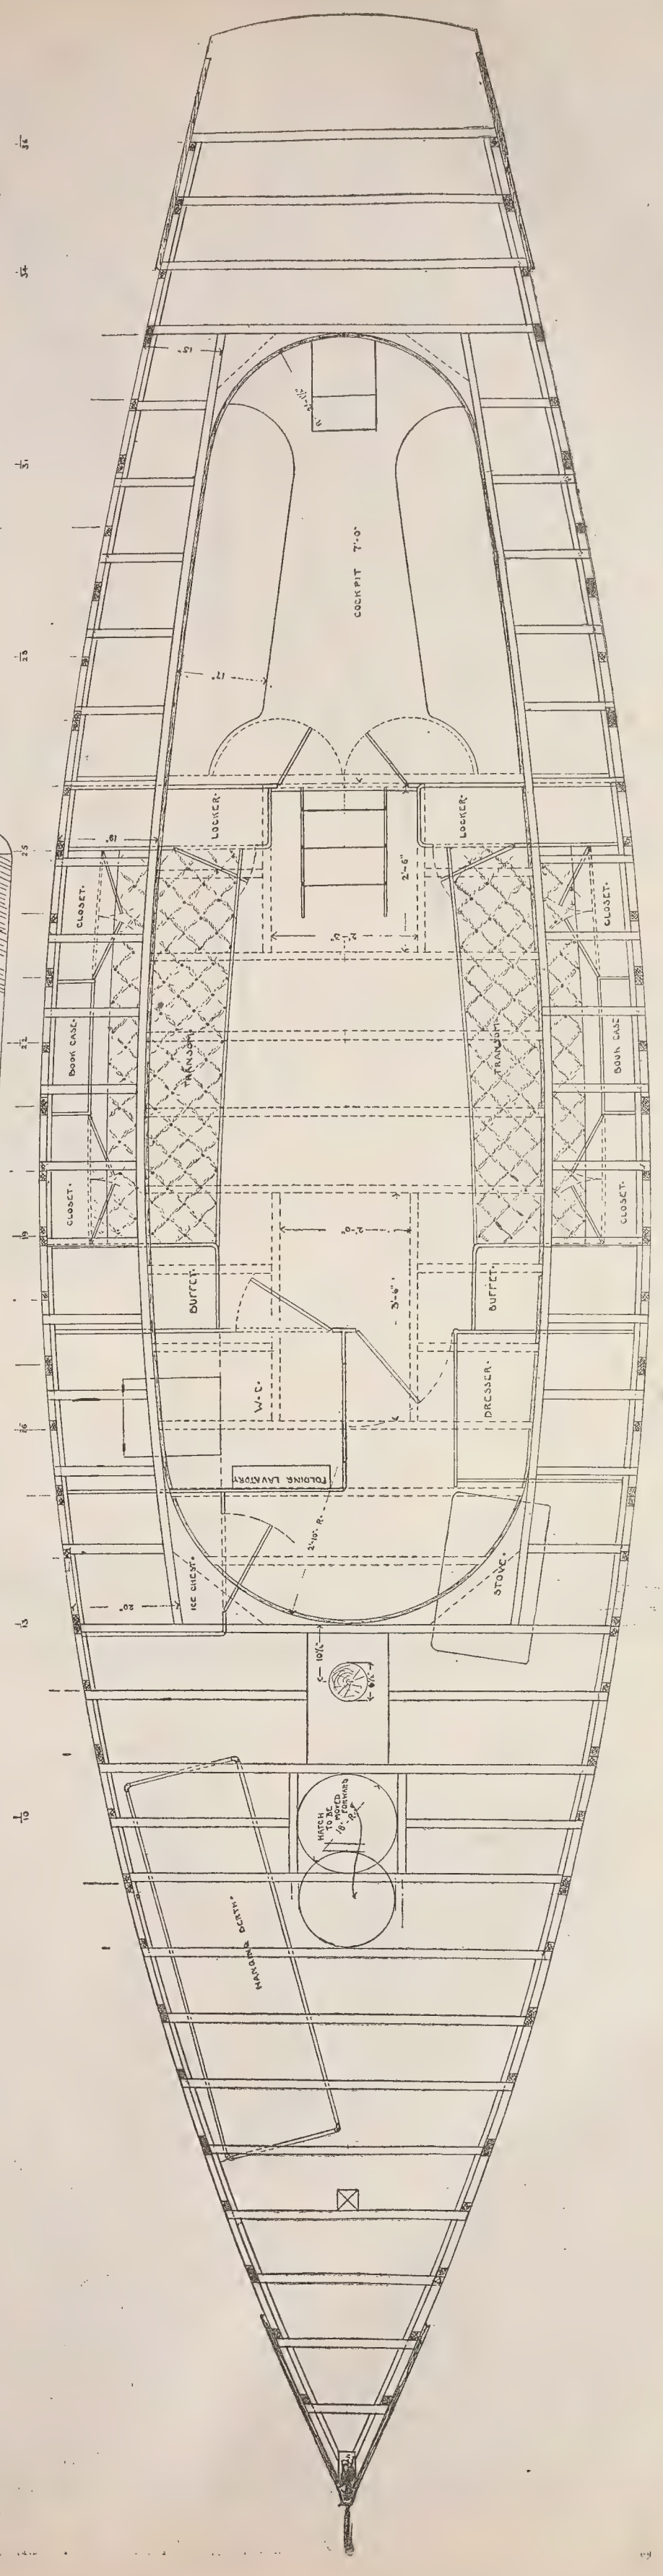
Her frames are of oak, every third one being sawed, the two between being steam bent; the planking is of 1⅛in. yellow pine. Cabin rail plank sheer and wheel are of mahogany.

The Yachtsmen's Club.

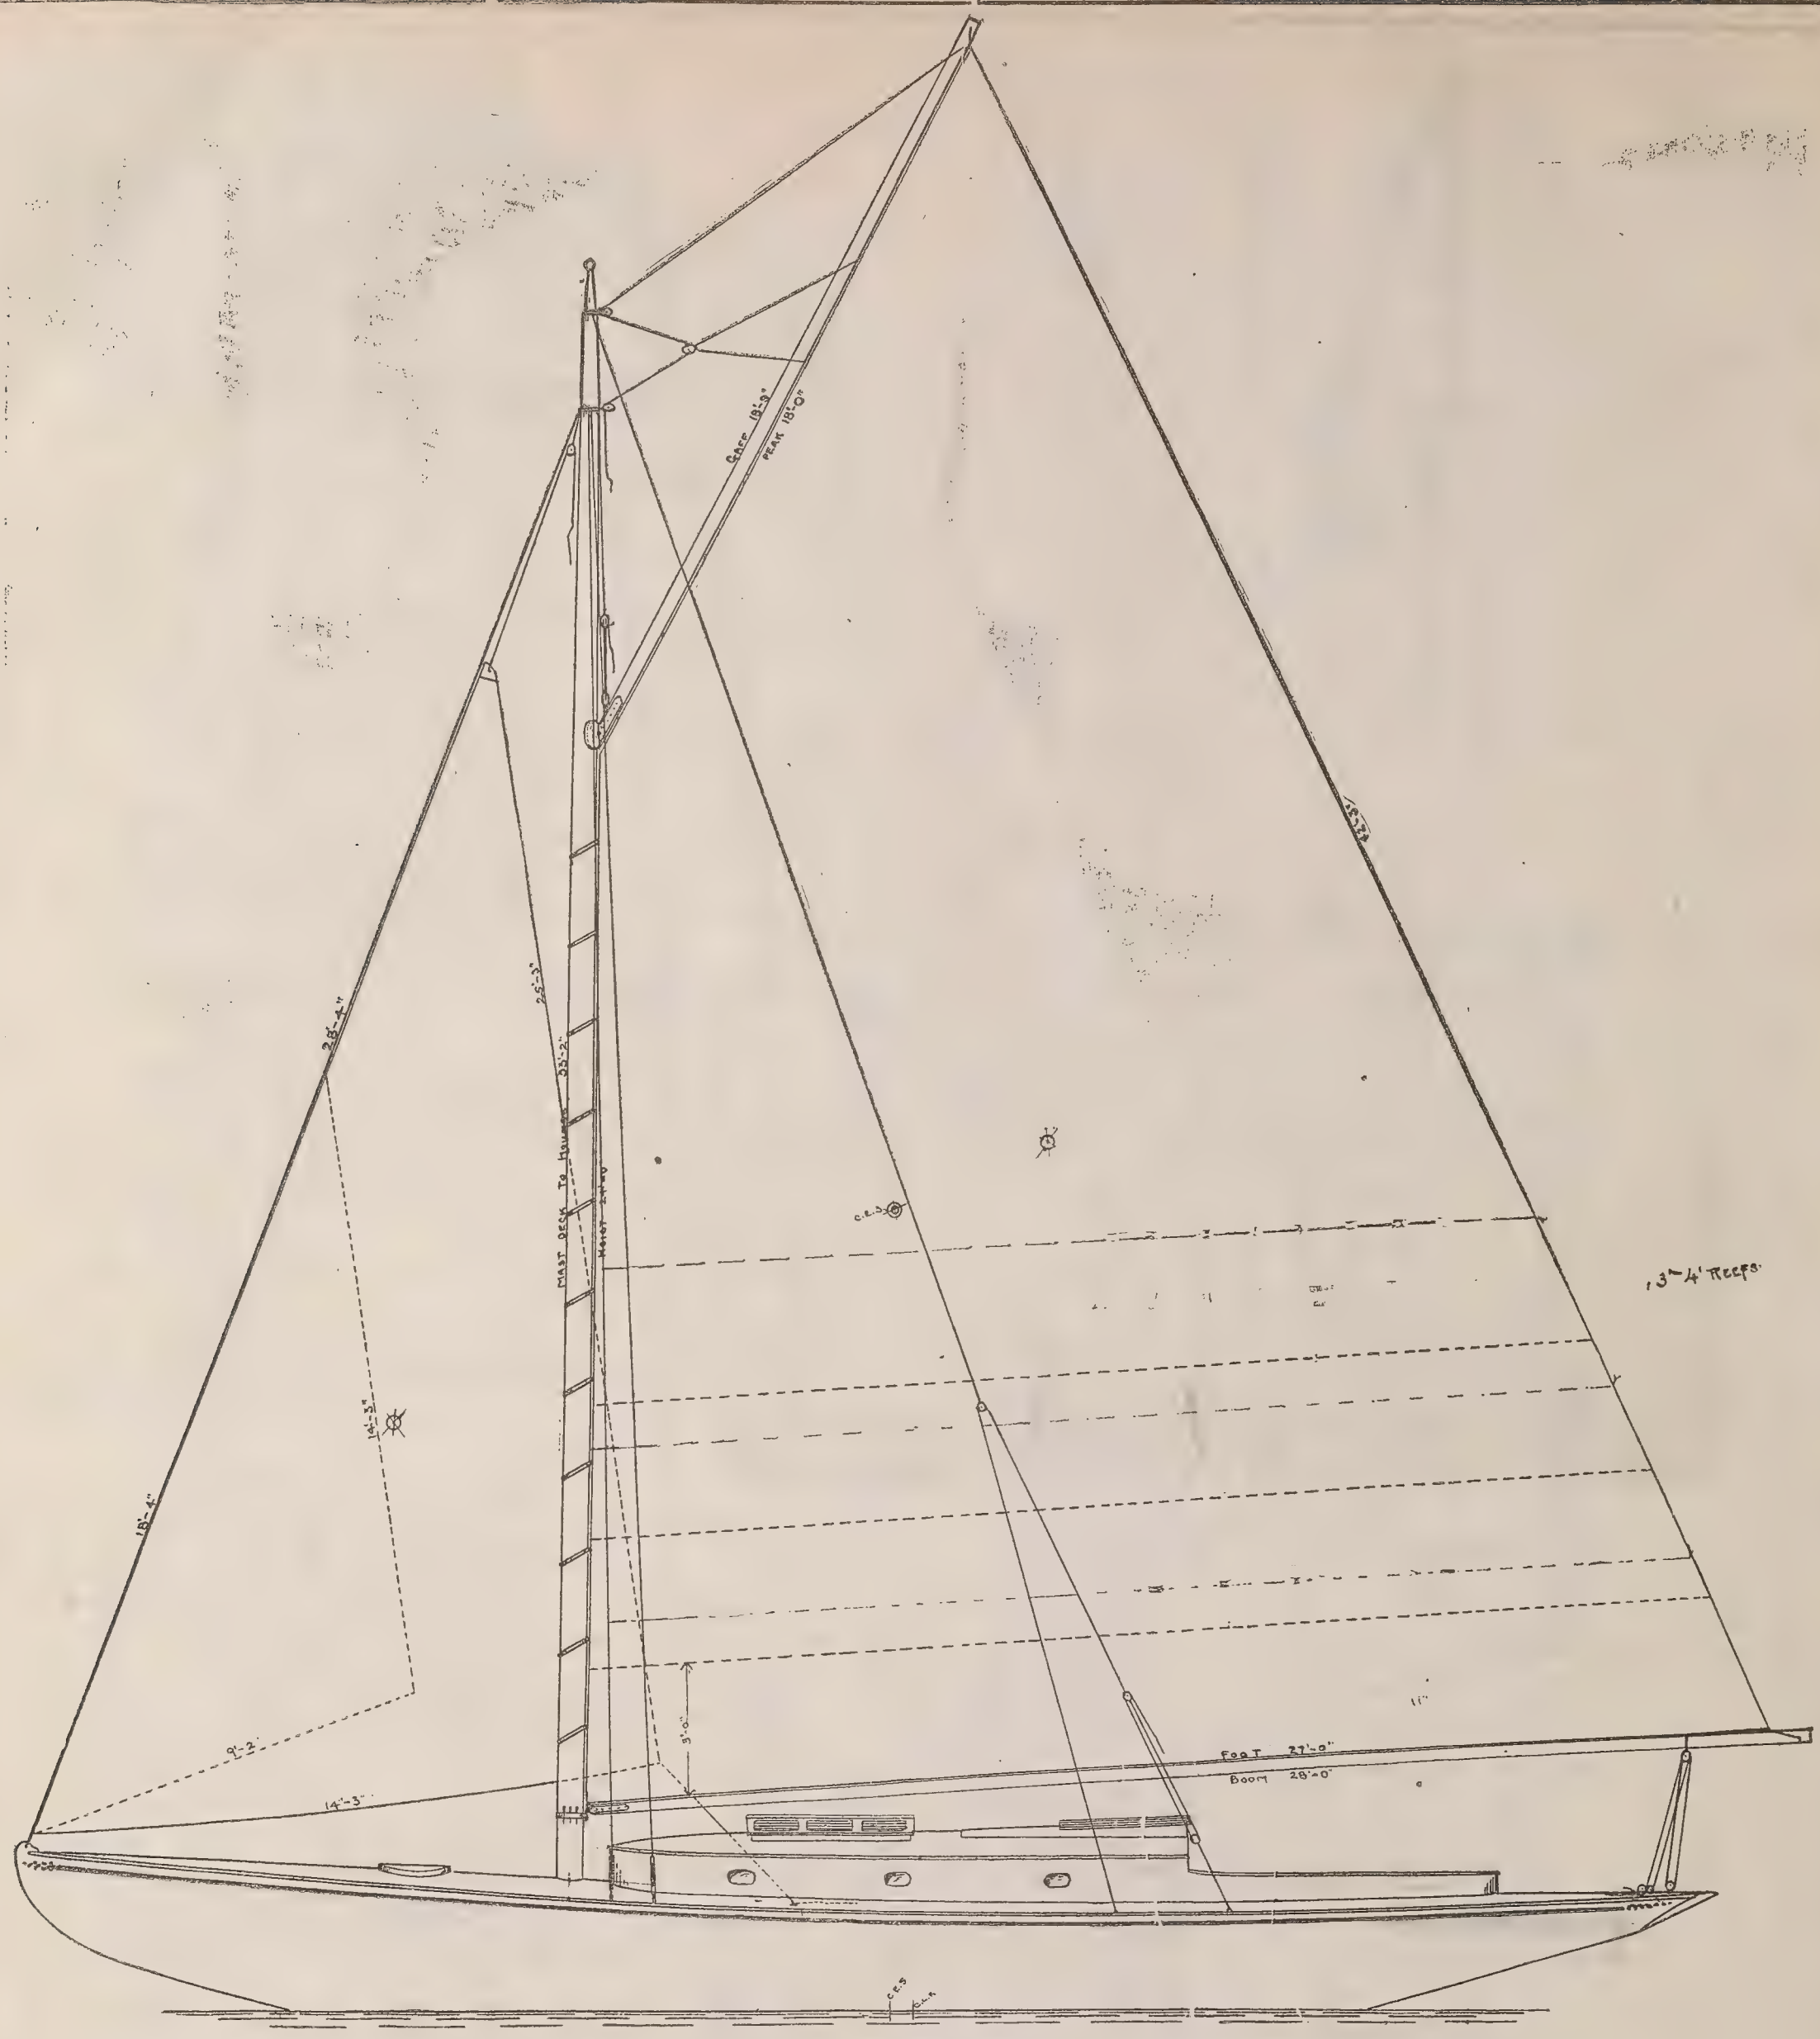
A SUFFICIENT number of the members of the Yachtsmen's Club have joined the class of lectures on navigation to insure the success of the course. The lectures will be given by Capt. Howard Patterson, principal of the New York Nautical College. They are to be six in number, and will begin with the rudiments of domestic navigation, the subjects being dealt with in a practical common sense way, and illustrated by special drawings and blackboard designs. The first of the course was delivered Monday night, Jan. 7, at the club rooms, 47 West Forty-third street, as follows: History of the mariner's compass, replete with stories concerning its discovery, its evolution, theory of terrestrial magnetism, the instrument dealt with from its mechanical standpoint, novel and interesting experiments by the aid of artificial magnets, illustrating the phenomena of polarity, etc., and the compass dealt with from the navigator's point of view.







BRIGAND—CABIN AND CONSTRUCTION PLANS.



BRIGAND—SAIL PLAN.

Our Boston Letter.

BOSTON, Jan. 6.—The work of laying down the Crowninshield Cup defender is still going on in the new mould loft at Lawley's. This work is taking longer than was at first expected, as there are so many details, but it is thought that it will be finished by the middle of the week. In a short time the lines of the boat will be given to the public.

At the Atlantic Works active preparations are being made for building the boat. A shed is being erected at the foot of the yard, in which the yacht will be built. It is 150ft. long and 36ft. wide at its widest part. It is 32ft. high. The walls of the shed are laid somewhat in the form of the boat, and their sides have a distinct tumblehome. The work of raising this shed will consume not more than a week. There will be about forty windows, which will be placed in the sides of the building as far up as possible. It was not considered best to place these windows in the roof, because of danger of leaks.

It is in about the same location where other yachts have been built by this company. It is at the right of the yard close to the wall, the ground sloping gradually, until it is lost in the water of a pretty little bight, which will be an ideal spot for sliding the boat overboard. A space has been excavated for the keel, which accounts for the small height of the building. There is another advantage in this too. As there is little work to be done on the keel after it is once laid, the room it takes up in a shop is very much wanted for other purposes. With the present arrangement the platers and riveters will be much closer to their work than they otherwise would be.

None of the material for the new boat has yet arrived, so far as can be ascertained, but it is expected very soon. The lead will be shipped directly to the Atlantic Works, as will be the bronez plating and the nickel steel angles for the frames. The spars will be made at Lawley's. There will be two sets of spars, one of steel and the other of Oregon pine. It is likely that the steel spars will be the ones to be used, but the others will be provided in case of an emergency. Lawley has some of the men in his employ who worked on the steel spars for Columbia.

Wilson & Silsby are busy on the sails for the new boat. They have nearly completed the light sails, and the heavier ones will be started very soon. Crowninshield sent this firm the blue prints of the completed sail plans last Thursday. Mr. Crowninshield says that the Boston boat will not have an extremely large sail plan. In none of his other productions has he ran to immense sail spread, but prefers rather to get speed from the form of the boat.

Mr. Lawson made the statement last week that he had offered Capt. Nate Watson a position on the new boat, to act in conjunction with Capt. Haff. This position Capt. Watson is quite willing to accept if he can be released by Mr. Skinner. Capt. Watson will act with Capt. Haff, but Capt. Haff will be the man in charge of the boat. Capt. Watson will not in any sense be mate of the vessel. His position is rather an honorary one, due to his immense ability as a racing skipper. Up to last week Mr. Skinner had not been asked to release Capt. Watson, but it is thought that the request has since been made by Mr. Crowninshield. Mr. Skinner is said to have before expressed his willingness to help the Boston boat. He is a great personal friend of Mr. Crowninshield, and for this reason it is thought that he will not hesitate in giving him the help of his skipper.

There seems to be a movement on foot to build the Hanley 90-footer, and it has been stated that a syndicate would be formed. It is to be hoped that this boat will be built, and once for all the question of superiority between the keel and the centerboard boat decided. There are many, though, in Boston who have not the slightest idea now that the Hanley boat will be turned out for the coming races. If she is to be turned out, it will be necessary for the syndicate, or the alleged syndicate, to get started as quickly as possible.

As usual, at the opening of the year there come rumors from disgruntled clubs of withdrawal from the Massachusetts Yacht Racing Association. This time it comes from the South Boston Y. C. There was a movement of the same kind started a few years ago, but it was defeated. This time the objectors seem to have organized their forces and will try hard to cause the withdrawal of the club.

It is to be lamented that people who are constantly objecting to the Association, and who are always talking of withdrawing, cannot, or will not, look further ahead than the present moment. The trouble is that these clubs do not take the individual interest in the Association which they should. They do not take the means to present their ideas to the Association in a legislative manner, but sit quietly until rules are made and then use up the balance of the time complaining.

It has been distinctly shown from time to time that an association for the equalization of interclub racing is absolutely necessary. Associations have been broken up before, but new ones have invariably started when the absolute need of them has been shown. There must be such an association for the racing men, if not of clubs, then of individuals. If an association is perfected entirely of individuals, it may well be questioned what

BRIGAND—DESIGNED BY GEO. LAWLEY & SON CORP.
Photograph by Jackson, Marblehead.

interest there will be left in yacht racing in the clubs. The racing men will flock to the association and the clubs will be put in the background.

At its recent annual meeting, the South Boston Y. C. elected the following officers: Com., Simon Goldsmith; Vice-Com., A. S. Dole; Rear-Com., A. L. Whittemore; Sec'y, W. H. French; Treas., Thomas Christian; Meas., F. H. Borden; Trustees for three years, Arthur Fuller and J. C. Merry; Regatta Committee, Charles Nordwell, F. A. Coupal, V. B. Johnson, E. J. McKee and G. W. Lane; House Committee, J. T. Ball, M. J. Lee, Maurice Levengston, D. M. Comar and W. J. O'Brien.

At the annual meeting of the Columbia Y. C. the following officers were elected for the year: Com., J. E. Doherty; Vice-Com., F. E. Grainger; Rear-Com., Hiram Patterson; Meas., J. R. Young; Sec'y, James Perry; Treas., A. E. Justice; Trustees, J. E. Doherty, A. E. Justice and C. J. Rushton.

At the annual meeting of the Revere Y. C. the following officers were elected: Com., A. B. Thompson; Vice-Com., S. E. Lawrence; Sec'y, J. J. Connor; Treas., J. S. Dalzell; Fleet Capt., W. L. Greene; Regatta Committee, W. L. Greene, H. B. Pray, C. H. Vanderslice, Thomas Wynne and T. S. Young; Directors, Dr. J. H. Strong and C. O. Frost.

Kiley's Marine Agency has sold the following yachts: The cruising 26ft. cat Quissett to H. A. Holcomb, of New Bedford, and the 42ft. cabin naphtha launch Fairlie to Edward Bronson, of Pawtucket.

John and Sam Small have started in business as yacht designers, and already have quite a number of orders, among which are a 40ft. cruising yawl for Southern waters, a 21ft. yawl for F. B. Rawson, of Sandusky; a 21ft. auxiliary yawl, a 26.6ft. cruising yawl and a 21ft. knockabout.

Brown, of North Haven, is building a 35-footer for J. Murray Forbes, of Boston; a 21ft. raceabout for C. F. Ames, of Rochester, and a 21ft. raceabout for George and Harry Shattuck, of Boston. All these are from designs by Crowninshield.

The big lead keel for the 85ft. schooner for H. T. Sloane was successfully run at Lawley's Saturday. It weighs 55 tons. Lawley is at work laying down the Canadian cup defender designed by Crowninshield, and expects to have her set up this week.

Graves, of Marblehead, has nearly completed the 16-footer designed by Crowninshield for A. D. Irving.

Howland, at Monument Beach, is building an 18-footer for a member of the Hull-Massachusetts Y. C., and a 39ft. auxiliary yawl for De Ver H. Warner, both of Crowninshield design.

JOHN B. KILLEEN.

The auxiliary schooner Genesee, owned by James Sibley Watson, N. Y. Y. C., is now nearly rigged and the latter part of January will leave port for a foreign cruise. The Mediterranean and Black Sea will be visited. The yacht will be absent nearly a year. Capt. Shelldrake is in command.

Banshee.

THE Yachting World gives the following interesting description of Col. H. L. B. McCalmont's new steam yacht Banshee, which was built last year by Ramage & Ferguson at Leith. She is about 900 tons measurement, and her dimensions are: 229ft. 6in. on the waterline, 29ft. 6in. extreme beam and 18ft. 6in. depth. Banshee will have a sea-going speed of fourteen knots. Col. McCalmont was formerly owner of the steam yacht Giralda, which was sold to the Spanish Government during the recent war between Spain and the United States:

"In appearance the Banshee is altogether different from the usual yacht, being in design similar to a Government cruiser, inasmuch as she is fitted with a round stem, with owner's coat of arms on the fore side, and relieved on each side with an appropriate carved trail. The stern is very handsome, being a perfect elliptic, relieved with rope moulding and finished in handsome carved trail of rose, shamrock and thistle design. The vessel is plated up to a height of about 7ft. 6in. above the main deck stringer for about 100ft. of her length. She also has a raised forecastle deck about 50ft. long, and abaft the plated-up portion a raised quarter deck about 30ft. long.

"The propelling machinery consists of two independent sets of inverted direct-acting surface-condensing engines of the triple-expansion type, capable of developing 1,800 indicated horse-power, and steam is supplied by two steel cylindrical tubular boilers, each 15ft. 6in. in diameter by 11ft. long, constructed to work at a pressure of 180lbs. per square inch, each with a separate funnel.

"Two small pole masts, with a short yard on each, and helm signaling apparatus on the mainmast, as used in Her Majesty's Navy, together with the two funnels, all contribute to make the appearance of the yacht very similar to a Government cruiser. Most comfortable accommodation is provided for a full complement of officers and crew, numbering about fifty-five all told, the crew of thirty hands being berthed forward in a forecastle having over 8ft. of clear height. Beneath these quarters are lavatories for the crew's use, a carpenter's shop, storerooms, etc. A spacious wardroom for the use of the chief officers, together with cabins for commander, chief officer, surgeon, etc., with pantry, bathroom and the necessary offices, are on the main deck in the fore end of the plated-up portion. Over the main boilers is a spacious gallery, with separate cooking ranges for owner's and crew's use, also main pantry, mess rooms for engineers and stewards, etc.

"On the main deck also are two large staterooms for guests, each with separate bath and dressing room. The main gangway entrances, one on each side of the vessel, are abaft the main funnel, and a special feature is a handsome vestibule amidships, opening off the gangway entrances, with ornamental fireplace and cozy corners. A corridor amidships, extending aft from the vestibule, leads to the dining room, which is about 18ft. long, and in width equal to the full breadth of the yacht, being finely fitted in dark brown oak, and with dome skylight over, glazed with stained glass.

"Abaft the dining room is another vestibule, and here on starboard side is the owner's private cabin, while on the opposite side of the vessel is owner's bath and dressing room, etc. Descending, a staircase aft leads to the women's boudoir of most recherché design, superbly fitted in satinwood of matchless quality. From the after vestibule mentioned a staircase leads out on to the quarter deck, while another staircase at fore end leads to the spacious staterooms below, four in number, and a room for women's maids, all fitted in choice hardwoods. On the promenade deck, and arranged between the main funnels, is a drawing room and smoking room, both fitted in satinwood and walnut respectively, each with dome skylight over, glazed with stained glass; also a chart room fitted in teak, and replete with every convenience and requirement for the navigation of the ship.

"The ventilation throughout the vessel is perfect, four large electric fans being fitted in the engine room to exhaust air from all staterooms and officers' rooms below the main deck. The yacht is also fitted with hot-water heating throughout. The Banshee is electrically lighted, the total number of lights being very nearly 300, exclusive of two powerful searchlights. For supplying current she has two generating plants and two batteries of storage cells, each plant being a duplicate of the other. She is also fitted with a fresh-water distiller of double distillation pattern, and evaporator.

"A powerful steam windlass and warping capstan is fitted on the forecastle deck; also steam warping capstan aft, and steam steering gear placed over the rudder head and worked from the bridge by means of controlling wires. The armament comprises four Hotchkiss quick-firing guns, with automatic mountings, and steel shields with attachments for each gun; also twenty-four magazine rifles, twelve army revolvers and twenty-four cutlasses. The Banshee has a bunker capacity of about 250 tons, and carries fully 5,000 gallons of fresh water.

What Modern Sailors Fear.

Not Winds and Seas, but an Explosion Which Sends the Ship to the Bottom.

"BOILER explosions are the terror of the seafaring man," said an old-time deep-water captain, speaking of the frightful disaster at the carbolineum works. "Such a thing is bad enough on dry land, but imagine a catastrophe of that kind at sea! In ninety-nine cases out of a hundred it means the absolute wiping out of the craft itself and every soul on board.

"The average landsman would be greatly shocked in looking over the maritime records to see how many vessels disappear each year and leave absolutely no clue to their fate. They run well up to the hundred mark, and such a mystery is not to be explained away by storms. A Chinese typhoon may swoop down like lightning out of a clear sky and tear a ship to pieces, but some floating wreckage is sure to tell the tale. A boiler explosion, on the contrary, will blow a hole as big as a railroad tunnel right through the center of the hull, and the stricken vessel simply goes down like a shot. There is no time to unfasten a boat from the davits or cut loose a spar.

"In the opinion of seamen, that is the story of at least 90 per cent. of the ships that leave port and are never heard of again. Luckily the modern system of marine boiler inspection is extremely strict and thorough, but it is impossible to absolutely prevent carelessness and fraud, and often enough, no doubt, the fault lies with the engineer.

"There is an old story of a drunken Scotchman who mistook the thermometer for the steam gauge and 'cussed out' the stokers because he couldn't get the pressure above 80. That yarn will hardly hold water, but I've seen cases almost as bad. I am glad to say, however, that during the past ten years there has been a steady diminution of the nuuber of vessels which 'mysteriously disappear.' That is due, beyond all question, to the increased stringency of boiler inspection and the greater strictness of examinations before a science is issued to engineers. Nevertheless there is still considerable room for improvement in both branches."—New Orleans Times-Democrat.

A Seesaw Tale of the Sea.

THE Burgermeister Petersen, in yesterday from Shields, had mighty pleasant weather a-plowing ocean fields until she reached Nantucket Shoals on Monday morning last, when from a sunless sky there came a marvel of a blast. The Petersen's an oil tank, and when she's westward bound she carries water ballast to keep shipshape and sound. Her skipper's no teetotaler, like many a German salt, and the ballast that he carried was partly made of malt. The Petersen had steered a course near polar latitudes, and met old Papa Neptune in the mildest kinds of moods. Down in the lane of liners he was playing ugly pranks that he never thinks of trying on the greasy German tanks. The skipper saw a cloudlet gather near Nantucket Isle and noted that the course it steered might hit him in a while. It turned to a tornado, with his glass he so made out, and now and then dipped in the sea and formed a waterspout. And then it bounded skyward on a weird and circular tear, a perfect whirling dervish of the circumambient air.

In vain the skipper cried "Heave to!" and the mate exclaimed "Avast!" The corkscrew squall it struck the ship and sprung the jiggermast. The skipper clung fast to the rail and railed against the fates; his hair was twisted off his head, as likewise was the mate's. The squall dipped down the funnel and drew the fires out, and grabbed two ventilator hoods and whirled them up the spout; and then it pirouet ed east, its business end aglare with furnace coals and other things and lots of sizzling hair. The skipper and the cabin boy, likewise the oil tank's mates, are cruising now for wigs to hide their squall-denuded pates.—New York Sun.

The 70-footer Rainbow, owned by Cornelius Vanderbilt, arrived at City Island a few days ago, after being partially rebuilt at the Herreshoffs', and has been hauled out at Hawkins' yard.

A Tale of the Sea.

A Fine Yarn Spun by a Small-Boat Sailor.

CAPT. BARNES LAWRENCE, captain of the port, has received extracts from the log book of Peter Johannsen, who, it may be remembered, recently made a successful voyage from Gibraltar to Charlotte Harbor, United States, in an open boat, Lotta, being accompanied only by his son. In going through the straits difficulty was experienced in keeping the boat from swamping, owing to heavy seas. On Aug. 30, at 6:30 P. M., when about thirty miles nor'-nor'-east of the Island of Grand Canary, while busy arranging the sailing gear, Johannsen noticed a strange man suddenly grasp the tiller, and on looking round found four men on board. While changing clothes, which had become wet with the sea water, two of the men became very affectionate to his son, helping him on with his dry clothes, etc., and speaking in a strange language. The third person sat down on the aft thwart in front of Johannsen. He seemed about fifty-five years of age, tall and muscular, with iron-gray hair. He was dressed in a white canvas cap, without peak, and had an iron foot on his left leg and dark worsted trousers, while over his shoulders and chest he wore a Moorish garment. The strangers shouted to people in the distance, but Johannsen could not discern any craft.

The boat being hove to, all laid down for the night, the visitors utilizing the forward end of the boat for sleeping accommodation. On awakening in the morning Johannsen found his friend of the iron foot sitting astride of the bowsprit scanning the horizon. Falling asleep again, the two travelers awoke just after sunrise. On getting up, it was found the mysterious strangers had disappeared as quietly as they came. The weather having moderated, and after a cup of cocoa, sail was made with all speed possible. However, about 5 P. M. on the 31st the strangers made a second appearance. Two of them kept swinging the jib from starboard to port for some fifteen minutes, as if a signal to some one astern. No craft or boat was seen following. At dusk they left. The usual entries as to weather follow in the log, but nothing more eventful happened. On Oct. 18 the Florida coast was sighted, and Pine Island was reached on Oct. 21.

Johannsen and his son suffered no ailments on the voyage except sunburn. On arrival 10 pounds of biscuits, 20 gallons of water and 34 ounces of preserved meat remained of the stores, but the personal effects had suffered much from sea water. The instruments of navigation escaped damage. Thus ends a sea romance exciting enough for the lover of the sensational. Doubtless the men were smugglers, or something akin, who had swum from their craft under cover of the night, and, finding no cargo or valuable booty on the Lotta, eventually returned to their vessel, kept purposely at a safe distance to prevent identification.—Gibraltar Correspondence of the London Telegraph.

Mermaid.

MR. ANSON PHELPS STOKES' cruising sloop Mermaid, designed by Mr. Clinton H. Crane, of Messrs. Tams, Lemoine & Crane, is nearing completion at Woods' yard, City Island. The hull has been given its final coat of black paint, and the interior fittings are nearly finished. The boat will be completed in a few days, when she will proceed south for a cruise in the West Indies. The dimensions of the yacht are: Length over all, 66ft. 4in.; length on the waterline, 44ft.; forward overhang, 10ft. 6in.; after overhang, 11ft. 10in.; extreme beam, 15ft.; least freeboard, 3ft. 5in.; freeboard at the stem, 5ft. 3in.; freeboard at the stern, 3ft. 11in.; draft, without the centerboard, 5ft. 6in.; with the board down, 10ft.; sail area, 2,100 sq. ft.; outside ballast, 12 tons.

The centerboard is below the cabin floor. The mast is stepped well aft, and with the small rig the yacht should be easily handled. She carries a pole mast. The frames are of oak, the planking yellow pine below the waterline, and the topsides are of cedar. The garboards, sheer stakes and desk beams are of oak and the deck white pine. Below deck the fittings are of butternut and the cockpit and deck are of mahogany. Aft, below deck, is the saloon, fitted with sofas, swinging table, sideboard and lockers. Forward, on the starboard side, is a toilet room, and forward again is the owner's stateroom. On the port side is another stateroom, and forward of this is a pantry, storeroom. Then comes the galley. On the starboard side, opposite the galley, is another stateroom, and then comes the forecastle.

The 51-Foot Class.

THE 51ft. class will be strengthened by two new boats next season in addition to Altair, Shark, Syce, Sistae and Hussar II. There will be a new boat for Mr. J. Roger Maxwell, to be designed and built by the Herreshoffs, and another for Mr. Edward Kelly, now building at Huntington's yard, from his own design. Altair and Shark will be strengthened and repaired, while Hussar II. will undergo radical changes, which it is hoped will improve her speed on windward work.

The Kelly boat will be an enlarged Rochelle. She is 75ft. over all, 44ft. on the waterline, about 15ft. beam and her extreme draft is 10ft. 6in. The hull will draw about 20in. Area of the lower working sails is 2,678 sq. ft., and the sail area with working jib and main topsails will be 3,094 sq. ft. There is a low cabin house aft and a good sized cockpit. She will carry a short bowsprit, and will be steered with a tiller. Her spars will be hollow.

Ice Yachting.

THE annual meeting of the South Shrewsbury Ice Boat and Yacht Club was held on Jan. 3, with the following result: Com., Benjamin P. Morris; Vice-Com., Charles P. Irwin; Sec'y, A. W. Cubberley; Treas., J. J. Manolt; Meas., E. E. Taber; Regatta Committee, J. J. Manolt, D. G. Edwards, George A. Lippincott; Board of Trustees, W. A. Zaman, E. E. Taber, E. W. Price, J. J. Manolt and A. W. Cubberley. The club has arranged for a series of races. Mayor Morris, the new Commodore, is an enthusiastic yachtsman, and the go between the North Shrewsbury flyers for the championship is one of the scheduled events.

Ice yachting in New Jersey has begun, and the South Shrewsbury Ice Yacht Club has a score of boats on the ice at Branchport, N. J. The Leroy won the championship for first-class yachts recently. Edwin E. Tabers is her owner. Bert Cubberley's Leota was second, finishing a minute behind the Leroy. W. A. Seaman's Harold was third. The Harold won the championship for fourth-class boats.

Yacht Club Notes.

The Lakewood Yacht Club, of Cleveland, Ohio, was incorporated on Dec. 21, by Messrs. G. O. Campbell, Myron B. Verck, J. H. Burrows, Arthur J. Phelps, S. H. Lucas and L. R. Miller. Capital stock $5,000.

The annual meeting of the Corinthian Yacht Club, of Philadelphia, will be held at the Hotel Bellevue, Broad and Walnut streets, on Saturday, Jan. 12, at 6:30 o'clock. The officers and standing committees of the club will submit their reports for the past year, and an election for the officers and standing committees of the club for the current year will be held. In accordance with Article XII., Section 5, of the by-laws, the trustees have announced the following nominations for the various positions to be filled: Trustees to serve for three years, George H. Frazier, George C. Carson; Commodore, Alexander Van Rensselaer, steam yacht May; Vice-Commodore, Robert J. W. Koons, schooner Priscilla; Rear-Commodore, E. Walter Clark, Jr., sloop Cherokee; Secretary, Addison F. Bancroft; Treasurer, George E. Kirkpatrick; Measurer, Albert C. Wood; Race Committee, Addison F. Bancroft, Harvey J. Mitchell, Kern Dodge; Committee on Admissions, Charles H. Brock, Alexander Van Rensselaer, G. Herbert Millett, Frank H. Rosengarten, Brereton Pratt. The annual subscription club dinner will be given at the Hotel Bellevue, at 7:30 o'clock, upon the adjournment of the annual meeting.

The members of the Morrisania Yacht Club, whose headquarters are at Cassanova, at their annual meeting last week elected the following officers: Commodore, George J. Oakes; Vice-Commodore, George Stelz; Rear-Commodore, Fred Daum; Fleet Captain, Charles Loocke; Financial Secretary, T. F. Dooley; Recording Secretary, Arthur Haire; Treasurer, George Charleton; Measurer, Wade Hixon; Sergeant-at-Arms, John Schroder; Steward, Ernest Kiel. Board of Directors, G. Ollweiler, L. Jackson, W. Hanson, T. Deckert, J. Schmit; Auditor, C. E. Miller, Jr.; House Committee, G. Charleton, G. Stelz, J. Schroder, W. Horlocher, F. Starke; Regatta Committee, J. H. Curtis, W. Hixon, J. W. Steffens, L. Englert, H. Bartro; Mooring Committee, C. Staudenbaur, F. Zumbuehl, C. Hendrichs, F. Kaiser, R. C. Johnson.

The annual meeting of the Horseshoe Harbor Club will be held at the Hotel Manhattan, New York, on Monday evening, Jan. 14, at 8:30 oclock. The following gentlemen have been nominated as officers for the season of 1901: Commodore, E. C. Griffen; Vice-Commodore, E. S. Ballou; Treasurer, Lester H. Riley; Secretary, Harold S. Hayward; Trustee, A. V. Smith. Supper will be served.

YACHTING NEWS NOTES.

"T. Griffin, who was for many years mate with the William O'Neill, on the Irex and the Iverna," says the Yachting World, Dec. 13, "will occupy a similar position on the New America Cup challenger."

The Lighthouse Board announces that on or about Jan. 10 to a fixed white light will be established on the southerly end of the breakwater at the westerly side of the mouth of the Patchogue River, northerly side of the easterly part of Great South Bay, Long Island. Its focal plane will be fifteen feet above mean high water, and the light will be shown from a white shelf on a black post with white top and black ladder.

Henry E. Doremus died on Dec. 27 from typhoid fever. He was thirty-nine years old, and was well known among yachtsmen, being one of the founders of the Indian Harbor Yacht Club in Greenwich, Conn., in 1889, and was its first commodore. Ever since its organization he was a member of the Board of Trustees of the club.

Buchanan Winthrop died suddenly after an operation for appendicitis on Dec. 25. He was a member of the New York Y. C.

Messrs. Tams, Lemoine & Crane have placed an order with Samuel Ayers & Son, Nyack, N. Y., for a houseboat. She is for Mr. Joseph M. MacDonough, of the N. Y. Y. C., former owner of the 46ft. cutter Jessica. The boat will be 100ft. over all, 23ft. beam and will draw 6ft.; her engines will propel her at a speed of eight knots an hour. There will be eight staterooms, and her appointments will be most complete.

Yachtsmen of Greenwich, Stamford and Port Chester are circulating a petition with the view of asking the Government to make a harbor of refuge at Greenwich, by connecting and extending a breakwater from Great and Little Captains Islands.

A contract for a new twin screw steel steam yacht has been placed by Mr. Leonard Lewisohn, of this city, with the Gas Engine and Power Co. and of Charles L. Seabury & Co., Consolidated, of Morris Heights. The vessel will be constructed of steel throughout. The dimensions are: Length over all, 155ft.; length on waterline, 130ft.; beam, 18ft.; depth, 10ft.; draft, 7ft. 6in. The yacht will be flush deck, schooner rigged with pole masts. There will be a deck house forward, constructed of mahogany, which will be used as a dining room, and in the after end a butler's pantry will be arranged. Immediately following the forward deck house and raised above it, will be an officer's bridge, from which the yacht will be steered. There will also be an after deck house. In the forward part of this house will be two large cabinets, arranged for music and a marine library; between these cabinets will be fitted a piano, with electrical attachment. Aft of the owner's quarters will be two double staterooms for guests, with a passage way between them. Each will be fitted with a large berth, with drawers, dressing case, mirrors, hooks, etc. The vessel will have steam steering gear and a steam windlass; it will be steam heated throughout, and arranged with electric call buttons in the different compartments. The guaranteed speed is 18 miles an hour, and the yacht will be ready for delivery on May 1.

A few weeks ago Mr. H. C. Baxter's steam yacht Neckan, while hauled out at Rockland, Maine, for the winter, took fire and before the flames could be extinguished the forward part of the boat was destroyed. Then the after part fell from the ways into the water. That portion of the boat was raised and her boiler and machinery were found to be in fair condition. Mr. Baxter has decided to rebuild, and will do so at once, hoping to have the yacht ready to go into commission about April 15.

At the Jacob yard, City Island, the plans of a new keel yawl for Mr. John Hyslop, the official measurer of the N. Y. Y. C., have been received. The boat is from designs of Mr. Hyslop, and the dimensions are 47ft. 6in. over all, 33ft. 7in. waterline, 10ft. 7in. beam and 6ft. 7in. draft. There will be 13,000 pounds of lead on the keel, and her interior plan and fittings will be similar to the yawl Audax, one of Mr. Hyslop's earlier boats, plans of which have appeared in FOREST AND STREAM.

The steam yacht Enterprise, owned by Mr. Frank B. Perrin, N. Y. Y. C., left Baltimore Jan. 3 for the West Indies, calling at Virginia ports.

Among the well known yachts laid up in the Greenport Basin and Construction Co. are Vigilant, Isolde, Katrina, Atlantic, Free Lance, Altair, Willada, Nirvana and Dilemma; also many smaller ones.

Charles Wilson and George Butler, two of the crew of Mr. A. Schermerhorn's steam yacht Free Lance, were asphyxiated on the night of Dec. 31 by gas escaping from the fire room of the yacht. The yacht was in her winter quarters at Greenpoint, L. I.

The steam yacht Arcturus, owned by Mr. Rutherford Stuyvesant, N. Y. Y. C., left Southampton, England, for the Mediterranean, and her owner was to join her at Marseilles.

Manning's Yacht Agency has sold for Mr. J. Fred Ackerman his sloop yacht Pocahontas to Mr. John C. Sharp, Jr., of Taunton, Mass. The same agency has sold for Mr. W. L. Crow his sloop yacht Ariadne to Mr. F. J. Tuthill.

The Rhode Island Y. C. is to have a one design class of 18-footers; some ten boats have already been contracted for. They will be designed by Mr. Fred. S. Nock, of Providence, R. I., and will be built by the Holmes Shipbuilding Co., of Mystic, Conn.

Designs Recently Published in Forest and Stream.

A. C. A. Membership.

THE following have been proposed for membership to the A. C. A.:

Atlantic Division—John R. Brophy.
Western Division—Charles Catlin, Franklin S. Catlin and W. P. Forbush, all of Chicago, Ill.

100 Sportsmen's Finds.

Some of the Queer Discoveries Made by Those Who Are Looking for Game or Fish.

38.

"About the year 1550," says Mr. Brand (an early writer of a history of Newcastle), "the very marvelous event related by Bourne and others, concerning Mr. Anderson's ring dropping by accident over the bridge as he was fingering it, is said to have happened, and this very identical ring was brought back again some time after in a fish bought at Newcastle Market by a servant of the above gentleman, and most unexpectedly restored to its owner. Bourne tells us that the gentleman from whose finger the ring fell was Mayor of Newcastle. He adds, 'On the inside of the ring, just under the signet, is the picture of a salmon, in commemoration of the fish and the transaction; on the one side is the letter F, and on the other the letter A, in commemoration of the person; calling it at the same time a curiosity so great that not only the whole kingdom cannot show the like of it, but the whole world beside.' 'This ring,' says Brand 'is at present (A. D. 1783) in the possession of Mr. Edward Anderson, merchant.'"

39.

Some of the reminiscences of the old settlers of Mil-

waukee are very curious, to say the least. One of these has recently come to light. A veteran states that he was informed by Otis Hubbard, long since dead, who was one of the very oldest residents of Milwaukee, that in 1836 a gentleman came from the East to take up his residence here who subsequently became honorably prominent as the president of a bank and of the Milwaukee Gas Light Company. He debarked in the bay, as there was no pier in those days, and the river could not be entered. He was placed in the yawl of the steamer, and while passing to the shore he accidentally dropped his spectacles into the water, and the aforesaid Hubbard avers that in the course of the next spring a sturgeon was caught near the north point and across the nose of that sturgeon was found the identical pair of spectacles. Such a story as this ought to be supported by a large number of affidavits.—Milwaukee Evening Wisconsin.

Rifle Range and Gallery.

Columbia Pistol and Rifle Club.

SAN FRANCISCO, Dec. 31.—Columbia Pistol and Rifle Club elected the following officers for the year 1901: President, George Mannel; Vice-President, A. H. Pape; Corresponding and Recording Secretary, Fred O. Young; Financial Secretary, C. M. Daiss; Treasurer, A. J. Brannigan; Range Masters, Geo. W. Hoadley and A. B. Dorrell; Trustees, G. M. Barley, F. S. Washburn and E. A. Allen.

Programme adopted is divided into: Class medals, open to members only, 10-shot scores, 10 cents each, entries unlimited; each member can win a medal or bar with pistol and one with rifle and a Columbia head piece, to which the bars are to be attached. Each member is classified—an expert, a sharpshooter, or marksman—and each class has a gold, silver and bronze bar or medal, one of which he can win on his best 10 scores made during the year; he must take the bar in the class above him if his average reaches it. Rifle, average to win: Experts—Gold, 42; silver, 50; bronze, 55. Sharpshooters—Gold, 60; silver, 70; bronze, 75. Marksmen—Gold, 80; silver, 90; bronze, 95. Pistol, average to win: Experts—Gold, 35; silver, 40; bronze, 45. Sharpshooters—Gold, 50; silver, 55; bronze, 60. Marksmen—Gold, 65; silver, 70; bronze, 75. Point off one place in the above figures for the ring average in inches; annex a cipher for the number of points, Columbia target, which is used in all matches.

All comers' re-entry matches, 25 cents; best 10 scores to win. Rifle, 3-shot match; pistol, 3-shot match; military and repeating rifle, 10-shot match; .22 and .25cal., 10-shot match at 50yds. Revolver, 10-shot match. In these matches 8 cents per score goes back to flags (1's) each month equally, rifle and military in common, first three shots to count for flags, and 8 cents per score is divided into 50, 30 and 20 per cent. prizes in each match at end of the year. The revolver and pistol on same plan. The .22 and .25 rifles count flags and prizes same, but it is a distinct match. Many prizes have already been donated to these matches, and we expect many more from our friends, to whom credit will be given. Any donor can place his prize if he desires, since he may prefer some weapon's advancement.

The winners of the Peters ammunition for the last six months were: G. Mannel won the powder (from which experts were barred) three months, P. A. Becker one, Daiss one, and Dr. Trask one. Their .22 cartridges were won in the pistol match by Young five months, Becker three, Hoadley two, Daiss one and Mrs. Mannel one. .22 and .25 rifle, won by Capt. Kuhnle six months, Dr. Twist four, Becker one, Mrs. Waltham one. This club extends its thanks to its donors, and the press, and wishes its friends and enemies a happy New Year.

Practice shooting was indulged in Dec. 23. F. O. Young beat his record with revolver (S. & W., which he has had recut), using King's powder, placing 48 out of 50 shots in the 8 (inch) ring, and no cleaning or blowing into the revolver, the ammunition being crimped for service use. Scores, practice match:

Revolver, 50yds.:

										Rings.	Creedmoor.
F O Young.....	3	4	4	2	7	7	3	3	8	5—46	50
	4	3	10	1	6	5	4	4	2	7—46	49
	2	4	2	3	7	7	4	3	7	3—42	50
	3	6	6	4	5	4	2	5	12	4—51	49
	2	3	2	8	3	8	5	4	5	8—48	50
										233	248
P A Becker	4	4	7	2	6	6	7	4	6	8—48	50
J R Trégo.....	2	3	4	4	9	4	5	6	12	13—62	47
F W Page.....	6	6	2	5	13	14	14	11	4	5—80	46
Dr Twist (pistol)...	3	3	3	12	3	5	3	3	8	2—45	

This was Mr. Page's first attempt at the target with revolver. He had a new Colt's service. Trego had a new .44 S. & W.

Dec. 30 found many pistol cranks at the range. Mr. Trego brought Mr. C. W. Seaward and Mr. Paul, of the Mergenthaler Linotype Co., Brooklyn, N. Y. Dorrell did some fine work with his new .22 center fire, using regular factory 45gr. Winchester bullet. I have received questions about this combination, and will describe it, as it does fine work at 200yds. He made a group that counted 36 at 200yds, first trial off-hand. The rifle is a .22 single shot, 16in. twist, Winchester. We chambered it for the center fire 10gr. shell, which is filled to within ¼in. of the top. The bullet is seated about 1in. ahead of shell. L. & R. powder is used.

Practice match: A. B. Dorrell, .22 rifle, 15; F. O. Young, .22 rifle, 17, 23; F. O. Young, revolver, 46, 51; P. A. Becker, revolver, 49, 59; C. W. Seaward, revolver, 56; *F. O. Young, pistol, 52, 49, 45, 43, 49, 38, 47, 45; Dr. J. F. Twist, pistol, 47, 51; F. S. Washburn, 50; G. W. Hoadley, 50, 61, 63.

*Peters .22 short cartridges.

F. O. YOUNG.

Cincinnati Rifle Association.

CINCINNATI, O.—The following scores were made in regular competition by members of the Cincinnati Rifle Association at Four-Mile House, Reading road, Dec. 23. Conditions, 200yds., off-hand, at the standard target. Gindele was declared champion for the day with a score of 92. A very strong wind from 3 to 6 o'clock blew all day, much to the discomfiture of those engaged:

Gindele	9	8	9	10	10	9	9	9	10	9—92

Rifle at San Francisco.

SAN FRANCISCO, Cal., Dec. 27.—The various rifle clubs hereabouts are now closing up their annual shoots. The Golden Gate Club wound up their medal contests last Sunday with a banquet. Among their guests were many prominent riflemen. The coveted prize of the year was won by D. W. McLaughlin. It is a trophy of $100 in value, presented by F. H. Bushnell for the best 10-shot scores of the year, eight scores per month allowed. Mr. McLaughlin made the fine total in his 100 shots of 2313 rings, 25-ring target. Mr. Mason was second with 2303. Mr. Gorman won first prizes with both pistol and revolver. Next year will be a great one among marksmen here, on account of the festival in July of the National Schuetzen Bund. ROEEL.

Trapshooting.

Notice.

All communications intended for FOREST AND STREAM should always be addressed to the Forest and Stream Publishing Co., and not to any individual connected with the paper.

Leading dealers in sportsmen's supplies have advertised in our columns continuously for a quarter-century.

If you want your shoot to be announced here send a notice like the following:

Fixtures.

Jan. 12-13.—Aurora, Ill.—Bennett's target tournament.

Jan. 15-18.—Hamilton, Ont.—Hamilton Gun Club's eleventh annual tournament; live birds and targets; open to all. H. Graham, Sec'y.

Jan. 16.—Trenton, N. J.—Second contest of the series between teams of the Trenton Shooting Association and Freehold Gun Club, on the grounds of the former.

Jan. 17.—Baltimore, Md.—Ten-men team contest—Baltimore Shooting Association vs. Keystone Shooting League.

Feb. 6-7.—Cincinnati.—Cincinnati Gun Club's sparrow tournament. Chas. F. Dreihs, Sec'y.

Feb. 18-23.—Hot Springs, Ark.—Tournament of the Hot Springs Gun Club; four days targets, two days live pigeons; $1,000 added. C. E. De Long, Sec'y.

Feb. 22.—Harrisburg, Pa.—Washington's Birthday live bird and target shoot of the Harrisburg Shooting Association.

Feb. 22.—Albany, N. Y.—Annual midwinter target tournament the Forester Gun Club. H. H. Valentine, Mgr.

April 9-12.—Baltimore, Md.—Eighth annual spring tournament of the Baltimore Shooting Association; two days targets, $100 per day added; two days live birds, $500 guaranteed. H. P. Collins, Sec'y.

April 16-18.—Leavenworth, Kan.—Annual tournament of the Kansas State Sportsmen's Association.

May 7-10.—Tournament of the New Jersey State Sportsmen's Association. C. W. Feigenspan, Sec'y.

May 7-10.—Lincoln, Neb.—Twenty-fifth annual tournament of the Nebraska State Sportsmen's Association, under the auspices of the Lincoln Gun Club. W. D. Bain, Sec'y.

May 21-25.—Chicago, Ill.—Twenty-seventh annual tournament and convention of the Illinois State Sportsmen's Association. Chas. T. Stickle, Sec'y.

June 5-7.—Circleville, O.—Under auspices of the Pickaway Rod and Gun Club, annual tournament of the Ohio Trapshooters' League. G. R. Haswell, Sec'y.

June —.—Columbus, Wis.—Tournament of the Trapshooters' League of Wisconsin. First week in June.

Newark, N. J.—South Side Gun Club target shoot every Saturday afternoon.

Chicago, Ill.—Garfield Gun Club's live-bird trophy shoots, first and third Saturdays of each month. Grounds, West Monroe street and Fifty-second avenue.

CONTESTS AT INTERSTATE PARK.

April 1-5.—Interstate Park, Queens, L. I.—The Interstate Association's ninth annual Grand American Handicap Tournament at Live Birds.

June —.—Interstate Park, Queens, L. I.—Forty-third annual tournament of the New York State Association for the Protection of Fish and Game.

Monthly contest for the Dewar trophy till June, 1902; handicap; 25 live birds; $5 entrance. First contest took place June 20, 1900.

Interstate Park, Queens, L. I.—Fountain Gun Club's regular monthly shoots, the third Thursday of October, November and December.

Interstate Park, Queens, L. I.—Two miles beyond Jamaica, on L. I. R. R. Trains direct to grounds. Completely appointed shooting grounds always ready for matches, club shoots or private practice. Café and hotel accommodations.

Interstate Park, Queens, L. I.—Weekly shoot of the New Utrecht Gun Club—Saturdays.

DRIVERS AND TWISTERS.

Club secretaries are invited to send their scores for publication in these columns, also any news notes they may care to have printed. Ties on all events are considered as divided unless otherwise reported. Mail all such matter to Forest and Stream Publishing Company, 346 Broadway, New York.

At the twenty-seventh annual meeting of the Riverton Gun Club, held on Jan. 5, officers were elected as follows: President, J. Hazeltine Carstairs; Vice-President, H. Yale Dolan; Secretary and Treasurer, R. F. Harned; Board of Directors, George A. Shoemaker, William R. Ellison, Carlton M. Moody, Jacob T. Alburger, S. B. Stenson. Forty members were present. The growth of the club has been continuous financially since its beginning in 1873, when it was a small rifle club, with leased grounds. At present it has twenty-eight acres, two shooting boxes, a club house and roomy pigeon lofts. About 40,000 birds were shot during the year, which were dressed and shipped to the Boston and New York markets.

A neat handbook, issued by the Chicago Gun Club, contains articles of incorporation, the club's constitution and by-laws, and shows the list of officers for 1901 to be as follows: President, Dr. C. E. Morton; Vice-President, J. L. Jones; Secretary-Treasurer, Dr. C. W. Carson; Directors, Chas. Antoine and W. H. Cornwell. Article XX. reads as follows: "To encourage ladies to shoot, the club will trap targets for them free of charge." As to the target shooting, Article XXI. provides: "Target shooting to begin the first Saturday in April and to continue every Saturday until the last Saturday in October, inclusive."

The Oriental Powder Mills, Portland, Me., have issued a booklet, which is artistic and instructive. The full-page illustrations, showing different buildings and scenes of the company's property, are remarkable for the interesting features which they present, and their technical excellence. There are ten of them all told. The booklet also gives a list of the company's branch offices and agencies, a description of the properties of the powders which it manufactures, with illustrations of the sizes of grain, etc.

Under date of Dec. 28 Mr. C. C. De Long, secretary of the Hot Springs, Ark., Gun Club, writes us as follows: "Please announce in the columns of FOREST AND STREAM that the fourth annual national tournament of the Hot Springs Gun Club will be held at Hot Springs, Ark., Feb. 18 to 23. There will be four days at targets and two days at live pigeons, and $1,000 added money. Address all communications to R. E. Price, manager."

The next shoot of the Hudson Gun Club will take place on Jan. 19. All shooters are welcome.

At Manayunk, Pa., on Jan. 5, the Gladwyne defeated the Roxboro shooters, in a ten-men team contest, by 27 targets. Each man shot at 25 targets, known angles. The scores were: Gladwyne—Haley 23, Cascaden 23, T. Barker 21, Booth 20, J. Barker 20, Fryer 18, Corman 17, Chadwick 16, Pyott 16, W. Barker 13; total 187. Roxboro—Wilde 20, Kinder 20, Hayes 18, Wein 18, Ruth 16, Burns 16, Murphy 16, C. Jones 12, Willard 12, Light Kep 12; total 160.

A new gun club has been formed on Stated Island. Its title is the Richmond Gun Club, and its membership is composed of the best shots of Richmond county. The officers are: President, George Bechtel; Secretary and Treasurer, Fred W. Schoverling. In a match at 35 birds recently the scores were: A. A. Schoverling 23, F. Schoverling 25, G. Bechtel 19, F. Pommer 16, John Schoen 12, Dr. Albrecht 11.

At Gloucester City, Pa., on Jan. 3, Mr. James McQuaid, of that city, defeated Samuel Wimley, of Camden, in a match at 25 live birds, on the grounds of the Wimley Gun Club. We are informed that the purse was $100. The conditions were Rhode Island rules, 21yds. rise, 30yds. boundary, 25 birds each. The scores were McQuaid 25, Wimley 19.

Mr. John S. Wright, the manager of the Brooklyn Gun Club, is now making preparations for a ten-men team shoot, 25 live birds per man, between shooters of New York and New Jersey, to take place some time during the latter part of this month, probably the 29th inst. He has begun correspondence with some of the leading shooters at interest with a view to further the purpose mentioned.

Recently, at Holyoke, Mass., we are informed by the club's secretary, a gun club was organized with a membership of twenty-five. Officers for the ensuing year were elected as follows: President, M. H. Whitcomb; Secretary, J. R. Blamey; Treasurer, George Crosby.

Mr. Joe Bourke, brother of Mr. E Bourke, of the Oceanic Rod and Gun Club, leaves on Thursday of this week for a two years' sojourn in the gold fields of Alaska. He has some excellent prospects in that frigid land of wealth, the result of his efforts in his prior trip.

In the final contest for the Elliott diamond medals at Kansas City, Dec. 26, Chris Gottlieb killed 25 straight and won. They represented the championship at both live birds and targets. Roy Overly won the target championship with a score of 46 out of 50.

At a meeting of the Cartaret Gun Club, held in the latter part of last month, a resolution was passed to take effect on Jan. 15, in substance, that any member of that club who shoots on grounds where professionals shoot, shall be asked for his resignation.

On Jan. 5, at Philadelphia, the Wayne Gun Club defeated the Highland Shooting Association in the final contest of a series of three, ten men on a side, 25 targets per man, magautrap, by a score of 165 to 143.

In the match for the Dupont trophy at Interstate Park on Tuesday of this week between Messrs. J. A. R. Elliott, challenger, and R. A. Welch, 100 live birds each, the former won by a score of 97 to 88.

The fourth shoot of the second series of the Interstate Park Handicap will take place on Wednesday of this week, on the arrival of the 12:20 train from New York.

Thursday of this week is set for the trial of Mr. George S. McAlpin for his assault on Capt. A. W. Money, the particulars of which were given in our last issue.

The match at 100 live birds, $100 a side, between Messrs. L. T. Duryea and J. A. R. Elliott, at Interstate Park, Jan. 5, was won by the former, by a score of 94 to 87.

Shooting has sprung into pleasing activity about Philadelphia since the winter months set in, and the signs indicate that it is on for a permanent stay.

Mr. H. H. Valentine, of Albany, N. Y., writes us that the annual midwinter target tournament of the Forester Gun Club will be held on Feb. 22.

At Ashland, Pa., on Jan. 1, Mr. Wm. Long, of Locustdale, defeated Mr. Samuel Boyer in a pigeon shoot at 15 birds, by a score of 9 to 8.

BERNARD WATERS.

Elliott vs. Welch for Dupont Trophy.

INTERSTATE PARK, Jan. 8.—A large crowd of notables was present to witness the great match for the Dupont trophy between Mr. J. A. R. Elliott, the challenger, and Mr. R. A. Welch, the holder, both men having been in the public eye for some time of late as experts of rare deeds with the scatter gun. The conditions were 100 birds each at 30yds. rise. The birds came from Carteret, and were not noticeably superior. They averaged fairly good as a whole, with an occasional corker and an occasional easy bird. It is true that against such performers it was difficult for an average good bird to get hard. The match began at 1:24 and ended at 2:33, thus consuming one hour and nine minutes. Had not Elliott's gun broke down in the 54th round, it would have been finished in some minutes less.

Mr. H. P. Collins, of Baltimore, acted efficiently in the capacity of referee.

Elliott maintained his time more uniformly from start to finish, and was centering his birds as a whole better than Welch, though the latter was shooting well, excepting for a certain slowness with his second on the fastest birds which were not cut down with his first. Elliott's two birds, his 12th and 35th, were hard hit. As to the draw of the birds, hard, easy and average, the luck was about even.

Welch started with a miss, but ended well with 23 in the first 25, 1 behind Elliott. At the 50th round Elliott had gained another bird, with a score of 48, and from that on to the finish he steadily drew away. The light was clear and good, the weather cool and no wind—an ideal day for good scores.

Interstate Park Handicap.

Interstate Park, L. I., Jan. 2.—The shoot-off of the first series brought out four contestants, all 30yd. men. Of these, "Daniels" and Fanning tied on 24. The third shoot of the second series brought out a strong lot of shooters, and their competition was remarkably close, two killing straight, with two more in the 24 place. The scores:

Daniels, 30	22222211121212222201121122—24
H Money, 30	2221212221102122121220W

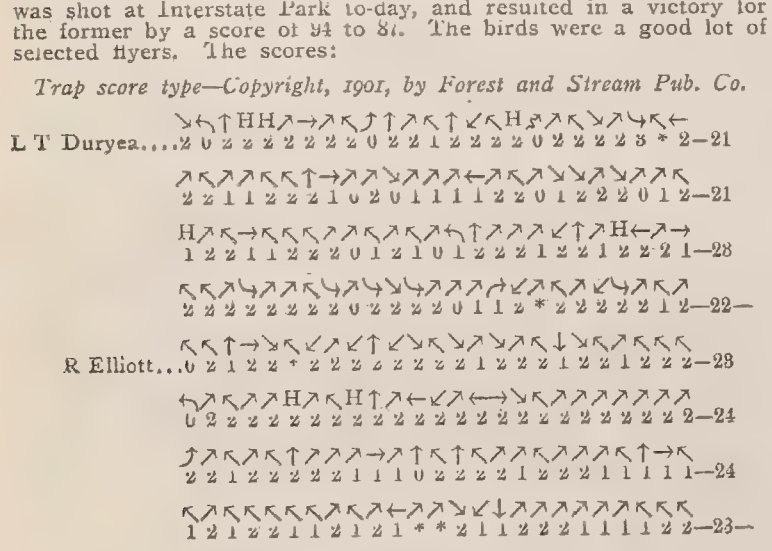
Elliott vs. Duryea.

Interstate Park, L. I., Jan. 5.—The match between Messrs. J. A. R. Elliott and L. T. Duryea, 100 live birds each, $100 a side, was shot at Interstate Park to-day, and resulted in a victory for the former by a score of 94 to 87. The birds were a good lot of selected flyers. The scores:

Trap score type—Copyright, 1901, by Forest and Stream Pub. Co.



New Utrecht Gun Club.

Interstate Park, L. I., Jan. 5.—The New Utrecht Gun Club held its club shoot to-day, the conditions being 20 birds, handicap distance, and extra bird allowance in the way of misses as no birds or kills. Of the sixteen contestants, two scored the limit, Annie Oakley with an allowance of 3 misses, and T. W. Morley, scratch. The scores follow:

Lincoln, 3 misses, 28yds.	11221202222022222222—18

Oceanic Rod and Gun Club.

Rockaway Park, L. I., Jan. 7.—The weather was better than one could expect. Although the contingent of shooters was small, it did not interfere with the guests who came to the beach to greet Joe Bourke and Mrs. Kunda and wish them a farewell on their departure for the Alaskan gold fields. They leave on Thursday of this week for another two years:

WESTERN TRAPS.

CHICAGO, Ill., Jan. 5.—The Chicago Gun Club is engaged in its regular club shoot this afternoon, and it is having good stiff winter weather, to give interest to the occasion. Since the field shooting has now come quite to an end in this vicinity, it is thought that the club shoots will be better attended from now on.

The Garden City Gun Club, of Chicago, holds its annual meeting to-night at the Sherman House, due report of which will follow.

The five-bird shoots of Garfield Gun Club, reduced to the trophy basis, continue to be spirited five-bird sweeps, and help to shake things up in these dull days.

Universal Gun Club, of Chicago, has its grounds at Archer avenue and Forty-sixth street, and proposes a series of interesting club shoots for this winter.

There will be a meeting of the Illinois State Sportsmen's Association at the Sherman House this evening, and plans will be taken up for the coming tournament next spring.

Geo. Roll has been hitting a pretty good gait of late, and his record at Watson's midwinter tournament and in the sweeps following since that time would seem to indicate that he would be a hard proposition in a 100-bird race right now. In his last four contests he killed 59 out of 60 birds shot at, which is big shooting for this time of year at Watson's.

On New Year's Day, at Springfield, Ill., J. T. Hall, of Loami, won from Guy Burnside the challenge trophy cup of the Illinois Gun Club, killing 25 birds straight to Burnside's 23. Hall won best average in Class A of the Springfield Gun Club, highest scores in five shoots. Richardson won in Class B, and Charles Shuck, Jr., in Class C.

Accident to Mrs. Shaw.

Jan. 6.—What might have been a very serious accident, but which under the circumstances may be called a lucky accident, since its results are so much better than might have been expected, occurred yesterday afternoon to Mrs. Shaw, wife of Dr. Siremba Shaw, in course of the contests at Garfield Club grounds. Mrs. Shaw was on the point of firing at her fourth bird in a sweep, but when the gun was discharged it burst, the metal tearing apart between her left hand and her face, and the rib blowing entirely free from the gun and falling at a distance of several yards from the score. How she escaped a terrible injury is one of those mysteries which so often show when a gun bursts in a shooter's hands without any bad injury to the shooter. No solution is offered at this time for the problem of the accident. It just happened. There is the customary talk of an overload, and of a defect in the metal of the barrel, but the real cause is not known, and indeed it seems to deserve a secondary place, in view of the fortunate escape of one of our most popular lady shooters. Mrs. Shaw is a well-known character at the traps here and elsewhere, and has shot in several of the large out-of-town tournaments with some success, as well as having attained skill in field shooting. She was naturally much frightened by the accident, but will hardly give up the sport of the gun on this account.

State Sportsmen's Directory Meet.

The directory meeting of the Illinois State Sportsmen's Association at the Great Northern Hotel yesterday was largely of routine nature, but the interest evinced augurs well for the success of the meet next May in Springfield. President Jas. R. B. Van Cleave and Secretary Chas. T. Stickles came up to the meet from Springfield, and President Van Cleave presided. He says that his city will make this a red hot tournament. Capt. Smith, of Springfield, also came, and from Chicago the official delegation included Col. Felton, E. S. Rice, C. P. Richards, Oswald Von Lengerke, Dow B. Lewis and Tom Hicks. Harvey Sconce was there from Sidell, and Mr. P. Connors from Peoria. The interest in the yearly shoot is going to be widespread over the central and lower portions of the State, as well as Chicago. A committee of promotion and publicity was appointed, composed of Messrs. Felton, Hicks, Bingham, Amberg, Lewis, Loveday and Leffingwell, all good men and true, who shoot with the best Chicago clubs.

The date chosen for the shoot is the third week of May, or May 21-25, and the programmes will be out in ample time for everybody to read and refer to his private executive committee. It will be a full and attractive programme, including the capital contest for the old Board of Trade badge, for the Dupont trophy and for the more recent prize known as the Governor's cup, at 25 live birds, open to lady shooters from any State. The donors of the L. C. Smith cup, indicative of the target championship, are to be asked to modify the governing conditions. The Rose system of division will be used in one day's shooting.

The present Game Commissioner, H. W. Loveday, was indorsed for the Association's candidate for the oncoming term of office. Significant action was taken in a resolution for a $1 gun license for all shooters, for the creation of a game protecting fund, and in one coming out for the abolition of spring shooting all over the State. The latter is a consummation devoutly to be wished. It has long been held an impossibility to pass such a measure in Illinois, but times have been changing very rapidly in Western protective matters.

On review, this bids fair to be an interesting year in the history of the parent organization of Illinois shooting interests, and there is reason to believe that the annual tournament will be a good and modern one, up to date in all particulars. There will be a large number of clubs enrolled before next May.

Chicago Gun Club.

The unlucky number of thirteen took part in the regular club shoot of the Chicago Gun Club at Watson's yesterday, but this did not serve to prevent anybody from having a good time, and it did not keep W. D. Stannard from winning the trophy from scratch with 15 straight kills on good, hard ones. Lem Willard was second with the wind up, and Drs. Carson and Miller divided third. Rose system governed in the money. A light wind blew from the score to the right.

Garden City Annual Meet.

The regular annual meeting of the Garden City Gun Club, of Chicago, was held last evening at the Sherman House, and the customary routine business was transacted. The following officers were elected for the ensuing year: President, J. H. Amberg; Secretary-Treasurer, Henry Levi; Directors, Jos. B. Barto, W. B. Leffingwell, C. C. Hess, F. H. Lord and J. M. Gillespie.

It was decided to hold twelve contests during the coming year, the date to be the second Saturday of each month. Watson's Park will be the meeting place. There will be two medals—one for high average on the season's series, one for the man with the best seven scores under the handicap. The handicap committee will be J. H. Amberg, F. H. Lord and John Watson. Garden City Club is in good shape, and it holds some of the best men and best shooters of Chicago.

E. HOUGH.

Garfield Gun Club.

Chicago, Jan. 5.—The appended scores were made on our grounds to-day, on the occasion of the seventh trophy shoot of the season. Dorman carried off the honors of the day, being the only one to go straight in the main event. The birds were a fairly good lot, making excellent time when once started, but were a little slow about taking wing. An unpleasant accident, which narrowly escaped being a serious one, occurred when Mrs. Dr. Shaw went to the score to shoot her fourth bird. Her gun, a high grade ejector, exploded, throwing the whole rib fully 20yds. away, and tearing a great hole in the side of the right barrel, but very fortunately she escaped injury entirely:

RAVELRIGG.

Keystone Shooting League.

HOLMESBURG JUNCTION, Pa., Jan. 1.—There was a strong attendance of shooters at the New Year's contests of the Keystone Shooting League to-day, among the lot being several new comers. Shooting continued till darkness interposed. The main event was the New Year's Handicap at 20 birds, handicaps 28 to 30yds., 50yds. boundary, $10 entrance, three moneys, Rose system. Van Loon and Hobbs killed straight. Mr. Pach withdrew in the 10th round, with a clean score. He did not have a recoil pad and could not stand the punishment of his gun. The score:

Vandegrift, 30	11220211121111011221—18
McCoy, 30	*222*2222221222222222—18

Landis, 30	2*1222202111112*1011—16

Hobbs, 30 .....2222222222222222222—20
Felix, 29 .....1122120222022202222—17
Foster, 28 .....1202110210122101111 2—16
W T Smith, 28 .....0100112 22*12221101*2—14

Jan. 5.—In the championship match to-day Messrs. H. M. Van Loon, J. R. Painter, H. Henry and J. W. Budd were the best performers in the events of the Keystone Shooting League at Holmesburg Junction. The two former killed their 10 birds straight. The championship match was at 10 birds, 30yds. rise, 50yds. boundary, $2.50 sweepstake. The scores:

Vandegrift	2120112022— 8	Fitzgerald	101010w
Budd	2122220122— 9	Miller	*101*21020— 5
Hobbs	02*2222122— 8	Hauff	2120202212— 8
McCoy	*220222022— 7	Ross	222222020?— 8
Painter	2212121121—10	Prickett	10*2020221— 6
Henry	1111211110— 9	Albury	1122222022— 9
Van Loon	1122212222—10	Geikler	2222022222— 9
Brewer	00112221*2— 7		

Tie shoot, 3 birds:
Van Loon .....12 Painter 0*2

Club Handicap, 10 birds, handicap rise, sweepstake, entrance $2.50. Messrs. J. W. Budd and H. Henry made straight scores, with a number of other shooters huddled close up:

Budd, 30	2212222212—10	Painter, 28	2222220112— 9
Vandegrift, 30	2212202121— 9	Miller, 28	2200001122— 6

Brewer, 30	1112212202— 9	Van Loon, 30	2112121012— 9

The Carteret Gun Club's New Ruling.

THE recent ruling of the board of governors of the Carteret Gun Club, which, on its face, bears evidence that it was intended solely for the government of its own members, has evoked a great deal of discussion in the daily press and among many individual shooters, particularly among those of New York and vicinity, on the assumption by them that it was an attempt to define what constitutes professionalism as it relates to shooting interests at large. As the Carteret Gun Club has never, so far as we know, made any attempt to legislate for shooters at large, and, moreover, as it is not a philanthropic institution, it is a much more reasonable assumption that the ruling was promulgated solely in the furtherance of its own interests.

The view of some shooters, namely, that the ruling was illegal even as a club measure, inasmuch as, the club being a coporate body, such ruling would arbitrarily deprive members of their property rights, is untenable in view of a clause in Article IV. of the club's constitution, as follows: "Any member acting contrary to the provisions of the constitution and by-laws, or in violation of the rules of the Association, or in any way which may tend to the destruction or injury of its property, or contrary to or neglecting his duty as an officer or member of the Association, or whose conduct in or out of the Association shall, in the opinion of the governors, be considered unbecoming a gentleman, or in any way calculated to injure the character or interests of the Association, may be expelled; and shall thereupon forfeit to the Association all property, claims and benefits, to which he would have been entitled as a member."

It will be noted that the constitution of the club provides that the board of governors may take cognizance of the doings of a member in his capacity as such, and also may take cognizance of the doings of a member in his personal capacity, whenever they adversely affect the club's interests—that is to say, "Any member * * * whose conduct in or out of the Association shall, in the opinion of the board of governors, be considered unbecoming a gentleman," etc.

As to the powers of the board of governors, they are defined in Article III., as follows: "The governors shall have entire charge of the affairs of the club, and shall fill any vacancy occurring in their number, for the unexpired term of the governor whose place is to be filled." It is thus self-evident that the board did not exceed the powers vested in it when it made the ruling under consideration, which, in substance, is that any member of the club competing against a professional or on grounds where professionals compete would be asked for his resignation. According to the opinion of the board of governors, a professional is one who is employed by any gun or shell making industry or sporting goods concern, or one who has ever accepted a gun or shells from any manufacturer or dealer.

This, while weak and lame as a definition of a professional, is forceful as a protective measure. In matters of finance, no one ever accused the Carteret Gun Club of inefficiency.

It is to the club's financial interests that the club members shoot as much as possible on the club's own grounds. From them the club derives its revenue. It makes a profit on the pigeons which are shot, and it has a rake-off of 10 per cent. on all matches and sweepstakes. As the shooting entrance fees are high—from the point of view, at least of the average shooter—the 10 per cent. rake-off is of itself a liberal source of revenue.

But some of the club's greatest shooters, both in respect to skill and the amount of shooting done, have been shooting a good bit on other grounds during some months past, notably Messrs. R. A. Welch, L. T. Duryea, D. I. Bradley, Capt. A. W. Money and his son, Mr. Harold Money—sportsmen who, besides shooting on grounds other than those of the Carteret Gun Club, have been winning the lion's share of the prizes at the Carteret Gun Club's shoots.

However, the ruling, from any point of view other than financial, is an unreasonable restriction, since it practically closes the door to the club members, so far as the greatest shooting events of the country are concerned. The ruling bars them from the Grand American Handicap and other similar grand national open events where honors are to be gained by the shooter who is ambitious to achieve national fame by meeting the best shooters which the land can produce.

There is but one event fostered by the Carteret Gun Club which assumes to confer honors broader than the borders of the club grounds, namely, the amateur championship, which, though not so indicated by its title, is a limited championship, the competition in it being confined to the members of a certain few clubs. It therefore is a championship of those clubs, and nothing more.

The Sun of Jan. 6 says:

"By persons outside of the charmed circle of trapshooters the new rule is looked upon as a travesty, and it is thought that if the Carteret Club is really desirous of establishing an amateur standard its first move should be to insist on the first principle of amateurism and eliminate money prizes from its club competitions. James E. Sullivan, secretary of the Amateur Athletic Union, said:

"'The definition is the most ridiculous that I have ever read. In view of the fact that the members of the Carteret Gun Club are allowed to shoot for money, it looks to me as if they were "straining at a gnat and swallowing a camel." in drawing such a fine distinction. This is especially noticeable in the clauses which are intended to debar men who receive a present from manufacturers, and put a wholesale embargo on those employed by sporting goods concerns. The root of the matter is the competition for money. There are many men alleged to be amateurs who win more money prizes than their actual expenses during the year, and thus derive an income from their proficiency with the gun. This could be obviated by the shooting clubs coming out as a body and insisting that amateurs should be those who compete only for trophies. This, I know, is a revolution that would not be appreciated by many of the trapshooters, but it would clearly show the difference between those who indulge in the sport for gain and those who compete for glory alone.

"'The argument has been put forward that trapshooters are subject to great expense in the matter of shells, and would, therefore, be actually out of pocket by their competitions unless reimbursed by money prizes. This is true of many sports—yachting, for instance, which is a much more expensive pastime than shooting. Yet yachtsmen are content to foot the bills for the sake of the trophies that reward their successful efforts. The question of the cost of shells could easily be provided for, however, as a percentage of the entrance money could be set aside to pay for the shells without violating any amateur principle. It is a good thing that the matter has come up, as it may lead to a satisfactory settlement of the amateur question by trapshooters.'"

The trapshooting world of America is without any authoritative ruling as to what constitutes a professional. Although it has long since needed a central governing body, and FOREST AND STREAM many years ago called attention to the need, it has gone on without it. As a result, professionals and amateurs have shot together, with very little heed of what was professional or what was amateur. Their purpose seemed to be alike—that is, to win money. There are few shooters, indeed, of any note who have not at some time or other shot for money in open tournaments, or shot with professionals, or accepted some ammunition or guns, or shot where gate money was charged, etc.

However, in respect to shooters at large, it is not at all likely, in view of what may have evoked the ruling in question, that it will impinge much one way or the other in drawing the line on professionalism.

IN NEW JERSEY.

Hudson Gun Club

Jersey City, N. J., Dec. 31.—The target shoot of the Hudson Gun Club, held to-day, resulted as follows:

Events:	1	2	3	4	5	6	7	8	9
Targets:	15	15	15	15	25	15	15	25	10
L H Shorty	13	11	14	12	18	11	13	23	10

A. A. SCHOVERLING, Ass't Sec'y.

Shooting at Roselle.

Roselle, N. J., Jan. 1.—At Olympia Inn a 35-bird event was shot to-day. The birds were a little above the average, with just enough wind to make the shooting interesting. There were but few sitters. It was a nice, clean shoot. Mr. Wm. McCloud did his utmost to give us a good time, and succeeded. The scores follow:

A F Compson, 30 .....02110*2212010101012111111111211222 01—27

J. D. BERDAN.

Cannibal Gun Club.

Trenton, N. J., Jan. 1.—Our shooting grounds are at the Trenton Driving Park. We have three traps, electric pull, and are fitted up nicely for beginners. In the club shoot, to qualify for a place in the medal shoot, 15 targets, the scores in the gold medal contest were: Brook 5, Ruelins 9, Mickel 9, W. Taylor 10, Vialko, 13, and won the gold medal; J. L. Kafes 7, Webber 5, Lutes 5, Heil 6.

Silver medal: Brook 8, Ruelins 7, Mickel 8, W. Taylor 7, Kafes 5, Webber 7, Lutes 4, Heil 9, and won the silver medal.

In the handicap turkey shoot, 15 targets, unknown angles, handicaps in parentheses, the scores were: Lutes (4) 16, Hillman (5) 15, Carnall (4) 11, Ruelins (4) 8, Cap (2) 14, Mickel (4) 16, Wilson (5) 13, Max (7) 11, Brook (3) 10, Heil (4) 13, Dansbury (5) 8. In the shoot-off the scores were: Lutes (2) 13, Hillman (3) 13, Mickel (2) 12. Hillman bought Lutes' chance.

The second turkey shoot, a handicap at 15 targets, resulted as follows: Lutes (4) 15, T. Hillman (4) 11, Carnall (4) 12, Wilson (3) 7, Brook (3) 15, Ruelins (4) 11, Mickel (3) 13, Dansbury (5) 13, Cap (2) 12, Max (6) 10. Lutes bought Brook's chance.

Turkey shoot, same conditions as above; Cap won: Hillman (4) 10, Cap (3) 16, Carnall (5) 10, Max (7) 12, Stead (7) 12, Hughes (5) 12, Lutes (4) 7, Hillman (4) 8.

H. P. MINSCHWANER.

South Side Gun Club.

Newark, N. J., Dec. 22.—The following scores were made in ten 10-target events to-day on the grounds of the South Side Gun Club:

Geoffrey	5	7	8	8	9	9	10	8	7	9
Terrill	7	8	5	7	8	..	..	..	9	8
Stanton	8	9	8	7	9	9	10	8	6	7
Aff	3	5	6	4	6	5	6	3	6	5
W M Smith	9	8	9	8	7	10	8	9	10	8

Newark, N. J., Jan. 1.—Nos. 1 to 6 were sweepstakes; No. 7 to 10 were the L. C. Smith gun shoots and two turkeys; No. 7 was the handicap allowance; No. 8 was the score; Nos. 9 and 10 were the ties; No. 10 was miss-and-out. Geoffroy won the gun, Dudley and Schortemeier a turkey each. No. 11 were the allowances, No. 12 the scores, No. 13 the ties. No. 15 were allowances, No. 16 the scores, and the ties drew for the turkeys. The scores:

Singac and Little Falls.

Singac, N. J., Jan. 1.—On the Singac Hotel grounds a match was shot to-day at 15 birds, $10 a side, 50yds. boundary, between Bunn and Rhodes, and Klotze and Weaver. The birds were first class. The boys were sorrowful over Uncle Jake's death, and over the assault on Capt. Money.

The birds were not enough in number, so we had to cut the shoot short. Mr. Wm. Dutcher was referee and scorer. The scores:

A Doty, 30	2222—4	Klotze, 28	1220—3
Johnson, 28	2220—3	Wright, 28	20 —1

A large holiday crowd was present. The birds were first class. There was plenty of excitement over match.

Applegate vs. Von Lengerke.

Freneau, N. J., Jan. 4.—In a match at 50 birds each, shot to-day at this place between Messrs. J. Applegate and Carl Von Lengerke, the former won. Mr. Von Lengerke has been suffering from a severe attack of la grippe, which seriously affected his eyesight for some days, enforcing the use of colored glasses part of the time. No doubt the attack impaired his shooting ability for the time being. The birds were excellent, and a large crowd was present. The scores:

J Applegate .....11111111110110011111010111—20

Riverton Gun Club.

Riverton, N. J., Jan. 1.—The New Year's Day shoot of the Riverton Gun Club, on its grounds at Taylor's Station, was well attended. The main event was at 30 birds, for a beautiful cup presented by Dr. Karsner. It was a handicap event. Six men, all at the back mark, 30yds., tied on straight scores. In the shoot-off Yale Dolan won. Shooting began at 11:30 and lasted until dark. After the main event there were several sweepstakes.

Thirty birds, handicap, $10 entrance: Dolan (30) 30, Agnew (26) 30, Upson (27½) 30, Davis (28) 30, Stevenson (26) 30, Darby (28) 30, Cortright (25½) 30, Harned (26) 29, Pleasanton (26) 29, Chandler (26) 29, Whittaker (26) 28, Godschalk (27) 27, Karsner (28) 27, Wagner (29½) 27, Dorrance (26) 25.

Shoot-off: Dolan 14, Agnew 12, Upson 7, Darby 6, Cortright 5, Davis 5, Stevenson 5.

Trap Around Reading.

READING, Pa.—The New Year shoot of the South End Gun Club, of Reading, Pa., on its grounds, was a success. In all, thirty-one shooters from the city took part in the events. All the clubs in the city were well represented, and the South End Club members were out in force. The day was just a delightful one for target shooting. Shooting began at 10 A. M. and continued until dark. John Matz, of the South End Club, was the high average man with 85 per cent., closely followed by Saylor, of the Mt. Penn Gun Club, with 82 per cent. The scores follow:

Events:	1	2	3	4	5	6	7	8	9	10	11

Fegleysville, Pa., Jan. 1.—A target and live bird shoot was held here to-day, the scores made being very good. The scores:

Events:	1	2	3	4	Events:	1	2	3	4
Targets:	10	10	10	5	Targets:	10	10	10	5
Geist	9	8	7	5	Trumbauer	10	7	7	5
Smith	8	7	8	5	Eames	10	..	..	..

No. 1 was at live birds; Nos. 2, 3 and 4 were target events.

Reading, Pa., Dec. 26.—The Neversink Gun Club, of this city, held a target shoot on the Neversink Flats, near the city. The scores were, each man shooting at 10 targets: W. Wonzke 5, Hoch 8, J. Kilpatrick 7, Qunter 3, Sallade 6, A. Wonzke 6, Herman 3, Faeger 5, Bright 8, Goodman 6, Pfleger 5, Clark, 0, Hannahoe 4, Border 3, Goodhart 6.

Dec. 22.—The annual live-bird championship shoot of the Mt. Penn Gun Club, of this city, was held to-day on the shooting grounds at Stoney Creek, and was won by Albert Yeager, who killed 12 out of his 15 birds. Chick, Dietrich, Osborn, Sparley and Fair tied for second place with 11 each to their credit; Shultz and Shell with 10 scored tied for third place. For second prize there were 200 hand-loaded shells, donated by the club, while 100 of the same kind of shells were offered for third prize. As the supply of birds became exhausted, the ties could not be shot off, so it was decided to divide the shells. The birds were a fast lot of old country birds, and better birds were never trapped in this vicinity. Arthur Fink, of Reading, officiated as referee, while Chas. Brown, the club's official scorer, and Irwin Seaman had charge of the score. The score follows:

Mt. Penn Gun Club's live-bird championship, for the club's live-bird championship medal; 15 birds per man, 28yds. rise, 50yds. boundary, Hurlingham rules to govern:

Yeager	222201112102112*—12	Saylor	102*02002212200— 8

DUSTER.

Elliott Holiday Shoot.

AS FOREST AND STREAM went to press on Monday, one day earlier than usual, last week, the report of the Saturday shoot could not reach you in time for the last issue. I now call your attention to it, as it was an important event, and especially since all shooters might find it to their interest to look well into the handicap used, which is known at Kansas City as the Riley handicap. It is not hard to understand, being one in which the shooter handicaps himself after the starting point. If he kills 5 birds straight at any given point he then moves back 1yd., etc.

Saturday, Last Day, Dec. 29.

It was expected that a large number of shooters would put in their appearance and enter for this handicap shoot. The morning opened up bright, with plenty of southwest wind and a prospect of such birds as no one could make a straight score. Yet the shooters were all tardy in getting out, and did not seem anxious to unpack their guns.

The park manager, R. S. Elliott, was feeling very confident that "no straight" goes to-day. He was delighted with the wind behind the birds, and no one knew so well as he that 500 of his very best birds had been cooped. Just to show the confidence that Bob has in his birds, traps and grounds, and by way of an inducement he made an announcement on Friday evening that to any lucky shooter who would kill 25 straight he would present a $5 hat.

The morning was passing away without a gun being fired. What few were present were telling what they had done in days gone by, and Elliott, while disappointed at the tardy shooters, mentioned that a big crowd would come out about noon. They could see that they "were up against another man's game," and finally some one proposed a $1 miss-and-out. Robert agreed, and seven entries were made. Stevens, Crosby, Norton and Tramp Irwin made clean scores of 9 each, and said Robert was willing to call this little preliminary off and start the big shoot. Mr. Cockrell, in the mean time, fell down on the second bird, and that genial fellow, Budd, followed suit. Then Jim Elliott, known the world over as a shooter, stubbed his toe on the very first bird. Mr. Dunn grassed one, and then the next one was "over the fence and out." The score:

Stephens	222222222—9	Elliott	0
Cockrell	20	Norton	222222221—9
Budd	10	Dunn	10
Crosby	222222222—9	Tramp Irwin	112111111—9

You will understand where each contestant started by figures following immediately after the names, and by dividing the scores into strings of 5 it will no doubt interest all to see the movements of the shooters, and also see just where they finished, as we take it that this Riley handicap is new to all save the Kansas City shooters, it not having been adopted by any other club that I know of.

It was at 11:30 when the now "Daddy of all of them," J. A. R. Elliott, stood up at the 30yd. mark and said, "Ready," grassing his first bird with one barrel, and the great race was on. Then Budd, Crosby, Norton and Cockrell did likewise, and when the first string had been shot by this squad of five, and only one bird had been missed, the shooters began to think a straight possible. The second squad did not have any of the crackerjacks in it, yet only Mr. Beach had the misfortune to lose a bird.

As the business men of the city could not get out until about 2 P. M., these two squads shot up to the 15-bird mark and then went to lunch.

If Mr. Elliott had any inward feelings as to getting the worst of the hat bargain he did not look it, and offered then, with four men straight—his brother Jim being one of them—to wager $25 that a straight would not be made. Your correspondent, with his eagle eye ever open, detected the boys changing the birds in the pit, and really I thought the hats were off, so far as these shooters being able to wear one on Bob. Please note that starting on the 16th bird J. A. R. would be at the 33yd. limit, Budd at 32, Cockrell and the L. & R. Tramp at 31, with the last three going back 1yd. should they make another straight.

After lunch Allen, O'Brien, Curtice and Smith entered and shot up. This brought Mr. O'Brien, a new shooter from Kansas, into prominence as a candidate for a hat.

Then the race for the finish was begun, and closed with the 20th bird being in the "game sack"—as Fred Gilbert calls them—to the credit of Elliott, Cockrell, Tramp and O'Brien, Budd only of the possible having gone amiss on a bird that walked quartering in and then sprang, and swinging, evaded his big loads, as sent from both barrels. The three left had 5 more to shoot, Elliott at 33, Tramp at 32, and O'Brien at 31, and they were not slow in telling the manager something about the size of their old hats, etc. It is nothing unusual for successful people to be elated, and the last two named were inclined to remark that should Jim go out straight and they should tie the "professional" they would require one full-size larger than usual.

Strange as it may look on paper, these three men were as well distributed as to positions as they could be—Elliott first, Tramp seventh, O'Brien twelfth—one in each squad.

Champion Jim drew some screamers—at least 3 of his 5 needed the full contents of the second barrel to get them down in the boundary, yet they fell one after another as their turn came, until the last one was an easy incomer, and the hat was on Robert, but to be on Jim, so soon as he could get to the city.

The next interest was of course on Tramp, the oldest shooter on the grounds, who took his first lessons in Kansas more than twenty-five years ago. As it was known that he had shot in several handicaps in the last few years and never made a straight, most of the knowing ones had doubts about any more hats being necessary; but this time was the exception, and at the end of this squad, another hat was the proper thing. Tramp made some long kills on fast birds; his 24th escaped the first and went away fast to the right quarter, to be saved by the second. Then came the last, which, lucky for him, was an incomer, and he centered it with the first barrel. He had the satisfaction of being warmly congratulated by his many old friends present.

Two hats being won, it was up to Mr. O'Brien, and that gentleman went on killing bird after bird as his turn came around and then pumping another barrel into them just to make them lay quiet and not give the dog any trouble, which, by the way, was getting very tired and worn out. I never met this gentleman before, and he says that, while he is a good target shot, he has faced live-bird traps but a few times. Let me tell you he has the right stuff in him to make a pigeon shooter. Get rattled? Not much, and Bob Elliott just took that pencil of his and says, "I take my hat off to you, Mr. O'Brfien, and here's an order for a hat that you will not be ashamed to remove from your head when you meet the belles of the Sunflower State."

I must not forget the 24-men, for they struggled hard and shot well. Had it not been for their "bad half hour," they would be wearing Elliott hats. Budd, Norton and Cockrell would each give a $5 hat, I fancy, to shoot at that one bird again. They were not so far behind in cash, as the money was divided on the Rose system.

In the 23-hole you will find Billy Crosby. You all know that two of the unkillable kind came to his draw, else he would not be hatless. Please look at his score and note that, starting at 30yds., he shot his last 20 birds from the 31yd. line, and was at the finish 1yd. ahead of Tramp Irwin and on the same line with O'Brien, who started at the 27yds. line.

Mr. Curtice, a Kansas City man, being well used to this sliding handicap, shot a fine race, losing but two, his 2d and his 9th. This enabled him to shoot his first 15 all from the 29yd. line; then he went straight, finishing at the 31yd. mark.

Walter Allen had a "hard luck" story, killing 17 straight, then losing 3 before the end came. He is one of the best shots in the West, as look at his starting point—the same as Budd's. Then there are Herman and Cockrell; each lost 3 out of his last 8, while Smith lost 5 out of his last 11. Then Beach, a very good shot, a 28yd. man, lost 3 out of his last 11, while Mr. Stephens, after killing 7 straight, lost 4 out of his next 7 and withdrew.

Please consider that these three last named gentlemen, save Stephens, have been shooting these 25-bird-handicp races here every month for a year, and are well used to the grounds and the towering birds, and yet lost. This will enable the reader to have a fair conception of what this prince of good fellows, Bob Elliott, was doing in the way of trapping selected birds.

Mr. Elliott was, I think, disappointed that so few home shooters came out, yet he now sees that holidays and closing the old year and beginning a new one is not the most suitable time for a shoot, and will select some time in next January for his midwinter shoot.

The chances are that a new park will have been selected by that time, one in which there will not be so many climbing birds, and possibly faster ones.

The boys think that a new hat would look well next year, and will no doubt all return here whenever Robert sends them an invitation.

Miss-and-Outs.

As there was a little daylight remaining a couple of miss-and-outs were shot. The scores herewith appended will show that among the good scores made Tramp Irwin stands at the head, having killed all 52 straight, for the day:

Event No. 3, $2 miss-and-out, birds extra:

Planck	22110	Berkley	222220
Curtice	2222222—7	Beach	1111110—6
Crosby	2222222—7	Tramp	1212111—7

Event No. 4, $2 miss-and-out, birds extra:

Berkley	22222222222—11	Tramp	11211111111—11
Allen	210	Beach	11112221112—11
Crosby	0	Curtice	12222220
Smith	22220	Cockrell	220
Norton	21110	O'Brien	20
Stephens	21112222221—11	Smith	110

KANSAS CITY, Dec. 29.—The Bob Elliott holiday shooting tournament opened at Washington Park, Wednesday, and continued throughout the week, closing to-day with a 25-bird sweepstakes. The feature of the opening day was the final shoot for the Elliott diamond medals, representing the local championships at both live birds and inanimate targets. The interest in the "mud pie" race was completely overshadowed by the wingshot contest, Kansas City being essentially a live-bird town. There were twelve contestants in the live-bird race, a 25-bird event, the winners of the respective monthly shoots during 1900 meeting to shoot off for absolute possession of the trophies. Chris Gottlieb won the shoot-off, being the only one to kill his 25 straight, and his excellent work was all the more creditable from the fact that he had a heavy handicap to overcome. He started in the race at 30yds., and after grassing 5 straight dropped back a yard. Still killing his birds, he was sent back another yard, after the 10th bird. The third block of 5 he killed from the 32yd. mark, and the last 10 birds from the 33yd. mark, the outside limit. Jim Porter and Tom Hearn were his nearest competitors, with 23 each. The scores:

W S Allen, 30	22222022220222202112222*—21
J B Porter, 30	22122221220212212202222—23
T J Hearn, 27	*22212202122222222222222—23
W A Smith, 29	20221100212201102121w
J F Vaughn, 26	22211220212222212222**22202—21
P Francke, 27	21111022*222111*1211*2*22—20
J W Bramhall, 29	2020222222220w
Dr F M Planck, 28	2221212*22212202100*10102—18
A E Thomas, 28	202222220212222*w
C Gottlieb, 30	21212222212211222211222221—25
T Turner, 27	121112*12111220022112221l—22
N Beach, 28	*21111011121211111020w

The race for the target championship was close and spirited, Roy Overly winning out after a hot finish, with Newt Beach, Dr. F. M. Planck and W. N. Hill. Overly scored 46 out of 50 with the aid of his handicap, while the other three named scored 45.

The target scores: Roy Overly 46, C. B. Cockrell 39, F. N. Cockrell 38, A. Holmes 41, W. N. Hill 45, Ed Hickman 44, S. S. Millett 40, L. W. Scott 41, C. Wright 42, N. Beach 45, Dr. F. M. Planck 45.

Elliott vs. Crosby.

On Thursday, J. A. R. Elliott successfully defended the Cast Iron medal against William R. Crosby, of O'Fallon, Ill., winning the match by a score of 96 to 91. W. V. Rieger acted as referee and James Whitfield as scorer. The day was cold and raw, and the birds a particularly fast lot, not over two or three being "no-birded," and they had been injured in the traps. The wind was blowing stiffly northeast, which was toward the score, and the incomers had to be centered to keep them from being carried out over the boundary. Elliott was suffering from a crippled knee, but he shot a hard race, centering his birds generally with the first barrel. Crosby, on the other hand, did not appear in good form, and did considerable slobbering. Crosby was the first to miss, losing his 6th bird, which he overshot with both barrels. He settled down for a run of 26, after that, and as Elliott had lost his 28th dead out of bounds, honors were easy at that stage. Crosby lost his 33d dead out, and lost 4 more before the half was reached. Elliott was shooting steady, and at the 50th round had a lead of 5 birds, and the match was practically ended, except for the cheers at the end. Each killed 47 out of the last 50. There was no apparent advantage in the drawing of the birds, and both made some remarkably long kills with the second barrel. Crosby used his L. C. Smith gun, 7-13, and his loads were 48grs. E C powder in Leader shells in both barrels, with 1¼oz. of No. 7½ shot in the first barrel and No. 7 in the second. Elliott shot his Winchester repeating gun, 7¾lbs., and his loads were 45grs. of Hazard Blue Ribbon, with 1¼oz. No. 7 shot in Leader shells. The race was shot in an hour and eight minutes—pretty rapid trapping for a 200-bird event.

Richmond Gun Club.

SILVER LAKE PARK, Staten Island, Jan. 1.—Four events were shot at targets, Sergeant system, in the shoot of the Richmond Gun Club, held to-day. In the live-bird match, the birds were slow. Mr. A. A. Schoverling was referee and trap puller.

Events:	1	2	3	4	Events:	1	2	3	4

A. A. SCHOVERLING, Capt. R. G. C.

Ossining Gun Club.

SING SING, N. Y., Jan. 1.—The New Year's Day shoot of the Ossining Gun Club was most successful in every way. The members, as well as a number of outside shooters, supported the shoot very liberally. During the day 74 live birds and 2,000 clays were trapped.

The best shooting was done by I. Tallman. The light was bad and the grounds hard, but he managed to get his last 40 straight.

Event No. 2 at live birds was cut down, as there were not enough birds to fill out the whole entry. Some of the shooters who had entered for birds only very kindly withdrew on the 4th bird to allow those who entered in the sweep to finish their scores. The birds were a fast lot. There were but 3 sitters in the 74.

Live birds:

C. G. B., Capt. O. G. C.

Harrisburg Shooting Association.

HARRISBURG, Pa., Jan. 7.—Tuesday, Jan. 1, found a large crowd of shooters from the surrounding towns of Lancaster, Reading, Steelton, Chambersburg and Lebanon to take advantage of the popular annual New Year's holiday live-bird shoot of the Association. Having increased yearly, it became necessary this year to run two sets of traps and commence shortly after noon and continue until dark.

Conway, of this city, surprised them all by scoring 19 straight after losing his first bird. A strong wind was blowing, and the birds of first-class quality. The shooting was difficult for the "old ones." All seemed highly pleased at the comfort furnished by the local club, whose grounds are one of the best equipped in the central part of the State, and all were made to feel at home while here. A number of shooters were detained in the city and failed to take part on account of the State Legislature organizing on this same date.

Twenty live birds, $10, Rose system, four moneys:

Wayne vs. Highland.

PHILADELPHIA, Jan. 5.—The Wayne Gun Club defeated the Highland Shooting Association in the third and final contest of a series by a score of 165 to 143. The conditions were 25 targets each man, magautrap. A cold, stiff wind that blew across the range made it difficult for big scoring. The Wayne team won by 22 targets. The scores:

Wayne—Johnson 22, Myers 20, Smith 20, George 17, McMichael 17, Wayne 17, Morris 14, Dalton 14, Green 13, Bender 11; total 165.

Highland—Everett 18, Miller 17, Laurent 16, Meehan 15, Ferstch 14, Loetz 14, Burn 14, Dreakley 13, Wentz 12, Shaffer 10; total 143.

PUBLISHERS' DEPARTMENT.

The Vartray Ginger Ale,

which is a Buffalo, N. Y., product, enjoys the distinction of having carried off the honors at Paris against all competition. The achievement is a notable one, for it puts at the front an American ginger ale as superior to the much-vaunted imported article. See advertisement elsewhere.

The Andrew B. Hendryx Co. Catalogue.

Messrs. Andrew B. Hendryx & Co. send us their handsome catalogue of Fishing Tackle, and advise us that it will be sent free on request to any reader of FOREST AND STREAM.

The Robin Hood Powder Co., Swanton, Vt., has issued a booklet, whose title is "Powder Facts," in which is set forth in an instructive manner the advantages of their powder and the proper loads of it for the different gauges of guns. For a copy address the secretary, Mr. Edwin H. Richardson, Swanton, Vt.

THE NEW YORK COMMISSION.

THE recommendation of Governor Odell for a reduction of the commissions for the care of the forests and of fish and game has been put into effect in a measure introduced by Assemblyman Allds, which amends the present law and substitutes for the existing boards of five commissioners for forests, fish and game and three commissioners of the forest preserve a single board of three members, which shall be made up thus: "The Forest, Fish and Game Commission shall consist of three members, to be appointed by the Governor, by and with the advice and consent of the Senate. Two of such members shall be appointed from the Commisisoners of the Land Office and may be removed by the Governor at his pleasure. The third member of such Commission shall be appointed for a term to expire on the 31st day of December, 1903; a successor to such member thereafter appointed shall hold his office for a term of three years, beginning on the first day of January of the year in which he is appointed. Within twenty days after the amendment of this section takes effect, the Governor shall appoint a Forest, Fish and Game Commission as herein provided, and upon the appointment and qualification of the members of such commission the terms of the members of the Forest, Fish and Game Commission and of the Forest Preserve Board then in office shall expire."

The member who is not a Commissioner of the Land Office the bill provides shall be the shellfish commissioner; and as a matter of fact, we understand the meaning of the bill to be that the shellfish commissioner shall be the practical executive man of the commission. His salary is to be fixed at $5,000 a year, the other members to serve without compensation. All the commissioners are to receive their actual expenses. The measure further abolishes the present forest preserve board and provides that the Forest, Fish and Game Commission as newly organized shall constitute the Forest Preserve Board, and shall have all the powers conferred and perform the duties imposed by law upon that board.

Such a change as here contemplated would be directly for the benefit of the interests involved. It is of common knowledge that the fish commission of five members was brought into being as a political job. There is no good reason for such a board. As a matter of fact, the work of the commission could be done by one man, or as we have repeatedly urged, the entire commission could be abolished with profit and the work be intrusted to the practical executive heads, the State fishculturist and the State game protector, who now actually perform the duties of the commission. It is improbable, however, that the Legislature would consent to the adoption of such a system, notwithstanding that it is the practical and business-like way to accomplish the ends sought. Unquestionably the most efficient force of game protectors would be one made up of officers appointed directly by the chief game protector and responsible directly to him for the performance of their duties. The reason such a system could not be put in force, however, is that for political considerations the Legislature would probably not intrust the appointments to a chief game protector. So with the State fishculturist. A competent person filling this position could do everything with respect to the choice of species of fish for propagation and the waters to put them into, and the practical work of fishculture and fish planting independently of the advice or direction or control of a commission or commissioners over him. He likewise would be much more competent than a commission to select his employees and retain or dismiss them according to their efficiency. Barring the possibility, however, of adoption of such a simple and business-like system, we shall welcome the reduction of the commission to the form proposed in Mr. Allds' bill.

TIPS.

IN the swirl of changes which has marked the progress of outdoor interests during the past few years, the relations between sportsman and landowner, in so far as they concern rights and privileges, have been subjected to radical readjustments. Of all these, none has been greater than that caused by the advent of the man with a tip. The simple custom of gratuitous feeing has been fraught with results never contemplated nor foreseen by the man with a generous, open hand.

In the days often referred to as the old days, but days of a few years ago only, in many districts the landowner looked upon the sportsman as a kind of novel visitor, between whom and himself there existed no question of bargaining. If the sportsman chose to shoot over his land without even asking for the privilege, the landowner, as a general proposition, did not consider that thereby his rights were in the least invaded. It was not causing him any material loss, nor even inconvenience, and, if the self-invited guest would but exercise care in replacing gates and fences, or not to shoot near his cattle, he asked no more. The shooter was as welcome to shoot birds on his land without price as he was to drink from the water of his well free.

But the change of time brought a constant and growing prosperity. With the general accumulation of wealth there has been evolved a large leisure class, whose members from the customs of their life have been habituated to the giving of gratuities. It is a part of life in the great cities. The waiter in the hotel, if he is not tipped after serving a patron, is prone to serve him but ill thereafter till the tip is forthcoming. Similarly, at every turn in the great cities, the person of means is confronted with the necessity of giving a tip. He comes in time to consider it a matter of course, and attaches no special importance to it.

But the tip in the country has been instrumental in changing what was free as a matter of courtesy to what is now a business proposition as a matter of right. If a landowner had a particularly good game section within his possessions and received $10 or $20 from an appreciative shooter for the privilege of shooting thereon, or a substantial sum to prohibit all other shooters from its privileges, the surrounding landowners in a similar manner were not slow to grasp the idea of revenue from their land in return for its hunting privileges. Thence came the assertion of the rights of ownership as against the sportsman who sought sport after the old free manner. Once unhindered, he at length found himself a trespasser.

The sportsman with the tip has effected a profound change in the customs of every class which caters to his needs—guides, boatmen, hotel servants, drivers, etc.—till at length the sportsman without a tip has many difficulties to encounter in consequence. Without silver pieces to distribute freely, he finds that the old-time freedom and service are unattainable.

Of course there are a few sections here and there where the virtue of the tip has not yet become establishd, but its establishment therein is only a question of time.

There is no question that any one has a right to be as munificently generous as he chooses, and there is also no question that superior and zealous service should merit and receive extra reward, but the lavish and inconsiderate bestowal of rewards, regardless of merit, has no direct benefits to the giver, and makes life incomparably more difficult for the poorer brethren who may chance to follow in his footsteps when seeking sport or recreation.

The rewards given to guides as gratuities are often so large that the person of limited means or less lavish expenditure finds himself regarded as niggardly because he fails to equal with his gifts the gifts of those employers who have preceded him.

Mr. J. Russell Reed, the new president of the Massachusetts Fish and Game Protective Association, has long been actively identified with the work of the Association, and has been one of the most intelligent, able and efficient workers for the fish and game interests of Massachusetts. Under his administration the Association's affairs, we may be confident, will be admirably promoted, and the society will maintain its very enviable record of achievement.

SNAP SHOTS.

Pennsylvania is taking hold of the forest preserve idea. Dr. J. S. Rothrock, president of the Forestry Board, writes in another column of the acquisition of a Pike county tract of 26 000 acres, which will be held as a State preserve of the forest, the fish and the game, and of another territory of 60 000 acres on the West Branch of the Susquehanna. We quote also from Governor Stone's message paragraphs reviewing what has been done already in this field, and giving assurance that further action in the same direction will be seconded by the executive. That Governor Stone has popular support in his forestry recommendations is indicated by the action of the Pennsylvania Conference in the Interests of Public Health, Wild Game and Forestry, which has adopted a resolution declaring their belief that "the thousands of citizens who are in the membership of the organizations represented in this conference from every county of this commonwealth, will cordially approve of the recommendations of Governor Stone and unite with him in the endeavor to secure for the State the benefits which his liberal policy promises."

It is not often that we have the privilege of publishing so careful, well considered and matured discussion of the game interests of a State as the one printed to-day from the pen of Mr. D. C. Beaman, of Colorado. It is comprehensive in scope and the discussion of the several topics is so thorough as to show that the facts printed have been carefully gathered and the observances based upon them are the product of mature reflection. It is a game study worth studying, and it should have a careful reading. The conditions prevailing in Colorado are in large measure the conditions which hold over the Rocky Mountain region. Like causes have produced like effects. Deer, elk and antelope have vanished from large areas where in the past, within the years which are not yet counted remote, they swarmed in astonishing numbers. The problem of how the remnant shall be saved is immediate and pressing. Mr. Beaman finds the solution of the problem is the hunting license, the shortening of the season and a rigid enforcement of the law.

The tenacity of the humbler species of wild animals and the wonderful way in which they persist in the face of civilization is illustrated in some facts recently brought out by the Norwich Bulletin, which has discovered that a fur dealer in Danielson, Conn., during the season makes weekly shipments amounting to $200 and $300 worth of mink, fox, raccoon, skunk and muskrat skins. And he has been in the business since the Civil War, as his father, a noted hunter and trapper, was in it for years before him. There are men and boys in the back districts all through New England who find profit in their traps from November to March. And this reminds us that we have in manuscript a story of youthful adventure in trapping, written by Mr. Wm. H. Avis, of which we shall begin publication next week.

The interests of forestry and fish and game protection have a growing recognition among the topics which the Governors of States consider deserving of attention in their messages. We have already noted the stands taken by the Governors of New York and New Hampshire. To-day we quote a paragraph from the message of Governor McLean, of Connecticut, who shows an intelligent appreciation of the economic aspect of protection when he says that "a brook well stocked with trout, or a cover well stocked with partridge or quail, will in the near future bring a larger proportionate profit to its owner than any other investment."

Among the things which are crowded out of our pages this week are the annual reports of President Alex. Starbuck, of the Cuvier Club, of Cincinnati, and Secretary H. H. Kimball, of the Massachusetts Association. They will be given in the next issue.

The second annual meeting of the North American Fish and Game Protective Association will be held in Montreal on Jan. 30. We look for substantial results from this organization, which should have cordial support.

The Sportsman Tourist.

Tulimanu.

EVERY race has its tradition, merely history wherein reliable particulars are lacking, of its own killer of things and possessor of the craft to interchange the jungle hail of "good hunting." It may be a Nimrod, that mighty hunter before the Lord; it may be the more delicately sculptured Diane Chasseresse. Whatever be the name that this tradition carries in the several lands, it is always a dim recollection of some one who had learned woodcraft in all woodland ways. Tulimanu is the Samoan expression of the same recollection of the mighty hunter on the mountains. This paper is the attempt to rehabilitate out of fragmentary stories the personality of Tulimanu, the great hunter of Samoan legend.

When first I heard the word it was applied to me by the king as interjected comment in some narrative of my search for shootable game in the bush back from Apia. It was a new word to me, and I made a mental note to look it up as soon as I got home. It was scarcely etiquette to ask the king what he meant by the term. In fact, the only way such a question could be asked in Samoan is in literal translation "what's its name?" and that doesn't exactly seem to be the right way to speak to kings. One may be all sorts of a fellow citizen and a profound hater of all things monarchical, yet a king so long as he behaves himself does seem entitled to the lugs that kings have become accustomed to put on. I am sure I never let Malietoa feel that I thought any the less of him for being a king, and I treated him accordingly.

But at home I found that I was relying on a very poor authority when I took up the dictionary in order to find out the meaning of the word "Tulimanu." That blessed old dictionary, compiled by some enthusiastic missionary, gave but the single meaning of "a corner of a house." That was absurd, for at the least two reasons, each decidedly valid. Samoan houses are all oval, and you could march around one all day without finding the first vestige of a corner. In the second place the king, who was the most courteous of mortals, would never dream of calling me a house corner. That was a common experience with that dictionary as a help to the comprehension of the Samoan language; it either did not give the word at all or it gave some nonsensical meaning that could not be stretched to cover the emergency. Before I put the dictionary back on its shelf I must set down its bright particular gem. In the English half of the vocabulary was this entry in its proper place, in alphabetical order: "Blush, ———" No one who knows the Samoans at all can be surprised at the blank set against the word. Island morals will need a great improvement before the first blush shall struggle to suffuse the Samoan cheek, and after all it is problematical if any blush could make itself apparent through the prevailing coffee color of the South Sea complexion. This, of course, is merely by the way and interjectional, just to show how little valuable the enthusiastic missionary's dictionary is. But there was Talolo, well-spring of daily delight and source of information which might be accepted for fact if I could get it corroborated—he surely would be able to act as my better dictionary.

"Talolo e!" I asked, when next my juvenile companion found occasion to pay me a visit on my spacious veranda, "what did the king mean when he called me 'tulimanu' the other day?"

"He said you were a devil-girl," was the prompt answer of the young gentleman, whose conversation was always breezy, and the frankness of whose most simple statements was refreshing.

"Moi, the boy is right," said Tonga, who sat sewing on a mat near me, it being her main task in life to keep one or two frocks ahead of the ravages of the native laundry methods. "Tulimanu is a devil." Then she sang out to Tanoa to bring her a burning billet, and toasted the tobacco and duly wrapped it in the dry banana leaf and lighted it at the coal and passed the cigarettes among the three of them.

"Why should the 'banana eater' call you a devil-girl?" Talolo asked with hot displeasure. Being a rebel the lad was not willing to call Malietoa King, even in ordinary conversation, and "banana eater" was the least abusive of his nicknames for his sovereign. "Why should you come here to Samoa and make him king when we want Mata'afa? Now he calls you a devil-girl, and won't you send for a man-of-war and have his head chopped off?"

"Moi," said Tonga, in acquiescence, and a cloud of smoke from her cigarette, for Tonga was out and out a rebel, and had been in many a battle.

Tanoa, however, slid unostentatiously away from the group. Not that he was excessively loyal—I never gave him credit for strong opinions on any subject. But he held a position of trust and emolument under the Government of the United States, as captain of the Consular rowboat, and had probably received from his superior officer instructions not to talk politics and to support the administration. For my own part I felt some of the force of the same sentiment, and made haste to sidetrack the discussion of the heartrending tangle of Samoan politics.

"You explain it to me, Tonga, for surely the king did not intend to call me a devil."

"Yes, he did," said saucy Talolo; "if Mata'afa had been the king he would never have called you a devil-girl; he's a high chief, and knows all the words of compliment and courtesy. Oh, Tamaita'i, do tell your husband to bring back Mata'afa and make him king, and chop the 'banana eater's' head off."

Here was politics, and with a vengeance.

"Be quiet, Talolo, so that Tonga may speak. How should you know what Mata'afa would do? He is a high chief, and you are not yet tattooed." That was a thing that the boy never liked to be reminded of, and to scold him with that as a clincher never failed to reduce him to abject humility. Talolo was very close to the age when he should be tattooed, and for his own part he felt that the important and painful operation should have been done some time since. Any mention, therefore, of the fact that he was still in the baby class was particularly galling.

"Go on, Tonga," I continued, after squelching the boy, "tell me what tulimanu means. Does it mean the devil, or what?"

"Yes, Tamaita'i, it means the devil his name. All like same Nifoloa devil, The-One-With-Long-Teeth. All like same Ulufanuasese'e devil. The-One-Who-Coasts-On-Tree-tops, you hear him sliding in the still night when there is no wind, and then you suddenly hear a swoosh back in the bush. All like same Nafanua and Fe'e and Fa'aananafi, all devil, all aitu. Tulimanu devil too, aitu, and he lives back of Mount Vaea, on the Ala Sopo trail over the Tuasivi."

"But what does the word itself mean?" I asked.

"It means Run-after-Birds," replied Tonga.

Then at last I found out what the king meant when he called me Tulimanu. It was really intended for a compliment. But what with the omissions of the missionary dictionary and the heat of Talolo's political opinions, I was a sufficiently long time in finding out that the king had done no more than apply to me the Samoan equivalent of Nimrod. But it was longer before I was able to get together any more information about the Samoan Nimrod. The younger Samoans, with their abundant education at school, are rather losing precise information about the aitu of their land, former gods, but now devils. Few knew as much about Tulimanu as Tonga had told me, apparently none knew more. At last it resolves itself down to an exploration of the remotest cupboards in the memory of old Lauta, the ancient chief of Vaiala, and probably the oldest man in Samoa. It was never easy to get him to tell a straight story of matters relating to his life as a heathen, and this consistent unreadiness was, in this case, still further complicated by the fact that his family had a blood feud with the family which numbered Tulimanu among its ancestors.

But there was one thing that gave me a wrenching power on any story that Lauta might have tucked away in his memory—I could break it loose and wind it up to the surface for inspection. That lay in the fact that Lauta and I had financial dealings with one another; in fact I was his banker for varying sums. As the security for my loans was articles of wear, I suppose I might as well call myself a pawnbroker. That has to be in any money dealings with Samoans—they would borrow without limit, and never repay unless they deposit some valuable possession as collateral for the debts which they incur.

The only thing to be found in any Samoan house which has been found to be a valid security and which they will really work to reclaim is the ancestral fine mat; accordingly it is the only safe pledge for money loaned. These mats are remarkably fine pieces of hand weaving, as dainty as damask, and each one represents months and years of careful work. They seldom vary in size by more than a few inches one way or the other from four yards square, and when it is at all possible to buy one, a price of $50 is about the lowest that can be made for even the newest. When such a mat has entered upon its career, in connection with the marriages of the chiefs and high-born maidens, it is well nigh impossible to purchase it at any price. The older a mat is, and the longer its history of successive wedding ceremonies, the more it is valued. Each mat has a name, its history is chanted when it is displayed before the admiring populace on the village green, songs are written about it in the most extravagant metaphors, and the highest chiefs do not disdain to pay it the most exaggerated forms of respect. From this short account it will be seen that in Samoan life the fine mat is a very large factor, and that a mat with a name and a history may well serve as security for rather considerable sums.

Nobody knows how old Lauta really is, for he, of course, has no means of establishing his personal chronology. The first clue is his statement that when he was already a grown man and invested with the chiefship of Vaiala and the title of Le Patu, which goes with it, he came as a deck passenger from Pango Pango to Upolu on the "first man-of-war." As the Samoans have lost all remembrance of their discovery in the last century by Bougainville, who introduced the archipelago to geography as the Navigator Islands, this first man-of-war refers to the vessels of the United States Exploring Expedition under Wilkes in 1839. If Lauta were a grown man at that time, he must now be somewhere in the neighborhood of ninety years. However that may be, he does not look it, but it is not by any means impossible, for it was only in December last that the last survivor of that great expedition died, in the person of Charles Erskine, of Roxbury, Mass., for a score of years a seaman in the navy. But looks afford small clue to the age of any islander; they are for the most part aged men at forty years, and dead beore fifty, and no amount of survival after the half-century mark seems to bring any further traces of age. Physically the old man showed no sign of feebleness, except for the fact that he could not walk with ease, and that was not a mark of age, but was due to the fact that the elephantiasis had made his left leg as big around as a keg. Mentally he was as chipper and hearty an old boy as could be imagined, and the political harangues, an hour or more in length, that he frequently felt impelled to deliver at the gate of our compound, showed no lack of energy.

Considering his advanced age one would have thought that Lauta would have outgrown the spendthrift habits of youth, and would have settled down to prudent economy. Such, however, was not the case. The old chief was always broke, and always trying to negotiate a loan; and as we, according to his way of thinking, had at our disposal the whole of the boundless resources of the United States, he felt that we should supply his various needs. His first touch was for $100 on the security of a ground and chattel mortgage of a village up the coast. To be sure the village was in the rebel country, and Lauta had no slightest vestige of authority over it any way, but to be found out in a little trick of that nature did not in the least disturb the old man. After much palaver we established things on a business basis; he might borrow sums of $5 at a time, for one month, only by depositing for each loan a genuinely old fine mat. If, at the expiration of that month, he did not come to time with the money, the mat and all its traditions should pass irrevocably to me. I must say that the old chief did live up to this arrangement, much to my regret, for some of the mats which were left in my custody I should have been glad to own at almost any price.

While I was pursuing my investigations, with small result, into the history of Tulimanu, there came a crisis in the finances of old Lauta. I had on pledge a mat that may have been centuries old. Its legend was that it had been woven in the ninth heaven of all, and had been floated down for the wedding of some great hero ages ago. It was venerated by all Samoans. Even King Malietoa, when I took it from the safe to show it to him, lifted one corner reverently to his head and said, "Take it away, for it dazzles my eyes," and that is about the highest thing that can be said of any fine mat. The day was at hand when the $5 was to be paid or this treasure of a mat pass into my ownership. Perhaps the village women had not done well in the laundry business; perhaps there had been no cruiser in port, with sailors ready to hire ponies for wild gallops along the beach. At any rate the money market was absolutely flat in Vaiala; the old chief did not have the money, and came to beg an extension of time. It was within my rights to foreclose, but it did seem hard to acquire such a mat for so little and I gave up my chance to own the woven history, and granted an extension on condition that Lauta should tell me the story of the Samoan Nimrod. The ancient chief agreed. My boys prepared his bowl of kava, and his titles and degress were duly called when the first shellful was carried to him to drink. Then seated on a mat in a shady corner of the veranda, with his fly flapper hung over his shoulder, except when he needed emphasis, and used it to switch his back, Lauta told the old tale of Tulimanu, and he was probably the only man left in Samoa who could tell it.

"It's all changed now, Tamaita'i," he began, after a pause to carry his memory back to the old times. "It's all so different. Now Samoans work to get money that they may eat the food that comes in the ships from your distant islands, the salmon and the 'pisupo' (pea soup is the generic name for tinned beef), and the biscuits that come in big tins. But before the Papalangi came Samoans were content without working. They found all their food in the sea and in the bush. When I was a boy we used to make parties and go back into the bush to net pigeons for days at a time. That has all been forgotten; these Samoans know not how to sweep the net in the daybreak to catch the pigeons. All have forgotten except myself, and I do not remember much, for I have not handled a pigeon net since I was a very young man. Even then Samoans were not such hunters as they used to be, many generations ago, when they lived together in the bush before the great battle when they drove their enemies away from the shore. Ever since that battle our homes have been along the shore, and only a few villages still remain in the bush. You have been to one such, Tanungamanono, so near to Apia that you can walk to it without fatigue. The wagon road goes by it now, but that has only been within a very few years. In old times the only way to reach it was by the Ala Sopo, from the mouth of the Vaisingano, through the former grove of fragrant pandanus which gave the river its name. Then all the people who followed that path over the Tuasivi from the other side, from Safata and Siumu, stopped at Tanungamanono to rest themselves, and to tell and hear the news before they came down to Apia. The change in the road is so recent that men yet young remember it. Well, Tulimanu, our last great Samoan hunter, was the chief of Tanungamanono in the ancient times, his name So'oalo. How long ago he lived I cannot tell you—we never have learned to count by years after your fashion, and we know only by generations. Some time you ask Fono up there in that town. He is wise in those things, and is of the family of So'oalo. He can tell you just how many generations ago he lived. I think it must have been ten. And So'oalo is buried on the highest crest of Vaea, where runs the westward boundary of the Vaimaunga district. They buried him high in the bush because he was such a hunter, and they made his grave on the boundary line because he belonged partly to Faleata, and each district wanted his 'mana,' the supernatural power that great men leave behind them after they are dead. And you have been at his 'ti'a,' his pigeon netting platform on the Ala Sopo, half way to the Tuasivi; it was there that you stood when you shot your first pigeon. That is why we call you Tulimanu; it is because you stood on his Ti'a when you shot that pigeon, and his 'mana' entered into you makes you a good hunter. We Samoans know how such things are, we may be foolish in Papalangi ways, but we are wise in the ways of our own bush; it is because the spirit of Tulimanu has entered into you that you can kill the birds and hook the fish; that spirit makes you Tulimanu yourself.

"So'oalo was not a born hunter. Until he came to the age when it was right for him to be tattooed, he seems to have been in no way different from the other boys of his village. Nor did he slowly learn the ways of the bush and thus become a hunter through experience as I did myself, as all others have done except you two, you who are Tulimanu because the 'mana' of the old Tulimanu entered into you when you shot your first pigeon on So'oalo's ti'a, and So'oalo, who became in one night Tulimanu, the chief of hunters, because in that one night there entered into him the magic of Pe'a and Fe'e, the bat and the cuttlefish gods. They were heathen gods, you know, and no longer do we pay any attention to them, except when things are going very bad with us, and even then we do not let the missionaries hear of it. How did the might of these two gods enter into the chief? That is what I shall tell you, for that is all there is to the story of Tulimanu. All that I can tell to you is what the fathers have told to their children ever since the time when So'oalo wandered over our Upolu mountains, but how the 'mana' enters into a man I cannot tell you, for that is a mystery and a strange thing.

"One morning, in the circle of house chiefs, when the kava had been made and all the cups carried in due order, So'oalo said, 'I go,' and there was none to ask him whither he went, for his was the highest rank of any chief in the circle of chiefs. So without knowing whither he went, they replied, ''Tis well.' And So'oalo left the house, and with him went his tulafale or talking man, with the staff and the fly flapper pertaining to his office, for it is right that where a chief goes there also shall go his tulafale, else would there be shame on the face of the

chief should he meet another chief and there be none by to make the speeches that should never be forborne when two chiefs are meeting on the way. These two crossed the village green and went south along the Ala Sopo, and the chiefs in the circle said to one another, 'Who goes up the mountain comes down the mountain; perhaps he crosses over to Safata or Siumu.' But others laid by the coir sennit that they were braiding, and leaned upon their hands, as they looked out from the house and watched the disappearing figures, and just before they were lost to sight among the trees it was seen that So'oalo and his companion turned aside into the path which crosses the valley of the Vaisingano, at the cascade of Papaloloa, the long rocks. Then the wachers said, one to another, 'Afimusasa'e! The fire burns in the East; there's many a rich marriage to be made before he reaches Lufilufi on that path.'

"But it was not a courting trip the chief had gone on that day, although after the 'mana' had come to him he made many marriages, and brought many fine mats to Tanungamanono. Where he went and how he passed the night the chiefs and people learned the next morning, when he returned to his house and the circle of chiefs. Young girls brought him basins of clear water that he might cleanse himself of the stains of his travel. The women brought in food on mats, something from the sea and something from the land, as our ancient laws prescribe. Then the kava was chewed and mixed in the dark bowl, with its deep violet stain, and the kava-caller called the cup of So'oalo. But when the girl carried the cocoanut shell cup to him, the chief refused to take it, and the girl carried it back to the bowl to have more kava put in it. Still the chief put out no hand to drain the cup, and the girl brought it back again to the bowl, and this continued until the shell was brimming, but the chief would not take it. Then the kava-caller called the cup with more dignified words, 'Fetch forth the cup of So'oalo, the bone of Manono and the grave of the fleet!' Now that is the highest heaven language that any chief can have in that town, yet the chief refused the cup.

"Then the chief's own tulafale, he who had gone with him on the journey, and had been with him through the night, left the house and stood upon the town green with his staff in hand. Thus standing, he shoutel aloud, 'Sao! Sao! Sao!' and all the people gathered to hear the proclamation. When the shell had been filled afresh the tulafale called the cup for his chief, and this is how he called it: 'Fetch forth the kava of Tulimanu, and its name is the supernatural power of the bat and the cuttlefish.' Then the chief took the shell, poured out a little behind him for the god to drink, then drank himself. Thus So'oalo became Tulimanu.

"There was still more for the tulafale to declare, while the cups of kava were sent around the circle of chiefs. He told how they went to the stone house of the cuttlefish god back in the mountains, the Fale o le Fe'e or Falepouma'a. And he told how the Fe'e gave to So'oalo his 'mana' and the power over things of the sea. Then he told how they went thence when the night was half gone to the summit of the great waterfall, the Afutapu or Forbidden Cataract, and there the Pe'a gave to So'oalo the magic of the bat and the power over all birds and other creatures. But it is not well to talk of these things, for you never know when you are angering the old gods. And it is not necessary to talk about how this was done, for you know already; you have the 'mana' yourself, the 'mana' that Tulimanu gave you on his own ti'a when you stood upon it to kill your first pigeon. So that is why you have power over the living things of the sea and the living things of the bush—it is because Tulimanu gave you the 'mana' that the Fe'e and the Pe'a gave him so many generations ago."

LLEWELLA PIERCE CHURCHILL.

A January Afternoon.

OUT of doors: A foot or more of snow covered the face of the earth. The drifts were piled in the roads till their tops were even with the tops of the fences, and big drifts were piled at the lee sides of the buildings. Every sheltered nook and corner was piled full of it. A gale of bitter, cutting wind kept the air so full of flying snow that it was not possible to see a big barn 60 yards from the house. So violent was the wind that it was scarcely possible to stand against it, and it blew the flour-like snow right through one's clothing and left it to melt against the skin. So thick were the clouds overhead and so full the air of flying snow, that the mid-afternoon was gray twilight.

In the house: A cozily furnished family sitting room of ample size, warmed to cozy temperature by the big "air tight" stove, on one side of which lay a sleek, well-fed pointer, and behind it lay the shaggy-haired, big-boned old black setter. On the walls were pictures descriptive of sports with gun and rod; over the mantel behind the stove were two finely mounted buck heads, across which lay an old-fashioned full stock muzzleloading rifle—"grandfather's old rifle," that in its day had been the death of many a fine gobbler—several deer and squirrels galore. On the center table a peck basket full of apples, big belleflowers, with glossy, greenish-yellow skins, with a rosy blush on the side that had been turned to the sun; golden russets dressed in modest brown that hid the honest worth of richness within; Jonathans in livery of the deepest red, and there were winesaps, white pippins, yellow pippins, sweet pippins and flat shaped yellow Andersons, favorite pears, too. On the mantel was a glass pitcher holding a gallon of cider, which was just sharp enough to scratch the throat of him who drank it. A ten-year-old boy had a big stick of stovewood upended between his knees, on one side of him a basket of hickory nuts, which he was cracking on the end of the stick between his knees, and tossing the cracked nuts into a basket on his other side about as fast as the two middle-aged men who sat in the comfortable old rocking chairs could eat them. These two were old cronies who had spent many a day together, and the two dogs that were lying by the stove had been their constant and faithful partners on a great many of their trips afield. It was natural that the two should talk about things pertaining to field sports. One of them was telling some experiences with ruffed grouse in the Black Hills, and when he had finished the story the boy stopped cracking nuts and said, "Uncle Mahlon, tell me about that trip you and grandpa made to the reservoir. I've never heard all of that story yet."

"Well," said Uncle Mahlon, "wait till I drink about two glasses of cider to cut the hicker nut grease out of my throat, and I will tell about it."

After drinking a glass of the cider he said, "If Gran'ther Hill was drinking this cider he would be polite enough to say it was mighty good cider for the time of year, but I imagine it is not near hard enough to suit his taste. That trip to the reservoir was a good while ago, before you were born, but I remember it pretty well yet. One glorious October your grandpa and I hitched old Sorrel Top to the little spring wagon and struck out. We got an early start, and by noon had got to where we thought we could find some sort of game for dinner, so we drove into the edge of the woods, and having unhitched the horse and fed it, we struck out after game, and your grandpa scared up a pheasant which he killed, and we went back to the wagon and built a fire and broiled the pheasant on the ends of long sticks and made coffee, and with our other stuff had the best dinner we ever ate. Then we lay down in the warm sun, just too lazy and contented to do anything else, and both went sound asleep, and maybe wouldn't have waked up the whole afternoon if some hogs had not come nosing round and got into trouble with the dogs. That evening we got to Fort Recovery and stayed at the hotel.

"At noon the next day we only stopped long enough to feed the horse and eat a cold lunch, then drove till 3 o'clock. The horse seemed to be getting tired and the woods looked pretty good for rabbits, so we tied the horse and struck out into the woods. We had not gone far when your grandpa in trying to step over a log, fell sprawling, and almost fell on top of a pheasant. I was so interested in the sprawling and scrambling motions he made that I did not shoot at the pheasant, but he somehow or other got the gun to his shoulder and while lying flat on his stomach shot at the bird, then got on his knees and watched the bird fly away. A little after it had gone out of my sight he said, 'I've marked him all right.' He always could beat everybody marking birds. We went after the bird, and when we were about 50 yards from the tree by which he had marked it, we heard a fluttering in the dry leaves, and rushing over there found the bird kicking its last. It would be too long a story to tell about each bird we killed that afternoon, but we and the dogs worked like beavers till sundown and brought in eighteen pheasants, and I got about two-thirds of them, for it didn't seem to be your grandpa's day for pheasants. I was mightily tickled over it, for he most always socked it to me a little when we went after quail, and I had a new Parker gun and now I felt that I had a gun that I just couldn't miss swith.

"There was a house near where we had left the wagon, so when we got back your grandpa took the horse and got permission to put it in the stable, and I set to work making a lean-to to shelter us over night. How do I make a lean-to? I found a big dry log with two trees standing about 6 feet from the log and about 8 feet apart. I cut a pole long enough to reach from one tree to the other. Then I cut two saplings 8 feet long with forks on their upper ends, leaned them against the trees and put the pole in the forks. Then I cut other poles and leaned them against pole that reached from one tree to the other, letting the other ends of the poles rest on the ground so they slanted like the rafters of a house. Over these poles I spread a big piece of canvas we had brought along, and it was big enough for the ends to hang down and close the ends of the lean-to. The top edge was tied to the cross pole and heavy pieces of wood laid on the canvas where the edges flattened out on the ground. By the time your grandpa got back the lean-to was almost done, and he went right at a couple of the pheasants to get them ready for cooking. He was the greatest fellow you ever saw to dress game. He can do it the quickest and cleanest I ever saw it done."

"I know that," said the youngster. "I've seen him dress many a squirrel and quail."

"He was an all-round good man about the camp every way. Wasn't a lazy bone in him, either in the field or round camp. That's why I liked to have him along. Some fellows are so worthless around camp that it's a nuisance to have them in sight, and they are not in sight in more than one camp with me. Well, we built a fire against the big log and prepared and ate a fine supper of broiled pheasant, bread and butter and coffee. My! but it was good and we ate a lot of it—ate a whole bird apiece. We also dressed a couple of big rabbits and broiled them a little for the dogs.

"After supper we brushed a lot of dry leaves into the lean-to for our bed and made good beds for the dogs in the same way. We spread blankets over the leaves and took the wagon cushions for pillows. After everything was ready, we took some birds to the house and gave them to the people who lived there, and they invited us to stay over night with them, but we preferred our snug camp. Then they insisted that we have breakfast with them, and we accepted, but wished we hadn't, for the pheasants were not cooked to our liking, and it wasn't like a breakfast in camp anyway.

"After breakfast we struck out for more pheasants and got several more. (Just wait, sonny, till I get another glass of that cider.) About 10 o'clock we hitched up and drove the rest of the way to the reservoir, getting there before noon. What is the reservoir? Well, in the first place, it was a great big piece of woods, many of the trees very large ones, and there were tens of thousands of them. The Beaver River ran through those woods, and its banks were very low. To furnish water for a canal, a dam was built across the river, and for several miles across the low ground on either side of the river. The ground is so nearly all the same level that when the water was held back by the dam it covered 17,000 acres of the woods with water. It is said to be the largest artificial lake in the world. The standing water killed all the trees, and after a few years most of them rotted off even with the top of the water, and becoming soaked, sank to the bottom. At the time we were there, the dam was somewhat out of repair, so the water was about 4 feet lower than usual, leaving the tops of the stumps about 4 feet above the water, and there were still hundreds of the big dead trees standing. Queer looking place? I should say so. Can't describe it. It is dreariness, desolation and death. When darkness begins to fall and a mist rises from the water and the trees that are standing look like giant ghosts, and the big owls perch on them as they do every night, and hoot, its an eerie, uncanny place.

"We stayed there only a few days, and one mallard and one pheasant was all the game we got. On the way home we stopped and hunted half a day in the woods where we killed so many pheasants, but not a bird could we find. Guess they must all have been in the trees that day. In the afternoon it began to rain, and the rest of the way was slow, muddy, wet, cold and miserable. Now let's have some more cider."

O. H. HAMPTON.

In Frontier Days.—III.

The Demise of Splayfoot.

WINTER set in in a few days after the wolfers had finished their tunnel. One morning when they awoke they found a little pile of snow in the fireplace which had sifted down the chimney during the night, and when the door was opened they saw that a real blizzard was on. The bitterly cold wind was from the east, and the snow was falling so fast that the opposite shore of the river was invisible. They were delighted at the change; their days of enforced idleness were over; from that time until spring they would be busy poisoning and skinning wolves.

Very early the day after the storm they started out to kill and poison some baits, Jack and Ben going to the west, Longhair and the Scribbler quartering up the hills to the east of the cabin. It was very cold; a thin, sparkling feather of frost hung in the air, and great clouds of fog arose from the narrow black line of open water in the channel of the river. The storm and intense cold had driven unusual numbers of game in from the plains. The bottoms and slopes of the valley were fairly black with buffalo, checkered with the light forms of the antelope, which were also there in thousands. A band of mule deer, alarmed by the approach of the two men, suddenly rushed out of a low coulée and then stopped to gaze foolishly about. But they were safe; even the big buck with the massive set of antlers was too small for a good bait, and in those days his kind were seldom killed for food.

Whatever may be the case elsewhere, the mule deer of the upper Missouri subsist almost entirely upon the slender terminal shoots and leaves of the greasewood brush; one always finds the paunch distended with it. Is it this diet of dry, bitter wood which makes their meat so dark and coarse, their fat so hard that when cooked and hot it instantly congeals and sticks to one's mouth? Their flesh is certainly not to be compared to that of the other ruminants which subsist chiefly upon grass. So little did the wolfers think of them that they never shot one; buffalo meat was their preference, varied occasionally by a feast of fat bighorn or antelope or white-tail deer.

About half a mile from the cabin a well traveled game trail entered the valley from the plains through a break in the prevailing cliffs. As Longhair and the Scribbler approached the place, a small herd of buffalo was just coming through on their way into the valley. They kept on until they were directly opposite the two hunters, a coulée about 200 yards wide intervening between them. "Paste that big cow in the lead, Scrib," said Longhair, "an' be sure to hit her so she'll drop right there on the trail; we don't want no baits down in the coulées."

The Scribbler refused the shot. "You are a better marksman than I am," he replied; "shoot her yourself."

Longhair brought his gun to his shoulder and fired with the ease and celerity of the professional hunter. The crack of the rifle sounded very faint in the cold, thin air. Thud! went the bullet against its mark, and down dropped the cow in her tracks, shot through the shoulder and heart, as was afterward ascertained. Is the .45-70, the .50-110, the .30-30 powerful enough for bear, for moose for elk? modern sportsmen are continually asking. Powerful fiddlesticks! What weapon was it that practically exterminated the buffalo, and so decimated the ranks of the grizzly tribe? 'Twas the Henry rifle with its 28 grains of powder and 200 of lead. It was a deadly thing in the hands of those old-time hunters.

When Longhair fired the herd lost no time in scampering back up the trail. The hunters made their way over to the fallen cow, turned her on her back, propping up the body by turning the head sharply around against a foreshoulder, and then removed the entrails. A large amount of blood remained in the cavity, and they quickly poured two bottles of strychnine into it, thoroughly mixing it with the rapidly congealing fluid and smearing the whole inside. The contents of another bottle was sprinkled into deep gashes cut in the body and upon the heart and organs lying beside it. Before they had half finished several interested spectators arrived. A couple of magpies were the first to come, and they were so bold that they fluttered about the men, chattering and scolding almost within arm's reach. Next came a kit fox sniffing the air and picking up his ears and alternately advancing and retreating in the trail just above. Poor creatures! they fell victims to the deadly poison before the wolfers passed out of sight of the bait.

The next trail entering the valley was three miles further on. There also a buffalo was killed and poisoned, and the two swung down the ridge to the river. Here were more buffalo, and the Scribbler shot one, which tumbled over the steep bank onto a sand bar at the water's edge. In winter the wolves traveled up and down stream a great deal on the ice, and although the snow had fallen but a couple of nights before, they already had a well-beaten trail near each shore. It was a sort of boulevard, a strolling place, where they met of nights to practice their weird and melancholy chorus. It was an ideal place for a bait, that sandbar beside their well-beaten road, and Longhair surveyed the carcass of the buffalo with great satisfaction. "Them two up on the hills is all right," he said, "but here's where we make the biggest killin'. There, we've poisoned it to rights. Come on; le's go home."

Tired of tramping through the deep snow, they chose the easier route homeward over the ice, following the wolf road. On their way they saw where a buffalo had walked out on the ice to get a drink from the open water in the channel, but there was no returning track, and the broken ice at the edge of the narrow opening explained the reason—it had crashed through the thin sheet and drowned. A great many of them lost their lives in that way every winter.

Arrived at camp, Longhair and the Scribbler found that their partners had preceded them and had supper ready. How warm and cozy the cabin was after the long tramp in the cold and snow! How cheerful the ruddy glow from the fireplace illuminating every detail of the rude interior. And how they did relish that meal of boiled ribs, beans and bread!

Jack and Ben had put out four baits, and on their way home had found three wolves lying dead around the carcass of the first buffalo they had killed. As they were not frozen, they skinned them and brought in the pelts. It was a good beginning, and proved one most important point—that their strychnine was good.

The next morning the river was found to have frozen solid, so all hands crossed over and put out some baits on that side and up Eagle Creek. The succeeding day the baits first put out were examined, and sixty-three wolves were found, to say nothing of coyotes and kit foxes, which were of no value in those days. Around every bait the snow was strewn with the long-haired animals. Some had died with their heads on the carcass; a few had got away several hundred yards before falling; the majority lay within a circle of 50 yards. Some were very dark colored; some a light gray; a few as white as the snow they lay upon. "We're sure in luck," Ben said that evening. "Le's see: five times sixty-three—three hunderd an' fifteen dollars' worth o' pelts in two days, baits acrost the river not counted. If we could keep that lick up all winter we'd come out millionaires next spring."

"The Lord tempers the wind to a sheared sheep, as the preacher says," Longhair remarked. "Looks as if I was goin' to make enough ter buy some more pack mules 'n' a saddle hoss 'n' a new outfit o' stuff."

And now the days passed quickly, one much like another. When it was pleasant the wolfers wandered around among their baits, noting with great satisfaction the increasing number of wolves lying about them. When it was very cold or stormy they remained in their comfortable cabin, happy and contented. Nothing worried them. As the season advanced, a less and less number of wolves fell victims to the deadly baits, perhaps because the greater part of those in the vicinity had already partaken of the poisoned meat; or because the survivors had become educated and were wary of the food so temptingly offered them. One would naturally think that at sight of a number of his kindred lying stiff and stark about a bait, any sensible wolf would become panic stricken and immediately strike out for other regions. Unfortunately for the wolfers, there were but two or three chinooks during the winter, and they were of such short duration that the frozen animals never thawed out so they could be skinned. After January no more baits were poisoned, for it was evident that when warm weather did set in many of the pelts would decay before they could be removed. In fact, there were already more dead wolves than could be cared for.

"Le's take a spin down to my shack," said Longhair one morning in March.

Every one was in favor of the proposition, and after breakfast they strapped a few blankets and some eatables on their backs and started down the river on the ice. The sun shone brightly, the still air was just below freezing point, and the hills and bottoms were nearly bare of snow, the effects of a recent chinook. It was evident that spring was at hand. Even the game realized it, for everywhere along the bottoms and hills they stood lazily sunning themselves, or lay among the sage brush asleep. The buffalo had long since lost the beautiful dark brown luster of their coats, and were now a dingy, yellowish white. There were thousands and thousands of them in the valley that day, and apparently as many antelope. The coats of the latter, too, had been bleached by the brilliant rays of the winter sun. Bands of bighorn, thirty and forty in a bunch, were frequently seen on the nearby buttes, and occasionally a bunch of them, down close to the edge of the river, took fright at the approach of the travelers and bounded away up the hill, where from a safe distance they gazed curiously at the men, stamping the ground with their front feet as is their custom when alarmed. On and on, hour after hour, the wolfers trudged at a live pace, and on either side of them, at every step, some kind of game—buffalo or antelope, sheep or deer, elk or wolves—was in sight.

"There's where my shack is," exclaimed Longhair along in the afternoon, pointing to a gap in the south side of the valley.

"That's where Arrow Creek comes in," said Ben. "You sure picked out a bad place to camp; worlds o' game here, of course, but it's a reg'ler runway fer war parties travelin' back an' forth atween the Yellowstone an' the north; don't see how you made out to stop here as long as you did."

Arrived at the mouth of the creek, the first thing the wolfers saw was some moccasin tracks on the sandbar, and up in the timber bordering the river they found them again in a snow drift. They were evidently not more than a week old.

"Gran'pa's coat buttons!" exclaimed Longhair. "I'm glad I wa'n't here when these fish come along. What's that the preacher says? A poor man fer childern an' a fool fer luck."

"Therefore, being lucky, you're a fool," the Scribbler added.

"I never said I wa'n't," Longhair replied. "I've been a fool all my days, an' will be, world without end, as the preacher says. Some day I'll tell yer all about it."

The hills and flat were carefully looked over before the men left the shelter of the cottonwood grove and approached the shack, which was at the lower end of the bottom. Here also there were moccasin tracks in the drift before the doorway, but the makers of them had not crossed the threshold. The Indian is a superstitious creature, afraid of ghosts and spirits, afraid even of his own shadow. And there on the cabin floor in plain sight through the open dooor lay a fleshless human skull. Evidently Longhair's little trap had been the death of at least one paint-daubed warrior. The wolfers passed inside; the interior looked as if a tornado had broken loose there. The rocks and baked mud of the fireplace were scattered promiscuously over the floor; the logs and roof in the vicinity of the explosion had been forced out, and the whole corner was about ready to fall apart. The floor was littered with flour, beans and rice, evidently spilled out by the survivors in order to get sacks in which to stow provisions as they wanted. At least no sugar, coffee or bacon was found, and the molasses keg was empty. Among the debris were a number of gnawed human bones and parts of Indian clothing, and in one corner another skull was found, which pleased Longhair immensely. "I'll call it square right here," he said. "Two Injuns for four head of stock an' the outfit ain't bad pay."

It was not a fit place to camp; there was a disgusting oder of decayed flesh in the place, so the men went back to the timber, built a small fire and prepared their evening meal. They turned in early, and at daylight next morning were well on their way home, where they arrived in due time, pleased to have learned the result of Longhair's little scheme.

A few days after their tramp to Arrow Creek a chinook set in, and they were soon busy removing the hides from the poisoned wolves, and pegging them out on the ground to dry. It was hard work, and a greasy, disagreeable job, but they kept steadily at it, begrudging even the time required to eat their midday lunch. It was their harvest time; every well-haired and well-cured hide, they knew, was worth a five-dollar bill. No wonder they worked with tireless energy. One evening it was Longhair's turn to cook supper. "Grub pile," he yelled, as he poured out the tea, and the tired men wearily filed in and sat down at the table.

"Well," Ben began, but he never finished the sentence. There was an eruption of earth, sticks and grass under their feet, and with a loud woof! woof! woof! a huge grizzly shot out of the entrance to the tunnel, overturned the table with its load of food and dishes and sent the men sprawling in every direction. Exactly what they did in the next few seconds none of them was ever afterward able to tell. There seemed to be a general mix up of bear, men and furniture. There is no denying that they were panic stricken, too badly scared to yell or swear. Without stopping, the bear flew around and around the room like a whirlwind, woof, woofing, and knocking things out of his way. The bunks were in two tiers, and Ben and the Scribbler found themselves in an upper one looking down with distended eyes and open mouths at the bear careening around. Longhair and Jack had managed to get out the door, and just as they crossed the threshold the bear had struck it and knocked it shut.

"My God, Ben!" the Scribbler gasped, "what are we going to do?"

"Hey, Longhair! Jack! open the door an' let the cuss out," Ben yelled.

There was no answer, and the two looked at each other in dismay. The bear meantime had stopped in its wild and frenzied course and was standing near the opposite wall, swaying from one foot to another and dismally wailing. All of the rifles were over in a corner beyond him and out of reach.

"He's just as bad scart as we be," said Ben. "Le's throw some blankets at him an' set him goin' ag'in. Mebbe he'll dive back into the tunnel if he ever sees the hole."

"No, no," the other demurred; "more likely he'll take a notion to tear down the bunks or pull us out of them."

"He ain't seen us; he ain't looked up once. Now then, when I throw this, yell for all yer worth."

The blanket fell over the bear's head and shoulders, and with an angry, terrified roar he struck at it with his forepaws, at the same time backing to get out from under it, and to the watchers' surprise and delight he suddenly fell into the mouth of the tunnel and disappeared. The two men sprang to the floor, grabbed their rifles and were out of the door in no time, where they beheld Longhair and Jack perched on the roof of the cabin. "Git yer guns an' watch here," Ben shouted; "Scrib an' me'll go to the river end o' the tunnel; the bear's gone back into it."

They ran through the narrow strip of timber to the edge of the bank; the beaver cuttings and drift wood which had concealed the tunnel's end were scattered in every direction; there was no bear in sight. "He ain't come out," said Ben, "an' to git out he's got to back up the hull way, fer the tunnel's too narrow fer him to turn round in. We'll git him pretty soon."

But they didn't. Just then a shot rang out over at the cabin, followed by Longhair's triumphant yell. "Come back," he cried, "I got him."

Sure enough he had; the bear had stuck his head up out of the tunnel and then fallen back with a bullet through his brain. The wolfers gathered about the narrow entrance and looked in; there he lay at the bottom, stone dead. It was no small task to get him out, but with levers and ropes and pries they finally had him up on the cabin floor. "Look here, fellers," Jack suddenly exclaimed, lifting up a hind leg. "I'm darned if we hain't got ole Splayfoot at last."

Yes, 'twas him; there was no mistaking that foot, bent inward from the ankle, the result of an old fracture of the joint. "Well, well!" said Ben, "I never expected to see him ag'in. Jest think of it, we've follered him a thousan' mile off 'n' on, 'n' then got him right in the house at last. But, man! he wound things up in a blaze o' excitement. I dunno when I been so flustered as I was when he kinder blowed up through the tunnel."

"All things comes to the feller what waits, as the preacher said," Longhair put in. "Well, le's drag the old cuss out 'n' skin him."

The next morning the wolfers inspected their tunnel. Why old Splayfoot had undertaken to explore it was a mystery, but why he had bolted up into the cabin was plain to be seen; almost at the end the roof had caved in, completely filling the cut, and as he could not turn around he had been forced to go on. It took the men a whole day to wheel out the dirt and prop up the roof, and then the entrance at the river was carried over as before. However, they luckily had no occasion to use it that year; so long as they remained there no war party ever came near the place.

* * * * * *

One day in April the long expected and long looked for smoke of a steamer was discovered far down the river, and the wolfers hurried to get their belongings out on the bank, ready to put aboard. The result of their season's work made a goodly showing; there were 900 prime wolf skins, twenty in a bunch, pressed, baled and bound with rawhide thongs. There were also some bear hides, including Splayfoot's, and a few beaver pelts which Jack had caught at odd times in the river near by. It seemed to the impatient men as if the steamer would never arrive, but finally she came puffing slowly along against the swift current, and in answer to a rifle shot swung in to the bank. The gang plank was lowered, the hawser made fast to a tree, and as the deck hands ran out to carry on their pelts and things, the wolfers stepped aboard, the cynosure of all eyes. There were many passengers, including a number of women, come to try their fortunes in the boundless West, and they crowded around the new arrivals and began to ask all sorts of questions. Ben and Jack and the Scribbler fled from them, but Longhair was in his element, and the lies he told those pilgrims were monumental. "Are the buffalo very fierce animals?" one thin, consumptive looking man was heard to ask.

"You bet they be," Longhair replied. "They rush at a feller on sight an' eat him up if they catch him. They don't like white men much, though. They live mostly on Injuns."

"What do you hunters eat mostly?" a woman asked.

"Meat."

"What? No vegetables? No green things of any kind?"

"Well, we eat grass in the spring when it's young an' tender like; we bile it an' put on vinegar, an' it goes fust rate."

The tenderfeet believed everything he said.

Fort Benton was sighted the evening of the second day after the wolfers went aboard. The steamer whistles blew, a cannon at the old adobe fort boomed a salute to the first boat of the season, and all the people of the town thronged to the levee to see her come in. There were merchants and soldiers, gamblers, saloon keepers and hurdy gurdy girls, traders and trappers, miners from the Rocky Mountains, bull whackers, mule skinners and Indians, a motley crowd. The wolfers were vociferously greeted by their friends, their hands nearly shaken off. "Come on," they cried, "and bring your friend. What's his name? Longhair? Come on, Longhair, the town's yours."

THE SCRIBBLER.

A Small Cook Book

For Our Club House.

Chapter III.—Ducks, Turkeys and Chickens.

To cook a duck, put him in a baking pan having a tight cover, with a half-inch of water in the pan. Break two sticks of celery in two and lay over his bosom. These are all the flowers needed at the funeral of a duck. Cover him up tight and bake or roast him, whichever it may be called, in a hot oven, and it is sinful to leave him to get overdone.

The turkey is a hard bird to spoil, but he must be well stuffed. If you have oysters for the stuffing, there is nothing better. If not, break up a small loaf of bread into good sized crumbs, salt and pepper them well, put them in a skillet with a lump of butter and brown them, after which add a sprig of sage crumbled up fine, and a double handful of raisins. Stuff the turkey with this in preference to the wet, soggy concoctions sometimes used.

To fry a chicken, clean and dry it and cut into halves or quarters, dependent upon its size. Rub the pieces in flour and then rub more flour in the pieces. Put a few slices of breakfast bacon (which means smoked bacon) in a frying pan and fry the grease out of them. Add some lard to the bacon fat so as to have enough to cover the bottom of the pan well. Salt this and pepper it well while it is hot, and when it is smoking hot put in the chicken. When it is browned and cooked through, proceed in one of the following ways:

Transfer the chicken to a baking dish.

Pour off all the grease but the "settlings," and add a little water to the settlings in the frying pan. Bring it to a sizzle, pour it over the chicken in the baking dish, cover the dish and set it in the oven or on the stove to steam for a moment or two. This makes fried chicken tender. Flavoring the hot grease makes it taste good. Of course every woman thinks she can fry a chicken as well as the next one, but let her try this kind on her men folks once and take their verdict.

The other way is the true Maryland style, and involves more trouble. First of all, make some cornmeal mush and let it get cold and hard, cut into slices and fry to a dark brown. When the chicken is taken from the frying pan it is placed on a hot platter and put in a warm place while you make the gravy. Pour off all the fat but about a tablespoonful, being careful to not pour off any of the settlings. Put into the pan a tablespoonful of flour, and, with the pan on the stove, mix it with the fat. Pour into this a sufficient quantity of cream—about a pint will do—salt and pepper it and stir it while it boils for five minutes. (The flour must be cooked, else it will be only so much starch.) Pour over the chicken, garnish with the fried mush, and if there are any complaints refer them to me.

There are, of course, many other things to eat, and many other ways of preparing even the few things mentioned above, but these suggestions will suffice to make successful cookery for members of hunting and fishing clubs, and they are also recommended to keepers of hotels where sportsmen stop. One more word in closing. Do not give your guests any one thing too often. Change the bill of fare each meal. Chicken is good one day, it is endurable the next and intolerable the third day. Variety is the spice of cookery.

GEORGE KENNEDY.

Natural History.

North Carolina Wolves.

LITTLETON, N. C., Dec. 10.—*Editor Forest and Stream:* In several numbers of FOREST AND STREAM recently there has been mention of wolves in eastern North Carolina. I have just returned from a quail shooting trip to that section, and at the same time a visit to my parents. Added to the pleasure of seeing them, I had fine sport on birds, which are plentiful, but find the thickest places for cover I ever saw when a covey is flushed. There are so many peanuts for food and stacks of shelter that snows can have but little effect upon them. Woodcock and turkeys are plentiful there, and rarely ever hunted. With a properly trained dog I think I could kill a turkey every day.

Of particular interest to me was a captive she wolf which my brother, Mr. G. C. Picot, had kept chained for several months at his country store. During this time she passed through a period of œstruation. My brother made a great many ineffectual efforts to breed her to various kinds of dogs. In his efforts he was warmly seconded by her wolfship, who made every show of solicitation. Her actions were just like those of a female dog under like condition. But the only effect these advances had upon every dog was to make, from the end of his tail to the back of his head, "each particular hair to stand on end like quills upon the fretful porcupine." The first scent of the wolf caused the dog's tail to draw tightly between his legs, and there he kept it until he was removed to a distance, when he would sit on his haunches and say, "Boof! boof, boof!" just as dogs do when they catch the smell and sight of the peregrinating Italian and his dancing bear. A very conceited bull terrier was offered, and his vanity received a crushing blow. His courage was no better than that of curs of low degree. He whined piteously to be removed from her presence. Really it was the smell of the wolf that so terrified the dogs. The Delaware Park superintendent, after scoffing the idea of wolves being caught in North Carolina, bought one from Mr. Abbott at a good, stiff price, and has it on exhibition with other wild animals peculiar to North Carolina and Virginia. Delaware Park belongs to the Seaboard Air Line Road, is about forty-five miles from Portsmouth, Va., south, and is used as a picnic and pleasure ground for excursions. I could furnish you a kodak of the wolf if it would be of any interest to you or your readers. It will be a most difficult matter to exterminate these wolves, on account of the inaccessibility and large size of the forest in which they are hidden.

L. J. PICOT.

The Fear of Wild Animals.

MORGANTOWN, W. Va.—*Editor Forest and Stream:* I have always been impressed with the erroneous ideas of the great mass of people in regard to the danger of contact with wild animals of this country, at one time making mention of it in FOREST AND STREAM, and speaking particularly of the fear of panthers. All of the old-time hunters with whom I have talked had a mortal dread of them.

I was much pleased with the editorial of a recent issue of FOREST AND STREAM on that subject, since it expressed so exactly what my own experience and investigations have proven to be correct, and I was just writing a few lines to express my appreciation of that article, which was well worth preserving, when along came an article from S. E. Filkins, which called for some moderation of the editorial.

I haven't a doubt about every word of Mr. Filkins' being true concerning the New York panther, since it is just in keeping with the "critter's" way of doing things.

That they will follow a person for miles either in daytime or at night is a certainty, and no doubt that is what gives them a bad name. That they make suspicious demonstrations and "hair raising" noises is also true, but the only proof we can accept that they will actually attack a man is to learn of some known instance of the kind, and I have never yet known of such, and have never heard of it except in stories which originated in the mind of some writer, which are disgusting to all who are familiar with wild animal life.

Two instances of adventure with these creatures came under my observation while living in the Rocky Mountains, which bear out my belief. My near neighbor, Cooke Rhea, a noted hunter, at one time wounded one and it went into a sort of cave under a large rock. Being a man who knew no fear, he went in after it. After being in some little time, objects began to be discernible in the dark, and he saw the panther but a few feet from him. He fired at its head and succeeded only in breaking its jaw. Rather than attack him even then, when wounded and crowded as far as it could go, it slunk back into the corner and was shot to death without showing sign of fight.

Another one came to an outbuilding at Mountain Home Road Ranch, on the Medicine Bow Range, after some meat which was hanging there. It was discovered and attacked and killed with a pitchfork in the absence of a gun, and no one received a scratch. These are facts.

An uncle of mine, an old-time hunter, went off on an extended hunt once to be gone over night. When quite a distance from home his dog came to him and he allowed him to follow. That night when his fire had burned low he was aroused by his dog jumping over him and chasing some animal. After it got some distance away it began its unearthly screaming, and then he knew it was a "painter." Of course, he believed until the day he died that his dog saved his life that night, while I firmly believe that had his dog not been along he would never have known there was a panther near him. With their size, wonderful strength and agility, they would certainly be the most dangerous of North American animals if they were inclined that way, and we would have a long list of people killed by them, for no man could live two minutes in combat with one. Who can tell of an instance of a man being attacked by one? Let us hear of it, for nothing else can convince us.

When I read the editorial referred to, I wished so much that all my Eastern friends could have read something of the kind before I returned from the West, as it might have saved me the annoyance of replying to many foolish questions such as "Did you ever have any fights with wild animals?" "Weren't you afraid to be in the woods alone?" etc. I do believe there is less of intelligence and knowledge among otherwise intelligent people on this subject than any other that could be mentioned.

EMERSON CARNEY.

Eider Ducks on Toronto Bay.

TORONTO, Can.—*Editor Forest and Stream:* In your issue of Dec. 15 mention was made of an eider duck having been killed near Toledo on Lake Erie, evidently a rare visitor in that locality. While I can hardly say they are common near Toronto, there is generally one or two taken every year. This year, however, there has been an unusual number about the bay, fifteen or twenty having been killed in the harbor.

The eider ducks that come this way seem to have less fear of man than the ordinary domestic fowl, consequently they afford an easy mark for the first man or boy with a shotgun that happens to see them, so that perhaps it is a good thing for the future of the species that so few of them visit the Great Lakes.

JNO. TOWNSON.

The Starling in America.

NEW YORK, Jan. 12.—*Editor Forest and Stream:* While discussing a proposal made by Didymus to introduce the English woodcock in America, Mr. Van Name, in your issue of this date, refers to the "European starling" and says that it "will probably prove to be a great pest." Will Mr. Van Name enlighten one who wishes to know what bad habits he considers the starling to possess?

EDWARD BANKS.

Stray Blackbird.

BARRE, Vt.—I have noticed several times recently a blackbird among a flock of English sparrows. It flies, eats and lives as one of them. From size, color, etc., I should say it is what is called the cow bird, or cow blackbird. Is it not a singular incident that this bird should be wintering so far north? We now have 18 inches of snow, and are having about zero weather.

B. A. EASTMAN.

Camp-Fire Flickerings.

"That reminds me."

Last Year's Calendar.

WEATHER assorted,
Snow storms imported,
A gale that cavorted
Through forest and stream.

Then wonders of bloom,
White orchards in June,
A wealth of perfume,
For forest and stream.

Dust and humidity,
Heat like torridity,
A lack of frigidity,
In forest and stream.

Weather assorted,
Game laws distorted,
Fishing reported,
In FOREST AND STREAM.

F. L. W.

The Story of a Steer.

DURING a recent trip on a small sternwheel Puget Sound steamer I chanced to drop into the smoking room for my after dinner smoke. The atmosphere was heavily laden and gave forth the diversified odors common to these boats. It was occupied by a picturesque crowd of swarthy lumbermen, picked up at the various lumber camps along the route, rough miners and prospectors from Alaska and Washington, sleepy moon-eyed Celestials en route for Seattle, Siwash Indians from the salmon fisheries, here and there a drummer and traveling poker player, and a motley assembly in general. I have found by experience that among such an assortment of human nature I would be liable to pick up something of interest, so I seated myself as near a window as possible and listened to the conversation. Ere long stories concerning the immense amount of game formerly found in the Puget Sound country became the topic of the conversation. Some quite startling yarns were spun, and finally an old chap, unkempt and unshaven, and who had evidently occupied his clothes both day and night for a long period, fixed his glittering eye, like the Ancient Mariner, upon the crowd, and thus he spoke:

"'Pears to me you fellers hain't never seen no geese wuth speakin' on 'longside what I seen in this yer country 'fore now. I come from Indiany 'long in '70, and pitched down on the Swinnowish Flats. Talk 'bout geese—a man them days had to jest yell ter hear hisself 'bove the tarnal honkin'. Fust I hired out for $35 a month just to rustle them geese off the grain, for every fall they nigh eat up 'most all ther' crop. Had a rifle and ca'tridges throwed in and plenty grub, too. Wall, after follerin' this some weeks, I see ther' was big money killin of 'em, if I cud git plenty on 'em to one shot. I see they paid no 'tention to cattle browsin' 'round, so I got an ole steddy, long-legged steer and trained him up. I humped up under his belly and mighty soon got him trained so I could work right outer them geese after circlin' round fer a spell. I rigged up a big single gun holdin' nigh half-pound er shot, and fixed a sling fer ther' ole gun 'twixt the steer's front legs. When I gut nigh enuf I faced the steer bow on and let her rip inter 'em, and fust time I let her off she punched me back 'mong that steer's hind legs and mussed me up bad. I uster be in ther' navy onct, so I rigged a runnin' britchin' for that gun, and that took off ther' kick."

"How many did ye ever git to one shot, ole man?" queried a lumberman.

"Best I ever done was eighty-four with both berrils," the old chap modestly replied.

"You jest said you had a single gun, pard."

"Wall, what if I did? Hain't any you fellers ever busted inter a mess er birds. You can't never kill half what yer ort ter, and 'most likedly only skin down a few scatterin ones on the aiges. I found that out, and gut a good double barrel and had her bored out, so I recken she spread her shot nigh 20 foot, and used to rip both on her berrils off to once. After follerin' them geese some time, I see they gut mighty uneasy, 'cept when that steer kept browsin', so I set to work and gut that steer to keep his head down, and when ther' wa'n't no feed at all the old cuss would slobber his mouth over the ground just like he was feedin', and as he drawed up to the geese I could hear him sort ur chuckle inside when he squared 'round fur me ter shoot. Wall, I jest laid out thousands er them geese, but arter awhile I hed to quit."

"How's that, now, when you done so well?" was the next query, and I thought I detected a sly twinkle in the old man's eye as he replied:

"Wall, I'll tell ye. 'Long towards spring one or them fellers from Vanco'ver came down with one or them smell dogs huntin' snipe, and I recken that ere steer seen that dog work, for one day arter rippin' in good rakin' fire, that cussed steer broke shot 'spite all I cud do and run in to retrieve them geese and tramped me nigh ter death, an' I never could break him on it, and 'sides that, them Swinnowish geese grew so dog-gone cunnin' that when they seen a steer swoopin 'long with six legs a-workin' they riz up and lit out plum for Califony."

CAZADOR.

Game Bag and Gun.

Proprietors of shooting resorts will find it profitable to advertise them in FOREST AND STREAM.

Notice.

Abolish the Game Markets.

Editor Forest and Stream:

Your editorial anent the FOREST AND STREAM Plank in the sportsman's platform, in your issue of the 5th inst., is encouraging reading for all advocates of this Plank.

The widespread interest in game protection, reaching as it does to all sections of our country, has been fostered by the sportsmen's press. Game and fish butchers are being held up to public scorn, and other legitimate ways are adopted to crystallize public opinion on the subject of the protection and preservation of our game, fish and song birds.

No greater proof is wanted of the power of the press than the immense work along this line and its result during the last decade.

But the press cannot do it all. While much has been accomplished, much remains to be done. Even with present safeguards our game is doomed to extinction unless the marketing of game is absolutely forbidden and the laws rigidly enforced.

To this end sportsmen everywhere should organize and labor till this is accomplished. Organize, organize. Every State should contain a sportsmen's association with a large membership. More can be accomplished by organized effort in one year than can be done by desultory, intermittent, individual effort in ten. An association of 2,000 members, united as one man for a purpose, is a great power. One of 10,000 becomes almost irresistible. Therefore, organize.

Every owner of a gun—and his name is legion—should at once unite with his State association, and if there is no State association, issue a call for the formation of one. Then rush the work all along the line till the closing of the game markets is an accomplished fact.

Now a word as to game markets. The statutes of Ohio read as follows, Sec. 6964: "Whoever shall at any time catch or kill any quail, etc., for the purpose of conveying same beyond the limits of this State, or for sale in the markets of this State, or shall transport or have in possession with intent to procure the transportation beyond the limits of this State, or for sale in the markets of this State, any quail, etc., shall be fined as provided in Sec. 6968."

On the face of it this is a good law. It is fairly well enforced, and its enforcement has resulted in a moderate increase in the game of the State.

But while the markets are unable to furnish game, its sale goes right along without fear of the law or its penalties. Scarcely a hotel of prominence in the State but has furnished its guests with quantities of game. Restaurants everywhere not only furnish their patrons with such game as ducks, squirrels, quail, grouse and rabbits, but sell them to any one who will pay the price.

The law should be changed so as to include hotels and restaurants. The object of the Ohio law is to prohibit the sale of game. It does not do so. It could be made to do so most effectually by adding a clause to Sec. 6964 defining the term "market."

There is plenty of work cut out for our sportsmen, especially those living in Ohio, and it cannot be commenced too soon. A new Legislature is to be elected this year, and we must see to it as far as we can that only those candidates are returned to the Legislature who are favorably inclined toward game protection and a prohibitory game market.

Then abolish spring and summer shooting, confine the season to the glorious days of autumn and this generation of sportsmen will not have lived in vain.

American Wildfowl and How to Take Them.—XIX.

BY GEORGE BIRD GRINNELL.

[*Continued from page* 25.]

Ring-Neck Duck, Tufted Duck.

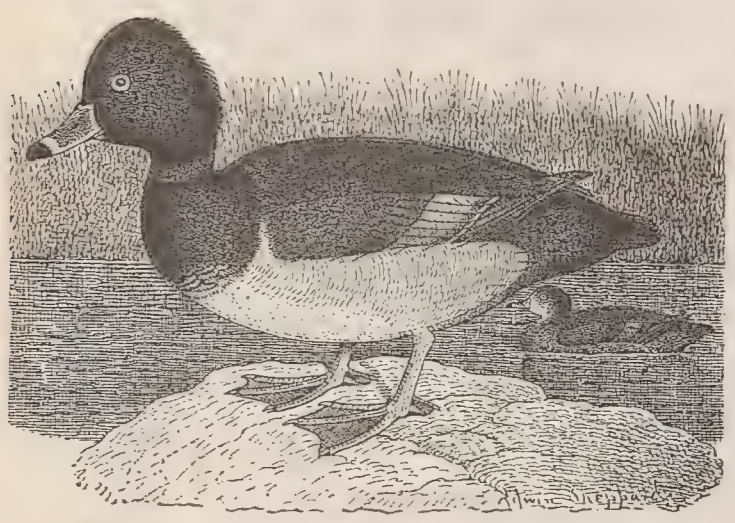
Aythya collaris (Donov.).

THE adult male has back of head and crown loose and puffy, at times showing almost as a crest. The head, neck, breast, upper parts and under tail-coverts, black; the head sometimes glossed with purple and the back with greenish. There is a more or less distinct chestnut or reddish brown collar around the middle of the neck, and a white spot upon the chin. This speculum is bluish gray; sides of body waved with white and blackish lines. The under parts are white. The bill is dark grayish blue, with a black tip, and a very pale (in life nearly white) band across it, near the tip; the eyes are yellow.

The female does not show the neck ring, and the bill is less plainly marked. The black of the male changes to brown in the female. The fore part of head, all about the base of the bill, is nearly white. The lower parts of the body are white, sometimes marked with brown or brownish gray, growing darker toward the tail. The length is 16 to 18 inches.

The female of the ring-neck duck is very similar to that of the redhead, but the former is darker, except about the bill, where the pale markings are much paler, often almost white. The difference in the bills is characteristic, that of the female ring-neck being much the shorter and broader.

The ring-neck duck is by no means so abundant as many of our other species, and is quite commonly con-



RING-NECK DUCK.

fused with the little blackhead, which it closely resembles in habits. In fact, as a rule, gunners do not distinguish between the tufted duck and the little blackhead, and when counting up their score at the end of the day always refer to this species as a blackhead. Its common names indicate this confusion. It is called ring-neck scaup, ring-neck blackhead, marsh bluebill, bastard broadbill, ring-billed blackhead, ring-billed shuffler, and sometimes it is called creek redhead, because of its resemblance to that species. I have also heard boatmen, who had happened to notice the red collar about the bird's neck, call it a hybrid between a blackhead and a redhead.

The ring-neck duck is found sparingly throughout almost the whole of North America. Its chief breeding grounds are north of the United States, but it probably used to breed also in suitable localities on the plains, and its nests have been taken near Calais, in Maine, as well as in Wisconsin and Minnesota. Its nest is built usually in thick cover, close to the water, and is a neater structure than most ducks' nests. The eggs are usually of a grayish ivory white, and number from eight to ten. This species is occasionally taken on the California coast, and also on that of New England, but it is nowhere common. Even in the South, in that paradise of ducks—Currituck, Core and Albemarle sounds—these birds are few in number.

They decoy well and are easily killed when they come up to the stools, although very swift flyers.

It is said that this bird is more abundant on our inland waters than on the sea coast. Even there, however, it can never be called an abundant species. Its flesh, under favorable circumstances, is excellent eating, and if it were more abundant it would be one of the most desirable of our fowl.

The Golden-Eye, Whistler.

Glaucionetta clangula (Bonap.).

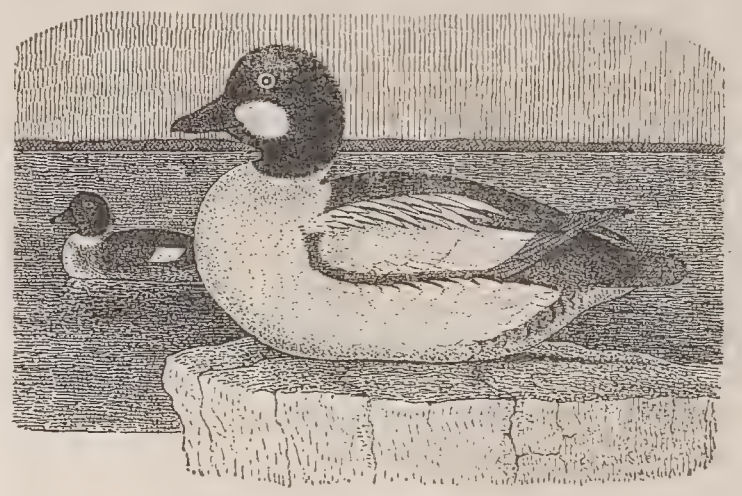
The adult male has the head somewhat puffy, but the feathers longer on the back of the head, forming more or less of a crest. The head and upper part of the neck are dark glossy green, with purple reflections and a roundish and sometimes oval white spot just back of the bill and below the eye. The lower neck, fore back, scapulars and wing coverts, with the secondaries and most of the under parts, pure white; the back, long scapulars, and the base of the secondaries, black. The long feathers of the wings and their coverts are blackish. The tail is ashy gray; the bill black; eye yellow; legs and feet yellowish red. The total length is about 20 inches.

The female has the head and upper part of the neck brown. There is a white ring about the lower neck, and the upper breast is gray. The back is blackish brown. The white on the wing is chiefly confined to the secondaries. The under parts are white; the tail is dark brown; bill sometimes yellowish, but more often brownish; legs and feet as in the male.

The American golden-eye has been separated by naturalists from the bird of Europe and called a variety, on no better ground than that it is slightly larger than the Old World form. Naturalists are not agreed on this point, and sportsmen are not greatly interested in such fine distinctions.

The golden-eye is a bird of wider distribution, breeding throughout the northern parts of the Northern Hemisphere and in summer pursuing its migrations as far south as the Southern United States and even beyond to Cuba. It is a bird familiar to all sportsmen, but from the standpoint of the epicure it is not highly regarded. It has been found breeding as far north as Alaska, and undoubtedly is scattered in summer, in moderate numbers, all over the British possessions. It breeds in Maine and also in Massachusetts, but probably not south of that. I have found the golden-eye common, in summer, in the high Rocky Mountains, not far south of the parallel of 49 degrees, but am unable to say whether it was this or the next species.

The golden-eye is one of the few tree breeding ducks,



AMERICA GOLDEN-EYE.

choosing for this purpose some hollow limb or broken-off stump in which to lay its eggs; these are pale grayish green in color and are said to be from six to eight.

Concerning the breeding habits of this species, the veteran naturalist, Mr. Geo. A. Boardman, said in FOREST AND STREAM:

"Fifty years ago we used to have six different tree ducks breeding on our river: Barrow's golden-eye and the bufflehead *(albeola)* rare, but the common golden-eye, the American merganser, hooded merganser and wood duck abundant. About fifty years ago pickerel were put into our waters, which soon put an end to most of our wild ducks breeding, as the pickerel ate up all the chick ducks except in the few lakes or ponds that were free from pickerel. Near to Calais are several ponds and lakes that are free from those fish, and the tree ducks bring their young to those lakes for safety.

"I was at the Kendrick Lake, and a lad that lived near by was with me. A duck (whistler) came flying low toward us, when the lad threw up his hat with a shout, when the old duck dropped a young one that fell near us that was at least ten days old. The old one went for it so quickly I almost lost it, but I got it and put it in my pocket for a specimen. We were near the lake, and the old duck also, when we saw she had four others in the water. The boy says if we keep quiet she will go away and bring others, or if she is afraid of us very much she will take those across the lake or to the other lake. They were getting near to some water grass, when the old duck made a flutter, caught one and went across the lake; it was hardly two minutes before she returned and took another.

"I don't think she took them by her mouth, and the one she dropped, if it had been in her mouth we should have seen it. Mr. Eastman, father of the lad, said they often took their young from one lake or river to another if they thought them in danger, and said he had seen them bring the young from the nest to the water and then in their bills, but, to go any distance, or if they are any size, carry them pressed to the body by the feet, and the boys often by a shout made them drop their young. They brought me several different kinds afterward, wood duck, whistlers and hooded mergansers, but no young of the large merganser."

The whistler, as it is frequently called, although resorting to the fresh waters during the breeding season, is much at home on the salt water in autumn and winter. It is an expert diver and feeds largely on shellfish, and when it can obtain them, on small minnows. On the other hand, it readily eats grain and frequents the wild rice fields of the interior and the fresh marshes of the coast, and when it has lived on grain for some time its flesh is very good eating. The name whistler, so commonly applied to it along the seacoast, is given because of the quivering, whistling noise made by the wings while the bird is flying, which is often recognizable long before the bird itself can be seen. Other names for this species are golden-eye, from its yellow iris; conjuring and spirit duck, from the rapidity with which it dives; brass-eye and brass-eyed whistler, whistle-wing, merry-wing, great-head, bull-head, iron-head, cob-head and cub-head.

While the whistler is one of our most beautiful ducks, it is not highly regarded by those who have an opportunity to kill better fowl, and like the little dipper and ruddy duck and the mergansers, it is often allowed to pass over the decoys without being shot at. It is not a bird that decoys readily, and as a rule offers little sport; but at many points in New England and Canada, where betters ducks are rare, its pursuit offers some reward to the gunners.

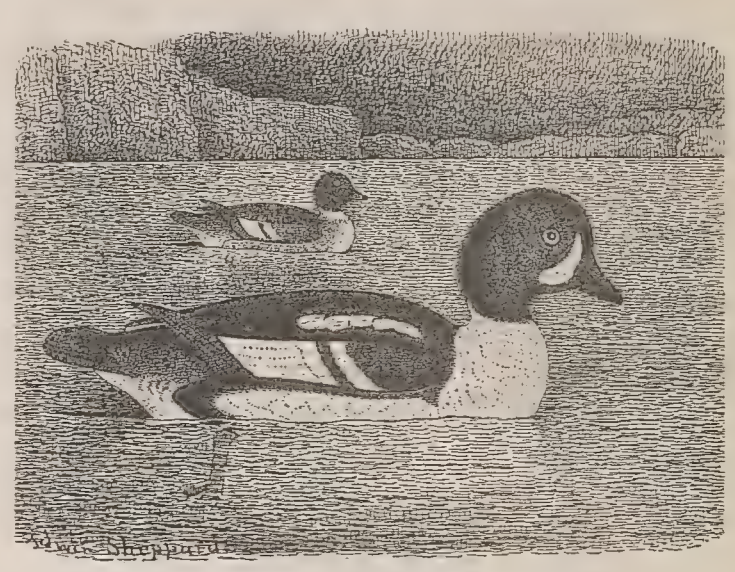
Barrow's Golden-Eye.

Glaucionetta islandica (Gmel.).

Adult male extremely similar to the golden-eye, but larger and with the head and upper neck bluish black, with purplish reflections instead of greenish, with the spot at the base of the bill and in front of the eye, triangular or crescent-shaped, and with very much less white on the wing, this usually being confined to two long bars with a short bar between them.

The female is much as in the ordinary whistler. The collar about her neck is narrower than in the whistler; the white on the wing is less and is crossed by a black bar. The grayish on the breast, sides and flank is wider in this species than in the whistler.

Barrow's golden-eye is much less common than the ordinary whistler. Like that species, it is a Northern bird, but it appears to be much less abundant in Europe than even in this country. I have frequently seen golden-eyes breeding in the lakes in the high Rocky Mountains, which were probably of this species, but I was never so fortunate as to have any of them in the hand. Like the whistler, Barrow's golden-eye breeds in trees, laying eight to ten eggs, grayish-green in color. Mr. C. W. Shepherd found this duck breeding in Iceland, where, in the absence of trees, it built its nest in holes in the cracks and crevices of the lava. Barrow's golden-eye has been found in Alaska, on the Yukon River, and at Sitka, and specimens have been taken at other points in the North. Mr. Boardman believes that this species breeds in the woods of Calais, Me., though as yet their nests have not been discovered. Mr. Nelson states that this species is a winter resident on Lake Michigan, and is proabbly found generally through the interior wherever there is open water. A number of specimens have been taken on the coast of Massachusetts. Dr. Elliot has found it quite abundant on the St. Lawrence River, near Ogdensburgh, and has frequently killed it there over decoys. He says: "The bird would fly up and down the river, doubtless coming from and going to Lake Erie, stopping occasionally in the coves to feed and floating down with the current for a considerable distance, when they would rise and fly up stream again. My decoys were always placed in some cove or bend of the stream where the current was least strong, for I noticed the birds rarely settled on the water where it was running swiftly. This duck decoys readily in such situations, and will come right in, and if permitted settle among the wooden counterfeits. They sit lightly upon the water and rise at once without effort or much splashing. The flight is very rapid, and is accompanied with the same whistling of the wings so noticeable in the common golden-eye. In stormy weather this bird keeps close



BARROW'S GOLDEN-EYE.

to the banks, seeking shelter from the winds. It dives as expertly as its relative, and frequently remains under water for a considerable time. The flesh of those killed upon the river was tender and of good flavor, fish evidently not having figured much as an article of their diet."

Another Long Island Conviction.

MANORVILLE, Jan. 9.—Gilbert W. Raynor, chairman of the Town Board of Audit, president of the Manorville Gun Club, deacon in the church, and ex-Justice of the Peace, was arrested here on Saturday last by Game Protector John E. Overton for shooting quail out of the season, and brought before Justice E. W. Lane. Mr. Raynor asked for time in which to procure counsel, and said he would want the trial by jury, so the request was granted and the trial set down for 11 o'clock yesterday morning. Mr. Raynor appeared somewhat late, and said he was not ready for trial as he had no counsel, but Mr. Overton stating that he had no counsel either, but was ready with his witnesses, the Justice proceeded to hear the case. Mr. George V. Hutton swore he saw Mr. Raynor shoot into a flock of quail at a point not far from the Manor depot, and saw one quail drop. Mr. R. L. Wells testified to hearing the report of a gun about the time mentioned by Mr. Hutton. Mr. Raynor refused to testify, but stated that he was out with his gun and dog upon the afternoon in question and in conversation outside admitted that his dog pointed a flock of quail, as sworn to by Mr. Hutton, but claims that he didn't shoot, but only raised the birds to count them. Justice Lane found him guilty and imposed a penalty of $25 or twenty-five days in jail. Mr. Raynor left his check, but declared he would appeal. Those who wish to see the law obeyed are commending both the Justice and Protector Overton for pushing this case and showing that the law is intended to apply to people of all stations in life, regardless of wealth and influence. There were witnesses present ready to testify that this was not Mr. Raynor's first offense against the game law.—Brooklyn Eagle.

North American Fish and Game Association.

QUEBEC, Jan. 8.—*Editor Forest and Stream:* I am instructed by the Honorable S. N. Parent, president of the North American Fish and Game Association, to call a meeting of the said Association, which meeting will be held in Montreal, in the Government offices, St. Gabriel street, on Wednesday, Jan. 30, at 10 A. M., and at which you are respectfully invited to attend.

L. Z. JONCAS, Secretary.

GLENS FALLS, N. Y., Jan. 12.—*Editor Forest and Stream:* Will you kindly give publicity through the columns of your paper the inclosed notice of the annual meeting of the North American Fish and Game Protective Association?

I would like to add a cordial personal invitation to all interested in these matters, especially regarding the harmonizing of fish and game laws, as between the States and Provinces, to be present at that meeting.

C. H. WILSON,
Vice-President for New York.

Colorado's Big Game and Its Future.

BY D. C. BEAMAN.

I HAVE been requested to furnish something on this question.

A portion of what I shall say has been anticipated by newspaper publication, but there were some errors in dates, etc., and as its restatement is essential to the completeness of this paper, I shall have to ask the forbearance of any who have already read it for its repetition here.

Unless there is a speedy and radical change in protective measures there is no future for the big game of this State.

A retrospect of thirty years will astonish those who have not given the subject close attention.

As is well known, the deer and elk thirty years ago existed in great numbers east of the Continental Divide. Now they are practically exterminated in that portion of the State, except in North Park.

The region known as the Gunnison country, which comprises the Cochetopa hills, the Elk and West Elk mountains, an area of about 4,000 square miles, was, twenty years ago, full of elk, deer and antelope. No one knows how many hundred thousand of them there were in that region, as it was only necessary to go a few miles from the town of Gunnison to get good hunting.

Now they are so scarce that no one thinks of going there to hunt, and for several years Gunnison hunters have been going to Routt and Rio Blanco counties for their big game.

Further north in the Huntsman's hills, on the Muddy and Divide creeks, the Grand and Battlement mesas, an area also of about 4,000 square miles, twelve years ago deer and elk were abundant. They are now scarcer there even than in the Gunnison region.

The White River Plateau, the Flat Top Mountains, the Trappers Lake and Williams Fork Basins—a vast natural garden of parks, groves and lakes of 1,800 square miles—was a game paradise fifteen years ago, and deer or elk were always in sight along the Trappers Lake trail, and in the Williams Fork Basin I have seen bands of elk numbering from 50 to 200, and deer were too plenty for good sport. I have not seen a deer or elk from that trail for more than three years, while the deer and elk have disappeared from the Williams Fork Basin, and I doubt if there is left in that whole region 5 per cent. of those there in 1885.

From a camp on the White River, twelve miles below Trappers Lake, in October, 1889, I have seen 300 deer pass in sight along the hill trails between daylight and sunrise on their way to their winter range. None can be seen there now.

There are, of course, a few deer left in the more inaccessible portions of these regions, but as hunting grounds they are no longer considered.

The deer of these regions which have not been killed have been gradually crowded north, until their summer range is in a region bounded by the Medicine Bow Range, the Wyoming line, the White River and the Eleventh Auxiliary Guide Meridian, a total area of about 5,000 square miles, but taking into account the portions from which they are excluded by the settlements and natural conditions, their actual summer range is probably little more than half that.

In October, usually about the first full moon, they begin their migration to the lower regions westward. A few stop in the low hills and valleys of the streams, but the majority drift before the snow to a narrow strip west of the Twelfth Guide Meridian, north of the Grand River and south of Wyoming, some going over into Utah. Their present winter range in Colorado, excluding settlements, etc., is probably less than 400 square miles, and with 1,000 hunters after them (more than two to the square mile) it will be seen how small a chance the deer have to escape destruction.

The Destruction of Deer and Elk.

The destruction is traceable to several sources. There are probably 1,000 people residing in and near the game regions of the Grand, White and Bear rivers and their tributaries who kill from three to ten deer every year, some of them having little other meat the year round. They begin the killing in the spring and kill one occasionally during the summer. In the fall they kill and hang them up, or corn them like beef for winter supply. In the elk region elk are killed by them mostly after the season closes. Ninety per cent. of these residents pay no attention whatever to game laws, and never will until they are generally otherwise enforced and it becomes dangerous to violate them.

They themselves will not deny this, except when talking for publication, and not always then, as one of them in a recent letter to a Denver paper says, "You will never find a settler in the game region who kills any more than he has use for, and only when he needs the meat." There was some excuse for this when beef was scarce, but there is none now, except that the law is generally violated by others.

More than all others, if there are any degrees in interest, are these residents interested in game preservation, that they may have it at hand for all future time as a luxury, instead of heedlessly using it for daily consumption while it lasts, with the certain consequence that it will soon be beyond reach by them even as a luxury.

A conservative estimate of the deer thus killed annually for several years past is 6,000, and no doubt largely exceeds the number killed by all others.

No considerable effort is made to enforce the law against residents. Indeed, it is almost useless to try it and expect conviction.

In some cases the juries stubbornly refuse to convict where the evidence is conclusive. I doubt if they would do so except on a plea of guilty, and may be not then.

In other cases county commissioners have refused to allow fees to witnesses for the prosecution, and district attorneys refused to prosecute.

This sort of a spirit and prejudice against the game law is still too prevalent, when a resident is concerned. The non-resident does not have it always so easy.

Next in order probably come the Indians and market-hunters, who perhaps kill another 2,000.

Then come the tourists and other hunters. Some of these fail even to get one deer each, while an equal number probably exceed the legal limit. While hunters of this class do not kill so many as the residents, they perhaps waste a greater proportion.

One camp of six men near the camp where I was this fall, killed only eight deer, but they did not bring into camp the forequarters of a single one of them. They were non-residents—men of means—and a game warden could have got enough out of their fines to pay his salary and expenses for three months.

But I never saw a game warden in the mountains in the hunting season. I would be as much surprised to see one as I would to see a buffalo.

The tourist and city hunter falls back on the excuse that the residents also violate the law, and thus the excuses go round in a circle and few are disposed to obey the law when others violate it with impunity.

Probably a high estimate of the number killed yearly by the tourists and city hunters would be 1,000, prior to this season, when possibly it was some in excess of that.

These estimates refer only to northwest Colorado and have been arrived at by a tolerably general observation and diligent inquiry wherever information was available.

These estimates are all doubtless low enough, but the total of 9,000 is sufficiently appalling, and as it will, if there is no change in the means of protection, be much greater for the next year or two, it is apparent that no increase in the game will keep pace with such destruction, and that long before posterity gets action the game will be gone.

The Killing of Does.

Not content with the opportunity to kill bucks for more than two months each year, the game destroyers are clamoring for the legal right to kill does also, on the silly pretense that the large number of does seen without fawns indicates a scarcity of bucks.

It is true that bucks as well as does are scarcer now than formerly, and it is also true that what bucks there are are more wary than formerly, made so by being hunted more. Instead of following close on the migratory bands of does as in former years they hang back, the older ones until compelled by the deepening snows to brave the army of meat hunters which they know await them in their winter range. This wariness has increased from year to year, until it has worked a permanent change in their migration habits where there is much hunting, and those who judge of their number by the number herding with the does, judge superficially.

During the summer season one will report seeing does only, while another will see numerous bucks. In fact this year there have been an unusual number of phenomenally large buck heads brought in.

None of these reports amounts to anything in the way of comparison.

These conditions originate from the natural separation of the sexes prevailing during most of the year.

This separation has become more marked as the bucks grow more wary. During the summer and fall seasons before migration begins does only will be found in one section or one mountain, while on another, but a few miles away, there will be bucks only, and in most cases the old bucks will be found in a secluded region, with a few or no young bucks with them.

The fawnless does are not always barren does. The fawn from the day of its birth has to run the gauntlet of a score of enemies, among them the wolf, the coyote, the wildcat, the lynx, the mountain lion and the eagle, and the wonder is that any escape. No doubt 25 per cent. of the fawns born are thus destroyed before they are three weeks old. A doe whose fawn lives but a few days cannot be distinguished from a barren one, and no one can with certainty tell a barren doe until she is dead, and much of this cry of barren does is mere speculation, and most of it comes from those who kill them anyhow, but prefer to have the law sanction it.

It has been stated that formerly does usually had two fawns, whereas now they seldom have more than one. This is a natural result of being more frequently disturbed in the breeding season.

A very general observation, with careful and extended inquiries from guides and others, shows that the proportion of bucks to does this year is about 25 per cent., certainly not less than 20.

The deer are like the sheep in respect to procreation, and when we consider that one buck deer is good for the service of 50 to 100 does, the cry of a scarcity of bucks for procreative purposes is absurd.

Maine is the only State having an open season on does, so far as I know. Complaints have been made this year by correspondents of the FOREST AND STREAM that deer are growing scarce there, and the Game Commissioner of that State says the closing of the season on does is being agitated.

The time may come for an open season on does in Colorado, but it is not yet.

The Elk.

The extermination of the elk is nearly accomplished, but it has been little, if any, accelerated by the short and late open season of the present law.

Elk were killed under the old law (having no open season), regardless of sex or age, and have been rapidly decreasing, and it was on that account that it was desired by many that those who were law-abiding should have the same chance as those who were not.

Complaint has been made that the present open season (Oct. 25 to Nov. 5) is so late that the snow is deep where they are, and they are hard to get at, and suggestions have been made to change it to September.

There are several objections to such a change. The rutting season is in September, and the killing of bulls at that time would mean the cutting off of the heads and leaving the carcasses to rot, or if by chance the meat should be fit to eat, the weather is too warm to save and consume such great carcasses.

The present open season gives the bulls about a month to recuperate flesh during a time when the food is good, and it was made late for that reason and that they might be difficult to get at and thus give them a better chance to escape the hunter.

Any change in the season except to make it shorter or later, or close it altogether, would be a great mistake.

The closing of it without absolute enforcement would simply mean the shutting out of law-abiding hunters without materially delaying their fast approaching doom.

Without perfect enforcement of the law they will be gone in less than three years.

The Mountain Sheep.

The mountain sheep have probably slightly increased in the last ten years. This is not so much due to there being no open season as to the fact that prior to that time the mountains were full of prospectors whose avocation took them into the higher ranges where the sheep were within easy reach, and many were killed by them.

The inaccessibility of their haunts has protected them from the ordinary hunter, and for this reason they have not decreased like other game, although some are killed every year by those who live near them and some by other hunters.

A short open season was provided in the draft of the present law, on the theory that the horns being the main object, the killing would be confined mostly to the large rams, leaving the younger ones, which would propagate more vigorous progeny, and as there is a surplus of rams it would not materially, if at all, interfere with their increase, also that the law-abiding hunter would then have some interest in preventing the killing out of season, while without an open season he has no chance, and is more or less indifferent.

Objection was made to it, however, and it was stricken out.

The principal question is, Shall the lawless be permitted to continue killing them while the other people are shut out?

The Antelope.

Except during the past three years, antelope have been less hunted than formerly. The scarcity of deer and the long travel required to reach them in the last three years has sent out many antelope hunters, and they are becoming scarcer.

The Remedy.

The original draft of the present game law was well adapted to conditions then existing, and would have averted the crisis then obviously and rapidly approaching, and which is now upon us.

The Legislature, however, eliminated or changed many of its best features, so that it has been to a great extent a failure so far as the preservation of the big game is concerned.

If these features can be restored by the coming Legislature, and the most vigorous enforcement inaugurated, there is still hope. Otherwise there is no future for our big game, and the sportsmen of the State must soon quit hunting or go elsewhere to do it.

A discouraging feature of the situation is that those most interested manifest the least concern.

These are the residents of the game regions and the hunter of limited means. When the game in their immediate localities is gone their hunting is over.

The hunter of means has a much less personal interest. The vast game regions of the Northwest Territories are open to him, and the expense of reaching them is to him unimportant.

If the residents of the game regions would abide by and aid in the strict enforcement of the law, the battle would be half won.

The other half must be won by such increase in protective measures as will keep pace with the great improvement in guns and ammunition and the enormous increase in hunters, the latter having increased in the last few years nearly or quite 100 per cent.

It is an unquestioned fact that some of the Eastern States have, by a rigid enforcement of game laws, so increased their game that they are already strong bidders against Colorado for hunting tourists, while British Columbia and Alaska are attracting Colorado hunters.

Notwithstanding the complaint as to the lack of enforcement of our game laws, it is nevertheless a fact that they are as well enforced as our other State laws. The latter are daily violated in the presence of officers, with few real efforts at enforcement.

Game laws should, however, be enforced much more strictly for the reason that the failure as to other laws still leaves sufficient people alive to do business, while the failure as to game laws means the annihilation of the game.

The Federal Government spends ten times more for forest protection in Colorado than the State does to protect its game.

Game Preserves.

The project of a national game preserve, to include the summer and winter ranges of the deer, has been talked of.

This question was threshed out in 1891, when meetings were held in Denver favoring it, and in Meeker opposing it.

The White River cattlemen were unanimous in opposition to it, because they feared that their cattle would be excluded. There is no reason why the presence of cattle in a game preserve should be objected to. Indeed, their presence and that of the range riders would be of great advantage in keeping down fires and keeping out lawless hunters.

But the cattlemen were jealous of any restrictions upon the freedom of the range, and the whole scheme was knocked out by the kick of the White River steer.

It is likely that a renewal of the effort would meet with the same opposition.

The more limited State scheme, aiming to constitute the winter range of the deer a sort of a refuge for them, will meet the opposition from the residents there, on the same grounds, and on the additional ground that they depend on getting their game after it goes down. They have never been willing to go as far for their game as those do who reside out of the game regions.

It was this demand that lengthened the open season of the present law to Nov. 5.

This scheme for protecting the deer in a definite area, comprising their winter range, and without reference to date, is a good one theoretically, but practically the failure to enforce a law of this kind would be the same as one having reference to dates alone.

It will also be found that in the attempt to pass any law looking solely to the welfare of the game, the bal-

ance of power sufficient to defeat it has always been held by those actuated by selfish motives. If it shall prove to be otherwise now, I shall be surprised.

Akin to a State preserve, and the next best thing after efficient laws for general protection, rigorously enforced, is the establishment of private parks under the present law. Under a former law numerous private parks containing deer and elk were established. They therefore had a legal standing, and acquired vested rights which cannot now be taken away by legislation, and any effort to do so is simply an idle dream; but the law then placed them under no restrictions, nor had they any clearly defined rights. The present law supplies this deficiency, and also requires the payment of a license fee and the surrender to the State of 10 per cent. of the natural increase.

Some opposition has been manifested to these parks. It comes chiefly from a failure to realize that all the game captured and confined in these parks, or likely ever to be, does not equal the number killed in one week of a season in the field, and so far as lessening the number open to public hunting cuts no figure.

Besides, unless a most radical and altogether improbable change in game protection is speedily brought about, the only elk and deer in the State will be those in the private parks.

The private propagation of game and fish should be encouraged in Colorado, as it is elsewhere; and as it is open to all, there is no well founded objection to it.

I have been accused of being personally interested in private parks and lakes. If it is of any importance, I have not now, nor never had, any interest, direct or indirect, present or prospective, in any private park or lake, but favor them because I believe they are beneficial in every respect and represent progressive ideas.

The Indians.

As regularly as the incursions of the Indians occur some impulsive but uninformed individual bobs up with the statement that by the Ute treaty the Indians have a right to hunt in Colorado.

The terms of the treaty with the Bannocks in Wyoming were similar to those in the Ute treaty, but the Supreme Court of the United States decided in 1896 in the case of teh Bannock Indian, Racehorse, that such right could only be exercised in conformity with the game laws of the State.

A former judge advocate of the Department of the Colorado held, and the Commissioner of Indian Affairs in 1897 instructed the agent at White Rocks agency, that this decision was applicable to the Ute treaty and directed him to so inform the Indians. The alleged treaty hunting rights of these Indians, therefore, have no existence.

As a member of the commission appointed by the Governor to investigate the killing of the Indians by the game wardens in 1897, I visited the Indian camps and scene of the conflict on the Snake River, and also interviewed the Indians and the agent at the White Rocks agency. This investigation showed that the Indians did not kill deer for the hides alone, but saved the meat as well.

It also showed that no effort was made by the agent to keep the Indians out of Colorado at any time, although fully advised that they had no treaty rights paramount to the game laws; that passes had been given them to go to Colorado without making entry of names or destination on the stub of the pass book, as was usual in other cases, and that the Indian police instead of trying to prevent their hunting here, connived at it, although able to prevent it, as shown by their ability to run them back promptly when specially ordered to do so.

The Indians, however, never pretended to refrain from killing does and fawns. None of them claimed anything by virtue of the treaty, as they had been advised of the Commissioner's instructions in that respect. Snake Pete, a leader in the conflict of 1897, testified before us that none of the deer he had killed were branded, and that he thought he had a right to kill them for that reason.

It is perfectly apparent that the entire Indian management, from the Board of Indian Commissioners down to the Indian police, are in sympathy with these raids, and will never do anything to prevent them until the State authorities make it expensive or dangerous. They will defend and excuse the Indians at all times. The conflict of 1897 was also investigated by E. B. Reynolds, special agent of the Board of Indian Commissioners, and his report fully agreed with ours in all respects, and that the Indians were the first aggressors and fired the first shot, yet the Board in its next annual report wholly ignored their agent's report, and stated in reference to the conflict: "Investigations by army officers seem to prove clearly that the white men were the real aggressors, and that the Indians suffered rather than committed outrage."

As there was no investigation made by army officers other than to interview the two wounded squaws while they were having their wounds dressed, the animus is apparent.

When the Board itself will thus falsify the facts, what can be expected from the subordinates?

It is useless to continue the time-worn practice of waiting until word comes that the Indians are on the hunting ground. It is a sure thing that they will be there every year, if not prevented. Nor is anything accomplished by driving them out when they have got all the game they want.

The matter should be taken up in the early fall with the Interior Department and the agents, and they given to understand that serious consequences will ensue if they are allowed to come. If they do come, a few of the leaders should be arrested and jailed, and their ponies and outfits sold to pay the costs. That will settle it for that year, but it will require constant vigilance as long as the Department and the agents fail to make honest efforts at prevention.

Formerly they raided Wyoming in the same way, but I learn that the passage of a hunting license law there has kept them out since, they thinking they will be made to pay, although they care nothing for other provisions of the law.

The stopping of the Indian raids would go far toward inclining the residents of the game regions to a strict observance of the law on their part, for it is their usual claim, not without merit, that there is no reason for prohibiting the whites from doing what the Indians are permitted to do.

The recent raid by the Commissioner on the Indian and Mormon game butchers shows what can be done, but spasmodic efforts are of no permanent good. The game butchers will all be back on the hunting ground next year, if they were not there by the time the wardens got home.

Sale of Game.

The markets of Denver are and have been for months full of feathered game of all kinds. Some big game has also been in the market, most or all of it imported. Inquiry at the Game Commissioner's office shows that the principal dealers comply with the law so far as procuring importation certificates is concerned, but few or none of them comply with the law requiring them to publicly expose such certificate in connection with the game, that all may see that the law is not being violated. As it is, observers suppose that the law is being openly violated in the sale. This serves to bring both the law and its administration into disrepute and encourage others to disregard the law in other particulars.

It is as much a violation of the law to expose foreign game for sale without the certificate being publicly exposed with it, as it is to do so without having a certificate.

Where the revenue laws of the United States require liquor dealers and others to keep exposed to view their evidence of compliance with the law, it is done, or some one suffers, and that is the difference in the way State and Federal laws are enforced.

The game laws will never be obeyed in the country so long as they are openly violated on Market and Sixteenth streets in Denver.

The conditions to which I have referred have about discouraged those who are earnest advocates of game protection, and I for one have about concluded that if the coming Legislature fails to realize the situation and enact the laws necessary to meet it, I will join that numerous and happy throng whose constitution and by-laws are comprised in a single line, "Look out for yourself and let posterity go to the devil."

The Hunting License.

The most efficient revenue producer, and at the same time the greatest assistant to the enforcement of a game law, is the hunting license.

This feature was stricken out of the present law by the Legislature, not because they thought it bad, but because some of their constituents were bitterly opposed to anything which would more effectually restrict their operations or tax them directly for game protection.

Objections have been made to this feature. Most of them arise from a misconception of the license provisions, and their purpose. It is not a gun license, nor applicable to the hunting of any game not protected by the act.

One objection made is that a license to hunt is an importation of English methods and foreign to American ideas. The objection is prompted by selfish motives or lack of information, rather than patriotism. The mere fact that a thing is of English origin cannot make it *per se* objectionable. Usefulness and not origin is the test of desirability, and licenses are as essentially American as anything we have, and are required in professions and business callings without number. The right to kill game is no higher than the right to keep a saloon or drive an express wagon or a hack, and without these licenses the revenue of the city of Denver would be insufficient to support its government. The purpose of all licenses is twofold, viz., to produce revenue and to enable the governmental authorities to control and regulate the business, and they are especially adapted to an effective administration of game laws.

It being fundamental law that the game and fish in a State belong to the State, the same as its land, timber, etc., and held in trust for all the people, the State has a right and it is its duty to enact regulations in relation to its acquisition, as no one person has a right to appropriate either, *ad libitum*. Hence, the State, when disposing of its land by lease or sale, rightfully exacts from those who desire to acquire it some compensation for the special privileges thus obtained. This is fair to those obtaining the privileges as well as to those who do not care to have them, and yet have an interest therein as citizens of the State.

The same principle is applicable to the game, for if left to the unrestrained desire of the few, they alone will be benefited, and that temporarily only, as it would soon be gone.

There has been a general prejudice against all game laws, but it is disappearing, and the importance of game and fish as a food supply is now being more and more realized. This opposition is selfish and short sighted.

A widespread but altogether erroneous idea has prevailed that game laws are for the benefit of the rich. If the game would last without protection, no laws would be needed. But as it will not, its protection is more in the interest of the poor man than the rich. The only remedy left the average man is the protection and preservation of game in every locality where it exists, that he may have it within reach, and he above all others should not object to paying a nominal sum for a license, the principal purpose of which is to restrain and identify the lawless hunter rather than to burden the legitimate one.

Under the license feature, those who receive the most benefit from the game will contribute most to the cost of protection. Every hunter of protected game must procure a license having coupons, one of which must be attached to every game quadruped killed. By this means every animal is identified with and traceable to the person who killed it, and every animal without a coupon attached is contraband.

Thus the legitimate hunter is fully protected, while the detection of the lawless one is rendered easy.

The hunting license proceeds on the theory that those who hunt should pay all or a large share of the cost of preserving the game. This is the true theory. As it has been and is now to a large degree, the cost is borne by the general taxpayers, 90 per cent. of whom do not hunt, and 50 per cent. of whom derive little or no direct benefit from game protection.

Fifteen States now require hunting licenses, the fee varying from 25 cents to $50. Most of these license laws were passed within two years and since the question was agitated in Colorado, and the license feature is now universally regarded as the most perfect method of game protection ever devised.

In some of these States a license is exacted for non-residents only. The constitutionality of this discrimination against citizens of other States is still an open question. In any event, it is in a sense unfair, and in this State will not produce the necessary revenue. A uniform fee for a State license, regardless of residence, with a much less fee for a county license, will be, in my opinion, much better. Most non-residents and city hunters will take out the State license, while residents of the game regions will need only a county license, and as the law now requires an export fee, the non-resident will not object to paying the extra fee for taking home what he kills, and thus he will in fact pay more for his hunting privilege than the resident.

In no State where the license feature has been adopted is there any movement for its repeal. In some of them the license revenue amounts to $28,000 per annum. It places the cost where it belongs, and wherever it exists, as to residents as well as non-residents, it pays the entire expense of a strict enforcement of the law.

There is, however, I find, a very general opinion favoring a non-resident fee greater than that for a resident, and if such is the conclusion, I recommend three grades.

1. Non-resident, good all over the State..... $25.00
2. Resident, good all over the State..... 5.00
3. Resident, good only in the county where the licensee resides..... 1.00

A great many resident hunters will take the State license, that will enable them to hunt in all the counties, while most residents of the game regions will take only a county license, and this is all the advantage they ought to ask.

Taxidermist Licenses.

This was also a feature of the present law, which was stricken out by the Legislature because it was new and untried.

As the taxidermists reap more clear profit from the killing of game than any other class, and are therefore quite as much interested in continuing its existence, they ought to be willing to contribute a small amount in that direction.

The law should provide for an examination of their stock and the tagging of specimens, and thus prevent the hide and horn hunter from passing through their hands his illegal acquisitions, as he can now do without the slightest danger of detection.

All professional taxidermists should be licensed. The fee should be small, but sufficient to keep the business in responsible hands and protect them and their patrons in their lawful possessions only.

Of course some of them will kick, but it is impossible to enact laws that touch no one.

Guide Licenses.

This was also a feature of the present law, but was eliminated by the Legislature.

I found the best professional guides to be in favor of it as a protection against those who pretended to be guides, but get lost in the mountains and do an injury to the guide business.

The guides should be made ex officio deputy game wardens and their licenses subject to revocation for "overlooking" violations of the law.

License should be required only in case of a professional, not from a person, who, being one of a party, acts temporarily as a guide.

The guide license is in vogue in several States, and has been found to be a great assistance in enforcement of the game laws.

Forest Rangers as Game Wardens.

The present law confers on Government forest rangers the powers of game wardens, but they have never exercised them. Great assistance could be rendered by them if the Interior Department could be induced to instruct them to enforce the game laws in connection with their other duties, and it would be entirely germane to forest protection, as the more restrictions there are on lawless hunting, the less likely it is that forest fires will be set.

These rangers ride daily among the hunters' camps, while well authenticated instances of game wardens having been seen in such places are extremely rare.

During the present season some of them have been reported as making political speeches, just at the time when the greatest game slaughter was going on.

Probably this may be excused on the ground that the politicians were provided with funds for their purposes while the game department was not.

A Game Commission.

Game commissions controlling the administration of the laws have always proved more efficient than single-handed control.

These should be composed of men able and willing to serve without pay or with very small pay, and so divided in politics and serve for such a length of time as to remove that element from the administration of the law.

A bill to that effect was introduced in the last Legislature along with the game law, but it was crowded out by the prize fight law, the horse tail docking law and other similar acts for the advancement of civilization and the public welfare.

Although, as I have stated, the best revenue and protective features of the present law, as drafted, were eliminated by the Legislature, it has nevertheless produced in two years more revenue than all previous game laws.

The following are the receipts from May 1, 1899, to Nov. 30, 1900, from the various sources named:

Park and lake licenses	$1,195
Private preserve licenses	325
Importation certificates	188
Transportation permits	638
Storage permits	22
Seining permits	37
Scientific permits	9
Capture permits	10
Fines and seized game	197
	$2,621

Nearly sufficient to pay the salaries of the Commissioner and chief clerk for one year.

It is plain to be seen that if the license features had been left in the law, some $15 000 or $20,000 more would have been realized—amply sufficient to have enabled the Commissioner to enforce the law as it ought to have been enforced.

And it must be remembered that no Commissioner ever has or ever can enforce the law as it should be without more funds than have ever yet been furnished, and my criticisms must be considered with that in view.

On the other hand, I have attended game conventions and belonged to sportsmen's associations without number for the last thirty-five years, and the furthest we ever got toward game protection was to pass some good resolutions and adjourn to a trap shoot or some other kind of a scrap.

You are up against it now.

The Open Deer Season.

It has been suggested that August and September should be cut off the open deer season, but this would be of no substantial advantage. The great bulk of the killing is later, and during the last two or three weeks of the present open season, while the deer are in or on their way to the winter range, when the fusillade resembles the skirmish line of an army, and it is a hunt for meat rather than sport.

The increase in the number of people who take part in these annual meat hunts renders it absolutely necessary to shut it off entirely. The deer now remaining will not stand the drain. The number limit for each person should not exceed one, and if restricted to one to the camp or family, so much the better.

Many of the residents of the game regions say they are ready for an absolute closing of the deer and elk season for at least two years. But will they all agree to and abide by it? I think not.

Besides this, a two years' close of the season would leave only bird hunters to pay license fees, and the fund would be insufficient to enforce the law, with the result that the law-abiding hunters would be shut out, while the lawless ones would go on killing just the same and no benefit would come of it.

Residents of Piceance Creek who were in Denver last week say that the deer wintering there are less by 50 per cent. than last year, and that there were hunters then in camp there killing them.

I am therefore emphatically opposed to any change of season or limit, unless it is accompanied by a provision for ample funds and a rigorous enforcement against everybody alike.

In conclusion, I want to emphasize what I believe to be the only remedy.

1. The immediate passage of laws requiring the licenses mentioned, especially that for hunting, as the only available means to raise funds for enforcement.

2. The cutting off of October and November from the open season on deer.

3. An enforcement of the law as searching and vigorous as that by Federal officers after moonshine whisky, or more so, if possible.

The conditions are alarming, and the remedy must be heroic, and every person interested must make some sacrifices, as no half-hearted measures or those which favor one class at the expense of others will meet the emergency.

If we can have changes in seasons, etc., with ample funds and strict enforcement, as indicated, there is hope for the future, but without these, no change in seasons will stay the fast approaching end of the big game of Colorado.

When that day of misfortune comes and it is too late to retrieve the error, the citizens of the State will regret the failure to adopt and enforce progressive and enlightend laws for its protction.

The Rhode Island Ducking Season.

PAWTUXET, R. I.—*Editor Forest and Stream:* The new law governing duck shooting in Rhode Island is decidely unpopular with all who live on or near the shores of Narragansett Bay and enjoy an occasional day with the ducks; and no wonder, as a more absurd and unjust law could not well be imagined. This seems all the more strange when we consider that both adjoining States, and in fact all of the States bordering on the Atlantic seaboard, have good sensible laws governing this sport. Sea fowl shooting should not be confounded with inland duck shooting, as the habits of fresh water ducks and of sea fowl are entirely dissimilar. The latter do not breed here, and are simply winter visitors, or birds of passage, breeding in the far north and really needing no protection, except perhaps in the manner of pursuit which is accorded them in most of the States bordering on tide water. This, however, is more for the protection of the gunners than for the ducks, and consists of prohibiting chasing them with sail boats, launches, etc., and, in some States, even row boats, shooting into bedded fowl with a rifle and, in short, disturbing them in any way on their feeding grounds, as this tends to drive them out of the bays, where they may be legitimately shot over decoys, the only way of having much success with them. Now the injustice of the present law, which is now in operation for the first time, is in having the close season begin just about the time these fowl put in their appearance in the bay, as they are practically kept out all through the fall by the fleet of steam launches and sail boats. When these are hauled up for the winter the birds come back again, and very fair shooting may be had through February and March over decoys. About the only kinds of ducks shot here in any numbers by decoying are the scaup or broadbill and the golden-eye or whistler, the former being the more plentiful and affording better sport.

As the Legislature is now in session, an effort will be made to have this law repealed or changed to conform with those of the adjoining States, which enjoy excellent laws on sea fowl shooting. By the way, what a pity it is that the game laws, as well as the duck laws, cannot be made uniform in at least the three States of Massachusetts, Connecticut and Rhode Island.

W. H. SHELDON.

Ontario Deer.

THE deer hunting season in the Province of Ontario is considerably shorter in duration than any other of the localities where deer are found in abundance, the close season being from Nov. 16 until Oct. 31 of the year following, allowing only fifteen days for the hunter to enjoy this grand sport. The Grand Trunk Railway system have given this matter considerable attention, and the districts reached by their railway are the finest hunting grounds in the Dominion of Canada. Through their courtesy we are permitted to give some information which will be of interest to sportsmen.

The returns are not quite all in, but those to date show 88 licenses were isssued to non-residents and 4,200 to residents of the Province of Ontario; also 105 moose licenses, making a total of 4,393; but the probabilities are that at least 5,000 licenses were issued. The hunters during the 1900 season have not been quite as successful as those that went up into these districts in previous years, which was accounted for by reason of the bad weather that was experienced during the last open season and does not mean that there is a diminution of deer, as they are increasing in numbers each successive year, owing to the very stringent regulations which the Government enforces.

The open season for the shooting of moose was opened in 1900 for the first time in five years, and is now closed for three years. There were taken out during the open season by the express companies alone 1,621 deer, weighing in the aggregate 176.312 pounds. Chief Game Warden Tinsley states that not less than 5,000 deer were taken out of the northern country during the open season, as the number carried by the express scompanies (large as it may be) cannot be taken as a criterion of the total number killed, as those killed by the settlers are not shipped, and a large number of hunters from towns and villages adjacent to the hunting grounds have the deer killed by them taken to their respective homes by teams and other conveyances.

There is one clause in the deer hunting regulations which should be eliminated by the Ontario Government, and that is allowing the killing of deer in the water. This is considered a brutal way of hunting by any true sportsman, and by cutting this clause out it will not only be a means of still further protecting deer, but will be recognized as an important addition to the game laws by every true lover of the sport. There has been considerable talk in connection with extending the open season, but it is to be hoped that the Ontario Government will not countenance any such suggestion at the present time, as the present open season protects the deer from promiscuous slaughter and obviates the likelihood of their depletion.—Montreal Gazette, Jan. 9, 1901.

Talks to Boys.—IX.

Now, boys, we have been talking for a good while about shooting. You have had a good deal of practice with your new gun, and have gotten ahead in learning how to use it much faster than I supposed you would. Certainly, much faster than I did when I began to shoot. In a few weeks you have learned a great many of the principles of shooting; you have been advised what not to do and what to do, and you have tried to put this advice into practice.

Of all the men and boys who use shotguns, not many are first-class shots. Many of them have very little time to practice, many others who get a good deal of practice seem to derive no particular benefit from their practice, and this, in most cases, is only another way of saying that they are careless, heedless and unobservant, that they do not endeavor to correct the errors of to-day by exercising greater care to-morrow. It is a splendid thing to be a good shot. It gives a man very great satisfaction to be able to shoot steadily, to make few misses and now and then to make a long, quick or in any way difficult shot which neither he nor his companions thought could be successful. There is very great pleasure in this—pleasure for yourself and for your companion—and I hope that you may have a great deal of this pleasure.

But besides carrying yourself in the field so that you can go through the day's work with safety to yourself and your companion, and besides shooting so well that you have little or nothing to regret in the way of lost opportunities, or lost birds, there is something else about which you need advice which will have a very decided influence on the pleasure which you and your companions are to have from the outings that you make during shooting season.

I have already suggested to you that a pretty important part of the character of any boy or man is made up of his consideration for other people. I take it for granted, of course, that you have been well brought up and have learned by this time that you are not the most important person in the world. You have probably been taught, by your parents, good manners, which, after all, consist of nothing more than thoughtfulness and consideration for the feelings and the rights of other people. A boy, when he gets into the field, enthusiastic about his gun, eager to take advantage of every chance to shoot that comes to him, excited by the working of the dog, and made more or less nervous by the unexpected getting up of birds, may at first be excused if he forgets himself to some extent and is disposed to shoot everything in sight, but he may be sure that excuses, or the reasons given above, will not long continue to be made for him. He must remember that it is quite certain that his companion is just as anxoius to shoot and to take advantage of every opportunity as he is, and yet they both know that it is a waste of ammunition and a cause of dissatisfaction to each if both shoot at the same bird. Each one, therefore, must learn to keep himself in hand, to exercise self-control and to follow out certain fixed and well-known rules which the sportsmen of bygone generations have formulated and put into practice, so that now they are universally accepted.

One of the first of these is that birds getting up in certain positions with relation to two or more shooters in the field belong to one man or the other, according to the point at which they leave the ground and the direction in which they fly. If you and your companion are walking through the stubble 40 yards apart, and a bird gets up close to him, he is the person to whom belongs the first chance to shoot. If it flies toward you or in front of you, give him abundant time to shoot before you aim at the bird. If it gets up just in front of him and flies straight away from him, do not you fire at it until he has shot both barrels. If it gets up in front of him and flies quartering away from him and so nearly straight away from you, but off to his side, do not shoot at it under any circumstances. Never shoot across your companion's face. This is a rule to which there is no exception. If birds get up midway between you and fly straight to the front, either of you may shoot at them, yet I advise you to hold your fire and give your companion the chance to shoot at least once, before you discharge your gun; yet, of course, you must not wait too long. You may occasionally lose a bird in this way, but by acting as I have suggested you will be teaching yourself a good lesson in self-control, and in very many cases your chance of getting the bird will be better than that of your companion, who, if he is less well taught than you, and extremely eager to kill, will be very likely to shoot too quickly and miss, while your more deliberate shot, discharged after his gun is empty, will be likely to be successful. To shoot too quickly at a bird that gets up between you and flies to the front is to shoot across your companion's face, and this, as I have said, you must never do.

If the birds get up near you, you may shoot as quickly as you please if they fly to the front or turn away from your companion and toward your side, but where there is time I advise you always to be deliberate, and if you understand your gun as well as by this time I hope you do, you will find that there is nothing lost by waiting.

Of course, waiting may be impossible if you are in thick brush, since a little time would enable the bird to pass out of sight; but when there is time, I am anxious that you should always take it.

If you find your companion so eager to get the shots that he makes himself disagreeable to you, it will be well for you to speak to him about this—pleasantly and not at all in the way of fault finding—and to suggest an understanding by which the rules that I am giving you shall be carried out by each. This you can properly enough do if you yourself have not offended as he has done, but if you have been too eager as he has been, a remonstrance will not come with a very good grace from you. If, however, you have followed the rules I have suggested, very likely a little quiet talk with him and an explanation of what is customary among sportsmen in shooting will be pleasantly received by him and remembered. If, however, he persists in trying to get more than his share of the shots, and is not willing to emulate the courtesy that you practice, it will be well for you to gradually give up shooting with him, and either get some other companion or go alone. There is much more pleasure to be had in a day's shooting when two good fellows are together than when there is no one to talk to, but I should certainly not advise you to continue to shoot with a disagreeable companion.

If you have a dog, and are working him, I hope that you will do it quietly. After you and your dog come to understand each other he will work for you just as well with very little talking to, and only a few blasts of the whistle, as he would if you were to shout at him all the time, and a dog that has become accustomed to being called to and scolded continually, after a while gets so that he pays no attention to the shouting. Therefore, you get no better service from your dog than if you were quiet with him, and at the same time you make yourself a nuisance to your companions in the field. If your dog is already broken, as he probably is, it will be well for you to take him out before the season opens without a gun and to teach him to work fairly close to you, and to turn, in quartering his ground, at a blast of the whistle, accompanied by a wave of the hand. He is anxious to do what you wish to have him do, but until he understands what your words and whistles and gestures mean, he cannot do as you want him to. Try then, by patient perseverance, to explain to him what is required of him, and when you use him in the field do it without any noise or fuss. You will find, after you have worked with him for two or three years, and each has come to thoroughly understand the other, that it will hardly be necessary for you to speak to him more than a few times all through the day, for he will comprehend just what your wishes are, and the two of you will work together like a well-ordered machine.

During your shooting, much of which, if you are a resident of the Eastern States, will be in a country abounding in brush and swamps, you and your dog will often have to push your way through undergrowth so thick that it will be almost impossible for you to shoot, and where the mud is so deep that walking is slow, hard work. Often you and your companion will come to a little swamp, where, in order to secure the best results, it will be desirable for one of you to stand on the outside, so as to shoot the birds which rise to go away, while one must go into the thicket and work with the dog to start the birds. Now, of course, going through such a tangle is laborious work; the gunner can see but a short distance ahead of him, and much of the time he is so tied up in brambles, vines and alders that it would be a very difficult matter for him to shoot, even if he could see a bird.

Nevertheless, if you and your companion come to such a place, where it is necessary for one to go into the brush, I advise you to offer to do it. In fact, if you are watching the dog, you must do so.

But on general principles it is better in a shooting excursion, or, indeed, in almost any outdoor pursuit, that you should show yourself willing to do more than your share of the work, and there is nothing that looks worse, or that has a worse effect on the energy and go of a man or boy when out shooting, than to hang back and wait for some one else to volunteer to do the disagreeable and the difficult things. Moreover, although to shoot in such a situation is sometimes impossible and usually difficult, it is nevertheless the fact that it is about the best practice that any one can have, and if you should ever happen to have an old cock partridge get up in front of you as you are crawling on hands and knees through some particularly dense thicket, and suddenly twisting around should fire at his disappearing form, and then hear his body strike the ground and his wings drum on the soft soil in his death struggle, I venture to say that you will feel more satisfaction at this shot than you would over twenty

made in the open, and will long remember, with satisfaction, the fact that you sacrificed something of your comfort to go into the bushes after that wary old bird.

When you are old enough to go duck shooting, and perhaps to take your place beside a companion in the ducking blind, I wish you to take with you there the same habits that you have, I trust, practiced in the field. Try always to remember that you have a companion, and that his rights and privileges are just as great as yours. You would feel injured and angry if he tried to take shots that you thought belonged to you, and you may be sure that he will hold the same views concerning the shots that he thinks belong to him. It is far better that you should miss a few chances than that you should lead your friend to think that you were taking more than belonged to you.

In the blind the gunner can usually see at least half the circle of the horizon without having his view interrupted by trees, reeds or any natural objects. The birds come up in plain sight, deliberately, and, as a rule, there can be no question as to who is entitled to the first shot, if it is a single bird, nor as to which birds should be shot at by each gun if there is a flock. If you sit to the right as you face the decoys, and the birds come from the right, the first bird will obviously be yours. But if they continue to come from the right, singly, you will do well to make an arrangement with your comrade by which you two shall take alternate shots. If a pair of birds come up from the right, the first one belongs to your companion, and you should kill the second. If three come, your companion should take the first, you should take the second and the third belongs to whichever one can kill it. Of four birds coming up, the two leading ones should be killed by your companion and the two last ones by you. If birds come in directly from the front in bunches, it is enough to say that your companion should shoot at those on his side and you at those on your side.

Between two good fellows, each of whom has a regard for the other and a respect for fair play, there is not likely to occur any opportunity in the blind for dissatisfaction, much less for dispute. Rarely, of course, a man or boy may forget himself, or a pair of birds may steal up, and if he does not see them until they are going away he may forget and shoot across his companion's face, but if he is guilty of a slip of this kind he will certainly, if he is the right kind of a fellow, apologize for it and will remember his mistake and not soon repeat it

One thing I want to have you remember about the ducking blind—your quarters there are limited, often your footing is uncertain. Perhaps you are heavily clad, wearing rubber boots and a long ulster that comes down to your heels; very likely each of you has two guns. All these things expose you more or less to accident. Sometimes a man twisting about suddenly to shoot at a swift flying bird puts his foot in a muskrat hole and falls down, or at least comes very near it. You must remember, therefore, what, of course, has already been dinned into your ears so many times, to be especially careful about the way in which you hold your gun. Keep the muzzle well up in the air, or else pointed out over the water. Very likely behind you may sit your boatman, and somewhere near the edge of the blind your retriever, and the accidental discharge of a gun under these circumstances, even though it may do no harm, startles everybody and makes each man more or less uncomfortable all through the day. I hope that such an accident will not occur to you, but it is not very many years ago since a friend, who was just about to put down his gun, discharged it by accident and frightened everybody in the neighborhood. Fortunately, the muzzle of the gun was pointed over the water so that the charge, after blowing a hole through the front of the blind, passed out over the decoys quite harmlessly. My companion, who was an old gunner, was very much mortified over what he had done, and the boatmen who were with us were obviously nervous and uneasy all the rest of the day.

There are many other little points about your conduct toward your companion in the field, concerning which your own good feeling can tell you as much as I could, if I were to write a column about them. You should carry about with you when shooting the same good manners that you employ if you were in a situation where you felt called upon to be on your best behavior. You are anxious to become a good sportsman, and the test of good sportsmanship is consideration for others. You will not shoot at a bird in close season, because of your respect of the law, and because the act is one you would condemn in another person. You will not trespass on posted land, because if you owned land and for any reason were trying to preserve the shooting on it, you would not like to have other people trespass there. You are polite and courteous in your intercourse with your companions because you wish and expect them to be courteous and polite to you, and you are willing sometimes to restrain your own eagerness to kill a bird because you think it may give another more pleasure to have the shot than it would you.

Of course, all men and boys get excited sometimes and do things that are thoughtless and even selfish. You are not expected to be perfect any more than other people are, but it is well for you always while you are in the field to think about your companion and his feelings, and try to some extent to put yourself in his place. You will find that your good manners and your forgetfulness of self will react on him, and will breed in him the same thoughtfulness and consideration for you that you are manifesting toward him, and when two boys or two men who act on this principle go out together they are very sure to have a good time, whether they get many birds or not.

Sometimes you may notice that your companion, if he has not had good training, is careless about his gun; he may carry it in a fashion which you will think dangerous to yourself or the dog, or to himself, and as I have already suggested, you may find it necessary to caution him about this and to ask him to mend his ways. If, however, such necessity should arise, you must use great tact and judgment in speaking to him about it. Very likely he may imagine that he knows just as much about shooting as you do, and may resent any criticism on your part. It will be well for you, therefore, when you speak to him about this to tell him frankly that you are afraid to have the gun pointed at you or at the dog, and to give him to understand that you will be more comfortable if he keeps the muzzle of his gun pointed up in the air. You may, if you please, quote to him the example of older men known to both of you, and may especially instance what your instructor has said to you on this subject. But all this you must do in a pleasant manner, not as if you were criticizing or finding fault with him, but rather in the way of discussing general principles. He, of course, has no desire to make you feel uncomfortable, and while he may possibly laugh at your fears, do not let this trouble you, if only you can carry your point and induce him to hold his gun as it ought to be held. After you and he have grown a good deal older, you will find that the men who have had most experience with guns are those who are the most afraid of them, and who have the least patience with persons who are careless in the way in which they handle them.

In your shooting you may occasionally shoot with men who are ignorant of the rules that I have just explained to you. Often, these men will commit what you and I would consider gross breaches of good manners in the field, but it frequently happens that they do these things merely because they are ignorant and have never been taught. Such people, if spoken to in the right way, will very often accept suggestions good naturedly, and even gratefully. They do not intend to be selfish or boorish, but they know no better. A few words of plain, pleasant speaking, clearly setting forth what some of the best known rules of field etiquette are, will often cause them to cease to offend, but if they do not stop after such a warning, or a second reminder, you should leave them and go off to shoot by yourself.

W. G. DE GROOT.

CHICAGO AND THE WEST.

Big Indiana Preserve.

Jan. 5.—Reference has already been made to a number of Chicago game preserve ideas of a minor sort, and I have mentioned the enterprise of certain of our more prominent sportsmen here who have for some time been figuring on securing a big tract of land on the Kankakee bottoms, thus forming, although at a late date in the history of that country, another one of those important shooting clubs which have taken over large bodies of the best shooting country along the historic Kankakee. I have not felt at liberty before this time to give details regarding this last matter, but it is now sufficiently forward to be safe, hence I take this opportunity of making exclusive mention of the news in this column.

The gentlemen concerned in this matter are Hon. Hempstead Washburne, ex-Mayor of Chicago; Mr. J. V. Clarke, president of the Hibernian Bank; Mr. Harry Clarke, of the same institution; Mr. Charles S. Dennis, manufacturers' agent; Mr. W. L. Wells, head of the art department of Chicago Tribune; Mr. Eddie Pope, Mr. W. P. Haskell, Mr. Graham H. Harris, president of the School Board; Mr. C. E. Lewis, of the Washburne-Lewis Investment Company; Mr. R. B. Organ, of the County Board of Commissioners, and a number of friends of these gentlemen, probably to the number of twenty-five or thirty in all, the names of the additional members being not yet determined. The tract in question is the largest continuous body of land available for such purposes anywhere within reach of Chicago. Every shooter who knows anything about the Kankakee will know this land, which is known as the John Brown tract. It extends from near Shelby, Ind., on the Monon Railroad, north and northeast for about six miles along the Kankakee River. The western line of this tract cuts the end of Fuller's Island, which is in the center of the best open snipe country left on the Kankakee River. It includes the mottes known as Skunk Island, Ridge Island and a dozen smaller and unnamed islands. The northern line of the tract runs clear to the edge of the hills, which bound the marsh on the north a mile or so from Fuller's Island. On this tract there is nearly two miles of wild rice, and out into the bottoms from the timber there are fine smartweed, slough and grass flats.

The whole tract, if taken over, will deprive the shooting public of Chicago of one of its most popular duck and snipe grounds. The best snipe and plover shooting open to the man who does not belong to a club is in this same Fuller Island region. The grass flats on the John Brown tract are known as famous pintail grounds in the spring. There is no better mallard shooting anywhere on the Kankakee to-day than there is in the timbered region which is included in the John Brown tract. This is the old shooting ground of the Diana Club, which was fully described in these columns some years ago. The tract is opposite the marsh of the old De Golyer Club, whose grounds were bought out by Nelson Morris as a cattle range.

Another Good Decision.

There is accumulating in the West a long list of strong decisions supporting the proposition that the State has under its police powers a right to control at all times the possession of game within its borders. The Supreme Court of Indiana, in the case of William H. Smith against the State, has handed down a strong opinion which is in line with the above doctrine. Smith had some quail in possession during close season. He claimed that he had bought them legally in the open season and had them in his ice box since. He was found guilty in the lower court and appealed. Judge Hadley confirmed the decision of the lower court and pointed out that the State had the right under its police powers to protect its game. He said that the State could impose such condiions as the Legislature saw fit as to the time and manner of taking game and of keeping the same.

This same principle of law—and it is one which is sufficiently well established in the West—could, under the law of Illinois, break open and empty every one of these big Chicago warehouses which will be full of illegal game after the closing of the season. We have never had any movement in this city of sufficient strength to practically uphold this doctrine of the police power of the State. There would seem to be no difficulty, except in making the original seizure.

Seizures Under the Lacey Law.

The Lacey act continues to do good work in this city. During the week Warden Loveday, with his deputies, Clark and Edenborough, have made some heavy seizures of game under the provisions of the Lacey act, and their hauls of two or three days have amounted to over 4,000 pounds of game. Everybody knows how good the quail shooting is down in the Indian Nations, or how good it used to be. Its future may be guessed from the fact that this week there were over 150 dozen quail seized in one lot which came from the Indian Territory addressed to Boston. The transfer here in Chicago was fatal to the interests of the shipper. He will lose his game, and it is much to be hoped that he will eventually lose his calling.

Illinois Sooners.

Mr. E. K. Stedman, writing from Mt. Carroll, Ill., reports a little poetic justice which overtook a couple of the citizens of that community, as follows:

"Last week George N. Machen and Joseph Boothby were fined $25 and costs each for killing ducks out of season. They committed the act about six hours before the law was out—went camping the day before so as to be on the ground on the opening day. They could not withstand the temptation, and opened up on the previous evening, with the result aforesaid. The worst feature of the affair is due to the fact that both men are among the county's best citizens and have always been considered sportsmen of the right sort; while the informers were fellows below the average moral status, and suspicioned game violators from the time they were born."

Late Velvet.

Mr. John W. Carpenter, of Whitman, Neb., writes regarding some of his own experiences with deer which carried the velvet on the horns until the beginning of winter time, his letter reading as follows:

"I was very much interested in a letter in a late issue of FOREST AND STREAM from Wm. Wells, of Wells, Wyo., telling about a buck he shot on Nov. 20 that had not shed or rubbed the velvet off his horns. My two brothers and myself were out on a deer hunt Dec. 24, 1885, on the south side of Dismal River, in Nebraska, and we found where three deer had crossed the road, and tracked them about five miles. We found them in a plum thicket and shot one apiece. The one I shot had a very large set of horns, and there was not a particle of the velvet rubbed off. The deer had a large wart on his side, hanging by a cord or string, and the string was about 2 inches long. The deer was as fat a deer as I ever shot or saw at that time of the year. The deer were all black-tailed bucks. The deer I shot was the first and last one I ever heard of or saw with the velvet on that time of the year until I saw Mr. Wells' letter in FOREST AND STREAM.

"I was telling some hunters from the East about the deer not shedding the velvet, and they told me it was a fish story. I am glad Mr. Wells wrote about his deer. I am going to send the letter to those sportsmen and let them see I am not the only hunter that ever killed a buck with the velvet on his horns in the winter time."

A Good Ending for the Year.

Mr. S. B. Dow, of Knoxville, Tenn., must certainly be one of the sort of men who can fall into the water and come up with diamonds hanging to him. He could hardly tell a better story made to order than his own experience of a lucky double, which he gives as below:

"I want to tell you of a good double I made—the last two shots I fired in 1900. It was Friday after Christmas, out near the Cincinnati Southern Railway, at a place called Rocky Creek.

"A party of four of us had hunted all the day before and up to noon of Friday without a shot. We had jumped several deer and seen a small gang of wild turkeys, but no meat to take home. While eating our lunch on Friday I said, 'Boys, I am going back to Knoxville "skunked." It has never happened to me before, and I hate it like sixty, but it is no use—luck is against us.' One said, 'Let's try it another day.' I told them they could, but I had promised my wife that I would be back home Friday night, and in an hour I was going to the station (two and a half miles distant) and board that 4 o'clock train for Knoxville. We agreed to hunt out an hour down to a place where I was to leave them for the railroad.

"I was going along a branch that led down to a swamp not far away, and between it and myself was a stretch of sage grass and briers, and while passing through this up jumped a deer and went bounding down the hill. It was a fairly good angling shot. I fired the left barrel, and he fell with a charge of buckshot through his heart. The right was loaded with No. 4 chilled. As I went to the deer at the edge of the swamp, it proved to be a young buck, and while standing over him I saw a wild turkey flying over the trees. My old Parker was equal to the occasion, and a deader turkey never hit the ground. It was a gobbler, and exactly 4 feet from point of tail to end of bill, and weighed 15 pounds. I caught the train and got home that night with venison and turkey. The others remained there over Saturday, but came home empty handed."

Politics in the Park.

The future of the Minnesota National Park is going to be one largely of politics. Luckily, the resolution for the joint commission has passed the Senate. There will soon be appointed for the Senate a successor for Cushman K. Davis, of Minnesota. At one time the name of Thomas Shevlin was up for this position. Mr. Shevlin is well known as the hero of the split train in the Congressional trip over a year ago to the Minnesota reservations. He pretended to be a friend of the park at that time, but he was not, is not now and never will be any such friend, and it is a good thing that his protestations are distinctly understood for what they are worth. Mr. Shevlin will hardly attain the office of Senator of the United States, which is much more apt to go to his friend, Thomas Lowry, of Minneapolis. The election of the latter would practically be the same as that of Mr. Shevlin, so far as the interests of the park are concerned. He would probably do all he could to prevent a park of any considerable size ever being established. Mr. Evans is still another candidate for this honor, though his attitude in regard to the park is not known. The real center of affairs, however, will not rest with the Senate, but with the House, and as has been already pointed out, Judge Page Morris, Representative of the Sixth District of Minnesota, is the

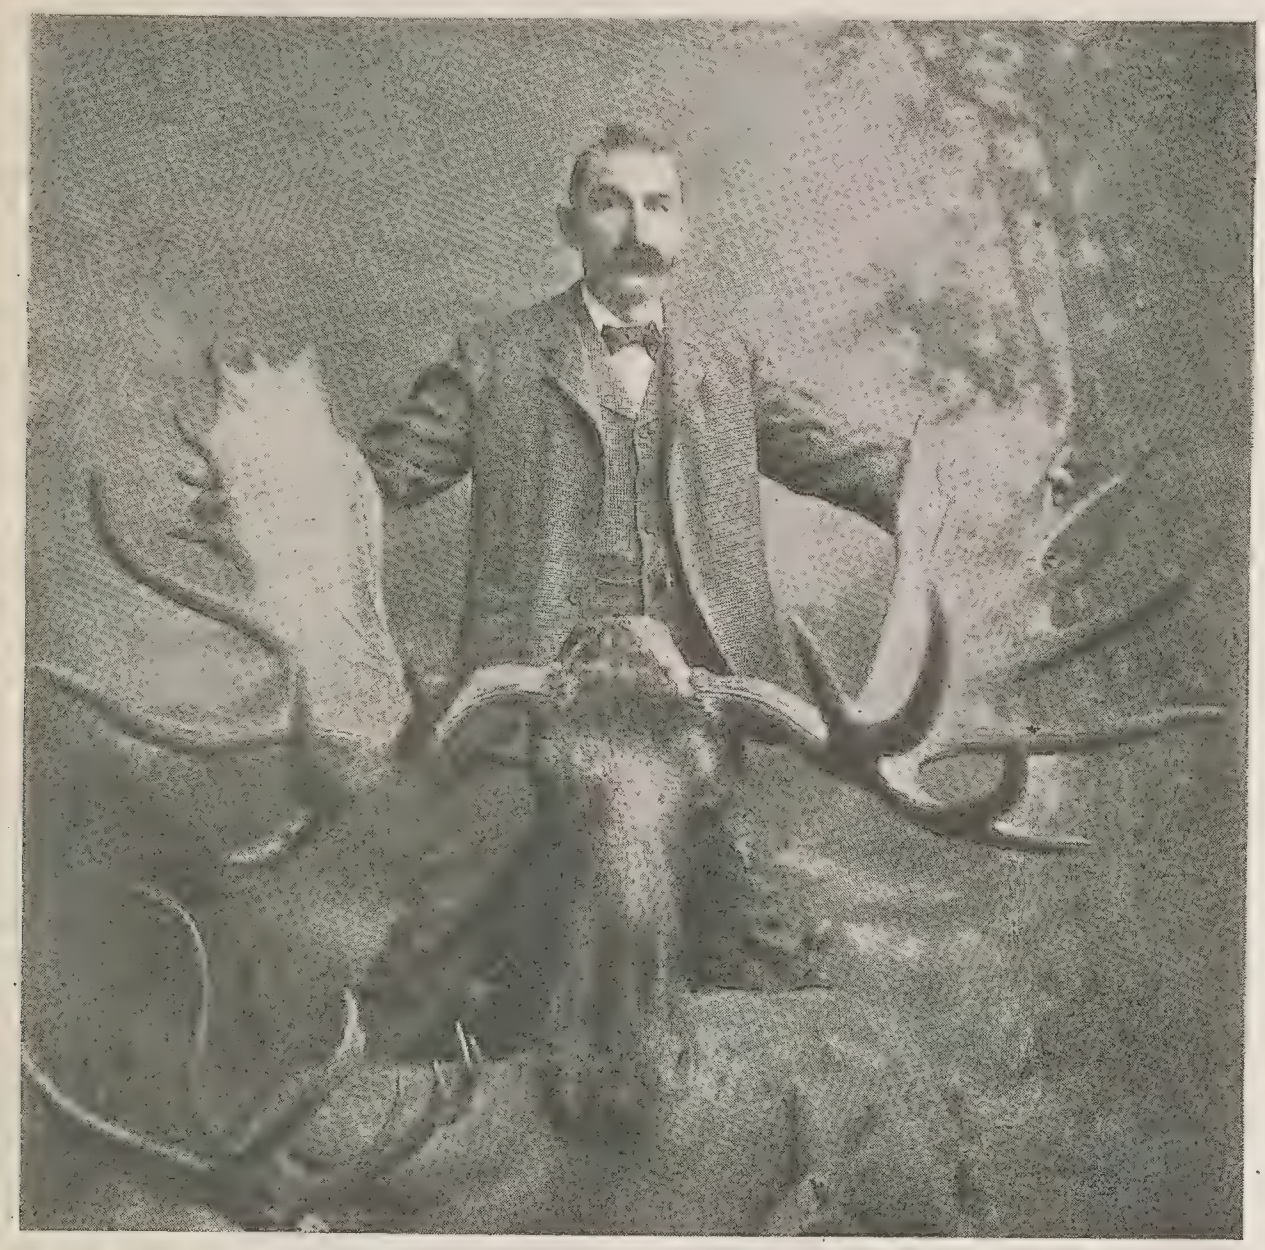
man who can make or break the park movement at once. The most sanguine friends of the park seem to believe that there will be something of a reservation made of the pine lands, though perhaps this may be only of the tracts joining the lakes and streams.

Poygan Gun Club, of Chicago.

The Poygan Gun Club, of Chicago, whose large preserve is located on Poygan Lake, of Wisconsin, held its election of officers this week and re-elected for their third term the following board of officers: President, Arthur Humphrey; Vice-President, George A. Kersten; Secretary and Treasurer, F. F. Homan. The Board of Directors, also re-elected, consists of Arthur Humphrey, R. R. Clark and R. W. Patton.

Sportsmen's Show Changes Dates.

There has been some discussion as to the best time for holding the Sportsmen's Exposition in this city, and the matter will probably be determined this evening. It is the general belief that the date will be set forward to Feb. 27 and two weeks following. The Santa Fé Railroad wishes to put in a 75-foot reproduction in model form of the Grand Cañon, and this work will take so much time and be so desirable as an attraction that the management of the exposition has felt like making every concession in its power to secure it. Mr. H. G. Maratta, the well-known Chicago artist, will have this model in charge. The Southern Railroad wants also to put in a big exhibit, and it needs time to get its stuff in. The date will not go later than March 15, and the show bids fair to be a great success in every way.



A NEW BRUNSWICK TROPHY.

Fighting Moose in Minnesota.

Under date of Jan. 4 there comes from Cass Lake, Minn., a wild story of a mad moose which came into the village of Farriss, bent on war. It killed three dogs and two cows, wounded one man severely, and broke through the window of the only store in the town, smashing up a couple of show cases and in general starting a rough house. The residents at last killed the animal, and in its body were found twenty-three bullets. Surely a pretty good moose and a pretty good story.

HARTFORD BUILDING, Chicago, Ill.

A Pennsylvania Game Sale Case.

WILLIAM D. EDSON and Joseph S. McColloch, trading as Edson Brothers, dealers in game, of Philadelphia and Harrisburg, were held in $500 bail last Wednesday in default of the payment of $1,375, imposed for violation of the game laws. Dr. Joseph Kalbfus, representing the State Game Commission, testified that in the middle of December last he had seen seven deer, twenty-four quail, two turkeys and one woodcock exposed for sale at Edson Brothers' establishment in Harrisburg.

This game was said to have been killed in Western States and sent into Pennsylvania for sale. The law says it is unlawful to purchase or expose game for sale contrary to the game laws of Pennsylvania. The penalty imposed is $100 for each deer, $25 for each quail, $50 for each turkey and $25 for each woodcock. This netted a fine on the charge brought against Edson Brothers of $1,375. They refused to pay it, taking an appeal from the magistrate's decision.

The FOREST AND STREAM is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday and as much earlier as practicable.

Pennsylvania Forest Preserve.

WEST CHESTER, Pa., Jan. 6.—*Editor Forest and Stream:* I have your request of the 3d inst. for information concerning proposed hunting park in Pike county, Pa. The newspaper rumor to which you allude is only part of a much larger truth. It is true that the State has acquired about 26,000 acres in that location and proposes to make of it a preserve for forestry purposes. We shall, of course, allow lawful hunting and fishing on this ground. But on the other hand we propose to punish all hunting and fishing which is done out of season, or in an unlawful manner. Under such protection the game there will, no doubt, increase. What is true of the Pike county reservation is also true of the Hopkins reservation on the West Branch of the Susquehanna, where we have about 60,000 acres. It is hoped also that these State lands will be utilized as summer outing grounds, where tired men, and women, too, may gain fresh strength for their life work. But the main object of the State reservation is, as I have said, for forestry purposes, and we hope in the near future that our public acreage will be greatly increased.

There are certain newspaper rumors in circulation that there has been a clash in Pike county between the "State and the private clubs." I beg to say there is nothing whatever in this. We have no designs on the rights of any one, but we will see, however, that all law-abiding citizens shall have the full benefit of the public lands.

J. T. ROTHROCK.

The State has acquired considerable bodies of land in Elk, Lycoming, Clearfield, Clinton, Centre and Pike counties, amounting in the aggregate to this date to 97,962 acres and 20 perches. The purchase of various other tracts has been authorized, which, if the titles prove satisfactory, will increase the acreage owned by the State to something over 113,000 acres. The cost to the State of the 97,962 acres and 20 perches already acquired is at an average of about $1.35 per acre. Some of this land has increased in value since its purchase by the State and could now be sold at an advance.

The purpose in acquiring these lands is to preserve and increase our forests. Forests exert a great influence on the streams and climate and tend to preserve the health of the community. Their rehabilitation in Pennsylvania, if only to part of their former extent, will be productive of the greatest good. It is the purpose of the present administration to purchase more lands in various sections of the State under the several acts of Assembly wherever they can be purchased cheaply. The investment is a good one, and should the State acquire a large acreage of wild lands it cannot under any circumstances be a mistake. The land will increase in value through the rapid growth of timber, and, while there will be destruction in part by fire, yet the average value will largely increase. These public lands will become the people's parks, open to them at all times for hunting, fishing and camping, and the people in turn will become the guardians and protectors of the forests. Already they are quite popular in the vicinities where purchases have been made.

There should be additional legislation relating to the forest reservations. As the purchase of large tracts in any one county withdraws those lands from taxation, it is thought that separate tracts scattered about over the State in various places would be productive of better results. Too large bodies of land should not be purchased in one county to the exclusion of others. If the purchases were distributed more evenly over those counties where forest lands still exist, the reduction of local taxation by such purchases would be trivial.

In a very few years the State will receive a large revenue from the sale of matured timber and timber that has been destroyed by insects, fire and wind storm.

I would respectively recommend the passage of an act of Assembly that would place the purchase and supervision of these lands under one management, and authorize that management to sell mature timber and timber destroyed by fire, wind storm and insects; to lease coal and oil rights on royalty and pay the proceeds into the treasury of the commonwealth; and that more stringent laws should be passed for the protection of these forests from fire. The management should also have the power, under certain circumstances, to appoint forest wardens with limited compensation; and authority should be given for the purchase of lands under a limited price wherever in the judgment of the management it would be best for forest reservation so to do. All taxation, local and for all other purposes, should cease upon these lands the moment the title vests in the State.

A New Brunswick Moose Head.

I LEFT New York on Oct. 8 and arrived on the hunting grounds, Blue Mountain Lake, New Brunswick, on Oct. 11, having with me C. Barker, my guide, and Allen Trafton, cook. We did not hunt the first day, as we were all too tired from packing in; but simply canoed round the lake looking for fresh signs of game. The next day we started our hunt. We found plenty of fresh moose and caribou prints, but saw no game. This continued for a few days, and in the meantime we set some mink and otter traps.

The night of Oct. 16 we had a fall of 6 inches of snow, and on the morning of the 17th, full of determination to get a moose, we started. It was an elegant day for hunting. After tramping for about seven miles over the mountains, we came across footprints of two bull moose. The guide, C. Barker (who is a first-class one), turned to me and said: "Look out and be careful. These two fellows are quite handy." We tracked them for at least a mile, when finally the guide came to a sudden stop, and as he did we noticed two black objects in the distance. They were lying down about 20 yards apart. We looked at the two so as to see which one had the largest set of horns. The one to our right we could scarcely see, as we were in a bad position, while the one to our left was in better view in more open growth. Finally the beast moved its head, which looked like a root of a tree moving about, whereupon the guide said, "Be careful and steady and take good aim." I did as I was told. The first ball was well landed; the beast attempted to rise, and I gave him another shot. He was then in a half-standing position, when a third shot reached him. He still attempted to get away, when the fourth ball reached him, and he came down and rolled over on his side. He was my moose.

You can imagine my feelings in getting a moose after five years of hunting in Maine, Wyoming, Idaho and New Brunswick.

This ended our hunt for the day. On examining the moose, we found the spread to measure 60 inches. The horns had thirty points. This head is a record breaker from New Brunswick in two years.

The next day we continued our hunt, and after hunting several more days we came upon a caribou, which was dropped with two shots. It was a good speciman. We also ran across a bear, but did not get him. The Province of New Brunswick is a good place for big game.

The moose and caribou heads can be seen, together with many other trophies of my collection from different States, at 409 East 107th street, New York city. Brother sportsmen are invited.

GEO. A. REEBOR.

Maine Game Interests.

BOSTON, Jan. 14.—At the meeting of the Maine Fish and Game Association, on Tuesday, at the State House, Augusta, Senator Mcfarlane declared that the game laws are openly violated by hunters who have "a pull" with the commissioners or wardens. He cited the instance of the killing of a moose in close season by a man who after the deed was heard to say "I have a pull. No one would dare arrest or fine me."

Mr. Mcfarlane admitted that this was a direct libel upon the commissioners, but declared that it was only one instance out of many. Naturally his words created a profound sensation. He also declared that the guides are fruitful source of game law violations and ought to be better regulated and controlled, not by the Commission, but by the Governor. He was followed by Commissioner C. E. Oak, who indignantly denied that any man had "a pull" with either commissioners or wardens. He dared anybody to produce a man who would openly dare show that he had "a pull." Mr. Mcfarlane threatens to introduce a bill to take the care and control of the wardens and guides entirely out of the hands of the commissioners, and put them in charge of the Governor and Council. He says that the commissioners are fallible along with the rest of human nature; that they have too much power, too much to attend to.

The proposition to increase the guide license fee from $1 to $5, or even $10, by the more radical, is meeting with some bitter opposition from the guides themselves. A guide, who was in Boston last week, says that the guides themselves will go to Augusta and oppose such a measure. He says that putting the fee higher than $1 would do nothing toward insuring a better class of guides, since no would-be guide is so low that he could not procure $5, or even $10, to pay for a license, and when he had obtained the license he could easily get even with the State by taking still another deer to sell to hunters or send by them to the Boston markets.

SPECIAL.

The Cuvier Club.

THE Cuvier Club, of Cincinnati, held its thirtieth annual meeting on Jan. 5. The election of officers resulted as follows: Alex. Starbuck, President; James W. Doherty, First Vice-President; Henry Hanna, Second Vice-President; P. E. Roach, Third Vice-President; E. G. Webster, James W. Doherty and John T. Rouse, Trustees, to serve three years. This will make President Starbuck's sixth successive term as the head of the organization.

Successful Outings.

CALIFORNIA, Jan. 8.—In its varied gleanings, FOREST AND STREAM unavoidably collects peculiar sentiments. The correspondent who contributes the item "Two Successful Outings" to the journal of Jan. 5 must be an amateur sportsman of very indifferent attainments, or there are no contrasts in life.

According to his subscribed testimony he went to Newfoundland on his successful outing No. 1 and killed three caribou, having to put "five shots apiece into the bodies" of the first two.

In successful outing No. 2, in New Brunswick, with a guide, he shot three moose and three caribou, securing one moose and one caribou.

Now it seems to me that this is about as unsuccessful a showing as a man should make public or be permitted to contribute to FOREST AND STREAM.

Who writes the headlines?

There is a sermon behind such successes, but I am not patient enough to attempt it. Of course the performance is not a new one, and it is a pity it is not. Cannot some real sportsman devote a few hours to the topic?

RANSACKER.

100 Sportsmen's Finds.

Some o the Queer Discoveries Made by Those Who Are Looking for Game or Fish.

40.

John Roberts, the fish dealer, received a channel catfish yesterday evening from Hickman, Ky., weighing 114 pounds. The monster measured 14 inches across the head and came alive and kicking. Roberts called in many customers to see the monster, and proceeded to skin, dissect, etc., in the presence of Mr. Sterling Neblett, of the Chronicle, Stickacre and others. The reporter will give the facts as told him by Mr. Neblett, who never wabbles, even in a fish story, and we will swear to anything Sterling Neblett says, also Stickacre, who was brought up by Sterling in the Greenwood prayer meeting, and can't tell a lie. Says Neblett: "I saw him cut the fish open, take out the entrails and open the masticating sack, from which was taken a piece of candle, a bunch of six keys, and a rag carefully rolled up and securely tied, in which was found two $20 gold pieces, two $5 gold pieces and $5.50 in silver, making $55.50, and I tell you, sir, I never would have believed it if I had not seen it with my own eyes."—The Savannah News.

Sea and River Fishing.

Notice.

Proprietors of fishing resorts will find it profitable to advertise them in FOREST AND STREAM.

One Morning.

THE fishing was rank; in fact there seemed to be no trout in the lakes, and the experts with rod and reel who had made the summer pilgrimage to the Mastigouche were filled with disgust and doubts of there being any trout in the famous waters of the club. It was the last of August and hot—just an ideal time for camping, and though the midday sun was too warm for comfort, the nights were chilly enough to call for blankets. More for the enjoyment of an excursion than for the hope of any change of luck, our party, taking tents and supplies for two days, made the trip of about ten miles from the club house to a group of three small lakes, where we arrived quite late in the afternoon and pitched camp.

By the time we had the tents up and camp in good shape it was time for the evening meal and those delightful two hours of loafing around the camp-fire before turning in on the spruce bough beds. The guides had cut a beautiful supply of fire wood, and when our fire had become a bed of glowing coals we piled on the big logs and getting under the blankets were soon in the land of dreams. From the shack of the guides and from the tents came volleys of snores and from the great northwest came a fullgrown frost. Shortly after midnight we were cold enough to appreciate the comforts of a warm day and spent the rest of the night in feeding the fire and getting an occasional forty winks between its frequent demands.

At last the morning came, and while the guides were preparing breakfast we made a dash for the lake for the morning ablution. A heavy fog hung over the water and the temperature of the water was so much higher than that of the air that it really felt like a warm bath. That phenomenon, however, received little notice. More interesting things than fogs and warm water were in sight. The frost had chilled the flies so that they were on the water in swarms and the trout were taking breakfast just as fast as they could jump. It looked as if there was a rising fish in every square foot of the whole lake, and out in the fog beyond our range of vision we could hear the splash of what seemed countless thousands of them. We thought we were in for a day of great sport, hurried through our breakfast and as soon as possible were out in the canoes.

But what a disappointment! We had had our breakfast and so had the fish. The fog had disappeared before the rising sun, the flies warmed up to new life, and fishing for that morning, at least, had settled down to the normal conditions. Nothing in the way of fly or bait would tempt them.

Perhaps some older and wiser angler can explain why it is that at irregular periods the brook trout stops feeding. Not once or twice, but many times the writer has known this to happen, and during these seasons of fasting the fish grow thin and have the appearance of being starved. To the trout fisherman the contents of the stomach of the fish is always a guide to the bait. During these periods of non-feeding, however, there is no guide, for they are found to be empty, except for small quantities of vegetable matter. Then suddenly the conditions change and for a day or two they appear to be ravenous and fill up with anything in the way of food and then settle down again into deep water and another period of starvation. The strange part of it is the fact that these fastings seem to occur when insect food is plentiful, and, so far as we can see, all conditions are favorable for indulging in meals at all hours.

Then, again, what trout fisherman has failed to notice that often when the fish are rising freely to the flies and the sport is all that one could desire, it will stop as suddenly as if an alarm had been sounded and no amount of skill will tempt them? It is the uncertainty that makes the angling art the more fascinating and teaches how little we really know of the philosophy of these inhabitants of the water. What trout fisherman has failed to note that often the greatest skill is required to tempt the fish when they are absolutely void of food? And, on the other hand, how often do we find them dashing at the bait and when landed discover them to be so filled that there is no room inside for another mouthful? One old Indian who was one of the best guides we ever had, and who was regarded as quite an oracle by all who knew him, summed up the subject about as follows when he was asked what luck might be expected for the day: "No can tell; may be so catch lot; may be so no have bite; try hard any way; plenty fish, but no tell about catch 'em."

The laws of men are doing much toward preserving the species, but it is a blessed thing for the anglers of coming generations that kind Providence has established laws of nature, of which we know but little, whereby the trout are somewhat defended against the temptations of bait which are constantly placed before them.

B.

ANGLING NOTES.

Oldest Active Angler.

My friend Mr. Archibald Mitchell sends me a leaflet which describes the "oldest active Scotch angler," and also gives a portrait of the man. "George Thomson, working joiner, of Lovers Lane, Cupar, was born at Nuthill, Falkland, in April, 1807, and is thus in his ninety-fourth year."

Mr. Mitchell says: "The inclosed, which will tell its own story, has just been received from an old angling friend of mine, who is President of the Cupar Eden Angling Club, and thought it might interest you, for I am not sure but Mr. Thomson may be the oldest active angler in the world. At any event, I do not know of one who is nearly as old as he. Had Mr. Habersham been still alive, he would have been at least ten years younger than this man. Do you know of an angler who goes fishing in his ninety-fourth year?" Indeed I do not, but I wish there was a company that insured a man's life to that degree of certainty that he would live to be active and fond of fishing when he arrived at ninety-four, and I would take out a policy to-night. That would be the one thing that would tempt a man to live to the age of ninety-four—that he could call himself an "active angler" and enjoy angling, but I suppose really if an angler lives to be ninety-four and retains any of his senses he would enjoy angling as a matter of course.

Mr. Mitchell writes: "This sketch of Thomson's life is interesting to me, because I had my first experience of angling on the Eden, and know all the places mentioned in the sketch. I hope he may round out the century and still be able to fish, but it is doubtful, as he has now lived far beyond the usual limit of human life."

The picture of Mr. Thomson shows a rugged old man with bright eyes and a strong face and a head crowned with white hair, and if one can judge from a picture, he seems good for six years more of angling.

One paragraph of the sketch I must quote: "From the far-off day when he 'bocht a ha'penny wand frae Blind Danvid at the Hedging Close' and helped the other urchins of the town to denude the tail of any passing gray horse to make lines, George Thomson has ever been a persistent, enthusiastic and successful angler. Up to the close of this season, he has plied the gentle art with success, and even now he says he is looking forward to the time when the hedges bud and the swallow returns, so that he may resume his loved craft. All will re-echo the hope of this 'hero of a thousand fights'—with trout—that his hundredth birthday will find him, rod in hand, on the banks of the Eden."

Spawning of Rainbow Trout.

The rainbow trout is called a spring spawning trout, as indeed it is on the Pacific coast, where it is native, but since it has been transplanted to Atlantic coast waters its spawning season has been of an earlier date as the years passed, until now it may be called a winter spawning fish in New York. When the rainbow was first introduced into New York State, a special season was provided for it by law, but now no distinction is made in the season when it can be taken legally. A few days ago I was at the Pleasant Valley hatchery of the Forest, Fish and Game Commission in Steuben county, and while there rainbow trout eggs were taken for the first time this season, and the date was Dec. 10, or eight days earlier than ever before known at this hatchery. On Long Island it is common to take rainbow trout eggs in January, but never so early as in December. At Pleasant Valley brown trout eggs were taken on Dec. 11, and quite a number of native brook trout had not spawned on that date. On Dec. 12 I was at Cold Spring Harbor, on Long Island, and on that date the men at the State hatchery were taking eggs from brook trout, and the brown trout had finished spawning. This evening I opened the Manual of Fish-culture published by the United States Fish Commission, and this is what is said of the spawning of the rainbow trout at the Wytheville, Va., station of the U. S. Fish Commission: "In the ponds at Wytheville the spawning fish may be found any time after the first of November; the season is well started by Nov. 15, and generally closes about March 1. December and January are the best months. In California the season extends from the first of February to May, and in Colorado begins early in May and continues until July." It has been said, I think, that in California the rainbow trout spawns in each month of the year somewhere, depending upon the elevation at which it is found, which means that in waters of different temperatures the fish has different spawning seasons. One of the objections urged against the rainbow trout in the East was that it was a spring spawning fish, and consequently it was soft of flesh at the season when the native brook trout season opened. No longer is it true to say the rainbow is a spring spawning fish in Eastern waters.

A. N. CHENEY.

The Massachusetts Association.

BOSTON, Jan. 10.—*Editor Forest and Stream:* Another year has rolled round—an exceedingly active and important one for the Massachusetts Fish and Game Protective Association. The sportsmen of the State have taken hold of the game question in such a manner and put in such an amount of work before the last Legislature that a law prohibiting the sale of game birds is now on the statute books, and the occupation of the market-hunter is gone. The State Commission, with Capt. Collins at its head, has shown its fitness to live—no longer are complaints of the violation of fish and game laws ignored or pigeon holed, as in the old days, but strong, active measures are taken to see that the laws are properly enforced. All this, and more, were matters for congratulation among the members of the Association at their annual meeting at the Copley Square Hotel last evening, at which there was a good attendance. President Wiggin was in the chair, and after dinner a good amount of business was transacted. Messrs. Herbert Merriam, I. S. Adams, A. H. Whipple, George Nichols, John C. Clark, Jr., and Dr. D. S. Woodworth were elected to membership, and applications from forty-two gentlemen were received and referred to be acted upon at the next meeting. The report of Treasurer Kimball showed a balance to the new year of $429.81, and that the invested fund amounts to $2,180.11. Mr. Kimball also presented his report as Secretary, dwelling at some length upon the movement that led up to the crowning mark of the year—the enactment of the new game law, before referred to. The election of officers followed, resulting in the unanimous choice of the following gentlemen to serve for the current year:

President, James Russell Reed; Vice-Presidents, George W. Wiggin, Horace T. Rockwell, William S. Hinman, Dr. Heber Bishop, Dr. A. R. Brown, Dr. Maurice H. Richardson, Benjamin C. Clark, Robert S. Gray, Edward J. Brown, Dr. George H. Payne, Dr. B. V. Howe, A. W. Robinson, A. B. F. Kinney, of Worcester; C. H. Moulton, of Waltham; A. C. Sylvester, of North Attleboro; Dr. J. T. Herrick, of Springfield; Dr. D. S. Woodworth, of Fitchburg, Secretary and Treasurer, Henry H. Kimball: Librarian, Dr. E. W. Branigan; Executive Committee, J. N. Roberts, Charles Stewart, C. G. Gibson, Dr. Eben C. Norton, W. C. Prescott, George H. Moore, C. M. Bryant, Rollin Jones, William B. Smart, A. C. Risteen, N. Le Roy, Loring Crocker; Membership Committee, Thomas H. Hall, Waldron B. Hastings, Richard V. Joyce; Fund Committee, George W. Wiggin, William S. Hinman, Adelbert D. Thayer.

President Reed on taking the chair thanked the members for the compliment paid him, and promised his best efforts to promote the objects of the Association. The health of Mr. Daniel T. Curtis, one of the charter members, was drank with all the honors, and he briefly responded. Mr. Curtis reached the age of eighty-six years on that day, and he is still quite active, and rarely misses a meeting of the Association.

A committee was authorized to make arrangements for the annual banquet—always a very important affair—and then there was a little bouquet-throwing by ex-Presidents Clark and Rockwell—entirely deserved—to ex-President Wiggin, in the form of a vote of thanks for his services as President. Mr. Wiggin is a pretty busy man in his law business, but he has always found time to devote to the best interests of the Association.

Dr. Peckham, Bird Commissioner of Rhode Island, spoke of the havoc made among game birds by the pot-hunter, and complimented the Association upon the splendid work it had done in the direction of proper protection. Capt. Collins, the efficient chairman of the State Commission, always a welcome guest at our board, declared that the good results of the recent legislation were already apparent, and that it was true beyond question that game birds were on the increase in the State. There was still much to be done, however, and he felt sure the State Board would receive the hearty support of all true sportsmen throughout the commonwealth. Ex-President Clark spoke of the recent death of ex-Governor Wolcott, who always took a lively interest in the objects of the Association, and one of whose last official acts was the appointment of Capt. Collins to the State Board. In conclusion, let me say that in Mr. Reed the Association has a President who is a sportsman in the best sense—he uses both rod and gun, and uses them well. He is a lawyer in active practice, and has served as counsel for the Association for many years. He is a worthy successor to such men as Benj. C. Clark, Horace T. Rockwell and George W. Wiggin. The old Association enters upon another year with satisfaction for its labors of the past and great hope for the future.

WM. B. SMART.

Trout Jump at Flies.

CHICAGO, Ill., Jan. 8.—In answer to Mr. R. B. Marston, in London Fishing Gazette, let me relate: In fishing a trout stream in northern Michigan I was using a cast of a Parmachenee-belle and a brown-hackle. I was wading down stream, and I came to a place where a tree had fallen into the stream, and after several casts I noticed some small trout following my flies. I cast again, and while my flies were 5 or 6 inches from the water a small trout 4 or 5 inches long jumped clear out of the water, grabbed my Parmachenee-belle and immediately dove with it in its mouth. I believe the same trout did the same thing several times while I was fishing there. These were brook trout, and they were not jumping except when they jumped at my flies. They were so small that I did not take any from that place. I have fished in that same stream every summer for five years, and this was my only experience of this kind.

THE FLY.

Governor McLean on Fish and Game.

HARTFORD, Conn., Jan. 10.—*Editor Forest and Stream:* Governor George P. McLean, of Connecticut, is a noted sportsman, and his hunting proclivities were attested in his inaugural message delivered to the General Assembly yesterday by the following passages:

"I believe it very bad economy to permit the extermination of the trout and game birds from our brooks and woodlands. A brook well stocked with trout or a cover well stocked with partridge or quail will in the near future bring a larger proportionate profit to its owner than any other investment. A step in the right direction was taken by your immediate predecessors, but the law lacks means for its enforcement. The slow torture and strangulation of the partridge should not only be prohibited, it should be stopped by detection and punishment as other forms of torture and cruelty are stopped. Many States of the Union have found it necessary to prohibit the sale of game entirely for a term of years. Certainly no man should be allowed to enter the premises of another for the purpose of taking trout or game found thereon, without the written consent of such owner. Non-residents coming into Connecticut to shoot or fish should pay a license fee. The law protecting deer should be extended and ample provision made for its enforcement. An intelligent treatment of this subject would add greatly to the value of many of our remote farms and preserve one of nature's greatest blessings." E. H. F.

The Innocent Dies for the Guilty.

WARRENTON, Va., Jan. 5.—I was unfortunate enough on Monday last, the last day of our season here, to lose my most valuable dog while hunting, from poison gotten upon some place where it had been put out to kill sheep killing dogs. I regret that this is only a too common practice here, notwithstanding, in my opinion, it is against the law, and it is certainly hard, as in my case, without notice and without going upon lands where hunting is prohibited, to have a dog upon which time and money have been spent, a good hunter, a most excellent watch dog and a pet of the family, killed in this way.

Unfortunately I have been unable so far to ascertain exactly where the poison was obtained. I had taken the precaution to have my dog listed for taxation, as provided by our law, thus making her personal property, and could I ascertain where the poison was gotten I think the party in question would have enough of putting out poison in this manner before I got through with him.

Wishing FOREST AND STREAM a prosperous New Year, as I know its readers will have a happy one while reading it, I am, very truly, C. M. WHITE.

The Philadelphia Dog Show Association.

THE annual meeting of the Philadelphia Dog Show Association was held in their offices on the 7th inst. The reports of the various committees and the officers were read and placed on file. The following officers were unanimously elected for the ensuing year: President, Clement B. Newbold; Vice-Presidents, Edward Moore Robinson, Alexander Van Rensselaer and Louis A. Biddle; Secretary, Marcel A. Viti; Treasurer, S. Boyd Carrigan; Board of Governors, the above named officers and Messrs. Reginald K. Shober, D. Murray Bohlem, Francis E. Bond, Mitchell Harrison, Jay B. Lippincott, C. Leland Harrison, Sidney W. Keith and Geo. R. Packard.

It was decided to hold the third annual show in the latter part of November of this year.

Points and Flushes.

Mr. James Mortimer writes us that Mr. G. M. Carnochan, Riverdale, N. Y., will judge fox terriers, and Mr. A. J. Purinton, Palmer, Mass., will judge beagles. The judges of the other classes were published in FOREST AND STREAM of last week.

The Alabama Field Trials, owing to scarcity of entries, have been declared off for this season.

The Yachtsmen's Club.

THE Entertainment Committee of the Yachtsmen's Club announces an important change in the ararngements for the Wednesday evening "talks." A class in knots and rigging under the tuition of John F. Byno will commence on Wednesday, Jan. 16, and be continued on alternate Wednesdays until finished. The corrected programme for January and February, therefore, is:

Jan. 16, class in knots and rigging; Jan. 23, "Cruising Yachts, Their Design and Construction," by Clinton H. Crane; Jan. 30, class in knots and rigging; Feb. 6, "Steam Yachts, Their Design and Construction," by Henry J. Gielow; Feb. 13, class in knots and rigging; Feb. 20, "Racing Yachts, Their Design and Construction," by William Gardner; Feb. 27, class in knots and rigging.

Yachting.

Notice.

All communications intended for FOREST AND STREAM should always be addressed to the Forest and Stream Publishing Co., and not to any individual connected with the paper.

To Mr. George L. Watson, the famous yacht designer, has been alloted the difficult task of rectifying the glaring mistakes made by Sir William White and his assistants in designing the royal yacht Victoria and Albert. Probably no naval architect is more widely known or has had such extensive experience as Sir William White, the chief constructor of the British Navy. After successfully designing the greater number of the recent ships in the navy, he made such grave errors in the planning of the royal yacht as to necessitate his removal from office. He is held responsible for lack of proper attention to the details of the design of the yacht, the unfortunate record of which dates from the time of her launching, when she nearly capsized. After radical changes and alterations were made, she was found to be quite as unseaworthy as when she was first launched. Sir William White endeavors to excuse himself by saying that impossible requirements were exacted regarding the interior arrangement of the vessel, but after some $3,000,000 have been spent, the British Admiralty do not feel disposed to consider this plea. The yacht is so much of a failure that it is a question whether it lies within the power of even so able a man as Mr. George L. Watson to remedy the mistakes made and to produce the original plan to make her the finest and most seaworthy yacht in the world. She was designed solely for the use of Queen Victoria and her family, and it is said that the Queen's prejudice is so strong against the boat that no matter what alteration might be made, it is very doubtful if she would ever go on board her.

The New York Herald's European edition publishes the following article in regard to the royal yacht:

The story of the new royal yacht, which remains a theme of much talk among yachting men and ship designers, is the subject of a long letter in the Pall Mall Gazette, written by William Allan, of Sunderland. He enumerates the various failures and alterations which the yacht has undergone, and says:

"The story of this yacht, which is unique in the annals of naval architecture, reads somewhat as follows: A yacht for Her Majesty that would eclipse all examples of modern yachtdom in luxurious comfort and seagoing qualities was determined to be built. Money was voted by the House of Commons without demur. The design and arrangements were left in the hands of the Admiralty officials, who, being designers of battleships, cruisers, gunboats, etc., were naturally deemed competent to design such a small affair as a yacht.

"The vessel was duly built from these designs in Pembroke dockyard, and was launched in the presence of royalty. Her machinery was fitted on board in the dock, but on letting water into the dock to float her out, she, much to the amazement and consternation of all around, almost tumbled over. Had she not been in the dock at the time, she would have done so with terrible loss of life. After a great deal of labor and ballasting she was ultimately got upright.

"The usual official inquiry followed. After being ballasted with hundreds of tons of pig iron, it was arranged to finish her in Portsmouth dockyard. She steamed around to Portsmouth very slowly, as it was found that she was inclined to show her keel. The report on this run was duly worded, in the usual phraseology, 'highly satisfactory.'

"She was docked at Portsmouth and has been in dock ever since, fully six months. Then began a series of wonderfully unscientific operations upon the poor cripple, to wit., cutting down the masts, funnels, forecastle, cabins, staterooms, window frames, dead packing the decks, etc., making the vessel look like a battered wreck. Then followed the fitting in of fixed iron ballast between the frames. Then it was found that the non-inflammable woodwork would not take on paint or be suitable for the valuable upholstery fittings, and so on.

"Yacht designing experts were called in at last, who, by all reports, confirm what was long ago told the Admiralty representatives in the Commons, namely, that she is, for want of a better term, a botch.

"The reason for this failure is not far to seek. The vessel speaks the cause. Any one, even an apprentice ship draftsman, on looking at her in the dock would have seen that she had no middle body in her and was too fine for top weights. This fining of her lines has been her ruin.

"This has been done apparently without due calculation of the weights to get a high speed ship at small indicated horse-power. Hence the center of gravity is too high, rendering her cranky.

"It will be admitted that such slipshod work as has been exhibited in this vessel would have been expected only from an amateur, but, coming as an Admiralty design, and having no doubt the approval of admirals and captains on the Board, one is staggered at this result.

"Hence the question naturally arises, Are the battleships and cruisers of the English Navy stable? With the heeling over recently of Her Majesty's ship Resolution, an object lesson is provided which ought to be seriously considered. With bunkers and tanks empty, can these vessels remain upright? While under these common conditions to what angle can they be heeled over without capsizing?

"If stability is to be sacrificed to speed which with the present machinery can never be attained or maintained after the trial trip farce is over, then the British fleet is indeed in a deplorable condition, and the sooner the nation is made aware of this fact the better for its ultimate safety.

"The cost to the country of this new royal yacht will be enormous, as much as, if not more than, that of a first-class battleship.

"Why all this extravagant expenditure has been allowed to go on since the launching of the vessel, last May, it is difficult to understand upless it is on the ground that the Admiralty creed is, when we make a blunder we don't admit it, but endeavor to retrieve errors of all kinds, whatever the cost. On such a basis alone can such scandalous waste of public money be accounted for.

"Who is to blame? An answer is required. A full investigation is urgently needed and will be demanded, into the true condition of the British Navy and Admiralty management.

"Nothing less should satisfy the country. Then will it be known who are the men that have given the world the materials for this discreditable story of the new royal yacht."

Our Boston Letter.

BOSTON, Jan. 13.—Everything is now in readiness for starting work on the construction of the Boston cup defender. The laying down has been completed, and the scrive board will be taken to the Atlantic Works, Monday. It is expected that some of the lead for the keel is now on the way to Boston, but this material is not needed in a hurry, on account of the peculiar manner in which the keel will be constructed. It can be put into the hollow trough at any time before the yacht takes the water.

The shed at the Atlantic Works has been completed, and is now ready for occupancy by the new 90-footer. It is a very fine affair, for a temporary one, and will have every convenience for the workmen. Light is obtained from thirty-nine windows, placed in the sides and the ends. It is situated close to the rolling mill, so that no time will be lost in transferring the plates and the frames when finished to the yacht. B. B. Crowninshield went to New York Friday, but it is not known that it was in connection with the new boat.

There is now little doubt that the alleged centerboard syndicate will prove a fizzle. Some of the men who were most prominently mentioned in connection with it have drawn out, and it is not expected that the others will carry on the work. As a matter of fact, there has not been one dollar put up so far to insure the building of the boat, and it is not thought that there will be any of these necessary articles produced.

It is greatly lamented in this district that the boat will not be built, and that is the way the matter looks at present. There are many advocates of the centerboard type about here who are very anxious to see the principles of such a design thoroughly tried out in a 90-footer. It is thought that some of these men would have formed a syndicate if it were not for the fact that they had received the impression that a syndicate had already been formed. It may be possible that these men will yet put up sufficient money to insure the building of the boat, but it is considered extremely doubtful.

Wilson & Silsby are hard at work on the sails. They were offered the use of the big sail loft at the Charlestown Navy Yard, but as the larger sails could not be spread there, Mr. Wilson thought that he would perhaps be as well off in his own shop. Both Mr. Wilson and Mr. Crowninshield were very much pleased at the manner in which the navy officials treated them. They were offered every assistance which might be obtained at the Charlestown yard. It is quite likely that the bolt ropes for the sails will be made there. The rope which is made at this yard is the finest produced in the country, the material of which it is made costing more than the finished article turned out by private concerns.,

Wilson & Silsby have probably the largest private sail loft in the country. It is 122ft. long and 40ft. wide. But even with this large floor space the big jib topsail, ballooner, spinaker and mainsail for the new boat cannot be spread. It may be wondered how the sails can be made accurately, when they cannot be entirely spread out, but they are all made from a certain design which cannot be departed from, and the result is that every cloth in the sail has its proper draft and conforms to the idea of the designer.

The sails for the Navahoe, Colonia, Jubilee and Pilgrim were made in the old sail loft, which was only 22 by 75ft. The sailmakers had no idea of the appearance of the larger sails until they were hoisted on the boats. That sails can be made in this manner, having the right flow and draft, seems nothing short of marvelous, but they are made accurately. Wilson & Silsby sails are the finest in this country, and probably in the world.

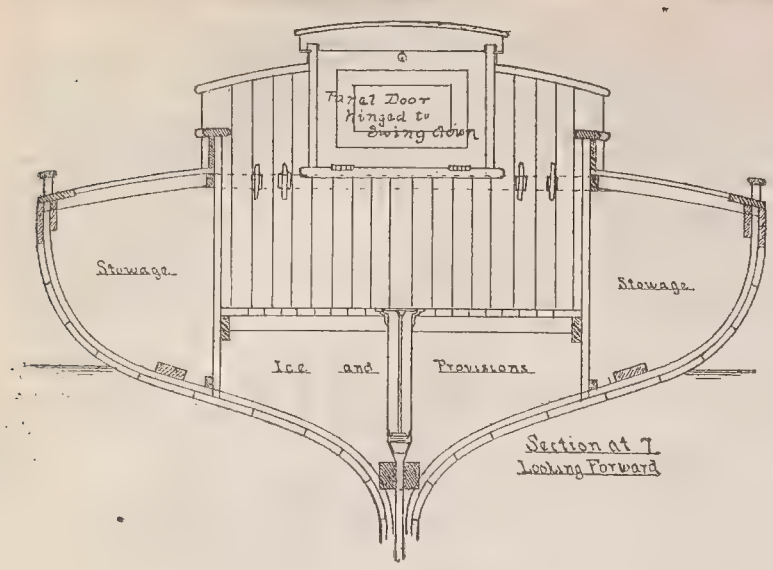
Arthur Binney has been at work on a number of designs during the winter. He has had his usual number of steamers and this year he has turned out another fisherman. Mr. Binney has designed several fishing vessels for Capt. Sylvester Whalen, which have been very successful, both in regard to speed and in carrying capacity.

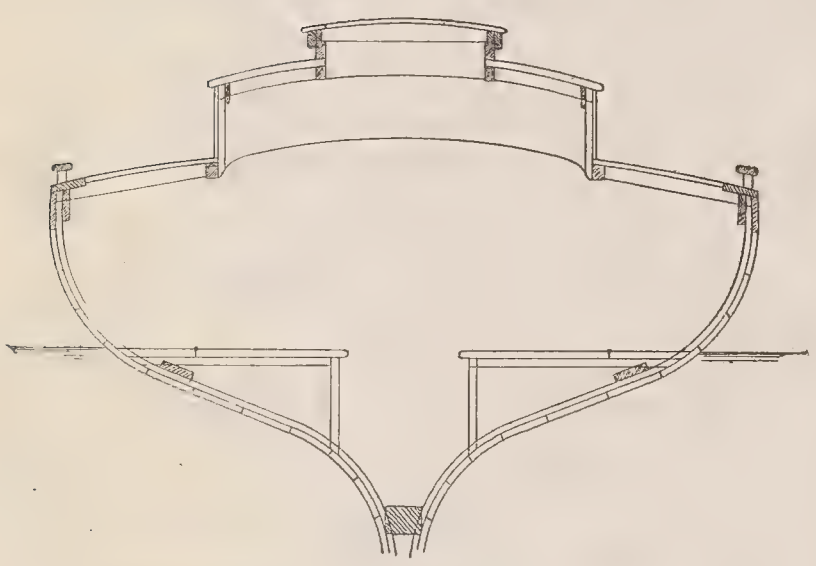
The fisherman which he has turned out this year is for B. F. Philips & Co. and is being built by Story, of Essex. She will be 98ft. on the waterline and 126ft. over all. She will have a long overhang forward, but which could hardly be called a spoon bow. It is very sharp and somewhat rounded up to the stemhead. There will be great depth under the forefoot, which Mr. Binney considers necessary on account of the vessel laying to so much.

He has a 36ft. gasoline launch for the Canaveral Club, of Titusville, Fla. This will be a stern-wheeler and will draw but 8in. of water. She will be used for fishing and shooting. He also has a twin-screw gasoline launch, 66ft. long, for George Hills, which is being built by Rush Bros., of East Boothbay. He also has orders for two 86ft. steam yachts, one of which will be built by Geo. Lawley. These will be very roomy boats, and will make admirable cruisers. They are expected to make 12 knots. Besides these he has a 70ft. schooner, a 55ft. schooner, a 36ft. cutter, two 22-footers, and a 17-footer.

The wooden keel for the Illinois, the Chicago defender of the Canada's cup, has been smoother up at Lawley's. The lead keel will be run this week. In the shop the Silsby 35-footer is about completed, as is the King 35-footer. The Curtis 35ft. schooner is all planked and her deck is being laid. The keel for the Sloane 85ft. schooner will be set up this week. The lead keel which was run for this schooner last week was about the slickest piece of casting that was ever turned out. There was not a bubble anywhere in it and the fuzz of the rough wood planking was plainly indented on its sides.

Kiley's Marine Agency has sold the 47ft. cabin naphtha launch Thoro to Jerome D. Aspinwall, of New York, and the 63ft. schooner Fairmount to Rockland parties.





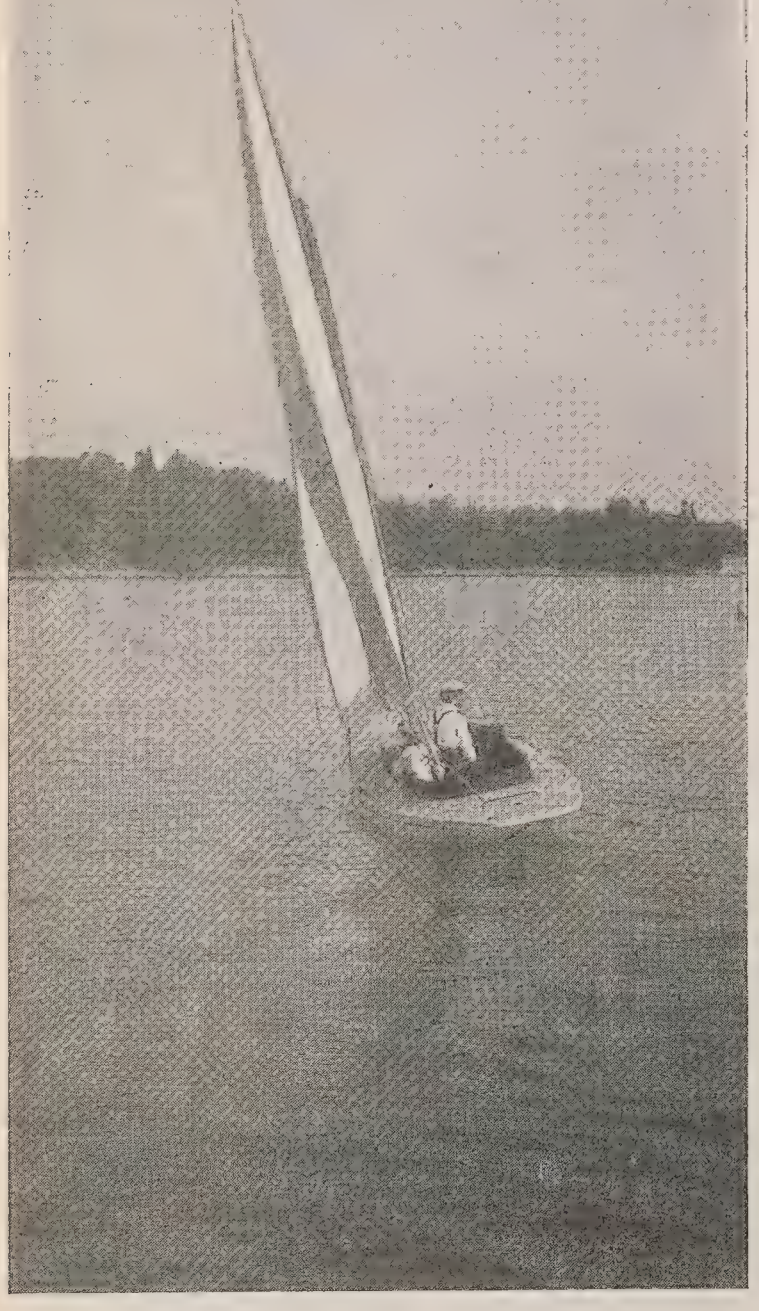
C. LARK—SECTIONS.

Kiley has an order to build a 40ft. gasoline launch for a member of the Hull-Massachusetts Y. C.

A smoke talk will be held at the Mosquito Fleet Y. C. Monday evening. Congressman Henry F. Naphen will deliver an address on Webster and Burke, a subject to which he has given much time and research.

MacConnel Bros. have sold the following yachts: The 21-footer Usona, to Dr. C. P. Curley, of Provincetown; knockabout Amelia, to B. E. Newhall, of Danvers; sloop Athla, to Dr. F. A. Gardner, of Washington; cutter Adeline, to Shepard & Orr, of Chelsea; cat Magic, to Chester Field, of Boston, and cat Gwendoline, to Myron L. Crowe, of Dorchester.

The following officers have been elected by the Old Colony Y. C.; Com., H. E. Jepson; Vice-Com., Louis Ostermeyer; Rear-Com., H. E. Jackson; Sec'y, M. Edmonds; Treas., H. L. Woodward; Meas., C. H. Conant; Board of Directors, J. Anthony, R. W. Davenport and F. Doane; Regatta Committee, E. W. Powers, C. Doane and A. H. Pike.



C. LARK.
Designed by C. A. Macey.

C. LARK—SAIL PLAN.

The following officers have been elected by the Beverly Y. C.: Com., George C. Stickney; Vice-Com., Stephen J. Connelly; Rec. Sec'y, William J. Starr; Fin. Sec'y, William D. Sweetman; Treas., Dr. E. B. Dudley.

JOHN B. KILLEEN.

C. Lark.

IN designing Pickle in 1897, Mr. C. A. Macey, of Rochester, N. Y., met with such success he was encouraged to turn out another boat of about the same size. C. Lark, the plans of which appear this week, is Mr. Macey's second attempt, and was designed for Dr. George E. Clark, of Skaneetales, N. Y., who built her himself, but the design was also used by Mr. James W. Commerford, of Toronto, Canada, who built a boat from the plans, but made the error of cutting down her sail area to 320 sq. ft., consequently she did not make a particularly good showing in a light breeze. C. Lark has proven herself fast in light and heavy weather, and is easily handled by one man, as all halliards and sheets lead aft to the cockpit. Her best point of sailing is to windward in a breeze. She is very quick in stays and balances perfectly under the rig shown in the drawings, carrying her helm about an inch a-weather when close hauled. Her construction is very simple, as is shown by the dotted lines on the plans. She is oak framed, has one sawed frame at each station shown on the sheer plan, and two bent ribs between; she is planked with cedar ¾in. thick, and is copper fastened. Her rig is of the sliding gunther type, as was used on Pickle, and proved very satisfactory.

The result of some of her racing last season is given in the following account furnished by her designer: On Aug. 14 she sailed a six-mile triangular race. There were eight starters. The boats were handicapped at the start, according to measurement, the smallest boat starting first and the largest boat last, the object being to bring all the boats together at the finish. She got away third, five larger boats following. The course gave one leg with the wind on the quarter and two legs of windward work. The wind was light and fluky. On the last leg the first time around when C. Lark was leading, she ran into a soft spot and a breeze astern brought up the other boats, putting all eight in a bunch and practically giving all of the boats an even start. For the second round, however, lay it to wind, boat, handling, as you will, she crossed the finish line first, about five minutes to the good. The next race she sailed in was on Aug. 28. There were only three starters. The wind was light again, and gave C. Lark two sides of the triangle off the wind (a condition favoring the other boats) and one leg of windward work. Spinakers being barred, she had to do her racing on one side of the triangle. However, she finished with nine seconds to her credit. The third and last of her season's races was sailed on Sept. 4, this time with four starters, C. Lark starting third. There was a whole sail breeze blowing two sides of the triangle off the wind again, and one leg dead to windward again. C. Lark finished first about five minutes ahead, thus winning second prize for the series of races. A good showing, considering that she was not rigged in time for the first race of the series, and broke down in the second and went into several other races without a trained crew, also had a bad setting mainsail, which has been replaced by the sailmakers since the races.

C. Lark's dimensions are as follows:

Length—	
Over all	25ft. 6in.
L.W.L.	14ft.
Overhang—	
Forward	5ft. 6in.
Aft	6ft.
Beam—	
Greatest	6ft. 6in.
L.W.L.	5ft. 6in.

C. LARK.
Designed by C. A. Macey.

Freeboard—	
Forward	2ft. 2in.
Aft	2ft.
Least	1ft. 6in.
Draft	3ft. 9in.
Sail area—	
Mainsail	301 sq. ft.
Jib	77 sq. ft.
Total sail area	378 sq. ft.
Ballast outside	700lbs.
Displacement	1,900lbs.

C. Lark's cabin is quite small, but still in case of being caught out over night or during bad weather it affords ample protection for two or three persons.

C. LARK—DESIGNED BY C. A. MACEY FOR DR. GEORGE E. CLARK.

A Canadian Ice Yacht.

TORONTO BAY, a clear expanse of fresh water frozen for several months of the year, offers excellent facilities for ice yachting, and though the boats are much smaller than those of the Hudson and Shrewsbury, and racing is not such a feature, ice yachting is very popular and much sailing is done. Many of the yachts are kept on hire and also used regularly to carry passengers between the city and the island, a mile away. They are of simple construction and far less expensive than the Hudson River craft, costing only about $100.

The yacht here illustrated, through the kindness of Mr. J. Ackroyd, one of the principal builders, is a good representative of the class. The construction is so clearly shown in the drawing that but little explanation is needed. The runner plank is of white pine, 2in. thick and 16in. wide, the upper members of the truss being two oak strips, each 2x4in. These are sprung over two pieces of 2in. oak, one on each side of the center of the runner plank. The truss is fastened together with ½in. bolts, as shown, the ends of the oak strips butting against pieces of 1¼in. oak bolted to each end of the runner plank, the same bolts, or lag screws, running down into the runner block. This is of oak, 5x5in., with a groove cut in the lower side, ½in. wide and 2½in. deep to receive the runner.

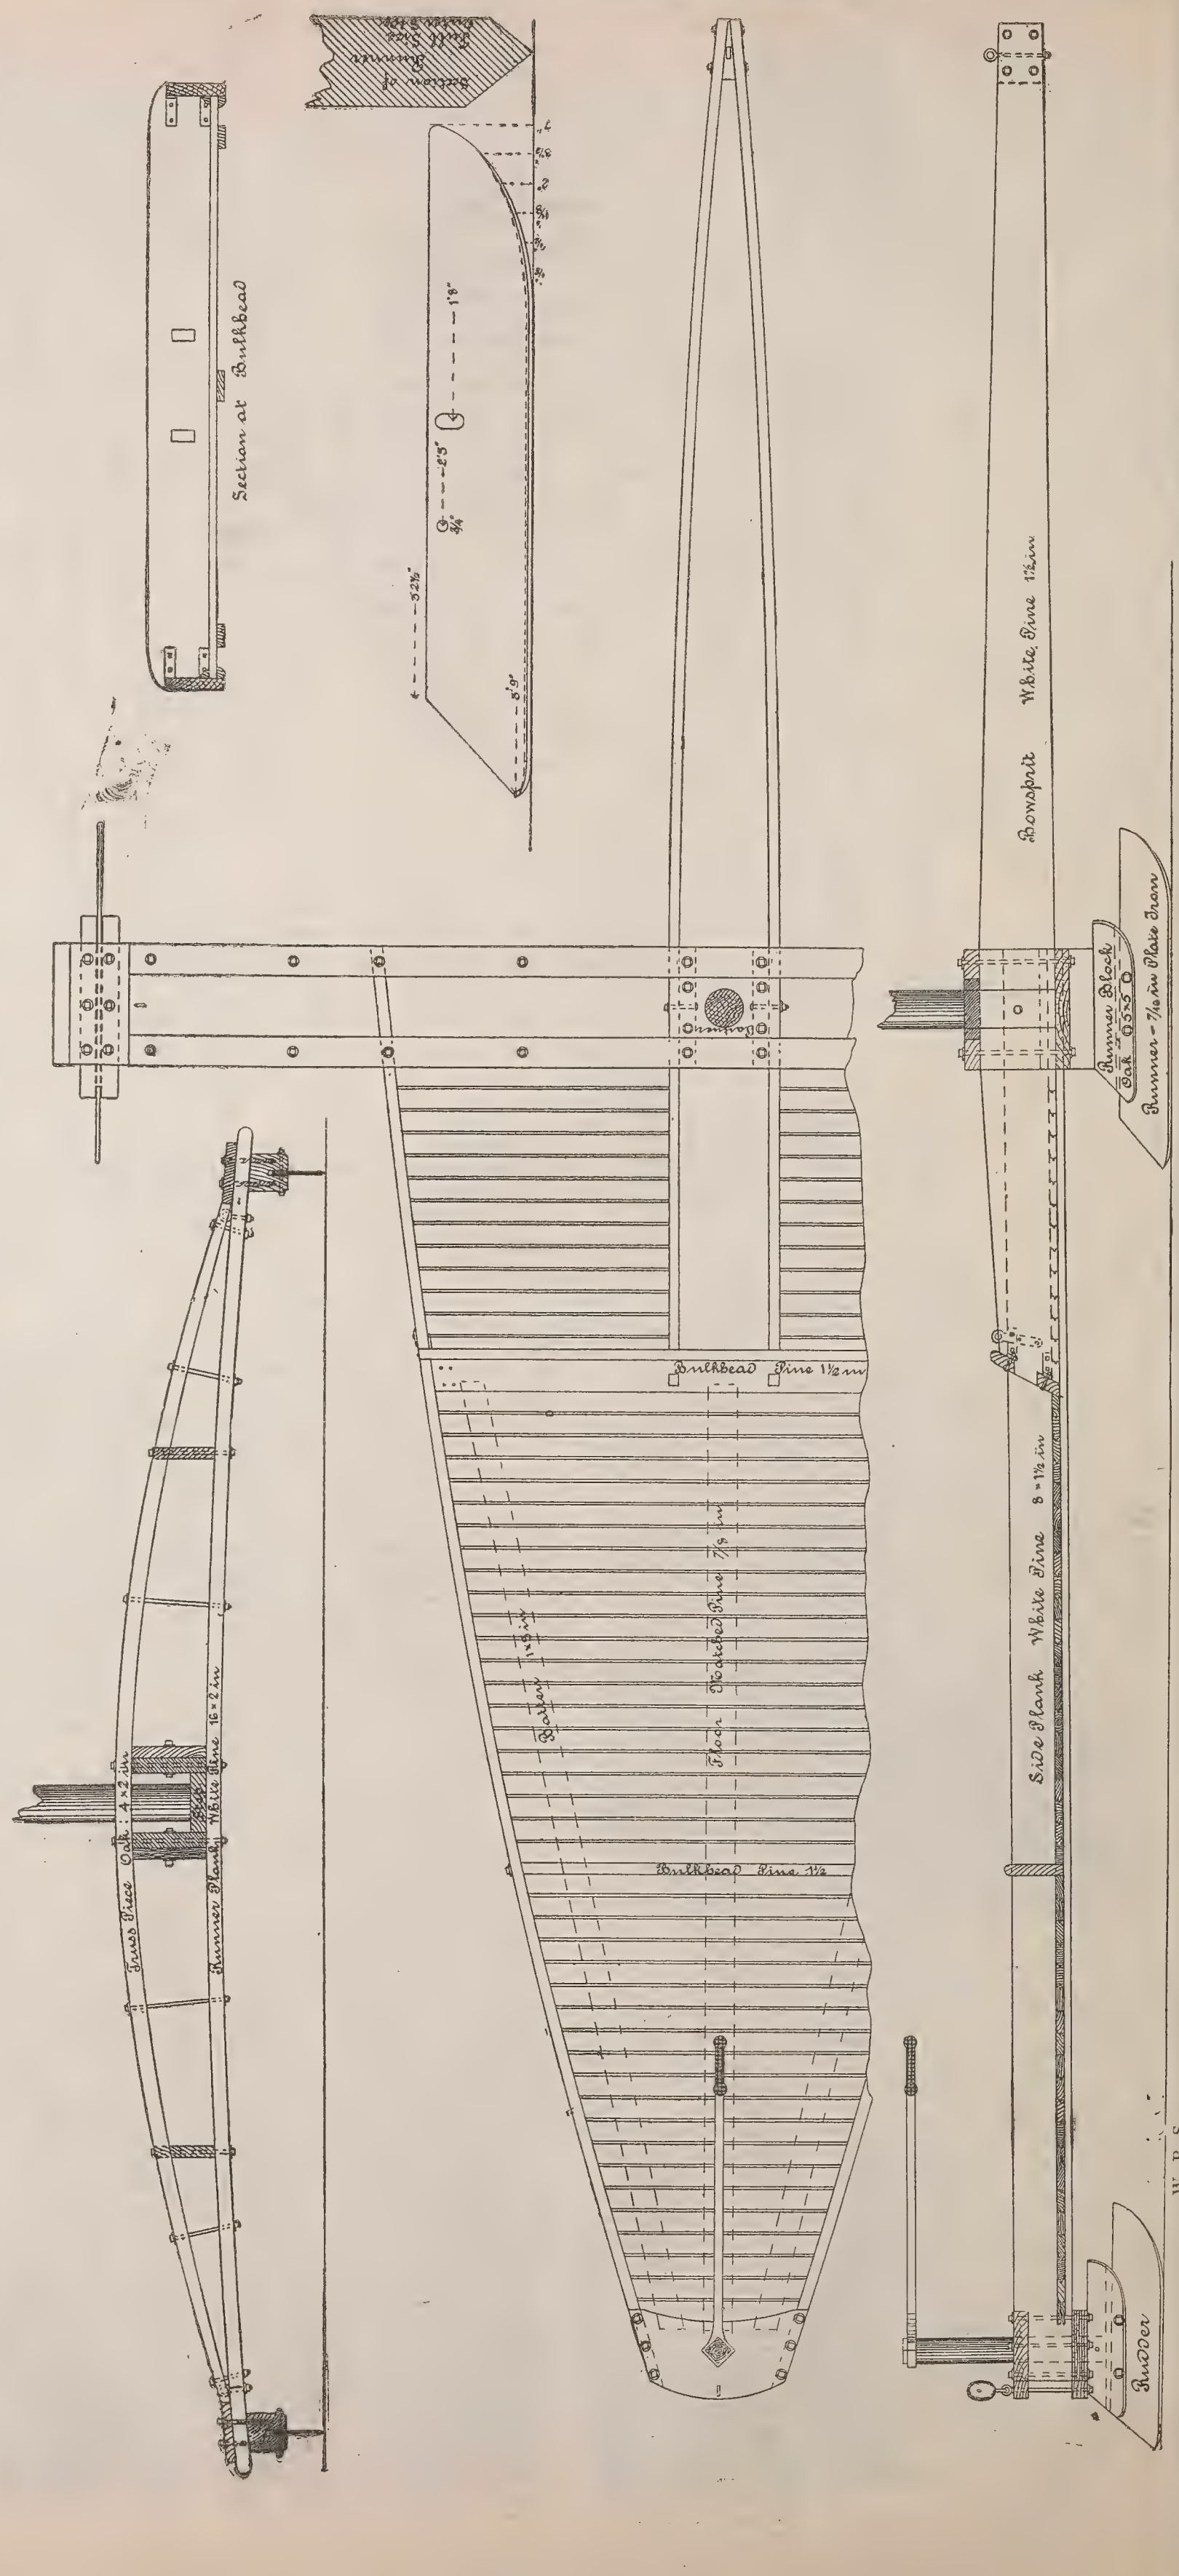
The mast rests on the runner plank, in a 2in. oak step bolted to plank, and the space at the top between the two oak strips is filled in with a similar partner piece through which the mast passes. The body of the yacht is made of two side planks, each 1½in. white pine 8in. wide, united at the after ends by two stern pieces of 2in. oak, through which the rudder stock works. The side planks are sprung to a curve and the forward ends are bolted into the truss of the runner plank. The floor extends the whole length of the body, and is of ⅞in. white pine, battened in sections and removable. It rests on strips screwed to the inside of each plank on lower edge. There are two transverse planks or bulkheads between the side planks, the forward one raking forward at an angle. These bulkheads are secured by lag screws through the side planks and also by iron knees, two to each end.

The bowsprit is of 1½in. white pine, the two planks being bolted together at the fore ends, while the after ends are tenoned into mortises in the forward bulkhead. The planks of the bowsprit pass outside the two oak uprights of the runner plank, and are secured by one bolt through each plank and upright.

The rudder stock is tenoned into the rudder block, the tiller being of oak or iron. The runners are of boiler plate, beveled as shown, the rudder, of course, having the same bevel on each side. They are hung on two ⅝in. bolts through runner block, the forward hole in runner being oblong, to admit of free play.

The yachts are all lateen rigged, with sails of 6oz. duck, double bighted. The boom and yard are each made of two spruce poles with their butts spliced at the center of the spar, the splice being wrapped with hoop iron for its full length.

Ice yachts are also much used on Burlington Bay, at Hamilton, thirty miles from Toronto, also lateen rigged, but with sheer legs in place of mast. The dimensions of the present boat may readily be reduced to one-half or one-third, making a still cheaper craft.



Yacht Club Notes.

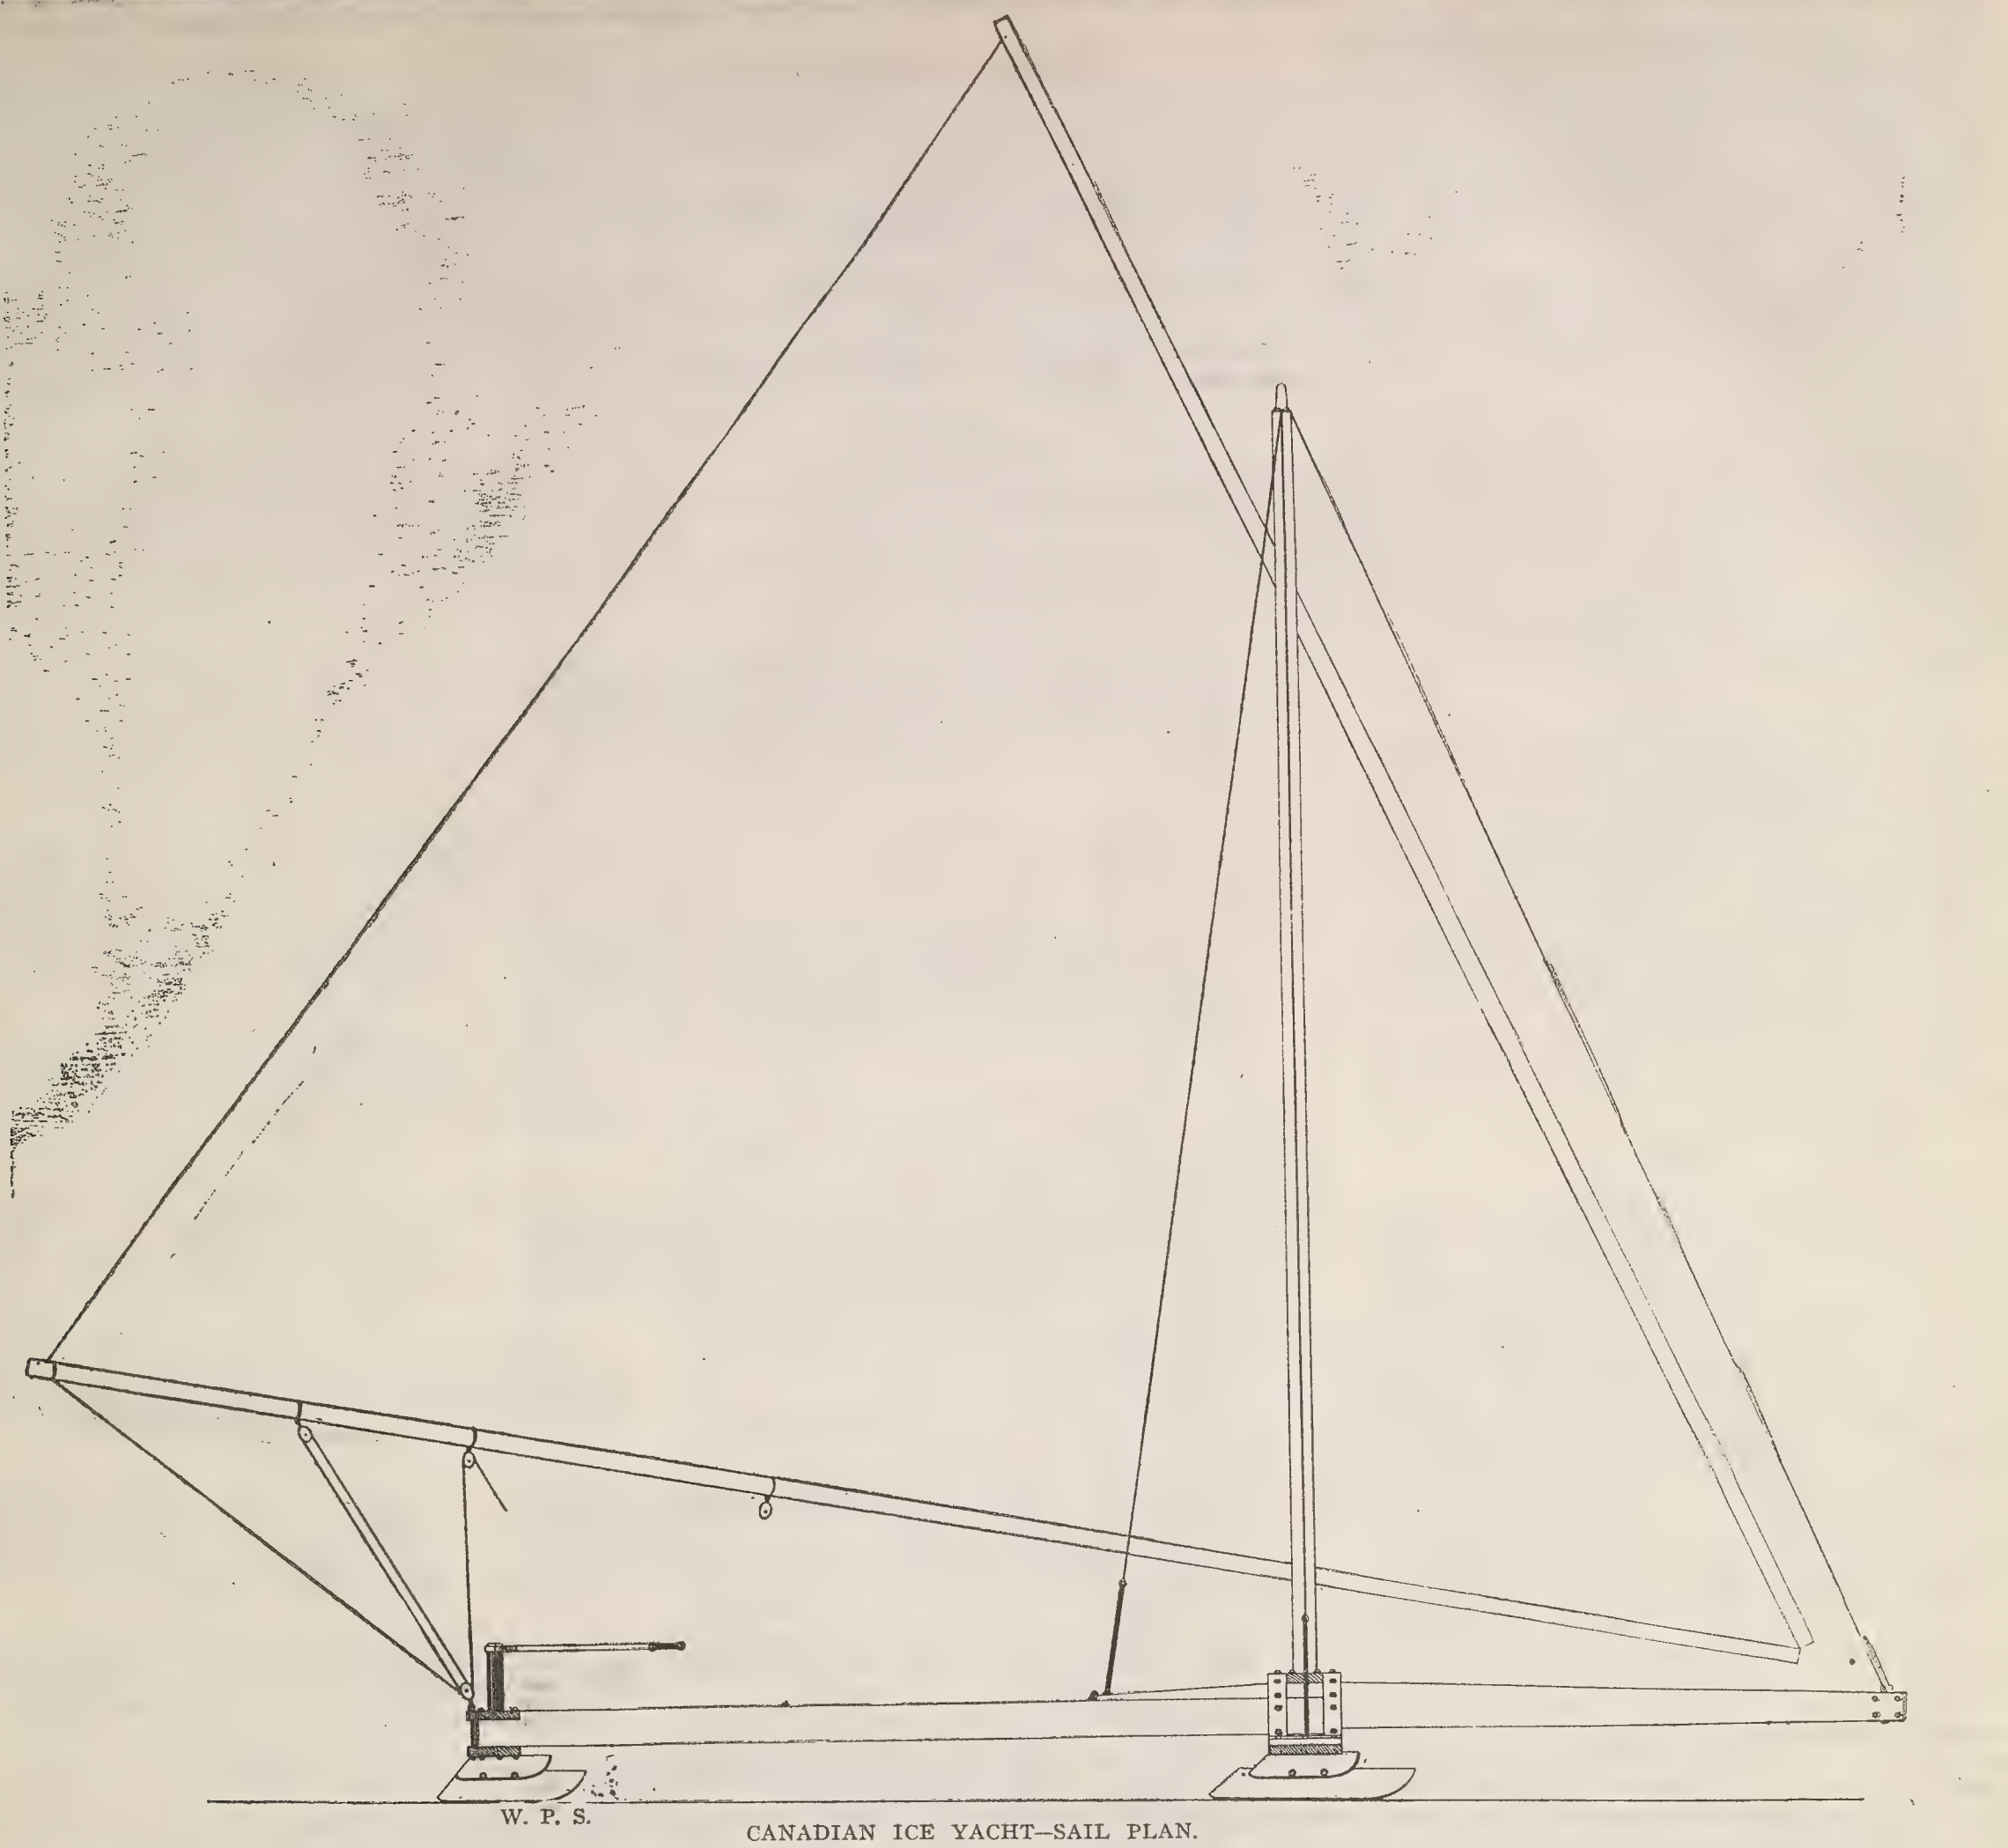
The annual meeting of the Indian Harbor Y. C. was held at the Yachtsmen's Club, 47 West Forty-third street, on Jan. 9. The usual reports were made, which showed that the club wis in a first-class condition in every way. The prizes won by yachtsmen in last season's regattas were exhibited and given to the successful yachtsmen. They formed a very handsome collection. Com. Charles T. Wills, who has held office for six years, retired last night. The club thanked him for his services and made him a trustee.

Resolutions were adopted of condolence with the family of the late Henry E. Doremus, who was the first commodore of the club and one of the charter members.

The following officers were elected: Com., Frank Tilford; Vice-Com., Alfred Peats; Rear-Com., George F. Dominick; Sec'y, Charles W. Kirby; Treas., Richard Outwater; Trustees (term expiring 1904), Charles T. Wills and L. R. Alberger; Regatta Committee, Frank Bowne Jones, Charles F. Kirby, Charles P. Tower, F. C. Henderson and Charles E. Simms; Delegates to the Y. R. A. of Long Island Sound, Frank Bowne Jones, Charles F. Kirby and Charles E. Simms.

The annual meeting of the Seawanhaka Corinthian Y. C. was held on Jan. 8 at Sherry's. The chief business of the evening was to listen to the reports of the officers and committees and all of these, particularly those of the Secretary, Treasurer and Race Committee were particularly pleasing. They showed that the club had just completed the best season of its existence. There were fewer resignations last year than ever before, the financial condition is good and there never was so much good racing as there was at Oyster Bay last summer. The result of the election was as follows: Trustees (to form the class of 1904 in place of that of 1901, whose term of office expired), Percy Chubb, Henry Clark Rouse and Wm. J. Matheson; Com., Arthur Curtiss James; Vice-Com., Colgate Hoyt; Rear-Com., Henry C. Eno; Sec'y, Allen E. Whitman; Treas., Frank S. Hastings; Meas., John Hyslop; Fleet Surgeon, H. Holbrook Curtis, M. D.; Fleet Chaplain, W. Montague Geer, D. D.; Race Committee, Charles W. Wetmore, Walter C. Kerr, Charles A. Sherman, Clinton H. Crane and Johnston de Forest; Committee on Lectures and Entertainments, Jacob Wendell, Jr., Nelson B. Burr and Elijah Woodward; Committee on Lines and Models, John Hyslop, A. Cary Smith and H. M. Crane; Law Committee, Alfred Ely and Wilmot T. Cox.

At the annual meeting of the Williamsburg Y. C. the following officers were elected for the present year: Com., John Fennell; Vice-Com., E. V. Rosemond; Rear-Com., John New; Sec'y, Henry Schmieder; Cor. Sec'y, William E. Long; Treas., Adolph Kling; Meas., Joseph Northup;



W. P. S.

CANADIAN ICE YACHT—SAIL PLAN.

Steward, A. J. Brush; Sergeant-at-Arms, Pierce Hamburger; Board of Trustees, F. W. Smedley, William E. Kills, James Schuessele; John Lanes, Jr., Robert Jones; Regatta Committee, Adolph Kling, Henry Schmieder, Joseph Newburg; Fleet Capt., Thomas Airey; Chaplain, F. W. Smedley.

* * *

Members of the Columbia Y. C. held their monthly meeting at the club house on Jan. 4. The club determined to hold its annual regatta as usual on the Fourth of July. In addition to this, it seemed advisable to hold a second regatta later in the season, about Aug. 17. The fact that the races for the Canada cup will be held in Chicago shortly before this gives assurance that many outside boats will be on hand to compete and it is expected that the affair will take on something of an international character. It is not believed that the August races will detract from those of July 4. At that date last year as many as 112 boats were entered.

In addition to the regatta question, the club came to an important decision in regard to building a new harbor. A measure was passed to the effect that a new pier or breakwater should be built out into the harbor 150ft. east and another pier the same distance north and south.

It is expected that next summer will witness a great awakening of interest in yachting matters about Chicago, and Columbia Y. C. members are hopeful of securing their share in the same. Among the names of those who were admitted to membership last night were E. C. Berriman, E. J. Lampert and H. S. Boutell.

The election of officers of the club will be held next March. A nominating committee was appointed last evening consisting of Henry Davis, Edward T. Balcom and H. M. Heller.

The Columbia Y. C. will have a number of new craft in her fleet next summer. Among these will be a 46ft. cutter, Margaret, purchased by Mr. Fulford from N. Fred Avery, of Grand Rapids, Mich. She will be used as a cruiser. Mona, 30-footer, has been sold by Carlisle & Noble to R. C. Rittenhouse. New swallows will be sailed by C. O. Andrews, D. Winship and W. M. Bruce.

The cruising sloop Mermaid, which was built at Wood's Yard, City Island, from designs of Messrs. Tams, Lemoine & Crane for Mr. Anson Phelps Stokes, was launched on Jan. 5. A trial of the yacht was made as far as Execution Light and return. The boat worked splendidly in the strong breeze that was blowing at the time.

The Larchmont One-Design Class.

THE promoters of the one-design class of 25-footers for the Larchmont Y. C. deserve credit for bringing the matter to a successful issue. The difficulties of establishing one-design boats are known only to those who have made attempts to organize these classes. In strictly one-design boats every one should be alike in detail, and a design that will meet with the approval of a sufficient number of men to warrant the success of the idea is a most difficult one to secure.

The object of the class is to get an able and fast boat at a moderate cost, with large accommodations for both day sailing and cruising, with beam sufficient to enable them to sail with less angle of heel than the narrow, deep boats, and of such draft as would permit them to enter any harbor on the Sound, and at the same time a boat in which racing can be had with the knowledge that she will not be outbuilt next year by a yachtsman who is willing to spend more money and secure lighter construction.

Some eight of these boats have already been ordered, and five of them are being built at Clinton, Conn., by Wyckoff Brothers & Taylor. It is hoped that two more boats will be ordered by the time the first five are completed, so that a second lot of five boats may be set up as soon as the first lot are out of the shop. The boats are designed by Messrs. Gardner & Cox, and the plans show a handsome, deep centerboard boat with good freeboard and well balanced overhangs. The cabin house is comparatively narrow, giving ample deck room on each side. A good sized cockpit 8ft. long and 7ft. wide makes them comfortable boats for day sailing, and their commodious cabins give sufficient accommodation for two or three to live comfortably on board while cruising. The cabin floor is 9ft. long and 4ft. wide, and is unobstructed, as the centerboard houses under the cabin floor. On each side are transom berths 3ft. wide and 6ft. 6in. long. Forward on the port side is the lavatory with closet and folding wash basin. On the starboard side opposite is a buffet and lockers; the galley is next forward with stove, dish lockers, etc.; the ice chest is under the cockpit floor; the forecastle with a gas pipe berth gives accommodation for one paid hand. The cabin house is 13ft. long and 6ft. wide, and gives 5ft. 2in. headroom under beams. There is about 3½ tons of lead ballast outside. The rig consists of a jib and mainsail, having a total area of about 1,100 sq. ft., which is large but not excessive. The mast is stepped well aft, and a short bowsprit will be carried.

The dimensions are as follows:

Length—	
Over all	40ft. 7in.
Waterline	25ft.
Overhang—	
Forward	7ft.
Aft	8ft. 7in.
Beam—	
Extreme	10ft. 6in.
Draft—	
Board up	4ft. 6in.
Board down	8ft. 4in.
Freeboard—	
Bow	3ft.
Taffrail	2ft. 4in.
Least	2ft.
Sail Area—	
Mainsail	858 sq. ft.
Jib	245 sq. ft.
Total sail area	1,103 sq. ft.

The boats will be built in the most thorough manner, and sufficiently strong to withstand any strain that may be put upon them in several years of hard service. The cost of each boat fully rigged and painted and with a complete outfit on board, will be $2,200. They will be ready for delivery on May 1.

YACHTING NEWS NOTES.

The Christmas number of the Yachtsman that we have just received is even more attractive than any of its previous special numbers. It is filled with splendid articles and illustrations, the pictures of Valkyrie III. and Britannia, Mimosa and Sybarita being remarkably good. A photograph taken on board the steam yacht Niagara while crossing the Atlantic is one of the liveliest pieces of marine photography we have ever seen. Aside from these full-page illustrated supplements, the number is filled with smaller but equally interesting pictures on yachting subjects. "Yachting Par Excellence," a story of a cruise of 12,000 miles on an English clipper ship, is most entertaining, and another sketch, "Yachting on Windemere," gives a most comprehensive account of the sport in that vicrinity. Among the other articles are the following: "Salt Water and Sunshine," "In the Archipelago," "How We Saved the Annie Burpee," "A Corner in Pigs," "Fair Rosamond," "On the Hamble River," "A Few Famous Matches," "Frustrated," "Mimine's Cruise." "On the Saguenay River." All of these are attractively

illustrated. Plans of a 12-ton auxiliary cruising yawl, designed by Linton Hope, is a very interesting little boat with large accommodation.

Lewis Morris Rutherford died at Davos Platz, Switzerland, on Jan. 5. He was forty-one years of age. Mr. Rutherford was a member of the New York Y. C.

Gen. Brooke Postly died of heart disease on Jan. 4. He was eighty-four years old, and was a member of the Larchmont and New York yacht clubs.

Messrs. Gardner & Cox have prepared a design for a steam yacht 180ft. long for Mr. J. G. Cassat, of the N. Y. Y. C., and the boat will be built at Chester, Pa. This firm also has orders for two boats for the 30ft. class, four 36ft. centerboarders for Philadelphia yachtsmen and a boat for the 43ft. class. One of the boats for the 30ft. class is for Mr. Otto Lohrke, of Shelter Island. This boat will try conclusions with Oiseau, Empronzi and Alerion. Her dimensions are 42ft. 6in. over all, 25ft. on the waterline, 9ft. 6in. beam and will draw about 6ft. She will have hollow spars.

George W. Maytham, of Buffalo, the owner of the yacht Echota, formerly the Hamilton, was awarded a verdict of $200 and costs against the Detroit Y. C. by Justice Stein recently. Maytham sued the yacht club for the $200 prize money which he claimed his yacht, Echota, had won in the last sweepstakes race of the yacht club. The justice held that the instruction to the skippers of the different yachts did not abrogate the rules, and that the officials of the yacht club had no right to postpone the race. The race was sailed under the rules of the Yacht Racing Union of the Great Lakes, which provided that when the race was not finished within the time limit the prizes shall be awarded according to the result of the first round, and the Detroit committee ignored this altogether, ordering the race to be sailed again when it had really been won by Echota.—Philadelphia Item.

A number of new yachts will be seen on Jamaica Bay next season. At Francis' shipyard, Holland Station, two knockabouts are being built. O. L. Schwencke, of Flatbush, a member of the Jamaica Bay Y. C., is having a knockabout, 25ft. over all and 20ft. on the waterline, built. She will also have a small motor and will be used for cruising purposes. Another is being built for the Merrill brothers, members of the Atlantic Y. C. The boat will be 28ft. over all and 18ft. on the waterline. At Broad Channel, Charles Roehr, of Brooklyn, a member of the Bayswater Y. C., is building an 18ft. knockabout of his own design. The boat is being constructed of very light material, and when finished will not weigh much over 300lbs. The big schooner yacht, Florida, which went ashore during a storm last November, has had new side planking put on and been thoroughly overhauled. She is owned by F. Reid, of Brooklyn, and is registered in the Atlantic Y. C. At the Rockaway Motor Company's works things are very brisk and a score or more naphtha launches are being built.

The steam yacht purchased abroad by Mr. John H. Hanan, N. Y. Y. C., to take the place of the Sagamore, recently sold by him to a Philadelphia yachtsman, is the Consuelo. Of this yacht and the sale, the cowes correspondent of the Yachtsman, Jan. 3, says:

"The Consuelo, steam yacht, has just been sold to an American gentleman, through the agency of Messrs. Borthwick, of Glasgow. The Consuelo is a fine screw schooner of 546 tons. She was built in 1887 by Gourley Brothers & Co., of Dundee, and was formerly known as the Taurus. Last year she was taken by Sir R. Williams-Bulkeley, Bart., in part payment for the composite auxiliary yacht Vagus, which he sold to the Earl of Crawford.

"The Consuelo is on the slip at Mr. G. Marvin's, where she was hauled up for survey. A crew was shipped this week, and fitting out has commenced. The yacht will be skippered by an American captain."

In regard to the trial boats for Shamrock II., the following article from the foreign correspondence of the Boston Herald is of interest: Now that the holidays are over and work on the America Cup challenger resumed, interest in everything relating to yachting has been rekindled. The Prince of Wales' new yacht will be in the trial races, and the latter will far exceed any ever run in the United States since the Puritan raced against a fleet off Sandy Hook. Shamrock II. will sail in company with five yachts, and, if she is beaten, Britishers will insist that the fastest boat be selected and sent across.

Big yachts which have been on the sale list for over a year have been bought recently, and the best skippers available have been engaged for them, and Bob Wringe will sail Shamrock I. and Edward Sycamore Shamrock II. It is a strange coincidence that both Wringe and Sycamore should be Brightlingsea men, and Bobby served as mate under Sycamore.

Kenneth Clark, owner of the 65 rater Khama, has just purchased the Distant Shore, and will fit her out for the trial races. Archie Hogarth will be captain.

Another good bit of news is that James Coats, owner of the schooner Glennifer, is negotiating through Watson for the purchase of Lord Dunraven's Valkyrie III. The sale is quite assured, so the challenger of 1895 will be in the circuit. Capt. Robert Duncan will be the skipper. Sybarita, too, will be in the trial races, so Shamrock II. should be well tried out before crossing the western ocean.

The trial races will practically all be run in the Solent, as this is convenient for the Prince of Wales. There will be some racing, however, on the Clyde, and possibly at Bangor and Kingston, en route to Cowes. The Queen will offer cups to be raced for on the Clyde and Solent.

Trapshooting.

Notice.

All communications intended for FOREST AND STREAM should always be addressed to the Forest and Stream Publishing Co., and not to any individual connected with the paper.

Leading dealers in sportsmen's supplies have advertised in our columns continuously for a quarter-century.

If you want your shoot to be announced here send a notice like the following:

Fixtures.

Jan. 15-18.—Hamilton, Ont.—Hamilton Gun Club's eleventh annual tournament; live birds and targets; open to all. H. Graham, Sec'y.

Jan. 16.—Trenton, N. J.—Second contest of the series between teams of the Trenton Shooting Association and Freehold Gun Club, on the grounds of the former.

Jan. 17.—Baltimore, Md.—Ten-men team contest—Baltimore Shooting Association vs. Keystone Shooting League.

Jan. 29.—Dexter Park, Brooklyn, L. I.—Open live-bird handicap shoot of the Parkway Gun Club.

Feb. 6-7.—Cincinnati.—Cincinnati Gun Club's sparrow tournament. Chas. F. Dreihs, Sec'y.

Feb. 15-16.—New Orleans, La.—First annual Mardi Gras tournament of the City Park Gun Club, under the auspices of the Peters Cartridge Co. Percy S. Benedict, Sec'y, Denegree Building.

Feb. 18-23.—Hot Springs, Ark.—Tournament of the Hot Springs Gun Club; four days targets, two days live pigeons; $1,000 added. C. E. De Long, Sec'y.

Feb. 22.—Harrisburg, Pa.—Washington's Birthday live bird and target shoot of the Harrisburg Shooting Association.

Feb. 22.—Albany, N. Y.—Annual midwinter target tournament the Forester Gun Club. H. H. Valentine, Mgr.

Feb. 22-23.—Colorado Springs, Colo.—Colorado State Fish and Game Protective Association's thirteenth tournament, under the auspices of the Colorado Springs Gun Club.

March 2.—New York.—Two-week Roof Garden tournament of the National Sportsmen's Association. Capt. J. A. H. Dressel, Sec'y.

April 9-12.—Baltimore, Md.—Eighth annual spring tournament of the Baltimore Shooting Association; two days targets, $100 per day added; two days live birds, $500 guaranteed. H. P. Collins, Sec'y.

April 16-18.—Leavenworth, Kan.—Annual tournament of the Kansas State Sportsmen's Association.

May 7-10.—Tournament of the New Jersey State Sportsmen's Association. C. W. Feigenspan, Sec'y.

May 7-10.—Lincoln, Neb.—Twenty-fifth annual tournament of the Nebraska State Sportsmen's Association, under the auspices of the Lincoln Gun Club. W. D. Bain, Sec'y.

May 14-17.—Allentown, Pa.—State shoot of Pennsylvania State Sportsmen's Association. C. F. Kamlich, Cor. Sec'y.

May 21-25.—Chicago, Ill.—Twenty-seventh annual tournament and convention of the Illinois State Sportsmen's Association. Chas. T. Stickle, Sec'y.

May 30.—Auburn, Me.—Annual shoot of the Auburn Gun Club.

June 5-7.—Circleville, O.—Under auspices of the Pickaway Rod and Gun Club, annual tournament of the Ohio Trapshooters' League. G. R. Haswell, Sec'y.

June —.—Columbus, Wis.—Tournament of the Trapshooters' League of Wisconsin. First week in June.

July 23.—Dexter Park, Brooklyn, L. I.—Annual clambake and handicap merchandise shoot at targets. Eugene Doenick, Sec'y.

Newark, N. J.—South Side Gun Club target shoot every Saturday afternoon.

Chicago, Ill.—Garfield Gun Club's live-bird trophy shoots, first and third Saturdays of each month. Grounds, West Monroe street and Fifty-second avenue.

CONTESTS AT INTERSTATE PARK.

Jan. 22.—Interstate Park.—All-day anniversary shoot of Medicus Gun Club; $75 trophies; 20 live birds, $25 sweep.

Jan. 29.—Interstate Park.—John S. Wright's live-bird handicap shoot.

April 1-5.—Interstate Park, Queens, L. I.—The Interstate Association's ninth annual Grand American Handicap Tournament at Live Birds.

June —.—Interstate Park, Queens, L. I.—Forty-third annual tournament of the New York State Association for the Protection of Fish and Game.

Monthly contest for the Dewar trophy till June, 1902; handicap; 25 live birds; $5 entrance. First contest took place June 20, 1900.

Interstate Park, Queens, L. I.—Two miles beyond Jamaica, on L. I. R. R. Trains direct to grounds. Completely appointed shooting grounds always ready for matches, club shoots or private practice. Café and hotel accommodations.

Interstate Park, Queens, L. I.—Weekly shoot of the New Utrecht Gun Club—Saturdays.

DRIVERS AND TWISTERS.

The anniversary all-day live-bird shoot of the Medicus Gun Club, to take place at Interstate Park, L. I., Jan. 22, has five events on its programme, one at 5 birds, $3; one at 7 birds, $5; one at 3 pairs; the anniversary handicap at 15 birds, three prizes, and the fifth event at 20 birds, $25 entrance, three moneys, high guns. The programme further states that: "Please remember that all matches of the Medicus Rod and Gun Club are open to all comers, and any sportsman is requested to compete for the prizes on same conditions as members of club. The first prize in our anniversary shoot is a pair of game pieces, mounted in heavy 6in. oak frame, inclosed in oval glass, background hand-painted. The ladies say these are very handsome. This pair was made as part of a collection for the Paris Exposition, but arrived too late for shipment. One is a specimen of California quail; the other is a fine specimen of English gray snipe; second prize, black bear's head mounted on heavy oak shield; third prize, handsome mallard duck mounted on oak shield."

Messrs. R. O. Heikes and John J. Hallowell, under date of Jan. 12, write us as follows: "We are going to have a shoot at Dayton, O., the last of this month. The programme is as follows: Five 15-target events and five 20-target events each day, with $5 added to each event, and one 25-target event, with $10 added. A hot lunch will be served on the grounds each day, and plenty of fire and shelter will be furnished for the comfort of visiting shooters. The Phillips House will be headquarters, and the programme will be the same for three days, with a handsome silver pitcher for first prize and $10, $6 and $4 respectively for the second, third and fourth high guns. We expect to have an old-time shoot, with a chance for any one who can shoot a little bit and a good time for all."

The second contest between ten-men teams of the Baltimore Shooting Association and the Keystone Shooting League evokes much interest. It is to take place at Baltimore on Jan. 17. The following contestants of the Keystones have been notified to take the 8:32 A. M. train from Broad Street Station, Philadelphia, on that day: H. Henry, I. W. Budd, F. B. McCoy, F. W. Van Loon, W. N. Peck, J. Vandergrift, H. B. Fisher, H. L. Landis, W. J. Davis, W. W. Wagner and J. A. Anderson. The first contest, Dec. 27 last, resulted in a victory for Baltimore by a score of 198 to 189. Each contestant shot at 25 birds.

The Lake Shore & Michigan Southern Railway has issued a calendar for 1901 which is distinctly artistic in its effect. A heavy cardboard, 5¾in. by 7¼in., makes a neat framework for the centerpiece, which is a reproduction in miniature, by color photography, from the original of Taggart's painting entitled "After a Long Silence." The aged mother, gravely eager, is reading a letter from the absent son or daughter to the aged father, who, bad to ear, is intently listening to the contents. Address A. J. Smith, General Passenger and Ticket Agent, Cleveland, O.

The Oceanic Rod and Gun Club announces a shoot at Rockaway Park, L. I., on Jan. 21, at targets, the latter thrown at 1½ cents.

Mr. Elmer E. Shaner, manager of the Interstate Association, informs us that programmes of the Grand American Handicap at live birds will be ready for distribution on Feb. 20, and that entries for this great national event will be received by Edward Banks, Secretary-Treasurer, 318 Broadway, New York. It will thus be noted that the direct preliminaries for the great contest are begun, and the large number of shooters who know how they missed that bird, or those birds, at that trap, or those traps, will have an opportunity to try again.

There will be a special meeting of the Governing Shooting Committee at room 820 No. 320 Broadway on Jan. 24 to receive the report of the Committee on Constitution and By-laws, and transact other pertinent business. At a meeting held Jan. 10 the resignation of Mr. W. F. Sykes was accepted with regret. He could not spare the time from his business affairs which the business of the committee exacted. Col. J. H. Voss was elected president of the committee.

Mr. John W. Garrett, of Colorado Springs, Colo., under date of Jan. 9, writes us as follows: "Kindly announce in your columns that the Colorado State Fish and Game Protective Association will hold its thirteenth tournament at Colorado Springs, Feb. 22 and 23, under the auspices of Colorado Springs Gun Club. There will be $500 in cash added in addition to merchandise prizes. We expect to have the programme out about Feb. 1. For any information desired address John W. Garrett, Captain."

The Boston Gun Club, of Wellington, Mass., announces a prize handicap series, commencing Jan. 16 and ending on April 24, on Wednesday of each week. The list of prizes numbers ten, all useful articles. "Conditions: Entrance free, open to all shooters. Distance handicap, aggregate of the six best scores out of the fifteen to count. Score each day to consist of 30 unknown. Practice afforded before and after match. All shooting from magautrap. Targets 1½ cents each."

Mr. L. H. Schortemeier, under date of Jan. 14, writes us as follows: "At a meeting of the Jeannette Gun Club, of New York, Jan. 11, F. H. Ehlen was elected President; F. H. Kastens, Vice-President; C. N. Brunie, Treasurer; W. P. Rottman, Secretary. On the Shooting Committee were appointed L. H. Schortemeier, Chairman; Kid Peters and John Hainhorst. It was decided to join the N. Y. S. A. P. F. and G., and enter a team in the contest for the Dean Richmond trophy."

The secretary, Mr. W. Glenn Dietz, informs us that the Country Gun Club, of Myerstown, Pa., met and elected the following officers for one year. President, J. Risser; Vice-President, Frank Long; Secretary, W. Glenn Dietz; Treasurer, Robert Shanaman. He adds: "During the past year very little shooting was done, but we expect to do more in the coming years."

The Forester Gun Club, of Newark, N. J., announces trap shoots for Feb. 12 and 22, live-bird sweepstakes in the morning, handicaps for merchandise in the afternoon, with a free lunch intervening. It also announces April 12 and 13 as the dates for its second annual two-day tournament at targets. John J. Fleming, 21 Waverly place, Newark, is the secretary.

The Parkway Gun Club, of Brooklyn, has arranged to hold an open live-bird handicap shoot at Dexter Park, Jamaica avenue and Enfield street, Brooklyn, Jan. 29, commencing at 10 o'clock. The main event will be at 15 live birds, $6 entrance, birds extra, commencing at 1:30 o'clock. It will be governed by class shooting, four moneys, 40, 30, 20 and 10 per cent.

Mr. John S. Wright, the able manager of the Brooklyn Gun Club, announces a live-bird shoot at Interstate Park on Jan. 29. The porgramme will be announced later, but it probably will consist of events at 5, 7 and 10 live birds, $3, $5 and $7 respectively, with handicap allowances of distances and misses as no birds and kills. Shooting will begin at 10:30.

The trial of Mr. G. S. McAlpin, for assaulting Capt. A. W. Money recently, was adjourned on Thursday of last week to Feb. 18, to enable the defendant to have Dr. Wilson, of Savannah, Ga., present as a witness, Mr. McAlpin being placed under bonds to appear at the time set.

The Cleveland Gun Club, Cleveland, O., held an election of officers Jan. 8, with results as follows: President, F. G. Hogen; Vice-President, C. H. Stanley; Treasurer, S. C. Payne; Recording Secretary, A. M. Allyn; Financial Secretary, F. H. Wallace; Captain, F. C. Wheal.

On Saturday of last week Mr. E. J. Clark, known to fame also as an expert basket ball player, killed 10 birds straight alone in the club event of the Flushing, L. I., Gun Club, in a field of twenty contestants. The club contemplates holding a tournament on Lincoln's Birthday.

The Board of Governors of the Keystone Shooting League has posted a rule which denies the privilege of the club grounds to visitors unless accompanied by a member or provided with a visitor's card, which may be obtained of the members.

At Interstate Park, L. I., on New Year's Day, some shooter by mistake took Mr. Griffith's gun barrels instead of his own. He can exchange barrels and rectify the mistake by calling at room 820 No. 320 Broadway, New York.

Mr. Percy S. Benedict, secretary of the City Park Gun Club, Denegre Building, New Orleans, La., announces his club's first annual Mardi Gras tournament Feb. 15 and 16, under the auspices of the Peters Cartridge Co.

In the mention of the match between Messrs. L. T. Duryea and J. A. R. Elliott, the former was erroneously credited with the win in "Drivers and Twisters" last week. The scores were: Mr. Elliott 94, Mr. Duryea 87.

Mr. Eugene Doenick, secretary of the Hell Gate Gun Club, writes us that the annual clambake and handicap merchandise shoot at targets for 1901 will be held at Dexter Park, Brooklyn, on July 23.

The Milwaukee Sentinel of Jan. 1 has the following bit of news gathered fresh with the dew upon it: "H. D. Bates, of St. Thomas, Ont., won the Grand American Handicap at live birds."

Mr. J. A. R. Elliott now has a string of trophies on his chatelaine which excites the admiration of connoisseurs in trophies, and which are doubly interesting from their associations.

Mr. C. F. Kramlich, corresponding secretary of the Pennsylvania State Sportsmen's Association, informs us that the State shoot will take place on May 14 to 17.

The tournament of the National Sportsmen's Association will be held, as formerly, on the roof of Madison Square Garden, commencing March 2.

In a practice shoot at Interstate Park last week Mr. Ansley H. Fox, we are informed, killed 129 live birds out of 130 shot at.

The Auburn Gun Club, Auburn, Me., announces May 30 as the date for its annual shoot.

BERNARD WATERS.

Standard Sizes of Chambers and Cartridges.

THE importance of correct relation in size between the chamber of a gun and the cartridge to fit it is obvious. The best gunmakers have always taken especial care to work to a series of chamber dimensions best suited to the cartridges in ordinary use, and cartridge makers have likewise done their best to work to sizes that will give in practice a minimum of split cases and bad extractions. But neither gunmaker nor cartridge maker has had the guidance of a series of standard dimensions jointly recognized by each. Both therefore have had to base their calculations upon a process of averaging existing practice, with the result that complications have arisen when full gauge cartridges have been fired in exceptionally small chambers, and, conversely, when small cartridges have been fired from guns of large chambers. We need not here detail the difficulties with which all manufacturers have had to contend in harmonizing gun chambers and cartridges under conditions in which each was standardized with only partial reference to the other. In fact, the necessity for correct relation between the two is so apparent that it would be idle to dwell upon the evils arising when the required conditions are unfulfilled.

It is only during the past six years that the industry of gunmaking, through an organized association, has been in a position to deal with the question of standard-sized chambers, and to secure the recognition of such sizes by the ammunition manufacturers. Early in the history of the Armourers' Club the question of chamber sizes was brought into prominence.

The Armourers' Club in June of 1895 passed a resolution inviting "Messrs. Eley, Kynoch and Joyce to meet a committee of the Armourers' Club to try and establish standard maximum and minimum sizes of the leading sporting shells." The conference then decided upon was held on Jan. 29, 1896, and besides various members of the Armourers' Club there were present Gen. Arbuthnot and Mr. Robert Fryer, of Messrs. Kynoch; Mr. J. C. Irvine, of Messrs. Eley, and Mr. P. Newton, of Messrs. Joyce. At this meeting careful consideration was given to the points at issue, and although no definite sizes were put forward or adopted, the ball was set rolling, and the principle of joint action was confirmed. All this occurred in the days of the Armourers' Club, of which Mr. H. A. Thorn was the hon. secretary, and among his more active colleagues were Mr. Henry Holland, Mr. E. Harrison, Mr John Rigby and Mr. A. H. Gale.

These particulars are interesting as showing the genesis of the movement. Subsequently the Armourers' Club became the Gunmakers' Association, and the question of standards was for the time lost sight of until again brought into prominence by Mr. T. W. Webley. This well-known gunmaker constructed on his own initiative a complete set of maximum and minimum gun chamber and cartridge gauges, and his figures received the careful attention of the leading gun and cartridge makers. But a difficulty arose which for the time being checked further developments. Mr. Webley's specifications included the maximum and minimum sizes of both gun chambers and cartridges, and in several cases the opinion was expressed that while it was right that the minimum chamber should be determined in its relation with the maximum cartridge the sizes should not be extended to include maximum chambers and minimum cartridges. The fixing of the latter sizes was considered to be the private business of the gunmaker and the cartridge maker. Having specified the point of contact, as it were, between the gun chamber and the cartridge, the other sizes become a question of manufacturing "latitude." Obviously, the closer a gun is chambered to the minimum sizes the less likelihood is there of split cases in firing, but whether the allowable difference or latitude should be fixed at .002in. or .005in. was recognized as mainly a matter of quality of manufacture, controlled in turn by price. The ammunition manufacturers likewise did not wish to be tied down on the one hand to an impossible degree of accuracy, while on the other hand they had no wish to adopt a wider margin of error than was necessary to cover the unavoidable divergencies of manufacture. We can best illustrate this point in reference to the paper tubes of ordinary sporting cases. These tubes are as a rule manufactured accurately to diameter within a margin of difference of about .005in. Storage in a damp warehouse or the use of overlarge wads would readily cause an excess of deviation beyond the above margin. If, therefore, the cartridge manufacturers had bound themselves to any particular latitude they would have opened the door for endless disputes, arising from the unintelligent treatment of cartridges which would satisfy the required conditions.

At this stage the Gunmakers' Association took the matter in hand, and under its auspices joint conferences were held last May and last October, at which the ammunition manufacturers already named were represented, while a delegate of the Birmingham and Provincial Gunmakers' Association attended on behalf of another important section of the gun trade. In the course of the discussion it was decided to reduce the question at issue to the simplest possible basis. It was recognized that all that gunmakers required was a standard minimum chamber, and its official recognition by the ammunition manufacturers, the term recognition implying an undertaking that cartridges should work satisfactorily in guns chambered within working limits of specified sizes. This at once put the matter on a sound basis of common sense. The gunmaker who chambers his guns properly is in a position, without knowing anything about minimum cartridge sizes, to insist on cartridegs that shall do their work efficiently. The cartridge maker, knowing the minimum size of the standard gun chamber, is in a position to determine for himself the manufacturing latitudes which will insure a satisfactory cartridge. Being thus in possession of the information he requires from outside, the ammunition manufacturer is left with a free hand to take what measures he thinks suitable for turning out the best cartridge he is capable of producing. Having once clearly defined what sizes were to be determined, the comparatively simple task of fixing upon definite dimensions was all that remained.

In order to set the minds of sportsmen at rest, we may at once point out that the new sizes are very little different from the average values which have hitherto been in use by the trade. In the course of the proceedings each representative present stated the sizes to which he had been in the habit of working. If one manufacturer found that any particular dimension he had hitherto followed was in disagreement with those adopted by the majority of his confrères he waved his point, and the result of this averaging process was that the sizes ultimately approved did not differ materially from those previously in use by the best makers. For instance, it has been pointed out that the 12-bore minimum chamber sizes are, with one exception, in all respects similar to those put forward by Mr. Webley two years ago, the sole difference being a divergence of .001in. in one of the measurements. It is thus important to note that the newly adopted sizes will not render existing guns obsolete. In fact, the only guns that will be rendered obsolete are those which were already proved to be over size in the chamber by their liability to split the cases fired in them.

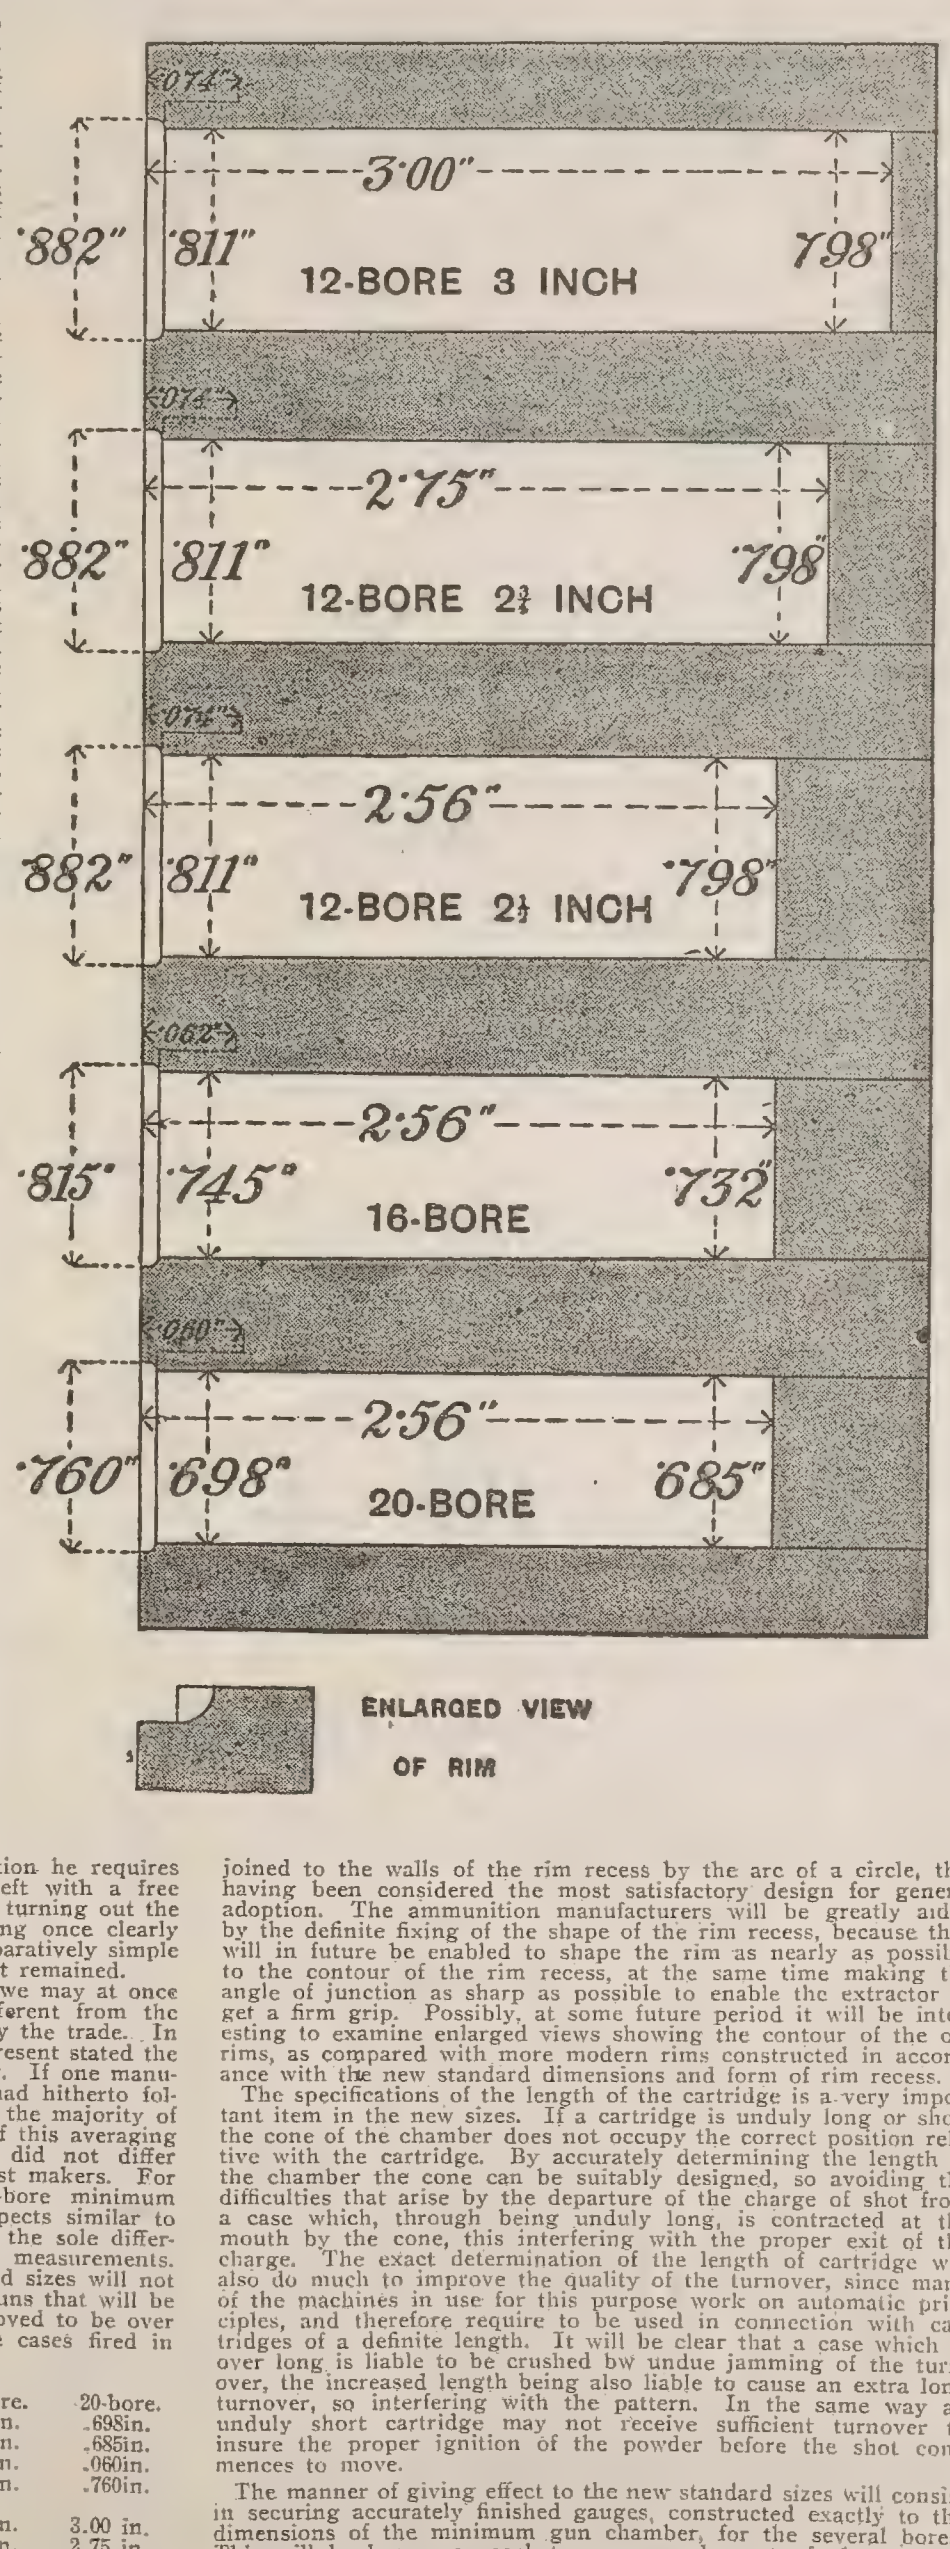
Minimum Gun Chamber Sizes.

	12-bore.	16-bore.	20-bore.
Size under rim	.811in.	.745in.	.698in.
Front end of chamber	.798in.	.732in.	.685in.
Depth of rim recess	.074in.	.062in.	.060in.
Diameter of rim	.882in.	.815in.	.760in.
Lengths.			
For 3in. cases	3.00 in.	3.00 in.	3.00 in.
For 2¾in. cases	2.75 in.	2.75 in.	2.75 in.
For 2½in. cases	2.56 in.	2.56 in.	2.56 in.

Turning now to the sizes adopted for 12, 16 and 20 bore cartridges, as shown in the accompanying diagram and table, we may offer a few general remarks concerning them. In the first place, it will be noticed that the walls of the chamber consist of a regular cone, the old principle which was recommended some years ago by Messrs. Kynoch, of making the rear portion of the chamber with parallel walls, being now definitely abandoned. The amount of taper in the walls of the chamber, represented by the difference between the diameters at the front and rear ends, works out at .013in. for every cartridge. It was agreed that with the taper the withdrawal of the empty shell after firing in the process of extraction would give the case sufficient clearance to insure easy ejection. The taper of .013in. in the whole length of the cartridge applies equally to all sizes, so that 2½in., 2¾in. and 3in. cartridges vary somewhat in the taper of the walls, the diminution of diameter being spread over a greater length in the longer chambers.

The dimensions of the rim have received the most careful attention, the depth of the rim recess having been the first point considered. In the case of the 12-bore this remains much as before. The 16-bore has been increased somewhat, so that it now stands at .062in. The 20-bore rim has, however, been very largely modified. Curiously enough, the rims of the old 20-bore cartridges were entirely out of proportion with those of other cartridges, their extreme smallness giving manufacturers of weapons of this bore considerable trouble in their efforts to secure reliable extraction. The depth of rim recess is now .060, and the value of the change is to be appreciated by examining specimen cartridges manufactured by Messrs. Eley Brothers to the new sizes side by side with those previously issued.

It would be safe to say that no one will benefit so largely from the standardization of cartridge and chamber sizes as users of 20-bore guns. Besides the depth of the rim recess, its diameter has a great influence upon the efficiency of ejectors. The elevation of the rim above the walls of the cartridge may be judged by the difference between the diameter under rim and the diameter of the rim. In the case of the 12-bore this difference amounts to .071in., which represents the elevation of rim above and below. Dividing this by 2 we obtain .0355in. as the upstanding height of the rim. That of the 16-bore is .035in., and of the 20-bore .031in. The form of the rim recess is shown in the enlarged view at the bottom of the diagram. It will be seen that the walls of the chamber are joined to the walls of the rim recess by the arc of a circle, this having been considered the most satisfactory design for general adoption. The ammunition manufacturers will be greatly aided by the definite fixing of the shape of the rim recess, because they will in future be enabled to shape the rim as nearly as possible to the contour of the rim recess, at the same time making the angle of junction as sharp as possible to enable the extractor to get a firm grip. Possibly, at some future period it will be interesting to examine enlarged views showing the contour of the old rims, as compared with more modern rims constructed in accordance with the new standard dimensions and form of rim recess.



The specifications of the length of the cartridge is a very important item in the new sizes. If a cartridge is unduly long or short the cone of the chamber does not occupy the correct position relative with the cartridge. By accurately determining the length of the chamber the cone can be suitably designed, so avoiding the difficulties that arise by the departure of the charge of shot from a case which, through being unduly long, is contracted at the mouth by the cone, this interfering with the proper exit of the charge. The exact determination of the length of cartridge will also do much to improve the quality of the turnover, since many of the machines in use for this purpose work on automatic principles, and therefore require to be used in connection with cartridges of a definite length. It will be clear that a case which is over long is liable to be crushed bw undue jamming of the turnover, the increased length being also liable to cause an extra long turnover, so interfering with the pattern. In the same way an unduly short cartridge may not receive sufficient turnover to insure the proper ignition of the powder before the shot commences to move.

The manner of giving effect to the new standard sizes will consist in securing accurately finished gauges, constructed exactly to the dimensions of the minimum gun chamber, for the several bores. This will be known as socket gauges, and a set of plug gauges will also be manufactured to correspond with the same dimensions. The plug gauge will serve to test the chambers of guns, while the socket gauge will act as a cartridge gauge. It is clear that every loaded cartridge which properly enters the socket gauge will also enter a gun chambered according to the new sizes. In this way manufacturers of ammunition, gunmakers, and others who load cartridges, will be able to test every single cartridge before it leaves their factory, in order to insure that it shall properly enter any gun chambered in accordance with the new sizes. There are a number of other gauges that will be required in actual manufacturing operations, but these do not come within the scope of this article.

As a matter of general interest, it may be mentioned that, in nearly all cases where complaint is made respecting split cases or bad ejection, the first test is one to determine whether the gun chamber is of accurate gauge, and the same with the cartridge. If one or the other is found to be in fault, the trouble may generally be ascribed to this circumstance. Should a batch of cartridges at any time be found not to enter the chamber of a gun without force, and the chamber be nevertheless of correct dimensions, the cartridge would be obviously over size. If it were then proved that the cartridges were true to gauge on leaving the maker's hands, it would then be clear that the tubes must have changed their dimensions since being issued, probably owing to storage in an unsuitable place. Difficulties of this kind, which have hitherto given so much trouble both to the user and the manufacturer, will in a measure disappear when the new sizes are introduced in practice, and when they do arise there will be less trouble than formerly in locating them.—London Field.

Richmond Pigeon Club.

RICHMOND, Va., Jan. 9.—The Richmond Pigeon Club made its bow to the public this afternoon at the baseball park in lovely weather. Every one had a good time except the pigeons. This club, organized recently, will hold monthly shoots, the chief event being a 20-bird handicap, the highest aggregate at the end of the season (after the April meeting) being awarded a gold medal.

Shooters killing their first or second 10 birds straight are penalized 1yd., the limit being 30yds. Score:

Moline Gun Club.

MOLINE, Ill., Jan 1.—The Moline Gun Club ushered the old year out and the new one in by having a two days' tournament. The weather was much against us, and kept many away who had intended coming, and those who were present did not enjoy the cold, biting wind and the snow which fell on the first day.

The zero weather was warmed up a little by the sun, which shone on the second day, yet the reflection on the snow was very trying on weak or old eyes. Some good scores were made on live birds, but not on targets. The electric pull was almost constantly out of order, and proves that it seldom works well in very cold weather. On this account part of the target programme was abandoned.

The live birds were an excellent lot, many of them getting away to all appearances unhurt. The gentlemen who furnished them said they had been fed on cinders and were shotproof. It seemed to require more lead to bag these pigeons than any that I have seen this year, save perhaps some of John Watson's which he furnished during his December tournament.

There was a good attendance of local shooters, and Geneseo sent over a small delegation. Dr. Stone came from West Liberty, while Tom Laflin and Sperry, of Rock Island, put in their appearance and shot into first money more than once, Laflin winning first day and Sperry getting almost all in sight on the second day.

The head men of this club are the two Dunn boys and C. Stephens, of the Moline Plow Company. They are all O.K. when it comes to running a shoot. They had up a good tent, a good stove and a lunch man with hot coffee and plenty to eat. The attendance was in fact larger than the late tournament at Kansas City, and the local and country boys proved to be shooters and stayers. None of the regular attendants of shoots, such as Budd, Gilbert, etc., were present, but the L. & R. Tramp came early and stayed late, and claimed that the weather was against him, and he did not shoot quite up to his usual form.

The grounds used were not the best, sloping too much and facing the south. This accounts for a loss of pigeons, as the shooter would aim over them.

MOLINE.

IN NEW JERSEY.

Trenton Shooting Association.

Trenton, N. J., Jan. 9.—The programme that had been arranged for to-day's shoot was knocked into a cocked hat by the breaking down of our magautrap and the loss of over two hours' time before the break was found. The five-trap bottom was put into commission, but the boys prefer the magazine, and would not get down to work until it was in shape to use. Besides the badge contest, a private match at 25 birds, between Messrs. Widmann and Comp, and the final contest for the Walsrode cup was on the cards. On account of the late hour when we got started, the boys were rushed out to shoot their 25 targets in rather undignified haste, and those who had a chance to tie on 25 were sent out to shoot their handicap allowance. Four men made that score—Messrs. Cole, Comp, Mickel and Jaques—and they will shoot off the tie on the 16th, the date of the second team race with Freehold, on our grounds.

Harrison and Cole tied for the gold badge, and Mickel and Coates for the silver one, and agreed to let the score of the first 10 targets in the cup handicap decide who was to hold them, with the result that Cole and Mickel won in the order named.

The Widmann-Comp match was also called off until the 16th. Besides the team race, a number of merchandise events will be arranged:

Events:	1	2	3	4	5	Events:	1	2	3	4	5
Targets:	15	10	15	15	10	Targets:	15	10	15	15	10
Thomas	9	..	..	11	7	Hughs	9	..	..	..	8
Harrison	12	8	14	..	..	Applegate	7	..	..	6	3
Jaques	12	..	12	..	7	Worthington	8	..	..	9	..
Farlee	12	8	13	..	..	Ginnely	6	..	..	7	..
Comp	12	4	12	..	..	Widmann	14	..	12	..	..
Cole	11	8	14	..	..	Borden	11	..	9	..	..
Coates	9	..	..	13	6	Petitt	..	..	..	..	3
Lutes	6	4	..	11	..	Ellis	..	..	..	..	4
Mickel	8	7	..	13	..						

No. 1 was for place. Those breaking 10 or more shot for the gold badge; less than 10 shot for the silver badge. No. 3 was for the gold badge, No. 4 for the silver badge.

Walsrode cup handicap:

Widmann, 3.....0101010011111111101111111—19
Thomas, 4.....1111101011011111101111111—21

Ginnely, 9.....0010000100111011100010111—12

Those who had a chance for the 25 shot their handicap, as follows:

Mickel	11	Cole	110
Thomas	10	Harrison	1110
Farlee	1110	Comp	01101
Jaques	01110	Worthington	110

Ties on 25 will be shot next Wednesday.

Hudson Gun Club.

Jersey City, N. J., Jan. 14.—There was a high, cold wind, making difficult shooting. The next shoot will be held on Jan. 28:

At the annual meeting held to-day officers were elected for 1901 as follows: Henry Bock, President; W. Wilder, Vice-President; Thomas Kelly, Financial Secretary; Jas. Hughes, Recording Secretary; Fred Altz, Treasurer; L. H. Schortemeier, Captain; J. Doran, Sergeant-at-Arms.

There will be three prizes presented by the club to be shot for (handicap) for the first six months—January to July, 1901—beginning next shoot.

A. A. SCHOVERLING, Ass't Sec'y.

Forester Gun Club

Newark, N. J., Jan. 12.—There were but five members present to face the traps. A gale blew on their backs from the west. At our regular monthly shoot of Jan. 12 the shooting was a hard game, as the targets flew like partridges, some towering and others dipping. Eleven events, sweepstakes, money divided by the Equitable system, were shot.

On Jan. 8 our annual meeting was held and the following officers elected: Chas. Smith, President; E. G. Koenig, Vice-President; J. J. Fleming, Secretary; G. Backus, Treasurer, and H. E. Winans, Manager.

Our second annual two-day tournament at targets will be held April 12-13.

Lincoln, 28.....1120112202— 8
J M Thompson, 29.1012121221— 9

Event at 7 birds:

*S B Jay, 28.....2122222—7
*A A Hegeman, 28....2221112—7
*Jack, 28.....2220w
**Bennett, 28.....1222201—6
*Gaughen, 29.....2222212—7
*Ray, 29.....2022222—6
**Chapman, 28.....2202222—6
*Lincoln, 28.....2212222—7

*One miss allowed as no bird. **One miss allowed as a kill.
Shoot-off: Jay 2, Hegeman 7, Gaughen 8, Lincoln 2.
Several other 7-bird events were shot.

Trap at Interstate Park

Jan. 8.—After the Elliott-Welch match was concluded a 20-bird sweep was arranged, and a large part of the visitors remained to witness this contest. There were sixteen competitors, many of them well known to fame. Of the number, but one went through without mishap, and he was Mr. G. D. B. Bonbright, of Colorado Springs. The scores follow:

J G Knowlton, 28.....22022222220222222012—17
W H Sanders, 28.....22222220202222222222—18
Thompson, 28.....21011112121221221121—19
B H Norton, 28.....22222202*22221222001—16
Harris, 28.....22020020010221102000—10
Lentilhon, 28.....20112112121020220022—15
C Daly, 30.....22222222220220222020—16
Steffens, 30.....22220222222222002222—17

Bonbright, 28.....22222222211222112222—20
A V Carman, 28.....12200221212 2*0012222—15
Packard, 28.....02220212212221221222—18

Crescent Athletic Club.

Bay Ridge, L. I., Jan. 12.—In the shoot for the January cup Messrs. F. B. Stephenson and C. H. Chapman tied on 49. The conditions governing the January cup were: 25 targets, expert traps; 25 targets, magautrap; handicap allowances added:

	—Expert.—		—Magautrap.—		Grand
	Hdcp.	Total.	Hdcp.	Total.	Total.
F B Stephenson	4	24	3	25	49
C H Chapman	12	25	10	24	49
C A Sykes	3	21	3	22	43
Dr J J Keyes	7	19	5	23	42
H M Brigham	2	20	2	21	41
W W Marshall	6	18	5	16	34
J O Graham	9	21	8	13	34
H B Vanderveer	7	18	6	13	31
G G Stephenson, Sr.	10	17	8	10	27

Two events—one at 25 targets, the other at 15, for a stein—afforded interesting competition. The score, expert traps: C. H. Chapman (10) 25, Dr. J. J. Keyes (7) 25, H. M. Brigham (2) 20, W. W. Marshall (6) 19, F. B. Stephenson (4) 19, J. O. Graham (9) 19, H. B. Vanderveer (7) 17.

Shoot-off, 15 targets, magautrap: C. H. Chapman 14, Dr. Keyes 14.

Shoot-off, 15 targets, expert traps: Dr. Keyes 15, C. H. Chapman 12.

Shoot for Stein trophy, 15 targets, magautrap: F. B. Stephenson (2) 15, C. H. Chapman (6) 14, Dr. J. J. Keyes (3) 14, W. W. Marshall (3) 12, J. O. Graham (5) 12, H. M. Brigham (1) 11, H. B. Vanderveer (4) 11.

Keystone Shooting League.

HOLMESBURG JUNCTION, Jan. 12.—A high wind prevailed in the weekly shoot of the Keystone Shooting League to-day, and consequently good scores were difficult. Miss May Hunsinger (Little Hawk Eye) was a visitor. In the club handicap I. W. Budd alone scored straight. For the day's shooting C. E. Geikler divided the honors with Budd for the best average. In practice Geikler killed 11 straight. This run he followed by straight scores in two 5-bird events, killing 8 out of 10 in the club handicap at 10 birds.

Budd, 30.....2222222122—10
Fels, 28.....1022212212— 9

Sweepstake events.—Five birds, 30yds., $2 entrance: Geikler 5, Brewer 4, Budd 4, Painter 4, Anderson 4, Van Loon 4, Fees 3, Hawk Eye 3, Albert 2.

Five birds, 30yds. rise, $2 entrance: Budd 5, Brewer 5, Geikler 5, Van Loon 4, Albert 4, Fees 4, Albury 4, Painter 3, Prickett 3, Hobbs 1.

Jan. 7.—An important function of the Keystone Shooting League took place to-day at Holmesburg Junction, it being the annual meeting, team shoot and banquet of the organization. Messrs. H. Henry and J. Brewer were the captains. The conditions were 7 birds per man, 30yds. rise, the losing teams to pay for the banquet, Capt. Henry's men, who lost by 4 birds, gaining that pleasure. Some of the good shots on Henry's team were very erratic, Landis and Painter each losing 3 birds.

Another team match under the same conditions for a purse was shot. Brewer's team again won.

The annual meeting followed the supper. The secretary-treasurer's report showed the league to be in a healthy financial condition. Twenty-seven thousand birds were trapped last year. The officers elected were: W. H. Pack, President; Charles H. Fitzgerald, Vice-President; George E. Pack, Secretary-Treasurer; F. M. Van Loon, Field Captain; Howard Ridge, Assistant; George M. Young, Scorer; W. N. Stevenson, J. A. Ross and H. L. David, Board of Governors.

The scores follow:

	First Match.	Second Match.
Brewer	2120122—6	0011202—4
Budd	2222222—7	2121222—7
Ridge	2222222—7	2100222—5
Sanford	2202222—6	1222022—6
Thurman	2*02221—5	2022012—5
Fees	0120222—5	1222222—7
Van Loon	1220210—5	2111210—6
Hobbs	2222222—7	2222222—7
	48	47

	First Match.	Second Match.
Henry	2121121—7	0122220—5

Florists' Gun Club.

PHILADELPHIA, Pa., Jan. 8.—The regular monthly shoot of the Florists' Gun Club was held to-day on the grounds of the Frankford Gun Club, at Summerdale, on the Reading R. R., near Frankford. Concerning these grounds, a local paper states as follows:

"These grounds are nicely located, and when complete will be one of the most perfect target shooting resorts in this vicinity. A set of five expert traps is now in place, and ground has been broken for a magautrap. Back of the club house is a dense wood, which will furnish ample shade for the shooters during the hot summer days. The Florists are looking for a new shooting grounds, as public improvement will soon compel them to abandon their grounds at Wissinoming. Several clubs have offered the use of their grounds, and they will give each one a trial before deciding."

In the club contest each man shot at 25 targets, known angles, and 25 unknown, the handicap being added to the score. Fifty was the maximum limit that could be scored:

	K.	U.	H.	T'l.		K.	U.	H.	T'l.

At Dupont Park.

ST. LOUIS, Mo.—The following scores were made at Dupont Park, St. Louis, New Year's Day, for the Dupont Park medal, which is a handsome and valuable diamond watch charm, donated by the management of the park. The crowd of shooters was very enthusiastic, the birds were good, the weather ideal, and the event was a most enjoyable one:

Bond, 28.....1121211112—10
Johnston, 28.....221221*221— 9
Mrs Cabanne, 26...2122222101— 9
Nason, 29.....2111112122—10
Spicer, 28.....2222122012— 9
Prendergast, 31....220222212*— 8
Collins, 30.....1110222122— 9
Mermod, 31.....1211212011— 9
Taylor, 30.....2221222221—10
Grayson, 27.....0201211101— 7
L D Cabanne, 29.2211121212—10
C G Spencer, 31..2220222222— 9
Dr Clark, 29.....11*0012221— 7
W B Willis, 30.....0222022222— 8
Wintrick, 30.....0201200002— 4
W E Fields, 28....0021200221— 6
A A Schwarz, 28...1212111222—10
Dr Smith, 31.....0222222200— 7
F Turk, 28.....2220122201— 8
Reichert, 29.....2212211121—10
Heiligenstein, 30..1222011202— 8
Dr Spencer, 30....0122222022— 8
Nold, 29.....2022222220— 8
Sandberg, 29.....2022212200— 7
Craig, 29.....2222221102— 9
Kenyon, 28.....1102222110— 8
Dodge, 28.....2111222222—10

Dr. Bond, a new man at the traps, won the shoot-off, killing 7 more birds straight.

After the above event Ed Prendergast and Alex Mermod shot a 25-bird race for the Mermod championship medal. The birds in this match were first class, and Prendergast's work was faultless, while Mermod was in the poorest form he has ever displayed in a match. Prendergast stood at 31yds., Mermod at 33. The scores were:

Mermod .....2212200121102210100221120—18
Prendergast .....1121121222222221222222222—25

Trap at Fremont, O.

FREMONT, O., Jan. 8.—Please find scores made at our shoot Tuesday. Although we are a local organization, and can't make clean scores yet, we enjoy the sport just the same. A feature of the shooting was that nine of the eleven shooters shot Ballistite powder, being well pleased with results:

Targets:	15	15	20	15	15	10	10	Broke.
A Lambright	9	11	13	7	11	8	7	65
Ballistite	13	12	19	12	12	8	10	86

A. CHENEY, Sec'y.

New York German Gun Club.

NEW YORK, Jan. 11.—The below being probably of interest to you and your readers I would inform you that:

The New York German Gun Club held its annual meeting Jan. 7, at the Garden Hotel, Twenty-seventh street and Madison avenue. The following officers were elected: J. F. Wellbrock, President; Hy. Meyer, Vice-President; J. Schlicht, Secretary; J. P. Dannefelser, Treasurer; Peter Garms, Captain.

Handicap Committee, J. P. Dannefelser, Chairman; Peter Garms, Dr. G. V. Hudson, Hy. Meyer and A. Neumann.

Distribution of the annual prizes took place after the election. The following were the prize winners: J. P. Dannefelser, first prize; J. F. Wellbrock, second prize; J. Schlicht and Dr. Hudson, third and fourth prizes, and the rest in the following order: H. W. Mesloh, W. S. Maisenholder, P. Garms, F. Kronsberg, A. Neumann, H. Nobel, A. H. Sievers, M. Detzen and E. K. Blaisdell.

J. P. DANNEFELSER, Sec'y.

PUBLISHERS' DEPARTMENT.

The Twentieth Century Train, New York and Florida Limited.

On Jan. 14 was inaugurated the magnificent New York and Florida Limited train via Pennsylvania R. R. and Southern Ry. In the four past seasons the Southern Ry., to meet the constantly increasing demand, have put on an extra high class mid-winter service between the North and Florida points.

Each season has seen the luxurious Florida Limited with all the improvements and comforts that the most fastidious traveler could demand. This season the Florida Limited train begins the twentieth century as the most magnificent and luxurious train in the world.

It is composed of steam-heated and electric-lighted Pullman compartment cars, drawing room, sleeping, library, dining and observation cars.

The New York and Florida Limited leaves New York 12:40 noon daily, except Sunday, and runs solid from New York to St. Augustine, also carrying a Pullman drawing room, sleeping car New York to Aiken and Augusta. Direct connections are made for Augusta, Aiken, Brunswick, Thomasville and points on the east and west coasts of Florida.

For further information, call on or address Southern Railway, New York offices, 271 and 1185 Broadway. Alex. S. Thweatt, Eastern Passenger Agent.—*Adv.*

The Hay Burner Route.

Mr. O. D. Seavey, of the Magnolia Springs Hotel, Magnolia Springs, Fla., is sending out to his friends an annual pass over the Hay Burner Route, of which he is Pooh Bah. The yardage of the road is:

St. John's River Division.....500 yards.
Live Oak Division.....700 yards.
Culinary Division..... 50 yards.

Total yardage.....1,250 yards.

And it is all under one management. Florida tourists who have ridden over the route once will joy to go it again.

For Flower Lovers.

Messrs. J. M. Thorburn & Co., of No. 36 Cortlandt street, New York, send us their century catalogue, being the hundredth successive annual issue; and it is a beauty. There are numerous exquisite half-tone engravings of vegetables and flowers, and the flower photos are, some of them, worthy of being cut out and framed. The catalogue, with its pictures, is a joy to flower lovers. It will be sent free on request by the Messrs. Thorburn.—*Adv.*

A Good Chance to buy into a sporting club will be found in the advertising columns of this issue.—*Adv.*

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

COPYRIGHT, 1901, BY FOREST AND STREAM PUBLISHING CO.

TERMS, $4 A YEAR. 10 CTS. A COPY. SIX MONTHS, $2.

NEW YORK, SATURDAY, JANUARY 26, 1901.

VOL. LVI.—No. 4. No. 346 BROADWAY, NEW YORK

GEORGE A. BOARDMAN.

THE death of Mr. Boardman, recorded in another column, removes from the list of FOREST AND STREAM'S subscribers, contributors and readers one of the very oldest. Mr. Boardman was for a large part of his life an active business man, but like many of those who work hardest in the world's business, he made time to pursue what was his pleasure as energetically as he did his business. For more than fifty years he had been a naturalist, and had done work with and aided some of the most eminent of the naturalists of this country. Audubon, Agassiz, Baird, Downs and others were among the men with whom Mr. Boardman was associated, to whom he freely gave of the interesting facts that he had collected, and among whom to some extent he distributed the collections which he had made.

Notwithstanding this generosity, he was able to gather together a very large museum which, as might be supposed, represented with singular completeness the fauna of eastern Maine. Mr. Boardman was thus naturally one of the first authorities on the fauna of the extreme Northeastern United States, and it was to him that application was first made for information on that subject.

Besides his fondness for nature, he was a keen sportsman, and above all, an enthusiastic salmon angler, and very many of the older and better known anglers of the Eastern United States used to visit him and fish with him.

Mr. Boardman was, it is believed, the second subscriber on the list of FOREST AND STREAM when it was started in 1873, and from that time to this he had taken it without a break.

SNAP SHOTS.

WE print in another column an opinion from a member of the bar of this State that the meaning of the recent decision of the Court of Appeals in the case of The People vs. Buffalo Fish Company cannot be interpreted as a reversal of the ruling in the Phelps-Racey case that it is competent for the State to forbid the possession in close season of game killed outside of the State.

This same point came up in Chicago the other day in a suit brought by the Audubon Society against a bird dealer for having in possession in his shop live mockingbirds, cardinal grosbeaks and other song birds, which, as he set for defense, had been brought from Louisiana. But Justice Everett found for the prosecution, holding that the Illinois law applied to any wild bird in possession without reference to the source of its capture.

The Massachusetts Fish and Game Protective Association is extremely happy in its choice of a secretary for the current year. The re-election of Mr. Henry H. Kimball means that the work of the Association will be prosecuted in an efficient manner. Mr. Kimball has been highly successful in promoting the special interests of game and fish protection with which the Association and the Central Committee are concerned; and his success has been due to an earnest and devoted personal service. We print elsewhere Secretary Kimball's report of the undertakings and accomplishments of the year.

As an earnest of the practical accomplishment of the purpose of the recently organized association for restoring moose to the Adirondacks, Assemblyman Price has introduced a bill which empowers the Forest, Fish and Game Commission to "acquire by gift, purchase or capture a sufficient number of wild moose to stock the Adirondack region," and to care for, herd and yard the moose temporarily and liberate them when and where it may be most conducive to the game's probable subsistence and increase. And to insure the protection of the moose, the bill adds to the fine of $100 a further penalty of imprisonment for a term of not less than three nor more than six months. The bill carries an appropriation of $5,000 for the purchase of moose.

This present moose restoring enterprise has grown out of the personal activity and persevering work of Mr. Harry V. Radford, who has succeeded not only in enlisting the support and co-operation of a large number of well-known sportsmen, but has also awakened an interest among the Adirondack guides and residents. The Brown's Tract Guides at their meeting last week indorsed the project of restocking the woods, and it is reasonable to assume that their attitude is that of the Adirondack guides in general. It is manifest that to acquire the parent stock of moose by gift or purchase is the simplest part of the undertaking; that which it would be more difficult to secure, in default of a supporting public sentiment, would be protection for the game after its putting out. If the Adirondack people will give the moose a chance to live, increase and multiply, we shall once more see the wilderness inhabited by its noblest native game.

The letter from Capt. Kelly about the barking deer of Mindanao, Philippine Islands, published in another column, will convey real news to many. Capt. Kelly commands a garrison at Dapitan, Mindanao, and some time ago came into possession of the little deer which is commonly tethered on the grass near his quarters. As is well known, the cry of the muntjacks is a sharp bark, but any such vocal effort from a deer seems strange to one who is familiar only with our American forms. Capt. Kelly has written to the Adjutant-General, requesting authority to ship the deer to the Washington Zoo, and it is understood that the necessary authority will be given. Evidently, however, such an animal could not endure the outdoor climate even of Washington, and would have to be caged during the winter.

As a measure of safety in the woods a correspondent recommends doing away with high-power rifles in the woods and taking up again the smooth bore of a more primitive stage of hunting. Such a plan probably would effect also a very material reduction in the number of big-game hunters, for the perfection of firearms—the hunting made easy—is one of the factors that has crowded the forests with deer shooters. To make it harder to get a deer would be to keep at home many a sportsman who is now attracted by the simplicity of the thing.

That appeal to Vice-President-elect Roosevelt to use his influence to secure a Federal law protecting wildfowl is chiefly interesting as an expression of the very common and perhaps universal conviction among sportsmen that it would be of the highest advantage if Congress could legislate for migratory game. There is much of reason in the view that the wild geese and the wild ducks which pass from State to State might be considered as being within national control, just as the local game which passes from one person's land to that of another is under the control of the State; but we question very seriously that such a view would stand the test of judicial examination. After all, as the authors of the petition to Mr. Roosevelt themselves concede, the chief trouble with our wildfowl protection is not in the existence of conflicting laws, but in the lax manner in which the laws are enforced.

We have always considered that sea gulls come under the protection of that clause of the New York game law which relates to wild birds other than those for which a close season is provided, and hence that they might not be killed at any season; but it now develops that Chief Game Protector Pond classes the sea gulls as "web-footed wildfowl," and therefore construes the statute as giving them protection only in the close season for ducks and geese. It would not be difficult to show from the use of the term "web-footed wildfowl" in the law that its intent is to include game birds only, for the further restrictions as to modes of hunting and as to sale and possession clearly have to do only with what is game. Moreover, the terms "wildfowl," "wild-fowler" and "wild-fowling" have in common usage a universal application to game water fowl and their pursuit. No one would think of a gull plumage hunter as a wild-fowler. We opine, however, that Protector Pond is governed by a consideration of the strict interpretation of the words of the statute, and is of opinion that under this phraseology an action for gull killing would not lie. Under these circumstances the law should be amended in such manner as clearly and definitely to forbid the killing of sea gulls.

A five-years' close season for antelope is proposed in Montana. The chief purpose of the measure is the protection of the antelope of the Yellowstone National Park. In the winter, when the snows drive the antelope down on to the Gardiner flats, the game strays out of the Park into Montana, and a certain number of animals are killed for food by the people of the town of Gardiner. Under present conditions, such killing, if confined to the Montana open season, is perfectly lawful, for when once the game has left the Park bounds it is no longer subject to the Park law. In view, however, of the lessening number of the Park antelope, the superintendents in charge have with good reason exerted all their influence to discourage the killing of the game when it has thus strayed beyond their jurisdiction. They have held that the Montana people near the Park line should give the game immunity; but they have been powerless to secure this under the present law. A five-years' close time would solve the difficulty, and for the sake of the National Park antelope we trust that the Montana Legislature will adopt the expedient. As for the antelope in other parts of the State, the conditions now prevailing will probably hold good, close time or no close time. The antelope that are killed are taken as a rule by settlers for food, and the settler who kills for a meat supply gets his venison without any particular regard for whatever law exists.

For one more season by the law of 1897 deer hounding will be prohibited in the Adirondacks. In expressing the conviction that the non-hounding law should be reenacted and hounding forbidden permanently, Lieut.-Gov. Woodruff gives voice to the opinion commonly held by those who are conversant with the conditions prevailing in the North Woods, and who are sincerely concerned to see the stock of deer maintained. And as Mr. Woodruff points out, the deer are not the only big game we must now consider as belonging, or about to belong, to the Adirondack forests, for the moose is to be added, and the elk, too, may be given a place. Considering the future of the North Woods, then, the hounds should be kept out. The State may well adopt for the care and possession of its game the measures which owners of private preserves have proved to be so profitable. If it is to the advantage of Mr. Litchfield and other owners of game preserves to keep the dogs out absolutely and permanently, it certainly is for the advantage of the people to do the same with their deer. That part of Mr. Woodruff's letter which gives his experience in feeding the deer in winter is interesting and instructive.

It is gratifying to learn that the New York Association for the Protection of Game is prepared to take active steps to urge before Congress the enlargement of the Yellowstone National Park, so as to take in the forest reserve on the south and east. Every new recruit willing to do battle for this good cause is warmly welcomed by the friends of the Park, and the influence of the New York Association is great and will be of much assistance. We have long urged the importance of the extension of the Park as stated, and hope that the time is not distant when the change will be made. Older readers will remember the long fight made by FOREST AND STREAM to preserve the integrity of the Park and to insure its better protection; a fight which culminated in the year 1894 in the passage by Congress of the bill introduced by Mr. Lacey, of Iowa, which has proved quite as effective in practice as its friends had hoped it would.

Charles Plath, an expert gunsmith and long a dealer in fishing tackle in this city, died Jan. 13 in the seventy-sixth year of his age. Mr. Plath was born in Germany, and taking part in the uprising of 1848, was obliged to flee. He come to New York in May, 1849. Very soon after his arrival he was employed as foreman by Hall, then a noted rifle maker of New York, whose factory turned out great numbers of "Kentucky" rifles, which were then in great demand on the Western frontier. In 1852 Mr. Plath began business on his own account, manufacturing guns and rifles for the trade, which then included such leading firms as Blunt & Simms, Schuyler, and Herman Boker. This business he continued up to and during the Civil War, but after its close, on account of cheaper labor, the introduction of machinery into country factories and for other reasons, gun making became unprofitable in New York, and Mr. Plath embarked in the general sporting goods business. In 1884 his son became a partner in the business, and the firm of Charles Plath & Son, dealers in fishing tackle, has continued up to the present time.

The Sportsman Tourist.

Reminiscences.—III.

BY ROWLAND E. ROBINSON.

THE boy's first real fur trapping is usually for the muskrat, an animal whose fur always has cash value negotiable at the country store, the tin peddler's cart, or with the itinerant fur buyer and so available for the purchase of ammunition, fishing tackle, jack-knives and tickets to the menagerie.

Almost every farm has its swamp, ditch or beaver meadow brook to harbor a small stock of game, too paltry to invite the rivalry of the professional trapper who plies his craft in the great streams and marshes. The muskrat has little of the wariness and cunning in regard to the trap for which his greater relative, the beaver, is famous; and the young trapper having gained the mere mechanical mastery of the steel trap, is fairly well outfitted to essay the capture of this animal in such places as he is likely to find it.

My soul was first fired with the ambition by the discovery of a smooth-worn place in a bog with a few chips of grass root and a few lumps of muskrat sign lying upon it. Going a little further I found other places bearing similar traces of muskrat visitation, and in my ignorance doubted not that each was made by a different individual, and began at once to compute my prospective wealth. It was a new hunting ground to me that I was exploring, a great ditch cut some years before for the drainage of a broad beaver meadow, quite outside the limits of my accustomed range, and if heard of, it was never as an abode of muskrats. I hardly dared to hope that it was as unknown in this respect to every one as it had been to me an hour before. Yet there was no sign of it; certainly there was no present occupant. My first thought was to secure my discovery by pre-emption, but to do this I must have more traps than had served me in my previous small operations. The two or three that I owned, with twice as many that could be borrowed of neighbors, made but a sorry muster. I remember one, which, a curiosity then, would be a rare one now, with spring and bedpiece all in one that could only be set in such few places as fitted it. But antiquities and curiosities were of small account to me then beside anything that would catch a muskrat, and I lent a willing ear to any deceitful tongue that cared to fool me with pretended wisdom.

When old Sim, most famous of liars, beguiled me with tales of his marvelous success with the box trap, I spent hours and sound pine boards in the manufacture of traps that neither the yellowest of carrots nor the sweetest of Tallman sweets would lure a muskrat to enter, and I only got rid of the bait by eating it myself.

When my traps were all set in what had seemed the best places, others appeared better, and they must needs be changed, until the first setting was not likely to be accomplished, but for the warning of the lengthening shadows along the mountain road through which I must pass to reach home. This was not formidable in the full light of day, but of a different aspect when viewed in the shadows of night. So I finished with more haste than care, yet found the wood road growing gloomy and got a great fright before I reached the other end of it. A boy could not help thinking of the panther that the professional berry pickers used to hear with regular recurrence when the huckleberries began to ripen, nor to wonder if the beast did not occasionally haunt our mountain at other seasons. At any rate, I was thinking of it, and that a beast of prey was likely to be very hungry at this time of year, and trying to revive my courage with the thought of the charge of BB shot in my fowlingpiece while I trod very quick and light on the dry leaves.

Just then my toe caught on a dead sapling that lay across the path, there was a sudden rustle of leaves and snapping of twigs 10 feet to one side, a shrill quavering cry in the same direction, not recognized then as the familiar voice of the screech owl, more than the threshing of the leaves by the sapling top was as the noise of an inanimate object. Then I got to my legs and that gave me strength and I fled from there, turning neither to the right nor left. I hammered my rapid resounding way along the woodland road, nor slackened pace nor cast a lingering look behind until well out into the open pasture and in sight of the homestead roof.

On sober second thought, my adventure seemed hardly worth relating next day.

When I traveled the mountain road the day after it was cheery with the singing of birds, and my thoughts were far enough from brooding on savage beasts, for they were busy filling my traps with smaller but more desirable game. Would there be a muskrat in more than every trap, I wondered, yet without a fear that the number could be less with the traps in such a choice pick of sure places.

Thus hopefully I drew near the first, not disappointed, for there at the bottom of the clear shallow water lay a drowned muskrat, a mouthful of uprooted sedge in the set jaws, the flat scaly tail curved to the shape of a scimiter. For all my having been so sure of it, my heart choked me with a great surge of exultation when I loosened the tally stick, and drawing my first victim to the surface, was fully assured of possession. My hand was not strong enough to ease the jaws from this foot, and I had to take trap, prey and all to hard ground where I could press down the spring with my foot.

There on my hands and knees I gloated to my heart's content over my prize, which was growing handsomer every minute as the fur dried. Resetting the trap with great care, I proceeded to examine the others, almost prepared now to find without surprise a rat in every one. However, it was not a great disappointment that the next was found undisturbed, but when another was come to in the same condition, it began to look as if something was wrong, and especially so when I came to the very last one without finding another so much as sprung. This turn of luck gave my hopes a sudden collapse, but the weight of the one in hand, the heavier for the difficulty of keeping a hold on the slippery tail, and the philosophical consideration that this was my first attempt, gave me a good deal of comfort. I remember that my intention of investing all the proceeds of my fur sales in a lot of new traps was abandoned. The need of them did not appear so great now that half a dozen caught but one muskrat a night, though perhaps it was really greater.

The skinning of this rat was an undertaking that involved much study and careful work. I had never seen it done, and only knew that the skin was "cased"—that is, not opened along the belly—and was then stretched on a bow of tough, elastic wood. I began confidently at the tail, where I had seen the skinning of other animals begun, and leaving it unopened elsewhere, I succeeded in stripping it off over the head without damage. Then I made a critical search for a proper stick, which I found at last in a slender hickory sprout, on which the pelt was drawn tightly with the flesh side out and fastened by two upward cuts through the lower edge into the wood, into which the edge of the skin was drawn by its own elasticity. I was very proud of accomplishing this successfully, for it was according to rule. But not so of the general appearance of the entire result, which was far enough from conforming to the models I had seen. Instead of a neatly rounded bow of snowshoe shape, it resembled more an awkwardly formed letter V with widespread ends. This was due to the manner of skinning, which, as I learned later, should have begun at the head.

It was fortunate that in the pride of my heart I showed my handiwork next morning to a tin peddler, who informed me that my fur was unsalable by reason of the fashion of handling. Now the same objection is made to what was then demanded, and the muskrat skin, to find favor in the eyes of the modern buyer, must be stripped off from the rear and stretched on a thin oval-shaped piece of board, widest at the butts.

The next day I tramped across the mountain and the length of the beaver meadow with the same poor tangible result—namely, one muskrat. All the other traps were apparently undisturbed, until it became evident even to my unsuspicious soul that I was assisted by an invisible partner. Invisible he remained, and his self-appropriated share unknown, though I had my suspicions. At last I grew tired of a partnership in which I had no voice and got so small a share of the profits, and I knew not what portion of the stock I might be left with at the end, so I took up the traps and departed, thankful to get away without the loss of one.

For all the vexatious interruptions and the small array of fur to show for all my pains, what happy days were those spent in my first fur trapping, the leisurely morning tramps, through the budding, blossoming woods, chickadees bearing me roadside company, jays creating senseless panic overhead as I advanced, and the cock grouse drumming to his nesting mate. Then there was the tramp along the brook, always expecting to find a catch in every next trap until the last was reached, gaping as serenely as I left it the day before. The whole course of the line of traps only once in one day gave me more than the one trophy to bear away. That was when hearing the puppy-like whine of a muskrat a few yards before me, I squatted in ambush among the dry sedge and presently saw the head of a swimming rat appear from behind a tussock. I fired at sight, and he dived as quickly without perceptibly increasing the commotion caused by the shower of shot. Reviling myself for my supposed blunder, the common one of overshooting, I watched closely for an under-wake leading to the nearest burrow. I began reloading in nervous haste, my fingers all thumbs, finding everything on top and nothing at hand, spilling ammunition right and left as I loaded with eyes on the brook. But the smooth surface continued, and when my gun was reloaded I went to seek some consoling excuse for the miss in the place I had aimed at, which, by the way, is something I never knew a boy, nor many men, omit when the opportunity offered. In such a case a shot mark in range or a tuft of hair, a feather, or a drop of blood, affords a healing balm to the mortified spirit. I found the tussock cut by shot in direct range, and was wondering how the game escaped, when I saw the tail of a muskrat pointing upward just beneath the surface, and then made out the body—all quite motionless. More puzzled than ever, I laid hold of the tail carefully and gave a smart pull, when, to my great amazement, the dead muskrat arose to the surface with a mouthful of uprooted sedge. This was my first acquaintance of a not uncommon trick that has saved me more than one muskrat that would otherwise have been given up for lost.

At last my traps were all taken up and tied together by the rings, the tally sticks were left in their places to fool my self-constituted partner on our fruitless round of the trapping ground, and slinging my burden over my shoulder, I started homeward on a roundabout tour of exploration. First down stream to the low, grassy embankment, recognized by few who see it now as marking the beaver's log-built dam. Few understood then what an important part its builders played in the history of the country. They were fought for to the death by savage tribes long before the advent of white men—the prize most hotly contested and most adroitly intrigued for by the English, Dutch and French in their struggle for supremacy. Indian hunter and free white trapper braved all hardships and perils in their untiring search for the last colony of beavers, and vied with each other in the skill that outwitted the cunning prey and wrought final extinction. When the peaceable settlers came to make a home where the axe had never cleared a rod, the rank wild herbage of the broad beaver meadow furnished abundant winter fodder.

Precious little I knew of all these things, only that there were yet free trappers in the far West, and dreamed enchanting day dreams of being one myself when I got to be a man; and all things are become possible to every boy. There was room enough yet beyond the Mississippi, as I knew by the map of North America that I studied most of all in my school atlas, for not far west of a great river a vast expanse of yellow was designated "unexplored region," and another thickly dotted to represent sand, "The Great American Desert." But my fancy traveled far beyond these to the grand forests and clear, swift rivers of Oregon, attracted partly by the better defined green block on the map, but more by the narrative of Lewis and Clark's expedition and Irving's delightful stories of Astoria and "Captain Bonneville's Adventures," which had been the charm of the past winter's evenings.

When I came to the hemlock woods through which the brook wound for sixty rods, it was easy to imagine myself walking in the perpetual shade of the giant firs and cedars beside the roaring Oregon, albeit I could step across it wherever I pleased, and its roaring was as gentle as Bottom's. The minnows that began to appear in flashing schools were salmon, and my two muskrats represented my morning's catch of beaver. My smooth bore easily became the long-barreled rifle of the mountain man; my cowhide boots, noiseless moccasins, and my sheep's gray garments his fringed buckskin leggings and hunting shirt.

I chose a pleasant spot where I might guard against surprise by the Indians of whom the forest, no doubt, were full.

I knew how the pelts ought to be taken off, ripped from chin to brisket and then the head carefully.

To do this without cutting the skin, and do it quickly, was the only difficulty. It was a knack to be acquired only by experience, and I was not a little puzzled how it was to be gained by skinning no more than one or two rats a day, and almost wished, as one of my friends did when vexed with his own awkwardness in skinning a fox, "By thunder! I wish I could shoot foxes enough to remember how to skin 'em, or else not shoot any." But neither of us gave up trapping or fox hunting for that reason.

When at last the first muskrat was flayed, I pitched the carcass to some little distance from me down the brook, wondering as the smooth, slender, scaly tail slid from my hand whether it might not furnish as choice a dainty as the beaver's is said to. It would certainly be scant and hard to get, which I used to think were my grandmother's reasons for recommending a chicken's neck to us children as "the sweetest part of the crittur, my dears."

It was so near noon that I was loth to wait fire making and cooking for the small results such a morsel would bring a boy's appetite and so postponed the experiment until a more favorable chance. But it has never quite come, and to this day I do not know the taste of a muskrat's tail. Not so the flesh, which I have eaten and found so excellent as to warrant our Indian's preference of it to hares and squirrels. Its name and tail cause an unjust prejudice against it among us.

As I plied my knife, the woods far and near were stirred by many sounds soft and low, or discordant and harsh; chickadees, friendliest of wood folk, lisping their usual and best known call, or too briefly piping the less familiar love note, the sweetest of the songs of earliest spring; the nuthatches' thin trumpet, one unknown and unseen bird continually whistling a single, sharp, clear call for a dog that never came; a scornful squirrel, snickering and jeering at me, head downward, rattling the bark with the nervous twitching of his claws. Far away down the brook a band of bluejays, their discordant voices softened by distance, were berating some real or suspected enemy, supported by a legation of their black relatives. All furnished good stuff for the imagination to make into signals of spying Indians. Then the clamor of the jays drew nearer, there was a loud splash in the brook and a number of frightened minnows came scurrying along pools and shallows, some leaping clear of the water in their haste.

The cause of the little fishes' fright now appeared; a weasel-shaped animal of twice the size and darker color than that bloodthirsty raider of poultry houses came along the bank carrying a large minnow in his mouth. I should have recognized it at once as a mink if it had not been for the color, which was not black as a mink, but brown and not of the darkest at that. I reached slowly and cautiously for my gun with what is always a boy's first thought; to shoot every strange wild beast or bird at sight. Luckily, mine could not be carried out at once, and the delay gave time for a lesson in natural history that was later of value. Before I got my gun in hand the newcomer on the scene came to the freshly skinned muskrat lying directly in his path, and it immediately became an object of the greatest interest to him. He stopped short with a backward start of surprise. Then he began an examination of his discovery, craning his long neck till his forelegs looked as if set in the middle of the body. Becoming satisfied of its nature, he drew nearer to it, dropped the fish from his mouth, as, I supposed, for better examination by the finer sense of smell. But after a little dibble of the carcass with his nose, he seized it by the neck and began dragging it, by the way he came, so easily, though it must have been twice his own weight, that I wondered at his strength.

The jays discovered me, and evidently thought me more dangerous than the previous object of their attention, for they flocked overhead with a louder outburst of discord, noticed at once by the mink, which discovered its cause, let go his burden and retreated a yard or two with evident reluctance, for he returned in a moment, all the while with his eyes upon me, until as he was about to lay hold of his prize, I fired. At the report the jays fled in terror. The lifting veil disclosed the last flash of blue plumage disappearing in the mist of budding leaves from behind the cloud of smoke that now hid my mark.

Christmas at L'Aurore, 1900.

THIS invitation was sent out by Mr. Edgar Magness from his hunting lodge L'Aurore on Lookout Mountain, in Alabama:

Another fair Christmas has come to L'Aurore.
Its pine-tree bells are ringing;
The mistletoe bough hangs over the door,
The pine fire now is singing.

Come up, if you will, my welcome is wide,
Break again on a bachelor's dreaming;
We'll merrily glide in the Christmas-tide
Which over my mountain is streaming.

Walk in my mountain path, I then will see
Within each footprint gleaming,
The wind-blown stars of anemone
And bluets faintly beaming.

Come, then, to me, the way is clear,
With each steep step a wider view is found;
Your smile grows brighter to me every year;
Then pass it, with my teacups, all around.

EDGAR MAGNESS.

A Month on Millinockett.

IT has been said that I have lately returned from a successful hunting trip in Maine. If spending a month camping on Millinockett Lake in a comfortable log camp commanding a grand view of Mt. Katahdin, and having plenty of game and fish killed by your friends, is a successful hunting trip, I have, with an accent on the success.

Many times have I been to the same region and the same camp, and each year it is more enjoyable.

This year we started from Boston three strong, including the Man from Pennsylvania. The excitement began as soon as we boarded the Pullman. It was a car composed entirely of compartments; the train was crowded (as trains leaving Boston always are), and the ticket agent had sold uppers and lowers promiscuously to men and women who had never seen each other before, and in the same compartment. Even a Parisian would have been startled by such indecency as this. It was doubly aggravating, as we had wired two days ahead for our berths and found people on the train with much better accommodations than ours, and who had bought their tickets that day.

We landed in Bangor early on the morning of Sept. 1. Here we had breakfast, and I proceeded to nearly go on the back of my head, slipping on the frost-covered platform. So much for the Maine summer climate.

The Bangor & Aroostok Railroad takes us seventy-five miles north to one of the gateways to the wilderness—Norcross. Here we are met by our old guide, John O. Hale, of Medway. He stands 6 feet 4 inches in his stockings, and a better guide never reached any altitude. He has everything ready, so that all we have to do is to put on our old togs, leave our store clothes in our trunks at the Norcross House and proceed up the lakes on the good ship Gypsie, Capt. Higgins.

The Man from Pennsylvania was at once struck by the amount of water and the number of rocks. For they do not have much use for water in Pennsylvania, and apparently have very few rocks.

The first lake is North Twin, then Pemadumcook and Ambajijis. By this time a newcomer's jaws are usually a little twisted trying to masticate Maine names. But they soon have a chance to twist themselves in other ways, for we now come to the Millinockett carry, where we land from the steamer in canoes, being met by Gene Hale, John's son, who is to be our other guide. The carry is a smooth one for Maine and hardly one-fourth of a mile long. But all carries have a reputation which they have to live up to. It seems a second nature to them. However, we are soon across, minus a little enthusiasm perhaps, but it immediately returns as we enter Millinockett in the Rushton rowboats, Pemadumcook and Pockwaklums.

This beautiful lake of many islands is about seven miles long and four wide. It is full of rocks, islands and loons. John Hale's camp, Millinockett Lodge, is on the south shore of the lake, about two miles from the carry. It is a peculiarly favored spot for a camp. The whole Katahdin range lies across the lake to the north, the camp being placed so that it faces directly at the mountain. Nesowadnehunk is on one side and Turner on the other, with Katahdin towering above them in the middle, the most beautiful mountain east of the Rockies. The first thing you put your foot on is a fine sand beach a hundred yards long. John keeps his camp in apple pie order. No wood pile nor dump heap in front of the entrance. No garden of tin cans nor empty bottles. The camp is 30 feet long inside with the main entrance in the center and a broad piazza running the whole length. About 200 yards back of the camp are two crystal springs, the water in them having a temperature in midsummer of 42 degrees Fahrenheit.

The camp is provided with cots, and all bedding, table crockery, napkins, tablecloths, etc. In fact, it is thoroughly equipped in every way. In the living room there is a large window in each end, the one facing the lake having a window seat and many cushions. Several rocking chairs, a large open Franklin stove, mounted heads, etc., serve to complete our comfort and the attractiveness of the camp. To the rear, past the springs, two paths lead to the Nesowadnehunk tote road, joining it at different points.

Why do so many sports and campers go up the West Branch? They go struggling up, wearying themselves on carries, because they think it is further in. Why be so far in when just as much game, if not more, is to be had around Millinockett? Abol, Togue and the Big Logan are all easily reached from the lake. They think it is too near Norcross. But the game does not mind being near Norcross. What they want to avoid is people, and they don't care if it is on North Twin or Nesowadnehunk. Take a trip any day during the season from Millinockett up the West Branch. You leave the lake inhabited only by wild things and you find the river lined with camps and crowded with canoes. Where does the wildness come in as compared with Millinockett? I have seen sixty deer and several moose in less than five days, and never left the lake. It is nearer the railway, but it is off the beaten track.

The Doctor and Chase joined us in a few days, and the cannonading commenced. The Doctor is a convert, having always considered deer shooting brutal till he saw one in the wild. Now he says that "Every wild animal's death is a tragedy, so the sooner and quicker it takes place the better." Chase did not have to be converted.

The Man from Pennsylvania is busy hunting, showing John how they cook in his State, and discussing the merits of springs. John spends his spare time fixing the sights on his new .30-40 Winchester and lashing Old Reliable with a 1-inch rope to a piazza post, because he says it roars and thrashes when it sees the new gun. The Pennsylvanian ought to be paid for the fish he catches. It gives the locality a reputation. Pickerel, white perch and trout all seem to be fond of him. They love to get on his hook. Why is it that fish are so devoted to some people? I'm one of those unfortunates whom they refuse to associate with. P., the Judge, and I start to-day to shoot a deer. We have started several times before, but were too modest to talk much about it. We are not afraid of the game wardens, for we have nearly a bushel of $6 licenses. Well, we are off in the Pemadumcook with a canoe in tow. We head for Big Mud Brook, with the Man from Pennsylvania at the tiller, Gene Hale rowing and the rest of us shivering. It is a good four miles to the mouth of the brook, where we anchor the boat and proceed in the canoe. Gene and I handle the paddles, and the others fail to keep warm in the bottom of the canoe. It is a dreary hole, Mud Brook, and well named. The Doctor disagrees with me in this, and thinks it a lovely stream, and that there is no mud. Gene sees a deer as we go up stream, but apart from that, sheldrakes seem to be the only game. It continues to rain and grow colder. About three miles from its mouth is the head of navigation. There is an old lumber camp here, where we intend having lunch. But the Judge is particular and does not like the looks of it, so we eat in the rain. Lunch over, we start for home. As we proceed down stream we realize that it is raining, that we are very cold and it is six miles home. Conversation lags considerably. Even the Judge fails to keep it going. Perhaps this accounts for the fact that just as we come in sight of the Pemadumcook Gene sees a deer. Instantly we are warm. Never thought of being cold. The game is in a cove about 300 yards to the left, so we proceed in that direction. The Man from Pennsylvania remarks that he cannot shoot through me. I blur his aim. There are two deer now, and they have come down to the beach to drink. Gene turns the canoe broadside some 200 yards from the beach; there is the sharp report of a .30-40 from center of the boat—the Man from Pennsylvania has got his deer. The other one runs a little way into the bushes, but I can see the rear end of him. Awful moment! I would not miss that deer for a farm in the presence of that Pennsylvanian. I raise the Lee navy rifle to my shoulder and fire. Again that little gun has stood me true, for the deer limps a little way and lies down. So the fun that was stored up in the Pennsylvanian's heart at my expense has to remain there. We go ashore, P. puts a bullet through the neck of the wounded deer and Gene goes for the rowboat. The first deer is dead, its back being broken. Both are bucks. We load them into the canoe and start for home. It rains, and how cold we are when we reach camp again. John comes down with a compassionate look on his face, for he sees no game. Presently his eyes stand out like two peeled potatoes, and he changes the subject. The Man from Pennsylvania and the Judge leave us to-day. They go back to their native State, having grown fat and lusty, and with many tales to startle the Pennsylvania Dutchmen.

The next day the "sports" arrive. Three of them, all bloodthirsty and new to the business. They consist of Ale, Cuba and Telephone.

Chase immediately starts in to tell them all about it. They can get deer without thinking long before he has exhausted his resources. The Doctor looks on and smiles wisely, for he has just come in with his deer.

In the evening Chase tells us of his first moose. He and John went to the cave west of the camp and there they saw five or six deer, one of them a big buck. Chase gets his eye on him at last; the muzzle of his gun makes curves in the air as he whispers to John, "Better not shoot, had I? Isn't that a moose?"

We discuss on the subject of Maine game laws. We "sports" consider ourselves very much wronged, and so do the guides. We spend much money in the State, and all the laws seem directed against us. The Game Commissioners and lumbermen seem to be the only ones satisfied—the Commissioners because they made the laws, and the lumbermen because they pay no attention to them. The wardens avoid a lumber camp as they would a plague. It is not healthy ground for wardens. I know of one case where the lumbermen from a camp caught through the ice two bushels of trout from a couple of trout ponds one Sunday. Why are all the game laws leveled against outsiders?

Several of us went on a Jim Crow hunting trip today, and much to the surprise of John and ourselves, returned successful. Maine guides have not much use for Jim Crows. They get less game, cause more fires and general disturbance and need more help than any one that goes to the State. A Jim Crow is one that goes it alone. Paddles his own canoe, as it were. Chase is going to personally conduct a party to Togue Pond to-morrow. Ale and Telephone are going with Gene for guide, but he simply goes to do the cooking, etc. The responsibility entirely lies with Chase. Togue Pond, probably the most beautiful sheet of water in the State, lies between Millinockett and Katahdin. Opposite the camp at the Club House the trail starts, running past the Trout Ponds, and occupies about four miles in distance, or ten of fatigue. It is a very rough trail and a difficult one to follow. Chase has stated that he can go directly to Togue Pond without losing the trail once. He tried and lost it before he had gone forty rods. But he caught a togue and is happy.

While they were at Togue the Doctor, Chase and I, with John, went to camp over night at Mud Brook. As we were changing from rowboat to canoe John began to gaze at a big black stump. The Doctor laughingly asked him if he took it for a moose. "Well, we seen a moose stand just like that before." And then it moved, a big bull, and behind it a cow. It is curious how moose appear only when you are making the most noise and least expect them. The Doctor and Chase left us to-day. I don't see how we are going to know how to do things now that Chase is gone. He shot a loon before he left.

The clouds begin to darken on my horizon. Ale is determined to climb Katahdin. Telephone and Cuba were to go with him, but they are backing out. Telephone is not well, and Cuba shot a deer one day and has had the doe fever ever since. John's cow has been a godsend to all these invalids.

The "bean hole" is always a place of interest at Millinockett Lodge. No one knows the true virtues of baked beans that has not tasted them baked in the ground Maine style. It is an interesting operation to see them going in, and doubly so coming out. We stand around holding our breath for fear they are a failure.

Well, my fate is settled. The man with doe fever has not recovered, so I must tackle Katahdin. I have been there before and know what it is. Ale has climbed Mt. Washington two or three times and thinks he is going to have a picnic. We will see what we will see.

We are off this morning for that old pile of rocks. Crossing the carry, we proceed up the West Branch of the Penobscot from the head of Ambajijis Lake. Gene goes with us. At Ambajijis carry there is a team, but we are traveling light, so we lug our stuff across. Above the carry the lovely West Branch begins to show its beauties. It would be hard to find a prettier river anywhere. We paddle along between banks covered to the water's edge with birch, fir, spruce, pine and maple. Here and there an open meadow appears, the river narrows and then widens into almost a lake. The carries come every two or three miles. At every turn in the river Katahdin comes nearer and nearer, and the slide up which the trail goes looks steeper and steeper. Toward evening we come to the end of the water part of the trip, and camp at night opposite the mouth of Abol Stream. Ale remarks that "The carries do get a little monotonous after a while." We turn in early, so as to be fresh in the morning. Breakfast over, we paddle across stream, haul out the canoe and start on the five-mile tramp to the foot of the slide. It is a pretty walk through the woods, mostly up hill, but once in a while down a pitch and over a mountain brook. There is one redeeming feature about climbing Katahdin—good cold water at intervals all the way, even near the summit.

I insisted upon a rest of fifteen minutes at the foot, having had some experience in this matter before. There are several good rules to follow in mountain climbing. Always rest before you get tired. Rest often, but not long at a time. Leave the whisky alone. We start up that heart-breaking slide. It is a very discouraging piece of territory. Loose sand, gravel, stones and rocks, all combine to make your feet go the wrong way. The man who had been up Mt. Washington three times started out at an awful pace. I did not say anything myself, as I had committed the same error when I first tackled the job, but I did a lot of thinking and wondered if it was because he had no idea of what was before him or that I had run up against a holy terror in the mountain business. He got way ahead, he and Gene. I had to crane my neck to look at them. It went along thus for some little time, when upon struggling to the top of a very steep pitch I found Ale waiting for me. He evidently thought it unkind to leave me so far behind. It was generous of him, and I appreciated it. He even went so far as to cause me to wait for him several times before we gained the plateau.

The view was opening up in a wonderful way. Lake after lake appeared, till it looked more water than land—North and South Twin, Pemadumcook, Ambajijis, Millinockett, the Jo Merry lakes, Nahmakanta, Rainbow, Chesuncook, Moosehead and a hunderd other lakes and ponds. It is said that you can see 200 from the summit. Some one remarked that it looks as if a mirror had been broken over the landscape. On climbing Katahdin for the first time you imagine when you reach the top of the slide it will be smooth sailing. How disappointed you are when you get there. A mass of great square edged rocks thrown on top of each other in a terrible way. It is evidently too steep to slide. It would not know which way to go, and neither does the poor benighted who is on his journey up. One has to tackle it parrot fashion and hang on by the teeth.

But all troubles are over at last, and we find ourselves on the plateau—a great level tract which stretches away to the east in a gradual slope to the summit. Trees have long since decided that lower altitudes are more enjoyable. It is grass, low shrubs, moss, lichens and rocks. The latter seem to be the principal crop.

In the center of the pleateau is a fine cold spring. Where it springs from on the top of a mountain is a question often asked and never answered. But it is there and has cooled many a weary throat. After resting a bit we started for the summit. If our legs were not constantly threatening to strike for overtime it would not be so bad. The highest point is reached and we are repaid. A more magnificent view I have never seen from any mountain. We look directly down into the great basin—an amphitheater with almost perpendicular walls 3,000 feet high and a tiny black lake at the bottom. Many other lakes have come into view, notably Katahdin Lake and Nesowadnehunk. To the south the Togue ponds seem almost at our feet, and beyond the Millinockett looks like a great silver tray. The camp can be plainly see without a glass.

At this time of the year the coloring of the mountain is superb. It defies description. It is clad with birches which are a rich old gold, gradually fading away to green as they grow lower and lower on the mountain side. Dark streaks of pine, hemlock and spruce make the whole look like a gigantic Persian rug. We climb over to the southern peak. The ridge is about a yard wide and is composed of tilting granite rocks. It tumbles off perpendicularly into the basin on one side and almost as steep on the other. One year when the Doctor went across he did it on his hands and knees, remarking, "I look neither to the right nor to the left."

Gaining this peak, we are at the end of our climb. The Saw Tooth lies below us, being the eastern spur of the mountain. I have seen people with courage enough to tackle it. We need what little we have left to take us to the river. Descending is in some ways more difficult than coming up. You have to be much more careful not to fall. Your feet fly out in the most ungentlemanly manner, causing you to sit on very uncomfortable spots. My camera insisted on swinging around and acting as a cushion. It was not of the pneumatic variety.

But at last we reach the river, weary and worn and sad. Ale decided that Mt. Washington is not in the same class with Katahdin, and I have decided for the third time never to go up again.

Getting an early start in the morning, we return to Millinockett, considering ourselves heroes. There is one thing more. Something very serious has happened at Millinockett. I do not know if it ever will recover. Sunday has been introduced by the Judge. It is not known quite what the idea was, but it was strongly insisted on. Sunday never got in so far before, and it did not seem to enjoy camping out. It is said that at times it reaches Norcross if the weather is favorable, but I have never seen any signs of it there. Possibly this will be its last visit to Millinockett. Let us hope so. The fatal day has come. Back to the noise and bustle of the great metropolis—cable cars and telephones. We see the last of John at Norcross, all having sworn to return next year.

POCKWAKEMUS.

John Gomez.

IT was in 1884 that I first met old John. I had been making a canoe cruise through the Ten Thousand Islands, and the time was about the first week in April. I was camped at Cape Roman, where I met an old fisherman. He landed at my camp one morning, where we had a short conversation. I do not remember what we talked about, nor does it matter. But I do distinctly remember that I looked my visitor over with a great deal of interest. A short, stocky built man, his clothing consisting of trousers and shirt, supplemented by an old cap that had a decided air of being home made. Short, curly hair, quite gray, and the brightest, clearest eye I had ever seen, a soft pleasant voice with a peculiar foreign accent and somewhat broken by the loss of his teeth. As he talked with me, he looked me in the face with a frankness that was refreshing, after noting the shifty eyes of the most of the men I had met in that section. He stopped but a few minutes. When asking for tobacco to fill his pipe, he stepped in his boat and pulled away.

The next day it set in to rain, and for two weeks there was more rain than sun. About the end of that time I had worked up to Palm Hammak, well in among the islands. It had been raining quite heavily. I was somewhat wet and considerably depressed, when turning round a little point I saw a skiff anchored near the shore. Smoke was curling up from a sand box on the stern, and standing knee-deep in the water alongside was my Cape Roman fisherman. He saw me as quickly as I saw him, and swinging an old black coffee pot, he yelled, "Coffee! Coffee!" I paddled alongside, and was soon sipping hot coffee, black as ink and strong enough to float a bullet. The fisherman was old John Gomez, and that was the beginning of an acquaintance of which I was and am still rather more than proud.

Old John was very reticent at first, but after several years' acquaintance he opened out quite freely. He has told me many very interesting stories of his adventures, telling them in such a modest way that they always carried conviction in the telling. Some of these stories I have already told to FOREST AND STREAM readers. I may tell some more when the mood takes me. I have missed no opportunity to learn all I could of his past life from others, and although parts of his life would not sound well in a Sunday school book, still I believe he was in the main truthful and honest. That his was an eventful life no one can question; would it could be faithfully written. His was a fitting end to such a life. Able to live alone, he was certainly able to die alone. May the sand rest lightly on him.

S. D. KENDALL.

A Word About Forest and Stream.

OAKLAND, Jan. 6.—*Editor Forest and Stream:* It has been many a long day since I have thus headed a letter; but as I sat by a bright, coal fire in the grate and alternately watched the flames shoot upward and their the rain as it came pouring steadily down upon the roofs of the adjacent houses, the spirit moved me to commune with those old friends of mine that, although never seen in the flesh, and known only through your columns, would still be hailed as old and long tried friends, should fate ever bring them more nearly within my ken.

From where I sit writing I can hear the guns of the hunters, who even in this inclement weather are harassing the ducks in the bay that makes up between Oakland and the Alameda shore; and it brings vividly to mind many an exciting day's sport I have enjoyed in that most fascinating pursuit ere old age had stiffened my joints and made the attractions of a cozy, comfortable fireside superior to duck hunting in a storm. Indeed, as others have written before me, the lust for blood grows weaker with the approach of age, and I confess that I now take as much pleasure in going down on to the Eighth street bridge, which spans the estuary a couple of blocks from my residence, and watching the canvasbacks, pintails, widgeons, cranes, etc., there, where, protected by the strong arm of the law, they paddle and wade about in perfect security not a stone's throw away, as I ever did in seeing a pile of their blood-stained carcasses lying in the bottom of my hunting boat.

More than a quarter of a century ago, when in Mason Valley, Nev., I began sending a fugitive letter now and then to the FOREST AND STREAM; and to the best of my recollections not a week has passed since then when it has failed to arrive at my door direct from the hand of the publishers, or that its contents did not assuage the galling of the chains of business.

Only an hour ago I was looking over some of the old files of the dear old journal, and came upon an illustrated page that aroused old-time memories of the most tender and affecting character. In the center stood an upright bear carrying over his shoulder long stalked floral offerings of the wilderness, and underneath the well-known signature of Awahsoose, while running around it in a border, forming wreath, were the written signatures of grand old Nessmuk, J. A. Henshall, Elliot Coues, Al Fresco, Corp. Lot Warfield, Podgers, Kingfisher, Jacobstaff, and a host of others who were weekly contributors in those days, but many of whom have since laid down forever the gun, the paddle, and the pen, and crossed over the shadowy range to those Elysian Fields of the blest, where I have faith to believe they gathered to greet Mather and Robinson, who so quickly followed them.

We are all, I think, inclined to sigh for the good old days gone long years ago, and to judge the present through old prejudices; but few of us would hesitate to say that the FOREST AND STREAM has steadily improved, and that its course has been constantly upward, both in its mechanical and mental attributes. It was always an advocate of the highest form of sport, but of late years it seems to me to have laid more stress than ever before upon that noblest theme of all—the preservation of the surviving remnants of our once glorious heritage. Even the Singing Mouse, thorough sportsman that he is, never fails to sound with trumpet tones the alarm of useless slaughter or to stay as far as in him lies the westward moving tide of our fast vanishing game.

No doubt the bright galaxy of writers that now adorns your pages will be as tendely remembered twenty-five years hence as are those of whom I have written; but it seems to me that with some of the later ones there is a skepticism apparent that was, to say the least, less obstrusive in those days. This was most forcibly illustrated at the time you invited your readers to give any evidence they could regarding the power of a weasel to follow a trail by scent. In reply, several of your correspondents (myself included) sent accounts of incidents that it was understood came under their personal observation, bearing directly upon the subject. How authentic the other accounts were I, of course, have no means of knowing, but of my own article I can only say that, in my case, the incident occurred exactly as it was described; and I saw no grounds for doubting the veracity of the others, but I noticed that a later writer seemed inclined to view the circling of a half-grown rabbit in its flight as a rehash of an oldtime fable, evidently forgetting that there is a vast difference between a half-grown cottontail and a 10-pound jack rabbit. But I am getting old and irritable; so, with a long life to FOREST AND STREAM, I close.

Yours, as of old, FORKED DEER.

George A. Boardman.

From the Calais, Me., Times, Jan. 18.

IT is with profound grief that the Times records the decease of this eminent citizen. Mr. Boardman passed peacefully into pleasant dreams, at his home on Lafayette street, last Friday morning. In our sense of personal sorrow which the event brings, all readers will share. His weekly articles contributed to this paper during the past five years on scientific, ethical, educational and political subjects would fill a volume. His last article was published in the issue of Dec. 20, on the subject of "Wars of the Century." He was also a contributor to other papers and magazines, especially the FOREST AND STREAM, for many years and until two weeks before his death, and the constant demand for his writings attested their merit and the interest they aroused.

It will require more than a single article to portray Mr. Boardman's life, work and qualities, all of which were of a kind to induce respect, confidence and friendship. His life was in the daylight, and he was esteemed

GEORGE A. BOARDMAN.
From FOREST AND STREAM, Aug. 5, 1899.

of all acquaintances. At an outing of prominent citizens, three years ago, it was decided by a unanimous vote that George A. Boardman, of all men who had resided in the St. Croix Valley, had best enjoyed the blessings and fruition of human life. Successful in business, fortunate in family relations, contented in his studies, broad and keen in intellect, varied in accomplishments, stainless in character, observant of affairs, with ample wealth, he was passing his declining years with a happiness that befited a naturalist, Christian and noble man. He was the last of the aggregation of great business men of the last generation who won fortune from the lumbering industry here.

Mr. Boardman was born in Newburyport,, Mass., Feb. 5, 1818, his ancestors coming from Yorkshire, England, and settling in Newburyport, May 10, 1637. He came to Calais with his parents in 1828, and left school to go to work at the age of 13, and at 21 was a partner with Hon. William Todd. He conducted the largest lumber business on the St. Croix River until 1871, when he retired from active business to enjoy the fruit of his labor in travel and in pursuit of his favorite study. He had been a noted naturalist and an authority on ornithology for nearly fifty years. His private museum comprised the finest collection of mounted birds in New England, if not on the continent.

He had studied the fauna of Maine as no other field naturalist has ever done, and passed twenty winters in Florida and other southern lands in pursuit of his favorite studies. He was a life member of the Natural History Societies of Boston, Mass., and London, England, a lifelong friend of Profs. Baird and Coues, of the Smithsonian Institution at Washington; Dr. Brewer, of Boston, Charles Hallock, of New York. Among his other scientific and literary friends were: Rev. Dr. Bethune, the eminent theologian; Senator Geo. F. Edmunds; Walter Brackett, the celebrated painter of fishes; Rev. James Smith, of Philadelphia; Prof. Bailey, of Fredericton, N. B.; Dr. Leith Adams, Judge Ritchie, of New Brunswick; Henry Ward Beecher, and scores of other eminent personages.

Readers of the Times will remember the beautiful tribute which Mr. Boardman wrote in memory on his friend James Murchie, whose death occurred last May. One paragraph of that fine obituary aptly applies to the writer's own life: "There was manifested none of the decrepitude or petulance of old age. When last I saw him, his face was sunshiny, for his 86 years had always been maturing goodness. The length of his life is neither magical nor mysterious, when we consider certain habits and dispositions which he possessed. He lived simply and loved simplicity, he was unostentatious, industrious, frugal and democratic. Temperate in all things, he was a latter day Puritan, an improvement on the old Puritan in that it adds cheer to a loyal devotion to the right. His great age was beautiful simply because his youth had been so; his October was the natural result of his May. His latter days had a magnificent maturity because in his younger days he had always sought that which was good. He was like one of those glorious maples that we see in October, that nature crowns as the resplendent monarch of the surrounding forest."

Natural History.

Midwinter Bird Notes.

Editor Forest and Stream:

The usual routine of midwinter bird life in this locality appears unchanged. I have not had opportunity for special jaunts among the thickets, and so cannot speak positively as to their denizens, but there is no doubt in my mind that such a visit would reveal most of my oldtime friends, whose retiring habits keep them away from the beaten track of the casual observer.

The call of the meadowlark, with its curious ventriloquial effect, comes floating up on every puff of air that fans your face when you pass among the meadows and fields—a charming little musical voice, full of reminiscence.

Along the roadside a quick eye will catch a glint of white feathers far ahead, as a party of juncos, disturbed by the ringing puck! puck! of horse hoofs on frozen ground, flick away in jerky flight among the nanny bushes. A number of hawks seem resident this winter, sparrow and hen hawks being quite in evidence.

One still, clear morning a few weeks ago, while passing over the road that skirts the West Meadows, just back of Gravesend Bay, I was admiring the bold outlines of the cedars that still guard the sandy ridge of its further shore, and thinking of the boys that used to gather hawks in that same old grove when the flight was on in late September. Even as I looked there was flapping of broad vans, and a huge hen hawk launched into flight from the midst of the cedars. The day was so perfectly still that the bird seemed as though he might be the ghost of one of my old victims. He sailed silently overhead, so close that I saw the gentle flutter of the fluffy plumage along his sides, and as he glared down upon me I realized from his savage expression that he must have identified me as the slayer of his great-great-great-grandsire long ago, which, indeed, was not at all unlikely.

I have long been curious as to where our winter birds obtained their supply during hard, frosty weather, in the absence of snow. In the case of our redhead woodpeckers, the mystery is solved. Time and again I see them chipping the ice in the drinking trough, swallowing the sparkling bits as they hammer them off. It is amusing to see the English sparrow glean after them. I've seen these sparrows eat snow when thirsty, but how our other winter residents quench thirst in winter when snow is a rarity and hard the rule, is beyond me.

Several "Canada specials" of geese went by on the "Air Line" last autumn, and other wildfowl traffic was fairly good. It is rather early yet to figure on spring business, but I assume the returns will be satisfactory. In a month or two D. V. I will further advise you.

WILMOT TOWNSEND.

BAY RIDGE, N. Y.

A Sleeping Buck.

Editor Forest and Stream:

Since I came to this country to spend a couple of years I have been a regular reader of FOREST AND STREAM. In a recent number I read a story of a sleeping doe. Perhaps your readers may be interested to hear of a sleeping buck.

A couple of years ago I had a cousin, Senfft, at my home in Silesia, on the opening of the season for buck shooting, viz., May 1. We had been driving through the woods for several hours, my cousin missing two bucks, and had turned back, when suddenly my cousin stepped out of the carriage. Supposing he had seen a deer, I drove on a couple of hundred yards before I drew up. This is done to make the deer believe that with the retreating carriage all danger for him vanishes. I then turned round to observe my cousin. He was standing behind a tree on the spot where he had left me, and was acting strangely. He would raise rifle to shoulder, but instead of the expected report, I saw him lower it and raise his field glasses to his eyes. After he had gone through these performances several times I saw him step cautiously into the woods. A few moments later I heard him shout for me for all he was worth; and mingled with his voice came another strange noise I had never heard before. I hastened to the spot with my double-barreled rifle and found my cousin holding a buck by his horns, both yelling at the tops of their voices; but it was impossible to say whether the buck danced round the man or the man round the buck (a buck of the deer species most generally met in Germany

will only weigh about 45 pounds). My cousin shouted to me to shoot the buck, and as the place where this happened was within a short distance of where Senfft missed a buck an hour or two ago, I tried to do so, thinking that this was a buck he had wounded earlier in the morning. But I found I had a hard task before me, because I was afraid of hitting my cousin, for man and beast were jumping around in a lively manner. At last I succeeded in putting my rifle on the shoulder of the buck, and drew the trigger. But in this second the buck must have moved; and instead of shooting him through the heart the ball only broke his leg. On hearing the report, my cousin, only too glad to get rid of his task, let go. The buck thereupon made off on his three legs as if he had four, when the second ball from my rifle brought him down.

I should almost have liked to miss him, to have been able to study Senfft losing his coveted prize after holding it so long.

We found on going up to the buck that he only had my two bullets—the one that had broken his leg and the one that had brought him down—and that the buck had been perfectly sound before.

My cousin then explained things. He had seen the buck sitting under a tree and stepped out of the carriage to shoot it. But when he raised his rifle, the posture of the buck gave him the impression that it must be a dead one. He therefore stepped up to it and grasped one of the horns to raise the head, to better inspect them, when, to his surprise, up jumped the buck. My cousin having the luck to grasp his other horn, held on to him.

This is the most extraordinary occurrence with a sleeping deer that ever occurred to me, though I have had several experiences with deer at home, which have led me to the conviction that you will once in a while run across a deaf one. E. G. V. S.

The Barking Deer of the Philippines

DAPITAN, Mindanao, P. I., Nov. 10.—*Editor Forest and Stream:* I have something curious to tell you about that black deer of mine, concerning which I have already written you. As I stated in a former letter, he is a yearling past, very dark, with a coarse coat for this climate, black tail with white tip, and his horns grow straight up from head on a line with his nose, as may be seen in the photograph I sent you. Lately he has shed his horns.

I remember reading once, from the manuscript of a friend in New York, a story, in which the baying of a pack of invisible hounds ever followed the fleeing deer, but I little thought the conceit would be brought forcibly to mind in later years.

One night about two months ago I was aroused by the savage baying of a dog trying to get into the inclosure where the deer is kept at night. I rushed down there revolver in hand, picturing to myself the agony the deer might be in penned up as it was. There are dogs here trained especially to hunt deer, and as the town is full of masterless curs of high and low degree, I was not surprised that some of them should come around at night.

Well, I wore myself out trying to find that dog. A short time afterward he appeared again earlier in the evening, in full cry, that filled the house and could be heard a quarter of a mile away. On this occasion an interesting whist game was broken up, and each vied with the other to get a shot at the intruder. The inclosure where the deer was is a room by itself, under the quarters occupied by the officers, and has a rather frail partition separating it from another room open from the outside, and from this point a powerful animal might dig his way in to the deer. The barking and baying seemed to proceed from this partition. It being a moonlight night, two of the party stationed themselves at the windows commanding the premises, while I went down to this outside room, with a candle in one hand and my revolver in the other.

No dog.

The next day I had a hole cut in the floor near and above this partition, and the next night that the sounds appeared, I stationed myself at the opening ready to shoot at the sound, if unable to distinguish any form. It seemed to proceed from the inclosure where the deer was. Is it possible, I thought, that that dog could have gotten in at the high window and was even now attacking the deer? I rushed around to the stairway with a candle, but the deer stood there quietly looking at me. I retired puzzled.

This howling occurred two or three times a month. One night a corporal, our interpreter, who sleeps in the building, went to the stairway and listened. Next morning he said, "Captain, is it possible that a deer can bark like a dog?" I thought not, but I interviewed the president of the town on the subject, who said at once that it was the deer, that it was a common thing for the bucks to bark like a dog, and he added that at times they make such a noise in the mountains that one cannot sleep in their neighborhood. He said that they barked at all seasons, but most at running time and at the full of the moon.

A few nights ago the deer set up his nocturnal roaring and I went with a light and sat down on the steps and saw him in the act. Being so close there was a false note in it, but a few yards away it seemed most like the deep mouthed bay of a hound. While he is barking or baying he stands and stamps with one foot. It continued at intervals for fifteen or twenty minutes, and as I said before was loud and could be heard a quarter of a mile. I thought I knew a little bit about deer, having hunted them many years and killed hundreds of them, but this particular breed is a curiosity. He is a handsome animal like a blacktailed buck, with small ears and shapely head, and when I shake a banana at him, comes running with a whimpering cry to take it form my hand.

LUTHER S. KELLY,
Captain 40th Infantry.

[Just what this curious deer may be is not certain, but very likely it belongs to the genus *Elaphodes*, which is allied to the muntjac of India, but has unbranched antlers.]

The FOREST AND STREAM is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday and as much earlier as practicable.

Strange Birds.

COL. W. COLTMAN, a neighbor of mine, in the fall of 1858 shot in the White Oak swamps, near Snow Hill, Md., a gigantic woodcock. This bird was more than twice the size of any woodcock ever seen here before or since, and had a few white feathers in its wing. It lay to the dogs like an ordinary bird, flew quite swiftly and made a loud whistling noise. The Colonel took his bird to Snow Hill and showed it to many interested in such things, then he sold it to a Mr. John Maddox, of New York city, who was staying there at the time. This gentleman called it a European woodcock. This, I think, was before the time of introducing new species here, and must have blown across in a storm to Newfoundland, and then drifted down the coast. The strange part is the white feathers in the wing.

The first week in December, 1900, Mr. Laurent and Mr. Livezey, of Mt. Airy, Pa., were shooting quail here. The dogs pointed and a rail bird flushed. Mr. Livezey shot and killed it, and on picking it up found a bird he had never seen before. He gave the bird to Mr. Laurent, who is connected with the Academy of Natural Sciences, Philadelphia. He said the bird was new to him, but looked more like a corn crake than anything he had ever seen here. The bird was carefully laid away and taken home in the flesh. On examination at the Academy it was found to be the real European corn crake, of which but two specimens have been taken in the United States before this one. The Eastern Shore is a wonderful place. If you cannot find all you want here, you are indeed hard to please. O. D. FOULKS.

STOCKTON, Md

The English Sparrow.

SAYRE, Pa.—The vociferous community of English sparrows which tenants the interior of the new passenger equipment paint shop at this place affords a convincing illustration of the bird's power of resistance to the ordinary methods of warfare waged against it. Every ventilator attached to this mammoth paint shop has been equipped with fine wire screens, and all the tracks entering the shop have been closely fitted with leather fenders attached to the doors, with a view of excluding the pugilistic Britons, but thus far all efforts in this direction have proved unavailing.

The mottled aliens quarrel and fight and forage impudently, and multiply surprisingly. Occasionally a bird falls to the floor overcome by the poisonous paint and varnish fumes, or intoxicated with the penetrating turpentine perfume, but on the whole the birds exhibit an amazing vitality. They swarm through the vast network of girders and roof supports in joyful estate, creating a deafening clamor, at certain hours of the day, defying alike the ingenuity of man and the unwholesome conditions of their environment.

As furnishing an example of contented existence under the most adverse circumstances the English sparrow has been and continues to be pre-eminently successful. This characteristic at least entitles him to some respect.

M. CHILL.

The Cat Came Back.

SAYRE, Pa.—The homing instinct of cats was lately illustrated in the case of an ebony-coated Tabby that for some time made its home in and about the stock room connected with the big passenger car paint shop of the Lehigh Valley R. R. Assistant Foreman John Brainard having a desire to make Tabby a member of his household carried the animal home one night, a distance of over a mile, and covering a journey across a great tangle of railroad tracks and often between a congestion of locomotives, freight cars and rolling equipment unsurpassed in variety and extent probably along the entire Lehigh system outside of New York and Buffalo.

Evidently, however, the black cat was alert and sharply observant, for two days thereafter its melodious voice fell softly upon the air in the vicinity of the stock room. Investigation disclosed the satin-furred feline perched high aloft upon the roof of the paint shop, a lookout point gained only by climbing an iron fire escape and general utility ladder equipped with widely separated rungs.

Removed from its exalted perch, the cat mewed contentedly, tied itself into a hard knot athwart a varnish can and slept the sleep of a thoroughbred Bohemian.

M. CHILL.

Mr. Boardman.

THE death of our old friend and correspondent, Mr. George A. Boardman, which took place last week, will cause pain to an unusual number of readers of the Natural History Department of FOREST AND STREAM. One of the last letters written by him was a kindly response to an inquiry from this office as to whether he knew of a single authentic instance of the taking of the panther in Maine. His reply was in the negative, and he added, "I have for fifty years been looking after the skull of a panther that was killed in this part of the State for my museum and have not been able to get one"; and then he added, "I have been much pleased with your cuts of the ducks in FOREST AND STREAM. They are first class."

Warning to Mountain Climbers.

BOSTON, Jan. 10.—A special committee of the Appalachia Mountain Club, which has been investigating the death last summer of Father Bill Curtis and Allan Ormsbee in White Mountains, finds that there was no carelessness, but says the time is a proper one to teach certain lessons. The warning which the committee issues says:

Provide adequate clothing. Then if experienced and strong, turn back rather than face such a storm. If inexperienced, do not let bright skies and an open pathway lure you to where you may need resources not at hand, and do not go alone. Hold together. Watch, to foresee the conditions ahead of you. Do not exhaust yourself by wasteful hurry and needless continuousness of severe effort. Keep courage; resist the fatal desire to lie down —New York Evening Post.

Game Bag and Gun.

Proprietors of shooting resorts will find it profitable to advertise them in FOREST AND STREAM.

Notice.

All communications intended for FOREST AND STREAM should always be addressed to the Forest and Stream Publishing Co., and not to any individual connected with the paper.

For Smooth Bores and Safety.

PHILADELPHIA, Pa., Jan. 16.—*Editor Forest and Stream:* During a recent trip in the South, I happened to take up your issue of Dec. 22, and read what your Maine correspondent said about the great number of very interesting shooting accidents which are constantly occurring in the Northern woods. They are not confined to the Northern woods, however, for they occur in the Northwest and wherever modern rifles are used in a forest country.

I have been in the Maine woods myself and heard a great deal about these accidents, and I have seen in a way how it is that they occur so easily. The great numbers of them are appalling, and I sometimes think that the statistics are exaggerated. But even allowing for the exaggeration, there are far too many of them, and it seems to me that everybody interested in sport should do his utmost to devise means for preventing them.

Your Maine correspondent suggests several remedies. He would have a law passed making accidental shooting a criminal offense. This, I think, would hardly meet the case. It would be contrary to the general principle of law that it is the criminal intent which makes a crime. It would hardly be proper under our system of jurisprudence to punish a man by fine and imprisonment for doing what he never intended to do. A man may be punished under our law for killing a person by gross carelessness, or for doing an act in itself unlawful which unexpectedly results in killing some one. But I do not think that we have ever made mere accidents punishable as criminal offenses. I do not think that the thought that there was such a law on the statute book would make people any more careful or make accidents fewer. You cannot by a few printed words alter human nature in the matter of carelessness, and these shooting accidents arise, I think, out of certain circumstances as much as out of carelessness.

Nor do I think that your correspondent's suggestion that all sportsmen be compelled to adopt a certain color of dress which would make them absolutely distinct in the woods and prevent any possibility of their being mistaken for a deer would obviate the difficulty. It would really be most ridiculous and would show that our sport had degenerated sadly, if we should try to adopt such an extraordinary rule as a safety costume. I do not know any color that could be adopted except white; and that might perhaps be the most dangerous of all, for a great many of these tenderfeet who do the reckless shooting have heard that there are at times white deer found in the woods, and they are enthusiastic for a shot at one.

It seems to me that the great difficulty arises, or the preventable part of the difficulty arises, from the condition to which the modern rifle has been developed. I have hitherto used one of the old Winchester .44's. In fact, I have had one for twenty years and more, and it would be described now-a-days as a very low power rifle. Recently, in order to be up with the times, I purchased a modern rifle, one of those deadly little .30-30's. It is really a most wonderful instrument, and in my use of it in the Maine woods I have been lost in admiration at the triumph of mechanical skill which it represents. I saw, of course, while in the woods, the rifles used by other sportsmen, many of them .30-40's, and more powerful than mine. They are nearly always magazine rifles and the way in which young fellows and ministers of the gospel, not to mention ladies, pump bullets out of them at every object they see and at every glimpse of brown or gray color in the woods is frightful to contemplate.

There are whole classes of accidents which I think are due almost entirely to the extraordinary power of these modern rifles. For example, that class of accidents in which a man suddenly finds himself struck by a bullet or is found lying dead in the woods, and no report of a gun is heard, nor any means of knowing why he was hit, is, I think, in every case, due to the random pumping of bullets from these terrible weapons which carry far beyond the sound of the explosion. There is another class of accidents which come from the extraordinary accuracy of these rifles at long range. I have been using rifles all my life; but the accuracy of these new instruments at a great distance when used even by an inferior marksman astonishes me. A tenderfoot who sees something moving along the edge of the lake or sees brown or gray color through the leaves and blazes away at it is very likely to hit it. If he finds afterward that he has shot a woman or a guide or a friend, he is, of course, very sorry.

The rifles have, in fact, become too good. They are so good that the element of sport is eliminaated. Shooting with them has become merely a mechanical pumping out of lead. Having been brought up to use a shotgun for quail shooting or duck shooting and similar sports, I can see no sport whatever in shooting moose with one of these modern rifles, and there is scarcely any sport in deer shooting with them. There is not much sport under the best of circumstances in moose shooting as compared with the beautiful skill required in quail or snipe shooting, and there is only a little real sport under the best of circumstances in deer shooting. Of course the wild romantic life one leads in the woods when in pursuit of moose or deer is the most delightful of all things. I have nothing at all to say against that. I enjoy it more than words can describe. And fishing is still a true sport. God be prasied that mechanical ingenuity cannot destroy that pleasure.

But in order to save life and to reduce the pursuit of big game in forest countries to its proper limits, I make bold to suggest that we abolish by statute the use of the rifle altogether and go back to smooth bores.

Years ago in the Maine woods, say before the times of the Civil War, moose and deer were often hunted with smooth bores. The famous hunters who went out to

Africa during the first half of the nineteenth century used smooth bores for shooting big game. They shot elephants with ten bores and eight bores. Sir Samuel Baker was, I believe, the man who first introduced rifles into these African sports.

An ordinary smooth bore, firing a bullet, has very little accuracy beyond sixty yards. But I would be willing to go a little further and allow the use of those paradox smooth bores which have been invented of recent years and which are accurate, they tell me, up to 100 yards. If everybody else will do the same, I am perfectly willing to go into the Maine woods and take my chances with a smooth bore; and I think in a forest country any man ought to be entirely content with the game he can kill inside of 100 yards. A great deal of shooting in forest countries is done at night with a jack, in spite of the law against it. In this sort of shooting, which is at very close range, a smooth bore is just as effective as a rifle and rather more so.

I think a law forbidding the use of rifles in the large game counties of Maine and New York could be very easily enforced. No man should be allowed to start on a camping tour with a rifle or to carry one under any circumstances. If he has a rifle with him, it should be taken away from him and kept by some official until he returns from his trip and is ready to go home again, and then it should be returned to him. I believe this system would tend to the increase of game. Not so many would be shot and we should all enjoy what is to me, and I think to every one, the great pleasure of being in the presence of large quantities of wild animals which are difficult to secure.

There would, of course, still be certain classes of accidents, the same accidents which occur with shotguns. These can never be eliminated. They are the necessary accompaniments of dangerous weapons and human carelessness. But I think several classes of accidents which are numerous and distressing and shock everybody when they occur, would be entirely eliminated.

SYDNEY G. FISHER.

Spring Shooting.

WATERTOWN, N. Y.—*Editor Forest and Stream:* I inclose an article I have published in the Watertown Times in relation to spring shooting. The sportsmen of Jefferson county are making a determined effort to stop spring shooting of wild fowl in this county, and I believe we shall succeed. If the sportsmen of this Stat would use the local newspapers, and let the public know their wishes in the matter of better game protection, I think it would go a long awy toward creating a public sentiment in our favor, and unless we have the people with us our laws cannot be enforced.

W. H. TALLETT,
President Jefferson County Sportsmen's Association.

There is a growing public sentiment in favor of more stringent game laws and their more rigid enforcement. Nearly every State in the Union has a law forbidding the export of game, and last winter the Lacey bill, making it possible to enforce these laws, was passed by Congress and signed by President McKinley. The sale of game is forbidden at any time in Massachusetts, Pennsylvania, Ohio, Vermont, Oregon, Iowa and South Carolina. The spring shooting of wild fowl is forbidden in Wisconsin, Minnesota, North Dakota, Vermont, Rhode Island, Utah, Idaho and Washington. Michigan forbids the killing of mallard, black duck, wood duck and teal in the spring. The great State of New York, which should stand in the front rank of this grand movement toward better protection for game birds, is a long way in the rear. Why? For the simple reason that the sportsmen, the men who believe in these things, are not united. These men who shoot and snare our birds for the market, these men who kill and drive from our waters the wild fowl that should be permitted to remain and breed here—these men are comparatively few in number. The time is coming, brother sportsmen, when one of two things must happen: Shooting for the market and the spring shooting of game birds must cease or our game birds will be exterminated. There is only one way to stop the market-shooter, and that is to forbid the sale of game at any time of the year, and there is only one way to stop the spring shooter, and that is to prohibit spring shooting.

It ought not to be necessary to have to pass such laws, and for the true sportsman it is not, but there are a few men in every community who for the few cents they receive, or for the mere pleasure of killing, will kill any bird or animal, at any time of the year, unless it is protected by law. The sportsmen of this State have been trying for years to secure the passage of a law prohibiting the spring shooting of wild fowl, and year after year have met defeat at the hands of Oswego county, whose members go to Albany pledged to oppose any bill of this nature, and if I am rightly informed one man controls the action of these members, and that one does his spring shooting in Jefferson county. Last spring a bill was introduced covering Jefferson county. You all know what happened to it.

It might be interesting to you to know how the States of Wisconsin, Minnesota, North Dakota and Michigan were induced to pass such a law. Three years ago the Horicon Club, composed of members in Chicago and Wisconsin, which owned a game preserve in Wisconsin, stopped the spring shooting of wild fowl on their preserve. Not only did the mallard, black duck, wood duck and teal stay there and nest, but the bluebill, canvasback and redhead, ducks that were supposed to breed in the far North, stayed and reared their young and on the opening day the birds were there in thousands, and instead of having to wait for the cold weather to drive them down from the North the members of this club had good shooting from Sept. 1 to the end of the season. The result of this experiment was the stopping of spring shooting Jan. 1 in four States, and this winter the sportsmen of Illinois are trying to pass the same law. I wonder what would have happened in this State in a year or two if our law had passed last winter? Is there another county in the State better situated for a game preserve? The St. Lawrence River on the north, with no spring shooting on the Canadian side, closes Dec. 15, our lake front with its bays and feeding grounds from Cape Vincent to Big Sandy, and the little lakes, ponds and creeks scattered through the interior. Suppose that instead of driving those birds into Canada in the spring we should sow wild rice in our shallow bays, and it will grow on any soft mud bottom in from one inch to eight feet of water. Suppose you owned a game preserve, not a big one such as Jefferson county would be, but a little one, and that next spring a few pairs of ducks should come and want to stay and nest there, you'd get your gun and go out and kill all you could and dirve the rest of them over in your neighbor's preserve, wouldn't you? Of course you would, and next fall you'd kick because he asked you to pay him twenty-five dollars if you wanted to come over and get a mess. I don't suppose there is any use of trying to make a game preserve of this county; the boys don't want it, and we'll have to go on shooting mud hens and wait till our neighbor's preserve freezes over and try and get a few as they fly over, but I would like to try it for, say, three years.

W. H. TALLETT,
President Jefferson County Sportsmen's Association.

The Massachusetts Association.

BOSTON, Jan. 18.—*Editor Forest and Stream:* The new Board of Government of the Massachuse ts Fish and Game Association within less than a week of their election have got right down to business. At the call of President Reed twenty members of the Board met at the Copley Square Hotel last Monday evening, and after a full and free interchange of opinion, the following committees were made up and agreed upon:

On Publication—Arthur W. Robinson, Edward W. Branigan, Henry H. Kimball, A. C. Risteen N. Le Roy.

On Enforcement of the Laws—W. S. Hinman, B. N. Howe, Charles M. Bryant, William B. Smart, Charles Stewart, Dr. M. H. Richardson, George H. Moore.

On Legislation—J. Russell Reed, B. C. Clark, Horace T. Rockwell, George H. Payne, A. B. F. Kinney, Rollin Jones, Loring Crocker, George W. Wiggin, C. H. Moulton.

On Finance—W. B. Hastings, J. N. Roberts, R. N. Joyce, A. T. Thayer.

On Entertainments—Heber Bishop, Thomas Hall, E. J. Brown, W. S. Hinman, A. R. Brown, E. W. Branigan.

Counsel—James E. Young.

A discussion ensued upon various matters that were proper subjects for legislation, notably the lobster law. Col. Rockwell said there would no doubt be an effort made to repeal the present 10½-inch law and urged that every effort be made to prevent such action. It was of the utmost importance to keep the laws of this State and Maine identical as to the size of the lobster, as they now are, and it was voted to support the State Commission in their efforts to keep the present law or something better. President Reed called attention to the shooting of gulls and terns, and it was voted to have presented a bill to the Legislature to prohibit the killing of these birds at any time. The subject of taking clams from the Charles River Flats, whose waters are more or less polluted by sewage, was brought up by President Reed and Dr. Maurice H. Richardson. The eminent surgeon gave a very interesting talk upon the habits of shell fish, and this and other matters were left to the Committee on Legislation, which committee will doubtless have considerable business on hand during the present session of the Legislature.

WM. B. SMART.

The Legislative Campaign of 1900 and Events Which Led Up to It.

Mr. President and Members of the Association:

The annual meeting of our Association is an occasion of more than ordinary interest to all our members and a fitting time for those on whom you have placed the responsibilities of official positions to give an account of their stewardship.

Mr. President, the year 1900 will ever be a memorable one in the history of the State Association. As you all know, the crowning achievement of the year is the passage of the new bird law, which was secured by the united efforts of the sportsmen and lovers of birds in our State. Another important enactment in which we were interested is the Fishway law. For a full understanding of the means by which these salutary measures were carried through, it is necessary to revert to events which transpired prior to the opening of the campaign of 1900. I trust a brief outline of occurrences leading up to the final result will be of sufficient interest to command your attention for a few minutes.

To commence at the beginning: The keynote of the movement was struck at the annual banquet of the Association held on Feb. 8, 1898, by Mr. Stevenson, of Pittsfield. I quote from the report of the meeting printed in the Boston Herald of Feb. 9, as follows: "Mr. J. M. Stevenson, of the Legislature, responded for the State and assured the members that Legislators were far more in accord with the hopes of the true sportsman than was generally supposed, the difficulty of promoting suitable legislation lying largely in the great divergence of views among the sportsmen themselves." This declaration, coming as it did from a brother sportsman who had been a member of the Legislative Committee on Fisheries and Game for two years, produced a profound impression, and was the subject of discussion at the next meeting of the Board of Management, on March 16 following, when on motion of ex-President Samuels the Board voted—"That the Secretary correspond with officers of the various fish and game and farmers' clubs of the State and invite them to meet us yearly in convention to discuss changes in game laws, etc."

During the following months till late autumn the Secretary sought in various ways to obtain a list of the different clubs and their officers. The only list of game associations and gun clubs available was one published many years before, and it is not strange under the circumstances that the seventy or more invitations sent out brought together only about a dozen representative delegates, who met with our officers in the afternoon of Nov. 16, 1898.

In opening the meeting President Rockwell stated that the Association had no plan or scheme that it desired to carry out, but had called the conference for an interchange of views, in the hope that united action might result in the advancement of the fish and game interests of the State.

Prof. William H. Niles assured those present that one thousand members of the Appalachian Mountain Club were a unit in favor of the purposes and work of the Association. Mr. George H. Mackey spoke for the Ornithologists' Union; George H. Palmer, Esq., for the Southern Massachusetts Fish and Game League; Mr. William B. Phinney for the Lynn Fish and Game Protective Association; Dr. C. H. Raymond for the Rehoboth Farmers' Club, and several others for their respective organizations. Mr. C. C. Peck, of North Attleboro, presented a carefully prepared paper, in which he urged the great need of more efficient wardens and more vigorous efforts in the care of fish and game.

The sentiment of all the speakers was strongly in favor of stringent restrictions on the sale of game and a rigid enforcement of game laws. The discussion was continued after the dinner by several speakers, but no definite action was taken at that time. While the meeting was not large in numbers, it was characterized by great earnestness on the part of the speakers, all of whom expressed a desire to co-operate in any plans that might be formed calculated to improve the existing conditions.

I have gone somewhat into details with reference to this convention, for two reasons. First: Because it was the beginning of a movement by us that has resulted in arousing widespread interest throughout the State, and the consequent improvement in game laws. Second: Because it was the first conference of clubs interested in fish and game ever held in the State of Massachusetts, and the credit of inaugurating the movement is due our Association.

To resume. At a meeting of the Board of Management, on Dec. 1, it was moved that the Massachusetts Fish and Game Association extend its thanks to all the clubs and associations represented in the convention of Nov. 16, and hopes the occasion may be made an annual one in which every association in the State may be represented. This was voted, and the Secretary was instructed to communicate the same to the various clubs.

The next event I will mention is the announcement in the newspapers in March following that the Association was prepared to distribute fifty dozen quail, which brought many applications, some of which came from officers of clubs.

At a meeting of the Association, on May 19, it was voted that posters of the game laws, suitably framed, be put in the post offices and railroad stations of the Commonwealth, the expense to be defrayed from the sinking fund. Later the Secretary was uthorized by the Committee on Publications to carry out this vote of the Association. He was able to secure from Washington the sanction of the Post Office Department and the assistance of the General Superintendent, Mr. W. E. Chamberlain, of the N. Y., N. H. & H. R. R., in performing this work.

This was followed by the receipt of hundreds of letters from various parts of the State, evincing a surprising interest in the community at large, and was the means of adding several to the list of clubs. Then followed the preparation of suitable blanks for obtaining statistical information concerning each of the clubs, and in my efforts in this direction I desire to mention the great assistance received from our Vice-President, Mr. William S. Hinman.

All the work which I have gone over in this brief manner led up to the convention held in Boston on Dec. 14, 1899, in which more than eighty delegates, representing about sixty different associations, clubs and societies, participaated. Among those present were representatives of the Massachusetts Forestry Association, Massachusetts Horticultural Society, Massachusetts Board of Agriculture, Massachusetts Board of Education, Massachusetts Board of Trade, Massachusetts Rifle Association, New England Agricultural Society, Middlesex South Agricultural Society, Hampshire Agricultural Society, several farmers' clubs, besides numerous fish and game associations, the Megantic Fish and Game Club, many gun clubs, etc.

The committee appointed in the afternoon reported in the evening the following recommendations, viz.:

1. That each association choose one delegate to serve upon a Central Committee, with full power to act in securing legislation, etc.
2. That the open season on rabbits, squirrels, woodcock, ruffed grouse and quail commence Oct. 1 and end Dec. 1.
3. That the sale of game birds be prohibited.
4. That suitable fishways be provided for food fish to reach their spawning bed.
5. That this committee use means to secure funds needed to bring these measures before the Legislature and secure their passage.

In accordance with the first recommendation, each association and club was invited to send a delegate as a member of the Central Committee, and the delegates met on Jan. 4, 1900, when the following Executive Committee was chosen: Chairman, A. B. F. Kinney, Worcester; Sec'y-Treas., H. H. Kimball, Boston; George H. Palmer, North Bedford; Herman S. Fay, Marlborough; Dr. J. T. Herrick, Springfield; William B. Phinney, Lynn; John S. Bleakie, Falmouth; H. A. Estabrook, Fitchburg; J. E. Tweedy, North Attleboro; Jos. H. Wood, Pittsfield; Herbert E. Tuck, Haverhill; Henry Hanson, Fall River.

This committee met on Jan. 10, to lay out its work. As appears upon our records, at the annual meeting of the Association, on Jan. 10, 1900, the following preamble and resolution were adopted, viz.:

Wheas, It has become known to this Association that the game birds and animals of this Commonwealth have become, year after year, more and more scarce, and it is notorious that, unless some further protective legislation can be speedily had, the time is not far distant when they will become exterminated; therefore, be it

Resolved, That this Association call upon our Senators and Representatives, and we do hereby call on them, to pass more restrictive laws for the greater protection of our game birds before it is too late and game of the State becomes exterminated.

The Secretary was instructed to mail a copy of the above to all members of the House and Senate.

By this means the legislators were early notified of our opinions and wishes.

The details with reference to what followed in the long and arduous struggle at the State House you have already heard from Representative Harry D. Hunt, of

North Attleboro, and I will not rehearse them. Suffice it to say, the Committee did the work assigned to it, and should receive the warmest gratitude, not only of our members, but of all lovers of birds.

The self denial of the clubs in the western counties in surrendering early fall shooting, and of those in the southerly sections in giving up their favorite month of December, entitles them to hearty commendation. The "divergence of views" alluded to by Mr. Stevenson in 1898 were no longer in evidence, but all stood shoulder to shoulder for the greatest good of the greatest number. To mention all those who lent their influence and actively engaged in securing this legislation would require too much time, but the names of Representatives Hunt and Morse (now Senator Morse) and Senators Wm. Tolman and Howard K. Sanderson deserve special recognition for their zealous efforts in behalf of the bill.

To the Fish and Game Commissioners for their cordial indorsement of the measure we would make our acknowledgments.

To the press of the State, also, for its enlightened presentation of the principles involved in the bill, and to the FOREST AND STREAM, not only for keeping its readers informed from the beginning to the end of the various movements in which we were engaged, but for its very able editorials in favor of the bill.

To Mr. Frank M. Chapman, of New York, who in one of his lectures at the Lowell Institute (in Boston) on birds last winter spoke with emphasis of the good work of the protective sportsmen's associations in their efforts to save game birds, expressing the wish that the song and insectivorous birds had friends who were equally zealous in their defense.

In closing I may say the bird law was the outcome of an enlightened public sentiment which has been created by the Massachusetts Fish and Game Protective Association. HENRY H. KIMBALL, Sec'y.

All Sorts.

ELMO, Kan., Jan. 14.—*Editor Forest and Stream:* Last winter, through the medium of FOREST AND STREAM, I brought to the notice of a startled (?) public the horned rabbit of Kansas. Yesterday, while out hunting, I shot two more specimens, and I was intending to forward one to you, but the idea that the horns were the outcome of disease took possession of me, and after examining one closely they became absolutely repulsive, and I threw them into a hedge, and FOREST AND STREAM is out a horned rabbit. One of the rabbits had six horns on its head, the horns closely resembling the horn of a young buck antelope when the horn is about an inch long. I should like to know more of them, but the revulsion against handling them is too strong.

In this week's FOREST AND STREAM I notice something about the Carteret Gun Club expelling members for competing with professionals or on grounds where professionals shoot. Now, I have seen reports of Carteret Club shoots, off and on, ever since I can remember, and none of them have left any impression on my mind. But when I see a closely printed column report of some tournament written by Hough, Waters or some other graphic writer who understands the ins and outs, haps and happenings of the game, and in which the names Elliott, Gilbert, Budd, Parmelee and Marshall appear, I always read the whole of it; and I have not read "David Harum" yet either, and am some shy on Shakespeare. These are the men who make the game interesting, and without whom the name of Carteret would never have been heard. If some of them go into the gun and ammunition business, so much the better, as it is only through the employment of the best talent that machines are perfected. Let the race go to the swift and the battle to the strong. See that everything is on the square and then—hands off. Let every individual be the sole judge of whom he is able and whom he is not able to compete with. This constant warfare on the best performers is like breaking one leg of a jack rabbit in order to let the hounds catch it. Improve your hounds is the better way, and is a more drawing card with the average onlooker.

Another thing that keeps irritating me is the immense amount of nonsencical talk about game protection. Game laws have been passed in such idiotic profusion that all respect for them is a thing of the past, yet the howl still goes up for more. Half a dozen States are threatening non-resident license laws. I suppose the profit accruing to wardens for State licenses is quite large; it must be, for already there is such a thing as reduced rates where competition is sharp, but what does the sportsman gain? The effect of the law has always been to debar the law-abiding and throw everything into the hands of the lawless. I have always thought that a law something like that of Colorado would do some good, only I want all game sold under a revenue stamp, the same as tobacco, and the money to go for the propagation and protection of game and fish. This would instil the idea of value, and wanton destruction would be less, especially if it were made a penitentiary offense to take game out of season. However, if other cranks will agree to drop their idiosyncrasy I will promise not to say another word about this fad of mine. E. P. JAQUES.

Sailing of Ducks in Great South Bay.

EAST QUOGUE, Long Island.—*Editor Forest and Stream:* The FOREST AND STREAM said the other day that the ducks in Great South Bay as soon as disturbed go to sea. I am not surprised that they do just as soon as a battery is rigged out. I have seen from two to three boats from one battery sail, sail, sail, until the ducks had to resort to one of two things—go to sea or to some other bay. When I used a battery I would take the large boat and anchor her out of the way, and then wait for the ducks to come back. There was no trouble about ducks going to sea then, and I am quite positive I made larger bags by not sailing the ducks than the batteries do now by continually sailing them from one place to another. Point and bar shooting was decidedly good this last fall, and many New York sportsmen who came down here did well and went home happy. E. A. JACKSON.

American Wildfowl and How to Take Them.—XX.

BY GEORGE BIRD GRINNELL.

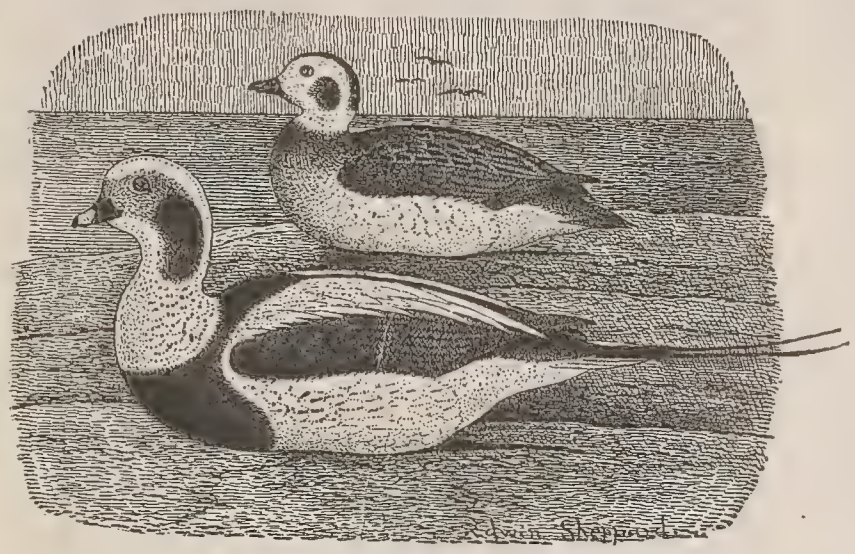
[*Continued from page 46.*]

Bufflehead Duck.

Charitonetta albeola (Linn.).

THE adult male with head and upper neck black. From behind and below the eye a very broad white band or patch extends backward to the ends of the feathers. The black of head and upper neck is brilliant with metallic reflections of green and purple. The feathers of head are long and loose, giving it a puffy appearance, and they can be raised so as to make the head seem very large. The back is black, fading to ashy on the upper tail-coverts. The tail is gray, with whitish edges. The lower neck, entire under parts, greater wing coverts, outer scapulars and some secondaries, white. The quill feathers of the wing are gray, the bill is lead color, the eyes brown and the feet flesh color or lavender.

The head of the female lacks the extreme puffiness of the male's. She is generally a dark lead color, or slaty, very much paler below, has a white patch on the side of the head behind and below the eye, and a white wing patch formed by the outer webs of the secondaries. The bill is dark lead color and the feet and legs grayish-blue.



LONG-TAILED DUCK.

The male bufflehead is one of the most beautiful and active of North American ducks and is also one of the most abundant, especially along the seacoast. It is confined to North America and is scattered over most of the continent, from the extreme North to Mexico. It is said not to be common in Alaska, but sometimes to occur on the Aleutian Islands, and Dr. Stejneger found it in winter also about the Commander Islands, on the Asiatic side of the Pacific. The bufflehead breeds throughout much of British America, nesting in hollows in trees, and its nests have been found on the Yukon River, as well as in many other localities in the North. Mr. Boardman believes that it breeds near Calais, Me., and young birds, still unable to fly, are said to have been killed at Pewaukee Lake, in Wisconsin.

The butterball is an extremely restless and busy bird, and in the dull times of the duck shooting, when the weather is still and no birds are flying, it is very likely to dart over the gunner's decoys and startle him by its unexpected presence. However, the butterball is so small, and also so swift of flight, and so expert in diving, that not very many of them are killed. They are by no means shy and often come readily to the decoys, among which they alight, feed and after swimming about for a short time, will fly off again. The dipper flies very rapidly, quite equaling in this respect the blackhead, which is known for its speed on the wing. Usually it alights without checking itself at all and strikes the water with a splash, sliding along the surface for some little distance. Dr. Elliot's remarks on the diving of this species are well worth repeating. He says: "As a diver the butterball takes rank among the most expert of our ducks, disappearing so quickly, and apparently with so little exertion, that it is almost impossible to shoot it when sitting on the water. When alarmed, with a sudden flip up of its tail and a scattering of a few drops of water, it vanishes beneath the surface, appearing almost immediately at no great distance from where it went under, and either dives again at once or takes wing, which it does easily and without any fuss. Sometimes half a dozen of these birds will gather together in a sheltered piece of water and be very busy feeding. A few will dive with a sudden jerk, as if drawn beneath the surface by an invisible string, and the others will quietly swim about as if on the watch. The first that went under water having returned to the surface, the others dive, and so it goes on for a long time. Occasionally all will disappear, and then the first one to rise seems much disconcerted at not finding any one on watch and acts as if he were saying to himself that if he had only known their unprotected state, he would never have gone under."

Dr. Elliot states also that the flesh of this duck is very palatable and is excellent when broiled. In this species, as in others, the food regulates the excellence of the flesh.

Mr. Gurdon Trumbull gives among the names for this very well-known species the buffalo-headed duck, little brown duck, spirit duck, conjuring duck, dipper, robin dipper, dapper and dopper, die-dipper marionette, butterball, butterduck and butterbox, diver, woolhead, Scotch duck, Scotchman, Scotch dipper and Scotch teal.

Old Squaw, Long-Tailed Duck.

Clangula hyemalis (Linn.).

Male, in winter, with broad strip running from the base of the bill, back, including eye, to about the ear, pale gray; at the ear darkening to black, which fades again to pale gray on the side of the neck; top and back of head, throat and lower sides of head and upper neck, all about, white; breast, back, upper tail-coverts, wing and long feathers of tail, black, the outer sides of the tail fading to white. The secondaries are reddish-brown; scapulars, pearl-gray; under parts, white.

In the male, in summer, the pale gray line running back from the bill, including the eye and parts of cheek, are as in winter, but the remaining parts of head, neck, breast and upper parts generally are deep brown or even black. The feathers on the foreback and the scapulars are margined with tan. The other upper parts are black, or blackish-brown, with some grayish on the secondaries. The four middle tail feathers are black; the breast and part of the belly are dark brown, and the rest of the under parts white. The bill is black, crossed by a bar of orange, and the feet are black

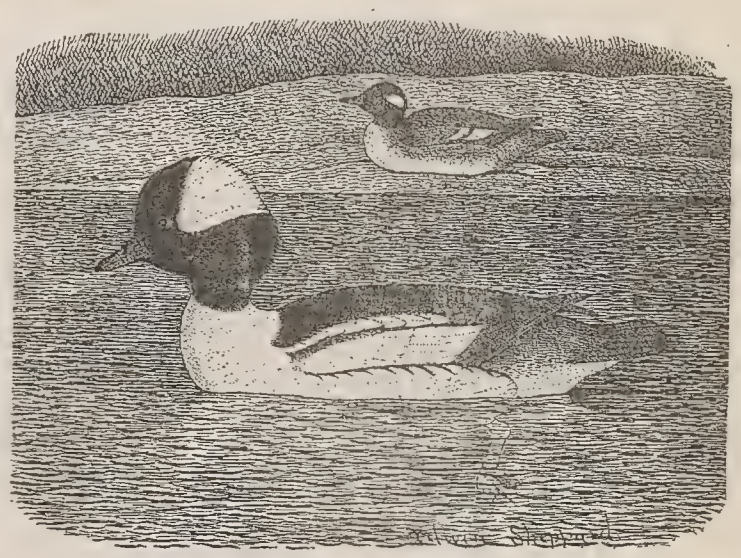
The female, in winter, has the head, neck and lower parts white, marked with dusky on forehead and crown, as well as on the ears, chin and throat. The upper parts are brown, many of the feathers being bordered with grayish. In summer the head and neck are more gray and the general plumage darker.

The old squaw, as it is commonly called on the New England coast, is one of the commonest of our winter birds, and is found on both coasts of America, as well as of the Old World. It is a beautiful bird, active, noisy and hardy, going little further south than it is obliged to to procure food, although occasionally it extends its migrations as far as Florida and California. In Europe it is sometimes found, in winter, in the Mediterranean Sea.

The old squaw breeds in the Arctic regions and has been found in Spitzbergen, Nova Zembla, Iceland and northern Alaska, as well as in Hudson's Bay. It commonly associates, even on the breeding grounds, in great flocks; and I have seen them in Alaska in June and July, hundreds together. They commonly breed on the waters of fresh-water pools, making their nests under low bushes, or among coarse grass, close to the water. The eggs are given as being only five to seven in number. The nest is made of grass and weeds and is invariably lined with down, which is of fine quality, apparently not much inferior to that of the eider duck.

On their return from the North the old squaws do not reach the New England coast until the weather has grown quite cold, long after the different varieties of scoters have come and established themselves in their winter home. Here they congregate throughout the winter in vast numbers, associating with the scoters and the eiders and yet often keeping very much by themselves. The old squaw is one of the most expert of divers and it used to be stated—and may be believed—that in old times it could not be shot on the water with a flint-lock gun. Even now it frequently dives so rapidly as to apparently escape the shot, and instances are given of where a bird, shot at when flying low over the water, has dived from the wing and escaped uninjured.

The common name of this species refers to its noisy habit. It is continually talking while on the water, and the flocks when flying frequently utter their musical cry. In almost all localities the bird takes its name from this call, which is difficult of imitation. Perhaps the Canadian syllables Caccá-wee imitate the note as well as anything that has been attempted. South south southerly is supposed to represent it, but hardly does so. The old squaw is remarkable for the rapidity and the irregularity of its flight. A flock starting low over the water, to go in some direction, will zigzag hither and



BUFFLE-HEADED DUCK.

thither, constantly uttering their mellow cry and reminding one, in their swift and darting flight, of the flocks of wild pigeons which used to be seen in the olden times.

Beautiful and active bird though it be, the old squaw is unfit for use on the table. It is always fishy, and no treatment with which I am acquainted will render its flesh palatable. It feeds chiefly on shellfish, and its flesh tells the story.

In the spring, when the birds are preparing to take their flight to the North, they prepare themselves for their long journey by extended flights, as the local gunners call it, "trying their wings." Late in the afternoon they rise from the water in great flocks and, circling high in the air, fly about for hours, performing many beautiful evolutions. The migrations are usually performed by night and perhaps at no very great height above the ground. At all events, I recall that some years ago, in a New England village near the Sound, the weather-vane one morning in April was observed to be missing from one of the churches. A search revealed it lying on the ground near the building, bent and broken, and not far from it was the body of a male old squaw, which had flown against the vane with such force as to break off the iron pivot on which it swung.

Tennessee Quail.

HENDERSON, Tenn.—Quail and other small game were never known to be so plentiful here as this year; thirty-five and forty quail are no unusual bag for an afternoon's hunt. P.

CHICAGO AND THE WEST.

Proposed Western Game Laws.

CHICAGO, Ill., Jan. 12.—It is too early in the game yet to tell what will come out of the variegated game bills which are making the usual grist in the early days of the legislatures of Illinois, Indiana, Minnesota and other Western States. There will probably be some change in the Illinois law, but it is not anticipated that these changes will be very startling. President Van Cleave, of the Illinois State Sportsmen's Association, wishes to lead the energies of that Association partly into protective lines. as well as trapshooting matters. The resolution for the abolishment of spring shooting in our Illinois law is a good thing, and were it passed it would be glory enough for the administration that suggested it, and a still greater glory for the Legislature which passed it; but the chances are that this measure cannot be carried as yet in Illinois. Neither is it likely that a one-dollar gun tax can be passed in this State.

Indiana proposes to do all sorts of things. The news this week of another wealthy club of sportsmen going in on the Kankakee Marsh excited great interest at Crown Point, Ind., whose citizens have always shot on this part of the Kankakee Marsh, and all sorts of wild telegrams emanated from that vicinity. It was stated in general principles that something would have to be done to keep the rich sportsmen out of Indiana. One proposed measure is that Indiana establish a close season on quail for five years. It is not in the least likely that this law will be passed. There may be some minor changes in the Indiana law, and the most probable of these is a non-resident license, which seems to be the thing in Western States at present.

The State of Minnesota, which for a long time was credited with having the best game law in the United States, is showing signs of not letting well enough alone, and it is reported there will be a certain amount of tinkering in the Legislature. The most radical measure suggested in Minnesota comes in the rumor that there will be a strong movement made to absolutely stop all shooting in that State for five years. In its extreme form this measure is to stop both resident and non-resident shooting, but there is a rumor that it will be modified by cutting off only non-residents altogether. It is stated that this movement is undertaken on account of the heavy market-shooting which has been going on in that State durnig the past year. So drastic a measure as this it would be a hard thing to get through, yet if it did carry it would have a good effect, for the result would be that shipments of game could not be made, there would be no loop holes available, and the men who were not allowed to shoot would not allow others to shoot for the market. The result would be the greatest educative measure as to the growing FOREST AND STREAM Plank that was ever enacted in the West. It is not to be believed, however, that this measure will carry. In fact, all these matters can be commented upon with greater wisdom a few months from now.

Weights of Quail.

Mr. J. W. Turner, of Springfield, S. D., writes interestingly on the subject of the weights of the Bob White quail, remarking: "The last three or four issues of FOREST AND STREAM have contained items in regard to the weight of quail in different localities. After reading them all, I feel that Dakota quail are not so slow, either on the wing or in weight. Myself and two friends were out one day last week for three hours' shooting and brought home thirty birds. I weighed eighteen of them, with the following result: Two 8 ounces each, three 7¾ ounces each, five 7½ ounces each, five 6¾ ounces each, three 6 ounces each.

"Quail have never been so plenty as they are year. Early in the fall there were three bunches within a stone's throw of my home for several weeks. So far this winter we have had practically no snow, consequently the quail have fared wonderfully well, likewise the hunter."

These Dakota corn-fed birds are whales in their way and much larger than the average of the Southern birds, as I believe. Yet it was from southern Illinois that this very fall I heard a quail story which at least ties this one from Dakota. My friend, Warren Powell, of Christian county, Ill., told me that he and a friend weighed two quail which they got on one of their hunts this fall, and the two weighed just an even pound. I don't know how the weights would hold out, but it always seemed to me that the quail over in Canada, not far from the Lake St. Clair region, in Ontario, were the biggest ones I ever saw. I never weighed any of those birds, but would be glad to hear from Mr. Wells or some other old shooter of that vicinity.

Little Bat Is Shot.

Little Bat, otherwise Baptiste Garnier, a well-known Western character, hunter and army scout, is probably dead at Crawford, Neb. He was shot, with probable fatal results, in a saloon row by James D. Haguewood this week.

All About the Doughbird.

Mr. E. K. Stedman, of Mt. Carrol, Ill., writes to ask a question regarding a game bird which in these days does not cut so very much of a figure in Western shooting matters, though not long ago it was one of the recognized sporting attractions in certain parts of the West, notably Kansas and Nebraska. He writes as below:

"By way of preface. In our little community hereabouts whenever a question arises as to anything in the least degree connected with sportsmen and sportsmanship they always pick yours truly out as judge. It sometimes requires a great deal of research and inventive ingenuity to find answer to all their queries, and in the present case they have 'stumped' me.

"They—and so do I—wish to know what sort of an animal a 'dough bird' is—not its latin name, but hasn't it got some other common title such as we can put our hands on and not have to get a dictionary to find the pronunciation of?

"They are quoted in the markets as game birds, and list at from $4 to $4.50 per dozen. Kindly enlighten us poor mortals in such a way that we can hereafter speak of them as next door neighbors—or at least as if we were on speaking terms with the family."

The dough bird, or doe bird, is the New England name for the Esquimaux curlew. It formerly mingled with the golden plover flight in the West. It is rather larger than the latter bird, with a mottled back, showing the splotched brown snipe and plover markings. It has the longish bill of the curlew family, down curved at the point. It is perhaps in these days more common in the coast flight of the East than in the West. Mr. Ezra Howard, of Edgar, Neb., about two or three years ago asked me to come out and shoot dough birds with him. I wish he would tell us something about the bird as he has seen it in his part of the country. It is said that this bird is found in countless numbers in the summer time in Labrador. It breeds in the barren grounds of the Arctic Circle, and spends its winters in South America, notably the Argentine Republic. It goes in the same flight with the upland plover and golden plover. It grows very fat in the summer time, like the plover. It is a shy bird, and is best approached by a horse and wagon, as one hunts the upland plover. Sometimes one may have good flight shooting at dough birds. I have never heard of decoys being used in shooting them, but there is no doubt that they could be used successfully, as the bird decoys readily to the whistle. A description of the bird says that the bill is short and slender and a little curved. The back is brownish black in color, and the tail distinctly barred. The feet are greenish black. There is much variation in the tone of the color, though there is a general sameness in different specimens. A hundred different specimens examined showed a considerable divergence. There are dusky streaks in some cases and sometimes stripes and little arrow heads in the arrangement of the colors. The bird may be popularly described as a sort of composite of the golden plover and the upland plover. When it alights it folds its wings and peaks them over the back exactly like the upland plover. It flies in battalions like the golden plover. My friend, William Werner, formerly chef at Kinsley's restaurant, in this city, once served me a couple of dough birds roasted in an eathenware dish. They were a dream. I hope Mr. Howard will not forget to tell us something more about this bird.

Hopes for the Minnesota Park.

CHICAGO, Ill., Jan. 15.—At this writing the matters pertaining to the Minnesota National Park have attained the most satisfactory shape yet reached since the Congressional deadlock on this question first began. The thorough agitation of the matter by the Minnesota friends of the park and by newspapers in different portions of the country has shown members of the House at Washington that the public is impatient and does not fancy too long a delay before reaching a decision, in one way or the other, upon the question of the Northwestern pine. Secretary Hitchcock has for a long time been anxious to have the Nelson law modified, and he earlier proposed to have a conference with the representatives from Minnesota before taking up the matter with Congress. At the same time Secretary Hitchcock will insist upon taking up this proposition for a national park. This much we knew some days ago, but at that time it was left to that conference between Secretary Hitchcock and the Minnesota representatives to decide whether there was to be any legislative action on these matters during the present session.

Much better than the above is the news which comes from Washington, under date of Jan. 14, which goes to the Minnesota journals in the following form:

"Those interested in the Minnesota park project are not to be defeated by mere objection if plans now formulated can be put into effect. Senator Quarles, of Wisconsin, a member of the Senate Indian Committee, will offer an amendment to the Indian appropriation bill which will permit an investigation by a joint commission into the feasibility of the establishment of a park on the Minnesota reservation.

"The amendment was prepared by Minnesotans who have been agitating the park project. It provides for an investigation and report by a joint commission as to what Indian reservations or parts of reservations are better fitted for the purpose of forestry or park purposes than for agriculture. The sum of $5,000 is made available for the expenses of the joint commission, which is to be composed of three members from the House and a like number of Senators. Reference is made to the Chippewa reservation. While the Senate committee passed unanimously the original park resolution, some objection will probably be offered to the amendment, as the committee has adopted the policy of excluding from the bill any new legislation. Objection may be made to the amendment on this score, but Senator Quarles said to-day he expected to have no difficulty in having it acted upon favorably. Representative Morris has not indicated what he purposes doing about the park resolution."

Senator Quarles has always been a very good friend to the park, and there are many other very good friends in the House. While there is nothing sure until the act is passed, it may safely be said that the prospects for the Minnesota Park are better than could have been hoped in view of the recent attitude of certain enemies of the enterprise. It is not unreasonable to entertain a hope that the park will be established.

Protest at the Proposed Tonty Club.

Mention was made this week, in these columns, of the new club which it is proposed to establish on the John Brown tract, near Shelby, Ind. When this matter was first made public, during the week last past, telegrams of a most indignant nature came up from Crown Point, Ind., protesting at this occupation of Indiana shooting grounds by a Chicago shooting trust. In telegrams sent to the New York newspapers, Mayor Harrison, of Chicago, whose name was mentioned as a member of the new club, was stigmatized as a monopolist and an oppressor. It is true that the John Brown tract has long been a favorite hunting ground of the Crown Point sportsmen; and there is, of course, much sympathy to be expressed with the shooters who would thus be kept out of their old and favorite ground. Yet this seems to be the tendency of the times, and there is very little use in combating it. Moreover, this club, established in one of the most lawless parts of the Kankakee country, so far as shooting is concerned, will have a very wholesome effect, and it will be a practical preserve for the wild game, where now there is no preserve at all. The gentlemen who propose to establish this club are not ogres or oppressors, but a very decent set of sportsmen, with very little selfish blood in their veins. Mayor Harrison has not yet stated positively that he will join the club. The Crown Point bombardment is therefore a trifle premature, so far as he is concerned. Mr. John Brown, owner of the tract, is expected in town at an early date to complete the arrangements regarding the leases.

Mallards Coming Up.

Day before yesterday we struck a cold wave here in Chicago, and perhaps this has checked the ambition of the wild fowl, but up to that time the ducks were beginning to come in along the waters of this region. It has been a very open and mild winter, and the mallards have not yet left the open streams of this State, but have wintered there. A great many more have been scattered over the country from here to Texas, and this week, up to the present cold snap, these birds were actually beginning to work north again, in a country of timbered streams and adjacent cornfields, an environment of which the mallard is particularly fond

Favorable Winter for Game.

CHICAGO, Ill., Jan. 19.—It is still trying hard to be winter, but making a miserable failure of it. Up to this date this has been the most favorable winter for small game in the last fifteen years. All over the State reports come of large bevies of quail, and they all seem to be in a perfect condition, with all the feed they want. From a friend at Mt. Carroll, Ill., 127 miles west of here, I hear of two farmers who claim in all ten bevies of quail which they know of on less than 200 acres of land, and they are all large, full bevies. The farmers are taking good care of these birds. Should conditions such as these obtain all over the State, we will have a grand head of game for next year. These birds can take care of themselves pretty fairly well. Thus, my informant above, Mr. Steadman, says that two of his friends who in trap shoots are good for eight or nine birds out of ten, this fall went quail shooting and shot 200 times at quail. They killed just thirty-six quail between them with the 200 shells. Bob White is certainly an amiable game bird, and if the netters and ground-sweaters would give him half a show he would continue to have fun with the sportsmen for several generations yet. It seems sure that we will have another good year of quail shooting in this section.

A good many of our streams in Illinois are not frozen over. A few ducks—mallards—are reported killed this week on the Mississippi west of here. A warm thaw any time within the next two weeks would in all likelihood bring up a heavy flight from the south.

Deer Hunters' Convention.

There is on foot at Benton Harbor, Mich., a movement to hold a deer hunters' convention within the near future. Special railroad rates have been arranged, and the promoters of the enterprise believe they will have 300 men present. The object is in the nature of a sportsmen's convention, called for the purpose of discussing the questions of the rapidly diminishing deer supply and the best way of preserving same. Suggestions for improvements on the present law will be made, probably in the form of resolutions. It is understood that this convention will favor the raising of the non-resident deer license from $25 to $30, thus making it equal to the non-resident license adopted by the State of Wisconsin.

All these movements are praiseworthy, but it is to be hoped that this particular movement will not be kept too strictly in line with the sportsmen's convention of the past. It will not do the men of Michigan any good to pass a set of resolutions. It will not save twenty of their deer next year, if they raise their license to $30 and then let it go at that. They have got a good enough law now if they would only enforce it. So has Wisconsin, and so has Illinois. There is a strange mental quality possessed by the American citizen and not shared by the men of any other nationality, by which he rests content with the making of a law and stops this side of its enforcement. The weak side of all our Western game laws is the executive side. Personally I used to take off my coat and holler as loud as anybody in these conventions, but I have seen so many of them amount to nothing in practical results that I must admit I have left no longer very much respect for the town, State, national or international convention which is customarily willing to content itself by the mere passing of gaudy resolutions. If the men of Michigan shall get together and raise some money, and shall expend that money in the practical enforcement of the law they already have, then they may expect to save some of their deer. If they shall search their game markets for illegal venison, then we may expect to see the demand for their deer discontinue. If they shall watch the lumber camps which are now reported to be purchasers of summer deer, and if they shall not merely content themselves with making faces at these lumber camps, but shall go after them and punish them under the law, then we may expect to see fewer deer killed by Indians and woods loafers. If they shall discountenance as illegal and ungentlemanly among their friends the taking of a rifle into the woods on a summer fishing trip, then we may expect to see fewer deer killed by men who call themselves sportsmen. The convention is all right if it does not disband at the time of its adjournment.

Apropos of this same matter is the suggestion made to me to-day by a prominent sportsman of Chicago, that a new organization be effected here for the purpose of looking after the executive side of our Illinois law, more especially as regards the enforcement of the law in the game markets of this city. Without doubt much illegal game comes to this market, but it is to be questioned whether a purely amateur association would not repeat history and content itself with "unanimously resolving." I don't know, but am afraid such would be the case.

Yet on the whole it is to be said that the game laws in the West are improving; that their enforcement is becoming easier. Perhaps it is because our game is getting so scarce that it has reached the point of value. We are

going to have the usual line of changes offered for the game laws. One can hardly care what the dates for our game seasons are. I should like to see this game market shut up, but if it is to be left open at all, then it would seem self-evident that what we need in Illinois is not any new or different law, but a sterner and sturdier enforcement, of almost any kind of law than we have ever seen in all the weak efforts at game protection in this Western country. What we need is not more theories, not more new dates, not more new schemes, but more money and more men to enforce the laws which we already have. We can protect our game just as soon as we get ready to do so and say that it must be done. But we will never do this by tinkering with dates and schemes.

White Moose Killed.

A report comes from Minnesota that an Indian last month killed near Grand Rapids, in that State, a moose which was almost completely white. This is the first instance of an albino moose of which I ever heard. It is generally understood that a white deer or a white moose is regarded with superstitious awe by the Indians. The story goes that the hunter who killed this moose has been tried by his people and sentenced to very severe punishment for bringing bad luck on the tribe.

The Sportsmen's Show.

Mr. H. G. Maratta, the well-known Chicago artist, started this week for the Grand Cañon of the Colorado to make studies for the purpose of putting up a big model of this cañon on the main floor of the sportsmen's exposition which is to be held in Chicago this coming month. Mr. Maratta has already made a small model of the cañon, and it gives the best idea of that tremendous spectacle which has ever been offered in artistic form.

The Chicago & Northwestern Railroad will put up a hunter's cabin at the exposition. Another well-known Chicago artist, Mr. W. L. Wells, will have charge of the designs for this exhibit. It is Mr. Wells who suggested to the management the idea of a flying flock of wild geese. There will be two dozen geese mounted and suspended in the air in a realistic way, as though they were just in to the marsh. The latter will also be shown in vivid realism.

There promises to be a very good railroad representation at the show, and on lines altogether unique and distinct from earlier enterprises of a similar nature. Indeed the show seems to be moving in most satisfactory fashion throughout.

E. HOUGH.

HARTFORD BUILDING, Chicago, Ill.

Possession in Close Season.

The People vs. Buffalo Fishing Company.

Editor Forest and Stream:

I have noticed several articles in FOREST AND STREAM with reference to the case of People vs. Buffalo Fishing Company (164 N. Y., 93), recently decided by the Court of Appeals of this State.

These articles convey the impression that the Court of Appeals, in the case cited, has held that the prohibitions contained in certain sections of the Fishery, Game and Forest Law (repealed in 1900 by the Forest, Fish and Game Law) against the possession of fish and game during the close season, were invalid as in conflict with the Federal Constitution, as applied to fish and game lawfully taken outside the State and imported into the State during the close season. The court did not so hold. Judge O'Brien wrote the prevailing opinion in that case, placing his decision upon two grounds: First, that the act in question does not by its terms prohibit the "possession" of fish and game lawfully taken outside the State and imported during the close season. To quote his words with reference to the statute, "What it means, and all it means, is to forbid any person to catch, kill or be possessed of the fish described from waters of this State. The word 'possession' obviously refers to those fish the catching or killing of which is prohibited—that is to say, fish in the waters of this State, and not those procured in a foreign country." As a second ground, he states that even though the statute were intended to prohibit the possession of fish and game during the close season without regard to where or how possession might be obtained, then, in his opinion, it would be invalid as in conflict with the Federal Constitution.

Judge Gray wrote a dissenting opinion, holding that the statute applied to fish and game caught and killed outside the State, as well as that killed or taken within the State, and held further that the statute was not in conflict with the Federal Constitution. Judges Martin and Haight concurred with Judge Gray in his dissenting opinion. Chief Judge Parker and Judge Landon concurred with Judge O'Brien in the prevailing opinion. Judge Warner, the only other judge sitting, also concurred with Judge O'Brien, but only on the ground first stated by him—that is, that the sections were not intended to apply to foreign fish and game.

It follows that this case simply holds that it was not the intent of the Fisheries, Forest and Game Law to prohibit during the close season possession of fish and game lawfully caught or killed outside of the State and imported during the close season.

Phelps vs. Racey (60 N. Y., 10) is still authority that a statute which expressly forbids the having in possession of game during the close season, regardless of where, when or how obtained, is valid.

The trouble was in the wording of the old Fisheries, Game and Forest Law, and as the wording of the present Fish and Game Law is practically the same, it should be amended so as to expressly apply to fish and game imported into the State during the close season, and when so amended the act will be valid under the decision of the Court of Appeals in Phelps vs. Racey.

WILLARD S. REED.

CORNING, N. Y., Jan. 18.

The FOREST AND STREAM is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday and as much earlier as practicable.

The Adirondack Deer.

THE following letter from Lieut.-Gov. Woodruff was read at the meeting of the Brown's Tract Guides' Association at Boonville, in the Adirondacks, on Jan. 16:

ALBANY, Jan. 9.—Mr. A. M. Church, Secretary Brown's Tract Guides' Association, Boonville, N. Y.: My Dear Sir—I take pleasure in replying to your request for information regarding the feeding of deer in the winter, with which I have had some experience, and am agreeable to your suggestion to present my views on this and the other questions associated with it to your Association at its meeting to-morrow.

As you know, I have been for four years engaged as President of the Forest Preserve Board in the work of purchasing for the State lands in the Adirondacks and Catskills. For $1,950,000 this Board has acquired 400,000 acres of land in the Adirondacks alone, and recovered about 90,000 acres which had been lost to the State by previous improper cancellations of the State's title. The lands thus purchased and acquired by the reinstatement of the State's title, through the operation of the Forest Preserve Board, are worth twice what they have cost the State. In 1883, when a law was enacted prohibiting the further sale of land owned by the State in the Adirondacks, the State possessed 700,000 acres. During the following thirteen years these holdings were increased to 825,000 acres, until in 1896 a 75,000-acre tract was purchased from W. Seward Webb, as the settlement in a suit brought by him against the State for damages incident to the damming of the Beaver River for reservoir purposes. Therefore, the State owned 900,000 acres in the North Woods when we took up this work under the provisions of the Forest Preserve Board act in the spring of 1897. Since then this acreage has been increased just 50 per cent., and to-day the State is in undisputed possession of about one-half of the Adirondack Park, the park embracing practically all the forest lands in the Adirondack region. In my opinion, it is unfortunate that, owing to the constitutional prohibition of the cutting of timber on State lands, the matured trees throughout this well-timbered forest territory cannot be marketed, instead of going to waste and retarding, as they do, the younger growth. The soft merchantable timber, or evergreens, on the State lands, which will soon die of old age, could to-day be sold for a sum sufficient to furnish the State with means to acquire the title to all the lands owned in the Adirondacks by corporations and individuals for lumbering purposes, provided they were granted a proper and reasonable reservation as to the large timber on their property at the time of its purchase. Not only would this course result in the acquisition of the land not at present owned by the State, but it would furnish employment to a vast number of our people and supply to the ninety-eight pulp and paper mills in this State raw material, which is decreasing in quantity at a rate which threatens the impairment of this great industry, in which the State of New York leads all the other States of the Union. And what is of greater importance to your Association, this plan would prevent the further cutting of hardwood, which has now assumed large proportions in certain localities, for the manufacture of wood alcohol and cooperage stock, and which is subjecting large areas of the Adirondacks to the danger of being stripped as clean as a desert. Thus would the next generation find a forest preserved to them by us as grand and beautiful as the one which the generation preceding us enjoyed, but neglected to preserve for us, even when it could be purchased for one-tenth of its present value.

It was not my intention to devote so much of this letter to forest preservation, but it is the foundation of the whole structure which your Association and many of us are trying to maintain and develop. The question of providing for the wild deer, concerning which you particularly ask for information, is of little consequence unless we have adequate game laws rigidly enforced. I believe that hounding must be permanently prohibited. Only one year of its prohibition remains under the act of 1897, which prohibited it for five years. The movement to stock the North Woods with moose, which has now been energetically started, and the offer of Mr. William C. Whitney and others to supply elk, if nothing else were wanted, indicate the absolute necessity of putting an end to hounding. Mr. Edward H. Litchfield, who has an inclosed preserve of 8,000 acres on Big Tupper Lake, told me the other day that his game keepers had not found a dead deer within his inclosure, while they were frequently found outside in its vicinity. The deer in his park have never been artificially fed. Therefore, as the amount of natural food, the temperature, depth of snow and other conditions are the same outside as inside, he has come to the conclusion that the reason why the deer die in the vicinity of his park is because when overheated they are driven into cold water by hounds, inducing physical conditions that enfeeble them and render them unable to sustain the hardships of a cold, prolonged winter.

As compared with the stalking of deer, hounding is unsportsmanlike. The hunter by the latter method is not dependent on his own skill or exertions, but upon the dog and the man that rows the boat. This does not, of course, apply to runway shooting in the woods or on narrow, shallow streams, of which comparatively little is done when shooting in the water is so much easier and more certain. To surely prevent the use of hounds in hunting deer, it should be provided in the law that no hounds or dogs capable of running a deer to water can be kept within the North Woods. Of course a reasonable period of time should be allowed those who now possess them to take them out and dispose of them.

The question is asked, "How many deer do you estimate there are in the woods?" The Adirondack Park comprises about 5,000 square miles. I presume I have asked a hundred guides and sportsmen in the last few years how many deer they thought there were to a square mile on the average, and I do not remember that I have heard one place it at less than ten. This would indicate at least 50,000 deer. Of course there are many regions where there are very few, but there are other portions where I know, from my own observation, that there are many times ten deer in every square mile. Some idea of the number may be gathered from the fact that there were shipped out of the Adirondacks by railroad during the past season 1,204 carcasses. In addition to these, a large number were taken to the surrounding towns by wagons. I think the guides who are members of your Association will bear me out in the belief that not more than one deer is shipped by rail out of every five killed. If this is so, the number killed during the past season must have been in the neighborhood of 6,000. Notwithstanding this large number, which has been about the same for five years past, they have certainly increased steadily in most localities.

Many of the members of your Association will remember the time when they were quite scarce as the result of being slaughtered for the market and destroyed by wolves and panthers. It may be of interest to you to know that there were shipped out of the Maine woods this fall 4,500 deer and 200 bull moose, and the accessible hunting territory in Maine is only about one-half larger than that of the Adirondacks. Hounding is prohibited, as you know, in the State of Maine, where the deer have increased in such proportions that the number shipped out this year is nearly three times as many as five or six years ago. If Mr. Litchfield's theory is correct (that the deer die from diseases induced by hounding), it will not be long after its prohibition before it will be a very easy matter for a man to get the two deer allowed by law in a season by the much more satisfactory and sportsmanlike methods of still-hunting. How much more salutary it is to tramp leisurely along a trail in the early autumn on the lookout for this noble game, or through the unbroken forest after the first snowfall has rendered tracking possible, than to sit on a watch point, nearly frozen to death, waiting for a hound to drive the hunted animal into the water, giving the guide an opportunity to get warm by rowing while the sportsman (?) continues to shiver so he can hardly shoot the poor animal even when the boat is almost on its back! And surely "floating" in the damp air is far from furnishing that recuperation for which most of us seek the seclusion and health-giving atmosphere of the North Woods, to say nothing of the fact that in "floating" for every deer brought down a considerable number of wounded ones escape and die a lingering death in the forest.

To enforce laws against hounding, floating, killing deer and taking fish out of season there must be an adequate number of protectors. The number designated in the bill introduced last winter by Senator Malby was thirty-five. This number would provide one for about every 40,000 acres of State land in the Adirondacks, or one to every section of eight miles square. If a protector were located at the center of such a section he would be within four miles of his limits in all directions and within eight miles of the protectors in charge of the adjoining sections. It would be impracticable to carry out this plan on the basis of such an exact and equal division of territory, and I have only thus used precise measurements for the purposes of illustration. If this general scheme is carried out, as I sincerely hope it will be in the immediate future, these protectors or guards should be entrusted with the responsibility not only of fish and game protection, but also of preventing forest fires and the stealing of timber. The State suffers great and constant loss from the present lack of adequate protection to its property. The fires of a year ago last autumn cost $32,000 for labor alone to extinguish them.

Protection such as I advocate would prevent destructive fires, for it would be the duty of the protectors to keep track of all fishermen, hunters, tourists and camping parties on their sections, and, as you well know, camp-fires which are left burning, and which have heretofore been responsible for so much destruction, gain headway very slowly at first. In the fall of 1899, when the State suffered so much, there were no fires on the lands owned by big lumber companies and private individuals, because they were promptly discovered and put out. In the consideration of this question of an adequate force of protectors, it has been suggested that some allotted area would be without protection while the protector was absent conveying one whom he had arrested to a police justice, or while giving testimony in the prosecution of the case.

In my judgment this phase of the question may be eliminated from consideration, because there will be no violation of forest, fish or game laws under the deterring influence due to the fear of almost certain arrest, when it is known that a protector is within sound of a rifle shot or the bay of a hound. When the illegal hunting and fishing carried on by the lawless residents of the forest region is prevented, then and not till then will the lawbreaking cease which is so common among those well-meaning frequenters of the Adirondacks who fish and hunt out of season and use dogs and "jacks," "because everybody else does." It is hardly to be expected that one will refrain from violating the law when every night as he lies in his camp he hears the discharge of shotguns in the direction of streams famous for night hunting, and listens attentively every morning to the music of the hounds as they give tongue among the hills, beyond which lies a lake whose shores he knows are being watched by eager hunters. It is evident that the efficiency of any such plan must depend very largely on the qualifications of the persons selected to serve as protectors. They must be selected solely for their knowledge of woodcraft and their acquaintance with all the methods and tricks of the hunters and fishermen. They must be just such men as compose the Brown's Tract Guides' Association and other associations of Adirondack guides.

I had almost forgotten, in the interest aroused in the consideration of other questions, to reply to the last paragraph of your letter, in which you say, "I have been very much interested in the problem of feeding deer in winter and would like to bring the subject before the meeting on the 10th instant," and asking for my experience and the privilege of presenting it to your Association. During the months of March and April of last year, when, as you will all remember, the snow was nearly 4 feet deep on the level, and when the deer were in poor condition as the result of an unusually severe, protracted winter, I kept four men constantly employed in feeding deer in the vicinity of my camp. We tried hay, oats and almost every kind of food given to domestic animals. This food they would not eat, but we soon discovered that they would eat the buds and twigs of the maple and other hardwoods;

also the tips of most of the evergreen species, when the branches of these trees were cut off and thus placed within their reach. It is not necessary to cut down trees for this purpose and thus spoil good timber, as the deer feed only on the tender buds and smallest twigs. In fact, after a yard had been found and a few branches cut near by, the deer would come around as soon as they heard the sound of the axe. They are partial to the maple, as the sap in that species is sweeter than in the birch or beech, and in the soft maples the sap starts earlier than any other kind of trees. It is at this very time of the year, when the sap is starting, that the deer are in the poorest condition and in greatest need of the assistance we are able to render them by providing them with some kind of browse.

I fully realize, as the result of an experience in the North Woods, covering a period of twenty years, with many of the best guides in that region, that I have in this letter merely set forth what the members of Brown's Tract Guides' Association know as well or better than I do. Your inquiries have led me to submit these matters as I view them, and if the presentation of them to the meeting of your Association adds anything to the interest of the occasion, I will be greatly pleased.

Very sincerely yours,

TIMOTHY L. WOODRUFF.

Work of the Cuviers

IN his report to the Cuvier Club for the year that has just closed, President Alex. Starbuck says:

We are reliably informed from various quarters where the song and game birds were wont to thrive, that they are rapidly diminishing. This is attributable, as regards the game birds, in a measure, to the non-export laws of the different States, in connection with the Lacey Federal act, passed by the last Congress, which is also sweepingly prohibitive. You have only to turn to the prices in our principal game markets during the open season to realize this important fact. Quail were then worth nearly $3 a dozen, mallard duck $4.50 to $5, canvasback $9 to $10, prairie chickens $5.50 to $6, and in New York prices were still higher, fine canvasback ducks, for instance, selling at $2.50 to $3 a pair. We only mention this as an instance that the game laws, and particularly the non-export laws, are beginning to have a wholesome effect.

We unquestionably desire a law which should prevent the spring shooting of fowl, and one that should place a penalty of $25 for each illegal bird, and no more, and confiscation of same; and still another that will give the deputy warden a reasonable salary, in addition to the fines and costs he now receives. This would, doubtless, result in more efficient service. Then let the concession or unities of the game laws be accomplished in the Middle States, and it would be some balm for the fiasco of our past Legislature.

We, however, blush for our State game laws, which are really nothing more than a travesty, if not a downright burlesque, and which we have to endure for the present year before they can be repealed. In many instances the laws conflict. As per example of idiotic legislation, I will here state that the Mongolian pheasants are protected until Nov. 15, 1900, but Section 6964 makes it a misdemeanor to have one in possession until Nov. 10, 1903. You can now kill these birds, but you must not pick them up until three years hence.

Doves are entirely without protection, though Section 6964 makes it a fine of $25 to have one in possession between Dec. 15 and July 4. As to the section relating to season for killing duck, an investigation as to its intent was made by the Attorney-General of the State, who decided that the word "or" was a clerical error, although the member who presented the bill stated that the paragraph containing the significant "or" was made for the protection of the ducks, and that it meant just what it signified. But, nevertheless, the Attorney-General's decision stood, and now you can have your salmi of wild duck without fear of fracturing the law as interpreted, and the sportsmen can also decimate them to their hearts' content, as they have been doing the past season.

Our Fish and Game Commissioners have loyally performed the duties of their office. Mr. L. H. Reutinger, Secretary and Chief Warden, informs us that the year 1900 has been a very successful one with the Commission in point of distribution of Mongolian and English ringnecked pheasants, as well as the planting of fish in public streams. There were distributed more than 2,200 birds and about 360 settings of eggs, and, as near as possible, they were divided equally in the eighty-eight counties of the State. Since the Commission has begun the experiment of propagating the Mongolian and English ringnecked pheasants it has distributed 6,400 of these birds and 1,121 settings of eggs. Reports from every section of the State indicate a very large increase in the propagation of the birds, and I think they are receiving reasonable protection from everybody—by the farmer especially.

In the distribution of fish this year there were planted about 300,000 marble catfish, 25,000 croppies and 80,000 large and small-mouthed black bass. Part of these fish were yearlings and the balance fingerlings.

The new ponds at London, as well as the pheasantry, are located together, and are a decided success. The ponds are equal to anything of their kind in the United States. The Commission feels proud of what it has accomplished during the past year, and if it were not for the unsatisfactory laws and stinted appropriation by the Legislature it might have largely increased this number, but there are so many loopholes for the violators to crawl through that it is very difficult to convict. The Chief Game Warden, Mr. L. H. Reutinger, has been a very earnest and efficient official, and deserves well of the public, as also does the Commission.

It is saddening to realize what our naturalists tell us relative to the depopulation of the bird kingdom. They state that at least 50 per cent. of our song and insectivorous birds and 75 per cent. of our game birds have been destroyed by an army of hunters, vandals, market shooters and thoughtless boys, and if more efficient measures are not soon taken to stop this indiscriminate slaughter they will, to a feather, be destroyed, and this fact I have frequently enunciated.

The Deputy Game Warden's report detailed at length the difficulties experienced in making arrests and securing convictions, and gave a detailed report of cases tried. The total number of offenders arrested was thirty-seven, of whom twenty-five were convicted and fined and two were committed to prison. The total fines were classified as follows: Fishing law, $355; game law, $420. In addition to this, the Warden captured 336 feet of seine, 30 feet of trammel net and several guns, pistols and other paraphernalia used by the nocturnal poacher.

Brown's Tract Guides' Association.

SARANAC LAKE, N. Y., Jan. 17.—The annual meeting of the Brown's Tract Guides' Association was held at Boonville Wednesday evening, and the following officers were elected for the ensuing year: President, Richard Crego; Vice-President, J. E. Ball; Secretary and Treasurer, A. M. Church; Executive Committee, H. D. Grant, D. H. Smith, George Goodsel, C. M. Barrett, Garry Riggs, Ira H. Parsons and D. F. Sperry. The Secretary's report shows 331 members. The receipts for the year were $810.07 and the expenses $393.73, leaving a balance in the treasury of $416.34. A letter from Lieut.-Gov. Timothy Woodruff was read.

The following resolutions were unanimously adopted:

Whereas, An association has been organized for the purpose of restoring wild moose to the Adirondacks, and for the proper protection of them after having been so restored or introduced; therefore, be it resolved, that the Brown's Tract Guides' Association heartily indorse the principles and objects of said Association and hereby request the Legislature of the State of New York to make a suitable appropriation for the restoration of wild moose in the Adirondacks.

Whereas, During the past few seasons several persons, mistaken for deer, have been killed; therefore, be it resolved, that there shall be no open season for the killing of men in the State of New York.

Resolved, That this Association condemn buoy or anchor fishing, and respectfully request the Legislature to pass a law prohibiting fishing at buoys or anchors in waters inhabited by trout within the forest preserve.

Whereas, The present law does not define at what age a young deer ceases to be a fawn; therefore, be it resolved that this Association recommend the passage of a law defining in its game laws the meaning of the word fawn. And that no deer shall be killed until it is upward of one year of age.

Resolved, That this Association recommend that the close season for wild deer shall be from Nov. 1 to Aug. 31, both inclusive.

Resolved, That this Association recommend that the game laws provide that no hound or dog capable of running deer to water can be kept or brought within the forest preserve.

Whereas, in the past the game laws of the State have not been properly enforced within the forest preserve; therefore, be it resolved that this Association recommend that the number of game protectors in the forest preserve be largely increased, and that the inefficient ones now on the force be removed, and that capable men be appointed in their place and stead.

Resolved, That this Association heartily indorse the candidacy of John E. Ball for the appointment of State Game Protector for the Herkimer district.

Whereas, The question of lumbering State lands within the forest preserve is now being discussed; and, whereas, in our judgment, this not only means the destruction of the forest, but also the cutting off of the present water supply of the State; therefore, be it resolved that this Association most strenuously protest against lumbering or cutting the timber from said lands.

A banquet was then held, after which the meeting adjourned.

S. A. M.

About a Bird-Hound.

THE WHEATLANDS.—*Editor Forest and Stream:* Being a devoted admirer of dogs all my life, I was much struck with a new breed I lately found in the columns of the New York World. In the inclosed you will find that the reporter speaks of a "bird-hound" and again of this same "hound" retrieving a snipe.

William Kohles risked his life yesterday in the most dangerous eddy in Jamaica Bay to save his dog, and was nearly drowned when rescued. Although he was unconscious when taken from the water, he still retained a firm grip on the dog, the animal being also unconscious.

It was fifteen minutes after the rescue that man and dog regained consciousness.

Kohles has a summer home at Bayswater, and visited the place yesterday for a day's shooting. He had his pet bird hound with him. The dog started a snipe from a marsh beside the eddy, where the tide was running with a strength that stirred several whirlpools into existence.

The snipe flew out over the eddy, and Kohles fired, the bird dropping dead into the water about 20 feet from shore. The hound gamely leaped in to retrieve the bird.

The animal was caught in a whirlpool and was drawn beneath the surface. As he was sinking he turned his nose toward his master and set up a plaintive howl that was plainly a call for help.

Kohles tossed aside his gun, took off his coat and jumped into the water. He was soon over his head, but struck out for the spot where his dog had sunk. He poised himself and dived, searching for his dog. He found the animal near the bottom, seized it by the neck and dragged it toward the surface. He arose with the hound tightly clutched by the nape of the neck. But, encumbered as he was, he was unable to swim out of the whirlpool, and he and the dog were whirled round in it until both sank.

A fisherman had seen their plight, and reached the spot where they sank in time to locate them. Then he got a boathook into Kohle's clothes and brought him to the surface.

Kohles, now unconscious, was still clutching the dog, which gave no sign of life. The fisherman dragged both into the boat and took them to shore. He and other men worked over Kohles, and were almost in despair before the man regained consciousness.

The fisherman who saved the man and dog left without leaving his name. Kohles and the hound were driven home, the animal licking the hand of his master.

Now as I am away out of the world in the Eastern Sho', will you kindly tell me whether the "bird-hound" is a new breed that you Greater New Yorkers have introduced, and whether the said bird-hounds are superior to the Chesapeakes? (of which I have long been a breeder), for if so, I would like to secure a gross or so for stock purposes.

Another thing I note in the story, and that is the dangerous whirlpools that seem to lie in wait for the shooting fraternity in the vicinity of Greater New York. Can it be possible that the celebrated maelstrom which is conceded to have disappeared from the coast of Norway has popped up in Jamaica Bay? Seriously, is it not amusing often to read the reports in the great dailies about yachting and the other sports of the field, bird-hounding included?

SINK-BOAT.

Death of a New Brunswick Guide.

BART W. REID, of St. Almo, N. B., died at Victoria Hospital, Fredericton, Jan. 11, of appendicitis. He was one of the best guides at Geo. E. Armstrong's camps, where he has guided for the last three years. He was a first-class hunter and a good companion and was honorable, generous and kind. Everybody that knew him liked him. He was well known by a great many American sportsmen. It seems particularly sad that a life so full of promise should end at such an early age. J. E. A.

An Appeal to Theodore Roosevelt.

MILWAUKEE, Jan. 16.—*Editor Forest and Stream:* Please find inclosed copy of resolution adopted in our last general meeting, and which was sent to our Hon. Vice-President this week:

To His Excellency Theodore Roosevelt, Vice-President-elect of the United States.

Dear Sir: The Wisconsin Game Protective Association, an organization of hunters and true sportsmen, organized for the protection of game, adopted a resolution at its last general meeting, which we herewith respectfully submit to your Execellency:

"Whereas, The Wisconsin Game Protective Association observes with alarm the rapid decrease of our wild game, especially of birds; and

"Whereas, This rapid depletion is due in a large measure to the persistent violation of our game laws, and in the lax enforcement of the same, the appointed game wardens generally not being hunters, and poorly qualified to perform their duties, and therefore having no interest in the protection of game; and

"Whereas, The worst of all is the great difference of law in the different States for the protection of migratory birds; therefore, be it

"Resolved, That the Wisconsin Game Protective Association begs and requests our Hon. Vice-President-elect, Theodore Roosevelt, as a great game protector and true sportsman, to cause such bills to be proposed to our Congress for the purpose of securing a Federal uniform (United States) law for the protection of our migrating birds, and asks His Excellency respectfuly to use his utmost influence for the passage of such a law."

Hoping this very important matter will have your approval, and your Excellency will kindly take action in this affair, and propose a bill to our Congress as expressed in the above resolution, we have the honor to remain, dear sir,

JOSEPH FISHER, President.
GUST. STEPPAN, Vice-President.
VAL. RAETH, Secretary.

To be successful in protecting game and singing birds we must have a uniform (United States) law for migratory birds, as these birds are at one hour in one State and the next in another. One State protects the ducks from the first of January, and in the other State the law allows the killing to the first of May.

The States of Wisconsin, Minnesota, Michigan and North Dakota protect water fowl after these birds have left these States in the fall, and the laws of the Southern States, where they go and remain all winter, allow the slaughtering of these birds until May, or do not protect them at all. These birds are really the property of the entire country and not of a single State, so far as they are not stationary or local birds, and therefore Uncle Sam must take a hand in this business and put a stop to the slaughter of our migratory game and singing birds, as he has successfully done about the transporting of dead bodies or skins of these birds through the Lacey bill.

Every hunter or true sportsman, every friend of nature or lover of our feathered friends, should do his utmost to secure a Federal law through our Congress for the protection of our migratory game and singing birds.

VAL. RAETH.

New York Association.

Editor Forest and Stream:

THE fifty-seventh annual meeting of the New York Association for the Protection of Game was held at the Union Club on Jan. 14, 1901. The following officers were elected for the ensuing year:

President, Hon. Robert B. Roosevelt; Vice-President, Alfred Wagstaff; Treasurer and Counsel, Thomas N. Cuthbert; Secretary, Robert B. Lawrence; Executive Committee, Charles E. Whitehead, Simon J. Drake, Henry Steers; Committee on Admissions, Charles E. Whitehead, William Carpender, Alfred Wagstaff, Richard Pancoast, Robert B. Lawrence.

A communication having been received by the counsel of the Association from the proprietor of the Waldorf-Astoria, requesting information as to the law governing the serving of foreign game to guests, the following resolution was offered by Mr. John S. Wise and carried unanimously, viz.:

"Resolved, That the counsel of this Association shlal reply to the communication of the proprietor of the Waldorf-Astoria, that while the Court of Appeals has recently indicated that under the laws of this State and of the United States, in existence when the case then considered arose, foreign game may be brought into this State, even in the close season, said decision was rendered on a case arising before the passage by Congress of a law, known as the Lacey law, that in the opinion of this Association the Lacey law makes the State laws of New York effectual against the importation of foreign game during the close season; and that this Association will so contend and will prosecute all importers of foreign game in the close season until a decision holding that it is wrong has been rendered by a court of last resort."

The subject of the preservation of large game in the neighborhood of the Yellowstone National Park being brought up for discussion, a resolution was adopted "That Mr. A. A. Anderson be appointed a committee of one to go to Washington and advocate the enactment of a law for the extension of the Yellowstone National Park to include the adjacent timber reserve on the east and south."

ROBERT B. ROOSEVELT, President.

The Massachusetts Season.

DANVERS, Mass., Jan. 17.—*Editor Forest and Stream:* Here is winter half gone, and up to the 10th no snow; now we have not more than 3 inches. The game has had the very finest weather to live in, with lots of feed. So far north we cannot feel like crowing much, as I have seen snow 4 feet deep on April 1; but everything so far so good. Lots of partridges and quail left over. I hear of them far and near. Fox hunting (or fox shooting, I should say) is about a thing of the past around here. I know of only one being killed this fall by the half-dozen hunters who hound them. Haven't heard of any pickerel.

**

Megantic Club Dinner.

BOSTON, Jan. 21.—The annual dinner of the Megantic Fish and Game Association is to be held at Hotel Brunswick next Saturday evening. Preparations are being completed on a more elaborate scale than ever, and that is saying a good deal to those acquainted with the dinners of the Association. Premier Parent, of Quebec, is to be an honored guest. Other distinguished gentlemen who have promised to be there will include Lieut.-Gov. Woodruff, of New York; Capt. J. W. Collins, chairman of the Massachusetts Fish and Game Commission; Chaplain Crawford, U. S. N.; J. Russell Reed, President of the Massachusetts Fish and Game Protective Association; Leroy T. Carleton, chairman of the Maine Fish and Game Commission, and Speaker Myers, of the Massachusetts House of Representatives. These gentlemen may be regarded as the leaders in fish and game protection, both in New England and Canada, and their presence at the dinner will add the best of influence to the annual social gathering of what has become the leading fish and game association of this part of the country, both in point of numbers and the character of the merchants, business and professional men that constitute it. Several of the club members, notably Dr. Heber Bishop and Dr. George A. McAleer, will tell of experiences in the forests and along the trout and salmon waters.

A gentleman just out from the Maine lumber woods tells of 18 or 20 inches of snow that fell late in November, with little or none following till a few days ago, when the volume of winter covering was increased to 2½ or 3 feet. During all this time he says that the deer have roved around easily and kept in good condition. He has been surprised to note how closely they have kept to the lumbering operations in many sections. The lumbermen say that they visit their works every night, nibbling for spears of hay, and particularly for salt. His idea is that the lumbermen are not troubling these deer; that the feeling in regard to close time is much better than formerly. Still, he says that the wardens are visiting the lumber regions, making unexpected calls at the camps, where they will ask for a peep into the larder, and will look well to the waste heaps where refuse food is thrown.

SPECIAL.

Have You Voted?

Editor Forest and Stream:

At the winter meeting of the New York State Fish, Game and Forest League, a resolution was passed unanimously that a bill be introduced at Albany prohibiting the spring shooting of wildfowl, and that the Law Committee of the League be instructed to go to Albany and urge the passage of the bill. There is no question that the members of this committee will do all in their power and work hard for the passage of his bill, but what does a Senator or Assemblyman from Oswego, Onondaga or any other county care for a member of a law committee from Canandaigua county? He doesn't vote in his county, and every pot-hunter, hotel keeper and person in his county who is likely to lose a dollar has written him, opposing the bill, and every one of these fellows has a vote, and it is votes that Mr. Senator and Mr. Assemblyman need in their business. But just so soon as you can convince him that you have more votes in his particular county than the other fellows have, just so soon will you get his active support, and not before. Write him today. Ask your friends to write him. Get in every vote you can this winter; get more than the other fellow and you are sure to win. Don't be afraid to use the local newspaper; present your argument in a clear, forcible manner; convince the public that you are right and the other fellow wrong, and when you ask them to sign a petition you will find them willing to help you. We can stop spring shooting of wildfowl in this State. We can stop the sale of game in this State. But you'll have to vote, and vote often.

The polls are now open. Vote.

W. H. TALLETT, President J. C. S. A.

WATERTOWN, N. Y.

The Boston Game Market.

BOSTON, Dec. 18.—No particular fish and game measures are yet proposed in the Massachusetts Legislature, but it is well known that the marketmen are chafing under the quail and grouse prohibitory law, passed last winter, and the friends of fish and game protection are keeping close watch. The Lacey bill is giving the marketmen a good deal of trouble in this city. It is certain that hardly more than one-tenth of the usual flood of game is being received here, and the Lacey act is believed to be the cause of the lack of supply. The receivers of game complain of seizures of quail and grouse en route here, and I notice that the FOREST AND STREAM has records of game stopped at Chicago and other points that was started for Boston. Very little Maine venison is coming here this winter so far, but I have seen one or two lots of saddles that have come through since the close season in that State began. The receivers are aware that they are liable, or at least that the game is liable to seizure under the Lacey act. But they hope that they will not be troubled. They may be hoping in vain, however, and some of the express companies may be asked to explain.

SPECIAL.

The Toothsome Muskrat.

BETHLEHEM, Pa.—*Editor Forest and Stream:* Inclosed find a newspaper clipping which may be of interest to your readers. I had some muskrats prepared last fall for a small company of friends, but none of the party can say that they are as palatable as terrapin. None of my party knew what they were eating, and pronounced them good, and were under the impression that they were rabbits, although several remarked that the bones were too small.

M. C. LUCHENBACH.

The report from the Baltimore Sun says: A "muskrat supper" is the latest gastronomic innovation at the University Club, famed for such wrinkles.

Periodically an informal supper is held at the club, at which some one or more culinary curiosities form the chief articles of diet, and last night the muskrat occupied the place of honor at such a supper.

The lowly muskrat as an article of diet was suggested by Prof. Powhatan Clarke, but it was noted that some urgent business prevented his attendance at the banquet. Nevertheless, under the skillful manipulation of the club steward, John A. Biddle, the muskrat was declared by those present to be a most toothsome delicacy, almost, if not quite, equal to Maryland's famous bird, the diamond-back terrapin, and much superior to the swifter, not to say more beautiful, rabbit.

The festive board at last night's repast was ornamented with whole muskrats, enveloped in hard aspic jelly, with tail rampant, with fish in mouth and with tusk and whiskers in plain view. As a spur to the appetite these were declared a success.

Steward Biddle had the famous animal prepared in three styles—the Maryland or Eastern Shore style, in which he is stewed in his own gravy; and broiled whole, like a chicken, and in the New Jersey style, in which he is roasted whole.

Some Weights of Game.

QUAIL in Warren county, N. J., will average, when full grown, 6¾ to 7 ounces. On Dec. 13 I killed three birds within two miles of Phillipsburg that weighed 20 ounces, one cock tipping the scales at 7½ ounces.

C. E. VOUGH.

BAYVILLE, N. J.—Last season I weighed 102 quail. Their total weight was 718¼ ounces on postal scales. The smallest weighed 5¼ ounces, the largest 8½ ounces (a hen).

Two cock woodcock weighed 7 ounces and 8¼ ounces.

Of three grouse, two males weighed 24 and 28¾ ounces, one female 22½ ounces.

There are lots of birds left. I believe that every flock of quail that I know of has at least seven birds in them, and a great many are full flocks of eighteen or twenty birds.

HERB.

An Experience.

SOME four years ago I had an Irish setter—the best retriever but one I ever saw. I was hunting quail and made a double out of a covey. Dash brought me one bird, then the other, both apparently dead as the old door nail we tell of. Put them in my coat and went on. Got another shot, let both barrels go and made a clean miss. Suddenly I heard the flutter of a quail, and with the flutter came a quail from my coat and flew straight away and before I could reload was gone. I imagine I was a sight while the quail was flying off. I had told my partner a few moments before I had five quail—then true. When I told him this true story—and I will take oath to its being such—he only laughed. That quail was probably stunned, came to life, and, like the plucky little cuss he was, got out and away. Next!

W. C. JAGER.

The Balling of Shot.

Editor Forest and Stream:

Do you know if a load of shot ever balls? I killed a quail, and all that was left of him was a leg and part of his breast; he was at least 20 yards away.

To-day I shot another. He was in the woods, and was, I should judge, 30 yards off. I had a factory load of 3 drams black powder and 1⅛ ounces No. 8 shot. When I picked him up his back and head were missing, his body was completely riddled and the wad that had been next to the powder was driven into his stomach cavity.

HERB.

[Shot are sometimes balled by the concussion of a heavy powder charge, and sometimes are fused by the heat of the powder.]

A Montana Hermit.

THE stir that is being made over the death of Cadet Booz, alleged to be from injuries received by hazing at West Point, revives interest in the case of John W. Maynard, a former cadet at that institution, who lived the life of a recluse in the Northwest for many years, and finally died in his lonely cabin near Great Falls, Mont. Maynard went by the name of Missouri Jess, and told nobody in the Northwest his real name or the story of his past life. He lived by the sale of furs secured by trapping and trading with the Indians, with whom he was on terms of friendship. After his death a back room in the cabin in which he lived was opened. This room, which had been kept secret, was lighted by a large lamp which hung from the ceiling. The furnishings were quite luxurious and showed taste and refinement. The walls were lined with shelves, on which rare volumes rested. There were works on art, literature and science. The presence of well-used Latin and Greek volumes indicated that the owner had been a scholar, and works of the leading learned authors of modern and ancient times showed that he had enjoyed, in his silent life, the company of great men in the works that they had written. In a box of letters were found several which revealed the man's real name and the reason for his retirement from civilization.

He had been a cadet at West Point, and had participated in a hazing affair which resulted in the death of a fellow cadet. Maynard had been engaged to marry the sister of the dead boy. After the occurrence, she had broken off the engagement, denouncing her lover as a murderer. He at once resigned from the army and went into the then unbroken wilderness of Montana, to end his days in solitude.—Buffalo Express.

Take inventory of the good things in this issue of FOREST AND STREAM. *Recall what a fund was given last week. Count on what is to come next week. Was there ever in all the world a more abundant weekly store of sportsmen's reading?*

The Log of a Bicycle Fishing Trip.—I.

Through the Mountains of Virginia and West Virginia. Edited from the Diary of Mr. George N. Beall by the Commodore, F. R. Webb.

FROSTBURG, Md., Nov. 18.—*My Dear Commodore:* I inclose herewith my little diary of my last summer's bicycle fishing trip to the Greenbrier, thinking that it may interest you. Read the same, and picture to yourself the good time I had. I went from Frostburg, through Romney, Petersburg, etc., to Franklin; thence to Hightown, where I struck the old Parkersburg pike, thence to Travelers' Repose, where I turned off up the river to Van Buren Arbogast's. I fished for trout in the Greenbrier, with a little bass fishing below the forks thrown in. Coming back I went across the mountains to Sinnett's, on the Thorn, where I had some trout fishing. Thence I crossed over the mountains to the South Fork of the South Branch of the Potomac—queer way they have of naming the rivers in these parts!—along down which I worked my way until I reached Romney and civilization again. I was out thirty days—the last week only being spent among relatives. The expenses for the three weeks footed up the sum of $11.25. How's that for an inexpensive trip? The only feature of the trip that I did not like was the fact that I was entirely alone. A congenial companion would have wonderfully improved the trip. Leaving that item out I can truly say that the trip was one of the most enjoyable ones I have ever taken. I find the bicycle to be entirely practicable for such a trip, in all kinds of weather. An outfit for roughing it can easily be carried, and a moderate jog trot can be paced very comfortably. Next year, if we could arrange to take such another outing together, I know you would enjoy it. You could meet me at Hightown, or ata Franklin via Harrisonburg. The wagon trip to the mountains isn't in it if only one could have two or three in the party. Very truly yours,

GEORGE N. BEALL.

It was 6:30 in the morning when I wheeled out of Frostburg on my way to the mountains for my annual fish. My destination was Arbogast's, on the upper waters of the Greenbrier River in West Virginia, and my route lay through Romney and Petersburg to Franklin; thence to Hightown, where I would reach the old Staunton Parkersburg pike, which I expected to follow over the Alleghany Mountains for Travelers' Repose, a somewhat pretentious and very comfortable mountain hostelry of the old school—now rapidly passing out of existence and seldom met with outside of these mountain regions—nestling at the foot of the western slope of the great mountain range, on the banks of the Greenbrier. Here my route led me off the pike, and along a rudimentary, very rocky and sandy and generally more or less unrideable two and a half miles of road to Arbogast's, where I expected to remain a week fishing for trout, with a little bass fishing thrown in on the side, in the broad river below the junction of the two forks, some six or seven miles below Arbogast's.

I carried my personal plunder in a leather traveling case in the frame of my machine, and a carrier on the handle bar, while a rod case strapped on the bar of my frame contained two rods.

I had a beautiful morning's run, which carried me to the second crossing of Patterson's Creek, about ten miles above Frankfort. I forded the creek with my machine under my arm, after which I mounted and hustled along lively for shelter from an impending thunder storm, which I soon found in the shape of a wayside barn, where, curled up on the seat of an old buggy, I enjoyed a refreshing nap of half an hour, lulled by the patter of the rain on the roof.

The storm over, I was soon under way again. Surmounting the brow of a hill I let go all hold, and turned my machine wide open for a glorious coast down a straight, hard, slaty hill, a straight-away stretch of flat road at the bottom giving me assurance of a safe landing. It was undoubtedly a glorious coast, but with a most inglorious wind up at the bottom, for when I reached the flat stretch it was like planting a foot in a new-laid huckleberry pie. Oh, how the mud flew! while consternation seized upon my soul. Down went the brake, thoughtlessly, in a frantic attempt to check my flight. My wheel immediately "slewed" all over the road, and we went to pieces in a jiffy. I picked myself ruefully out of the mud, to find myself plastered from head to foot, while my wheel escaped with a slightly sprung rim. After this little mishap I moved on more cautiously, and with frequent rests on account of the intense heat, and finally wheeled into Moorefield at 7:30 in the evening, after a day's run of fifty-eight miles. A streak of a thunder storm made very bad going of the last four miles, and my come in was almost a walk in. I had a good warm greeting at the hotel, and a good warm supper made quite a new man of me.

I left Moorfield at 7:30 next morning, and arrived at Franklin, forty-two miles distant, at 8 P. M. The ride through the gap to Petersburg was a royal one, as the road was in fine shape and the mountain scenery both beautiful and imposing. The heat, even in these high latitudes, was almost unbearable from Petersburg on toward Franklin, and sandy stretches of road along the river bottoms made the wayside springs seem few and far between. I loitered lazily along the road, hunting the shade as industriously as possible, until 6 o'clock, after which time the remainder of the day's mileage was

quickly disposed of. The Virginia House, in Franklin, a typical Southern home, looked cool and inviting; and Mrs. Haup, in a warm, motherly way, bade me welcome. I had a good supper and a short stroll around the village streets and along the river bank, after which I was ready for bed. Alum water applied to the blisters on my hands gave instant relief.

The next morning was cloudy, with every prospect of rain, but I put out in spite of the unpromising appearance of the weather. I found it so much cooler than yesterday that wheeling was easy and pleasant work. Twelve miles out I dismounted to swap yarns with a camp of Franklinites, among whom I found an old acquaintance, Hugh Boogs by name, who speedily helped me to make new ones. They were fishing, and incidentally enjoying the heat destroying effects of a case of export beer on ice, qualified with a little whisky, brandy, etc., on the side, after the manner of all true fishermen. I tarried awhile with them, then proceeded on my way, after making a full hand at their dinner table, and assisting in pulling a few corks. A steady pull up the long divide to the old Parkersburg pike took the entire afternoon, and brought me to the old tollgate in Hightown, where I was to spend the night. I telephoned friends in Staunton, sixty miles away over the mountains from here. This little hamlet derives its name from the fact that it is the highest settlement in Virginia—its elevation being 2,800 feet.

The next day was Sunday, but I kept right on. I had nothing in the world to do but lay around and wait until Monday, and I hardly cared to do that. I had an easy run before me as far as mileage was concerned, but the immense mountains towering up before me, which had to be crossed, were well calculated to eat up time and shoe leather. For a mile or so up Hevener's Mountain I chatted pleasantly with Mr. D. Yeager, of Travelers' Repose, who was on his way home with a wagon load of goods, bought 'way east in Staunton, seventy miles from Travelers' Repose. The old Parkersburg pike was surveyed and built by Crozet, Napoleon Bonaparte's Chief of Engineers, and is one of the finest pieces of engineering on the American continent; and a trip over its entire length from Staunton, in the valley, to Parkersburg, clear across the entire Appalachian system of mountains on the Ohio River, will amply repay the adventurous bicyclist who is not afraid of considerable mountain climbing—most of which, of course, on foot. It is so well graded that the rise to the tops of these towering mountains is made with less effort than is required to surmount many of the hills of an ordinary country road. The only thing to prevent the wheelman from riding to the tops of all these mountains is the great length of the grades—owing to the thousands of feet to be surmounted most of these ascents are from three to five miles long. This day's trip was right over the backbone of the great central chain of the Alleghanies, and consisted in slowly walking up the grades, riding around the mountain spurs and wild spins down the long, long western slopes, with the machine well in hand. There is fifteen miles of alternate climbing, riding and coasting to be had in crossing this great central range—the Alleghany Mountain, as it is locally known The historic top of Alleghany, and the site of the Confederate Gen. Johnston's winter camp, was reached at 11:30. A battle was founght here on the mountain top. The Federal forces endeavored to dislodge Johnston, but were repulsed. Service was being held in the little old weather-beaten church on top of the mountain, and scattered around were vehicles of all shapes, sizes and descriptions. I had to exercise great caution to avoid a stampede among the horses, or "beasts," as they are termed in mountain parlance—the sight of my unfamiliar combination was too much for their nerves. Finally dismounting, I led my steel steed through the gauntlet of hoofs, keeping up a running string of "Whoa, now!" "Yea!" "Steady there!" etc. Some stragglers outside the church crowded around to see my wheel and to ask the usual round of questions. On the very highest point of the mountain, and in plain sight on either side of the pike, lie scattered the remains of Gen. Edward Johnston's winter camp—the old earthworks still doing business at the old stand. Heaps of stones and sunken hollows mark the site of the hundreds of cabins and hovels that years and years ago dotted the hillsides on the mountain top and afforded shelter to the Confederate hosts who wintered on this bleak, exposed height.

On around the turn, around the vast shoulder of the mountain, and the nine-mile descent into the Greenbrier Valley was begun; the long, down-mountain spin made my brake hand weary, and frequent stops were made to cool off the bearings and rest the tires. Finally, on around the last turn of the road, and I shot out into the sunshine, and on a long stretch of gentle slope let go of the brake and rolled gently up in front of the old mountain hostelry, Travelers' Repose. The genial old landlord, Mr. Peter Yeager, gave me a welcome and a half-hour's chat, after which I got under way for the final two and a half miles of my journey. Here I took leave of the old pike and worked my way along a rocky, sandy, little used road, up the river to Mr. Van Buren Arbogast's—my destination. High spring freshets had washed out the river road more or less, all the way up, consequently most of the distance up was made on foot. I received a hearty welcome from Mr. Arbogast and his family, and sat down to a good hot supper, to which I did ample justice, for I was a hungry lad that evening, sure! An after-supper stroll with my cigar, to have a look at the familiar river, and I turned in, to dream of the morrow's sport.

[TO BE CONTINUED.]

Trout on Tap.

IN the days when the only means of rapid communication with Eastport, Me., was by steamboat for Portland and St. John, N. B., Bert Bean, a commercial traveler from Boston, paid a visit to Campobello Island, which belongs to New Brunswick, though only a short distance down the harbor. Bean had a little money, and liking the island, he bought a tract of land on top of the hill. His purchase contained about 100 acres, in the middle of which was a small pond in a hollow about 200 feet above tidewater, which washed the shore less than seventy-five rods away. As the pond was fed by springs, Bean had it stocked with trout, which were caught in brooks on the mainland and brought over in pails. Then he went away for four years. On his return the pond was swarming with fine trout. Though the place had been fished by expert anglers, they had never met with any luck, because there were so many caddice worms and other insects in the water that the fish had no need for taking the hook.

Bean consulted a lawyer and found that as his pond contained less than ten acres, it was his to hold and protect against all comers. He waited a few years longer and sent down a crew of men, who bored a hole from the shore through the bank facing the ocean, inserting a water main in the opening. When he had put a turn tap in the pipe so far inside the hill that it would not freeze in winter, he was ready to supply fish to order. Orders were taken in Boston and other large places for as many trout as he could furnish. Then Bean came to Campobello, turned the stop cock, drew off the water and picked up his fish as easily as he could kindlings. He always left enough to stock the pond with young fry, after which he closed the faucet and allowed the springs to fill the pond for the growing of more trout.—Cleveland Plain Dealer.

Albino Fish.

THE Marine Biological Association has come into possession of one of the most interesting fish specimens caught round our coasts for some time past. It is an albino hake, which was taken in a trawl off Milford, and is entirely destitute of the usual pigmentation both on the external surface of the body and on the inner linings of the buccal cavity and gill covers. The specimen is of considerable scientific value for its bearing upon the problem of natural selection in the coloration of fishes. Although quite healthy and of normal length, it is in a very lean condition, its girth being 11 per cent. and its weight 23 per cent. below the normal. This is due to the check placed upon its catching powers by its conspicuous whiteness. The hake is a predaceous and nocturnal fish, and depends upon its dusky, inconspicuous appearance for success in catching its active prey, while a white hake would be easily avoided. Albinism in fish is of exceedingly rare occurrence.—Westminster Gazette.

The Fish Were All Used.

NEW YORK, Jan. 18.—*Editor Forest and Stream:* While your criticisms are severe in regard to the quantity of fish that were caught by my companion and myself and the letter of Sportsman was justified by the reports, as given with the published photographs, I desire to correct the impression existing that the fish were wasted. All were carefully packed in moss and were carried on our pack mules until the last one was eaten, and with five hungry men in the outfit they lasted about three days, but we did not want fish again for the rest of the trip.

SARTELL PRENTICE.

[Mr. Prentice refers to a note in our issue of Jan. 5, relative to a reported catch of sixty-eight large trout by members of a surveying party in Montana. The writer of the communication assumed that in part the fish were wasted. This statement by Mr. Prentice, however, is such as to justify the fishing.]

Maine Fish Hatching.

BOSTON, Jan. 19.—Senator Mcfarlane, of Maine, has introduced a resolution calling upon the Commission to furnish the Legislature with the cost of hatching and distributing fish for a number of years back. He wants the Legislature to know just how much both fry and fingerlings are costing the State. He will attempt to convince the Legislature that the cost of fish propagation as now managed is too great and that he believes, with others, that it would be far cheaper for the State to encourage private hatcheries, buying the fish hatched at a fixed price. If few fish were hatched, the State would have little to pay. If a great many were hatched, as the Senate is reported to believe there would be, then the State would reap the benefit of abundant restocking at a reasonable cost.

Fox-Hunting Reminiscences.

THE story of the Wellman Fox, which was so delightfully told by Carlos S. Head in FOREST AND STREAM of Jan. 5, calls up many very pleasant memories of days spent in pursuit of this crafty little animal. I will freely confess that the pursuit of larger game has not destroyed my relish for fox hunting, fox hunting with a good gun, a good dog, and a good companion or two, and minus the anise seed bag, and all the other frills which are inseparable from the fashionable sport called fox hunting.

I think I was about ten years old when I had an experience which implanted the love of fox hunting so deeply and so thoroughly within me that it will probably abide with me while life lasts. I was standing upon the piazza of my home one December morning, away back in 1858, I think it was, when the mellow, flutelike voices of three hounds in full cry were wafted to my ears upon the frosty air. Looking in the direction of the sound I was struck speechless, breathless, paralyzed in fact, by the sight of a fox not over 20 rods distant, running across the fields with that airy, graceful motion which is characteristic of this animal.

One of my older brothers owned at the time an old-fashioned singel-barreled English fowling piece. It was quite a remarkable gun in many respects, but I will mention but one of its many peculiarities. Its barrel was octagon, and fully 5 feet long, yet so light was the fine metal of which it was made, and the whole arm was so nicely balanced, that, young as I then was, I could hold and fire it without artificial rest.

The fox disappeared from view about the time I regained control of my faculties, and to seize the old gun and rush pell-mell over fences and through ditches to where the track of the fox showed in the fresh snow was the work of a moment. It was the first fox I had ever seen, and I was laboring under such excitement that I could not have stopped long enough to formulate any plan for its capture, even had I known enough to do so. All I thought about was chasing and catching it, and chase it I did.

I don't believe I ever ran a mile in less time than I ran one then. I remember that I was scrambling up over a high rail fence when a great black streak shot past me in the air, without touching the fence, across a small field, and into a woods, before I fairly realized that it was a hound in pursuit of the fox. I will say here, this hound was owned by Calvin Metcalf, a veteran fox hunter, and I shall have more to say about this hound. Well, as I sat on top of that fence I began to feel as though I had lost my job, for it was evident to me that that dog could outrun me. While I sat thinking the matter over, two more hounds passed me in full cry. This discouraged me completely. But the ardor of the chase was still strong within me, and so I decided to take a wide circle on my return home, hoping that by so doing I would find some sort of game. This took me around to the other side of the woods through which the chase had gone, and here I came upon the fresh tracks of another fox. Running, too. Evidently started from his lair by the racket the dogs made when passing near to it. Once more I started on the trail, but this time I went more cautiously. My surplus enthusiasm had been worked off, and I could think and reason. Down through valleys, up over hills, through woods and alder thickets I stuck to that track until it led me into a woods which was quite near to my home. This woods had a thick undergrowth of hemlock, maple, birch and other small growths, and here the trail zigzagged about so that it was very difficult to follow it. Gradually a very peculiar sensation began to creep over me. I have often experienced it since when stalking game—a sort of presentiment or intuition that the game is near. With bated breath and noiseless steps I crept forward.

In the district school where my young ideas were taught how to shoot, there was a text book used, known as Sanders' Third Reader.

Among many other things which I had learned from it was a very interesting little story about a boy who had two chickens which were stolen by a fox. The boy's Uncle Rufus undertook to kill the crafty robber, and started off on what the boy at first thought were little dog tracks. Soon the hunter managed to get quite near the fox, when he squeaked like a hurt mouse, the fox trotted back around a fallen tree-top, the hunter fired and the old fox fell dead.

While I crept forward on the trail this story occurred to me, and boy like, I thought I would try Uncle Rufus' ruse on the fox I was following. No sooner had I given the first faint squeak than it was answered by the Wah-wah-wah of the fox, and so close to me that I came near fainting. As it was, I sank limply into the snow, hoping and praying that that fox would go anywhere except toward me, yet dimly conscious that it would be a terrible disgrace to let it escape if it gave me a chance to kill it. This thought nerved me for a supreme effort, and pulling back the hammer of the gun I swung the long barrel around until it pointed in the direction of the sound I had heard. It seems to me even yet that fate had decreed beforehand that I should kill that fox, for no sooner had I got the barrel of the gun leveled than, pop, up came the head and shoulders of the fox above a little hillock, not more than two rods distant and directly in line with the barrel of my gun, and then he very obligingly stopped and looked in every direction except toward me, as if he were purposely waiting for me to kill him. With my last strength I pulled the trigger, and the old gun did the rest.

I have killed over a hundred foxes since that day, but never a larger or finer one. My! but didn't I feel big? Washington's overcoat did not contain cloth enough to make a vest for an individual of the size I felt myself to be as I strutted to the house with that fox on my shoulder.

I could fill a good-sized volume with incidents from my own experience to illustrate the subtle cunning of the fox. However, I will relate but a single episode, which must serve as a specimen brick. About the year 1885 there lived a fox that sorely puzzled the hunters and hounds of Gansevoort and vicinity. Many times was this fox run with our best hounds and always with the same result. At a certain spot it would seem to vanish, and the most careful investigation would always fail to discover the way it did it. Some of the baffled hunters asserted that the fox had wings and that when it had run until there was no more fun in running it would start from this particular spot and sail off into another township. One of these hunters finally registered a vow that he would unravel the mystery if it took all the remainder of his life. Three times did he essay the feat and three times did he go home a sadder and no wiser man. The fourth time it chanced that a fresh snow covered the ground, which photographed every jump of the dog and fox. The hunter reached the point where the fox usually did its vanishing act almost as soon as his hound reached it, and at once tied up the dog to prevent him from tracking around in the snow. There was a large field, and north of this field there was a large woods. A fence separated the woods from the field. The center third of this fence was made of posts and boards. The two end thirds were built of rails. The hunter took the trail of the fox and dog, and soon found where the fox had jumped up on the outer end of one of the rail fences.

The snow on the top rail plainly showed the footprints of the fox until it reached the point where the rail fence

joined on to the board fence. There was no snow on the edge of the boards and so the hunter passed along the board fence until he came to where it joined on to the other piece of rail fence, looking carefully all the while to see whether the fox had jumped off of the board fence into the snow. It had not done this, and when he reached the rail fence he found that there were no fox tracks in the snow which lay on top of the rails. He next made two circuits around the entire fence, the first about 10 rods from it, the next time about 20 rods from it, but could find no place where the fox had gone out of the circles thus described. Then he subjected the board fence and its immediate surroundings to a careful scrutiny, but could find nothing which threw any light upon the mystery. He paused at last near the center of the board fence, utterly dumfounded, and admitted to himself that the problem was too much for him. While he stood thus his eye chanced to fall upon a beech tree which stood 3 or 4 feet from the board fence, and which leaned at an angle of 45 degrees from the perpendicular. About 8 feet from the ground the bough of a small hemlock lay across the body of the beech, and it occurred to our hunter to see what that bough covered. Aha, a hole. Things were beginning to assume an interesting aspect. A moment sufficed to cut a slim sapling and run it up in the cavity he had discovered, when he found the entire trunk of the tree was hollow.

After punching vigorously up and down in the cavity, he plugged the hole and started for the nearest house for an axe with which to fell the tree. When he had got a few rods from the tree he stopped and looked back, his gaze ranging upward, and there lying flat upon a large limb he saw the fox, motionless, but intently watching him. His punching with the sapling had made it so uncomfortable for Reynard that it had crawled out of another hole at the top of the cavity, in the center of the main crotch, or upper end of the trunk, and consequently invisible from the ground. The great mystery was solved at last.

Among the many good fox hounds which have been owned in this section during the last 50 years there were two or three which became especially famous. One of these famous dogs was bred and trained by a noted fox hunter by the name of Ira Wilson. She was quite a small dog and bore the plebeian name of Sally. Her namer, however, was all there was about her that was plebeian. Every inch and pound of her make-up counted, and she was game to the backbone. Throughout her long and checkered career she acquired a knowledge which enabled her to promptly trump any trick which a fox could play. She died before I was old enough to be trusted afield with a gun, and my knowledge of her was gained chiefly from listening to her exploits as narrated by her master. He was a loquacious and versatile story teller, and the charm which he would impart to a fox story would hold me spellbound for an entire evening, listening in open-mouthed and sleepless-eyed ecstasy to his vivid word pictures until I was driven to bed by my kind-hearted but somewhat strict mother.

Many of his stories are still fresh in my memory, and I will relate one which will show one of the many superior characteristics of the dog Sally.

Near the village of Ft. Edward there lived a fox hunter by the name of Thompson. One winter he had a lot of trouble with a big dog fox. This fox whipped his hound at the close of a long race, and thereafter every time he started this fox it would run a few minutes and then turn around and drive the dog back.

He told his grievances to Wilson, and as trouble of this sort was just what Sally was always looking after it was decided that she should have a piece of it. The first favorable day the hunters started early in the morning to try conclusions between the fox and Sally. She soon had him on the go, for his lurking places were well known and his big feet always gave him away.

The hunters purposely chose the southern end of some high ground, known as Reublins Ridge, from which nearly all of the surrounding country for the distance of nearly a mile could be plainly seen, for a vantage ground from which to watch operations.

As luck would have it, the fox came into their view only about 30 rods away, ran out from the woods into the field a few rods, stopped, turned around and bristled, in blissful ignorance of the character of the dog he was challenging to the combat.

The clear ringing voice of Sally came nearer and still nearer, until she burst from the woods and ran to within 3 or 4 rods of the fox, when she saw him. With one long scream of anger, or delight—who can tell which?—she fairly flew over the ground which separated her from the fox. It must have dawned upon that fox about that time that he had a different dog to deal with, for while Sally was in the air in a terrific leap which would have landed her upon him, his nerve failed him, and he ingloriously fled the field. And then our hunters saw a race which made them almost forget to breathe. Before Sally could check her momentum the fox gained a lead of 8 or 10 rods. Steadily did she cut this lead down until they reached the road to the south, half a mile away, when her nose almost touched the tail of the fox at every jump. Here the hard-pressed fox dodged under a passing sleigh, scooted out from the opposite side, and again gained a lead of 8 or 10 rods. The race now led through a farmyard, scattering sheep and poultry in fright, then swerved to the east, across another road and a level meadow to the foot of the Cary ridge. A stone wall ran along between the meadow and the foot of the ridge. There was a hay barn on top of the ridge, and the fox was evidently trying to reach and slip under this barn. All the way across the meadow daylight did not show between the end of the fox's tail and the point of Sally's nose. When the fox reached the stone wall he paused the smallest fraction of an instant to gather energy for the leap. Fatal pause. At its end Sally had him by his neck and his doom was sealed.

Another famous hound, and undoubtedly the greatest of all those that were ever owned in this section, was the Metcalf dog, Tiger, briefly alluded to in connection with my first fox hunt. At that time he was scarcely more than a puppy. In fact, it was one of the first, if not the very first, race that he ever ran. In color he was black. In build he showed that he had received an infusion of greyhound blood from some of his ancestry. When fully matured he stood about 28 inches at the shoulder, perfect in form, with muscles hard and tough as steel. In addition to his great power in body and limb, he had a remarkably fine intelligence which enabled him to amass an almost incredible amount of dog knowledge. During the many years that he retained his faculties unimpaired any ordinary fox which he got after had three alternatives presented to it: i. e., 1st, to be shot; 2d, to be caught by its pursuer; 3d, to run to earth; and it would have to choose the third alternative and act very quickly if it escaped the second one.

This dog also possessed a scent so keen that he could wind his quarry at astonishingly great distances. Often he would be going along quietly with those who had him in charge, when he would suddenly sniff the air, and then shoot into the wind like an arrow from the bowstring until he reached some distant woods or brushy hollow, and then it would be Yip-yap, Ki-hi, dash, dodge and scurry, until the fox was either shot, caught or lay panting in some friendly hole in the ground. On an average, half of the foxes started by this hound were caught by him. Most of the others were either shot or they would manage to dodge into a hole in time to save their skins. In the whole of his long career this dog never found but one fox which could stay on top of the ground ahead of him on good running for more than 15 minutes, and that one held him even for three hours. And what a race it was. Who will ever know the number of miles covered by it? Those who are best qualified to hazard a guess have held their peace, rather than be laughed at. It was run on the Argyle hills and the flats between them and the Hudson River, in Washington county, N. Y. A deep snow lay on the ground, but a hard, firm crust had formed which would almost bear the weight of a horse. An inch of light snow lay on the crust, which enabled the hound to run on a breast-high scent. The white expanse of snow covered fields, the firm foothold on the hard crust and the bracing air of a January morning acted like wine on the spirits of the hunters, and as for Tige, he was ready for anything, and like Micawber, was only "waiting for something to turn up." The something which turned up that morning was a big dark-red fox, and away went fox and dog out of sight and hearing before a man who stuttered could have said scat. And away went the hunters on the trail, confident that they would find a little heap of snow within the first 3 or 4 miles, from which they could dig the defunct fox (Tige always gave his victims decent burial), for they felt sure that the fox did not live which could keep out of Tige's jaws for a greater distance on such running. But they went the 4 miles and found no place where Tige had started another graveyard.

But, hark! Far away in the distance, but coming nearer with the speed of a lightning express train, they heard the Yi-eek, Yi-eek, Yi-eek of Tige's voice, which told them that he was running on a warm scent, and not by sight. The next instant they saw a red streak shoot along a nearby hillside and disappear, followed the next moment by a black streak. Streak is the only word I can find in my vocabulary which will be likely to convey a correct idea of the tremendous speed of this hound.

Back again went the hunters to near the starting place, and again the red streak, followed by the black streak, came into view, and disappeared like phantoms. And so on for three full hours did this terrific contest of muscle against muscle, endurance against endurance and wind against wind continue without lessening in any degree. However, when the fox was last seen alive his drooping brush and protruding tongue showed that he was rapidly nearing the end of his last race; and they found him, nicely covered with the white shroud which Tige had industriously collected and spread over him, covered except the pads and black stockings of his feet and legs, which protruded through the top of the little mound of snow in which he lay as though they were still trying to shield him in death, as they ever had in life before that fatal day.

And they found Tige sliding about on the crust, first on one side, then on the other, rolling and kicking his foot in the air in the exuberance of his inexhaustible strength and vitality, and fit as a fiddle to start in another race of the same sort without a moment's delay.

I have enjoyed a few very pleasant fox hunts with Calvin Metcalf, who is a gentleman of the old school, of the sort that now, alas! are too rarely met with. And I have enjoyed a great many with his son Eugene, who is a true scion from the parent stem.

During these hunts I have often heard them express a desire to possess another hound like Tige, but I think they will never see his like again. Nature does not often produce a dog like him. And it may be that,

> "Nature, satisfied, hath destroyed the mold
> Wherein his perfect shape was formed."

JOS. W. SHURTER.

GANSEVOORT, Jan 9.

Points and Flushes.

A long list of additional special prizes have been added to the prize list of the Westminster Kennel Club. The premium list is one of rare value, and worthy of the attention of all bench show competitors. Address Mr. James Mortimer, superintendent, 1001 Townsend Building, 1123 Broadway, New York.

Ducks Near San Francisco.

SAN FRANCISCO, Cal.—Dr. Trask and Mr. Young went duck hunting. They bagged two dozen, which is a good limit. Young shot five with his pistol at about 90 yards, four of which were wounded and escaping the gun. He got the crippled ones at the second shot each time and the well one at the first shot.

More ducks could have been shot, but the dog would not retrieve at first until the Doctor taught him with a duck shot on the land. Some men would have thrashed him, but the Doctor took the intelligent method, and just as soon as Jack found out what his master wanted he did his part perfectly. An effort will be made to protect the ducks from overshooting by placing the limit at twenty-four ducks to a gun.

FRED O. YOUNG.

Yachting.

Notice.

All communications intended for FOREST AND STREAM should always be addressed to the Forest and Stream Publishing Co., and not to any individual connected with the paper.

THE varying reports regarding the possibility of a centerboard boat built for the trial races are most confusing. During the past few years the typical centerboard boat has been seen only in the smaller classes. The majority of designers have bent their best energies toward developing keel boats from the smallest to the largest classes, and this type of boat has reached a point of perfection that great skill and years of careful study only can produce; on the other hand, there have been a few men who have continued to produce successful centerboard boats, but as many were designers of the old school, the moment they got beyond the small classes it was found that they had overstepped themselves, as was shown by the performances of the centerboard boats in the 51ft. class. The question of type (keel versus centerboard) is a serious one, and if a centerboard boat is to be produced so that any definite conclusions may be drawn as to their relative merits, she should have the advantages of the best design, lightest construction and superior workmanship, such as is being put into the new keel boats.

THE Hanley Construction Company, of Quincy, signed a contract to build a yacht for the Chicago Y. C. to defend the Canada cup in the races the coming summer. The Hanley boat is to be one of many to compete in the trial spins. She will be a 30ft. centerboard and a true type of Genessee, which took the Canada cup two years ago when she sailed under the colors of the Rochester Y. C. Work will commence on the boat about Feb. 1. She will be launched about May 1 and proceed under her own sail to New York, where she will be loaded on a steamer for Chicago.

THE work of laying down the Seawanhaka cup defender, Illinois, has been completed at Lawley's, and workmen are engaged in getting out the wooden keel. It is expected that she will be set up at once, and will be in frame and ribbanded off by the first of next week. This cup defender is a production of Mr. B. B. Crowninshield, and will be owned by Messrs. George M. Pynchon, Benjamin Carpenter and F. J. Dunn, of the Chicago Y. C.

DENNY BROTHERS, of Dumbarton, have at last formally announced that they are building Sir Thomas Lipton's challenger for the America Cup, Shamrock II. Up to the present time little progress has been made on the new boat, but the work will now be pushed forward rapidly. The keel was run while Denny's yard was closed on New Year's Day. Since then a score of the side frames have been set up to port and starboard. All work on the yacht is done at night. Everything, even the waste and scraps of metal, is locked up in a shed and sealed before the yard is opened for the day workmen. Ninety-five tons of lead were melted for the keel. The finished block weighs within a few pounds of ninety tons.

EDWARD SYCAMORE, the captain of the new challenger for the America Cup, has arrived in London from Glasgow. Heretofore he has refused to be interviewed, but he has at last talked with a representative of the Associated Press, to whom he said:

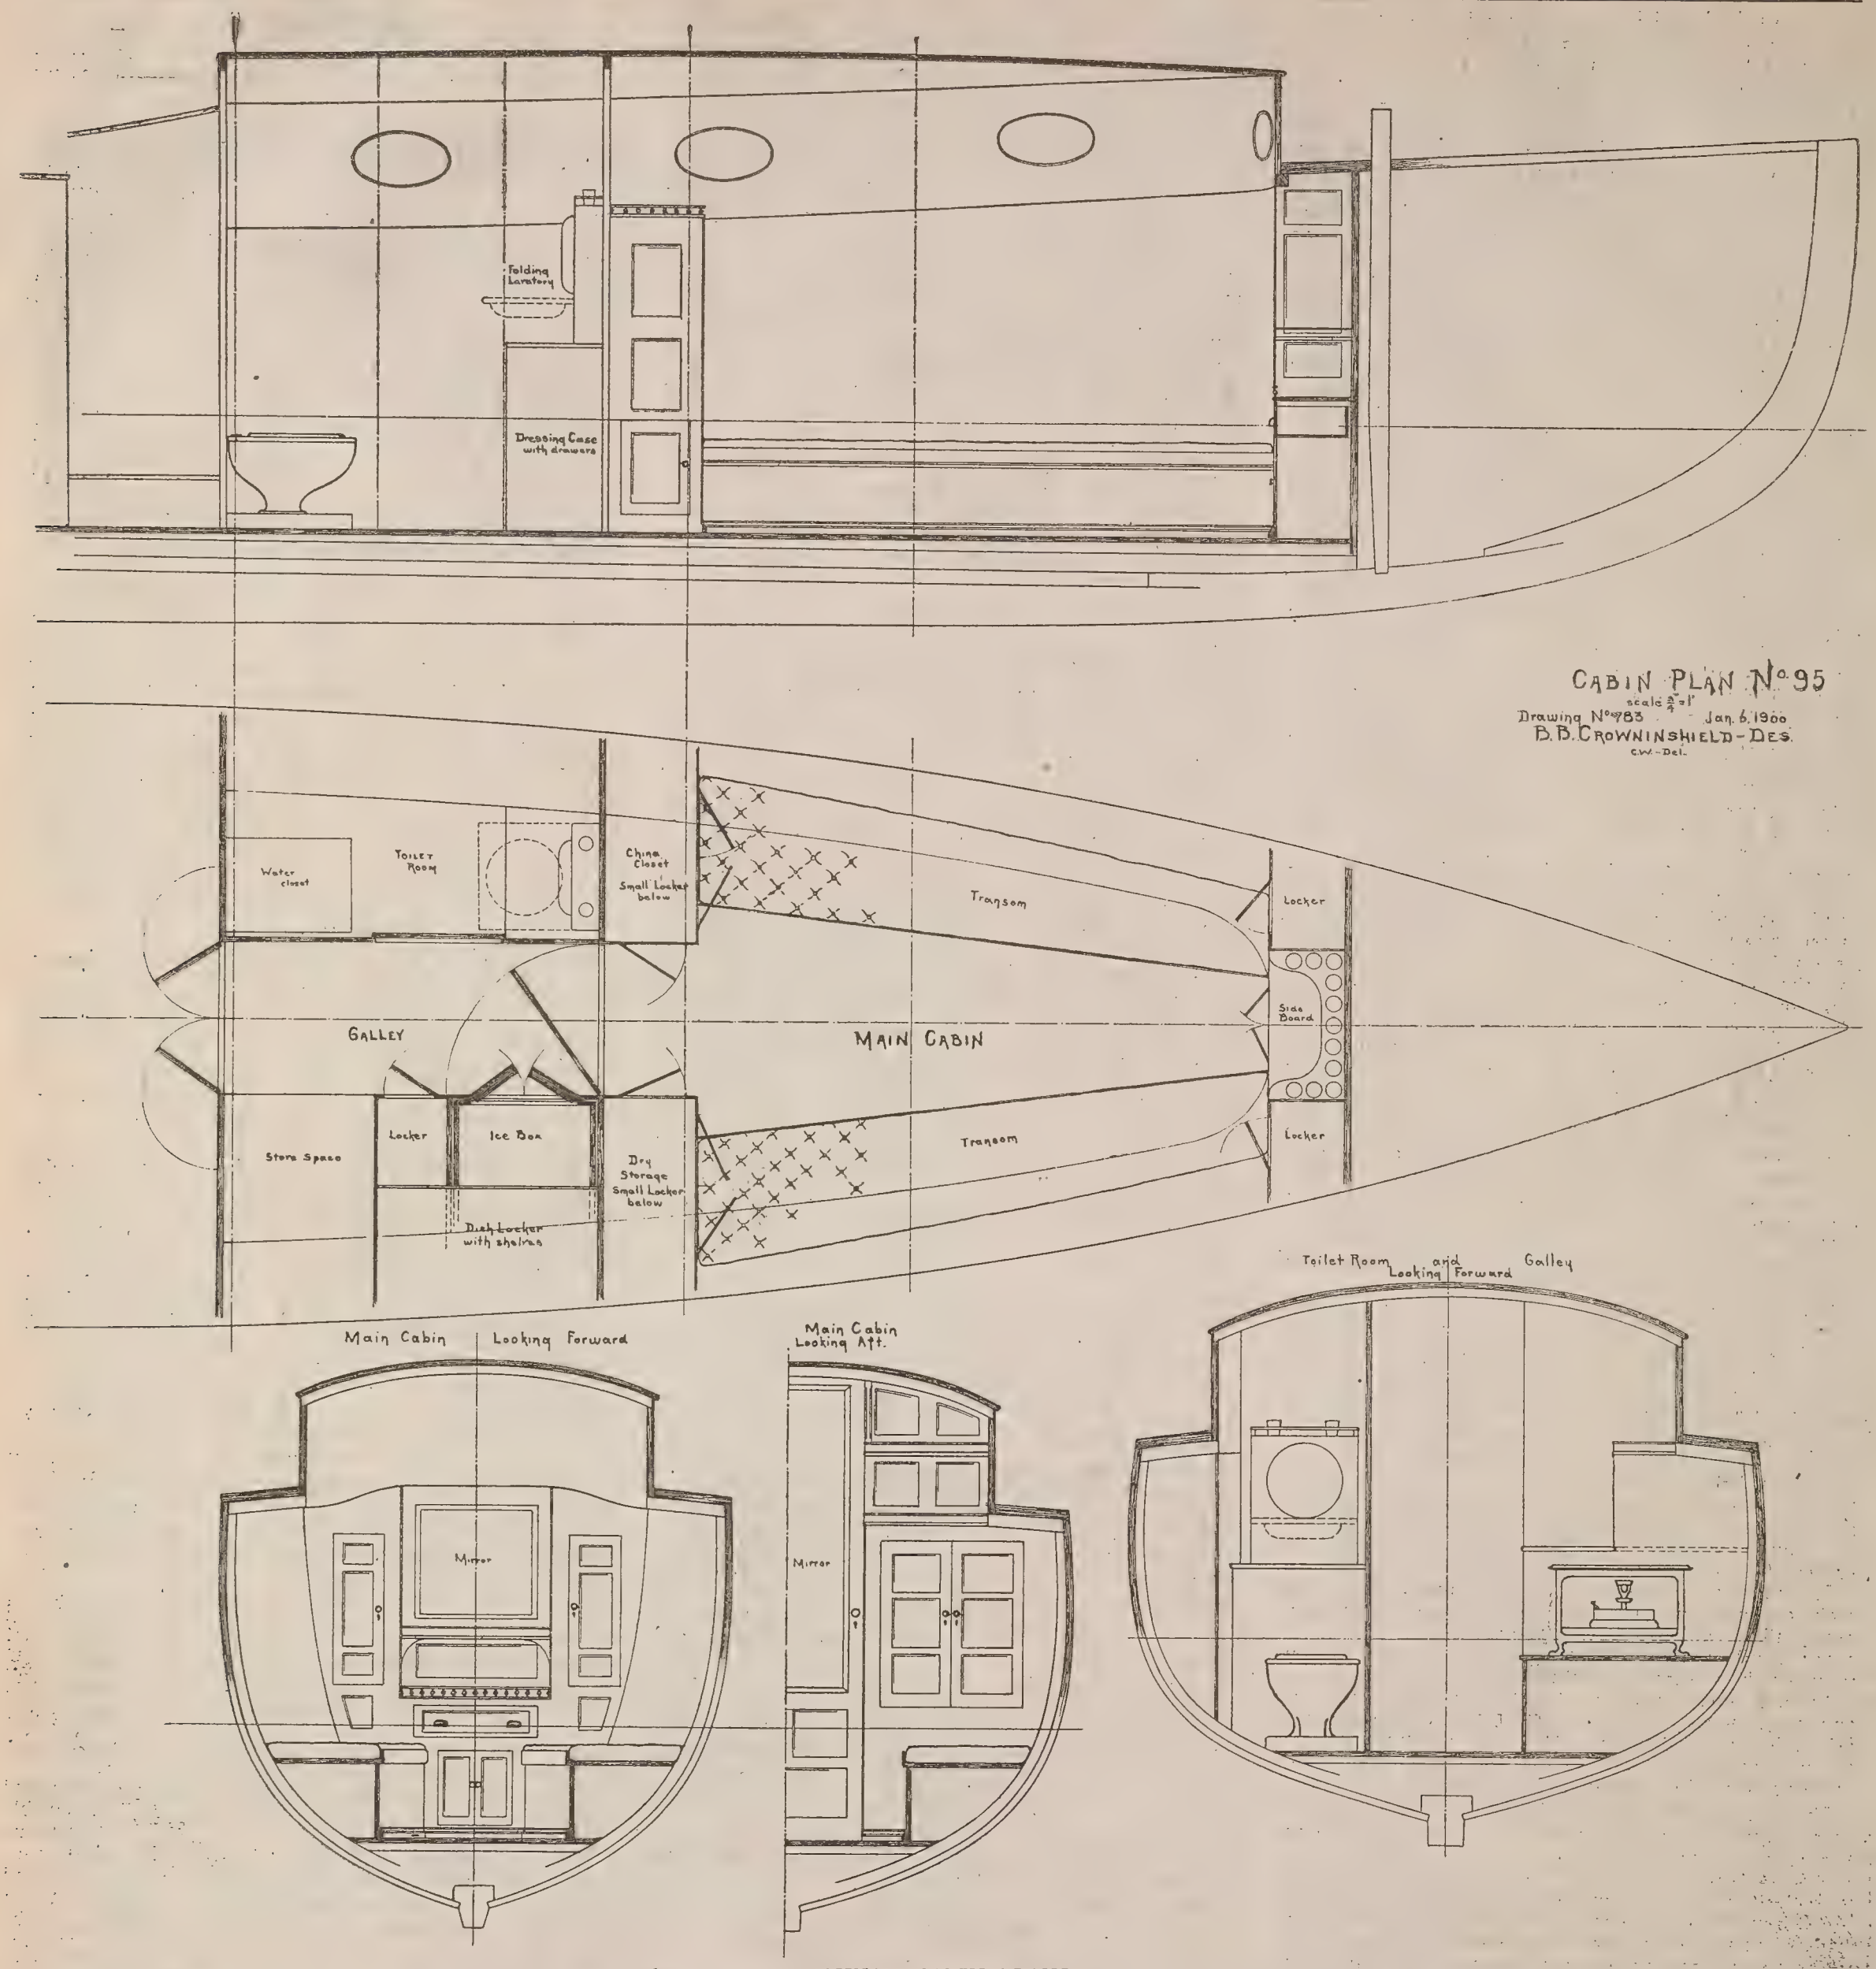
"It seems to me that magnificent opportunities for sport have been thrown away by the practice of taking a challenger to the other side and using her there only for the purpose of sailing the number of races necessary to decide the ownership of the America Cup. These boats, of course, have been built with the object of bringing back the Cup, and that must always remain their principal work. Shamrock II. will cross for that object, and nothing will be allowed to interfere with that. When the races shall have been decided, however, I should like her to be sailed in a few races against the pick of the American fleet for whatever prizes may be offered.

"The Cup contest is sailed under conditions calculated to give the fairest possible test. Still, it is conceivable that these very conditions might tell heavily against one or the other of the boats. I think it would be satisfactory to the owner and the designer of the defeated boat and good for sport to have a trial or two at open racing. If we are fortunate enough to win the Cup we would be glad if our opponents had an opportunity for revenge under other conditions. If unfortunate enough to be beaten, we would prefer an opportunity to try at something else instead of the certainty of returning empty handed."

In view of Sir Thomas Lipton's promise to take the Erin, and possibly Shamrock II., to some of the principal American yachting centers, the challenger is likely to be seen on more courses than that at Sandy Hook this fall.

Danger for Launch Owners.

THE attention of our readers is called to a bill introduced in Congress on Dec. 14, 1900, and which has been referred to the Committee on the Merchant Marine and Fisheries. On Dec. 4, 1895, Senator Perkins, of California, presented a bill to the Senate providing that vessels using for their motive power naphtha, gas or fluid should carry licensed engineers and pilots, and have their hulls and machinery examined as if they were steam vessels. This bill met with the greatest opposition everywhere, not only from the builders of launches, but also by their owners, and the Committee on Commerce at once changed it in such a manner that vessels under fifteen tons were exempt. On March 2, 1896, the Senate passed the bill, but when it reached the House of Representatives the public opposition proved so great that no action was taken until Jan. 11, 1897, when the bill was finally passed. It would have been impossible to get this bill through had not the change been made. The bill now offered by Representative Charles H. Grosvenor, of Ohio, has for its ultimate end to bring all pleasure power



ANNA—CABIN PLANS.

boats propelled by electricity, gas, fluid or naphtha under the same laws that govern steam vessels. It does not seem possible that Mr. Grosvenor understands the situation, and we do not believe the original act of March 2, 1896, will be amended. However, it is always the unexpected that happens, and we therefore urge every one of our readers to make this a personal matter and to protest against this offensive and dangerous action. Every yacht club and boat owner in the country should write to their Congressmen at Washington immediately and enter a formal remonstrance. It is a matter of record that as a general thing legislation has been unfavorable to yachting interests in the past. The sport has now become national as well as international, and supports some of the greatest industries in the country. Millions of dollars are now invested in small power-driven craft alone, and the passage of this unnecessary and absurd law might deal a death blow to some of the largest establishments in the United States. The idea of compelling the owner of a launch of small tonnage to carry a pilot and an engineer is too ridiculous for serious consideration.

The steamer Mount Morris, built at Athens, N. Y., last year, will be the tender for the Belmont-Stillman syndicate boat. The vessel is 137ft. long, 28ft. 8in. beam, and 8ft. 5in. deep. She is of 400 tons burden, and is of sufficient size to contain the living quarters for the crew and also the extra spars, sails, etc., which the racer will have to move from place to place in the summer. Alterations will be made in her interior as soon as she is turned over to Mr. Duncan.

Anna.

By permission of Mr. B. B. Crowninshield we publish this week the plans of the cabin launch Anna. She was designed for Mr. J. B. Cornwall, of Rochester, N. Y., who speaks very highly of the seaworthiness and speed of the boat. She was launched in August, 1900, and on her maiden trip went to the Thousand Islands and back. She crossed Lake Ontario in a very heavy blow, and her excellent performances under these trying conditions were most gratifying to both her owner and designer. The power for the boat was furnished by an 18 H. P. 3 cylinder engine made by the Rochester Gas Engine Company, of Rochester, N. Y., and has given perfect satisfaction in every way. The cabin is well arranged, as may be seen from the drawings, and every bit of available space has been utilized. The cockpit, engine room and cabin are all finished in mahogany.

Her dimensions are as follows:

Length—		
Over all	43ft.	8 in.
L.W.L.	38ft.	
Overhang—		
Forward		6½in.
Aft	5ft.	1½in.
Beam—		
Deck	8ft.	5½in.
L.W.L.	8ft.	2 in.
Freeboard—		
Stem	3ft.	10½in.
Taffrail	2ft.	10¼in.
Least	2ft.	6 in.
Draft—		
Hull	2ft.	9½in.
To rabbet	2ft.	5½in.
Propeller	3ft.	5½in.
Displacement	19,860.00lbs.	
Pounds per inch at L.W.L.	1,125.92	

Her keel is of oak 8x8in. All her ribs are steam bent. Stem and stern posts are also steam bent. She carries 1,800lbs. of outside lead ballast.

A New Boat for the 25ft. Class.

Last season Rochelle had everything in the 25ft. class pretty much her own way, and the news that there is to be an addition to the class is most welcome, particularly as she is to be a centerboard boat.

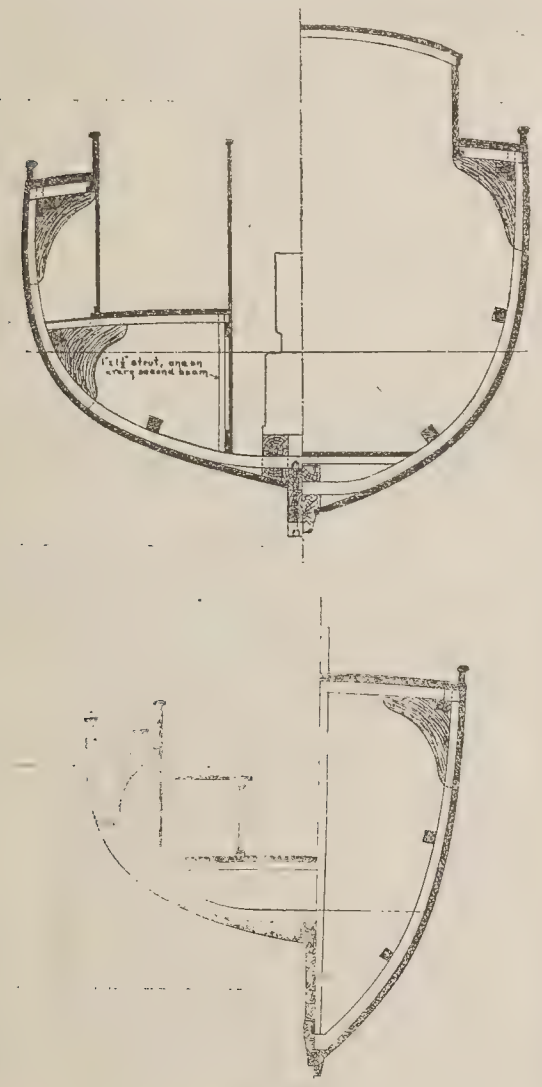
The newcomer will be from a design made by Mr. Charles D. Mower, and is for a gentleman well known in yachting circles, but whose name is withheld for the present. Mr. Mower has had wide experience in designing and sailing centerboard boats, and he is well known as the designer of Vitesse, Duchess and Heiress, all very successful boats. These boats are of a type that Mr. Mower has done much toward developing, and his new production will contain many ideas that he brought out originally in Vitesse. The new boat is a very shippy looking craft, her long overhangs adding much to her appearance, as they are particularly well balanced. The cabin house is low, being only 12in. high, and is 9ft. long, giving 4ft. headroom under beams. The cockpit is 8ft. long and is watertight; the deck is carried in to make the

cockpit seats. To strengthen the boat amidships, two deck beams run across the boat at the after end of the cabin. She will steer with a tiller, and the rudder will be hung on the deadwood. The centerboard is of wood, and will be weighted with 300lbs. of lead. There will be 1,000lbs. of outside lead ballast, which will make the boat practically non-capsizable. There will be some inside ballast for trimming. She will carry a jib and mainsail rig, and will be fitted with hollow spars and a short bowsprit. All blocks and cleats will be of metal, and her halliards will be of wire.

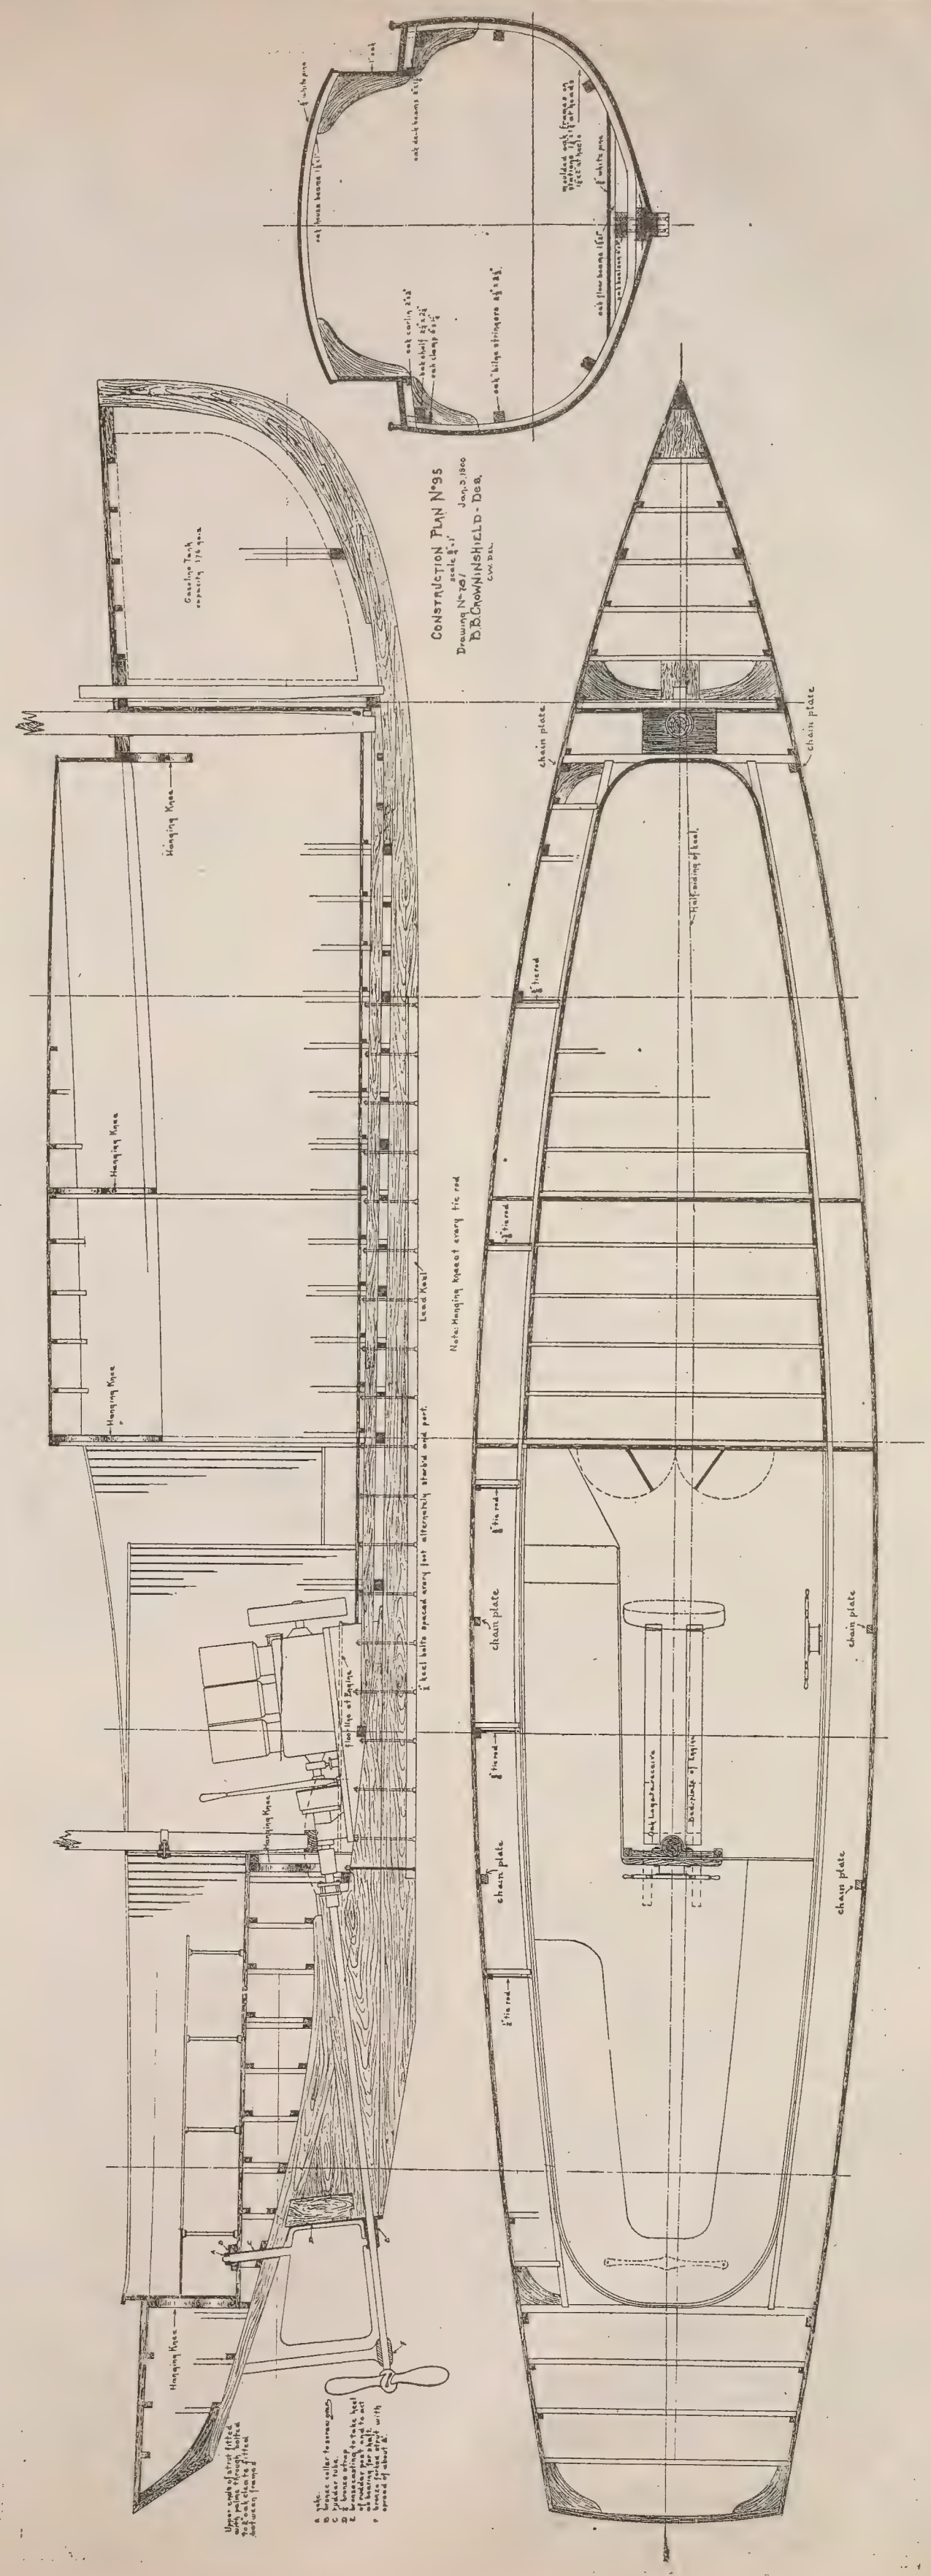
Her dimensions are as follows:

Length—	
Over all	37ft. 7in.
L.W.L.	20ft. 3in.
Overhang—	
Forward	8ft.
Aft	9ft. 4in.
Beam—	
Extreme	9ft. 5in.
L.W.L.	8ft. 8in.
Freeboard—	
Bow	2ft. 9in.
Taffrail	2ft.
Least	1ft. 8in.
Draft—	
To rabbet	1ft. 3in.
Extreme	2ft. 1in.
Board down	6ft.
Sail Area—	
Mainsail	670 sq. ft.
Jib	150 sq. ft.
Total sail area	820 sq. ft.

The boat is built in accordance with the cabin and scantling restrictions for the 25ft. class of the Y. R. A. of Long Island Sound. Her frames are of oak, steam bent, 1¼x1½in. and spaced 9in. on centers. The planking is of cedar ⅞in. thick, and she will be copper fastened throughout. Her deck beams are of spruce 1x1½in. and spaced 10in. on centers. The deck planking is of pine, ¾in. thick. The deck and the top of the cabin house are to be covered with canvas. Her topsides will be painted black with a gold stripe, and the bottom will be painted a light green.



ANNA—SECTIONS.



ANNA—CONSTRUCTION PLANS.

Our Boston Letter.

BOSTON, Jan. 19.—Capt. Haff and Capt. Watson have for the past two days been in consultation with B. B. Crowninshield and Adrian Wilson, in regard to the cut of some of the light sails for the Boston Cup defender. An argument over the cut of the jib topsail took up nearly the whole of Friday morning. It was decided to change the cut of the club topsail. Capt. Haff said that the club of the club topsail on Volunteer extended 23ft. beyond her topmast head. The topsail which Crowninshield had designed for the Boston boat was not quite so lofty, but the designer saw that he could carry a few feet more without difficulty, so it was agreed that the topsail would be enlarged. Like Volunteer's, the club will extend 23ft. beyond the topmast head.

Saturday afternoon the two captains and B. B. Crowninshield visited Lawley's and looked over the plant. They inspected the new mould loft and had a look at the hollow spar which is being turned out for the boom of the Boston boat. While there, Capt. Haff made a great find for second mate in Frank J. Miller. Mr. Miller is considered one of the best light sail men on large yachts in the country. Although a native of Bremen, he has for several years been a citizen of the United States. He was with Capt. Haff in Volunteer and later in Defender. He has sailed on Marguerite, Lasca, Yampa, Constellation and many of the larger yachts in this country. He brought Astrild around from New York last fall and cleared her out for hauling out. His brother, Lem Miller, was on board Defender and afterward on Columbia in 1899.

Capt. Haff says that he has selected several men for his crew, but that no articles have been signed yet. He will probably go to Deer Isle within a few days to get some of

the men who have been with him on former boats. The Deer Isle men are fond of him, and there is no doubt that he can get as many hands as he wants.

Last week the big stick from which the hollow boom will be made was towed over from Pigeon's Basin and afterward placed in the west shop at Lawley's. It is of Oregon pine, and is a beautiful piece of wood. After it had been squared, it was blocked at the middle and shores were put under each end. It took nearly two days to saw through it. The two halves have been lowered and now rest upon blocks. The work of cutting out the heart is now going on and will probably be finished some time during the week.

It is not expected that this spar will be finished up before the last of May or the first of June. Wooden spars are only to be kept for spare ones, to be used in case of accident or if the steel spars should prove in any way a failure. The stick, in the rough, measured a trifle over 111ft. It is expected that about 3ft. will be taken from this, leaving the spar about 108ft. long. Mr. Lawley expec s that the spar will season very evenly, and is much pleased with its general appearance, though the wood is now perfectly green.

The keel is to be cast in three sections, the bottom, the sternpost and the forward part of the keel running up to the forefoot. The pattern for the bottom of the hollow trough has been made and was last week shipped to the Victor Metal & Casting Company, at East Braintree. It has the appearance of a small skiff or a canoe with a decided tumble-home to the topsides. It has moulds placed much in the same position as in yachts. The patterns of the sternpost and the forward part of the keel are now being turned out and will be shipped to East Braintree early in the week. It is expected that all the parts of the outline of the keel will be finished about the same time, in ten days or two weeks.

The steel bulbed angle bars arrived at the Atlantic Works last week. With the exception of a few bars, all of the metal for the frames has arrived. In the two weeks that it will take to turn out the parts for the keel, many of these angle bars can be turned into shape, and upon the arrival of the parts from East Braintree, the construction of the boat should proceed rapidly. The steel bolts which will be used in the construction have been sent to the Atlantic Works.

The keel of the Pynchon syndicate defender for the Canada cup has been set up at Lawley's. By this time the moulds should be all in place and ribbanded off. There is a generous block of lead on the keel. The filling of the keel is hard pine and the keelson is oak. Hanley says that he has an order from a Chicago syndicate to build a centerboard defender for the Canada cup. This will be welcome news to Mr. Pynchon, who has been desirous of having another trial horse built besides Illinois.

There is considerable doubt whether the members of the Annisquam Y. C. will build 18ft. knockabouts or keel 21-footers. They would like to take up the 18ft. knockabout class, but there are many members who desire a larger boat with a greater sail spread, in which they can compete more generally in the races. One of the members has been talking boat with designer Crowninshield. He has inspected the plans and model of Sumner H. Foster's new Y. R. A. 21-footer. If he should build a 21-footer, it is likely that she would conform to the restrictions of the Massachusetts Y. R. A., and he expects that two more boats for the same class will follow.

The completed list of the officers and committees of the Hull-Massachusetts Y. C. for 1901 is as follows: Com., E. P. Boggs; Vice-Com., E. P. Boynton; Rear-Com., J. L. Sturtevant; Sec'y, Wm. Avery Cary; Treas., John L. Amory; Regatta Committee, Louis M. Clark, W. E. Sherriffs, L. B. Flint, H. N. Nute and John L. Amory. The Executive Committee is composed of the three flag officers, the Secretary and the Treasurer and J. R. Hooper, H. J. Thayer, J. W. Dutton and E. D. Ver Plank. The Membership Committee is composed of the same officers ex officio and Chas. Hayden, H. S. Potter, J. A. Barby, Jr., and Paul F. Folsom. The House Committee will be appointed by the Executive Committee. No fleet captain has yet been appointed, but it is expected that the Commodore will reappoint H. J. Thayer.

Kiley's Marine Agency has sold the 40ft. cabin naphtha launch Pet to Edwin Junkins, of Providence, and a 21ft. launch to Frederick Dutton, of Boston.

The schooner Marguerite has been sold to Prescott Hall Butler, of the New York Y. C. Capt. George Barry will probably remain in charge of her.

On Monday evening the annual ball of the Mosquito Fleet Y. C. will be held at Paul Revere Hall.

The 50ft. steamer which was designed by T. F. Poekel, of Lawley's, for use in Southern waters, has taken form rapidly. It was expected that she would be all ready to ship to New York Sunday night, from which place she will be carried south on the deck of a steamer.

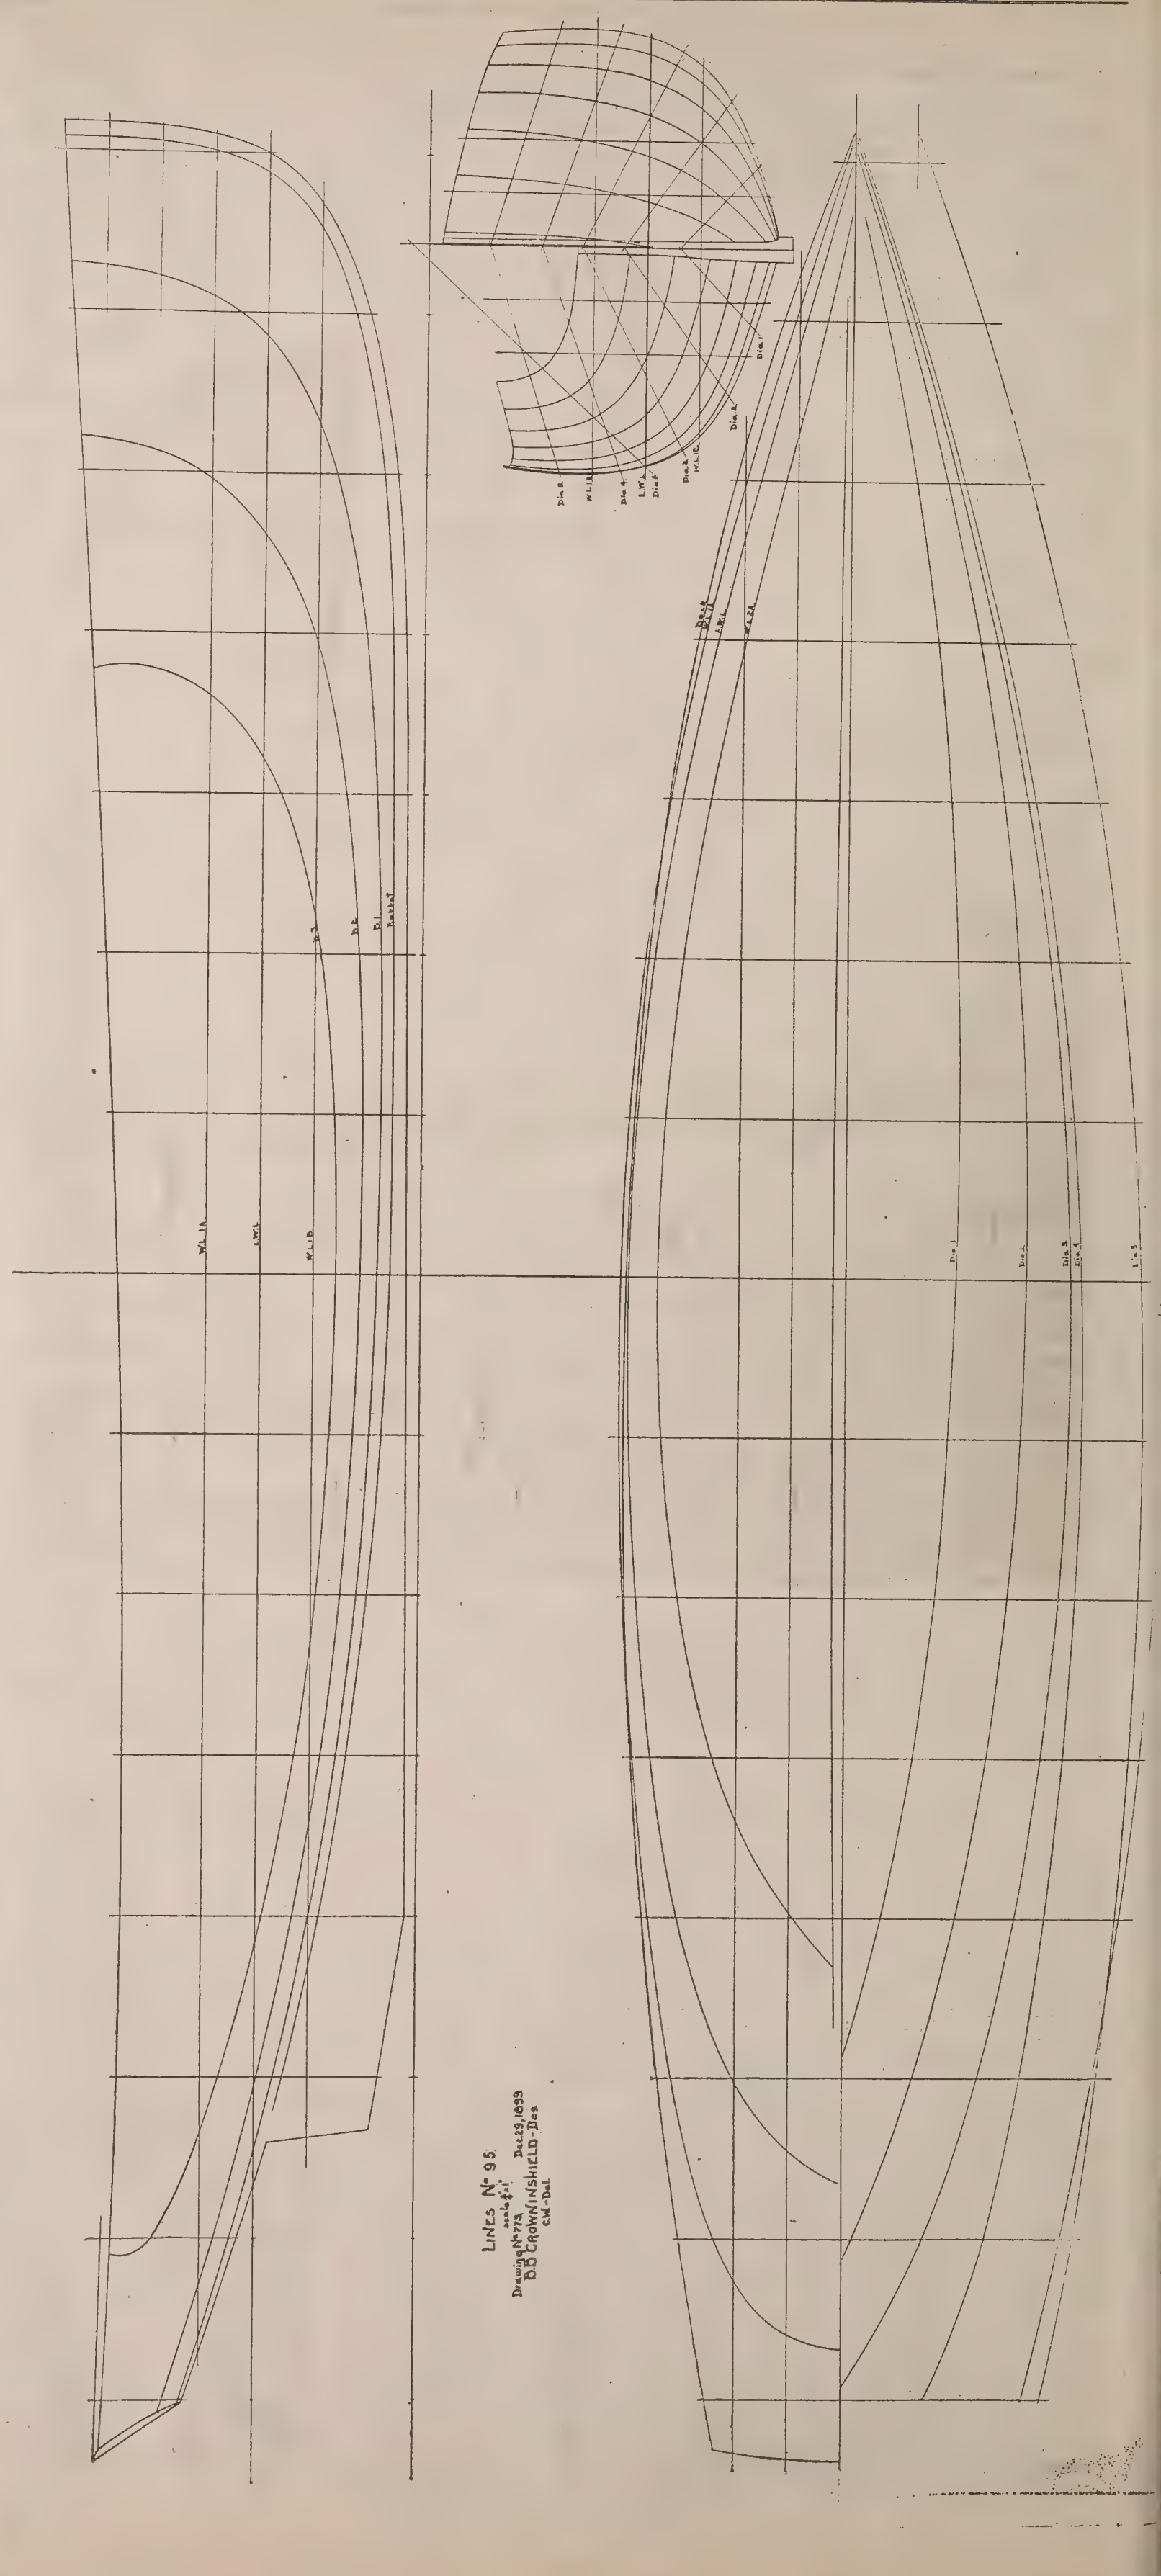
JOHN B. KILLEEN.

The Yachtsmen's Club.

THE annual meeting of the Yachtsmen's Club will be held on Feb. 12. The Nominating Committee, Frank Bowne Jones, Charles P. Tower and E. M. MacLellan, has prepared the following ticket: Pres., David Banks; Vice-Pres., Fred M. Hoyt; Sec'y, Edward M. MacLellan; Treas., Philip G. Sanford; Trustees, Class of 1903, Clendenin Eckert; Class of 1904, Hazen L. Hoyt and Charles T. Pierce. John F. Byno, who died last week, had agreed to give a course of lectures on "Knots and Splices." These will now be given by Herman White, who was foreman for Mr. Byno. On Wednesday evening Clinton H. Crane will lecture on "Cruising Yachts: Their Design and Construction." Henry J. Gielow will lecture on Feb. 6 on the "Steam Yacht," and on Feb. 20 William Gardner will lecture on "Racing Yachts." The lectures on "Knots and Rigging" are every other Wednesday, the first having been delivered on last Wednesday.

Twenty members have been elected during the last ten days. The latest proposals are Henry F. Lippitt, N. Y. Y. C.; Charles Lane Poor, Shelter Island Y. C., and Winfield L. Tucker, Hull-Massachusetts Y. C.

The steam yacht Shemara, owned by Mr. A. L. Barbour, N. Y. Y. C., arrived at Miami, Fla., on Jan. 21.

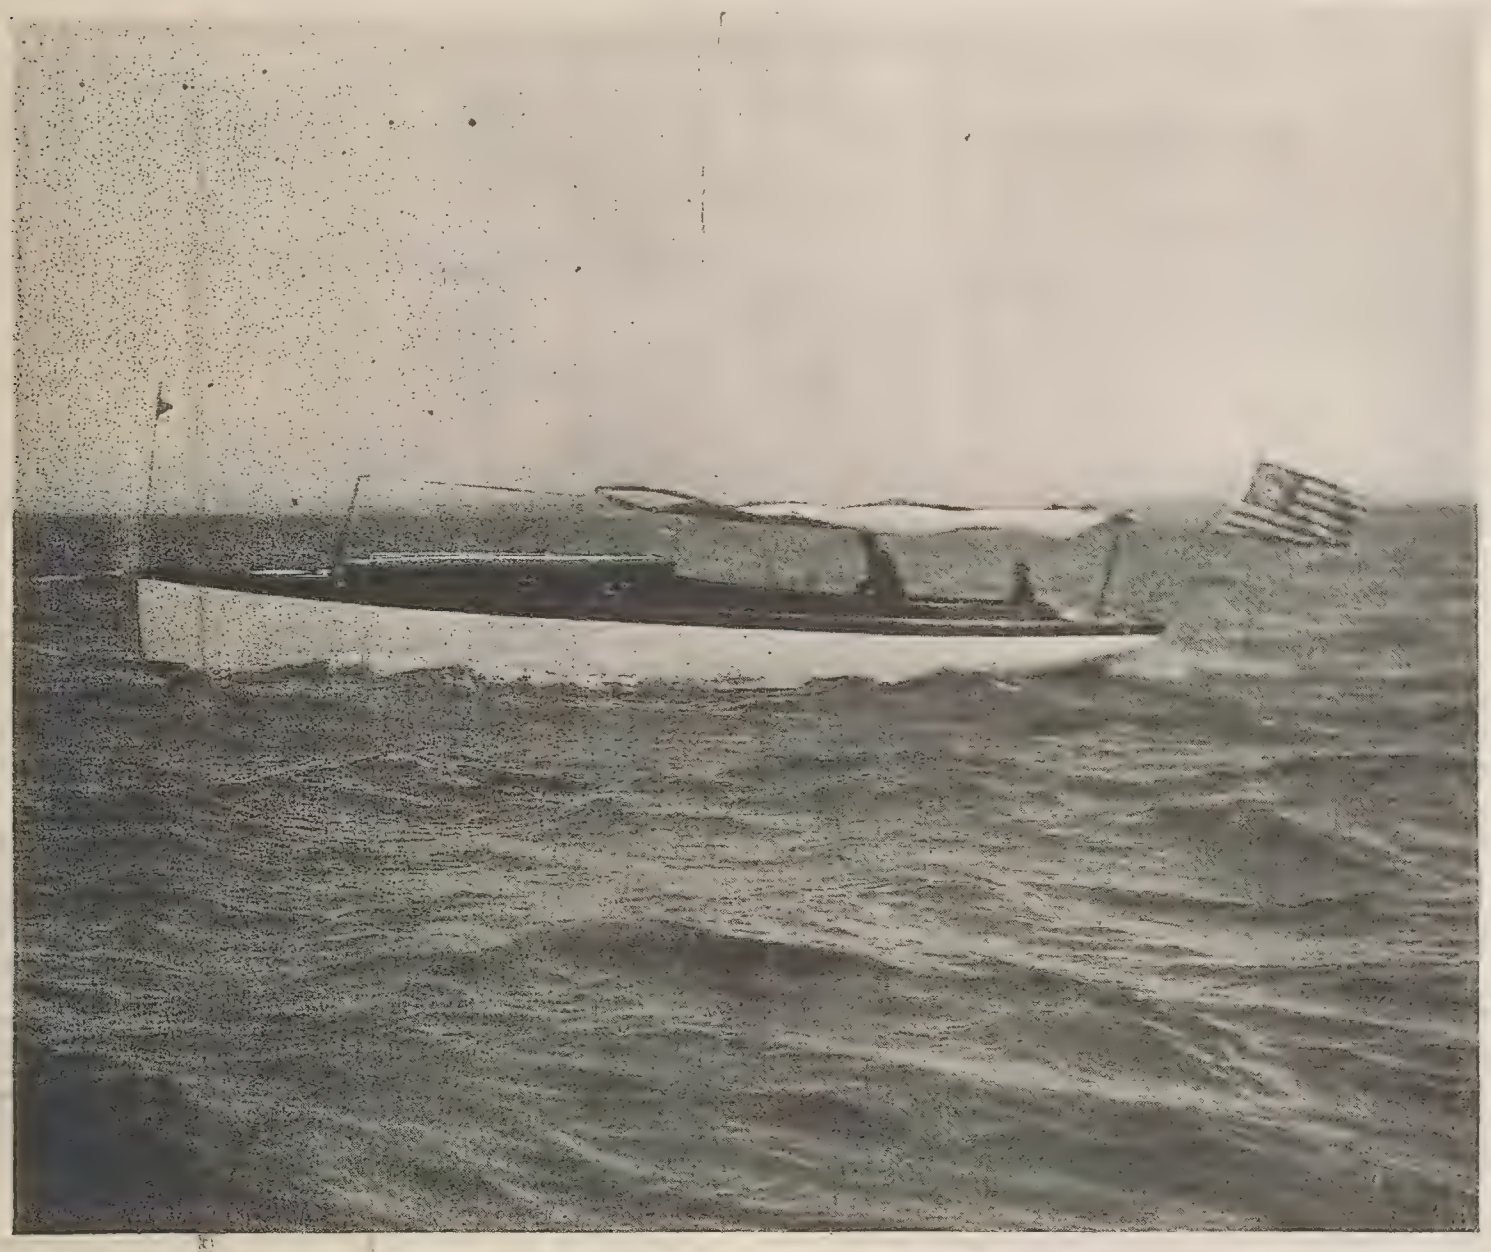


The New Home of the N. Y. Y. C.

AT eight bells on the morning of Jan. 19 the burgee was hoisted aloft on the new home of the N. Y. Y. C. and the building was formally opened to its members, the old house at 67 Madison avenue being permanently closed at midnight the preceding day. The new club house is located on the north side of West Forty-fourth street between Fifth and Sixth avenues.

After over two years of careful study and attention, Mr. Whitney Warren, the architect, has completed his work on what is conceded to be the finest yacht club house in the world. Mr. Warren has had entire charge of the building from the laying of the foundations to the designing of the linen and china, and the result is that the work is perfectly harmonious throughout.

The exterior of the building is modern French Renaissance, and conveys even to the unpracticed eye the purpose for which the building has been constructed. Although the height of the building is really six stories, the effect is that of a low structure, as the three top stories are set back some distance, making a sort of terrace, which is fitted up for the use of members on hot summer nights. This terrace will be made most attractive with palms and shrubbery, and along an arbor built at the bottom of the fifth story will be trained vines that will be allowed to run to the top of the building. The material used on the façade is Caen stone imported from Normandy, a sort of cream colored limestone which is easily worked when first quarried, but hardens rapidly with age. The first, second and third stories are marked with appropriate and striking



ANNA——Designed by B. B. Crowninshield for J. B. Cornwall.

ornamentation. The prominent feature of the front of the building is the three large windows which light the model room. They have immense circular panes above, and below are made to resemble the sterns of old Dutch vessels, the effect being very unique.

On entering the building, the visitor finds himself in a large apartment, two stories high, floored with marble, the staircase being directly opposite the entrance leading to the next floor through two marble columns which support the ceiling. The balustrade on the stairs and the landing is a conventionalized design carved in Caen stone, representing waves curling over and breaking, with sea growths entwined through it. On the east wall, hanging above the stone wainscoting, is a large tapestry portraying the defeat of the Spanish Armada. On the south and west walls are hung paintings of former Commodores J. Pierpont Morgan, E. A. Stevens, J. C. Stevens and George F. Schuyler. On the right of the stairs is the office, and on the left the entrance to the bar. A short flight of stairs lead from the left side of the hall into the grill room, which is 68ft. long by 30ft. wide, and is made to represent the "'tween decks" of an old ship. The room is most effective, and the work accurate, as it was executed under the supervision of a ship's carpenter, the deck beams, knees, timbers and planking all showing fastened with treenails, rivets and bolts. Although the deck is crowned, it was found to be impracticable to give the floor the contour of the sheer, so the idea was given up, but the effect is gained by means of corrugated glass placed in the doors and windows. The room is lighted by wrought iron lanterns hanging from overhead and others sunk in the planking to give the effect of portholes. The woodwork is of unfinished oak and the tables, chairs and seats that run around the sides of the room are of the same material. In the center of the west wall is a huge fireplace with a large copper hood where the grill room cooking will be done. On the walls are hung many valuable prints of the older yachts. At the south end of this room is the back board from the gig of the old schooner Gimcrack, the first flag ship of the club, aboard which the club was organized. At the north end of the grill room is the entrance to the billiard room, which is 45ft. long and 28ft. wide, and is wainscoted in quartered oak, and above this the walls are covered with sea green burlap, the hangings being of red. The room accommodates four tables. A sort of companionway leads from the east side of the billiard room to the glass domed palm room, which is 25ft. in diameter; it can also be reached from the landing at the head of the main stairway.

A large electric elevator, around which winds the staircase, leads to the next floor. Here the model room is located; it is 96ft. long, 45ft. wide and 26ft. high, with a balcony running around the east, west and north sides; this room is finished in oak, and the balcony is supported by colored and gilded dolphins. On the west wall is the fireplace, an immense affair of stone weighing over forty tons. Hanging in front of the fireplace is the model of an old sloop-of-war, on which the club places great value. On the left of the fireplace is a large Flemish oak chest inlaid with coats of arms which was presented by one of the club members. The ceiling is formed by three large panels, the center one of cathedral glass, and helps materially to light the room. On the walls are hung the many valuable models, and on the backs of the settles and on the tables will be placed the full-rigged models, which are now on the way back from the Paris Exposition. The effect of the model room viewed from any point is magnificent and impressive. Opening from the model room balcony on the east side is the mezzanine floor, by means of which the card room, 35x28ft., is reached. The entire front of the third floor is given up to the library and chart room. The library is 46ft. long and 32ft. wide. The books are well arranged, and each division is marked with the subject of the books it contains. The chart room, which adjoins the library, is 34ft. long and 28ft. wide. Both of these rooms are finished in natural oak with red hangings and furnishings. Owing to the large size of the prominent rooms, it was necessary to have the rugs made, and it took over a year to weave them. On this floor are the rooms of the secretary, treasurer, superintendent and several private dining rooms. The latter rooms are finished in mahogany, and the walls are a deep blue with gold decorations. The fourth floor contains one square room, from which large French windows open on the terrace. There are also a number of private rooms on this floor. The upper floors contain private rooms for the members, while the servants are on the top floor. In the basement are dressing rooms and baths, also the locker rooms. The kitchen, store room, ice house, wine rooms, pantries and waiters' dressing rooms are also here. The west side of the cellar is taken up with the boiler and machinery; under the sidewalk is a coal vault capable of holding 500 tons. The heating apparatus is so regulated that an even temperature may be had throughout the building.

The ground occupied by the club house is 75ft. wide and 100ft. deep. It was the generous gift of Mr. J. Pierpont Morgan, and cost $148,000. The building itself cost $350,000 to erect, and only the club house committee know the expense of the furnishings.

Secretary Oddie submitted the following statistics for the consideration of the club on the eve of taking possession of the new club house:

The club house in the Elysian Fields was moved into July 15, 1845.

The first club book was published in 1846, when the club had 122 members and 12 yachts.

In 1853 there were 159 members enrolled and 14 yachts.

In 1861 there were 488 members and 25 schooners and 22 sloops. Two of these schooners were offered to the Government and accepted.

On June 10, 1868, the club occupied the N. H. Wolfe cottage, Clifton, S. I. It then had 278 members, 228 schooners, 13 sloops and 1 steamer.

In 1869 there were 383 members on the roll, 29 schooners, 20 sloops and 4 steamers.

In 1871 the club moved to the southwest corner of Madison avenue and Twenty-seventh street, where there were 452 members on the books, 37 schooners, 14 sloops and 8 steamers.

On May 1, 1884, the club moved to No. 67 Madison avenue. It had then 390 members, 50 schooners, 23 sloops, 35 steamers and 6 launches.

There are now 1,495 members on the club's roll and 80 schooners, 119 sloops, cutters and yawls, 174 steamers, 3 naphtha and 19 other launches in its fleet.

New Home of the Chicago Y. C.

WHEN the Canadian yachtsmen come to compete for the Canada cup in August they will be entertained in the beautiful new home of the Chicago Y. C. The proposition to build a new house had been discussed many months before it was finally decided to build, and when the ball was fairly started rolling at one of the smokers of the club, it was kept going until enough had been subscribed to make the erection of the house a certainty. It is to cost between $17,000 and $20,000 and will be located opposite Monroe street just outside the park breakwater. Work upon the substructure will begin immediately, and the construction will be pushed to an early conclusion. The exterior will be of half timber and rough cast construction, so as to be best adapted to smoky atmosphere of the water front. A broad dock will be placed on the east front, and access to the building will be by a bridge connecting with the park breakwater. The interior will be finished in hardwood. The principal rooms will be on the main floor, and consist of an entrance hall, flanked on one side by the superintendent's desk and private office, and on the other side by the women's parlor and cloak room, and leading to a reception room 28x30ft. On the south side of the reception room is the living room, 35x40ft., with broad verandas on the south and east sides. The dining room, 24x40ft., will be on the north of the reception room, with kitchen and pantries adjoining it upon the west. The reception room is extended to take in the porch, this portion of the veranda being inclosed in glass, so that it may be used in inclement weather. There is nearly 200ft. of porch in the main floor level, with which the main rooms communicate by French windows extending to the floor. This arrangement will give great elasticity, allowing a great crowd to be cared for upon occasion, at the same time giving rooms of a size small enough to be comfortably furnished for use by the smaller number of members ordinarily in attendance. Oarsmen of the club will have their shells in the lower story, convenient to the water. Also, on this floor will be lockers, servants' dining room, store rooms, toilets and shower rooms. Servants' quarters will be in the attic, where there also will be committee rooms and bedrooms for use of members.

Yacht Club Notes.

The annual meeting of the American Y. C. was held on Jan. 15, and the following officers were elected: Com., Henry W. Eaton; Vice-Com., William H. Browning; Rear-Com., George W. Quintard; Sec'y, H. de B. Parsons; Treas., William Porter Allen; Fleet Surgeon, Samuel B. Lyon, M. D.; Measurer and Consulting Engineer, George W. Magee, U. S. N.; Trustees, Class of 1904, William H. Parsons, John Murray Mitchel land William Porter Allen.

* * *

At the annual meeting for the election of officers of the Keystone Y. C., held at the club house at Tacony, these officers were chosen: Com., Robert W. Brown; Vice-Com., Thomas McKane, Jr.; Sec'y, Samuel Y. Dingee; Treas., Frank Fisher; Board of Directors, Samuel Y. Dingee, Thomas McKane, Sr., John Hirst, Jas. Ayers, Alois J. Muller.

YACHTING NEWS NOTES.

John F. Byno, well known as a yacht rigger, died on Jan. 17. He was born in 1840 at Cape Cod, and his early life was spent in Boston, where he helped to rig many of the best pilot boats of that port. For thirty-three years he was with Francis Low & Co., and then came to New York to manage the business of ex-Congressman Philip B. Low, with whom he served ten years. He then started in business for himself, and was successful. The last yacht he rigged was Genesee, built from designs by A. Cary Smith for J. S. Watson. He also had charge of rigging the yachts Lasca, Colonia and Corsair.

* * *

Mr. C. L. Eckert, of New York, has purchased the 60ft. sloop Thistle from Mr. J. F. Fordham through the agency of Messrs. Huntington & Seaman. Mr. Eckert is to change her rig to that of a yawl.

* * *

Mr. William P. Kirk, of Toms River, N. J., has commenced work on a sloop yacht for Mr. Allan Pinkerton, which is to be completed by May 15. She is designed by Mr. H. J. Gielow. Her dimensions are: Length over all, 41ft.; length of waterline, 26ft. 9in.; beam, 11ft. 7in., and 3ft. draft. Her keel, stem and deadwood will be of oak and she will be planked with cedar. Her joiner work will be finished in natural wood. The cabin is large and is fitted with transoms so that four persons may have sleeping accommodations if necessary. There will be a galley, ice box, fresh water tanks, etc.

* * *

The steel steam yacht Alvina, built for Mr. Charles J. Fletcher, of Providence, R. I., was launched Jan. 19 from the yards of the Harlan & Hollingsworth Company. The Alvina will cost about $250,000. She is a twin screw yacht designed by Mr. A. S. Cheeseborough, of Bristol, R. I. Her dimensions are 215ft. over all, 20ft. 8in. beam and 11ft. 6in. draft. The yacht will be schooner rigged. Alvina is intended for long voyages, and the contract speed is fourteen miles an hour. Next summer she will be taken to Europe. She will be elaborately furnished; besides the five staterooms, there will be a large cabin. Electric-light and ice-making plants will be among her equipment.

* * *

Manning's yacht agency has sold for Mr. Ackerman the sloop yacht Pocahontas to Mr. John C. Sharp, of Taunton, Mass.

Capt. Chas. Belmont, commander of the steam yacht Saranac, owned by Mr. J. M. Quintard, was run down and instantly killed on the night of Jan. 18 by a trolley car in Brooklyn. Capt. Belmont was well known among yachtsmen along the Atlantic coast. He was fifty-five years old, and had been an officer on the yachts of a number of well-known yachtsmen of this city and elsewhere. He was at one time first officer of John Jacob Astor's steam yacht Nourmahal. About thirty years ago Capt. Belmont crossed the ocean in the schooner yacht Faustina, being one of the first to make the trip in such a craft.

Capt. Rhoades, of the Herreshoff defender, has chosen for his chief officer Mr. C. B. Howell, of Port Jefferson, L. I. Capt. Howell has been identified with yachting since 1878. He acted as Capt. Rhoades' mate on Defender in 1899.

Rifle Range and Gallery.

International Palma Match.

Editor Forest and Stream:

The inclosed invitation has been sent to the proper representatives of the following countries: England, France, Italy, Germany, Austria-Hungary, Switzerland, Denmark, Japan, Ireland, Scotland, Australia, Canada, Mexico, Argentine Republic, Brazil, Norway and Holland.

ALBERT S. JONES,
Sec'y National Rifle Ass'n of America.

At a meeting of the executive committee of the National Rifle Association of America, held in New York on Dec. 22, 1900, it was "Resolved, That the National Rifle Association of America hold an international rifle shooting competition in the month of September, 1901, on the range of the National Guard of the State of New Jersey, U. S. A., located at Sea Girt, and that the Centennial trophy "Palma," emblematic of the word's championship, the gift of the citizens of the United States, be again put up for competition, along with such other prizes as the committee of arrangements may decide, and that the secretary be authorized to send invitations, in the name of the Association, to the riflemen of all countries where rifle shooting is prominent, to send a team to participate in the said tournament."

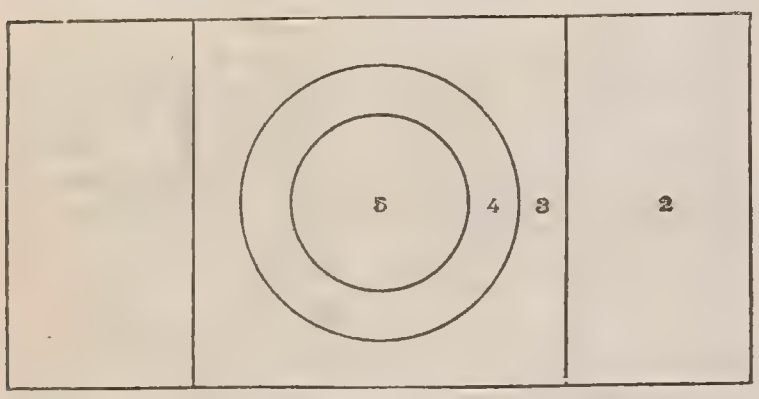
In conformity with the above resolution, I have the honor to extend the invitation herewith, and state that it would afford the National Rifle Association of America, as well as the riflemen of the United States, great pleasure to welcome to this country a teams of representative riflemen from .....

Visiting teams will be supplied, without cost by the military authorities of the State of New Jersey, with tentage, blankets and camp equipage.

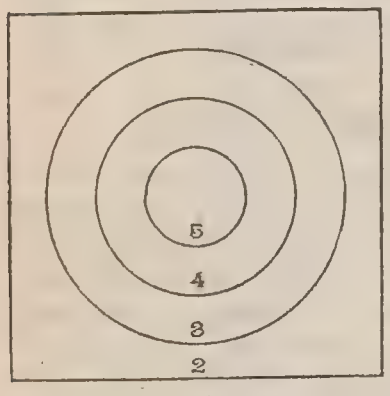
The Sea Girt rifle range is located on the New Jersey coast, midway between New York and Philadelphia. Express trains from either place, which run with great frequency, make the journey in ninety minutes. The city of Buffalo, State of New York, U. S. A., where the Pan-American Exposition will be held, is only a twelve-hour journey from Sea Girt. Visting riflemen could therefore visit the Exposition either before or after the tournament.

The Centennial Trophy Palma Match—Value of Trophy, $1,500.—For the championship of the world. The conditions are: Teams of eight men; 15 shots each at 800, 900 and 1,000 yards (731.52, 822.96 and 914.40 meters).

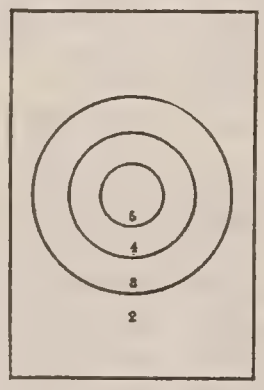
The Hilton Trophy Match—Value of Trophy, $3,000.—The conditions are: Teams of twelve men; 7 shots each at 200, 500 and 600 yards (182.88, 457.20 and 548.94 meters).



First Class.



Second Class.



Third Class.

In addition to the above are matches for regimental, battalion and company, teams with the rifle, and for troop and squadron teams with the carbine and revolver, as well as matches for club teams shooting with sporting rifles.

There will also be special prizes for best average and high scores in the world's championship match.

Rifles and Ammunition.—All teams must shoot with the national military arm of the country which they represent, without any alteration of any kind.

The ammunition must be standard, in original packages, as issued by the Government for troops in the field.

Positions allowed are: At 200 yards (182.88 meters), standing; 300 yards (274.32 meters), kneeling or sitting; 500 and 600 yards (457.20 and 548.94 meters), prone, with head toward the target; 800, 900 and 1,000 yards (731.52, 822.96 and 914.40 meters), any position.

Targets.—The targets to be used in the world's championship match and the dimensions and count on same are as follows:

Third-class target, 4 by 6 feet (3.65 by 5.48 meters); 200 and 300 yards (182.88 and 274.32 meters). Bullseye, 8 inches (0.20 meter) in diameter; center, 20 inches (0.50 meter) in diameter; inner, 32 inches (0.81 meter) in diameter; outer, remainder of target.

Second class target, 6 feet (5.48 meters) square; 500 and 600 yards (457.20 and 548.94 meters). Bullseye, 22 inches (0.55 meter) in diameter; center, 36 inches (0.91 meter) in diameter; inner, 48 inches (1.21 meters) in diameter); outer, remainder of target.

First class target, 12 by 6 feet (10.96 by 5.48 meters); 800, 900 and 1,000 yards (731.52, 822.96 and 914.40 meters). Bullseye, 3 feet (0.91 meter) in diameter; center, 4¼ feet (1.32 meters) in diameter); inner, 6 feet (5.48 meters) square; outer, remainder of target.

A complete programme of events will be sent later.

Hoping to have the pleasure of welcoming to the United States a team of sharpshooters, I remain, respectfully

Lieut. Albert S. Jones, Sec'y N. R. A. of A.,
Care Adjutant-General, State of New Jersey, Trenton, N. J., U.S.A.

Executive Committee: Maj.-Gen. Wesley Merritt, U. S. Army; Brig.-Gen. George W. Wingate; Brig.-Gen. George H. Harries, Commanding District of Columbia National Guard; Brig.-Gen. Bird W. Spencer, Inspector-General of Rifle Practice, State of New Jersey; Brig.-Gen. John S. Saunders, Adjutant-General, State of Maryland; Col. James M. Rice, Illinois National Guard; Lieut. Albert S. Jones, New Jersey National Guard; Nathan Spering, Esq., President Philadelphia Rifle Association.

Jan. 10, 1901.

Cincinnati Rifle Association.

CINCINNATI, O.—The following scores were made in regular competition by members of the Cincinnati Rifle Association at Four-Mile House, Reading road, Jan. 6. Conditions: 200yds., off-hand, at the standard target. Strickmeier was declared champion for the day with the good score of 88. Weather cool and cloudy, thermometer 54, wind 3 o'clock quarter:

The great national rifle shooting tournament, known as the Third Bundes Schuetzenfest, will be held in San Francisco, Cal., July 14 to 23. The ranges are at Shell Mound Park, situated on the Bay Shore, near San Francisco, with ample train service to this famous resort of pleasure seekers.

Trapshooting.

Notice.

All communications intended for FOREST AND STREAM should always be addressed to the Forest and Stream Publishing Co., and not to any individual connected with the paper.

Leading dealers in sportsmen's supplies have advertised in our columns continuously for a quarter-century.

If you want your shoot to be announced here send a notice like the following:

Fixtures.

Jan. 29.—Dexter Park, Brooklyn, L. I.—Open live-bird handicap shoot of the Parkway Gun Club.

Jan. 30-Feb. 1.—Dayton, O.—R. O. Heikes' target tournament; added money.

Feb. 6-7.—Cincinnati.—Cincinnati Gun Club's sparrow tournament. Chas. F. Dreihs, Sec'y.

Feb. 15-16.—New Orleans, La.—First annual Mardi Gras tournament of the City Park Gun Club, under the auspices of the Peters Cartridge Co. Percy S. Benedict, Sec'y, Denegree Building.

Feb. 18-23.—Hot Springs, Ark.—Tournament of the Hot Springs Gun Club; four days targets, two days live pigeons; $1,000 added. C. E. De Long, Sec'y.

Feb. 22.—Harrisburg, Pa.—Washington's Birthday live bird and target shoot of the Harrisburg Shooting Association.

Feb. 22.—Albany, N. Y.—Annual midwinter target tournament the Forester Gun Club. H. H. Valentine, Mgr.

Feb. 22-23.—Colorado Springs, Colo.—Colorado State Fish and Game Protective Association's thirteenth tournament, under the auspices of the Colorado Springs Gun Club.

March 2.—New York.—Two-week Roof Garden tournament of the National Sportsmen's Association. Capt. J. A. H. Dressel, Sec'y.

March 18-19.—Ashville, N. C.—The Peters Cartridge Company's two days' target tournament.

April 9-12.—Baltimore, Md.—Eighth annual spring tournament of the Baltimore Shooting Association; two days targets, $100 per day added; two days live birds, $500 guaranteed. H. P. Collins, Sec'y.

April 16-18.—Leavenworth, Kan.—Annual tournament of the Kansas State Sportsmen's Association.

May 7-10.—Tournament of the New Jersey State Sportsmen's Association. C. W. Feigenspan, Sec'y.

May 7-10.—Lincoln, Neb.—Twenty-fifth annual tournament of the Nebraska State Sportsmen's Association, under the auspices of the Lincoln Gun Club. W. D. Bain, Sec'y.

May 14-17.—Allentown, Pa.—State shoot of Pennsylvania State Sportsmen's Association. C. F. Kamlich, Cor. Sec'y.

May 21-25.—Springfield, Ill.—Twenty-seventh annual tournament and convention of the Illinois State Sportsmen's Association. Chas. T. Stickle, Sec'y.

May 30.—Auburn, Me.—Annual shoot of the Auburn Gun Club.

June 5-7.—Circleville, O.—Under auspices of the Pickaway Rod and Gun Club, annual tournament of the Ohio Trapshooters' League. G. R. Haswell, Sec'y.

June 11-13.—Sioux City, Ia.—Seventh annual amateur tournament of the Soo Gun Club. W. F. Duncan, Sec'y.

June 17-20.—Warm Springs, Ga.—Southern Interstate tournament; two days targets, two days live birds. Chas. L. Davis.

June —.—Columbus, Wis.—Tournament of the Trapshooters' League of Wisconsin. First week in June.

July 23.—Dexter Park, Brooklyn, L. I.—Annual clambake and handicap merchandise shoot at targets. Eugene Doenick, Sec'y.

Newark, N. J.—South Side Gun Club target shoot every Saturday afternoon.

Chicago, Ill.—Garfield Gun Club's live-bird trophy shoots, first and third Saturdays of each month. Grounds, West Monroe street and Fifty-second avenue.

CONTESTS AT INTERSTATE PARK.

Jan. 29.—Interstate Park.—John S. Wright's live-bird handicap shoot.

April 1-5.—Interstate Park, Queens, L. I.—The Interstate Association's ninth annual Grand American Handicap Tournament at Live Birds.

June —.—Interstate Park, Queens, L. I.—Forty-third annual tournament of the New York State Association for the Protection of Fish and Game.

Monthly contest for the Dewar trophy till June, 1902; handicap; 25 live birds; $5 entrance. First contest took place June 20, 1900.

Interstate Park, Queens, L. I.—Two miles beyond Jamaica, on L. I. R. R. Trains direct to grounds. Completely appointed shooting grounds always ready for matches, club shoots or private practice. Café and hotel accommodations.

Interstate Park, Queens, L. I.—Weekly shoot of the New Utrecht Gun Club—Saturdays.

INTERSTATE ASSOCIATION CONTESTS.

April 1-5.—Interstate Park, Queens, L. I.—The Interstate Association's ninth annual Grand American Handicap tournament at live birds.

May 8-10.—Memphis, Tenn.—Interstate Association's target tournament.

July 23-26.—Interstate Park, Queens, L. I.—The Interstate Association's second Grand American Handicap target tournament; $1,000 added money. Edward Banks, Sec'y.

June 19-21.—Cleveland, O.—The Interstate Association's tournament under the auspices of the Cleveland Gun Club.

DRIVERS AND TWISTERS.

Club secretaries are invited to send their scores for publication in these columns, also any news notes they may care to have printed. Ties on all events are considered as divided unless otherwise reported. Mail all such matter to Forest and Stream Publishing Company, 346 Broadway, New York.

The programme of the Rolla O. Heikes tournament, Jan. 30, 31 and Feb. 1, at Dayton O., provides a like programme for each day, namely, eleven events, of which five are at 15 targets, five at 20 targets, and one at 25 targets. The entrance is based upon 10 cents per target. Five dollars are added to each event, excepting the sixth, at 25 targets, which has $10 added. To the first high gun of the entire programme the prize is a silver pitcher; to second, $10; to third, $6; to fourth, $4. Mr. J. J. U. M. C. Hallowell will be in charge of the cashier's office. Mr. H. M. Altick will have charge of the traps. The programme presents further information as follows: "Shoot will start promptly at 9 A. M. at the grounds of the Buckeye Gun Club, to reach which take a red car, in front of Phillips House, for Fairview Park. Cars run every seven minutes. Headquarters for shooters, the Phillips House. One set Sergeant system, one magautrap. No handicap. Nobody barred, except for using black powder or 10-gauge guns. Interstate rules to govern. Target loads for sale at the cashier's office. A first-class hot dinner served on the grounds each day. Fifteen-target events, 40, 30, 20 and 10. Twenty and twenty-five target events, 30, 25, 20, 15 and 10. Traps will be in order, and grounds open for practice, Tuesday, Jan. 29. Plenty of shelter and heat for any kind of weather. Contestants making 90 per cent. or more the first or second day will be charged $2 extra entrance for the succeeding day, which will form a purse to be divided equally among the men shooting through the entire programme who have on neither the first nor second days averaged 90 per cent. or more."

Mr. J. A. R. Elliott was attacked by the prevalent la grippe soon after his match with Mr. R. A. Welch, Jan. 8, and was confined indoors several days thereafter. On Wednesday of last week he was a visitor in the gun colony, but was still weak, though nicely convalescing. In conversation with him on the topic of the Brewer challenges, concerning the importance of which a part of the daily press of New York had most exaggerated opinions, he justly stated that from his position in the trapshooting world there was no reason why he should seek a match with Mr. Brewer. If the latter desired a match with him the proper procedure was to challenge him directly. However, he had no objection to a match with Mr. Brewer, and would authorize the following proposition to Mr. Brewer, namely, to shoot three 100-live-bird matches, 30yds. rise, $500 each, $1,000 on the total scores of the three matches, winner to take all, loser to pay all, in the third or fourth week of March, on some grounds of modern complete equipment. The foregoing was said in a quiet, resolute manner, which was entirely devoid of the theatrical press agent style which has been so conspicuous in Mr. Brewer's challenge generalities.

To Chicago belongs the honor of discovering a new and effective handicap, which, upon further trial, may establish the much-to-be-desired condition wherein every man shoots alike. The Chicago American of Jan. 11 states: "Mayor Carter H. Harrison, handicapped by an arm sore from vaccination, managed to finish a close second at the prize shoot of the Chicago Sharpshooters' Association yesterday, held at the club park at Palos Springs. He punctured a target with a rifle at 200yds. accurately enough to score 232 points out of a possible 250. John Broekman got the first and honor prize."

Mr. John S. Wright announces the programme for his live-bird shoot on Jan. 29, at Interstate Park, Queens. There will be four events, at 5, 7, 10 and 15 live birds, $3, $5, $7 and $10 entrance, birds included. Class shooting will govern the division of the moneys. Each event will be a handicap. There will be misses as no birds and kills in addition to the distance handicap, in the 10 and 15 bird events. Mr. Wright will have a full staff of expert assistants. He intends to make the shoot pleasant and interesting to his friends.

At Dexter Park, Brooklyn, L. I., on Friday of this week, beginning at 11 o'clock, Messrs. "Job Lot" and C. Steffens have arranged to shoot a match at 100 live birds each for $400, some of Mr. "Job Lot's" friends picking him out and backing him to meet Mr. Steffens. Both men are good shots, and the race, therefore, will be of special interest. On the same day Messrs. G. E. Loeble, at 28yds., and C. Steffens, at 30yds., both of the Jeannette Gun Club, shoot a race at 50 live birds each, for $100.

There was a good attendance of the Riverton Gun Club members at Riverton, N. J., on Saturday of last week, notwithstanding that the weather was blusteringly wintry. The northwest gale, sweeping across the grounds, carried the birds before it with astonishing rapidity, notwithstanding which several straight scores were made. There is a rumor that this week there will be a couple of interesting matches shot on the Riverton Gun Club's grounds.

The energetic manager of the Interstate Association, Mr. Elmer E. Shaner, announces that the second annual Grand American Handicap target tournament of the Interstate Association will be held at Interstate Park, Queens, L. I., on July 23 to 26, inclusive, and that thereto will be added $1,000 in money. Also that on June 19 to 21, at Cleveland, O., an Interstate Association tournament will be held under the auspices of the Cleveland Gun Club.

The second contest of the series, between teams of the Baltimore Shooting Association and the Keystone Shooting League of Philadelphia, at Baltimore, Md., on Thursday of last week, sixteen men to a team, resulted in a victory by the latter, the scores being 283 to 274. They now are a tie, the Keystone League having won the first contest by 9 birds. The grounds of the Riverton Gun Club were talked of for the final shoot.

On the grounds of the Forester Gun Club, Newark, N. J., Feb. 22, Messrs. Wheeler and Fleming have arranged to shoot a match at 10 live birds each for a stake, commencing at 9 o'clock. For the afternoon of March 9 Mr. Fleming has arranged to shoot a match with Mr. C. Smith, at 50 targets, for a $10 stake. Mr. Fleming is the secretary of the Forester Gun Club.

The team match at live birds between trapshooters of New York and New Jersey is making progress. Messrs. Banks and Feigenspan are in active correspondence on the subject, and there is every probability that the match will be arranged to take place in the latter part of February next. The number of men, birds, etc., are still under consideration.

Entries to the Grand American Handicap are taking action to a certain extent, even at this early date, and the signs of the times indicate that it will be a great contest this year, as in the years of the past. The preliminaries are being arranged with that deftness, thoroughness and quickness so peculiar to this great organization.

On Tuesday of this week Messrs. R. A. Welch and Harold Money shot their second match on the grounds of the Carteret Gun Club, Garden City, L. I., for $500 a side. Mr. Welch won, the score being 88 to 83. In their prior match, they tied on 89. The conditions are unusually difficult, the boundary being 30yds.

The main event of the Parkway Gun Club's tournament, to be held at Dexter Park, Jamaica avenue and Enfield street, Brooklyn, Jan. 29, commencing at 10 o'clock, is at 15 birds, $6 entrance, birds extra. The sweepstakes are open to all shooters.

The FOREST AND STREAM is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday and as much earlier as practicable.

Under date of Jan. 17 Mr. J. H. McKibben, secretary of the Peters Cartridge Company, Cincinnati, O., writes us as follows: "March 18 and 19, Asheville, N. C., two days' target tournament by the Peters Cartridge Company, of Cincinnati, O. Maj. E. P. McKissick, Battery Park Hotel, Asheville, N. C."

On Saturday of last week Mr. Justus Von Lengerke, of Von Lengerke & Detmold, started on a trip for North Carolina, to take a well-earned outing in that game-favored section. He will dally with the festive quail bird after it is duly identified by the well-bred smell-dog.

The second race of the series between the Trenton Shooting Association and the Freehold Gun Club, fixed to take place on the grounds of the former last week, did not take place, owing to the absence of the Freehold team, caused by illness and accident.

The fourth intercity ten-men team shoot between Kansas City and Omaha was won by the former at Kansas City, on Friday and Saturday of last week, by the score of 433 to 440. It was a close race. Each contestant shot at 50 birds.

Mr. Chas. L. Davis, of Warm Springs, Ga., informs us that "the Southern Interstate tournament will be held at Warm Springs, Ga., June 17 to 20; two days at targets, and two days at live birds." Mr. Davis will be the manager of it.

In the shoot of the Emerald Gun Club on Wednesday of last week, at Dexter Park, Brooklyn, L. I., Messrs. Landcake and Sands killed their 10 birds straight in the club event. There were thirty-nine contestants in this event.

The Chamberlin Cartridge & Target Co., of Cleveland, O., offers to the public a simple yet useful gun cleaner, specially devised for taking the lead or fouling out of either 12 or 10 gauge guns, or for oiling them.

Next week in the West the main shoots begin with R. O. Heikes' tournament, followed the succeeding weeks respectively by Cincinnati, O.; Indianapolis, Ind., and Hot Springs, Ark.

Mr. W. F. Duncan, secretary of the Soo Gun Club, Sioux City, Ia., informs us that his club will hold its seventh annual amateur tournament on June 11 to 13.

In the eighth trophy event of the Garfield Gun Club's shoot, Chicago, Ill., Jan. 19, Dr. Shaw, at 31yds., was the only one to kill his 10 birds straight.

The Interstate Park Handicap takes place on Wednesday of this week, commencing on the arrival of the 12:20 train from New York.

The Interstate Association's tournament at Memphis, Tenn., will be held on May 8 and 10.

The next shoot of the Oceanic Gun Club will be held on Feb. 4 at Rockaway Park, L. I.

BERNARD WATERS.

ON LONG ISLAND.

Emerald Gun Club.

Brooklyn, L. I., Jan 16.—There was a large attendance at the shoot of the Emerald Gun Club, held to-day at Dexter Park, L. I. Messrs. Landcake and Sands were the only contestants who killed their 10 straight in the club event. Mr. "Johnnie Jones" acted as scorer. The scores:

New Utrecht Gun Club.

Interstate Park, L. I., Jan. 19.—Notwithstanding that to-day was the stormiest for a while and most wintry of this season, there was a good attendance at the shoot of the New Utrecht Gun Club to-day. A handicap by distance and misses and no birds as kills were given the contestants. No. 1 was the club event. No. 3 was at 7 birds, $10. Several miss-and-outs were shot. The scores:

No. 1:
T Chapman, 28, A..2202202222— 8
S Jay, 28, B.....222220*022— 7

Baltimore vs. Philadelphia.

BALTIMORE, Md., Jan. 17.—The second of the team series of live-bird contests between teams of the Baltimore Shooting Association and Keystone Shooting League was held to-day on the grounds of the former. There were sixteen men on a side, although the conditions as originally contemplated were for ten men on a side. There were nine men on a side in the first match, and Baltimore won it by 9 birds. Two sets of traps were used, which expedited the shooting satisfactorily. Snow and a 12 o'clock wind were weather conditions encountered by the shooters. Eight men from each club were formed into a squad, each man shooting at 10 birds on each set of traps.

There was an optional $10 sweepstake, and twenty of the contestants engaged in it, a * indicating such sweepstake contestant. This made a purse of $200, which was divided 50, 30 and 20 per cent. The conditions were: Teams of sixteen men, 20 birds each man, 30yds. rise, 50yds. boundary, the losing team paying for the birds. The scores:

Boston Gun Club.

WELLINGTON, Mass., Jan. 16.—While fine weather did not grace the opening day of the Boston Gun Club's annual spring series it did not prevent ten devotees of trapshooting who were present from having a thoroughly enjoyable time. Many were the regrets at the loss of the club's lady shooter, who has since the last shoot departed for other regions, but we hope still to have the pleasure of her presence on our platform once or twice during the series.

Much interest centered in the prize match, and honors were even between Baker and Spencer, they leading, having ground to dust 25 apiece. Leroy was not much outdone, being second with 23, others trailing along in the rear with very different results. Scores:

Ossining Gun Club.

SING SING, N. Y., Jan. 19.—Only five shooters braved the 60-mile-an-hour northwest gale, with the thermometer at just 3 above zero, to-day at the regular weekly shoot. The club house faces toward the north, and the wind, laden with snow, got in its fine work. Rev. E. D. Garnsey, of Chappaqua, one of the club members, a crack shot, always shooting in the old style of gun below elbow, showed that he was of "sterner stuff" than most of the cloth by riding seven miles across country in the teeth of the gale. It was noticed that the shooters holding their guns to shoulder were handicapped seriously. In the case of I. T. Washburn, who on a calm day averages 85 per cent., the fact was most noticeable. Washburn's gun froze up after the first string, which in a measure accounts for his poor showing in the second and third.

E. D. Garnsey shot at 75, broke 46; C. G. Blandford shot at 40, broke 26; I. T. Washburn shot at 50, broke 14; Winfield Smith shot at 10, broke 4; Frank Valentine shot at 10, broke 8.

C. G. B., Captain O. G. Club.

IN NEW JERSEY.

Trenton Shooting Association.

Trenton, N. J., Jan. 16.—The members were on hand early to-day in anticipation of viewing the second race of the Freehold-Trenton Shooting Association series, but the out-of-town team failed to put in an appearance. Assistant Secretary Ellis telephoned that, owing to the illness of his father, and that another member of the team had fallen from his bicycle and sprained his wrist, it would be impossible for them to keep their engagement. This caused some disappointment as well as personal inconvenience to some of our people, as a full attendance had been requested in order to do honor to the visitors, and some of the boys dropped other matters and came down with guns and shell cases in response to the urgent summons. After some grumbling, they got started on the balance of the programme and shot until darkness put a stop to it; in fact, the ties in the merchandise event were shot under very trying conditions, as it was so dark that the targets could not be seen until they had climbed above the sky line, and well broken targets only could be counted.

Hall won the watch from Williams in this event, and certainly earned the honor. Comp ran away from the bunch in the final tie shoot-off for the Walsrode cup, lost the match race with Widmann. Billy lost his first bird and then ran 24 straight, a magnificent finish. His wife presented him with a son earlier in the day, and this no doubt caused his excellent form. His first child, a girl, was also born on a day that we had a shoot, and Billy is beginning to feel superstitious.

The weather in the early part of the afternoon was clear and bright, but later clouded up and threatened rain.

At the business meeting three new propositions for membership were acted upon. This makes a total of nine new members admitted during the past three months. The indications are bright for a good season.

GEO. N. THOMAS, Sec'y.

As in a Looking Glass,

WE have received the following from one who is cognizant of the subject, treated as follows:

While Brewer has been talking of shooting anybody in the world three matches for good large sums of money, he seems to be scarcely anxious to shoot a series of races with Jim Elliott. Shortly after the first of the year—that is, on Jan. 4—Brewer's backer, who is a Mr. W. J. Alden, of New York, wrote Elliott the following postal:

"If you will call at above address I will arrange three matches with you, to be shot after the 15th, with Brewer."

Elliott was taken with the grip after his match with Welch on the 8th inst., and did not reply to Mr. Alden's postal until a few days ago, when he wrote that if Mr. Alden wished to make matches between Brewer and himself he (Elliott) would be glad to meet Mr. Alden at the office of the W. R. A. Co., 312 Broadway, on any day and at any hour that would suit. A little more correspondence between the two decided upon 2:30 P. M. Jan. 22, as the day and hour for the meeting. The parties came together punctually, but Brewer would not shoot anywhere but on the grounds of the East Side Gun Club at Newark. Mr. Elliott naturally wished to have the matches shot at Interstate Park. Elliott's proposition was as follows:

"Three matches, to be shot Tuesday, Thursday and Saturday during the last week in March, 100 birds each match, 30yds. rise, 50yds. boundary; each match to be for $500 a side, with $500 or more on the total score made in the three matches; loser to pay for the birds and winner to take all."

Elliott has allowed Mr. Alden and Brewer until Feb. 1 in which to accept this offer.

In this connection it may be mentioned that on Saturday last, the 19th inst., Elliott met with an accident. A man running against him in a crowd at the corner of Fulton street and Broadway, Elliott, in endeavoring to ward him off, put out his right hand, and had the thumb on that hand doubled back out of joint, with the result that he is now carrying his hand in bandages, badly swollen and out of business for two or three weeks to come.

In connection with the discussion between Elliott and Brewer as to where the match should be shot, Brewer said that he wanted to be sure that the birds were strictly first class; he was then assured by a representative of the Interstate Park Association that he would be permitted to furnish the birds for each match, provided it was publicly announced that the birds were supplied by Brewer. He then said that the system of trapping the birds from a pit made good birds poorer when they came out of the dark into the light. He was then assured that there would be no objection to the birds being trapped from the score instead of from underground, thus knocking out two of his objections to shooting at Interstate Park. Thus it would seem that Mr. Brewer was seeking how not to make a match instead of how to make a match.

Keystone Shooting League.

PHILADELPHIA, Pa., Jan. 19.—A powerful winter wind was in evidence to-day, blowing from right to left across the traps. There was, nevertheless a large attendance of shooters. Birds, though hard hit, were not infrequently swept over the boundary by the gale; and this explains why no straight score was made in the semi-monthly contest for the championship challenge trophy. F. W. Van Loon was the holder. There were nineteen challengers. The conditions were 10 birds per man, 30yds. rise, sweepstake, entrance $2.50. I. W. Budd and F. McCoy were first, with 9. C. E. Geikler lost 4 birds dead out of bounds. The shoot-off of the tie was at 3 birds per man. Budd won by killing straight, while McCoy lost his second. The scores:
were first, with straight scores. The scores:

WESTERN TRAPS.

Match of Wishininne Club Members.

Chicago, Ill., Jan. 19.—Altogether the warmest thing in Chicago trap matters for this coming week is the bloody internecine war that has sprung up among certain members of the Wishininne Club, whose doings have from time to time appeared in these columns. No one seems to know just where the trouble started, but in a few days—this thing has been brewing for a month—it had attained a definite form. It might have been Bill Haskell who was guilty of the first challenge, and it might have been Charlie Dennis who first hotly resented any aspersions upon his skill with the pigeon gun. At any rate, the last few noon hours at the Wishininne Club have been spent in consistent arguments as to the shooting of everybody who meets there for lunch, not excluding Mayor Harrison and ex-Mayor Washburne. Simmered down to brass tacks, there will be a race shot at Watson's on next Tuesday—unless somebody backs out—between C. S. Dennis and W. L. Wells on one side and J. V. Clarke and Bill Haskell on the other. Mr. Clarke is a prominent banker in this city, and was this week elected president of the Chicago Clearing House, so he should have no difficulty in raising the requisite stakes, large as they are. But he has failed to cover all the money offered by the opposing faction and their friends. As much as $4 or $5 is up now. It is all for the price of the birds, 25 birds a corner, and I do reckon this will be the most fun ever happened at Watson's. Bill Haskell has bet $25 against $5 that his side wins, and has laid odds of $50 to $1 that he will not be low man of the four. Mr. Clarke has bet Mr. Dennis $5 that he will kill more with his first barrel than Mr. Dennis, and another $5 that he will kill more with both barrels. There is mony up that Billy Wells, the artist man, will be high gun, and as much up that every other fellow will be high gun. There has been very little eating done at the Wishininne meets of late, nor does there promise to be any until this feverish state of mind shall have disappeared, which may only be after the battle is fought out to the bitter end. The race will be shot as early as possible on Tuesday morning, before anybody else gets out to the grounds, this being in deference to Mr. Haskell's wish, as he is liable to feel badly if he falls into last place. At last news to-day the odds were fluctuating very rapidly and the talk getting hotter and hotter all the time. The race really will be a hard-fought one, and it is a toss-up which side will win. Wells is picked for high score, and he should beat Clarke a bird or so. Between Dennis and Haskell it is a near thing. Haskell thought for a minute he might kill 23, but the wagers persuaded him otherwise very soon. Then he said 22, but changed his mind, and at last failed to connect with a bet that he would not kill 17, and that he would not get enough to make a pint of soup. Similar propositions were floating about at a late hour this afternoon. We shall see what we shall see.

Amberg—Healy.

Another warm race will in all likelihood be shot at Watson's on the same day, between J. H. Amberg and J. M. Healy, of this city. This race is at 50 birds per man, for the price of the birds and a corned beef and cabbage dinner, the latter being expressly stipulated as part of the conditions. As in the above-mentioned race, this is a near thing on form, and it is hard to pick a winner. This race will be shot after lunch, at Watson's, and will go to fill out a good day at the park.

Crescent Club Sparrow Shoot.

Crescent Gun Club, of Chicago, will hold a two days' sparrow tournament at the grounds at Forty-seventh street and California avenue, Jan. 26 and 27. A handsome gold medal is offered in the State championship sparrow event, at 25 sparrows, $5. There will be five events daily, and a good programme is offered, with 1,000 sparrows guaranteed on hand ready for trapping. Birds to be trapped at 10 cents, five traps, one man up, 25yds. rise. Added money to the F. S. Boyden medal championship shoot.

Kentucky Gun Club Would Shoot Chicago.

Mr. Emile Pragoff, of Louisville, Ky., is in town this week for a few days, and he intimates that a team shoot could be very easily arranged, so far as the Southern end of it is concerned, between a ten-men team of the Kentucky Gun Club of his city and a team of ten men from any one Chicago gun club. This is not offered as any challenge or bluff, but just as a feeler and in perfectly good faith and good feeling. The Louisville boys would want a return race of course, and should have it, and herein lies the greatest difficulty about concluding terms. The Chicago club men all would be glad to shoot the visitors here, especially if they happened to come up at about the time of the sportsmen's show in late February, but they do not know about going to Kentucky. The members of the Chicago Gun Club are the ones to whom the proposition was first made. The Louisville men would have several good men, such as the Pragoffs, Harry Lyons, etc., and it would be no walkover for a team from any one club of this city, for the Kentucky contingent can keep on picking out pretty good ones from their list. It is to be hoped that this event will be arranged.

Two Other Team Races Off.

There was some hope of a team race between ten Milwaukee men and ten of this city, the Cream City men to come from the National Gun Club, and the Chicago team from the Garden City Club. This arrangement was open to modification in case the race took a tendency to an intercity shoot. There seems, however, to have been a considerable misunderstanding on the part of the Milwaukee boys, and Mr. Bush, of Milwaukee, who is in town to-day, says they do not ratify any challenge as coming from them, and says that perhaps the matter arose out of some misunderstood talk of a personal nature. Mr. J. H. Amberg, who had details in charge here, to-day thought that there was not likely to be any race between the two towns, though there may something turn up suddenly later on.

There was also some talk of a race with a St. Louis team, to be held at Chicago this winter, but nothing worth calling a certainty develops as yet regarding that. So, with three very good city team proposals before us, we are in the attitude of not securing any one of the three, which is too bad, as the game here could stand a little stirring up of the right sort.

E. HOUGH.

HARTFORD BUILDING, Chicago, Ill.

Garfield Gun Club.

Chicago, Jan. 19.—The appended scores were made on our grounds to-day on the occasion of the eighth trophy shoot of the season. Dr. Shaw carried off the honors of the day, being the only one to go straight in the main event. A strong S.W. wind blew directly across the traps, and the birds were an extremely fast lot, taken as a whole—as fast a lot of birds as I have seen trapped in many a day. Several visitors favored us with their presence, among whom were Dr. Kelly, of Winnipeg, Man., a genial gentleman and an excellent shot; also Mr. and Mrs. Wachsuruth, both of whom participated in one event. The attendance was only fair for our club:

Kansas City vs. Omaha.

KANSAS CITY, Jan. 19.—The fourth intercity shoot between Omaha and Kansas City wing shots took place at Washington Park yesterday and to-day, and resulted in a decisive victory for the Nebraskans by a general team score of 440 to 433.

The conditions were the same that prevailed in former shoots—ten men to a team at 50 birds to each man.

Charlie W. Budd, of Des Moines, Ia., was mutually agreed on as referee, and James Whitfield, of Kansas City, scorer.

The weather was ideal for the sport, being clear and cool, and the birds as a whole were fast to wing and rapid and strong in flight. The birds Friday were probably a shade faster than those during the last day, but not a half-dozen birds were "no-birded" out of the 1,000 trapped in the team race. This probably accounts for the poor showing made by some of the steadiest shots, notably Dick Linderman, of Nebraska, who scored only 38. Walter Allen, Bramhall, Kelly and W. W. Herman, of Kansas City, all shot in bad form, and Tom Norton did not do much better. The shooting generally was not nearly up to the standard set at Omaha about six weeks ago, when Kansas City won by a score of 455 to 451, but some of the shooters claim that the birds in the race here the past two days were considerably faster than those trapped at Omaha.

James B. Porter and Frank Beard were the first pair up, and the Kansas City man beat his opponent 3 birds on a score of 46 to 43. Will Herman and George H. Watson next met, and the latter, although a green shooter, trimmed Herman by 4 birds, placing Omaha 1 in the lead. Gus Rickmers and "Plumber" Read were next to the score, and the Dutchman put it on his Omaha rival by 1 bird. This was a very interesting match and the score of 45 to 44 admitted excellent, considering the quality of the birds.

R. Kelly, of Kansas City, next met W. Townsend, and the little fellow from Omaha made Kelly look like a selling plater, beating him by a score of 47 to 39, which put Omaha 8 birds in the lead.

Walter Allen and Frank Crabill were the next two, and again the Omaha man was victor, defeating Allen 43 to 41. Both shot in poor form, Allen getting off badly, and Crabill finishing weak.

With the score in favor of Omaha by 10 birds at the half-pole, J. W. Bramhall and Dan Bray, "the iceman," locked horns, but Bramhall was clearly out of form, suffering from a severe cold which had settled in his eyes, and Bray added 6 more to Omaha's lead, beating Bramhall 46 to 40. This put Omaha 16 birds to the good, and shooting closed for the day.

The match was resumed to-day with "Cook" Herman and Dick Linderman as opponents, and as Herman was in great form and Linderman slower than an ice wagon, the Kansas City man cut down the Omaha lead an even 10 birds on a score of 48 to 38. This set the visitors guessing, although they were still 6 to the good, and it looked like a forlorn hope.

Tom Norton and Jim Smead next faced the traps, and Smead beat the Peters representative by 4 birds on a score of 47 to 43, giving Omaha 10 birds the best of the race.

Chris Gottlieb and George Loomis were next called, and "Slob," as Gottlieb is familiarly known, beat his man in the hardest fought race of the match by a score of 49 to 48, which cut the Omaha lead down to 9 birds. Gottlieb also made the high run of the shoot, killing 48 straight.

With 9 birds to the good, Omaha presented "Old Buffalo Hump" Frank Parmelee, who was pitted against Jim Elliott's brother Dave, and there was a heap of speculation on the result, which ended in a victory for Dave Elliott by a score of 46 to 44, which cut the Omaha's lead down to 7 birds.

Each team won five of the individual races. To-night the visiting sportsmen were entertained at a luncheon and "smoker" at Herman's restaurant, and it was after midnight before the party adjourned.

Speeches were made by Judge McCauley and Carskadon, Attorney-General Boyle, Major Julian, Chris Gottlieb, Frank S. Parmelee, Mr. McDonald, and others, and the sportsmen separated with the utmost good fellowship prevailing.

There was not a single jar or unpleasant incident to mar the two days' sport, and such gatherings do much to advance the interest in trapshooting and bring big-hearted sportsmen closer together.

The scores, as especially prepared for the FOREST AND STREAM, were as follows, and give a better idea of the merits of the contestants than columns of introductory remarks could do:

F Beard, Omaha	10122212*22222122*2222012—21 21212221202*0222222122121—22—43

The Genesis of the Donation.

ST. LOUIS, Mo., Jan. 12.—*Editor Forest and Stream:* There was a time when we could get together a good amount of "added money" as an attraction at trap tournaments by selling advertising space in programmes at so much per page to the manufacturers of guns, powders, shells, etc. The last few years it has been a hard matter to sell enough pages to those people to pay for printing the programmes, let alone gathering together any "added money." Don't you think the manufacturers ought to help us out, and make up the "added money" to draw a crowd to every tournament? There is some argument on this point, and we want you to give us the benefit of your opinion. Yours truly,

AN EX-SECRETARY.

The above embodies so much of general interest that we will answer it at some length.

The manufacture of sportsmen's supplies is governed by the same laws of trade which govern other business. Business usage prescribes that, if one desires to own the goods of another, he may do so by purchase or trade, buyer and seller agreeing. This however, does not apply to matters of charity. It is therefore self-evident, if the foregoing is admitted, that clubs and individuals have no claims whatever on that material evolution of modern trapshooting art, obtained by various processes, called euphemistically "a donation."

From time immemorial, however, the donation—from the other fellow—has been popular, and eagerly promoted among all races and classes of men. The profound appreciation of the other fellow's donation seems to be a phase of human nature which changes not with the passing of the years, nor with the mutations of matter. If one is personally asked to donate, the virtue of the donation then seems to have quite a different significance. The arguments made so sweetly by a donee seem to lose much force if the donee is expected to become the donor.

Sancho Panza, the simple-wise squire of the renowned Knight Don Quixote de la Mancha, on occasion sagely remarked that mankind was divided into two classes, namely, the "Haves" and the "Have Nots." It is not to be understood by his utterance that one class had nothing and the other had everything, but rather that every one desired to have something or other which he or she did not possess, yet which was possessed by others.

It is a peculiarity of the "Have Nots" that they have always been prolific with advice and commendation, seemingly unselfish, which they gratuitously have conveyed to the "Haves," the trend of which is that if they, the "Haves," would loosely detach some or all of their belongings in such a manner and free of cost, to the end that said belongings would directly become the property of the "Have Nots," the "Haves," in some deeply occult manner which was not to be investigated too curiously, would thereby be fulfilling a simple duty incurred no one knows how, besides thereby further performing an act which in some vague manner would redound to the eternal glory, prosperity and happiness of the "Haves," concerning which no one knows why, on the premises set forth.

More specifically, the present attitude of the powder, shot, sportsmen's goods and ammunition manufacturers, etc., in respect to the matter of donations, was brought about by an abuse of their generosity. It is a consequence of a long series of antecedent causes, embodying the principle of the "donation," a term which was supposed to signify a voluntary contribution, but which in reality siginfied a more or less informally organized system of getting the manufacturers' goods. Of course, there were clubs and associations which did not seek to obtain donations at all, or who, seeking them, did so in good faith, and in a reasonable manner. Of these we do not treat.

The abuse of the donation grew to such a degree that it became an intolerable evil. From giving voluntarily and sometimes lavishly, all branches of trade were drummed up systematically. So solicitous were many managers of trap tournaments for the prosperity of the manufacturers that they expended money freely for printed circulars or circulars printed in imitation of typewritten copy, etc., therein earnestly calling the attention of manufacturers and dealers to the advantages derived from an advertisement in the programme at $10 or $25 or $50 per page, or from donating a gun, keg of powder, bag of shot, shoes, clothing, fishing tackle—anything, in fact, which had a value; and also of the valuable good will to be derived therefrom by the donor. It was never shown just how an advertisement would pay the advertiser, when published in a few copies of a programme, nor how any particular good will or lasting benefit could be conferred on the donors by the donees. Every shooter uses such ammunition as best suits his own personal interests, so that when a tournament was over it is quite safe to assume that the goods having been delivered, all thought concerning them by the donees ended with that circumstance, and the world moved on as theretofore. Every mail was burdened with letters, each with its special plausible plea, asking for the "donation." Some would go so far as to intimate that, in case of a refusal, their influence and support would be thrown in favor of trade rivals. To secure the local advertising the threat of a boycott, more or less veiled, also was not uncommon. Herein lies a nice point of ethics. It is a crime to forcibly abstract money directly from a man's pocket, but actively and maliciously to take steps to check or stop money from going into his pocket in a legitimate manner is different. The trade rivalries were utilized. A, a manufacturer, was shown that B, a rival manufacturer, had taken a page of advertising; therefore if A did not take another page, he was in deadly peril of great loss. The wholesale raiding resulted in driving manufacturers into a defensive alliance. They combined and shut their doors on the abuse. The powder manufacturers, two or three years ago, entered into an agreement to stop donations entirely. This included advertising in programmes.

The manufacturer has a right to conduct his business in his own manner. He has a right, therefore, to advertise as he chooses. Because he manufacturers ammunition it is not a consequence that he is running a charitable or educational institution. The shoemaker hardly considers that he should give a box of shoes to the managers of a picnic because shoes are worn at picnics; so of the butcher, the baker, the candlestick maker. No doubt the manufacturer is free to give to any organization he pleases, but such is not discrimination against any other organization, for every one has a right to do as he pleases with his own. This applies to the donor as well as the donee.

A trapshooting tournament, precedents to the contrary notwithstanding, should be self-supporting. The pride of the individual as it exists against begging should be the same pride when he is one of a group, and the sum total of all the pride of the group against begging should be the sum total of the pride of all its members. When something is solicited, it ceases to be a "donation."

In respect to "added money," derived from donations, no organization has any cause whatever for a complaint or grievance if any manufacturer refuses a request to donate.

PUBLISHERS' DEPARTMENT.

Florida.

TWO-WEEKS' TOUR VIA PENNSYLVANIA RAILROAD.

The first Pennsylvania Railroad tour of the season to Jacksonville, allowing two weeks in Florida, will leave New York, Philadelphia, Baltimore and Washington by special train on Feb. 5.

Excursion tickets, including railway transportation, Pullman accommodations (one berth), and meals en route in both directions while traveling on the special train, will be sold at the following rates: New York, $50; Philadelphia, Harrisburg, Baltimore and Washington, $48; Pittsburg, $53, and at proportionate rates from other points.

For tickets, itineraries, and other information, apply to ticket agents; Tourist Agent at 1196 Broadway, New York; 4 Court street, Brooklyn; 789 Broad street, Newark, N. J.; B. Courlaender, Jr., Passenger Agent Baltimore District, Baltimore, Md.; Colin Studds, Passenger Agent Southeastern District, Washington, D. C.; Thos. E. Watt, Passenger Agent Western District, Pittsburg, Pa.; or to Geo. W. Boyd, Assistant General Passenger Agent, Broad Street Station, Philadelphia.—*Adv.*

There is a substantial trend toward the best guns by purchasers. Messrs. Schoverling, Daly & Gales inform us that they have sold more of their $375 grade Daly guns in December and January than ever before in the same length of time.

A Memphis, Tenn., business man writes: "I am unable to state how much pleasure your paper gives me, and aside from articles contained therein, believe I read every 'ad.'"

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

COPYRIGHT, 1901, BY FOREST AND STREAM PUBLISHING CO.

TERMS, $4 A YEAR. 10 CTS. A COPY. SIX MONTHS, $2.

NEW YORK, SATURDAY, FEBRUARY 2, 1901.

VOL. LVI.—No. 5. No. 346 BROADWAY, NEW YORK

The FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. The editors invite communications on the subjects to which its pages are devoted. Anonymous communications will not be regarded. While it is intended to give wide latitude in discussion of current topics, the editors are not responsible for the views of correspondents.

Subscriptions may begin at any time. Terms: For single copies, $4 per year, $2 for six months. For club rates and full particulars respecting subscriptions, see prospectus on page iii.

THE BOY AND THE DOG.

THERE is no more entertaining column in the average daily newspaper than that in which the editor gives his readers a free forum in which to air their views on all conceivable subjects, from the mast-heading of a city hall flag on the occasion of a Queen's demise to the best expedient for solving the dog problem. The dog problem in town, it need not be said, is for those who like dogs to maintain their dogs and live in amity with their neighbors who detest dogs. In congested centers of population the dog is not infrequently an occasion of bitterness and back-biting between very respectable citizens who otherwise would be disposed to keep the peace.

In the country, where folks live under less restraint and without the vexatious friction of the town, the youngster who joys in the possession of a pet—blue-blood or mongrel—knows none of this heartburning which for his city cousin diminishes in some degree the satisfaction found in owning a dog. There is no truer friendship than that of the boy and the dog. There are no happier days to which the grown man may look back with a tender regret for their passing than the days spent in the old home fields with the faithful four-footed companion of youth. Confidence between boy and dog was perfect. The dog perhaps was not a thoroughbred and had come into the world minus a pedigree, but the boy accepted him for what he was, and in the blessed ingenuousness of youth may even have found an occasion of added pride in the dog in some characteristic which he now knows was highly to the animal's discredit as determined by the bench show standards.

And as for the dog, on his part too he took the boy for what he was, asking of him no more than that he should condescend to make of himself a demigod for unstinted confidence, affection and worship.

If the scientists would devise a way to represent the care free happiness of boyhood days in some equivalent of foot pounds, the amount of it justly accredited to the companionship of boy and dog would be expressed in many tons.

THE SUNDAY SHOOTER.

OF the two hundred and odd arrests for violation of the fish and game laws in Massachusetts last year, more than one-quarter were for unlawful shooting on Sunday, and yet the reports of the deputy game wardens show that there was much less Sunday hunting during that period than in any other recent year. This decrease has been due in large measure to the activity of the wardens, paid and unpaid, who have given special attention to the Sunday shooter. One deputy, for instance, writes, "Although ordinarily a regular church-goer, I have since my appointment been roaming the mountains endeavoring to promote a better observance of the Lord's day and at the same time to do something for the preservation of the game." Our consideration of the Massachusetts law against Sunday shooting has to do with its bearing on the preservation of the game, and not with any "promotion of a better observance of the Lord's day." With Sunday hunting as a religious or moral question we have nothing to do. We may safely leave that for others who are charged with the consideration of such subjects, and we are all the more free to do this, now that Representative MacCartney, the Unitarian clergyman who represents Rockland in the Massachusetts Legislature, has introduced in the House a bill to repeal the law which forbids shooting on Sunday. We may leave the clergymen to settle among themselves the rights and wrongs of Sunday hunting; but certainly all friends and supporters of game protection in Massachusetts will oppose opening the day to the Sunday gunner.

As a rule in Massachusetts, as in all densely populated regions, the Sunday gunner is an unmitigated nuisance. He is a type of foreign extraction, and has a foreign way of regarding everything that flies or creeps or crawls as legitimate game for his gun. In fact, as a rule he does not hunt true game, but pots the song birds and pursues them on territory where he has no right to be. He is a trespasser, an invader of private property, and the Massachusetts farmer or other land owner ought not to be compelled to be on the alert to chase Sunday shooters off his fields. When we take into account the annoyance Sunday hunting creates and the innocent bird slaughter it involves, we are astonished at the action of Representative MacCartney. If the desired repeal is in behalf of the wildfowl gunners, the purpose could be better attained by the adoption of an amendment proposed the same day by Representative Gardner, to permit the taking of fish and the shooting of water fowl and marsh game birds on Sunday. But even this would not be a desirable change. The granting of one day of immunity to the game in the fields, on the marsh and on the waters is wise and profitable from a game preservation point of view. Certainly this step to open Sunday shooting will not have the support of the officials and the associations who are most closely concerned with Massachusetts game protection and most active in its promotion.

OUR ILLUSTRATION SUPPLEMENTS.

WE give to-day the last of a series of four illustration supplements. The subjects as printed are as follows:

Nov. 3.—IN THE FENCE CORNER. By Wilfred P. Davison.

Dec. 1.—WHEN FOOD GROWS SCARCE. By Wilfred P. Davison.

Jan. 5.—QUAIL SHOOTING IN MISSISSIPPI. By Edm. H. Osthaus.

Feb. 2.—IN BOYHOOD DAYS. By Wilfred P. Davison.

These pictures of outdoor life many a reader has been good enough to tell us have given much satisfaction, and have been looked for as a very welcome feature of FOREST AND STREAM. Others are in preparation, the subjects and dates of publication to be announced later.

SALMON RIVERS.

A CORRESPONDENT inquires: "Please inform me where I can obtain salmon fishing next summer at moderate cost and with a certainty of success. American rivers of the Atlantic coast."

The latter part of the question is more easily answered than the first. Salmon are apt to rise well to the fly when the weather and water conditions are favorable on almost any of the Atlantic coast streams during the run. It is usually necessary to make more or less study of a stream in order to know when the run occurs, in which parts of the stream the salmon stop to rest and which flies are most attractive. There is free fishing on the Penobscot, St. Croix and Denny's rivers in Maine; in some of the Nova Scotia streams, and in nearly all of the Newfoundland streams. The salmon fishing on the Penobscot River is confined practically to the pool at Bangor, and the pool is crowded with fishermen. The short series of pools on the St. Croix River at Calais furnish very good fishing, but the fishing is almost in the city, and one does not have the outing that adds to the charm of such royal sport. The Denny's River fishing has recently been ruined by a saw mill at the head of tide water. Almost all of the larger Nova Scotia streams furnish free salmon fishing, but as at Bangor, the pools are apt to be so crowded with fishermen that there is unpleasant interference. In Cape Breton and in Prince Edward Island the fishing is free, but the streams are for the most part so small that salmon do not run up to spawn until the breeding season is close at hand.

The Newfoundland streams at present afford the best free salmon fishing, and a large number of the rivers of both the east and west coasts abound in salmon. If Newfoundland becomes a Canadian possession there will probably be no free fishing, and no salmon rivers to be bought, as the Canadian Government is cognizant of the value of such properties, and its policy is to lease rather than to sell. A number of Canadian salmon rivers are offered for lease annually at a moderate rental, say from $200 to $500 for the season, but these rivers are so inaccessible that the whole cost of the trip is apt to amount to a considerable sum—more than would be called moderate by the average fisherman. The rentals of the Canadian rivers that furnish good salmon fishing and that are easily reached often amount to several thousands of dollars annually, and one can have fishing at moderate cost only through invitation from some lessee.

NEW YORK'S FISH AND GAME INTERESTS.

THE report of the Forest, Fish and Game Commission of New York State, portions of which will be found elsewhere in this issue of FOREST AND STREAM, is a notable document. It is highly gratifying and most unusual on account of the positive ground that it takes and the admirable recommendations that it makes to the Legislature. Among the recommendations are:

That the Constitution shall be so amended as to provide for the practice of forestry on State lands and the sale of dead, dying or mature timber under proper safeguards.

That authority be given to the Commission to set aside certain portions of the State lands as game refuges, and absolutely to prohibit the killing of wild animals on these refuges.

That the anti-hounding law be permanently extended, and that no dogs of any breed which will pursue deer be allowed in the woods at any time.

That the killing of does be prohibited at all times.

That spring duck shooting be forbidden.

To these is added an urgent plea for the better protection of the streams of the State from pollution. As the Commission well says, this is a matter of vital importance, and not to be dismissed as having to do merely with the lives of some fishes, the pleasure of some anglers or the dividend of some pulp mills. It has to do with the water which we drink and which we use in all our industries. It is a strong appeal for real action on the part of the Legislature to protect the people at large.

It were too much to hope that all the good things recommended in this report should at once come to pass, yet it is certainly most encouraging to find that the Commission realizes that the forests of the State should be so used as to produce an income and that for advice and assistance in this matter they have gone to the best man in the country. The recommendations as to game refuges and as to closing streams to public fishing for a brief period are highly commendable, nor will there be much difference of opinion with regard to the wisdom of permanently prohibiting the killing of does and the forbidding of spring shooting.

SNAP SHOTS.

At the meeting of the Adirondack Guides' Association last week the honorary president, Dr. Kendall, celebrated in well chosen words the high character of these men of the North Woods as the trusted guardians of those who are committed to their care. The record in this respect held by the Adirondack guides is a credit to American manhood. Some of us can remember how a few years ago, when a so-called North Woods guide was guilty of a gross betrayal of his trust, the true guides of the region indignantly denied that the man was of their guild or deserved the title of Adirondack guide, and they proved their case, much to their own satisfaction and to that of all others who rejoiced to see the woodsmen relieved of a stigma.

We give elsewhere some extracts from the report of the Massachusetts Commission of Inland Fisheries and Game. Under the able management of Chairman Collins and his associates, the game and fish interests of Massachusetts have assumed an importance in the public estimation not heretofore accorded them. The work of stocking the waters and protecting them when stocked and of increasing and conserving the game supply in the covers has been put on a business basis. Massachusetts affords an admirable example of what any State may do to defend and promote its native resources, if once the task be given into the charge of competent and earnest and diligent trustees.

A bill has been introduced in the Maine Legislature providing for a thousand-dollar fine for shooting a human being in the woods. We have had much speculation from time to time as to what the effect of a statute against mistaking man for beast would amount to; now let us trust that Maine will actually put the plan to a test.

The Sportsman Tourist.

The Passing of "Satan."

Hiram Meeks threw away the stick on which he had been whittling, closed his jack-knife with a snap and rose slowly to his feet.

"By Godfrey, I'll do it ef hit takes a leg," he declared aloud, in the tones of a man who after long deliberation has settled some question of weighty import in his mind.

It was apt to prove a cause for deep regret—this decision of his—since it involved an act of no less temerity, or even folly, than the purchase of a certain four-footed beast known far and near as "that mule o' Saunders'." Hiram had been debating the question with himself for two whole days, to the exclusion of all other thoughts. In a measure Sam Hawkins was to blame for this state of affairs, for it was he who had informed Hiram that the mule could be "bought for a song." Some people can never resist the temptation of a bargain. Hiram shared in the general feeling of distrust in which this creature of ill repute was held by the entire community; on the other hand, he was greatly in need of another beast of burden on his farm, as his entire live stock consisted of a solitary bay mare of uncertain age, whose days of usefulness were on the wane. The mule in question was without doubt of a superior breed physically as well as mentally, although greatly deficient in amiability; but Hiram was under the impression that this latter undesirable trait of character was due to a lack of proper training. Therefore, after considering all sides of the question, he had come to the conclusion that if Saunders were willing to part with the mule at a sufficiently low figure, he himself would assume the grave responsibility of ownership.

He was the possessor of a small fortune amounting to forty dollars—the savings of years—and with this sum he hoped to complete the purchase. A good mule was worth considerably more than this amount, but if Sam Hawkins had told the truth Saunders did not expect to sell his mule for anywhere near its full value. Well, it would do no possible harm to investigate the matter, so Hiram removed his treasure from its secret hiding place and set out on his visit to Saunders.

It was early in December. The air was fresh and invigorating, and Hiram covered ground rapidly with his long, swinging stride. As he drew near the abode of Saunders he looked about for some sign of that individual. The sound of a voice coming from the direction of the barnyard reached his ears, and he approached the fence and peered over. The voice was Saunders'. He was seated on an overturned water trough in his favorite attitude, and addressing his remarks to the only other occupant of the yard—his notorious black mule.

The mule was hitched to the stable door by a heavy rope that encircled his neck, and he seemed greatly depressed in spirit. Though well acquainted with this fickle-minded creature, Hiram had never before seen him in such a melancholy mood, and his curiosity was aroused as to the cause of his dejection. He therefore interrupted Saunders' invective against mules (for such seemed to be the tenor of his remarks) with an:

"Howdy, Eb! What 'pears t' be the trouble?"

Saunders turned his head without otherwise disturbing himself.

"Howdy, Hi," he responded. "Ther' ent no trouble t' speak on. I was jest a-tellin' Satan a few idees 'baout his doggon self an' his hull doggon relations."

"Who all's Satan?" Hiram inquired, puzzled at the name.

"That air mule thar," Saunders answered, indicating the black mule with a nod. "Ever sence he made all that fussin' with them Wright county folks I've called him Satan. 'Twant my idee. 'Twas Sam Hawkins'. Sam's up on religion, y' know, an' he sez I orter call him Satan, so I done it. Hit seems t' suit him fust rate."

"What's he been doin' naow that y' got him all tied up?" Hiram asked.

"Nuthin special," said Saunders. "I've licked him till I'm tired an' he don't seem t' give a cuss; but when he's hitched that away with a slipknot raound his neck an' I preach at him, he don't seem t' feel so doggon gay like. Hit sorter takes the sperits out o' him. But whar you all baound fer?"

"Oh, I was jest passin' 'long this way," Hiram replied, evading the question, "an' I thought I'd stop an' see how you all was gittin' on."

"Better come in an' sit daown awhile," Saunders suggested.

"Don't care ef I do," said Hiram.

He entered the barnyard and, seating himself beside his friend, waited for a favorable opportunity to open negotiations. As Saunders' mind was filled with nothing but thoughts of the mule, Hiram was not kept long in suspense.

"Say, do y' know that mule ent brayed onct sence he's bin hitched that away?" the old man remarked. "He used t' keep it up 'baout all night, an' I got so used t' hearin' him I can't sleep good sence he quit. Funny, ent it?"

"Hit air that," Hiram assented. "That mule's made a heap o' trouble fer you all, ent he?"

"Heaps an' heaps," Saunders made answer, casting his eyes severely on the subject of the conversation.

"Say, Eb," Hiram drawled after a moment's meditation, "what'll you all take fer the mule? What's yore lowest figgers?"

"Meanin' Satan?" Saunders asked in amazement.

"Meanin' Satan, to be sure," said Hiram.

"Be y' jokin' or in arnest?"

"Solemn arnest."

"What in blazes do you all want t' buy sech a devul uv a critter fer?" Saunders asked with increasing wonderment. "I don't 'low t' cheat no friend o' mine that away, Hi. That air mule's a mean, onery cuss, that's what he is, an' he knows hit by this time. I was figgerin' t' sell him over in Wright county."

"Waal, what'll y' take fer him?" Hiram persisted.

"I'd sell him doggon cheap," Saunders declared. "I'd sell him fer thirty-five dollars."

"Waal then," said Hiram, "seein' as I'm rich I'll take yore offer. ef you'll let me hev a try at him fust. I'll ride him over hum an' see what he's good fer."

"You all must be crazy," Saunders exclaimed. "Why, he'd throw yuh afore you'd got t' the end o' my forty."

"I'll risk it," Hiram rejoined. "Jest hitch him up. I never seen the mule or hoss I couldn't manage."

"Waal, 'tent any o' my funeral," Saunders remarked, yielding the point, and forthwith he proceeded to saddle and bridle Satan.

Now, whether the mule divined the situation and decided to adopt politic measures for the occasion, thus reinstating himself in his master's good graces, or whether his proud spirit had at last been broken and he himself brought to a proper realization of the futility of continuing further in his unprofitable course of opposition to authority, will never be known. Certain it is that he yielded himself with sublime meekness into Saunders' hands, nor did he give evidence of ill-temper or a disposition to rebel, by so much as the laying back of an ear. Hiram mounted him without need of the customary persuasive arguments, and rode away in perfect security on his journey. Satan was a good roadster, when he was minded so to be, and he now settled down into the swift, easy gait which he employed for his owner's benefit only on rare occasions. Saunders' astonishment knew no bounds.

"An' jest t' think that preachin' at him done the bizness," he reflected aloud, as Hiram and the mule disappeared from view. It was the only satisfactory explanation that occurred to him that would in any way account for the miraculous change in Satan's disposition.

Hiram expected to be absent two or three days. During that interval Saunders had ample time for reflection, and the more he thought about the matter the more reluctant did he become to part with the black mule. To begin with, he had owned Satan a good while and had grown attached to him in a way, for the strange animal furnished almost the only diversion in his life of wearisome monotony. Existence on the lonely, half cultived farm of forty acres would indeed be well nigh hopeless without the presence of the erratic, unruly Satan. He was always so very much in evidence. Moreover, and most important of all, thirty-five dollars was a ridiculously low price to pay for a mule. No, it could not be thought of. Surely Hiram would see it in that light, too. At any rate, if he wished to purchase Satan he would have to pay considerably more than thirty-five dollars, either in cash or trade. Having come to this decision Saunders anxiously awaited his friend's return.

Hiram appeared on the third day, and Saunders went forth to meet him. The old man made no secret of his anxiety regarding the mule's behavior.

"He's gentle as a lamb. I don't want no better actin' critter in mine," Hiram reported as they unsaddled the docile creature and turned him loose in the barnyard.

"Glad y' think so, cause hit shows I've larnt a new way t' break mules," said Saunders, and led the way to the house where they could talk things over at their ease. They seated themselves in front of the big fireplace and lit their pipes. Hiram opened negotiations.

"Ef hit's all the same t' you," he announced, "I'm ready t' pay you all that thirty-five dollars, an' ride the mule home to-day."

"Waal," Saunders drawled in reply, "I reck'n we'd better talk some fust. Y' see when I offered Satan fer sech a ludickerous figger I was mad at him; bein' as I've cooled daown consid'able sence, my price is gone up accordin', an' I reck'n hit'll take more'n thirty-five to buy him this evenin'."

Hiram was unfeignedly surprised.

"Why, I jest 'baout reck'nd the sale was made," he remonstrated. "Y' beant goin' back on your word, be yuh, Eb?"

"'Tent goin' back. Hit's only lookin' at the thing fair an' square like," Saunders replied in self defense. "You all knows that air mule's wuth more'n thirty-five dollars, Hi."

"Waal, I ent sayin' but what he is wuth more," Hiram admitted. "I got all o' my fortune 'long an' I'm game, so how'll forty even do?"

"Forty, an' what t' boot?" asked Saunders.

"T' boot?" Hiram exclaimed. "Not a dern cent, by Godfrey Simpson Daniels."

"Then, hi ganny, I reck'n Satan stays whar he is," Saunders declared with decision.

Hiram puffed away at his pipe in silence for a few moments, thinking deeply.

"I tell yuh what I'll do," he finally announced. "I'll give forty an' the old bay mare."

Saunders considered the proposition a while.

"Haow old be the mare?" he asked.

"Hard tellin," Hiram replied. "She's old nuff t' be stiddy. She ent no colt, but she ent got nuthin' onusual the matter with her."

"Waal, you all bring the mare over," said Saunders, "an' let me hev a look at her, an' then we'll talk tradin'."

"All right," Hiram acquisced. "I'll ride 'er over tomorrow mawnin'—I'd better be startin' fer hum naow, I reck'n. Waal, s'long. You'll like the mare. She's a doggon stiddy critter, she is."

"Stiddiness has its p'ints," Saunders remarked, as he ushered his friend to the door. "Reck'n Satan 'll be all right till mawnin' without hitchin'. Waal, s'long."

"S'long," Hiram responded, and started away down the road.

"S'long," Saunders called back a second time, and re-entered the house and set about preparing his simple evening meal.

The next morning, shortly after breakfast time, Hiram rode up to Saunders' cabin a-straddle the back of the aged mare. Most of the Douglas county horses were built on lines peculiar to that section of the country, and this particular mare was no exception to the rule. Hiram discovered his friend seated on the big boulder beside the road, just opposite the barnyard gate, and greeted him with a cheerful, "Howdy, Eb!"

Saunders was in a dejected mood and responded in a half-hearted manner to Hiram's salutation.

"Waal, has Satan bin behavin' like an angel?" the visitor facetiously inquired, as he swung himself off the mare's back.

The old man sighed deeply.

"That's haow he's bin behavin'," he responded, indicating with a jerk of his thumb a gap in the fence and some broken boards that lay scattered over the ground. The words and the gesture spoke volumes.

"Y' don't mean ——," Hiram began and paused, letting his gaze travel from Saunders to the remains of what had once been the barnyard gate, and then back to Saunders again.

Saunders nodded his head. "He's skunt aount again," was the only information he vouchsafed to give.

"Waal, I swan! Who'd a-thunk it!" Hiram exclaimed, and then slowly seated himself on the boulder beside his friend. His next move was the natural one, under the circumstances, and hardly unexpected. He produced a dark brown bottle from his hip pocket, extracted the cork with his teeth and passed the flask over to Saunders. They each took a long pull in turn, which apparently had the desired effect of relieving the tension of their feelings.

"What you all goin' t' do 'baout it?" Hiram asked.

"Ther' ent no use doin' nuthin'," Saunders replied. "We'll hev t' wait till the dern cuss makes up his mind t' come back."

"Mebbe you'd take less'n forty an' the mare naow?" Hiram ventured, after a moment's silence.

"Ef you all wants that air limb o' Satan arter this," the old man answered with decision, "you kin name yore own price, ef hit ent onreas'nble."

"How does twenty an' the mare strike you?"

"Make 'er twenty-five an' hit's a go."

"Hiram deliberated. "All right," he finally agreed, "she's a go, an' I'll clinch the bargin with a fiver." So saying he drew forth a greasy leather purse and counted out five silver dollars into Saunders' outstretched hand.

"I'll ride over to-morrer an' git the mule ef he's back then," Hiram answered as he rose to take his leave. "I kin manage him all right. Hit seems like he had it in fer you all."

"Hit suttenly do," Saunders assented in resigned tones.

Hiram departed, leaving Saunders seated on the boulder wrapt in the contemplation of the vacant barnyard.

The day passed without event and with no signs of the vagrant mule. When Hiram arrived on the scene the next morning he found Saunders in anything but a happy frame of mind. The two men discussed the situation anew, but without coming to any satisfactory conclusion. Hiram was about to take his leave when a small boy, mounted on a scraggy looking pony, drew rein in front of the house.

"Does Eb Saunders live yere?" he called out.

"That's me, son," Saunders answered, coming forward. "What's wanted?"

"Pap sez fer you all t' come an' git yore doggon ole mule," the boy replied. "He's bin tearin' 'raound awful, an' pap sez fer you t' bring a couple o' dollars 'long fer damages what the mule done afore pap got him shet up in the barn."

"What's yore dad's name, son?" Saunders inquired.

"Bill White," the boy informed him. "We live in Wright county. You all was at our haouse onct afore lookin' fer yore mule the time that man thar," pointing at Hiram, "an' another man sot on pap while you was a-huntin' fer the mule."

"All right," said Saunders, with resignation. "Tell yore dad I'll come arter the mule an' settle everything."

The boy wheeled his pony about and cantered away without further words. The men gazed at each other blankly. Here was a new complication to be dealt with.

"I reck'n," said Hiram, "I'd better go 'long, too, in case o' trouble with that man White. He mought git reckless."

"He suttenly mought," Saunders admitted. "I'd be right glad o' yore company, Hi," and they made ready for the journey.

During Satan's brief sojourn on the Wright county man's farm he had made life interesting for every living thing on the place, and Saunders considered himself lucky in escaping with only two dollars damages to pay. The two men never forgot the ride back from Wright county. The mule disputed each step of the way, and balked at every turn in the road. With each new development of his many sided character his value as a domestic animal decreased, and by the time he was safely housed in his own rightful quarters his owner, in despair, had agreed to part with him for fifteen dollars and the bay mare.

As it was late in the day when they returned, Hiram decided to spend the night with Saunders and take possession of the mule the next day. To avoid a repetition of such an experience as they had just passed through, they resorted to the method Saunders had formerly employed, and hitched the mule securely with a slip knot about his neck. They then administered the well-deserved chastisement and left him to meditate upon his sins.

It will never be known what bitter thoughts entered Satan's mind that night. It will never be known what feelings of rage and despair surged through his breast. He had tried and failed. He had resorted to strategy and had feigned meekness to gain his ends, but all to no avail. He had allowed himself to be ridden without a single protest by one of those great hulking man creatures, a stranger at that. He had humbled his pride and had behaved himself as any ordinary Douglas county plug might have done, and all for what? Why, merely for a brief moment's independence—the transitory joy of creating confusion and disorder in another man creature's barnyard, only to be driven into a prison at the points of a pitchfork. Those two-legged animals called men never did fight fair. Here was this rope about his neck. If he attempted to pull away and break it, it only choked him. That rope! Ugh! How it galled one's spirit as well as one's flesh! He would not submit any longer. Liberty or death! One or the other should be his portion. He would be free.

And then a tragedy occurred out there in the darkness behind the walls of the black mule's prison house. Whether, in his efforts to break loose, he accidentally threw himself, or whether, realizing that escape was impossible, he deliberately hanged himself, will always remain one of the secrets of the dead. They found him in the morning. He was free at last. The rope that was to have insured his safe keeping had proved the cause

of his undoing. The coroner's jury of two rendered a verdict of "Death from hangin' by a hitchin' rope. He done it on purpose."

They interred him in a remote corner of the woods, and Saunders' eyes were moist as they turned away from the newly made grave that marked the black mule's final resting place.

Hiram mounted his old bay mare in silence and rode thoughtfully homeward; Saunders shut himself up in his lonely cabin and composed an epitaph. He fastened together some pieces of board from the broken barnyard gate, and with infinite pains burned the letters and words of the epitaph thereon.

The next day the grave of "that mule o' Saunders'" was marked by a wooden headboard on which were written these lines:

HERE LiZE SATiN
THE MENEST AN BiGEST
MULE iN DUGLAS CONTY
HE HUNG HiSEF AN DUN
ME OWT UV 40$ AN A BAY
MARE.

FAYETTE DURLIN, JR.

Notes from the Trail.

On the morning of Oct. 1 we left the Valley of the Rio Aras at Santo Tomas, Chihuahua, and started boldly westward into the Sierra de Jesus Maria, bound for the Rio Mayo and Sinaloa. We left civilization behind us; for exactly three weeks we saw no track of wagon or cart or anything wider than a burro trail, and during those three weeks we traveled each day as much as our mules could stand.

The first day after leaving Santo Tomas was passed without seeing either Mexican or Indian, but about 10 o'clock of the second day we came to a beautiful little valley on the Rio Verdi. A few stone houses marked the site of the village of Carriaziachic, and from the caves on the mountain side curled smoke. The Verdi, which wandered leisurely among the cornfields, was fairly well sprinkled with pintals, gadwells and teal, and it took but a short time to shoot enough for several meals. Then we noticed, for the first time, that all the people whom we had seen working in the field when we entered the valley had mysteriously disappeared. All our hammering at the house doors brought no response. We were literally in a deserted village. Half a mile further on we surprised a family out of doors. Instantly the man sank out of sight, while the woman and boy hastily gathered together their goats and drove them up the mountain side into a cave back of their dwelling. We pursued, and when the woman found that we were not Mexicans, and were perfectly harmless, the animals were allowed to come out and graze, and the paterfamilias came from the cornfield where he had concealed himself. Except for his dilapidated hat he was absolutely devoid of clothing. He could talk a few words of Spanish, and a trifling present made him very communicative. The village Carriaziachic is the most northern town of the Tarahumaria, the descendants of the ancient cave dwellers. Some live in stone houses, but the majority stay with the ancestral habitations. They are afraid of strangers, especially of Mexicans, who are wont to swoop down upon them as the Turk is said to do upon the poor Armenian. Corn is their only agricultural product. For everything else they depend upon fishing and hunting. They claim the headwaters of the Yaqui, Mayo, Fuerte and Sinaloa rivers and their territory extends southward into the mountains of Durango. The old man reported the country as being great for deer, and in watching for one I became so interested in a natural history lesson that I forgot to take advantage of an excellent opportunity.

It came about in this way: On the top of a hill near by, surrounded by heavy timber, was a bare spot, an acre or two in extent. It was so marked by tracks and fresh signs, and we had seen so many white flags disappear unceremoniously in the underbrush, that I concluded that this was a good place to conceal myself for an hour and let the procession pass on. On the bare ground, about thirty yards from where I sat, was curled a large rattler enjoying a sun bath. There was a rustling in the bushes opposite, and a spring fawn came in sight. It did not see me, but it saw the snake; stopped a moment trembling, then sprang with all four feet upon the reptile, bounding safely to quite a distance beyond, where it turned and surveyed the damage that it had done. The snake writhed, that was all. Its back was broken, and it was too badly cut up to be capable of much harm. The fawn approached slowly, sniffed of its victim, and once more leaped upon it, this time bounding backward instead of forward. Five times it repeated the operation and then it stalked off with a self-satisfied air, while I entirely forgot that my business was to secure fresh meat.

During the remainder of that week we rambled among the mountain tops, amid pines and where the scenery was similar to that of the Rocky Mountains, in Colorado. At noon, Saturday, Oct. 6, we were 7,900 feet above sea level. Then we commenced to drop through a steep and narrow cañon. The pines disappeared, and the perpendicular walls, that towered to the very skies, were draped with adiantum, nothalaena and other delicate ferns, with giant creepers and with gorgeous festoons of red and yellow flowers. At 4 o'clock we reached the mining camp of Jesus Maria, elevation 5,600 feet, where an orange grove, figs and citron in the market place and a temperature resembling that of Tophet assured us that we were nearing the tierra caliente. The next day's climatic changes were yet more noticeable, for after climbing to an altitude of 7,200 feet, we made camp at night on one of the tributaries of the Mayo, only 1,700 feet above the sea level, and feasted on a fruit that I suppose to be a species of guava. Down the river we made our way for ten days, piloted by an Indian guide. Mexicans were as scarce as Americans, and Wara-wari huts thatched with palm leaves were the only habitations.

The scenery along the Rio Mayo, where it breaks through the main chain of the Sierra Madre, is grand beyond description. At times the walls rise perpendicularly from the raging torrent to a height of thousands of feet, and again, where the river widens into a peaceful stream, the hills recede more gradually from either bank and from water's edge to mountain top exhibit the characteristic flora of the tropics, warm temperature and temperate zones.

The Mayo abounds in fish, large catfish and a smaller fish, about a foot in length, that very much resembles the eastern dace. Owing to recent rains the waters were high and muddy, but grasshoppers were a fairly good bait, and a monster crawfish (eight to ten inches long) which our guide procured for us proved to be a line beyond compare.

At length we tired of the river. In fording our packs had been soaked enough times to satisfy us, and our tents were beginning to mildew; so, about thirty miles north of Alamos, Sonora, we left the Mayo and the mountains and commenced to journey through a rolling, bushy country—hot and dusty. It seemed like a chaparral waste. The change in flora and fauna was sudden and marked. Our diet now consists of rabbits and partridge (*Cullipepla elegans,* Less.). Evidently the latter have never been hunted, for they are too easy for right good sport.

One of the most interesting birds in this region is Audubon's caracara (*Polyborus cheriway,* Jacq.). Like the partridge it has no fear of man. It is usually found in pairs or in flocks and a pair will perch on a giant cactus and sit and survey us while we ride underneath, near enough to touch them with an ordinary fly-rod. The caracara is an adept at hunting. He always stalks his prey. I wondered for a long time why I saw so many pairs walking along the ground, peering into the dense underbrush, and why I always found partridges near them. The caracara locates a brood of young birds, and alights some distance from them, then steals closer and closer, and finally pounces upon the victim with a spring wherein the feet rather than the wings furnish the motive power.

Just at sundown, last evening, while crossing a low range of hills some twenty miles south of Fuerte, Sinaloa, a flight of parrots, entirely new to us, made a most deafening clatter. They proved to be the white fronted parrot (*Amazona albifrons,* Sparrem.). We found them at least three degrees north of Mazatlan, which is given in Ridgway as their northern limit. I ruined two skins this morning, and then concluded that if I should stop work long enough to write to FOREST AND STREAM, I might have better luck with my third. By the way the shadows are lengthening, it is time to recommence operations.

SHOSHONE.

HILLS OF SINALOA, Oct. 28,

Welsh Indians.

IT is a curious fact that among our grandfathers there was a general belief that in the far West was a tribe of Indians of Welsh descent who still used the Welsh language in greater or less purity. These Indians were believed to be descendants of the companions of Madoc, who is said to have discovered the coast of America and formed settlements here in the year 1170. This belief was founded upon the evidence of several individuals who had been among those savages and heard them use the Welsh language. Faith, in these days, demands a more vigorous demonstration of facts than in former times. Travelers' tales at second or third hand were then considered good enough for all purposes. There was no disputing anything that appeared in a book.

The most circumstantial account of the Welsh-speaking Indians that we have come across is in a little book, now very rare, "Journal of a Two Months' Tour," by the Rev. Charles Beatty, London, 1768. Mr. Beatty was a Presbyterian minister who had been sent out by the Synod of New York and Philadelphia in the year 1766 to examine into the religious state and needs of the people on the frontier. He says that when he was in the western part of Pennsylvania he met with one Benjamin Sutton, who had been taken captive by the Indians, and had lived many years among them in different parts of the country. He stated that when he was with the Choctaw Nation on the Mississippi he went to an Indian town a very considerable distance from New Orleans, where he fell in with a tribe of Indians who spoke the Welsh language. He said that he saw a book among them which he supposed was a Welsh Bible, of which they took the greatest care, though they were not able to read it. He said further that he had heard them speak Welsh to one Lewis, a Welshman, a captive there.

Another man, who had lived among the Indians from his youth, also informed Mr. Beatty that he had been among Indians on the west side of the Mississippi who spoke the Welsh language; while the Indian interpreter who accompanied the reverend gentleman on his mission also assured him that he had been among Indians who spoke Welsh, and in proof of it he gave some words which he said were Welsh. Mr. Beatty further remarks that there were other traditions current in his day of certain captives who had been among Welsh-speaking Indians, one a Welsh clergyman who had been captured while traveling "through the back parts of the country." This gentleman, while earnestly praying in his native language in view of a speedy death to which he had been condemned, was understood by the savages standing around him, who instantly reversed the sentence of death; "and thus this happy circumstance was the means of saving his life." They then showed him a book, which he found to be a Bible, but which they could not read. "He stayed among them some time, and endeavored to instruct them in the Christian religion. He at length proposed to go back to his own country and return to them with some other teachers, who would be able to instruct them in their own language, to which proposal they consenting, he accordingly set out from thence, and arrived in Britain with full intention to return to them with some of his countrymen, in order to teach these Indians Christianity. But I was acquainted that not long after his arrival he was taken sick and died, which put an end to his scheme."

But Mr. Beatty is not the only authority in point for the fact of Welsh-speaking natives in America. In a book, "Primitive Ages," by the Rev. Theophilus Evans, a Welsh minister, translated by Rev. George Roberts, and published in Ebensburg, Pa., in 1834, we find assurance of the same fact. He states that the Rev. Morgan Jones, of Tredegar, in Monmouthshire, while traveling through the wilderness of America, in the year 1660, was taken prisoner by the Indians. Possibly it is the same incident related by Mr. Beatty. He was discovered to be a Welshman in the same manner as related by the latter; whereupon the chief approached him and addressing him in the Welsh language assured him that his life should be spared. He was treated by the Indians with the greatest kindness. He remained among them four months, preaching the gospel to them in the Welsh tongue three times a week. Mr. Evans, who seems to have been thoroughly familiar with the ancient history and traditions of his native country, says that many of Madoc's companions remained in America and married women of the country; and that they had kept themselves apart from the other tribes and preserved their native tongue.

To all this the query arises, What degree of truth is in these traditions? It would seem to be quite improbable that statements made with such particularity by different individuals had no foundation in fact; at the same time the other question occurs, What became of these Welsh-speaking Indians, that they have not been discovered by modern travelers?

T. J. CHAPMAN.

Mrs. Mark Piper's Gardens.

THE Pipers are a large family, and they are a family that pride themselves greatly on their personality. Perhaps it is not so much the Pipers themseves as it is their wives, but particularly Mrs. Mark Piper. Two years ago she insisted on buying a strip of land on Grand River, where her husband goes to fish for muskalonge.

Mrs. David Piper demurred, and Mrs. John said that it was a crazy thing to do. Mrs. Mark named her place "The Gardens." "Gardens of what?" asked Mrs. John. "Come over and see," answered Mrs. Mark, pleasantly.

It was not until Mrs. Mark had owned the place two summers that Mrs. John and Mrs. David decided to drive over and call on the eccentric sister-in-law.

"I knew you always thought it a foolish thing for me to do," said Mrs. Mark, after she had made her guests welcome, "but I always thought that I wanted a garden. I was not quite sure about it. When Mr. Barber said I could have this land and the old school house with it for three hundred dollars, I just said I would take it. Really it was nothing when you think how much the boys spend when they go off on a fishing trip."

"Certainly," replied Mrs. John, "but you have no company here at all. Seems to me you must find it dismal."

"It is only during the children's vacation. I would not have the heart to be dismal anywhere with them, and here they are so occupied that I am never in a worry about them."

"What do they do?" asked Mrs. John.

Mrs. Mark laughed as she replied: "Well, Johnny is head gardener, Martha is housekeeper, and Bruce takes care of the live stock."

"And pray what do you do yourself?" queried Mrs. David.

"Keep the books, make the children take their work seriously and pay them seventy-five cents a week and their board."

"And you have the temerity to call this a vacation!" exclaimed Mrs. David.

"Come outside and see the gardens," was the gracious answer. "You see we have just as litttle inside the house as we can, so that we are not crowded at all, and it simplifies the work for Martha. Of course I wipe the dishes, and help her, but she thinks she has all the responsibility. It is her especial pride to have the meals on time, and we get very hungry working in the gardens all the morning." As they went out the door and off the wide porch that faced the east, they stepped upon a graveled path that wound among some flowering bushes and led to the river bank.

"John built that porch when he was over last summer fishing," continued Mrs. Mark, laughing.

"You surely don't mean my John!" exclaimed Mrs. John.

"To be sure. What other John?"

"He never thinks he can mend a door knob at home."

"Well, I didn't ask him. The first thing I knew there was a load of stuff here, and John was bossing Mark around like a head carpenter." I don't think, myself, that it is quite plumb," she said, as she looked dubiously at the floor; "higher on one end than at the other. John says if we will get stones together for a foundation he will lay it this fall, and that will straighten it."

It is useless to attempt to convey to the reader the charm of Mrs. Mark's gardens. Things had grown for her as the might have done for a trained gardener—flowers and vegetables.

"It is all very beautiful," exclaimed Mrs. David, "but seems to me it is lacking in system."

"Yes, I think it is, but it interests the children more than if the gardens were laid out regularly as Mr. Barber said I should do when I begged him to plow around the bushes and to make separate beds for things in level spots along the bank. Don't you see how pretty the lettuce is against that bank of moss? I like the flowers tucked away in unexpected places. I would have them in masses. You see the gardens are mostly along the river. It is pleasanter for the children. Up near the road is meadow, and Mr. Barber takes care of that. Really it costs us so little to live here, and there are so many things we do not buy that we would if we stayed in town, that Mark is beginning to count it all as a great economy, and he has about stopped laughing at me about it."

"It is pretty, any way," said Mrs. John, with real feeling, "and I do think it has been shabby in me not to have looked at the matter from your point of view. Really I did not know how."

"The children have a boat, and there is a small island just around the bend of the river. They play Robinson Crusoe, and they have a cave in the gardens where I understand a great many things are concealed, some gold and a few bags of diamonds. Then they fish. Johnny caught a ten-pound muscalonge last week. Last year he caught turtles and shipped a barrel of them to Pittsburg. They learn a great deal more than they would

under other conditions. They are learning to get along with each other, and I think that means a great deal to them."

When Mrs. John went home that afternoon she said to her husband, "Why did you not tell me about Harriet's gardens?"

"I don't know," he said. "I suppose I thought you knew." FLORENCE L. WRIGHT.

Hawaiian Wild Turkeys.

EAST WAREHAM, Mass.—*Editor Forest and Stream:* In the accession of new territory our country has gained considerable hunting ground and an amount of very desirable game. The following is an extract from a letter written by my brother, who is living in Honolulu:

Well, I have killed my first wild turkey, and will have to tell you about it. One of my workmen by the name of Durant wished me to go hunting with him. We took a train at 3 P. M., and rode out into the country about thirty-five miles, landing at a native's house, where there were lots of women and children and no end of dogs.

A big sign on the house told us that hunting was forbidden, but Durant held the key to the owner's heart and we were welcomed. After sitting down to a big table loaded with boiled hog and poi, we watched the natives who finished their feast with a glorious drunk on a liquor made from honey.

We were given the only bed, but sleep was out of the question; the natives do not quarrel when drunk, but keep up an infernal din. About 3 A. M. we were called to breakfast (hog and poi again), and at 5 we got off with our guns and lunch, and started for the mountains. Five miles of up-hill work. We soon heard the turkeys gobbling on all sides, and hens cackling. My partner went off on his well-known hunting ground, and I went for the nearest gobbler, which took me up a cañon with almost perpendicular walls of rock on either side. On my way up I saw three wild hogs that would weigh as many hundred pounds each. They were black fellows, but I wasn't hunting dogs. I drew nearer to the gobbling, which seemed close at hand as I got to the end of the gulch. Presently I saw two big turkeys walking up a steep slope about a hundred yards away. Oh! for a rifle—and only a shotgun loaded with No. 6. The "bush" was awful thick, and full of thorns; just such stuff as the wild gooseberry of Washington. The ravine was not over thirty yards wide, and I began to think I was sure of a shot as the walls went up plumb for a thousand feet, and I thought they must surely come out by me. All I feared was being tangled up in thorns so I could not shoot. The bush was so thick that it was impossible to get along, so I climbed up about fifty or sixty feet and then carefully followed along a ledge inch by inch.

The turkeys kept gobbling all the time and climbing higher. Finally I got where I thought I had them sure within thirty yards. I knew there were at least three birds, and I sat down for a minute to catch my breath, as I had been climbing furiously. Everything was quiet. I got my gun all ready (a six-shot repeater) and stuck my heel into the ground and stood up, expecting to see turkeys flying in every direction. You can imagine my surprise and disappointment at seeing nothing; while I was rubbing my eyes and trying to collect my senses I suddenly heard a loud gobble right over my head. Perhaps I didn't look up quick, but I think I did, and you can picture my chagrin when I tell you that square over my head, on a pinnacle of rock, stood two big gobblers. They were eighty yards above me, and one was strutting and gobbling incessantly, while the other was peering down at me. I sat about ten minutes and watched them. Still higher, on the other side of the cañon, I saw three goats. One of them looked as big as a cow, standing right on top of the mountain like a statue. I could hear a kid bleating, but could not see it. With a good rifle I could have knocked the big buck over. Well, I was helpless—the turkeys were too smart for me, and they knew it. There they stood as if laughing at me. Knowing if I tried to climb higher (which seemed doubtful to accomplish) the turkeys would spread their wings and sail away. I suddenly turned my gun loose at them just as they were in full strut. The feathers flew, and some of them came drifting down by me; the birds disappeared and so did the goats. However, I saw the turkeys again on a "hog back," and they saw me about the same time and went sailing away for a mile.

On my way out I found a cave with a good trail leading into it, but, as it smelt of hogs strongly, and as I hadn't lost any wild boars, I did not investigate it very closely.

I had heard Durant shoot several times, and when I got out on the ridge I saw him on the opposite one, with a turkey over his shoulder, that was almost as big as himself (it weighed twenty pounds). I was feeling rather blue, but was glad he had one.

We ate our lunch and started again. Everywhere we could hear turkeys gobbling, and cocks crowing, hens cackling, just like a farmyard, but always just a little ahead. In our vicinity it was quietness. Farther on the brush was alive with fowl—always just ahead when we would get there after incredible toil over rocks and through "lantanna," a kind of prickly shrub, in flower, and full of fruit all the year round, which every wild thing lives upon.

With a good dog now we could have shot *Gallas bankiva,* var. *domesticus.* I saw one rooster fly out of a tree. He looked like a big black game dunghill fowl, nor could he fly any better, but when I got to where I saw him alight he was not to be found, though it was all open there; he might have run a half mile while I was going a hundred yards. You can imagine how I felt; turkeys everywhere just out of reach. I saw twenty-one all told, but try as we would they would get on to "hog's backs" three or four hundred feet up and wait until we were almost within gunshot, then while we were holding on to some cliff and trying to get a little nearer, they would sail away down the valley, one after the other. Finally, when I was almost discouraged, and it was time to start for the train, while I was crawling through a thicket on my hands and knees, I suddenly heard almost under my nose "Quit! quit! quit!" and saw a turkey making its way through the bushes as fast as its legs would carry it. It could not fly because there was no chance to spread its wings. Thunder! how I struggled to get my gun to point somewhere near it. The bird's instinct to go up helped me to keep it in sight, as it dodged this way and that through the brush. Finally I got the muzzle of my old gun pointed at its neck, and let her go. Mrs. Turkey never took another step or even a kick, though not shot in the body. I was not so excited but my aim was good, even if I had not fired a gun for two years. I grabbed my turkey and struggled out of the brush, and with enormous strides went down the valley to join my partner.

I felt completely satisfied; we had just time to catch the train, with our turkeys in a gunnysack, ourselves dirty, torn and bleeding from a thousand scratches, but happy as when we were boys and I used to shoot little dappers down by the big rock when you would drive them in for me. We got home all right. The turkey was fine.

The Island of Molokai is one of the greatest game spots on the globe, alive with deer, cattle, goats, hogs, dogs, turkeys, peafowl, mongolian pheasants, quail and dunghill fowl of all kinds, all escaped and gone wild, reverted back to nature. They are as wild now as originally. An acquaintance of mine was there two weeks and brought home twenty hides of deer (Japanese spotted); said he could have killed a hundred. There was a bounty on them awhile ago, and still is on hogs. I am going over there before I leave the Islands.

HONOLULU. PHILIP SAVARY.

It would seem from the above letter that our island possessions are natural game preserves, and the game is not likely to find its way to the "dumping grounds" of our large cities. I have no doubt that these conditions would obtain in Puerto Rico and Cuba and in our southern country, if it were not for natural enemies. Save the dog, and probably cats, the Hawaiian Islands are not infested with game destroying mammals. My brother does not mention any birds of prey in a list of the birds he has seen, and in such cover as he describes they would work but little harm. With care to exclude undesirable species, there is a great field for sport.

WALTER B. SAVARY.

Just One Afternoon.

SUNDAY afternoon, not long ago, after a hearty dinner, I took my FOREST AND STREAM and, seated in an easy chair with feet stretched out toward the fire, prepared to enjoy an hour with others, like myself, chained to business. My good wife was here, there and everywhere for a while and then settled down in a chair by my side, and was soon apparently engrossed with the Ladies' Home Journal, but I notice she does not seem to make much headway, and looking up I am greeted with "Jack, you are the slowest reader I ever knew. Do hurry up and turn over that leaf." My three-year-old boy Forbes is rolling on the floor with my black and tan hound Tuck, while Jack the beagle has taken up a comfortable position in a cozy spot behind the stove.

Several pages of FOREST AND STREAM are gone over, the descriptions of scenery are photographed on the mind, and the success or failure of the brotherhood with rod and gun is applauded or condoned, and perhaps their methods mentally criticised, and then I come to canoeing and yachting and trap scores, and then my eys begin to wander. Jack Frost, the crystal artist, has been at the window with his pallet and brush, and the lower two-thirds of the pane is covered with his artistic work. What a lover of nature Jack Frost must be, for all his pictures are painted from that illimitable source—the hand of man is entirely absent—and who can compete with him? Look at that clump of spruce trees and balsams in the corner, with the snow piled up on the lower branches. The wind has shaken it from those above only to increase the depth on the lower ones, below which is a fine shelter, a veritable Hiawatha's tent. Surely there must be a ruffed grouse beneath those sheltering boughs, but we won't disturb him. Now look at that tangle of cedar and Virginian creepers, and that small beech tree on which the leaves are still clinging, although bleached almost white by the sun, rain, wind and frost, and over there the trunks of some giant elms and maples, the top branches not showing, for the artist has not yet reached the top of the pane; but no matter where he leaves off the picture seems to have a finished look. See that knoll over there, where old Boreas has swept away the snow and uncovered a cluster of ferns and wintergreen. How green some of them look in spite of frost and snow. Surely I am not looking at a picture; for the scene is too real, and quite certain am I that I recognize the path in front of me—those two balsams standing like sentinels on either side of the gap in the fence. Why, here is the log where Harry and I sat and ate our lunch, on our way home from the trout stream further on, one day last year—no! no! it must have been years ago, for my boy was a baby then, and here he is with me to-day, a lad of ten years, but to-day feeling very important and quite a man, happy in the possession of a brand new gun, the first he has ever owned. Then too I feel the pleasant weight of my own little 16-gauge under my arm, the crisp but silent snow under foot, and the frosty, health-laden breeze in my face. Jack and Tuck, our faithful dogs and companions of many an outing, are with us too, and are nosing around in the little swamp to our right, and trying their best to start a hare or fox from his hiding place. A sharp yelp from Jack announces the starting of something, and a moment later a streak of gray comes through the trees on our right and is making for the hardwood ridge on our left, but a charge of No. 7 stops him; we generally know when Jack has flushed a grouse by him giving one or two short, sharp yelps.

But it is not a grouse Jack has started now, for he gives three or four sharp barks and then breaks out with a long, loud, musical wail, in which Tuck joins. Tuck is a baritone, but Jack could make his fortune on the stage as a tenor. His style, volume, range, technique, tone and quality are perfect, but his enunciation is poor; but then he might confine himself to French and Italian opera.

Away they go, and we catch a glimpse of the hare as it crosses a logging road about two hundred yards ahead of us.

We wait to see if he crosses that ridge about three hundred yards to the south of us. No, he did not cross, for the music of the dogs is drawing nearer again, and on this side of the swamp; he will cross somewhere near to where we are standing. "Stay where you are, Forbes, and I will go to where he crossesd before and try to stop him if you miss him."

Nearer and nearer come the dogs; and presently a bundle of gray and white, with long ears and long hind legs, hops into the road, half turns and comes toward me for a few jumps, and then—stays there, for a charge of lead from the boy's gun stops him. The dogs come up, gaily wagging their tails, sniff the game, and then look up in our faces as much as to say, "Well, you did pretty well, but say, didn't we hustle him around in great shape!" You certainly did, good dogs, but hie away again there! hie away!

The dogs work hard, but there seems to be nothing else in that part of the swamp, but as we near the ridge above mentioned we see in the snow what appears to be a row of tiny post holes, about ten or twelve inches apart, and one directly behind the other. We know what that means, and looking from whence they come we see where sly Reynard has been basking in the sunshine on a ledge of rocks, but has slunk off at our near approach. The dogs are called, one sniffs, and the air is again filled with music. The fox will have to hustle, for the dogs are hot on his trail and there will be no time for him to try any of his old tricks. Fainter and fainter grow the sounds of the chase, but we do not care, for we know that the fox, having taken a southerly direction, will not leave the swamp, but will most likely circle and then take the back track.

We separate, Forbes staying on the ridge, while I go back to the logging road where the hare came to grief. The swamp is fully two miles long, and the fox will most likely go to the end of it before circling, so it will be some time before we hear the dogs again. Patience is a virtue, but it is a virtue hard to exercise on an occasion like this, although there is plenty to occupy both eye and ear. The snow mantled forest, with its three predominating colors, the gray of tree trunk, and branches and dead leaves, the green of the evergreens and mosses, and the white of the snow, with all their varying shades, present a beautiful scene, lighted up as it is with the bright sunshine gleaming from a blue, cloudless sky. Four odd colors, blue, gray, green and white, and yet how beautifully they blend in nature's picture. Overhead in a birch tree a red squirrel chatters and skips around; he, too, is impatient and doubtless wishing that I would move on, so that he can resume his repast on the pine cones beneath the fir tree, from which I have just disturbed him. The shrill cry of the bluejay is heard in the distance, and is answered from a tamarack near by, but a slight movement on my part sends this bright-eyed blue and white bedecked winter resident scurrying away like a blue streak. A dozen or more tomtits are flitting from tree to tree, alighting heads up, tails up, on the upper or under side of a branch, no matter which, any old way suits them, and continually uttering their cheery chic-a-dee-dee, chic-a-dee-dee-dee. But hark!—surely that was Jack's voice I heard there. There it is again, softened by distance, but none the less clear as a bell. Tuck also can be heard now. Hurrah! they're coming back, and apparently right straight toward Forbes.

Before parting we had arranged that if he got a shot and killed the fox, either with the first or second barrel, he should wait about ten seconds and then fire another shot to let me know the game was over. Nearer and nearer came the dogs; surely the fox must soon cross the ridge, for he can't be far ahead of the dogs. I wonder how the boy will act, for this is his first fox run. Will he have buck fever, or rather fox fever, and let the fox go by without——Bang! Bang! Look out now, you had better be ready—one—two—three—four—five—six—seven—eight—nine—Bang! Hurrah, he's got him; good boy, Forbes, let me get to him, I can't wait to go round by the cattle path, but rush straight through the bush. I am willing to bet that he's the biggest, best furred fox ever killed around here; how grand he'll look when mounted and placed in a glass case over the hall door. But how will my boy look when I see him? He will be standing there apparently grown two or three inches taller, the butt of his gun resting on the ground, the muzzle in the right hand, held at arm's length, the left hand rests on the hip, while the right foot is placed triumphantly on the neck of the fox. The two dogs will be standing near, with lolling tongues and heaving sides, but their eyes and tails show that they too share in their young master's success. His face may be a trifle pale, but a triumphant smile is playing all over it, although he tries hard to look unconcerned and as if killing a fox were an every day occurrence with him. Hark! I can hear him call, "Father come and see." All right, my boy, I'm coming as fast as my legs can carry me. How I wish I could fly! "Come and see, father." Well, really I can't come any faster, I think I'm doing pretty well now. Had I known the bush was so thick and the snow so deep I think I would have gone round, but more than half the distance has been covered now, and the rest is not so bad.

"Father, come and see." "Will be there in half a minute, sonny." Confound these logs, I never knew them so slippery before. And the brush heaps seem determined to keep me back. Whew! it's hot work, and I'm all of a tremble. The grouse that just whirred from under my feet actually made me jump, and I forgot I had my gun with me. I am afraid the boy is not taking his success as coolly as I thought he would; but I'm almost there. Just on the other side of this thick cluster of cedars and balsams is the spot where I know he is standing. "Father, come and see." Ah! that voice is not more than ten yards away now. "Here I am, my boy," and head first into the snow-laden trees I plunge, getting a regular icy shower bath. But what is that that falls on my shoulder? It must have been a small limb broken off by the weight of snow. No, it can't be, for it clings there, and is now shaking my arm, and now I hear another familiar voice saying, "Jack, do wake up—tea is waiting," and Forbes has been calling, "Father, come to tea" for the last ten minutes. I rub my eyes and then look for the picture on the window pane, but the lights

have been lit and the blinds drawn, and I have been dreaming.

During tea my wife said she wondered how I slept through such a noise, for our boy had been having a great time with the dogs, trying to catch them in an old landing net, and had them scampering round and barking at a great rate. Later in the evening, while I was discussing gunpowder with a friend, my wife remarked that "E C and Schultze seemed to have a good record." Considering the position of the ad. of those brands, that remark, to my mind, proved that she had gone further through FOREST AND STREAM than I had that afternoon.

Natural History.

Concerning Woodpeckers.

Read before the Ornithological meeting of the Entomological Society of Ontario

WHILE mentally reviewing in detail the attractions of this or that group of birds, I can scarcely single out one and allow it to claim special honor as a favorite family. Yet somehow I have always felt drawn toward the woodpeckers. This is strange, too, for while my own temperament is poetical, that of the *Picidæ* inclines, if anything, to the prosaic.

A great blue heron in his proper element—fishing, for instance, in the summer twilight at the foot of the shallows—typifies for me the utmost grace of form. A chickadee in a midwinter slashing has been to me as an associate more charming in manners than any Chesterfield of them all. A cerulean warbler tastefully arrayed in blue and white brings to my eyes, even on the hottest of days, a cooling, restful influence. A woodthrush in the high June forest, in pure tones chanting his morning anthem, refines and ennobles the lyric outburst which heralds the coming in of summer.

How stands it with the woodpeckers? Form angular, voice harsh, manners doubtful, colors sometimes brilliant, but often barbarously laid on! Still I like them. Gracefulness of form! Why, that would be out of place on a rail fence or the dead crown of a beech—things in themselves the very acme of angularity. Good manners! Sometimes it serves mankind right to be treated

FLICKER.

with suspicion or passed by with indifference. Harmonious blending of colors! Surely in looking at the infinite variety of hues in which nature dresses herself there will at times spring to the lips the cry, "Motley's the only wear!" Melodious tones! Ay, in June I grant you. But when against my face the angry north is spitting sleet; when over the snowdrifts comes the sharp bark of the lean and hungry fox; when the frost king, hurling his blue javelin, smites and splits with metallic clang the "gnarled and unwedgable oak," give me to hear the fierce, the ringing stroke of *Pileatus* pounding in the shrouded swamp, or the brave, if strident, calls of the redheads foraging among the beeches for their hard-earned daily bread. Yes, the woodpeckers fit in with nature even in her sternest mood—surely a sufficient passport to the naturalist's heart.

The *Picidæ* being almost necessarily forestine, we might expect the family to be well represented in Middlesex, more especially that we have such a variety of trees here which can naturally supply the needs of more species than would a larger area of uniform forest. We have, in fact, eight species in this county, exactly double the number found in Great Britain.

Ours are: *Dryobates villosus* (hairy), *D. pubescens* (downy), *Picoides arcticus* (Arctic three-toed), *Sphyrapicus varius* (sapsucker), *Ceophlœus pileatus* (pileated), *Melanerpes erythrocephalus* (red-headed), *M. carolinus* (red-bellied), and *Colaptes auratus* (flicker).

Two (the only others occurring in Ontario) may yet be found here, as very rare winter visitors from the North. These are: *Dryobates v. leucomelas* (northern hairy), and *Picoides americanus* (American three-toed).

I have been asked to write of the habits of these birds, and I find at the outset the subject much too large for the limits of a single paper, and indeed beyond my capacity in any number of papers. I could write better of the snakes of Iceland. Who could say, for instance, what a redheaded woodpecker would or would not do in certain given circumstances? A farmer once came to me to indignantly protest and complain of the havoc the redheads were wreaking on his barn. In vain I deprecated all responsibility. I was forthwith brought to the spot and shown where the birds had battered holes through the roof to get at (as he mournfully averred) his peas. As a matter of fact, the hungry fellows were treating his barn as they would an old stub, but it was in order to get at the farmer's pea beetles, which in myriads were swarming inside. Another day the redheads might be sampling sweet apples, for instance, or darting out for insects in true flycatcher style, thus giving us in good measure of the spice variety.

So let it be with this paper. I have a comprehensive text, and, like the Rev. Solomon Peter Hale, who, in opening up one of his celebrated lectures, gravely announced his intention to confine his remarks to the "Past, the Present and the Future," I shall run the less risk of getting away from my subject, and whatever else it contains, I shall be sure to supply sufficient variety.

Hardiness of constitution is a feature I admire in any

HAIRY WOODPECKER.

bird, and taken altogether, our woodpeckers are a hardy lot. The downy and hairy (*Dryobates*) keep a uniform hold on the country. Superior to mere changes in the weather, they are, if never numerous, never absent—good representatives of our rather small class of resident birds. The redhead and red-belly (*Melanerpes*) in some ways act much alike—the redhead being at most times the more numerous. Both are summer residents. When beechnuts are plentiful both remain in considerable numbers throughout the winter. The kind of winter has nothing to do with it, the supply of beechnuts alone deciding the question. The redhead stores many nuts in September in out-of-the-way places, an act of forethought I have not observed the other perform. Then again the red belly frequently comes to the orchard for frozen apples, which I have never seen a redhead doing—perhaps at that time he falls back on the larder he stocked early in the fall. Mr. Beal, of Washington, writing of the red-bellied woodpecker, says, "It is not known to breed north of the Carolinian fauna," and again, "Curiously enough, it sometimes migrates north of its breeding range to spend the winter." As bearing on this latter statement, I may say I have noticed *M. carolinus* in greater abundance during September than any other month in the year; and in view of the fact that it is really a Southern bird, I have for some time doubted that these numerous September individuals came from the north of us. Yet they have been recorded by Mr. Schoenan as quite common in Bruce county. If they breed there the species is not characteristic of the Carolinian fauna, for the Bruce peninsula is certainly Alleghanian, with a strong element of the Canadian fauna in its general features.

Sphyrapicus, tippling at his sap wells, is a curious though common sight. My friend Mr. Joseph Beck, who is not only a close observer of birds in general but is especially well qualified to speak of woodpeckers, assures me he has seen this bird in midwinter. It is, however, mainly migratory, commonest in spring and fall,

SAPSUCKER.

and a rather common summer resident. In its fondness for cambium it often removes considerable fresh bark. I have seen several fine Norway spruce ruined in this way. Yet it cannot live on sap alone, nor even on cambium. It feeds largely on insects, many of which (chiefly *Diptera*) are attracted to the oozing sap, and fall an easy prey.

Picoides articus, a rare visitant from the North, is, in regard to the structure of its feet, an aberrant form, apparently able, however, to get along with its three toes as well as any of its four-toed relatives. I have seen one taken some years ago in a cedar swamp near here. Mr. Saunders has more recently captured an example and seen others. Its winter wanderings are no doubt more prompted by the state of the food supply than they are by the severity of the Northern climate. From personal knowledge, I can add nothing on its habits.

The pileated has suffered more in consequence of the advent of civilization than any other member of the family. Originally a common resident, his great size and magnificent presence have brought him more difficulties than his marvelously acute sense of sight and hearing have been able to surmount. While in some of our larger swamps he still holds royal court, his throne is rudely shaken, his rule one of critical though "splendid isolation."

Even were he not hunted at all, it is doubtful if he could maintain himself in numbers in our sadly depleted forest. Highly specialized in the art of wood cutting—chiseling large and deep "mortise holes," for instance, in a live white ash in order to secure a colony of ants—he has proved unable to adapt himself, like the redhead, to the rapidly changing conditions of the country.

The flicker is pre-eminently an ant-eater, and I think it is less to avoid the rigor of our winters than to satisfy an insatiable craving for formic acid which prompts the sturdy yet amiable yellowshaft to betake himself to milder climes. My latest record for the species here is Dec. 22—a bleak and bare day. Indeed, the snow and the flickers are seldom seen together, for, although often perching high and feeding on many wild fruits, they are, after all, birds of the bare earth.

I transcribe the following from my "bird's calendar," bearing date April 6, 1889: "Snow 6 inches deep, with high drifts beside. All this snow fell since yesterday noon. This morning is calm and mild, with a strong sun shining, and no doubt the snow will rapidly pass away, yet surely none too soon for the poor birds. Saw flicker for first time, in maple at edge of orchard. Later saw another on ant hill eating medium-sized ants which have a brownish head and thorax and black abdomen.

RED-HEADED WOODFECKER.

Think of the storm last night and the hot sun to-day. When the ant hill is bare of snow the inmates sally out, the hungry flicker comes and the great question crops up: Which is to live? How eagerly the ants were working to clear away the accumulated debris! How prettily th flicker's plumage shone in the light of the western sun!"

On the approach of cold weather our resident woodpeckers make for themselves snug retreats, in which they not only spend the nights, but also the very stormy days. These "winter shelters" are worthy of critical study. They are made shallower than the nest, and are generally closer to the ground. The first half dozen or so which I discovered happened not only to face the south, but were also situated on the southern edge of the woods. Later, however, I have seen too many exceptions to this to allow me to generalize.

The downy, the hairy and the pileated are the only species I know of as making these solitary cells. Assuming that only one is made or used by an individual in a season, it must restrict his foraging ground to a rather limited area, and a hairy woodpecker, for example, may not be such a winter wanderer as somehow I have always considered him to be.

Most birds of the cloister lay white eggs; with the woodpeckers this rule is invariable. The hairy is the earliest nester, the red-bellied, perhaps, the latest. The redhead has the greatest vertical range, sometimes nesting as high as 75 feet and on the other hand, in a case I observed myself, as low as 15 inches from the ground. In choice of material to work in, *carolinus* selects the most decayed wood; *S. varius* the greenest and hardest.

Of the five nests of the pileated which I have seen in the county, two were in beech, two in elm, and one in white pine. The first one examined was in a beech tree which stood within 100 yards of a school house, New Swamp College. The nest was placed at a height of 45 feet, and on May 20 contained two fresh eggs. These measure in millimeters as follows: 36 x 24 and 35 x 25—the gems of my small oological collection. The second nest found was in an elm stub in thin woods—the hole close to the top and not more than 30 feet from the ground. When examined on May 27 it contained five newly hatched young. The other nests proved inaccessible. The prettiest woodpecker home I ever saw was found by Mr. Beck and myself while pottering around a pleasant woods near the River Thames. It belonged to

a downy, and besides displaying the well-known neatness of that artistic wood-worker, the whole interior was lined as white as snow with what we decided to be the mycelium of the dryrot fungus. Of course, we left undisturbed the demure little creature in her fairy hall, leaving her still to keep watch and ward over the crystal orbs containing the fruition of her fondest hopes.

I have spoken of the harsh quality of the picine voice. Even here there is saving grace. The hi, hi, of a first flicker is a pleading, an inspiring, call to the lagging spring. The soft koor-r of *M. carolinus* adds another charm to even the memories of sugar making. The minor tones of the April pileated are rare and sweet, the staccato notes of the great forest ranger changing in the spring, becoming lower, tenderer—softened and subdued by love.

But music has other mediums than the voice with which to express the emotions. This the woodpeckers well know, and so have learned the value of instrumental music. Given a hard, dry and splintered stub, a red-headed woodpecker—especially in the spring of the year—will by a series of rapid strokes produce a rolling call, suggesting the not unpleasant din of a snare drum. The music depends more on the resonant quality of the sounding board than on the expertness of the performer. Once in a while, by a lucky chance, an altogether unusual instrument is discovered. The thought of one of these recalls an incident of my school days.

Swamp College, long since removed, and now a granary on a neighboring farm, was at the time I write of a store house, where we boys intermittingly trudged to procure some scattered grains of wisdom, mixed, I fear, with an altogether undue amount of chaff. The building was constructed of logs, having the top of each gable end weather-boarded. Boys passing at safe hours could seldom deny themselves the luxury of throwing a stick or stone at the thin boards of the gable end. Not to satisfy a grudge against the building or teacher was this done, but merely to waken the echoes, asleep in the surrounding woods. On some such occasion as this a red-headed woodpecker, sitting disconsolate on a sodden stub, must have heard the long drawn out rattle, and hearing, received an inspiration. On a day in spring during school hours above the hum of the school room sounded a loud tattoo. The teacher, half-frightened, thought at the worst it was merely some new and temporary freak of the boys. But no; the boys, although delighted at the diversion, were as much mystified as the teacher. Then Miss W., stepping softly, went out, and on her return (gracious young lady that she was), allowed the pupils to tiptoe by twos and threes to the open door to see the mystery explained.

I remember thinking the woodpecker more frightened at his own stupendous success in making a noise than he was at the school watching him at such close quarters.

The whole upper and vacant chamber of a school house for a drum! Why, he simply beat the other woodpeckers all hollow. The teacher grew to like him, and yet, returning often, he became a nuisance. Volunteers readily came forward, offering to capture or kill him by snare or sling, or the hundred and one ways suggesting themselves to eager and active boys. Such schemes were vetoed in turn. We bore the additional racket, and when it finally ceased Swamp College even grew melancholy.

I once watched a hairy woodpecker drumming on a post to which a wire clothesline was attached. The vibrations, running along the line, made this the most pleasing performance I ever heard made by a woodpecker. I was told he returned (from a cedar swamp, evidently his home, and a quarter of a mile away) three or four times daily for more than a week, thus proving himself a good judge of stringed instruments.

The most interesting tattoo I know of remains to be told. A rather new frame house near Plover Mills some five years ago was occupied by its owner, a young bachelor—that is, occupied at meal times and some evenings—it was, in short, his domicile. One morning he was awakened by a rat, tat, tap, at the front door. On his opening the door to receive company, his visitor, after one good look, immediately took to the woods. The bachelor examines the door and the sequel rapidly develops. The demand for vengeance—the loaded shotgun—patient hiding—furtive peeps around corners—return of visitor—renewal of tattoo—unerring aim—loud report—and a male yellow-bellied sapsucker lies dead in the very heyday of his ambitious hopes.

A little later I was given a chance to examine the handiwork of my friends, the birds, and truly I had not a word to throw at a dog. A circle two or three inches in width around the door knob was battered and dinted to the depth of an inch or more. This loosened the screws which held the door plate, and no doubt the woodpecker at each rally raised considerable of a jingle. Yes, and he had drummed up a mate, too, and she, to show her appreciation of the musical abilities of the master, had made a nest in the adjoining casing of the door. This was the easier done, for by simply cutting through an inch of pine a cavity was reached that had for bottom the door sill, four feet below. It was clearly the intention of the birds to have nested there, but, as I have shown, love's young dream was suddenly ended, and an incipient race of door-rapping woodpeckers was thus prevented from disturbing the peace and quietness of our rural homes.

In conclusion, let me add that I shall be deeply gratified should anything written herein lead other observers to take increased interest in the many curious happenings, as yet unchronicled in the annals of the woodpecker world.

ROBERT ELLIOTT.

Take inventory of the good things in this issue of FOREST AND STREAM. *Recall what a fund was given last week. Count on what is to come next week. Was there ever in all the world a more abundant weekly store of sportsmen's reading?*

The Geo. A. Boardman Natural History Collection.

Editor Forest and Stream:

Henceforth the unique and valuable museum collection of the late George A. Boardman, who passed away so recently at his quiet home in Calais, Me., will be located and housed at Fredericton, N. B., in one of the best Government buildings, where it will occupy a conspicuous place and receive the care and attention which it deserves. The Hon. Wm. Todd, a member of the Provincial Government, who is a nephew of Mr. Boardman, has charge of the removal and installation of the collection. Indeed, he was about to ship it when Mr. Boardman was taken ill, but considerately postponed doing so, and consequently the ingathering of this eminent naturalist remained with him to the last, much to his heart's comfort and content, for the momentary parting with it at such a juncture would have been like speaking a final farewell to his dearest and most intimate companions and friends.

What a happy relief it must have been to his mind to have this collection so opportunely and desirably disposed of. Not less will his New Brunswick friends delight to do him honor. My own choice would have selected Fredericton next to Calais as his beneficiary. And Canadians are warm hearted, honest, faithful and unpretentious people, as I have always found them. Almost every week I receive epistolary testimony from some of them to this effect.

Perhaps it is better that Calais did not receive the gift. Years ago Mr. Boardman gave me his confidence, to a certain extent, as to the want of appreciation of his home people ("a prophet is not without honor except in his own country"), the municipality declining his repea ed overtures, first, on the plea that the city had no suitable building for the collection, and afterward declining to erect one. And it serves the corporation right to be left out, though the body of the town's people will sympathize with us all in the regret that the home site and the center of his life work could not have been selected and appropriated for this distinguished monument of his labors. It is a grand donation! It represents so much, not only of the local fauna of that interesting region, but so much persevering study, devotion and effort of pursuit.

I have not been able to obtain a classified memorandum of the G. A. Boardman collection, but I have been told by the proprietor that there were more than 3,000 birds and perhaps half that number of mammals and miscellaneous subjects, including many marine curiosities. The world of science cannot well spare such contributors as George A. Boardman and George N. Lawrence; both of them gone within a decade.

A Goosing Episode.

WE were tied out on one of the southerly points of Thoroughfare Island. The weather was mild, and a gentle breeze blew from the northwest. From the duck shooter's point of view the only good thing about the day was that it was cloudy and overcast.

The duck shooting had been poor for a number of days and promised to continue so until there should be a change of weather, with a storm, high winds and lower temperature. Still, I had gone up to Thoroughfare on the chance of getting a few odd shots during the day—though nothing like a steady flight was expected.

In the big Sound to the westward, and in Peter's Quarter Bay to the east, thousands of geese were resting or feeding, and from time to time small flocks flew from one of these bodies of water to the other, but usually far too high for a gun to reach them. Nevertheless, besides my stand of wooden duck decoys I had taken two live goose decoys and had put them out with a half dozen wooden goose decoys, and from some small bunches of geese that had flown over a little lower than the others I had succeeded in killing two or three birds.

About the middle of the morning, a thin broken line was seen far off to the eastward, which as we watched it gradually developed into a bunch of six or eight geese, headed for us and not more than one or two gunshots high. As they approached, Charley honked in good style and they at once noticed his cry, replying and seeming a little to lower their flight. As they drew nearer, the live decoys saw them and commenced to call in good style, the old gander honking in trumpet tones, while the goose clucked constantly and enticingly. On came the wild birds, lowering their flight, stretching out their necks, and as they drew nearer seeming eagerly to scrutinize the decoys below. The wind had increased a little, and before the birds reached us they payed off to leeward and passed outside of the decoys, a long gunshot off.

"Don't shoot, don't shoot," said Charley; "they are going to swing."

The decoys kept up their calling; Honk! Ah honk, from the gander; Nuka! Nuka! Nuka! from the goose, and vociferous responses came from the wild birds. Sure enough, after they had gotten well past the decoys they swung up into the wind at a slightly greater elevation, and then turned and came back again, now over the marsh, a little to the windward of the blind. Of course I did not dare turn my head to watch them, but with all my ears I listened to their melodious cries which drew nearer and nearer. Again Charley called to me, saying, "Let 'em go by. They'll swing over the decoys this time." Presently out of the corner of my left eye I discovered the head of the flock well down below the decoys, and saw them turn and come again with lowered flight, and crooking necks and legs almost beginning to drop toward the water. Truth to tell, I was so much interested in the way the birds acted that I hardly thought much about shooting at them, but felt a great desire to see how near they could be brought by the talk of the decoys, on which their attention was fixed. As they turned to come up again, headed straight over the decoys, a strong blast of the freshening wind caught them, and again they payed off to leeward and passed outside of the decoys.

At that moment I heard in the air behind me a startling rushing sound of some heavy falling body, and before I could turn my head there swept over the blind—within five feet of me—and splashed into the water immediately in front of the blind and between it and the decoys a tremendous old gander. He had separated himself from the flock, and had as it seemed dropped from heaven to investigate the live decoys, toward which with head erect he now swam swiftly. Of course, I could have blown his head off at any moment, but that would have been to end the spectacle, and for this I was not ready.

The flying geese had swung up to windward and again turned, and now were coming back again, low over the water. I should have been willing to spend the day watching this performance, without firing a shot; but the show was almost ended. The great gander on the water swam rapidly toward the decoys and apparently frightened them. They sprang from their stools with flapping wings, and the gander, thinking that they were rising in the air, himself took wing and flew away. My attention was concentrated on the approaching flock, which, warned by the gander's flight, turned before it again came within shot, and flew off.

So at these geese my gun was not discharged, but indeed I would rather have witnessed this sight and enjoyed the excitement which was a part of it than to have killed many geese. For when a goose is dead that is the end of him; but the memory of this flock—now approaching and again retreating, the sound of the fall of the great gander's body through the air and the splash with which he struck the water, and the sight of his graceful form and proud and alert head and neck almost within reach of my arm—this memory will remain with me for many years.

G.

Adirondack Guides' Association.

SARANAC LAKE, N. Y., Jan. 23.—What was unquestionably the most representative and enthusiastic gathering of Adirondack woodsmen that ever took place was the eighth annual meeting and banquet of the Adirondack Guides' Association last evening. The large town hall was very nearly filled with guides, woodsmen and residents with their wives, and in addition a large number of city visitors, sportsmen and health seekers, who are wintering at the Adirondack metropolis. Upon the platform were a number of prominent northern New York lawyers, as well as ministers, editors, doctors, business men and guides.

E. E. Sumner, president of the Association, introduced Dr. Frank E. Kendall, the honorary president and one of the trustees of the new New York State Hospital for Tuberculosis, about to be erected in the Adirondacks, who came up from Albany yesterday to attend this meeting. Dr. Kendall made an interesting address, which was listened to attentively and loudly applauded. He said in part: "In early days, as we speak now, the Adirondacks were visited by a class of people who loved the woods, who came here on pleasure bent, solely to hunt and fish. One of the first arrangements to be made was to find an able-bodied man, who knew the waterways and was well acquainted with the trails through the forest. A man who could make out a bill of supplies, cook and wash, set up open camp and take care of one for two or three months, winter or summer; a man fearless, but discreet, with a steady hand and a stout heart, whose very presence gave one an unexplainable confidence that all would be well. Such a man was then and is now known as a guide. The sportsmen learned to admire and trust these men, because they lived with and depended upon them, and in many instances the same guides were employed by the same parties for years. At that time our shores were dotted with tents and bark cabins; hotels were hard to find. As the old tally ho over the long and rough plank road was succeeded by the passenger car, our visitors steadily increased. With the sportsmen came the invalid. Different accommodations were necessary. As a consequence the hotels increased in numbers, the old camp sites were forsaken, until now the most modern hotels are on every shore. With the increased facilities for entertainment, but few went into open camp, while many sought the hotels. To row from one hotel to another in the day time all that was needed was a boat. As a result, a man with a boat, even though he did not know north from south, and could not find a hotel if there was a fog, established himself at one of the hotels and announced himself as a guide. This apology for a guide soon became numerous, and to an extent was encouraged by a few hotel men. To protect the sportsmen and the public traveling by water from such a useless and dangerous impostor, the Guides' Association was formed and organized in 1891 and incorporated in 1897. As a result of the patience and perseverance of its members, backed up with support and encouragement of its associate members, the organization now numbers in total 238, and is in a good, healthy condition.

"Individually the men making up the organization are to be commended for their woodcraft and physical ability, and particularly noticeable is their high sense of honor. Ladies have no hesitancy about coming into our country and going into open camp for weeks and months. Men have often placed their families in the hands of the guides for safe keeping and returned to their place of business. Never in the history of the Adirondacks have their confidence and trust been betrayed—a wonderful thing, not known of any other class of men.

"I feel distinguished and proud to be one of your number. To me this one quality is to be boasted of and characterizes you as strong minded men. From the Association as a body a wholesome influence for good is manifest indirectly if not directly. Whenever a body of men band themselves together with a desire to do themselves good and to benefit others, the community at large soon sees the result of their work. Commercially you have materially benefited the tradesman and hotel keeper. Many of our campers and annual visitors first learned of

the charms of our country through the Association's exhibit at the Sportsmen's Show in New York. The Association has given up its time and money to make these exhibits until this year. The business men and hotel men in our town and adjoining ones, realizing and appreciating the direct benefit to them from these exhibits, this year have contributed the necessary funds to send down a first class exhibit. They have felt your touch and responded with a hearty hand-shake.

"You are now stepping over the threshold into a new year. Time has come for you to put on the harness, get to work and pull together. Petty jealousies must be trampled under your feet. Work to uphold and make prominent the two great fundamental principles underlying your Association. First, to secure to the public competent and trustworthy guides; second, to aid in the enforcement of the forest and game laws of the State. Upon this last clause particularly depends your continued success. You are now at your zenith. The position you have taken and the small amount of work you have done in aiding to protect the forests and game has been widely discussed."

Hon. Verplanck Colvin, of Albany, who had hoped to be present, and also Hon. Frederick D. Kilburn, State Superintendent of Banking, sent lengthy letters to the Association, which were read by Seaver A. Miller and received hearty applause. Mr. Colvin wrote: "Who shall be the custodians, who shall protect the woods, the waters and the game? In my opinion, the guides, hunters and woodsmen of the Adironracks should be game protectors and forest wardens. Let each guide, hunter or woodsman who desires to be a State game protector or forest warden get a petition signed by resident land owners and reputable citizens that he has been a guide or forester resident in that county for the past ten years; that he is familiar with the woods and waters, with the streams and trails, and has an especially good knowledge of the fish and game, and will protect them, and that he knows the lines separating State and private lands, can travel the woods without trails, and will fearlessly protect the forests. Let the Board of Supervisors of the counties be empowered to receive and consider petitions and authorized to make and file in the office of the county clerk of the county a list of names approved by them as competent and reliable guides and foresters, by a certificate attached to the papers of those whom they approve as especially competent for such work, such list to be certified annually by the president of the Board of Supervisors as the eligible list from which appointments of game and forest wardens can be made. From these lists the State authorities could then each year select such men as should be needed in the forest wardens, retaining those found faithful and discharging those found negligent. These men should be permitted to pursue their ordinary avocations as guides or woodsmen, which would give them better opportunity to watch and guard the forests than if their movements were those of hated spies lurking in the forests. Better one hundred guides and foresters earning their own living with a bonus of $100 each, equal to $10,000 per annum, than twenty spies at $500 each per year, equal to $10,000 per annum.

"As a precaution against accident, the green garb of the ancient backwoodsman might well be copied by guides, tourists and travelers. A bright green hunting suit harmonizes with the forest and is unlike the color of bear or deer, beast or bird. Cloth of light sky blue color has the color of river and lake, and is unlike that of any animal, but is that of the plumage of some birds. Black and reddish brown and gray are particularly dangerous, as a person thus clothed might be mistaken for deer or bear."

At the business meeting Dr. Frank E. Kendall was reelected Honorary President; Edwin E. Sumner, President; Warren J. Slater, Secretary, and Oatman A. Covill, Treasurer.

The meeting then adjourned until the third week in January, 1902, after passing a number of resolutions recommending to the Legislature changes in the fish and game laws.

SEAVER A. MILLER.

American Wildfowl and How to Take Them.—XXI.

BY GEORGE BIRD GRINNELL.

[*Continued from page 67.*]

Harlequin Duck.

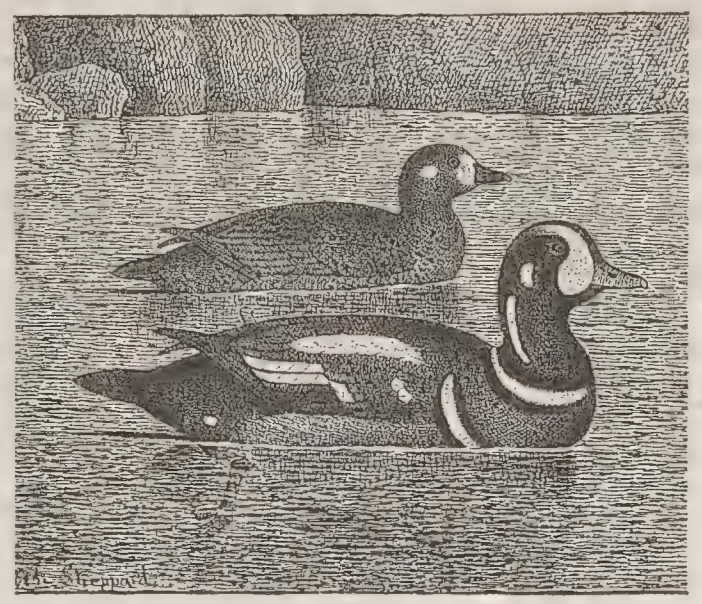
Histrionicus histrionicus (Linn.).

THE general color of the male harlequin is leaden-blue, marked with black, white and chestnut, as follows: Space between base of bill and eye, with a strip extending along the crown, a round spot near the ear, a narrow strip extending from below the ear a short distance down the upper neck, a narrow collar around the lower neck, a bar across the side of breast, in front of the bend of the wing, a part of the scapulars and tertiary feathers, tips of some of the greater wing-coverts, a spot on the lesser wing-coverts and a round spot on either side, just before the tail, white. The collar about the neck, the bar on the side of the breast, bordered with black. A strip from the forehead to the back of the neck, black, bordered with rufous. The rest of the head and neck is dark lead color, sometimes almost blackish, and with glossy reflections. The rump, upper and under tail-coverts are black; quills of the wing and tail, dusky; sides and flanks, bright tan, inclining to reddish. The bill and feet are bluish-gray; length about seventeen inches.

The adult female has the space between the eyes and bill and a spot behind the ear, white; the rest of the head and neck are dark brown, darkest on top; wings and tail blackish; the other parts reddish-brown, except the belly, which is white.

The harlequin duck is one of the most striking and beautiful of our ducks. It is one of our most northern species and not very much is known about it. On the Atlantic coast it is seldom found south of Maine. It is a bird of the Old World as well as the New, and, in fact, is found over the northern portions of both hemispheres. British ornithologists, however, have declared that it is only a straggler on that continent, except that it occurs regularly in Iceland and Eastern Asia. On the other hand, we know that it is commonly found during the summer in the northern Rocky Mountains, and I have seen the birds, evidently mated, in the Sierra Nevadas, in June. There, Mr. Ridgway tells me that it breeds as far south, at least, as Calaveras county, California.

All through the summer months in northwestern Montana harlequins may be seen spending their time, in small numbers, on lakes, often in the high mountains, where the milky waters from the glaciers form curious little mountain tarns at the edge of the timber line. Its nest has not been found in this country, and only twice in Europe: once by Mr. Shepherd, who states that he found it breeding in Iceland "in holes in the trees," while the Messrs. Pierson state that they found them also in Iceland in holes in the banks. It is altogether



HARLEQUIN DUCK.

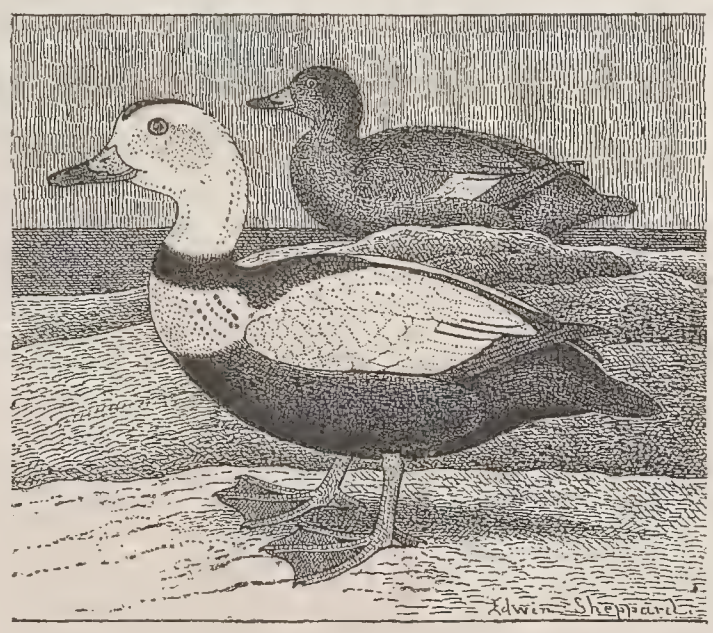
probable that in the northern Rocky and Sierra Nevada Mountains the harlequins breed in trees, while in Alaska they very likely breed in holes. In the summer of 1899 harlequins were seen abundantly on the salt water in Alaska, but all those taken were males. They were very common in Prince William Sound and at many points in the Bering Sea. An interesting account is given in the Zoologist for 1850 on the breeding in confinement of a pair of this species in Melbourne Gardens, Derbyshire. Eight eggs were laid, which were hatched about the middle of June, and several of the young ducks reached maturity. Some of the names given for this duck by Mr. Gurdon Trumbull are painted duck, mountain duck, rock duck, lord for the male and lady for the female, and squealer.

Labrador Duck.

Camptolaimus labradorius (Gmel.).

In the adult male the head, upper neck, upper breast and wing, except the long quill feathers, are white. A strip on the crown, running down over the back of the head, a collar about the neck, the back, rump, quills of wing and tail and entire under parts, black. The cheeks are sometimes tinged with yellowish. The long scapulars are pearly-gray and the tertiaries have black margins. The bill is black, with some orange at the base and along the edges; the feet are grayish-blue. The bill is somewhat expanded near the tip.

The female has the plumage of a general brownish-gray tint. The tertiaries are ashy-gray, edged with black,



LABRADOR DUCK.

and the secondaries, white, forming a distinct wing patch. The bird is about twenty inches in length.

The Labrador duck, or, as it is sometimes called, the pied duck, is one of our North American birds which has already become extinct, and this only within comparatively few years. It was a bird of the seacoast and was formerly not uncommon along the Atlantic, as far south as New Jersey, yet it seems never to have been very abundant. Giraud, who wrote in 1843, said of it: "This species is called by our gunners 'skunk duck,' so named from the similarity of its markings to that animal. With us it is rather rare, chiefly inhabiting the western side of the continent. In New Jersey it is called 'sand-shoal duck.' It subsists on small shell and other fish, which it procures by diving. Its flesh is not considered a delicacy. A few are seen in our market every season."

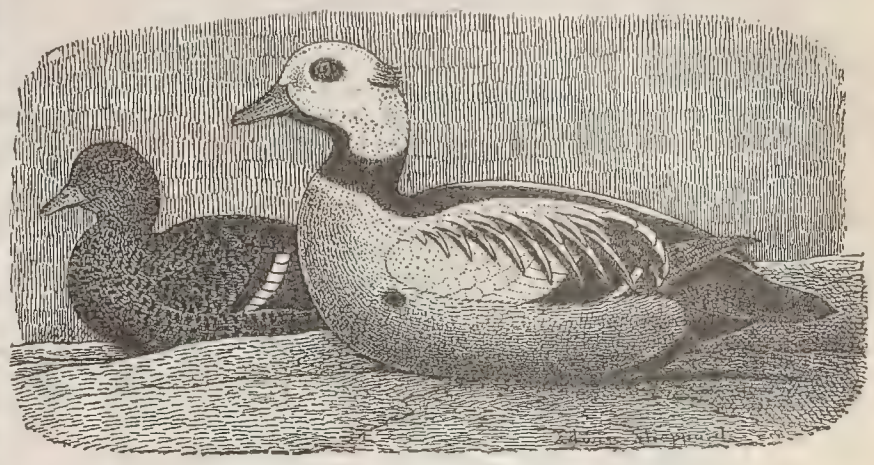
In the years 1871, '72 and '73 specimens were occasionally exposed for sale in the New York markets, but even at that time the bird had become so rare that ornithologists were on the watch for it, and as soon as a specimen was exposed for sale it was bought up.

The pied duck was a strong flyer and apparently well able to take care of itself, and its practical extinction took place before gunning was practiced on any very great scale. It was not especially sought for as a table bird, and no satisfactory reason has as yet been advanced for its disappearance. The number of specimens of the bird now existing is very small, probably not more than sixty in all, of which about two-thirds are in this country. A very beautiful group of Labrador ducks is to be seen in the American Museum of Natural History, in New York, where five specimens have been handsomely mounted in their natural surroundings.

Steller's Duck.

Eniconetta stelleri (Pall.).

In the adult male, most of the head and upper portion of neck are satiny white; the space between base of bill and eye and the tuft running across the back of the head, dark olive-green. The space about the eye, chin and throat, and band about the lower neck, the middle of the back, the long shoulder feathers, tertiaries and



STELLER'S DUCK.

secondaries, glossy blue-black. The rump, upper tail-coverts and tail, somewhat duller black. The scapulars are streaked lengthwise with white, while the tertiaries have the inner webs of the feathers fully white, and the secondaries are tipped with white. The wing-coverts, some of the scapulars and the sides of the back are white. The quills of the wing are dull black, while the lower parts are rusty-reddish, darkest in the middle of the belly and fading on the sides and breast to buff. The dusky of the belly darkens toward the tail, until it becomes dull black. There is a spot of blue-black on the sides below the bend of the wing. The bill and feet are grayish-blue.

The adult female is generally reddish-brown, speckled with dusky or black. There are two narrow bars across the wing, formed by the tips of the greater coverts and of the secondaries. The speculum is brownish; under parts light brown, spotted with brownish-black; the back sooty-brown.

This very handsome duck is found in America only on the coasts of Alaska. It frequents the coast of Asia, however, and has been taken in Russia, Sweden, Denmark and Britain. It appears, however, to be only a straggler in western Europe. It is distinctly an Arctic bird and more numerous in Alaska that at any other place. The nest is built on the ground, among the grass, and is well concealed. It is said to breed on St. Lawrence Island.

The species is one that can interest only Alaskan sportsmen, but it is an exceedingly beautiful bird.

In the Indian Territory.

PRYOR CREEK, I. T.—This country, where I am now located, is certainly one of the greatest on earth, taken from almost any point of view. Its producing qualities are second to none. Everything grows and flourishes here, particularly grain of all kinds. The next few years will see a wonderful change; sooner or later this land will come on the market, and when it does it will be snapped up. Even now there are parties who are only waiting for the time to come.

What interests me is the game that is here. We have everything but the ruffed grouse—deer, wild turkey, quail, geese, ducks, woodcock and snipe by the thousands. All kinds of plover, and snakes, too.

In Cleveland, O., I am having mounted what is probably one of the largest diamond-back rattlesnakes ever captured or killed. It is over 7 feet long and it is about 10 inches around. It has fourteen rattles on it. I purchased it from an Indian, and I must confess I would much rather meet it as I did (with the Indian) than when it was roaming over the hills of the Cherokee Nation.

This is the country par excellence for dogs to develop in. Quail are here by the thousands, and a find of thirty of forty coveys is not an unusual one.

Our hunting is done from a buggy, and just now we find the birds in the sumach bushes. I have at last seen a dog do what I have often heard they would do but never before saw them do, viz., find a covey of quail and if the shooter did not get to him he would leave them and come to the shooter and by his actions let him know he had found the birds and take him back to them. I saw him do the trick twice one day, and he raised himself a good deal in my estimation. Now I am prepared to believe a well-bred setter can do most anything but talk.

R. B. MORGAN.

Protection of Gulls.

PORT RICHMOND, Jan. 28.—*Editor Forest and Stream:* Your editorial item regarding the lack of protection to gulls prompted me to draft a bill intended to put them specifically in the class of birds protected through all seasons and to take them specifically out of the class unprotected during certain seasons as web-footed wild fowl. It is a coincidence that our Assemblyman, Hon. Calvin D. Van Name, spoke to me regarding these graceful and beautiful birds of our harbor, on the day of your last issue, and said he had it in mind to speak to me regarding the question of their protection. It is gratifying to have this unsolicited assurance of aid from such a quarter. I mailed the proposed act to-day, and unless some better substitute is found, it should become law.

EDWARD SIDNEY RAWSON.

Massachusetts Game.

From the Commission's Report.

Importance of Preserving Game.—The retention within the boundaries of this State of a supply of game to assure, beyond question, the continuance of species that cannot be replaced if once exterminated, and the maintenance of a sufficient abundance of various kinds to serve as an inducement to the public to seek healthful recreation in hunting, are objects which necessarily engage the attention of this Commission to a large degree, and are worthy the consideration of every public-spirited citizen. What the privilege of hunting means to many of our citizens whose business confines them to workshops, manufactories and counting rooms, cannot be expressed in words or figures. The desire to hunt is almost universal, and probably no other form of recreation is so healthful or so helpful to jaded nerves. Some have the time and means to visit other sections to enjoy the privilege of hunting, but a larger number cannot afford this, even though they may most need the relaxation from their ordinary duties which it brings. It is, therefore, manifestly to the advantage of the general public, and consequently beneficial to the Commonwealth, that every reasonable measure should be taken, either by propagation or necessary restriction, to promote an increase of game within our borders and thus to eliminate all fears regarding the probable extermination of certain of our most important game species. That this involves self-denial on the part of many, if not all, goes without saying; and that it places restraints upon those who have little consideration for the future or the needs of others, is equally apparent. There is, however, no other way to attain desired ends. This is so evident that it is believed the harmony of feeling and action that characterized the movement on the part of sportsmen in the early months of the year to secure satisfactory legislation will continue, and that the same spirit that then prevailed will govern future efforts.

Effect of New Law.—Although it is yet early to expect a marked change in conditions as a result of the enactment of recent laws for the protection of game, nevertheless reports from various sections of the State indicate that there has been material improvement in many localities, so far as the partridge, quail and woodcock are concerned. The quail is reported as more than usually abundant in all sections of the State where it ordinarily occurs; and those familiar with its haunts and habits predict a large increase of the species next year, if the climatic conditions are not too severe during the winter. The effect of the vigorous enforcement of the new law (Chapter 379, Acts of 1900) for the protection of partridge and woodcock, and the prohibition of their sale, is indicated in letters from deputies which report largely increased numbers in local covers.

Deer.—Deer are reported more or less common in nearly all sections of the State, and in some localities are reasonably abundant, as many as ten or a dozen having been seen in some places. There seems to be a general disposition to refrain from killing them; only a few complaints of such violation of law have been received, and two convictions were obtained. But deer are often seriously harassed by hounds, and doubtless fatal results may sometimes follow, of which no information that can be used in the courts is obtainable.

Pheasants.—Pheasants have been seen in greater or less numbers in and near those localities where they have been distributed, and there are many evidences that they are doing well under natural conditions.

Pinnated Grouse.—Deputy John E. Howland is of the opinion that the pinnated grouse, on Martha's Vineyard, is "soon destined to become extinct, unless something is done for it at once"; and he recommends that the fine for killing it "be fifty or even one hundred dollars."

Breeding Game Birds and Animals.

Winchester.—The work at the State experiment station at Winchester, for breeding birds and animals, has been successfully carried on during the past season, and much has also been done toward increasing facilities for the next season.

The Belgian Hare.—From experiments made at this station for two years with the Belgian hare (*Lepus cuniculus*), it seems desirable to stock the woods of the State with it as a game animal. In furtherance of this idea, Mr. Brackett donated to the State his entire stock of hares for breeding purposes.

Pheasants.—The breeding and rearing of Mongolian pheasants at Winchester has been carried on as usual, but on a somewhat larger scale than heretofore, while the plant for this work has been improved in various ways. A large number of eggs were obtained and placed in incubation, either under hens or in incubators. Under ordinary conditions the result should have proved most satisfactory. But, while a greater number of chicks were hatched and reared than in previous years, the complete success of the work was seriously if not disastrously handicapped by the active operation of a near-by stone quarry, the explosions of which had an effect on the eggs undergoing incubation similar to that resulting from heavy thunder, the latter being well known to poultry breeders.

The Ruffed Grouse.—Experiments were made during the past season in artificially rearing the partridge (*Bonasa umbellus*). A few eggs were obtained. Part of them were placed under a hen and the remainder in an incubator. Both lots hatched fairly well, producing strong, healthy chicks. There was every indication of success until they were about four weeks old. They had in the meantime been fed on maggots and green food (lettuce and young clover). The attempt to change their food by adding grain proved disastrous and caused their death. There is no danger in gradually changing the food of young pheasants to grain when they are three or four weeks old, and it was assumed that the same course could be pursued with the young partridge. The result in this case led to the conclusion that further efforts might be attended with better success.

The experiments with these birds, together with careful post-mortem dissection and examination, led to finding a food which may be more successfully used. Its discovery occurred too late to be of use with the young grouse, but it was fed to very young pheasants with excellent results. If its use does nothing more than to check the mortality so prevalent among pheasants during the first three weeks of their existence, and promotes their early growth, it may be considered an important outcome of the partridge-rearing experiment.

Cats.—The State aviary and rabbitry covers about one and one-half acres of land, inclosed by a wire fence 6 feet high; 2 feet on the lower part is of 1-inch mesh (set 8 inhes underground) and the upper part is 2-inch mesh. This successfully barred out all destructive vermin except cats, which found no difficulty in climbing the sides of the posts and getting into the inclosure. Consideration for the health and hardiness of the young pheasants and rabbits makes it necessary, during the first four months after birth, and as much longer as possible, that they should have the freedom of the yard. In endeavoring, however, to carry out this plan, the cats, whose depredations were committed at night, succeeded in destroying a large number of the yonug stock, to that extent rendering abortive the work of the State. During the past four years 137 cats were killed in and around the inclosure. Notwithstanding this slaughter, their numbers did not seem to materially decrease. It therefore became a question of either abandoning the work at this place or devising some means of protection. Accordingly, last April an insulated telegraph wire was stretched around the entire inclosure, about an inch above the wire fence. To this was attached a battery of twelve Excelsior cells, arranged in multiples of four, thus giving a strength sufficient to instantly kill gray squirrels attempting to cross the wire. During the five months it was run not a cat entered the yard.

The yard was wired for cats, but this did not suffice to keep out thieving bipeds, who in July cut the wire fence and stole some of our best breeding stock. Had such a thing been anticipated, it would have been easy to so wire the fence that the marauders would have paid a higher price for Belgian hares than is now asked for imported stock. In the vicinity of the water works a small motor and dynamo could be used to advantage. With a 40-foot pressure, a stream about the size used for a lawn sprinkler would be sufficient for from 75 to 100 volts, a current that neither cats nor thieves would care to encounter more than once.

Sutton.—The experiment of breeding and rearing the Mongolian pheasant on the State land, at the Sutton fish hatchery, was attempted this year on a scale sufficiently large to demonstrate the feasibility of successfully carrying on this work at that station. Mr. Arthur Merrill, the superintendent of the station, had succeeded in 1899 in hatching out a few pheasant eggs and raising a fair percentage of the chicks to maturity. Thus, in the spring of 1900 he had seven female and three male pheasants. From these he obtained about 200 eggs, which were incubated by bantam hens. More than a hundred chicks were hatched, and the loss in rearing was small, having in mind the well-known tendency of the pheasant to die during the first few weeks after birth. About eighty of the birds of this year's brood have attained an age when the chance of life presumably is at its maximum, and they may be deemed free in large part from dangers which beset this species in its younger stages.

Law Enforcement.—A most earnest and strenuous effort has been made by the Commision to enforce the fish and game laws with such resources as were available. These consisted, first, of unpaid deputies, persons whose interest in the protection of fish and game was sufficient to prompt them to devote more or less of their time to the enforcement of law, to giving warnings, etc., and in a large majority of cases without receiving a cent for their efforts, since the State pays them nothing if they secure no convictions. Second, special paid deputies were employed, whose terms of service varied in length according to circumstances, and whose rate of pay was regulated by the financial resources of the Commission and by other conditions that often enabled the procurement of service for a small remuneration from the State. There were eighty-four unpaid wardens and twenty-six paid wardens. More than 200 arrests were made during the period covered by this report, and the penalties imposed by the courts for violations of fish and game laws exceeded $2,100.

The importance of continuing the work thus begun will doubtless be apparent to all who have an interest in the protection of fish and game. If, however, it is to be prosecuted on a scale commensurate with the importance of the object sought, it is evident that suitable provision must be made by the Legislature. Whether an appropriation is made fully adequate to meet the requirements of the public demand, is a matter that must largely rest with the people. For, while the Commission is fully in accord with anything that may be required or may be done along this line, and will cheerfully accept any action that may enlarge the possibilities of enforcement of law, and while it has every reason to feel satisfied with what has been accomplished during recent months, the fact is recognized that the demand for expansion, if there is any, should come from the citizens who appreciate what it may mean to the Commonwealth to have fish and game laws well enforced in the future.

"High" Game.

The eating of "high" game is undoubtedly attended with risk, and the poisonous effects are probably due to the toxins produced in the earlier stages of the putrefactive process. The advantage, of course, of hanging game is that the flesh becomes tender and decidedly more digestible than when it is quite fresh. The ripening process, however, may mean the elaboration of the toxins. It has been stated that the production of the characteristic flavors of game is related directly to the amount of sulphurated hydrogen or sulphur-alcohol set free, but it is rather repulsive to think that the delicate flavor of game is dependent upon that invariable product of decomposition of rotten eggs—sulphureted hydrogen. The smell evolved during cooking of "high" game is even more disgusting. Fresh game sometimes sets up mysterious, poisonous symptoms, which have been attributed to the fact of the game having been over-hunted and fatigued. Fatigue products, indeed, have been separated from over-hunted game, which when injected into a healthy animal have produced marked poisonous effects. There is no doubt that fatigue products under certain circumstances are also elaborated in the human body, and give rise to a species of self-poisoning characteristic symptoms of which are headache, stupor and gastric and intestinal pains. The flesh of over-rotten cattle may prove poisonous from the same cause.

This curious formation of poisonous products in the flesh of animals through a state of terror or exhaustion is a question well worth considering in relation to the wholesomeness of animal foods, and emphasizes the importance of slaying animals intended for food in the most humane way.—London Lancet.

Talks to Boys.—X.

After you have begun regularly to go shooting, you will, of course, travel considerable distances, and will have more or less to do with the property of other people. You will, of course, consider the rights of these people, and will keep always in mind the fact that you must so conduct yourself as never to be in any respect a cause of annoyance or expense to them. You will travel over the lands of many people, climb their fences, pass near their houses and see their live stock. It is hardly necessary to warn you that you must never shoot toward a house, toward people working in the fields, nor toward live stock that may be on the ground over which you are shooting. You must watch your dog carefully and never permit him to chase chickens or ducks or sheep or cows. It is well, also, for you to refrain from shooting when fowls or domestic animals are near to you. If you should do this, and by an unlucky chance should frighten the animals, and the landowner should see them run, he might very well think you were one of the careless or rowdy class who have no respect for the rights of other people; and if he thinks this, he may perhaps fly into a passion and abuse you, or order you off his land. It may well be that at some time he has had an experience with roughs carrying shotguns, who have killed his chickens, or amused themselves by shooting at his cows, and if anything of this kind has ever happened to him you may feel sure that he entertains a strong prejudice against anyone whom he sees on his land, carrying a gun. If you should enter a field where people are working, it will be well for you to go up to them and ask if there is any objection to your shooting on the place. Usually you will find that such a course will make them friendly, and the pepole will talk to you in an interested fashion, and will meet you in the same spirit that you show. You should try always to cultivate friendly relations with the people over whose land you shoot, and you will find that if you do this you will have your reward in the kindly feeling of helpfulness which they will manifest toward you.

As you travel over the country, when you have occasion to go through a pair of bars to enter a field, do not let your hurry or your excitement cause you to neglect to put up the bars again just as you found them. It may be that there are cows or horses in the field, which might get out through your neglect and make great trouble for their owner and his neighbors. If, in crossing a fence, you knock off a short rail, or if an old rail breaks beneath your foot, you should stop and mend the fence as best you can, putting up the rails, and generally repairing the damage as well as possible, so as to leave things as they were. In the same way, if in crossing one of the tottering stone walls, so common in New England and the Middle States, you knock down a number of the stones so as to leave a gap in the wall, you should take time and pains to lay the stones up again, so as to leave the wall as nearly as possible just as it was when you disturbed it.

If, after such a mischance, you should happen to meet the owner of the land, by all means tell what you have done and explain that you endeavored to repair the damage, and that you left things nearly as they were. You will find that, usually, he will say that it made no difference, that the fence was pretty rickety anyhow, or that the old wall needed repair long ago. Ninety-nine men out of a hundred will appreciate your frankness, and will feel pleasantly toward you, while, if they discovered for themselves the mischief done, they would recall the fact that you had not spoken of it, and would blame you all the more for your silence. A frank apologetic course is the one you ought to pursue; it is due the landowner and is the least reparation that you can decently make for any injury that you may have done. But besides this, such a course tends to make you well thought of by the owner of the land you are traversing; he will like you for your honesty and your courage, and still more for the fact that you respect him and his rights. The result of such a course of action will be that these men will be glad to have you shoot over their land, will take an interest in what you are doing, will welcome you to their houses if you have occasion to stop there, and will often tell you where certain broods of birds are to be found, giving you information which may greatly help you.

Years ago I used to shoot with an old friend, long dead, of whom it was said that even the most cantankerous farmers in the district permitted him to shoot over their land. He was a charming man, but I never knew why he was so favored until on one occasion when he and I were shooting together we were approached by an indignant person who ran toward us, shouting violent threats and orders for us to get off his land. So soon as he had come near enough to recognize my companion his manner entirely changed, and he came up to him, shook hands and explained that he had thought it was some one else; adding, "For you know you are the only man that gets to shoot on this farm." Later, my friend explained to me the principle on which he went in dealing with men who were unwilling to permit shooting on their land. He told me, substantially, what I have told you in the preceding paragraphs, explaining that he was careful always when it was practicable to ask permission to shoot, and careful also to repair so far as possible any damage that he might do on the land, and if he could not himself repair it satisfactorily, to go out of his way to explain the matter to the landowner, and even to offer to pay for the harm that he had done. He had thus made firm friends of a number of men commonly reputed to be extremely cross-grained and disagreeable, and who allowed no one except him and his companions to shoot on their land. In other words, he had access to a number of farms which were strictly preserved for his benefit, and one result of this was that he and I, when we went together, almost always made a fair bag of birds, and sometimes an unusually good one.

I recall one old farmer of that section who had the reputation of being particularly disagreeable and penurious, but who always insisted on our stopping over night at his house, and would never take a cent of pay for our board and lodging and the keep of the horses. In the morning this man would always take almost an hour from

his work and go out with us, either down into the alder run below the house, or up on the rocky hillside above it, or else up the road to a rye stubble near the swamp, in order to point out the places where he had recently started woodcock or ruffed grouse or a bevy of quail. I had never seen a man more interested or enthusiastic about the working of the dogs, nor more delighted to see a good shot made than this hard-handed old farmer who apparently did not know the stock of a gun from its muzzle, and who certainly felt no interest in sport or shooting; and this change in his ordinary way of thinking and mode of life had been brought about by nothing else than the kindly and sympathetic manners and mode of thought of my dear old shooting partner.

In all that I have said to you about this subject, you will see that there is nothing very original; I am only asking you to apply to your shooting excursion the same rules that you have been taught to apply to the other affairs of life. It is true that when a man or a boy puts on his shooting clothes and takes his gun and goes off into the fields or woods for a day or a week's shooting he feels that he is for the time far more free and independent than he ever feels when he is at home living his usual life. But this freedom and independence, while very delightful, does not justify him in forgetting the things which are due to himself and to the pepople whom he may meet on his outing, and as I have more than once said already the man must carry into the field the same manners that he practices in ordinary every day life. The man whose breeding and whose bringing up are good will always remember to respect himself, and self-respect always carries with it a respect for the rights of others. Remembering this, your outings are likely to be marked by few disagreeable occurrences.

W. G. DE GROOT.

The Megantic Dinner.

BOSTON, Jan. 28.—The fourteenth annual dinner of the Megantic Fish and Game Corporation was held at Hotel Brunswick, Saturday evening. The full membership of the Association, 150 members, was well represented, with a number of distinguished invited guests.

Among those present were President A. W. Gleason, New York; Vice-Presidents C. A. Barney, W. G. Kendall; Secretary and Treasurer L. Dana Chapman; invited guests, Lieut.-Gov. Bates; Lieut.-Gov. Woodruff, New York; Speaker Myers, Massachusetts House of Representatives; J. W. Collins, Chairman of the Massachustts Fish and Game Commission; J. Russell Reed, President Massachusetts Fish and Game Association; O. Upham, President Canadian Club; Fr. Cloquette, Curate of the Megantic Parish Church; Dana J. Flanders, Jacob Fottler, Myron W. Whitney, Alexander Pope, Dr. Heber Bishop and Dr. George McAleer. Henry O. Stanley, Fish Commissioner of Maine, was in town and expected to attend, but was prevented by an attack of the grip.

The decorations of the banquet hall were beautiful, and most appropriate, consisting of fly rods, canoes, paddles and all manner of fishing and hunting paraphernalia, as well as mounted birds and animals and other trophies of the hunt. Some of the scenes and incidents of the evening were laughable, and some even dramatic, from the releasing of a counterfeited live skunk from a pie and on to and under the tables, to the toast "To the memory of the good and dead Queen," proposed, and then drunk in silence; all the gathering standing. President Gleason presented the condition of the Association as a most prosperous one, with a full membership and $1,500 in the treasury. He might also have added that the Association is one of the most influential in the country, not only on account of the prominent membership it embraces, but for the firm stand it takes concerning everything for the best interests of fish and game protection and propagation.

Lieut.-Governor Bates was most happy in his speech. He declared that all the world is now engaged in hunting —Vice-President-elect Roosevelt hunting lions in the Rockies; Mrs. Nation hunting ardent spirits in Kansas; a committee hunting vice in New York, the whole detective force of the country hunting after a mysterious fowl know as Pat Crowe. Lieut.-Governor Timothy Woodruff, of New York, received a most hearty ovation.

Among those present were: Christian P. Andersen, Edmund E. Hills, Channing H. Fairbanks, S. F. Barney, George J. Raymond, H. W. Robinson, Arthur W. Robinson, John B. Seward, Myron W. Whitney, Henry H. Kimball, Fred R. Comee, Francis A. Nichols, G. H. Gray, Edwin Howland, F. F. Preble, J. W. Rockwell, Oliver Whyte, Fred C. Henderson, Francis R. Henderson, Frank E. Johnson, I. G. Marston, W. P. Stevens, Morton G. Baldwin, C. L. Howes, H. L. Rice, A. F. Scheubelbergh, F. B. Rice, Charles A. Price, Frank N. Gagnon, Charles E. Dresser, F. H. Johnson, J. Burns, S. M. Johnson, George P. Johnson, C. R. Drew, Paul M. Richards, Sumner Y. Pierce, Edward P. Elliott, D. C. Pierce, William F. Pinkham, George H. Payne, Lester M. Bartlett, Jewell Boyd, W. B. Phillips, H. W. Sanborn, Guy C. Emerson, E. R. Kidder, C. H. Traiser, George M. Kirkner, New York; Joseph W. Collins, Gilbert Hodges, Medford; Dana J. Flanders, Malden; Howard Marston, W. S. Leavitt, Forrest S. Smitth, O. F. Conley, Parry C. Wiggin, William R. Albertson, John N. Akarman, J. T. Benson, W. E. Hapgood, Dr. George McAleer, William T. Farley, Dwight M. Clapp, Charles F. Randall, Henry I. Harriman, Dr. Charles W. McCormack, William A. Macleod, Arthur Black, Dr. Albert H. Tuttle, Dr. Willis M. Townsend, Ivers W. Adams, W. A. Love, W. E. Johnson, Dr. H. H. Hartung, A. L. Comstock, Alexander Pope, E. Haring Dickinson, O. C. Bailey, Dr. F. N. Morse, Dr. G. C. Smith, Henry W. Clark, M. H. Warren, C. H. Goldthwaite, J. H. MacAlman, E. W. Burt, Burt Jones, Norman P. Hesseltine, Gerald Sircom, Capt. F. W. Webb, Dr. E. D. Robbins, Frederick Edwards, Frank Fallon, James Yalden, New York; Dr. Robert H. Upham, President of Canadian Club; A. R. Brown, E. S. Tobey, John E. Crowley, William R. Buckminster, Harry L. Chatman, J. F. LeB. Drumm, N. S. Hunting, W. R. Bateman, Dr. J. A. Gordon, Dr. B. V. Howe, H. L. Klein, James R. Reed, Dr. Heber Bishop, the Rev. J. E. Cloquette, President A. W. Gleason, Lieut.-Gov. Bates, Lieut.-Gov. Woodruff, of New York; Dr. W. G. Kendall, J. J. Myers, Speaker House of Representatives; Clarence A. Barney, First Vice-President; John Fottler, Jr., Richard E. Traiser, B. R. Houghton. SPECIAL.

New York Fish and Game.

From the Report of the Forest, Fish and Game Commission.

Recommendations.

That the Constitution be so amended as to provide for the practice of conservative forestry on State lands (a vast estate of 1,384,128 acres, of a value variously estimated at from $5,000,000 to $10,000,000, of which this Commission has sole care and control, and which it must protect from damage by trespass, fire and poaching), and the sale of dead, dying or mature timber under proper safeguards.

That the excellent work done by the United States Government in connection with our foresters, as shown by the report of the United States Forestry Department, herewith submitted, be continued and an appropriation of $3,500, as requested, be made for that purpose.

That a force of rangers be appointed for the prevention of forest fires, timber stealing and poaching on State land.

That all town fire wardens be allowed a moiety of the fine in criminal actions, after payment of expenses, in cases where they can secure evidence that will lead to conviction for setting forest fires.

That the Board be allowed to set aside certain limited portions of the State lands as game refuges, and absolutely to prohibit the killing of wild animals therein.

That the anti-hounding law be permanently extended, and that no dogs of a breed which will pursue deer be allowed in the woods at any time.

That the killing of does be prohibited at all times.

That spring duck shooting be forbidden.

That there should be no discrimination by this State, in the matter of hunting and fishing, against any citizen of the United States except in cases of citizens of States which discriminate against the State of New York.

That the Commission have power, after stocking or restocking streams, to close them to public fishing for a term not to exceed two years.

Above all, we would especially call your attention to the difficulty of enforcing the law in regard to the pollution of streams. This is a matter of vital importance and not to be dismissed as affecting only the lives of some fishes, the pleasure of some anglers or the dividends of some pulp mills. We are a water drinking people, and we are allowing every brook to be defiled. Nature provides that they should be kept pure by animals which feed on the dead matters which fall into them, but the chemicals with which they are polluted can destroy all forms of life, so that every beast which dies in the mountains will soon roll down into our reservoirs, pickled in acids which no fish or bacteria can touch and live. It is not necessary to destroy or hamper any industry in order to prevent the pollution of water courses. What is really needed is to check the criminal selfishness of those who would rather poison their fellow citizens with their offal than to spend a few dollars to take care of it.

Adirondack Deer.

Although the protection of game is not strictly within the province of my department, I would say that for several years I have made the Adirondack deer a subject of observation and study. I have omitted no opportunity to gather reliable statistics bearing on the matter, and so I take pleasure in submitting here some facts and figures for the information of your Board. Through an arrangement made with the American and National Express companies, I am enabled to state the exact number of deer shipped out of the Adirondack region during the open season of 1900. These shipments represent only a small proportion of the deer killed during that period. What that proportion is it would be difficult to say with any degree of accuracy, owing to the large number killed by residents and men in the logging camps. The sportsmen also consume some venison while in camp; and many of the hunters who live near the edge of the forest bring out their deer in wagons, some of them carting their game many miles. If I were to venture an estimate, I would say that for each deer reported in the express companies' returns at least four others were killed. The record of shipments as taken from the way-bills of the express companies shows 1,020 carcasses, 89 saddles and 95 heads.

It may be that in some of these shipments a saddle and head belonged to the same animal, and that the total number should be decreased accordingly. As most of the saddles were from does—the hunters seldom shipping out a doe's carcass—and all the heads were from bucks, the possible duplication referred to did not occur probably to any great extent. But if all the saddles are deducted it follows that at least 1,109 deer were killed and shipped.

The number killed which were not shipped out by rail involves estimates or guesswork which had better be left for each one to determine in accordance with his own experience or observation in these matters. For the information of those who may wish to make such estimates I would say that in 1895 I arranged with a competent person in each locality to ascertain the number of deer killed that season in his immediate vicinity, specifying the district by definite boundaries to avoid any duplication in the returns. I received in reply reports from 247 correspondents, covering the entire northern forest, showing that 4,903 were killed during the open season. While these figures may not have included all, they showed conclusively that at least this many were killed, not including the ones illegally shot before the season opened.

The statement that 5,000 deer are killed each year in the Adirondack forests may occasion some surprise among sportsmen who have not looked closely into this matter. But in Maine last year 4,529 carcasses of deer—not including heads and saddles—were shipped out of the woods over the lines of the Bangor & Aroostook and Maine Central railroads; and it is estimated by competent authorities that over 18,000 deer are killed annually in the Maine forests.

The question arises here naturally as to how many deer there are in the Adirondack woods. This cannot be answered definitely, or even approximately. But if there are 5,000 killead each season, it would indicate that there must be at least 30,000 in order to furnish this annual supply. As there are about 6,000 square miles of forest in that entire region, with its outlying woodlands, this estimate would require only five deer to the square mile, on an average, to make it good. True, there are some localities in the Adirondacks in which there is not one deer to the square mile; but, on the other hand, there are some in which there are many more than five to that area. Given this unit of measure, each one is free to make his own estimate as to the number of deer in our northern forests.

Right here the question may arise whether, owing to the use of hounds and jacklights, more deer were killed under the old law than under the present one. This can be answered definitely so far as the shipments of the express companies are an indication. The number of deer brought out of the woods by rail in 1896—the last year in which hounds were allowed—as compared with the shipments this last season, give the following result:

	Carcasses.	Saddles.	Heads.	Total.
1896	849	139	100	1,088
1900	1,020	89	95	1,204

This indicates that more deer are now killed by still-hunting than when hounding and jacking were permitted.

A large part of the venison slaughtered this season, as shown by the date of the shipment, was obtained on the tracking snow which fell during the last week of the season. Prior to that the still-hunting was difficult work, owing to the dense foliage which was late in falling this year, and the dryness and rustling of the leaves underfoot.

Prior to this season no albinos or white deer have been killed in the Adirondacks for a great many years. Occasionally, at long intervals, one has been reported as seen, and as this happened each time during the close season, it was allowed to go unharmed. But this year the hunters succeeded in killing two of this rare variety.

One of them, included in the shipment from Port Henry, was shot near North Hudson by Mr. John Greenough. This animal, a two-year-old buck, is described by those who saw it as being perfectly white, with pink ears. Another noticeable peculiarity was its very short legs.

The other one was shot near the Boreas Ponds by Mr. Clark Cox, a gamekeeper on Mr. George R. Finch's preserve. It was a young buck with pink ears and a spotless coat of white.

The weights of the various carcasses as given in the shipping bills indicate that our Adirondack deer are larger and heavier than the same species in Michigan and the Northwest, judging from the description of the latter as given by Judge Caton, a well-known authority on this subject.* It would appear, also, from other sources of information, that our deer will compare favorably in weight and size with those in Maine and Canada. I noted thirty-two shipments in which the dressed weights ranged from 200 to 235 pounds. Under the rule for determining the live weight by adding one-fourth to the dressed weight, these deer when shot weighed from 250 to 294 pounds, without making allowance for what may have been lost by drying out while they were hanging "on the pole" in camp. The rule referred to will always enable one to determine the live weight closely. It is based on records kept for several years at Lewey Lake and at Meacham Lake. At each of these places there were scales at the boat landing where all the deer were brought in, which enabled the hunters to weigh the carcasses before and after dressing. I have seen the rule tested quite often, and always with a satisfactory result, the variations being very slight.

*The Antelope and Deer of America. By John Dean Caton, LL.D. New York: Forest and Stream Publishing Company. Second edition. 1881.

That is a gratifying note from Mr. Edward Sidney Rawson, of Staten Island, saying that prompt steps will be taken to secure protection for sea gulls. The residents of Staten Island should support the effort most heartily, for the gull shooter is there largely in evidence.

100 Sportsmen's Finds.

Some of the Queer Discoveries Made by Those Who Are Looking for Game or Fish.

41

In California a man borrowed a squirrel dog of a friend and went gunning. The dog led him in various directions until he was tired out and sat down to rest. He launched many anathemas at the animal as a brute that knew nothing about the business for which he was recommended. The dog, however, frisked about all the same. Presently he began digging in the ground in a very enthusiastic manner. The disgusted hunter paid very little attention to this new dodge until he saw the dog poking some dark object about with his nose. Going to the spot the hunter found that the dog had unearthed an old leather purse. This looked like game at last. Taking the purse from the dog the hunter found it contained $300 in gold and $1 in silver. On counting out the find the hunter concluded that the dog was not such a "fool critter" after all.

Editor Forest and Stream:

Not long after the war, when the Etowah phosphate works had started up, the writer was fishing in the Ashley River channel, near Charleston, for black drum, and had good luck, landing several heavyweights. The river bed at this point is paved with phosphate rock, in which are imbedded many immense sharks' teeth, as well as organic remains of saurians and land animals of various geological periods, the earliest being quite prehistoric. Upon cutting open a large drum there were found a Spanish silver coin of date 1763 and a set of artificial human teeth, in excellent preservation. The difficulty in this case would seem to be to reconcile these associated articles chronologically! Did one of the early Spanish explorers drop the coin while fishing for a Quaternary shark, and did the coin and the teeth belong to the same fisherman? RARUS.

The Log of a Bicycle Fishing Trip.—II.

Through the Mountains of Virginia and West Virginia. Edited from the Diary of Mr. George N. Beall by the Commodore, F. R. Webb.

(Continued from page 72.)

Bright and early I turned out Monday morning, and went below to breakfast; and then—equipped with rod, creel, landing net and fly-book—up the old familiar trail, with senses keenly alive to the beautiful wilderness surroundings and the anticipated morning's sport. I passed Camp Cooke, which looked lonely without the familiar tents, crossed the creek and climbed the shoulder of the mountain, and fared briskly along the old trail through the woods, with the sun glinting through the tree trunks, and the amber tinted waters of the river sparkling upward from far below. On past Blairville, as we were wont to denominate the log cabin and outbuildings occupied by old man Blair and his household; up and on through the primeval forest, which looks exactly as it might have looked centuries ago, and where, apparently, the foot of man never treads. Finally I splashed knee deep into the cold stream, and with my first cast began my day's sport, for this cast resulted in the capture of a 9-inch trout. The Greenbrier is a typical mountain trout stream—clear, swift and full of deep pools and glassy shallows; overarched with great trees and towering bluffs, and its banks lined with thickets of laurel and rhododendron, through which it is difficult to make one's way. After several hours wading and casting, I finally climbed the fence back of the house—having rapidly worked down the stream to my starting point—wet, tired and ready for dinner, and after unslinging my creel I counted twenty-four fine fish as my morning's catch, and was ready to pronounce my morning as one of the most enjoyable I had ever spent on a stream.

After a rest of an hour or so after dinner, during which I took occasion to write some letters, I again took to the stream for a short afternoon's outing, and returned in a couple of hours with seven more trout, all of good weight and size; which, with as many more small ones, caught and returned to the water, made up a good enough day's sport for anybody. At least I was satisfied.

How I did enjoy that supper! The day's idle rest and recreation after the steady drive since leaving home, over dusty roads and under hot midday sun, had made a new man of me. In the evening a plan was hatched up whereby Mr. Arbogast's clever little nephew Clyde and I would go to the Far Prong next day and fish for bass below the junction of that stream with the Near Prong, on which stream I was located. These two quaint names in local parlance refer to the East and West Forks of the Greenbrier—the West Fork being the Far Prong.

Bright and early next morning we made a start, with Clyde on the gray nag and Chynx on his bicycle. A ride of six miles and we reached the foot of Cheat Mountain, where the pike crosses the Far Prong. After a walk of half a mile down the latter we took to the water at the confluence of the two streams. Fishing with the fly about two miles of the river placed to my credit four bass and three horned chubs, while Clyde, although he handled his tackle with skill, raised but one fish, and failed to land even that.

After a weary walk back up the river we reached our steeds. There is a country store at this point—the only one for miles around—and we found quite a little concourse of people very busily engaged in loafing here. Great interest was displayed in the bicycle—the first that most of them had ever seen—and many eyes watched my mount and my display of speed up the road. Rounding a turn in the road, out of sight of my admiring audience, I settled down to a more moderate gait, which was more in keeping with the set of my tired muscles—to say nothing of the old gray nag.

I found the next day a good one in which to loaf around and rest up, to drink in plenty of good mountain air, and be lazily comfortable as well as comfortably lazy. The morning was occupied in a thorough overhauling of my bicycle; the front wheel having been a little under the weather ever since my fall the first day out. I proceeded by careful experiment to adjust the nipples and true up the rim. A satisfactory job was presently in evidence, and the machine was again in apple pie order. Shortly after dinner I discovered a swarm of bees down by the barn, and giving the alarm at the inner door, an infernal din was soon permeating the atmosphere. The bees having "settled" on the topmost branch of the nearest apple tree, the hiving was rather a difficult undertaking; but a platform was built in the tree, and the limb cut off and carefully lowered to the "gum," and the bees were secured and safely hived.

Late in the afternoon I shouldered my rod and leisurely took to the river. The stream, a little swollen by the rain which had fallen the previous night, gave promise of but little sport, but on coming in I found seven nice trout in my creel. My stock of flies, although embracing a fine variety, show plainly that age has begun to tell on the quality, for I lost several fine fish by the snoods breaking short off next the fly.

Thursday was a day of rain, fog and general dampness, and nothing could be done but lie around and kill time as best I could with pipe and book. About 4 o'clock the sun struggled through the clouds, and I took my rod and strolled down to the river, but it was no go—the stream was too much swollen for fishing, so I gave it up, and was forced to be content at home, and read myself to sleep.

Friday being clear, and the water in the river being still too high and discolored for fly fishing, I decided on a trip up Little River—a small stream that heads among the outlying spurs of the Alleghany Mountain and falls into the Greenbrier a short distance above Mr. Arbogast's house. Starting leisurely I went as far as the Second Ford, and got into the stream about 9:30; fishing down to the Greenbrier by noon with bait, and scored sixteen beauties, one of them close on to 12 inches long.

During the afternoon a plan was made to make a trip with Mr. Arbogast on horseback next day to the top of Cheat Mountain, the gigantic range lying next west of the Greenbrier and the Alleghany Mountain; so bright and early next morning, which was Saturday, the two old grays were made ready and we set off. The trip was thoroughly enjoyed by me, for by reason of my new mode of progression I had time and opportunity to look around me and enjoy the scenery without having to keep too much attention on the handle bars. This part of the country was new to me, for on my annual trips out here with the Greenbrier Club heretofore we have never been further west than the banks of the Far Prong, at the foot of Cheat. My friend Arbogast pointed out the different landmarks and various points of interest that presented themselves from the open points at the various turns of the road, and the various historic features of the famous old pike were brought up for my edification, and I was made familiar with the past as well as with the present.

A short two miles over the summit and we reached Cheat River, spanned by a picturesque old covered bridge, now entirely obsolete, as modern bridge construction goes, and the only bridge which the ravages of war left standing in this mountain region. This river, running as it does along the very top of the mountain, has a general northerly course, and helps to swell the volume of the Monongahela; and the surrounding country has the dead, deserted appearance of all lumber regions. The old bridge possessed an additional interest because of the names rudely carved on its beams. Those who stood sentry there during the war have left these weather-beaten evidences of their identity, and we found North and South alike represented there.

We stabled our horses in the bridge, and walked a mile up the river to the club house. This is a structure of well hewn logs, about 30x60 feet, and two-stories high, containing two large rooms on the lower floor, with numerous cuddyhole bedrooms opening on a large hall upstairs. The main sitting room is fitted with all the comforts of home; a billiard table occupies the left center and an enormous fireplace the back wall. Strewn around are tables, sofas, easy chairs, etc., while on the walls are paintings of sporting life, and sundry collections of a similar character. A well stored pantry, kitchen, ice house, barn, etc., go to make up an ideal mountain home. A party of Wheeling and Pittsburg men, numbering some sixty or seventy, have leased the surrounding land close to the stream—about 50,000 acres—and make this a summer headquarters for their families and friends. We met with a cordial reception, and for the time being were guests of the club, with full rights and privileges to all benefits, particularly those of a spiritual character.

After an excellent dinner and a careful inspection of the house and grounds we swung ourselves into our saddles and slowly journeyed back. When I rose to my seat in my saddle I found that all was not gold that glitters, and that perhaps the bicycle had its advantages after all. At any rate I can safely assert that riding thirty miles on horseback will all but wear out the crown of one's hat. Miles and miles before we reached home I had tried every possible experiment with that saddle, and had shifted my anatomy around thereon in every possible manner. The interesting and historic features of the road interested me no longer, and I could only see far in the distance visions of home and sofa cushions. However, after home and supper were reached I didn't mind the toll after such a good time and dinner as I had enjoyed, and had nothing to regret that time will not heal.

The next day, Sunday, I set about preparations for my return trip on Monday, but an evening stroll to the river put into my head the idea to go "way up," and have one more day on the old stream with the trout, and my kind hostess was induced to bestir herself early in the morning, and put me off in good season.

Another four mile walk through the woods over the well-known path! The trail seems never to have been touched by human foot, and as I sank deeper into the primeval forest which surrounded me I had to look sharp for the trail or get lost. At last I reached the "burnt camp" and unlimbered my tackle for business. The water was a little flush, and a fog hung rather heavily close around me, and things seemed chilly and damp, and altogether not promising. I first tried bait and then the fly, but with but indifferent success with either. Muttered thunder in the north gave warning of an aproaching storm, and soon big drops began to patter on the leaves overhead and on the surface of the water, so I said good-by to the fishing and hunted for shelter. Hastily putting on my gossamer cape, constructed for just such emergencies, I stood out the worst of the storm under a spreading beech; but finally I knocked down my rod and struck for home, where I arrived too late for dinner, but having eaten my lunch on the stream I made out to get along until supper without difficulty. Sixteen trout all told was my catch, and a nice lot of fish they proved to be. A general rehash of my effects and a getting ready to leave in the morning filled in the evening.

The household was astir soon after daybreak on Tuesday morning, and I gathered my belongings and made ready for an early start. Good-bys and good wishes on all sides were uttered, and I led off by a two mile walk to Travelers' Repose, where I leave the stony little side road and reach the pike. Swinging myself into the saddle I pushed off up the gentle grade which is the prelude to the nine mile climb up old Alleghany, until warned by the rapid beating of my heart that the heat and the grade together are becoming too much for me I dismounted and walked awhile. Walking, however, is no hardship, and I enjoyed it as an alternation to hill climbing—particularly on so large a scale. The close, hot air proved to be a forerunner of thunder storms, and at intervals I ran into the track of a shower, where my wheel piled high with mud to the serious detriment of my easy going; consequently I hunted the grassy margins along the roadside as industriously as possible. The woods seemed to be alive with squirrels, and the curious little fellows stretched their necks to see the combination go by, and barked out their surprise, and, I hope, their admiration. I topped the mountain at 11 o'clock, and after pedaling leisurely over the six or seven miles of road on its summit I turned things loose for the miles and miles of downhill before me. It was scarce 1 o'clock when I rounded up at Gum's, in Hightown, where I spent a night on my way out, and seeing through the open door the family at dinner I was tempted to give my lunch the go-by and stop. I hesitated and was lost, and my "horse" was soon tied to the fence and myself seated at table among my friends of a few days before. Dinner over I felt ready to push on down the valley, but the roll of thunder and the patter of rain drops on the roof admonished me to tarry awhile longer, with the result that I found myself stormbound, and spent the night in my old room, managing to put in the rainy afternoon as best I could.

George N. Beall.

ANGLING NOTES.

Tomcats and Bull Pups.

The architecture of my handwriting has been variously described by my friends who have suffered from it, as Gothic, in spots, Moresque, mediæval (or evil, by those who think they speak the frozen truth), with a touch here and there of Chinese, and suspicions of dead and forgotten style. One friend, brutally frank, said my writing was so bad that he could not even read my telegrams, but I forgave him when he said he could generally read the date line of my letters, for it was printed on my letter heads. Only last week Hon. Edward Thompson, lately Shellfish Commissioner of New York, wrote to ask where a friend of his could buy some trout, and added, "P. S.—Dictate the answer to your stenographer and have him write it on the typewriter, for I do not wish to take up your time, and my friend really wishes to know where he can buy the trout." These little side lights will show that if on occasions curious words, foreign to the subject, appear in my "Angling Notes" it is not the fault of the compositor, for I have no reason to doubt, poor man, that he does the best that he can with what he has to do with. Last evening I dined at my club late, and was smoking in the library, when a friend said to me, "I see that the Fish Commission is to distribute tomcats." Apparently he was in his right mind, but not knowing the answer I simply exclaimed, "Tomcats!" and looked around the room for an explanation, and every man in the room had a smile on his face and was looking at me. The first inquisitor gravely handed me a copy of Forest and Stream folded to expose page 472 of the issue of Dec. 15, and under the caption "New Fish Applications" I read, "The same blanks are used for tomcats, smelt, Adirondack frostfish and other fish;" and my name was printed underneath. "It is to laugh," but I did more than that. Before I went to bed I was thankful that there was not an initial T in my name, for I know what it would be made to stand for in that club.

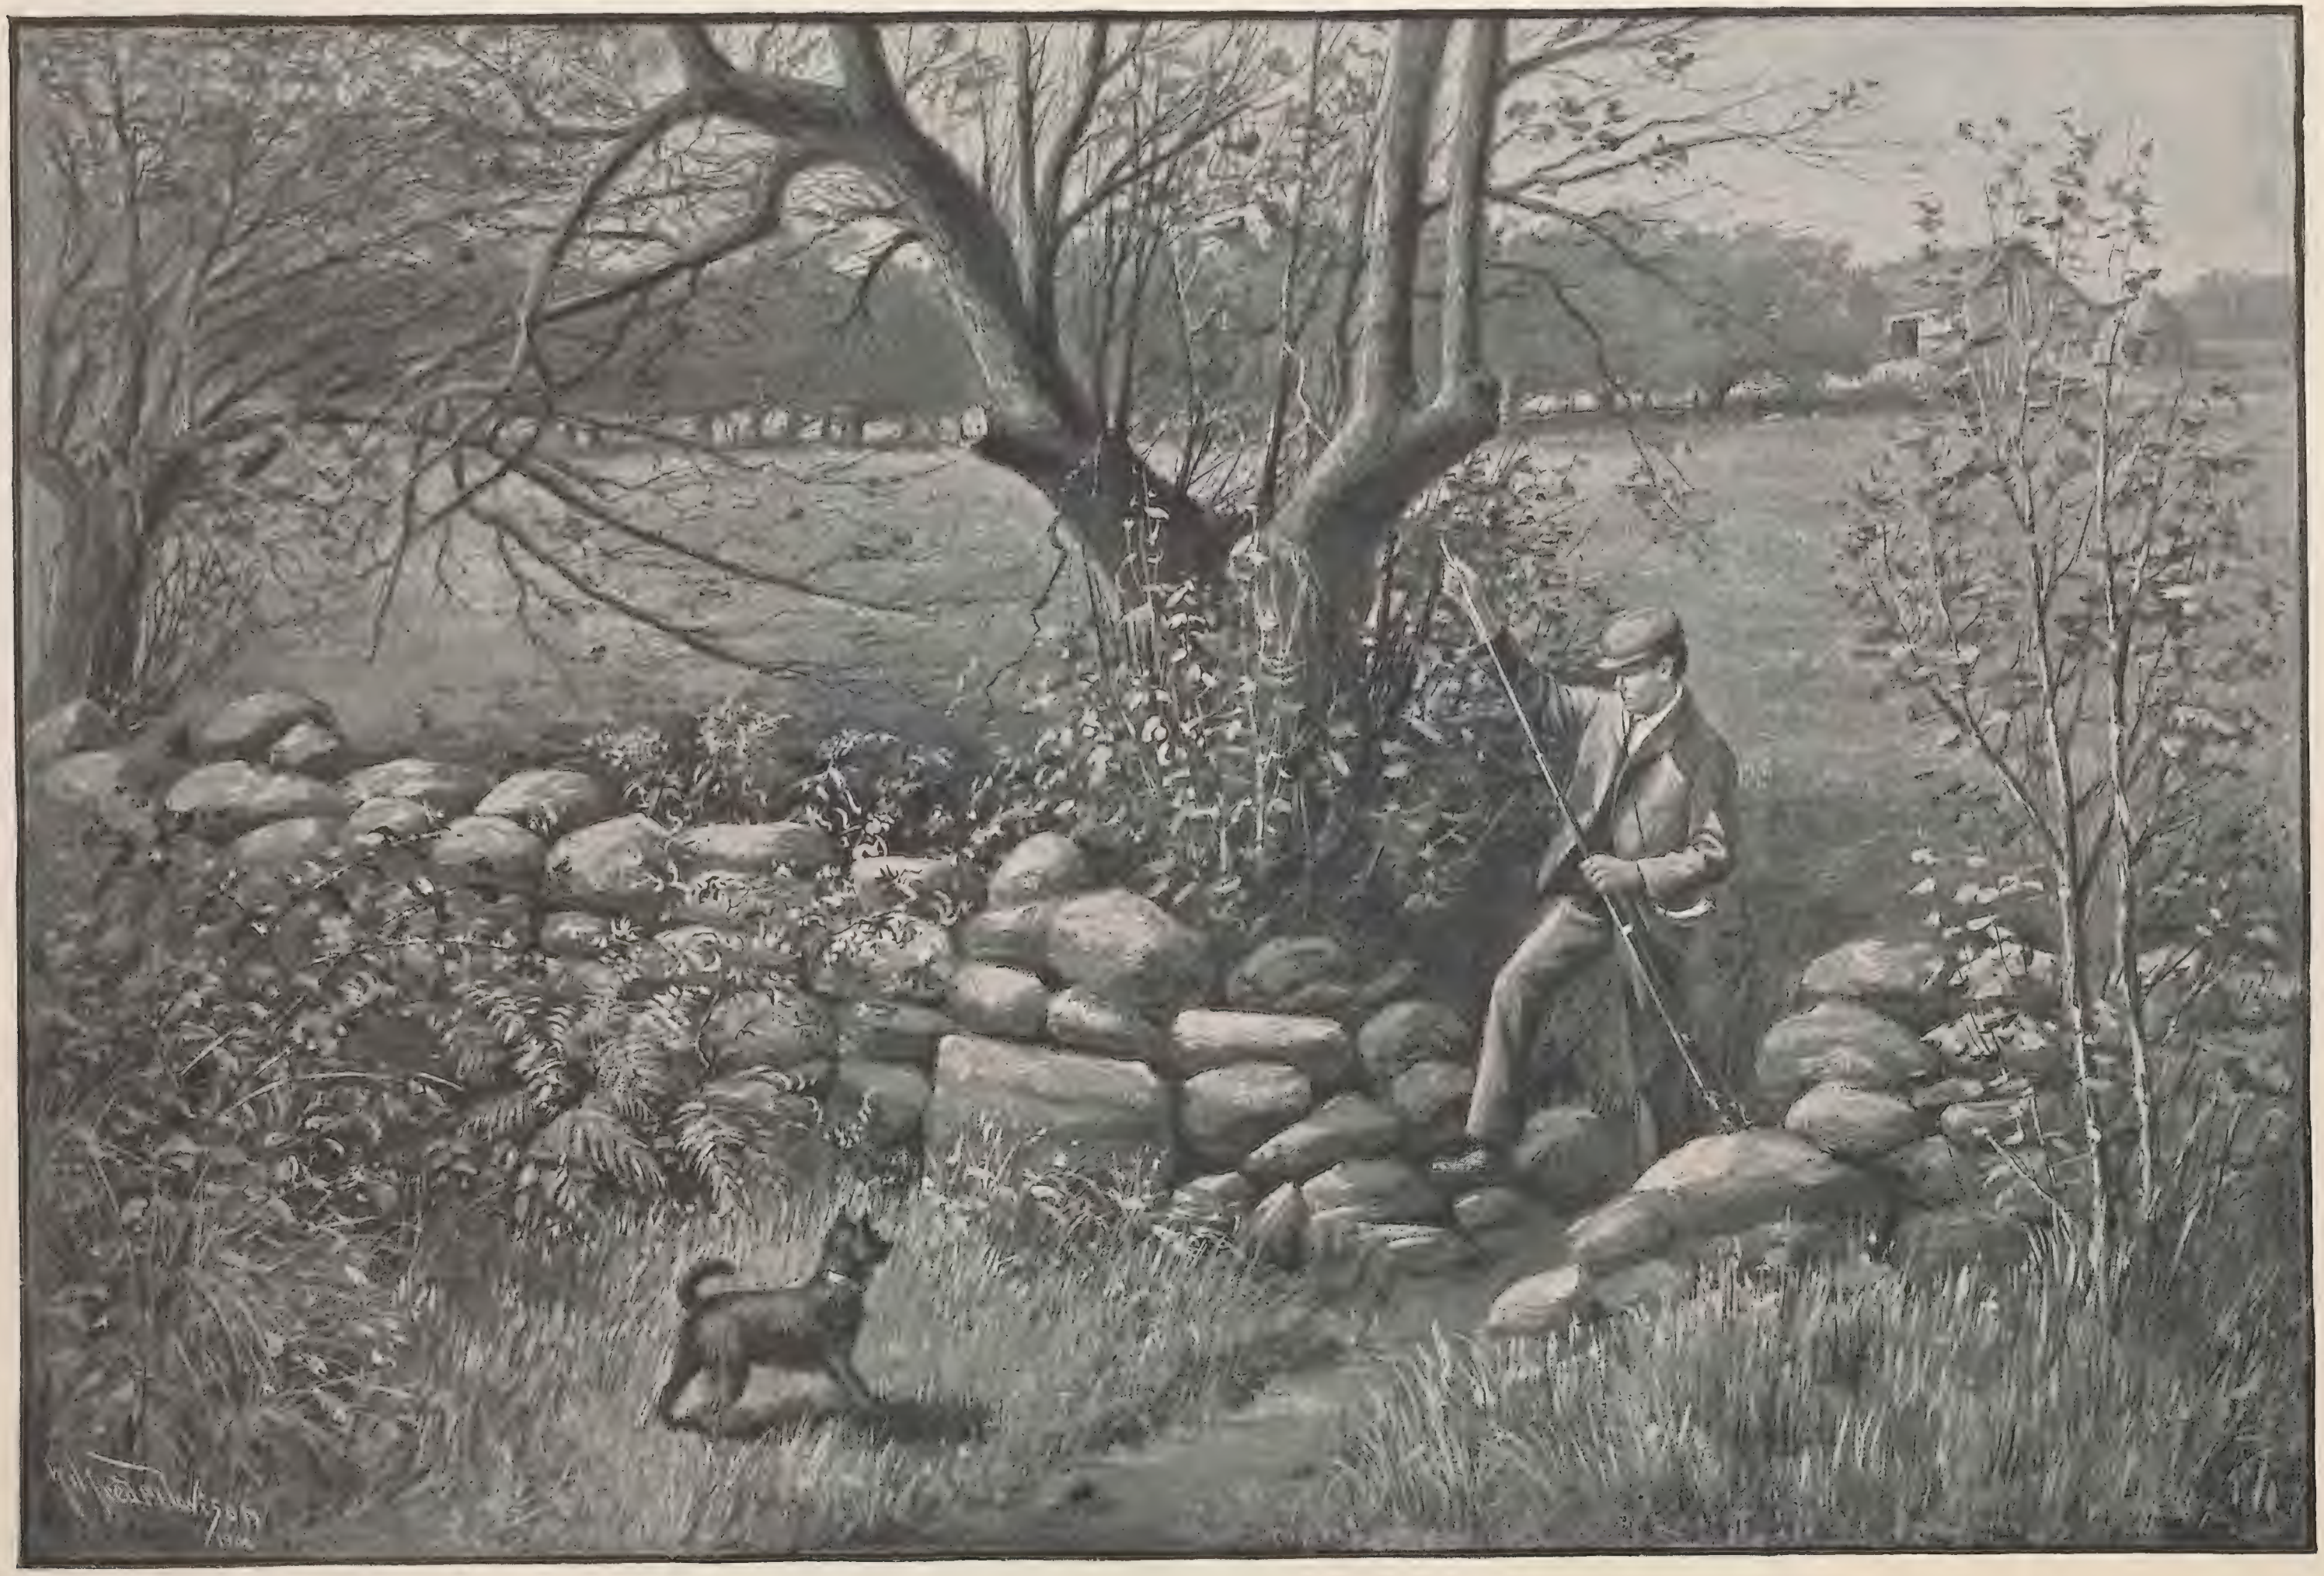
The New York Commissioners are friends of mine, and I feel that it will save them some trouble and embarrassment perhaps if Forest and Stream will announce that the crop of tomcats was very light this year, much smaller in fact than that of "other fish," and so far as I know all have been distributed for this year, next year and last year, but if tomcods will answer for tomcats one of those new applications filled out for tomcods will get them in large measure, and they may serve until the catch of tomcats is greater than at present. Even with this warning I shall not be surprised if I hear that some angler is actually suffering for a few thousands of tomcat fry and insists upon applying for them on those fish applications.

That reminds me. Once I was fishing in Brant Lake, N. Y., for black bass, and my companion in the boat was the Bishop of Louisiana. Bishop Sessums was not an enthusiastic angler, but he could read a book in a boat as well as on land, and he was a most companionable man on land or on sea. I was using crickets for bait, and late in the afternoon a bullhead took my hook. The Bishop looked curiously at the fish and asked what it was. I told him it was a bullpout, and he resumed his reading. As the black bass appeared to have departed for the night, and their places had been taken by the bullheads, I told the boatman to row ashore at the hotel landing. The third member of our party, Mr. W. D. Cleveland, was at the hotel when Bishop Sessums walked up to the veranda, while I remained behind to put up my sail, and he asked, "What did Cheney get?" Slowly the answer came, "Several black bass and two bull pups." "Bull pups!" "Yes; at least that it what he said they were."

All of which goes to prove that my speech is sometimes as indistinct as my handwriting, but I do hope that tomcods will not remain, with me, tomcats, as long as bullpouts have been bull pups—if I have to supply the bait.

Record Yellowtail.

Rather mechanically I read a marked item in a California paper of a 40¼-pound yellowtail which was mounted at Catalina. Later, my indifference changed to surprise when a younger brother wrote that it was his fish. He says, "I caught the fish on rod and reel, 21-strand line, after thirty minutes from the strike. It was a record yellowtail for rod and reel, and my first and only attempt." How luck will strike some men when they are not looking for it, and really care little whether it hits them or not! I never before knew that George had a fish rod, and he never would listen to me when I talked about fishing, and I returned the compliment when he talked about canoes and sails and models, as if canoeing and sailing were the only recreations that the American people indulged in. Another, still younger, brother



IN BOYHOOD DAYS.

Copyright, 1900, by Forest and Stream Publishing Co.

has a house full of guns, all kinds of guns for all kinds of shooting, and for all that I know he may have cannons in the cellar; and then he has dogs, and electric lights in the kennel so he can go out and see them in the night, and count them to see if any have escaped, and he knows the pedigree of every pointer from champion to H. C. that has been benched in ten years, and the next thing I know he will write me that he has killed a record fish of some sort or another on a 4-ounce rod. Now I am prepared for anything, although I have hitherto supposed if either of these brothers should even think of going fishing that all the fish would take to the brush and the hilltops. It is just possible that a good example in the elder brother is getting in its deadly work at the eleventh hour, and there will be dogs and canoes and guns for sale, and there will be a rise in the price of fishing tackle.

American Fishery Society.

The printed "Transactions of the American Fishery Society for 1900" are far and away the best that have been sent out, from a mechanical point of view, since the society was organized. The paper is heavy, calendered paper, the type is good, and the illustrations are clear. The cover and general make up of the pamphlet is attractive, and as a whole it is a credit to the recording secretary, who had the printing done, but I wish to register a mild protest about one feature which may or may not be chargeable to the stenographer. The contents—and I mean the papers and the discussions which followed the reading of them—are valuable, as they always are, and well worth the sum of the annual dues, but the manner of recording the remarks is, I think, confusing. During the business sessions, and later, under the head of "Papers and Discussions," the remarks of the members are in each case preceded by the name of the member making the remarks, except in the case of the president and the secretary. We know Mr. Clark, and we know Mr. Ravenel, and Mr. Bower, and Mr. Wood, and all the rest, for we have heard them make remarks on previous occasions when present, and we can follow them in the book in each instance by theese names. But who is the president who takes part in every discussion? We turn to the reverse of the title page, and find that the president for 1900 and 1901 is Commissioner Dickerson, of Michigan. So we go on until "the president" talks about his method in Vermont, and we conclude we have treed the wrong man, and then it occurs to us that the officers so conveniently printed are the president and secretary who will make remarks next year, and that "the President" is Commissioner Titcomb. The case of "the Secretary" is still worse, for there are two secretaries—a corresponding secretary and a recording secretary; but Mr. Ravenel is corresponding secretary, and he is not "the secretary," for when he has made any remarks it is "Mr. Ravenel" who makes them. "The treasurer" does not make any remarks, even when called upon officially; it is "Mr. Huntington." So it is really not necessary for official courtesy to say "the president," and if the stenographer would say "President Titcomb" and Secretary Bower" it would simplify the matter for the reader of the transactions, for there are occasions when it is most desirable to know just who the man is who makes the remarks.

The year that the transactions came to me as recording secretary to prepare them for the printer, I struck out "the secretary" and "the president" so far as I dared, and wrote in the secretary's name. I had acted as secretary that year only for a portion of the meeting, in the absence of Dr. Bean, and I did not take office until the following year, so I could not take many liberties with the minutes when they came to me, and when I really had a chance to knock out "the president" and "the secretary" from the discussions I was invariably absent. If it is not considered advisable to say President Titcomb or Secretary Bower, as the case may be, why not give the presiding officers at the beginning of the first day's proceedings, and the incoming officers as they are now printed, on the reverse side of the title page?

A. N. CHENEY.

Tarpon and Tuna.

Editor Forest and Stream:

During the last two years I have read so many articles in FOREST AND STREAM concerning tarpon versus tuna fishing that I think perhaps a few words from a man who has killed both fish may not be out of place.

It is not easy to compare the two kinds of fishing, nor to say which fish is more game, the tarpon or the tuna, for they act very differently. It is safe to say that they are imbued with quite different ideas when first hooked. The tarpon has no fear of boat or fisherman; his only idea is to shake the hook loose, and to do this he jumps out of the water and will do so several times if you fight him hard. The harder you fight him the more he jumps and the quicker he comes to gaff. I have never had a tarpon take more than 250 feet of line, and that in a tideway. I have heard of fish that have taken more, but am only telling of my own experience. The tuna, on the contrary, is off in a wild rush the moment he feels the hook,, and I have had 650 feet of line taken from me before I could stop my fish. He then dwells, perhaps sounds, then runs again, perhaps twice, then sounds as a rule. From that time on it is a question of "pumping" your fish up to the boat if you wish to kill the fish and not to allow him to commit suicide by towing you about. With proper tackle either fish should be killed and gaffed within thirty minutes, barring accidents. If you are fortunate enough to hook your tuna in the upper jaw and hold him hard during his first run, he comes to the surface practically drowned, and if you are quick it takes but a few minutes to bring him to gaff.

The method of fishing for tuna is to troll from a power launch or from a rowboat astern of such a launch, with a flyingfish for bait. The tuna follows the bait, strikes at the head and turns as he strikes, so that he is generally hooked in the corner of the mouth and makes his run with his mouth closed. To kill him in such cases you must tire him out. The water is very deep off Catalina—hundreds of feet deep. When your fish sounds, if you wait a few moments he will discover that the pressure of the water is more comfortable nearer the surface. The great depth of water is an advantage as well as a discomfort to the fish.

I proved to my own satisfaction years since that every tarpon should be brought to gaff within thirty minutes, and went to Catalina Island to see if the same could be done with the tuna, with the following result:

1900.

June 5, tuna 150 pounds, 2 hours 20 minutes.
June 6, tuna 130 pounds, 1 hour 17 minutes.
June 8, tuna 102 pounds, 19 minutes.
June 9, tuna 123 pounds, 19 minutes; tuna 104 pounds, 45 minutes.
June 10, tuna 118 pounds, 27 minutes; tuna 88 pounds, 20 minutes; tuna 100 pounds, 17 minutes.
June 11, tuna 99 pounds, 15 minutes; tuna 108 pounds, 14 minutes; tuna 62 pounds, 8 minutes; tuna 109 pounds, 9 minutes; tuna 118 pounds, 20 minutes.
Total 13 fish, 1,411 pounds.

I fought my first fish with a rod that had a flaw in it, and the reel was spread by the second fish, yet I averaged about thirty minutes on the thirteen, and five of them I killed in one day in six hours' fishing. I used a stout rod, a Vom Hofe Star reel, holding 800 feet of No. 22 Hall line, and a Van Vleck tarpon trolling hook with swivel and piano wire snood.

The leaping tuna do not jump after being hooked, but do when chasing schools of flyingfish, hence the epithet.

Now, to answer the question, Which is the more game—the fish that stands and fights, the tarpon; or the tuna, the fish that runs away, then holds on and fights to the last moment? I say the tarpon. Yet there is no sea fishing sensation equal to the first grand run of a hooked tuna, and he is a harder fish to kill than the tarpon. Try it! The season is from June 1 to July 15.

F. GRAY GRISWOLD.

UNION CLUB, New York, Jan. 12.

Massachusetts Fishculture.

From the Commission's Report.

Output of Fish.—The output of trout fry during the period covered by this report was nearly equal to the highest point reached in any other year. In addition to this, a number of trout and all the landlocked salmon have been reared to fingerlings and yearlings before being placed in the ponds and streams.

Through the courtesy of the United States Fish Commission, we were also able to plant a million fry of the pike-perch in our ponds. Thus, in the aggregate, the output of young fish has been approximately double that of any previous year.

Introduction of New Species.—The Commission has desired to introduce some species for stocking our ponds which are believed to be adapted to Massachusetts waters and to have other qualifications which will make them desirable accessions to our fish fauna. Two species were considered especially suitable for this purpose.

The first and most important of these is the pike-perch (*Stizostedion vitreum*), which is the largest of the perch family found in American waters, it having a recorded maximum weight of 40 pounds, though its usual size is about 5 or 6 pounds. This species is justly considered one of the best food fishes in the fresh waters of America, and also is valued for its game qualities.

The species is prolific, 90,000 eggs being considered a fair average per fish for Lake Erie; and there is every probability that because of this it will be able to maintain itself in many of our deep ponds, and thus add materially, not only to the possibilities for angling, but to the annual yield of food from our interior waters. The effort to introduce this species in this Commonwealth, which has already been successfully begun, will be continued.

The Commission also contemplated the introduction of the calico bass or strawberry bass (*Pomoxis sparoides*) early last spring, and arrangements were made for bringing fish from Lake Erie to put in some of the State ponds. The season had, however, advanced too far and the weather was too warm to carry out this purpose by the time the appropriation was available, and consequently it was necessary to defer action until some future time when conditions may be more favorable. It is believed that this species will make a desirable addition to the fishery resources of our inland waters.

Bar Harbor Hotels and Trout.

BOSTON, Jan. 25.—A strong effort is being made by the citizens of Hancock county, Me., for the passage of a special law prohibiting the sale of trout altogether in that county. A number of petitions have already been received, asking for such a law, and more are coming. The earnest request for this law is the result of the almost utter ruin of the trout waters in the vicinity of Bar Harbor, by fishing those waters for the hotel tables. It has been known for a long time that Bar Harbor hotel keepers would pay almost any price for trout in the height of the hotel season. The temptation to fish for such a market has been too strong for men and boys to resist. At one time last season ten dollars is reported to have been paid for a string of brook trout, and not a very large string either. The petitioners believe, with almost everybody else, that trout are distinctively game fish, and should be so treated, and not as food fish. The claim set forth is that dealers have driven about the section of Bar Harbor, including a radius of ten to fifteen and even twenty miles, buying all the trout they could get, and urging men and boys to fish for them. They have paid at the doors of those who have caught the fish twenty-five and fifty cents a pound. One man is reported to have admitted the taking of 2,700 trout, all of which were sold to the Bar Harbor dealers. The reports also state that some of the fishers have not stopped to take the trout with hook and line, but have resorted to netting the ponds and streams; while there are dark hints of dynamite being used. The same reports also say that all the partridges in the vicinity of Bar Harbor hotels have been killed off by those who have taken them for sale. This fact is understood to have been one of the first reasons for the enactment of the law prohibiting the sale of partridges in Maine.

SPECIAL.

The FOREST AND STREAM is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday and as much earlier as practicable.

New York Fish Commission.

FOREST AND STREAM is a journal which speaks with authority upon such questions as the relations of the State government to the preservation of forests and the culture of fish. It is therefore a high tribute to one of Gov. Odell's proposed changes in administration that this excellent judge commends the substitution for the existing boards of five Commissioners of Forestry, Fish and Game, and three Commissioners of the Forest Preserve Board, of a single board of three members, two of them appointed from among the Commissioners of the Land Office, and to serve without pay, and the third to be the Shellfish Commissioner, and the practical executive man, at a salary of $5,000 a year. FOREST AND STREAM declares that there was never any good reason for a Fish Commission of five members, and that it was brought into being as a political job. It only regrets that the politicians are not ready to make the reform complete by placing fish culture under one competent person and game protection under a single head, each with full authority over all employes. "Barring the possibility, however, of adoption of such a simple and business-like system," it says, "we shall welcome the reduction of the Commission to the form proposed in the pending bill."—New York Evening Post.

Training the Hunting Dog.

By B. Waters, Author of "Fetch and Carry: A Treatise on Retrieving."

XII.—Roading and Drawing.

(*Continued from page 31.*)

ROADING and drawing are terms used to denote the act of the dog locating the birds by the functional powers of the nose which he possesses. Roading more specifically applies to following the foot scent; drawing to following the body scent. Colloquially speaking, the effort of the dog to determine the whereabouts of the birds, after he has struck their trail or caught the scent of them, is called "locating."

Generally speaking, aside from the individual differences of manner which all dogs exhibit, one compared with another, setters and pointers follow birds in two ways, namely, by the foot scent or the body scent. When following by foot scent the dog devotes his attention to following the course of the birds in all its windings, using his nose to distinguish the scent which hovers around the tracks, as the handler in an analogous manner might use his eyes to distinguish and follow them.

In following the foot scent, dogs vary in skill from that of the potterer which puzzles about, following the back track or forward with equal stupidity and inefficiency, to that of the dog which roads with methodical celerity and accuracy.

A reasonable degree of quickness is essential to fair performance. The longer and further the birds run ahead of the roading dog, the greater likelihood is there of complications which may result in the loss of the trail, or their secure refuge in dense cover, or their escape by wing. Dogs which follow by the foot scent carry a lower nose, as a rule, than do those which follow by the body scent.

The dog which locates by body scent is guided by the particles of scent floating in the air, though his nose may be only at such height as he naturally carries it. When he catches a scent, however faint, he darts quickly to and fro, following it up quickly till it becomes strong enough to follow direct to the birds. It is analogous in manner which a man might be supposed to adopt if he caught scent of roses in the field and followed the clue up to the rose bushes from which the fragrance emanated.

A dog whose nose is keen and whose brain is sound will locate his birds with astonishing quickness by the body scent, but there are different grades of performers in this method, as there are also in the one aforementioned.

Whichever style of "locating" is used by the dog, to be a successful finder of birds it is necessary that he be able to determine the forward track from the backward track, and to locate the hiding place of the birds with a reasonable degree of quickness. The accomplishment of pointing stanchly is of but little utility if the dog cannot find the birds to point.

Whether they locate by foot scent or body scent, dogs vary greatly when compared with each other in respect to proficiency in locating. To strike scent some trust to their speed and the consequent wide area which they beat out, pointing the birds well when they happen to run across them. Such dogs may have distinctly inferior ability in following a scent, and yet, by pointing with much firmness and spirit when squarely on the birds, they may create a much better impression than a less pretentious but more meritorious performer. Wide range, high speed and spirited points are not necessarily indicitive of good finding and locating ability. There are many sham "high class" performers.

Whether ranging fast or slow, the dog should have his mind concentrated on the use of his nose, as well as on beating out the ground with good judgment. When ranging in this manner, he will pick up light scents and follow them to a successful find; will detect the scent of a trail which he is running squarely across, and will have

in mind the leeward side of all places as the best route to follow, thus "having the wind" of the birds from the covers in which they lie hidden. In the results, there are all the differences between those of intelligent, finished effort, and those of chance effort applied hit or miss.

Brains are quite as essential to the successful use of the nose as they are in any other line of effort. A dog with keen powers of scent and a dull brain may do fragments of brilliant work betimes when the circumstances happen to combine favorably, but as a whole his work is irregular, ragged and unsatisfactory. On the other hand, a dog with a good brain and a dull nose may do quite satisfactory work.

Why two dogs, highly intelligent and possessing good noses, the one following by foot scent, the other by body scent, should vary so much in their respective methods of locating is not known. Men vary quite as much in the methods employed in shooting, some aiming the gun, others snap shooting by a sense of direction, others again shooting without much aiming, or sense of direction, trusting largely to a beneficent providence or the law of chances for material results.

Whichever method the dog adopts naturally in locating that is his best method. Locating by following the foot scent is inferior to locating by following the body scent, but the trainer is powerless in respect to enforcing the better method if the dog choose to adopt the other. However, he can do much to mar them by ill-timed interference or persistent meddlesomeness. The habit of perpetually cautioning and checking the dog to make him go slow when he is roading or locating birds, a fault displayed by most amateur trainers, should be avoided. The effort, on the contrary, should be directed toward encouraging the dog to locate as quickly as possible, consistently with his ability to do so truly and properly. In this relation, the trainer would do well to bear in mind that there is an important distinction between quickness and hurry.

Some dogs have the ability to locate both by following the foot scent or the body scent, governing themselves according to the conditions governing at the time in the interest of the best success. Dogs of inferior range, yet skillful in locating, and with good judgment in planning their work, besides having the power to concentrate their minds on it, not infrequently distinguish themselves as excellent field performers.

The trainer should not tolerate any pottering work when a dog is puzzling on the foot scent. Drive him from the pottering with the whip. The dog which habitually sniffs at a single track one after another, returning to the same tracks time after time to sniff them as if he liked them for their own sake, thus leaving the trail to get cold and lost to him, is worthless. To be of any value in locating, he must road a little faster than the birds run, otherwise they will run clear away from him. On the other hand, when the dog is picking out the trail and is actually going ahead on it, it is better to leave the matter entirely to him. No theory of the trainer as to where the birds have run should be opposed to the doings of the dog when he is roading. Even if the trainer actually knows where the birds are, he should permit the dog to find them in his own way. If the trainer is seeking to secure a shot as a matter of first consideration, the schooling of the dog then is necessarily secondary to it. The pupil must learn to locate by his own experience, and the trainer can do but little more than to present to him the opportunities to exercise his powers in that respect.

A simple illustration will enable the novice to better understand the distinction between foot scent and body scent. Let it be assumed that on a dry plain a small body of sheep have passed by. We desire to follow them, but they are out of sight. We note their tracks, which are quite plain in a few places, indistinct or entirely lost in others, are followed with more or less difficulty, according to their continuity of imprints or their faintness or clearness. However, it is noted that there is a perceptible line of dust along and over the trail. It is quite visible to the eye. By following it at high speed before it is dissipated by the breeze, the flock may be accurately followed and overtaken. The particles of dust visible to the eye in this case correspond to the particles of body scent which the dog follows by the sense of smell, and the tracks are analogous in a way to the trail left by the birds.

The best of dogs will occasionally make mistakes, and this may be truthfully said of the best of men also. Mistakes made when the dog is endeavoring to do his best should always be silently overlooked.

The puzzle peg, a device intended to be tied on the dog's under jaw, in such a position that it projects some three or four inches forward on it, has been devised to make him carry a high nose and thus force him to follow the birds by their body scent. It is useless and cruel in practice, hence description of it is unnecessary. All mechanical means are useless when applied to correct in the nose a cause which exists in the brain. It is better to permit and encourage the dog to seek in his best manner as his nature impels or permits.

A Christmas Fox Hunt.

A young limb of the law, bearing the euphonious name of Dennis, came home for his holidays spoiling for a fox hunt. Dennis is no novice at the game of fox hunting, but he was anxious to try conclusions with Br'er Reynard, that he might demonstrate to his friends in this neck of the woods that the proverbial wiles of the fox were as naught when pitted against the craft of his chosen profession. Also that the time he had spent in the historical halls of old McGill had fitted him to successfully cope with all creation. With this idea firmly imbedded in his cranium, he invited me to be one of the party.

Now personally I am rather fond of a chase and love music, more especially the deep mellow notes of a hound on a frosty morning.

On this morning the trees were coated, and the frost crystals glittering in the sunlight gave the bush the appearance of a forest of Chrismas trees festooned with diamonds; and the depth and mellowness of the notes could not be denied as one dog went merrily away upon the first scent found. So we were happy and at peace with all the world.

Thinking the fox lay in the first cover and would be likely to shape his course for the mountains, we drove to a crossroad to intercept him; but he had crossed ahead of us, and we heard our dog driving on a wooded ridge about a mile to our left. So we left our team at a farm house, strapped on our snowshoes and hit the trail. As we went, Dennis would frequently stop, train his Greener upon an imaginary fox and mutter to himself, "Steady as a rock; and if I can only catch a glimpse of him between my barrels I can surely harvest him."

As we neared the hunt, I was for pushing through the bush to get a shot, but Dennis said, "No; you go down to that house below the hill; get Hib, and with him cover the upper and lower sides of the hill while I guard this."

I made the detour and gained my position about thirty seconds too late to see the fox. He ran straight to Dennis and I heard the roar of his 10-gauge as he gave him a right and left. I did not hear the usual cry announcing a successful shot, so I held my position till I heard the dog pass the field of battle, when I called to Dennis, but could get no reply, and on gaining the open saw him disappear over a neighboring hill. When I finally caught him up he wore a sickly sort of smile and volunteered the information that he had missed the fox with both barrels. I rather thought there were no shot in the cartridges, as he was dead on. I sympathized with him, and we struck out for a hemlock cover adjoining a sugar orchard, where we could hear the race going on with renewed vigor. They ran there for two hours, and we saw the fox several times, but always just out of gun shot. Finally in making a break through the open for the cover of a ledge, where I expected to meet him, he came to the edge of the field in time to see me disapear behind the rocks, which ended the fun for us in that cover. He then recrossed the road and opened up business in a swamp. After he had worked this over to his satisfaction, he started for another runway; but Hib was laying for the game, and we saw him start to his feet and let go. We were in the distance, but could see the smoke; and we did not need to wait for Hib's battle cry to know that the race was done. We let the dog come up and muss him a little, after which we robbed him of his jacket and hung him in the crotch of a convenient shrub to insure future luck.

Warrington.

Westminster Kennel Club Show.

New York.—The complete list of additional classes opened since the publication of the prize list is as follows:

Class 19A, Newfoundlands, open dogs and bitches.

Class 107A, Griffons, open dogs and bitches.

Class 232A, Beagles, open dogs and bitches (not exceeding 12 inches).

Class 320A, King Charles Spaniels, puppies, dogs and bitches.

Class 329A, Prince Charles Spaniels, novice dogs and bitches.

The additional specials are:

Messrs. Harris and Nixon offer the Harris and Nixon challenge cup for the best bull terrier of either sex owned by a member of the L. K. A. of A.

The Ballyhoo Bey challenge cup presented by W. C. Whitney, Esq., for the best American-bred of either sex, any breed, owned and bred by a member of the L. K. A.

The American Spaniel Club offers the President's Trophy for the best brace of cocker spaniels.

The Spaniel Club's Futurity and Sweepstakes should read, whelped since July 1, 1899, and not August 1, as in the prize list.

I beg to draw your attention to the fact that we have this year offered our old kennel prize of $20 for the best team of four of any breed entered and owned by one exhibitor, provided at least two teams the property of different owners compete.

Classes not already divided by sex will, upon request of the exhibitors, be so divided, provided a sufficient number of entries are made, four of each sex being the required number in the puppy and novice classes and six of each sex in the limit and open classes.

Dogs of the same breed the property of one exhibitor will be benched together if a request to that effect is made at the time of making the entries.

Jas. Mortimer, Supt.

Points and Flushes.

Mr. C. H. Mantler, secretary of the Great Dane Club, informs us that he has lost his well-known Great Dane Lochinvar. He in color is a light brindle. Mr. Mantler states that he either strayed away or was stolen on Thursday of last week. Any information in regard to the dog will be gladly received by Mr. C. H. Mantler, 3450 Hudson Boulevard, Jersey City Heights, N. J.

Canoeing.

American Canoe Association, 1900-1901.

Western Division, A. C. A.

Chicago, Ill., Jan. 12.—The meeting of the Western Division of the A. C. A. for election of officers and general business was held at the Great Northern Hotel, this city, this afternoon, the following members and proxies being on hand: H. C. Morse, Peoria, Ill.; W. C. Jupp, Detroit, Mich.; E. H. Holmes, N. H. Cook, E. Hough, Chas. Catlin and F. S. Catlin, Chicago; F. B. Huntington and A. W. Friese, Milwaukee, Wis.

Proxies—F. W. Dickens and G. F. Gregg, Milwaukee; W. H. Huntington, Oshkosh, Wis.; R. A. Hibbert, Ashland, Wis.; F. C. Howe, J. H. Ross, H. R. Fahnestock, H. S. Marsters, W. S. Truesdale, W. M. Clark, Guy Rayburn, S. Pearson, R. J. Hotchkiss, all of Peoria, Ill.; J. E. Baker, F. T. Barcroft, Wm. Campbell, E. B. Nellis, J. L. Dexter, C. H. Gould, all of Detroit; J. W. Hepburn, Toledo, O.; G. W. Gardner, Cleveland, O.

The report of the Purser showed a balance on hand of $81.95 and sixty-two members in good and regular standing.

There came up some talk over the late change of rules, which was not a popular movement in this part of the country. The old W. C. A. held a few canoeists of the sportiest sort and no sail area was too large for them and no cockpit too small. Mr. Cook pointed out that it would be very hard for the Western Division to hold a meet, because they had very few boats which would qualify. He thought the change of rules to a type of boat like the old cruiser would tend to hurt canoeing in this country. He said that members from this country could not build a boat each year, and surely could not build two. Mr. Cook moved that the Western Division meet be passed for 1901, and this was carried.

Vice-Com. Jupp, who was in the chair, reported on the failure of the Western men to make much showing at Muskoka. He said that if the Western Division did not make a bigger turn out on the St. Lawrence, they could not put up a very strong talk for an Association meet in their country.

Mr. Huntington in supporting Mr. Cook's motion pointed out that the old sailors of the Western Division were practically legislated out of existence. He said they could find more pleasure in a boat on faster lines than one with a 6ft. cockpit and no sliding seat. Mr. Morse, of Peoria, stated that Mr. Quick's device of a waterproof canvas lining to the cockpit, to be used for rapid bailing, had been acepted under the new rule.

The leaning of these Western men seeming to be toward a better chance for the racing craft pure and simple, Mr. Friese, of Milwaukee, moved that the Trophy race be sailed under rules which should leave the old boats eligible along with the new ones, and this was carried.

Mr. Morse took the floor to urge greater enthusiasm on the part of the Western Division. He said that the A. C. A. should have given the Western men a meet this past year, instead of giving it to the Northern Division. Had they done so, the Western Division would now be a good and strong one. He said that the second turn down of 1901 made matters still harder, and the Western Division men must get together and stand out for an Association meet in their own country.

Mr. Jupp pointed out that many canoeists were kept from the 1900 meet because they did not have any exact ideas of the railroad fares, tentage, board, etc. He hoped this would not be the case another year.

Mr. Jupp later, after a considerable discussion among the members and talk by Mr. Morse and others, made the following motion, leaving the chair for that purpose: "To the Executive Committee of the A. C. A.: It is resolved by the Western Division that it is absolutely necessary for the life and success of the Western Division, if it shall retain its membership, that the A. C. A. hold an annual meeting in the waters of the Western Division in 1902." This was carried.

The officers were then elected for the ensuing year, only two changes being made in the list of last year, Mr. Holmes taking the place of Mr. Woodruff, and Mr. Dickens of Mr. Lafferty. Mr. Morse holds over in his term as member of the Board of Governors. The officers elected were as follows: Vice-Com., William C. Jupp, 50 West Larned street, Detroit, Mich.; Rear-Com., F. B. Huntington, 629 Hackett avenue, Milwaukee, Wis.; Purser, F. T. Barcroft, 408 Ferguson Building, Detroit, Mich. Members Executive Committee—E. H. Holmes, Chicago, Ill.; F. W. Dickens, Milwaukee, Wis. Member Board of Governors—Henry C. Morse, Peoria, Ill.

E. Hough.

Hartford Building, Chicago, Ill.

Red Dragon C.. C.

The annual meeting and election of officers of the Red Dragon C. C., of Philadelphia, was held in the Colonnade Parlors on Jan. 4. There was a large attendance of members, and the following officers were chosen for the ensuing year: Com., M. D. Wilt; Vice-Com., Omar Shallcross; Purser, H. E. Davis; Quartermaster, Harry W. Fleischmann; Correspondent, W. K. Park; Fleet Surgeon, F. O. Gross, M. D.; Measurer, H. E. Bachmann; Trustee for three years, Joseph E. Murray, with A. S. Fenimore and E. W. Crittenden; House Committee, A. D. Shaw, Harry Blumner, N. C. McLeod, J. Howard Morrison.

The Purser's report showed a healthy condition of the treasury, and the club has been strengthened by the addition of several new active members.

The prize offered to the one making the greatest mileage during the season in paddling canoe was won by E. W. Crittenden, who covered 387 miles. A. S. Fenimore was presented with a trophy for second place, he having paddled 197½ miles. Mr. Fenimore's record would have been greater but that his doctor ordered otherwise.

The Red Dragons held their annual mess at the club house, Wissinoming, Pa., Saturday evening, Jan. 5. The house was tastefully decorated and the menu quite in keeping with the usual affair of this kind. It was strictly a club mess, and the following were present: M. D. Wilt, E. D. Hemingway, Harry Fleischmann, Joseph E. Murray, Capt. H. Blumner, A. S. Fenimore, J. N. Remsen, P. T. Hookie, Dr. F. O. Gross, J. H. Morrison, N. C. McLeod, W. K. Park, R. G. Fleischmann, H. E. Bachmann, H. E. Davis, C. W. King and W. Bachmann.

The evening was pleasantly spent in the old-fashioned

Red Dragon manner, talks by Com. Wilt, ex-Com. Hemingway, Joseph Edward Murray and Dr. Gross being particularly well received. The ex-Commodore spoke fluently in retrospective and took his hearers back to the time "when swords did hang but loosely in the scabbard." Capt. Blumner delighted the audience with a few of his choicest recitations. In fact, every member present added his mite, and not a moment was lost.

The year just ended has been a pleasant one for the Red Dragons, although, according to the report of the Regatta Committee, M. D. Wilt, chairman, there was a lack of interest in the regattas held by the club.

A successful ladies' day, successful mainly through the untiring efforts of the Commodore, was given after the spring regatta, and it was one of the most enjoyable meets of the season.

The race for the McFetridge paddling trophy and for a cup presented by E. W. Crittenden was held on Sept. 29, Mr. M. D. Wilt winning. Mr. Crittenden and Mr. Titus were the other contestants.

According to the log book, fifteen members have been active during the year, Mr. Crittenden leading in the greatest number of miles paddled with 387 to his credit, followed by A. S. Fenimore, with 197½; E. D. Hemingway, 165; T. W. Cook, 134½; M. D. Wilt, 134; J. E. Murray, 79½; H. W. Fleischmann, 68; H. M. Kreamer, 57; W. K. Park, 55½; H. E. Davis, 49½; A. D. Silliman, 46; N. C. McLeod, 12½; W. J. Scott, 11½; H. E. Blumner, 11½, and A. D. Shaw, 3.

Eight members of the club took part in the Delaware River cruise of the Atlantic Division of the A. C. A. in May, namely, Messrs. Kreamer, Fleischmann, Fenimore, Crittenden, Park, Murray, Cook and Hemingway. Besides these were several other members who joined the camp at Park Island. Two of the Red Dragons, M. D. Wilt and Harry Kreamer, attended the A. C. A. meet at Muskoka Lake, Canada. W. K. P.

CANOEING NEWS NOTES.

The Toronto C. C. annual dinner, which was announced for the 25th inst., has been postponed until further notice on account of the death of the Queen.

The following, proposed by Com. C. E. Britton and seconded by Sec'y-Treas. Herb Begg, have applied for membership in the A. C. A.: Thos. B. Greening, Hamilton, Canada; A. J. Wood, Montreal, Canada; Geo. Boyd, Montreal, Canada.

Charles Catlin, 481 Belden avenue, Chicago, has also applied for membership.

Com. Britton, who was unfortunately laid up sick during the annual meeting in Gananoque October last, has entirely recovered and is able to assume his official duties.

Mr. Percy Nesbit, Vice-Commodore of the British Canoe Association, has announced his intention of being present at the international meet, Thousand Islands, in August next.

The Toronto C. C. are making extensive alterations to their club house, which, together with the adjoining property, was recently purchased by them.

The annual reunion, dinner and election of the Brooklyn C. C. were held at the Clarendon Hotel, Brooklyn. The reports of the committees and officers for the year showed the organization to be in good condition, with no outstanding liabilities and a substantial balance. The following officers were chosen: Com., Robert J. Wilkin; Vice-Com., C. Valentine Schuyler; Purser, W. McK. Miller; Meas., F. V. Henshaw; Chairman of House Committee, Percy F. Hogan; Chairman of Enterfainment Committee, Samuel J. Bennett.

At the annual meeting of the Knickerbocker C. C., held at the club house, West 152d street and the Hudson River, the following officers for the coming year were elected: Com., L. S. Stockwell; Vice-Com., G. E. Taylor; Sec'y, J. Leach; Treas., W. R. Farrell, Jr.; Meas., Warren T. Berry. The reports of the retiring officers showed the club to be in a flourishing condition, as it owns its club house, is free from debt, and has a balance of several hundred dollars in the treasury.

Respectfully submitted, ARTHUR H. WOOD, Purser.
Audited and found correct—Fred B. Yard, G. L. Wallington.

The cruising schooner for Mr. Robert E. Tod that is being built by the Townsend & Downey Shipbuilding Co., of Shooters Island, S. I., from plans made by Mr. H. C. Winteringham, is already under way. She is 110ft. on the waterline, 152ft. 6in. over all, 28ft. beam and 14ft. draft. The overhang aft is 23ft. 8in. She has a very moderate sail plan. The skylights and deck trimmings will be of teak, and beside the usual boats she will carry a steam launch. The deck is raised forward and aft. Mr. Tod has sold his schooner Katrina.

Yachting.

Notice.

All communications intended for FOREST AND STREAM should always be addressed to the Forest and Stream Publishing Co., and not to any individual connected with the paper.

IN our issue of last week we referred to the new bill which has been introduced into Congress by Representative Charles H. Grosvenor, of Ohio, providing for the regulation of the use of launches propelled by electricity, gas, naphtha or fluid, and we are glad to say that there is little likelihood of its being passed at present. In an interview at Washington a few days since, Mr. Grosvenor made the following explanation:

"I introduced the bill for the Treasury Department upon the information that accidents to passengers on badly regulated vessels, propelled by power generated by gas or oil, were becoming too frequent, and also because there had been complaint that the masters of such vessels were indifferent to the sailing rules that govern other craft, and were getting in the way of steamboats and steamships with little care for the signals and regulations that restrain vessels under the supervision of the supervising inspectors of steam vessels.

"The bill does not pretend to debar any private user of a launch, however propelled, being of less than 15 tons, from choosing any way he may prefer to blow himself and his family to perdition. It simply says that all vessels propelled by power and carrying passengers 'for hire' shall be subject to rules found wise and necessary to control the use of other power-propelled vessels. That does not appear clearly in the act as I introduced it.

"To make it clear I have to-day introduced another bill, in which I have recited the act to be amended and then added the amendment. That is a rule in Ohio, and ought to be a rule here, the mere reference to a statute to be amended not conveying an intelligent idea to the reader of the act if he does not happen to be familiar with the statute referred to. The launch owners need not worry. Having introduced the corrected bill, it will be referred, but I shall not make any effort to secure its passage this session."

A MOST interesting pamphlet, written by Col. J. F. Bucknill (Thalassa), of Southampton, England, on the new English Y. R. A. rule, has just been received by us. It has for its purpose the formation of a new association in England with the object of fostering wholesome types of small boats for racing, with displacement as a basis for its rating formulas. Col. Bucknill ably discusses the new rule recently adopted by the Y. R. A. Council, and brings to light its weak points. A number of charts and tables make the volume most complete, and those who are interested in rating formulas will find the work of unusual value in the study of the subject. Copies may be secured from Wolff & Co., 75 High street, Southampton, England, for one shilling a copy.

The Duties of Regatta Committees.

LAST summer in conversation with Mr. W. P. Stephens I promised to write a few notes on the duties of regatta committees. The subject is a large one, and I shall not pretend to exhaust it or to offer instructions to men who have served on regatta committees for years. I may, however, hope to put together a little information that will be useful to those who have made no special study of the subject. If I am seldom able to quote authorities it must be remembered that outside of the racing rules there is scarcely anything available for the use of race officers, and they have to look for guidance to custom, fair play and common sense. As all, or nearly all, races are sailed under the management of a yacht club, it will be convenient and sufficient to inquire into the duties of the regatta committee of a club, merely remarking that under special conditions a regatta committee might exist without a club. Every club has its own system of internal administration, of which a committee of management forms the chief part, although discharging varying duties and responsibilities, according to the constitution of the club. With some small clubs this committee is little more than an executive carrying out the will of the members expressed at monthly meetings. In all larger clubs, however, the custom is to hold an annual meeting, at which the committee of management is elected, and to entrust it with full powers of administration. This would include the outlining of the racing policy of the club, and it might go further to the extent of fixing the classes, dates and events, providing for the measurement of the fleet and furnishing the necessary facilities for carrying out all the details of a race. Usually all such work is turned over to another committee variously known as the regatta committee, the race committee or the sailing committee, whose work it is now proposed to discuss.

The three titles mentioned are used almost interchangeably, as any report of summer racing in FOREST AND STREAM will show. Although each may at one time have possessed a more specific meaning of the three, the term regatta committee is the most comprehensive, and it may include those who have charge of the whole or any part of the club work connected with a race. The duties, the authority and the responsibility of such a committee vary almost with every club—there is no fixed rule and hardly any settled usage. The simplest and most effective plan is that of the New York Yacht Club, which elects a regatta committee at the annual meeting, and invests it with full authority to carry on the racing of the club, from the making of the first arrangements to the finish of the last race and the awarding of the last prize. There is no doubting the wisdom and efficiency of such a course—it is precise, clean-cut and effective. Of course, much of the work may be performed by deputy, either paid or honorary, and such a committee will find occasion to employ measurers, secretaries, starters, timekeepers and others. But with the central authority in good hands such details of administration give far less trouble than when they are entrusted to several individuals or committees working apart in a disjointed fashion, often out of touch one with another or touching only to collide.

The duty of conducting the season's racing of a yacht club, or even a special race of any importance, is no mere honorary sinecure, to be entrusted to any members who have a taste for publicity and no special qualifications for any other office. It is important, responsible work, requiring constant attention and good administrative ability, coupled with a practical knowledge of the rules and usages of yachting. For this reason clubs having important racing to look after entrust it to a compact body of competent men, five or even three being a good number; large unwieldy committees containing a good deal of honorary and ex-officio material having been abandoned, owing to the importance of the work.

A regatta committee taking charge of a season's racing will assume office at the beginning of the season, or better still at the close of the previous season, and with as little loss of time as possible plan the coming campaign. The first arrangements that will be made will be such as concern owners who propose building or altering boats during the winter. Changes in rules, classification or the establishment of new classes are matters that should all be settled before Christmas, if possible. Then the season's fixtures will have to be arranged, and often this requires more time and patience than may be supposed, particularly when dates have to be set with some regard to the events of other clubs. Work of this kind, although important, is only preliminary, and may be done deliberately. The active, conspicuous duties begin with the opening of the racing season, and even if all goes smoothly the regatta committee will have plenty to do on or before the day of the race. But unfortunately, even at the last moment, vexatious hitches arise from quarters where all was supposed to be serene. Yacht owners, strange to say, are often very capricious in their actions about racing. One would suppose that it would be looked upon as a privilege to sail a fair race for a valuable prize, and that every owner who had any intention of competing would make himself familiar with the rules, have his boat measured in good time, and attend to the necessary formality of making an entry with the proper officer. Most owners do all this cheerfully and promptly, but others do not. They treat the club measurer as though they were doing him and the club a great favor to allow the official tape-line to touch their sacred yacht—they stand him off and tell him to call again because some trifling changes may be made—there is no hurry. They go around one day explaining how they are going to beat their class out of sight, and next day are not sure they will race at all. Instead of entering in good season they take it as a matter of course that some member of the regatta committee will ask for their entry and be glad to get it. They do more—but my object is not to enlarge on the shortcomings of owners, except to show that a regatta committee must be prepared for all this sort of thing, and be ready to handle it with judgment and discretion. Careless yacht owners are often good-natured, honorable sportsmen, and they have to be humored, because in handling a regatta it is necessary to do more than carry out the technical requirements of the event—it must be made a success.

The course or courses will be decided some time before the day of the race, and all necessary preparations made to set the marks. Even in a well-regulated club, with a competent dock man or storekeeper, this will require the personal attention of at least one member of the committee. The equipment will have to be carefully looked over and every precaution taken to see that it is all there and in good order. Buoys, floats, targets, anchors and lines are peculiarly liable to loss and damage even with fair handling, not to mention carelessness and borrowing. When marks have to be set in the open in deep water and exposed to wind and waves, the gear cannot be too good or too much care exercised in the setting. Where the course is a long one the work is better done the day before it is required, as it takes some time to steam fifteen or twenty miles, stopping at intervals to set marks. The only drawback to this foolhardiness is that there is a chance of a buoy being carried away over night, and to guard against this it is always advisable to send a steamer around in the morning before the start, with the necessary materials for making good anything that has gone wrong. There is no more annoying incident in racing than the loss of a mark, and even if it be discovered in time to place a temporary substitute, such as the committee boat, the incident is likely to lead to dissatisfaction among the competitors. It is worse when a new start has to be ordered, as even on a short course this leads to a weary delay which is only a trifle better than a postponement. There are three things that racing yachtsmen have a good right to demand from a regatta committee: Precise instructions, accurate timing and a course properly laid and marked. For any failure in the latter respect it is idle to plead excuses or explanations; these do not restore a race that has been most vexatiously spoiled. Yet it must be added that the most painstaking regatta committee may sometimes have a mishap solely through their inability to obtain proper material for setting marks and keeping them there. The average yachtsman, who has not investigated the subject usually thinks that "any old thing" is good enough to use for a mark in a course, and if, as may happen, the regatta committee has no authority to purchase stores, they may have to submit to having requisitions for proper stores cut down below the point of utility and reliability by some very economical person who does not realize that a whole regatta may be spoiled by one piece of rope proving too weak or too short.

While on this subject I may say that after many experiments on Lake Ontario we have found the only satisfactory mark for deep water to be the affair shown in the cut. The A shaped float is constructed of dry stuff, well fastened, and should have a surplus buoyancy of at least 50 or 60 pounds. A stout ring is provided for the anchor rope of three-quarters or larger manila, a mushroom anchor of 50 pounds weight being used. A light but sound spar 25 feet long is stepped clear through the float, a third of its length or less projecting into the water, and to the heel is lashed a weight of say 50 pounds. This affords sufficient stability to carry the pole upright with suitable targets attached. Simple as this arrange-

ment is, care must be used in making and rigging it. The float itself is not expected to contribute any stability, as it is almost totally immersed, this being a part of the plan in order to minimize the resistance offered by wave motion, and to present no appreciable surface for windage.

The problem is the same as that of putting ballast outside a yacht, only much simpler, as all the required data are obtainable by the use of a foot-rule and a pair of scales. The first point to be settled is the required height of the pole above the water. Suppose this to be 18 feet, weighing say 20 pounds. The center of gravity of this may be assumed at a height of 9 feet. At the top of the pole is carried a target or device, weiging say 5 pounds. We thus have an upsetting force acting through the center of buoyancy made as follows:

Pole 30 pounds by 9 feet.....	180 pounds.
Target 5 pounds by 18 feet....	90 "
	270 "

If the heel of the pole projects 7 feet below the water and is loaded with a weight of 50 pounds, we have a counterbalance equal to 350 pounds, less say ten per cent., due to the immersion of the weight, or 315 pounds net. This affords plenty of margin for windage, and insures the mark and target always remaining right side up.

Having decided on the spar and weights to be used the float can be built of a size to support them. Using sides 6 feet long and a foot wide of 2-inch stuff, it will contain some 2½ cubic feet of wood, and the weight that this will support depends upon its quality and dryness. The surest way is to test both this and the stability of the marks by dropping it into the water alongside a dock, with a line attached. When properly planned and built the float should show a little above the water to allow for soakage, and the pole and target should instantly assume their proper position, no matter in what shape the outfit is thrown into the water. The only objection to a mark of this kind is that it is awkward to handle, not so much in setting out as in taking in. There is no great difficulty if the steamer is provided with a boat or anchor davit, from which the float may be slung alongside and rigged or unrigged. In setting, a line is bent on the anchor and the latter lowered away until it reaches the bottom. After allowing sufficient slack the other end is carefully fastened to the buoy. The pole is then shipped, the weight attached, and the outfit dropped overboard. In taking in, the chief difficulty is to hoist the mark and disconnect the weight, a davit or swinging boom being very useful for this work. In their absence more hands are required, and the boat's paint may suffer. It is not the weight, but the awkwardness of the mark that makes the trouble—once the pole is unshipped everything is easy.

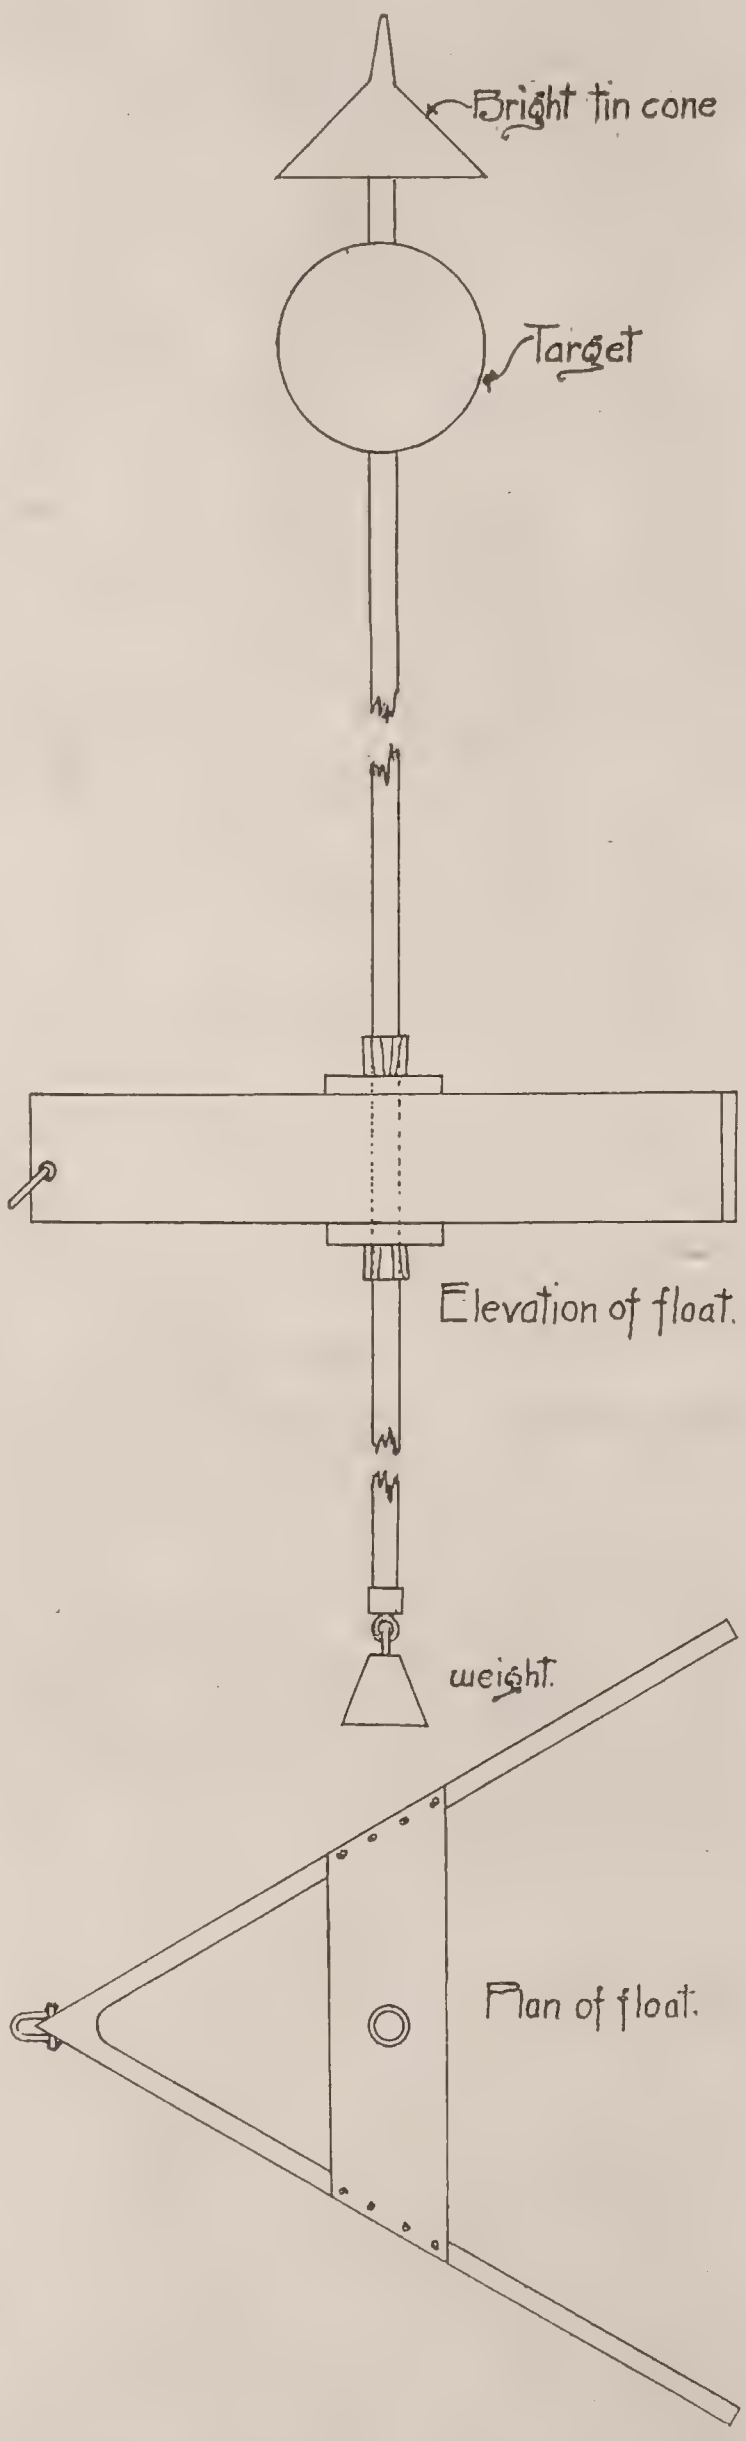
Many details of this mark may be improved. In all cases the wooden float should be strongly fastened, pins or bolts being used instead of nails. The pole might be shod with an iron weight of no greater diameter than itself, so that it could be readily shipped and unshipped. For the wooden float a metal air chamber might be substituted, made of light boiler plate or even thinner iron, but in the latter case some wooden bracing would be needed in the wake of the mast. A rig of this kind would be useful where it had to be set and taken up frequently, constant care being exercised to guard against corrosion and punctures. Where a mark is set out for the season the wooden float would be more reliable.

In frequently setting these marks, some curious opinions have been offered us by spectators. One man thought a small weight would answer for a larger one, if only it were hung on a lanyard, arguing that the lower center of gravity would give additional leverage. So it would if the connection between pole and weight were rigid, or, in other words, a continuation of the pole itself, but a loose connection adds nothing to the leverage of the weight; it serves merely to transmit the pull just as a lanyard on a tiller does. Another man did not see the necessity of getting the anchor to the bottom in deep water, supposing that the mere weight at the end of a long line would hold the buoy. In this connection it may be said that with a mark of this kind the float is so nearly immersed that a small anchor and less scope than in ordinary practice may be relied on. The strain on the ground tackle is nothing like that caused by a small boat, such as might be used for the purpose. For this reason alone the buoy is far superior to any boat; while a sea that will swamp an open boat at anchor will pass harmlessly over a buoy.

The style of target used will depend on the course and its surroundings. For open water with a background of sea and sky, no one thing will answer at all times. A flag of black and white or red and white is easily seen when blowing across the line of vision, but is useless at any distance when blowing down wind or in a calm. A sphere of basket work painted or covered with painted cotton is an improvement. The top of the pole may be crowned with a bright tin cone, small end up, which as it sways will throw off flashes at various angles, which carry a long way and are particularly valuable in hazy weather. Instead of a cone a many-sided pyramid may be used. For buoys with a shore background, care should be taken that the target is of a character that will stand out against it. Bright colors are useful and on a low-lying shore covered with trees a target near the water is more readily picked up than if slung higher. Experiment alone will decide what is best for any particular place.

When laying a course in open water the compass bearings will be taken and included in the printed instructions. This is simple enough if the steamer employed has a properly adjusted compass, but many tugs and small craft used for this work are not so provided. It is hardly necessary to add that the best compass put aboard a small steamer bristling with iron work cannot be relied upon. The only resort is to try to ascertain the amount of the deviation, and to check any bearings taken by cross-bearings plotted on the chart, and by such local marks as are available. In case of final doubt the bearings should be described in the instructions as approximate; and if the course is long so that one mark cannot readily be seen from another, the same steamer used in laying it should go ahead of the yachts to show the way.

Windward or leeward courses must, of course, be laid on the day of the race, the steamer starting either with the yachts or a little ahead of them. One member of the regatta committee should be on board to superintend the work, and it will usually be better to provide a separate boat for the starter. This leads up to the actual conduct of the race, which requires the services of several officers, although at times all the various duties may be discharged by one man. We have so far assumed



MARK USED BY THE LAKE YACHT RACING ASSOCIATION.

the regatta committee to be in charge of all the preliminary arrangements. They may and often do go further and attend to all the technical duties of race officers. On the other hand, they may content themselves with a general supervision, and leave all the active work to starters, judges and timekeepers, usually in such cases retaining the duty of deciding protests and disputed points. In some cases it is really the race officers who are known as the regatta committee, so that their duties begin where those of the regatta committee of another club may end. There is no fixed usage in such matters, and the customs of various clubs are established not by any general law, but by convenience and local conditions—even by accident or caprice. The important point is that the duties of race officers be properly discharged, and where this is accomplished names signify little.

The starter should satisfy himself that all the necessary gear, such as flags, signals, guns and ammunition, is in its proper place aboard the steamer, or wherever it will be required, and that everything is in good working order. The yacht cannon is naturally much used for starting, but unless everything is in perfectly good order it is unreliable for such exact important work. It should be clean inside as well as outside, the breech should open and close easily and the moving parts be well oiled. A cannon belonging to a well-kept yacht, in constant use, may be depended on, especially if the man who usually cares for and fires it can be spared to serve it, but even then there is a chance of missing fire with a bad primer, so that to guard against accidents I have always, where it was possible, used two guns. One man can handle the two lanyards and pull the second without appreciable loss of time if the first misses fire. An excellent substitute, however, is a double-barreled shotgun, using shells loaded with noisy powder. It is easier to handle than a cannon, and much more reliable, as a rule.

An accurate timepiece is, of course, a necessity, a ship's chronometer being the best, but a good watch which accuartely registers seconds will serve. A stop-watch having a "sweep seconds" hand is useful as being easily read, but one should beware of complicated watches unless they have been proved reliable. They are more liable to derangement than simpler movements, and I have known one stopped by the shock of firing the first gun. This was very awkward, as the starting guns had to follow at exact intervals, and I should have been in a fix had not another less pretentious watch set to the same time been available.

The starter will arrange in good time for such assistants as he requires, placing one man at the gun, another at the signal halliards, and perhaps another to write down times at the start if it is desirable to preserve them. Unless he know of a better man he had better hold the watch himself. Suppose a race to start at 11 o'clock. At 10:55 he will call out "Five minutes," then at 10:59 "One minute," and in succession "Half a minute." With a hasty glance to see that his assistants are all ready and attentive he will continue, "Fifteen seconds—ten seconds—five—four—three—two—one—fire!" At the word both gun and flag should respond. The man with the watch must keep cool and avoid allowing his attention to be distracted by the gossip and bustle that always occur on a committee boat at the start of a race. In the intervals between guns, no matter what else he has to attend to, he must keep an eye on his watch.

The timekeeper is the complement of the starter, and indeed it is convenient for one man to attend to both duties. Times around intermediate marks are usually taken for the benefit of reporters, if for nothing else, and when several rounds of a course are made, each completed one should be timed as carefully as a finish. For taking the latter the committee steamer should, if at all possible, be moved so that the finishing line is at right angles to the last leg of the course; thus no yacht is required to stay or wear around the mark. Similarly the starting line should be arranged at right angles to the first leg of the course, but of the two, it is of less consequence, and might give way to other requirements, such as sea-room. Rule books usually prescribe how and when a course is considered completed. The old rule read when the mast cuts the line, but the newer rule is when any point—usually the bowsprit end—crosses the line, the course is completed. Of the two I consider the latter fairer and decidedly more convenient. One can always see when the bowsprit comes in line with a buoy, but the latter is usually hidden by the sails by the time the mast cuts the finishing line. For particular work one man may sight the yacht and call her out to the timekeeper, who keeps his eye on the chronometer, notes the time, and either writes it down or announces it to the man who is keeping the records. With the assistance of a split-second chronograph the timekeeper may sight the finishes himself. The necessary corrections for time allowance should be made and the results tabulated as soon as possible.

In reports of yacht races one often reads of "judges" and sometimes of a "referee." These terms appear to have been borrowed from other sports, and used as loosely and indefinitely as other titles previously referred to. The most reasonable and exact application of the term "judges" is in the case of race officers who act under the authority of the regatta committee, or who are specially appointed to the work, as in the case of the races for the Canada cup. Here each of the two yacht clubs appointed a judge, and the two judges selected a third, who might have been called a referee, but in point of fact all three acted together as a race committee. There is a real need of some precise name for such race officers. The word judge fits badly, and is more suggestive of a fat stock show than a yacht race.

Having thus sketched the technical and perfunctory duties of a regatta committtee, it would be interesting to consider that part of their work which is discretionary; but in this so much depends on common sense and the personal equation that it is by no means easy to lay down rules or even offer suggestions. One thing may be said with certainty, and that is that no doubtful point should be left for settlement after a race which can possibly be cleared up before the start. Racing men usually consent to anything reasonable when announced fairly in the racing instructions, but they bitterly resent arbitrary decisions, however fair, when they disqualify or unplace a yacht after a race has been sailed. Sometimes a loser will go further and protest against a change of course or of the time of starting, which a committee may have seen fit to order, arguing that the change was to his disadvantage and prevented him from winning. Needless to say there can be no protest, within the meaning of the rules, against any act within the discretion of the regatta committee, although some yachtsmen do not appear to understand this, and cheerfully "protest" against anything that does not suit them. No responsible committee will refuse to consider complaints even against themselves, and to rectify any wrong that had been done, but it is quite impossible for them to pay any attention to a man whose grievance is that because a course is altered he lost a race he expected to win.

Coming to protests proper, one competitor against another, opens up a very large and complicated subject where the committee will require some skill in hearing evidence and sifting facts, after which they must apply the rules as far as possible, and finally fall back on fair play and common sense. In clearly proved cases the

penalty is fixed—the offending yacht "shall be disqualified." There are, however, cases, where the violation of the rules is purely technical, that may be dismissed as frivolous, especially if the complaint comes from a competitor who is clearly trying to snatch a decision where he had no chance of winning a race. There are a few sea lawyers who are regularly looking for this sort of thing. A prominent man once told me that most of the members of his club looked upon the racing rules as designed to prevent collisions, but there were a few who openly affirmed that the rules were made "to win races with"—these were the exact words, neither sportsmanlike nor grammatical. Fortunately such opinions are rare, and even when men are found holding them we must not judge them too harshly. It may be only their way of looking at things, and from their standpoint they may be acting fairly and honorably. The duty of a regatta committee is, however, clear enough. Rules must be observed, but tricks and sharp practices discouraged, and above all the high standard of the sport must be maintained.

In conclusion I do not know whether to apologize to the editor for the length, the discursiveness or the incompleteness of this article. I trust, however, that in spite of imperfections it contains a few hints that may be useful to those who are called upon without previous experience to serve on a regatta committee.

William Q. Phillips.

Clinton, Ont., Jan 7.

Our Boston Letter.

Boston, Jan. 26.—This evening B. B. Crowninshield, designer of the Boston Cup defender, acting under agreement with Thomas W. Lawson, owner of the yacht gave the principal dimensions to the press. Mr. Lawson issued a statement, in which he explained his position in regard to secrecy and his knowledge of the chances which he is taking. His statement, like previous ones he has given to the public, was very simple and straightforward.

He said that as he had originally intended to give the public the dimensions of his boat, when it was deemed advisable, he was now ready to stand by his word. He did not in any way intend to reflect upon the methods of secrecy which have been successfully adopted by other yachtsmen and builders. He allows that in making the dimensions public he may be running great chances of defeat, but will stick to his original intention, whatever the cost.

The following are the official dimensions of the principal parts of the hull:

Length—	
Over all	140ft. 10½in.
Designed waterline	90ft.
Overhang—	
Forward	27ft. 5 in.
Aft	23ft.
Beam—	
Extreme	23ft. 11½in.
Designed waterline	23ft. 5 in.
Draft—Extreme	20ft.
Freeboard—	
Stem head	6ft. 11 in.
Least	4ft.
At stern	4ft. 8 in.
Beam—	
Forward end of waterline	15ft.
After end of waterline	18ft. 9 in.
Stern	11ft. 8 in.
Center of lateral plane, aft of forward end of waterline	51ft. 5 in.
Center of buoyancy, aft of forward end of waterline	47ft. 3 in.
Area—	
Lateral plane	772.6 sq. ft.
L.W.L. plane	1,171.5 sq. ft.
Wetted surface	2,913.5 sq. ft.

Her displacement was not given out, but as it has been generally talked about, there is no harm in comparing it with Columbia's. Her displacement, on a designed waterline length of 90ft., is a little over 146 tons. Columbia's displacement was 145 tons. As the Boston boat is nearly 11ft. longer over all than Columbia, and her draft and beam very nearly the same, it follows that the Boston designer has gone to a reduction of dead rise, maintaining the flat floor, and has given a harder turn to the bilge.

The displacement of 146 tons is on a waterline length of 90ft., but it is not likely that the boat will float exactly at this length. It is more than possible that she will be somewhat less. In this case her draft, which is only 3in. more than Columbia's on paper, will not exceed that of the defender of 1899. She is simply a much bigger boat than Columbia and with greater sail-carrying capacity on about the same displacement.

It is not the designer's wish at the present time to disclose the dimensions of the sails which the boat will carry. It is not likely that he will give these out until both contestants are in the water, for such information would give too much comparative data to the Bristol designer. There is every reason to believe that the Boston boat will have a greater sail spread than Columbia, although even with the same sail area she should be faster on form.

Everything was put in readiness to begin work on the Boston boat at the Atlantic Works during the week. All of the angle bars for the frames are there. The bending slabs were put in place and a shelter erected over them. The furnace was kept going full blast for twenty-four hours to get an even heat, and then a small bar was turned as an experiment. The result was very satisfactory. Today two frames were bent into shape. The work of bending will now continue rapidly, so that as many frames as possible will be ready when the keel frame arrives from East Braintree. The metal for the keel frame was run today, and it is expected to arrive at the Atlantic works some time next week.

On Tuesday a big Oregon pine stick was towed over from Pigeon's Basin, at East Boston, to Lawley's, and Wednesday, at high water, it was hauled into the west shop. It is intended for a hollow mast for the new boat. It is now nearly squared up and will be ready for splitting in a few days. It is a beautiful piece of wood, the rich grain showing through plentifully.

The remarkable feat of building a 50ft. steel steam yacht in five weeks was accomplished at Lawley's recently. The boat was designed by T. S. Poekel for Lawrence B. Gray, of Boston. She is of peculiar design, her keelson taking a decided rise at the stern, forming double bilges, and it is in this space that the propeller is placed. She was expected to start for New York to-day. Arriving that she will be placed on the deck of the steamer Prins Frederick Hendrick and taken to Paramaribo, Dutch Guiana, where Mr. Gray has large interests in the coal mines. She will cruise on the Surinam River.

Several yachts have been finished at Lawley's and hauled out of the west shop, and new ones in process of construction have taken their places. The Canada cup defender, Illinois, is being planked. The 120ft. steamer for W. P. Eno, from Crane design, is being laid down. This yacht was intended to be 115ft. on the waterline, but the plans have been changed. The keel is ready for the 46-footer for Theophile Parsons. An 85ft. steamer for C. B. Borland, from design of Arthur Binney, is being laid down. The oak keel is ready for a 25ft. cruiser for F. E. Peabody, from Purdon's design. F. D. Lawley is designing a Bar Harbor 25-footer for Mrs. H. B. Gibson, and a Y. R. A. 21-footer for Mr. Wiggin, of the Annisquam Y. C.

The following officers have been nominated by the Boston Y. C., to be voted for at the annual meeting: Com., B. P. Cheney; Vice-Com., Walter Burgess; Rear-Com., E. F. Smith; Sec'y, A. C. Fernald; Treas., D. A. Dorr; Measurers, G. F. Lawley and Jefferson Borden; Trustees, B. P. Cheney, J. A. Mitchell, C. W. Jones and W. L. Dean; Regatta Committee, Walter Burgess, W. H. Bangs, Jr., B. D. Amsden, C. A. French and W. A. Ruddick; Membership Committee, W. C. Lewis, W. D. Turner, E. H. Tarbell, Albert Geiger, Jr., and C. G. Browne; House Committee (three years), W. D. Turner.

Crowninshield has sold the Bar Harbor 25-footer Scud, formerly owned by Edward Morrill, to Harry W. Weeks, of Boston. He has an order for a 54ft. schooner from W. F. Mayo, of Boston. She will be built by Rice Bros., at East Boothbay, and will be used by Mr. Mayo at Marblehead.

MacConnell Bros. have sold the 25ft. cat Alma, formerly owned by Ex-Com. C. A. Heney, of the Winthrop Y. C., to Stanley H. Eldridge, of Harvard College.

Graves, of Marblehead, has finished the Crowninshield-designed 16-footer for A. D. Irving.

John B. Killeen.

Lasca.

Lasca was designed by Mr. A. Cary Smith, and was launched in 1892. She was built by Mr. Henry Piepgras at City Island. Lasca is a steel centerboard schooner. She is 89.9ft. on the waterline, 119ft. over all, 23ft. beam, 11.2ft. deep and draws 10.8ft. Mr. James S. Watson sold her to Dr. Walter von Bruening, of Berlin, in December of 1899. Mr. Watson had Mr. A. Cary Smith design a larger boat with auxiliary power after selling Lasca. She is known as Genesee, and her cabin plan appeared in Forest and Stream a short time ago. Lasca was in collision with a steam hopper while sailing on the Solent last summer, and a full account of the incident is given in this issue under the heading "A Collision on the Solent."

The new 51-footer building for Mr. Edward Kelly, N. Y. Y. C., by Mr. L. D. Huntington, Jr., will be named Huguenot.

A Collision On the Solent.

In the Admiralty Court on Wednesday last week an action was brought by the owner of the schooner Lasca to recover the damage sustained by him by reason of a collision which occurred about 1:45 P. M. on Aug. 16 last on the Solent, a little to the eastward of Calshot Light, between his yacht and the defendants' steam vessel, the hopper No. 2. The plaintiff's case was that the Lasca, manned by a crew of sixteen hands, was cruising on the Solent in the neighborhood of the Calshot lightship, on board which vessel was a photographer, who was engaged in taking photographs of the Lasca. The wind was about E.N.E., light, the weather fine and clear, and the tide the last of the flood. The Lasca, which was under all plain sail, had shortly before stayed from the port to the starboard tack and was being kept on the wind heading about from N.E. by N. to N.N.E. while certain sails were being reset, and was making about one knot. In these circumstances the steam hopper No. 2 was observed distant from a quarter to half a mile and bearing about five points on the port bow. The hopper approached in such a direction as to involve risk of a collision, and though loudly hailed to keep clear she with her stem struck the port side of the yacht just abaft the main rigging, doing her great damage. The defendants' case was that the hopper No. 2 was at the time laden with about 500 tons of mud, and was proceeding down Southampton Water, manned by a crew of five hands, on her way to sea to discharge the mud. She was heading about S.E. by S., and was making between four and five knots. In these circumstances the schooner Lasca was observed distant about half a mile, and on the starboard quarter of the hopper. The hopper kept her course and the yacht overhauled and passed her. When the yacht was about 300 to 400ft. away, she suddenly put her helm down and threw herself into the wind across the bows of the hopper. The helm of the hopper was at once put hard-a-port, and her engines were stopped and reversed full speed, but almost immediately the collision occurred, doing damage to the hopper, for which her owners counterclaimed.

Mr. Justice Gorell Barnes, in giving judgment, said that the real point in the case was whether the yacht suddenly put about when just ahead of the hopper in such a way that the hopper had no time to act for her, or whether she was when she put about at such a distance from the hopper that the latter could have avoided her by the exercise of reasonable care and skill. His Lordship then reviewed the facts, and stated that, having regard to the evidence, and particularly to the excellent photographs which had been taken by Kirk & Sons, of Cowes, and which had been put in, he had come to the conclusion that the yacht went about without any one on board of her taking the least trouble to see if the hopper or anything else happened to be close by, and that the hopper could not in the circumstances do more than she did do to avoid a collision. On the story told by the plaintiffs it was quite impossible for the collision to have occurred, and he could not believe that the hopper continued for some minutes to steer straight for the yacht, which must have been visible to all on board the hopper. The Lasca must be held alone to blame.—Yachting World.

Mr. William Vanderbilt's steam yacht Valiant sailed for the South on Jan. 26. Mr. Vanderbilt will board the yacht at Palm Beach, Fla. After that he intends to make a short cruise in West Indian waters, returning to New York early in February.

LASCA—Designed by A. Cary Smith. Photograph by Jackson, Marblehead.

25-FOOT SHOAL DRAFT SLOOP—SAIL PLAN.

25ft. Shoal Draft Sloop.

The shallow draft centerboard sloop, the plans of which appear in this number, was designed by Mr. Thomas Clapham, of Roslyn, L. I., and built for Mr. Warren Somers, of Atlantic City, N. J. After a season of almost constant use, the boat is in splendid condition. She is very fast and able, having far exceeded her owner's and designer's expectations regarding her speed and seaworthiness in all weathers. A good sized watertight cockpit, 7ft. 6in. long, makes her a comfortable boat for day sailing, and her large cabin gives ample accommodation for four people to cruise on her comfortably. The cabin house is 9ft. long and 15in. high; the top is slightly crowned, giving 4ft. 6in. headroom under beams. On each side of the cabin are long transoms, so that two persons can sleep without overlapping. The trim in the cabin and cockpit is of mahogany. The dimensions on the sail plan clearly show the size of the spars and sails, and nothing further need be said regarding them. On her keel there is 2,500lbs. of lead, which makes her practically non-capsizable. Her dimensions are as follows:

Length—		
Over all	40ft.	4in.
L.W.L.	25ft.	
Overhang—		
Forward	8ft.	5in.
Aft.	6ft.	11in.
Beam—		
Greatest	11ft.	8in.
L.W.L.	10ft.	10in.
Draft—		
Greatest	2ft.	
To rabbet	1ft.	3in.
Freeboard—		
Bow	3ft.	2in.
Taffrail	2ft.	6in.
Least	2ft.	
Displacement	10,560lbs.	

Her frames are of oak, steam bent, 1¾in. by 1⅞in. at heads, and 1¾in. by 2¼in. at heels. The planking is of cedar, ⅞in. thick. The deck beams are of oak, 2in. by 1¼in., and the deck planking is of pine, ¾in. thick. The deck and the top of the cabin house are covered with canvas.

Unlucky Ships.

"Unlucky ships" in our navy have a most unpleasant way of acting up to their reputations. Any bluejacket will tell you that the most unlucky ship in the navy is the Thunderer—he is firmly convinced that in the event of war she will come to grief. The origin of this ship's reputation is not exactly known, though a story exists to the effect that a workman was injured or killed during her construction, and his dependents scurvily treated by the Admiralty of the period. His wife, dying in childbirth shortly afterward, cursed the ship. So goes the legend; possibly enough, like many another legend, it was made later on to fit events. No doubt whatever attaches to the Thunderer's ill luck—a fearful boiler explosion and a terrible gun disaster marked her earlier years. Minor disasters have been many; most things that could go wrong with her did so, and, though it was recently stated that she had outlived her bad luck, almost immediately afterward all her guns went wrong—a matter of inquiry at the present moment. She is being put out of commission and replaced by the Hood, and it is extremely doubtful whether she will be employed again save as a harbor ship—men do not like her.

Another unlucky ship is the Howe. She went ashore and sank at Ferrol. Subsequently she was raised and refloated, but her "bad luck" clings to her; she is the worst ship of her batch to manage. By bluejacket superstition she is doomed to sink some consort or be sunk by her, one of these days.

Then there was the ill-fated Victoria. A horrible story (absolutely without foundation) about a man who was accidentally fastened down to die to her used to be related in the early nineties. She met with disasters, culminating in the terrible catastrophe that bears her name. The saddest of all incidents in connection with this catastrophe has never been made public. When the order was given for each man to jump, a batch of marines were not ordered to fall out. All, or nearly all, of those men were drowned standing at attention. However, this incident does not concern the luck of ships.

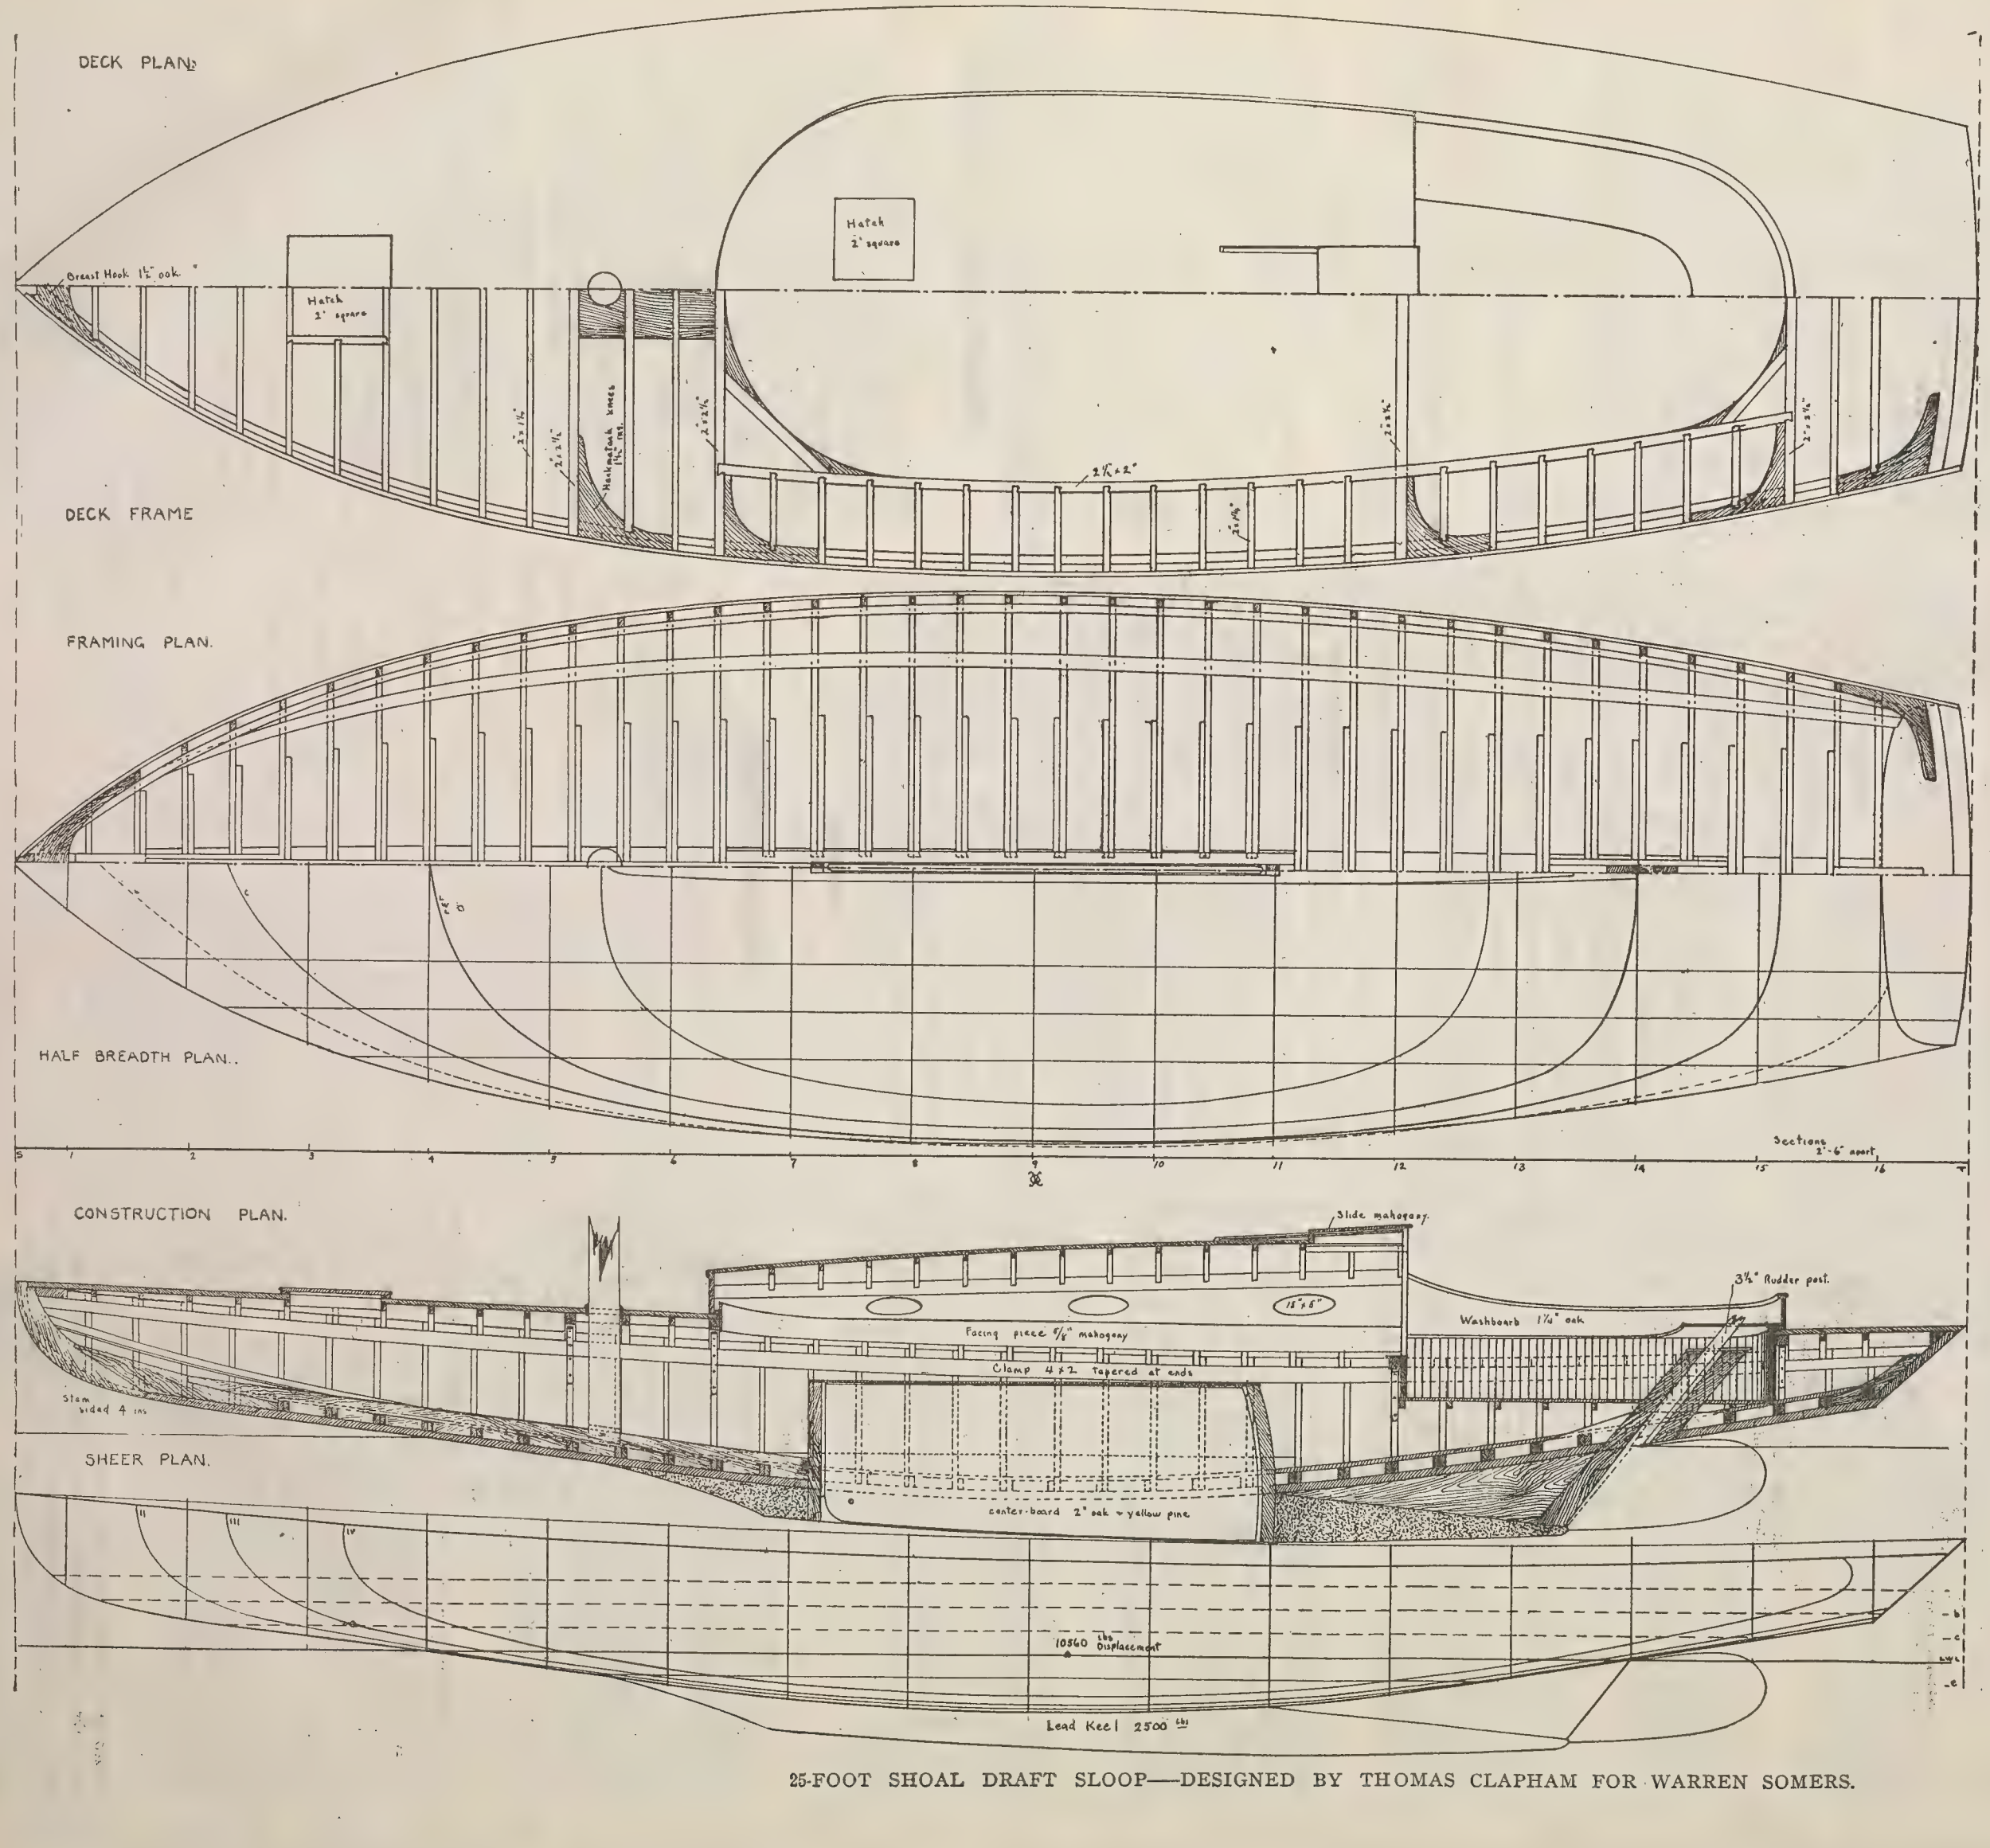
The list of unlucky ships could be extended considerably, but the above typical cases will suffice. In fact, of them it is absolutely useless to argue against nautical superstitions. The "bad luck," of course, varies; in the majority of cases it is confined to breakdowns and so forth, but whatever it be, once the "unlucky" reputation attaches to a ship it will last till she ends her career. And since the new royal yacht has thus got labeled, nothing that may be said or left unsaid will clear her. As she has cost over £500,000 something must be done with her. One speculation is that royalty will decline to use her, and that she will be handed over to the Lords of the Admiralty in place of the Enchantress, the anything but seaworthy craft that now carries them around.—London Chronicle.

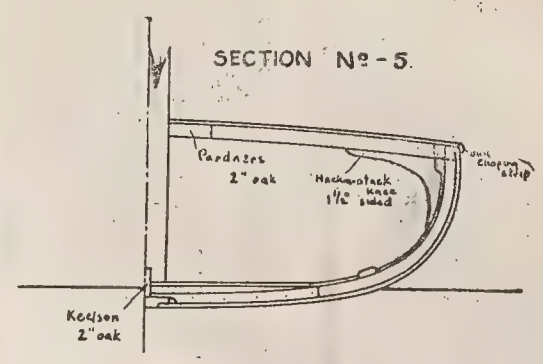
Yachtsmen's Club.

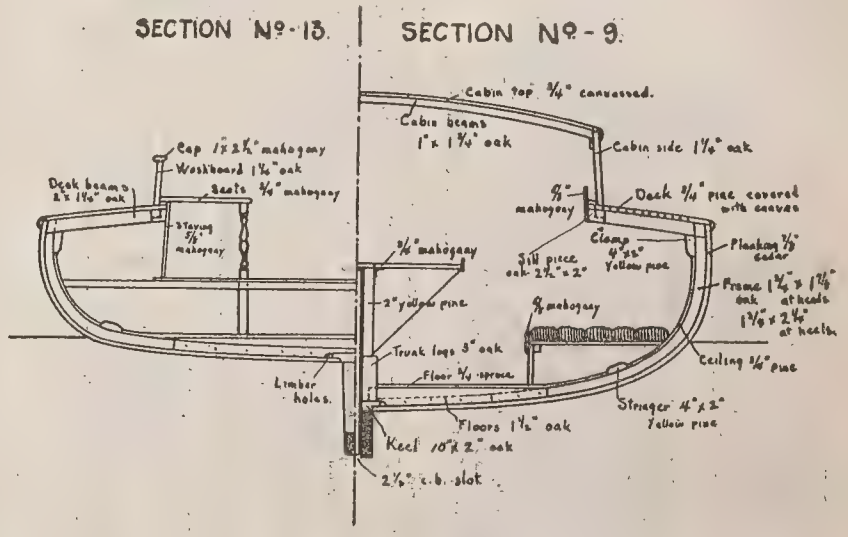
At the Yachtsmen's Club, 47 West Forty-third street, on Wednesday evening, Jan. 23, Mr. Clinton H. Crane, the well-known yacht designer, delivered a most interesting and instructive lecture on "Cruising Yachts: Their Design and Construction." The lecture was well attended, a larger number of members being present than on any of the previous Wednesday evenings, which shows the increasing interest as the series progress. Arrangements have already been made for the following subjects: Jan. 30, "Knots and Rigging," Herman White, Esq.; Feb. 6, "Steam Yachts: Their Design and Construction," Henry Gielow, Esq.; Feb. 13, "Knots and Rigging," Herman White, Esq.; Feb. 20, "Racing Yachts: Their Design and Construction," William Gardner, Esq.; Feb. 27, "Knots and Rigging," Herman White, Esq.

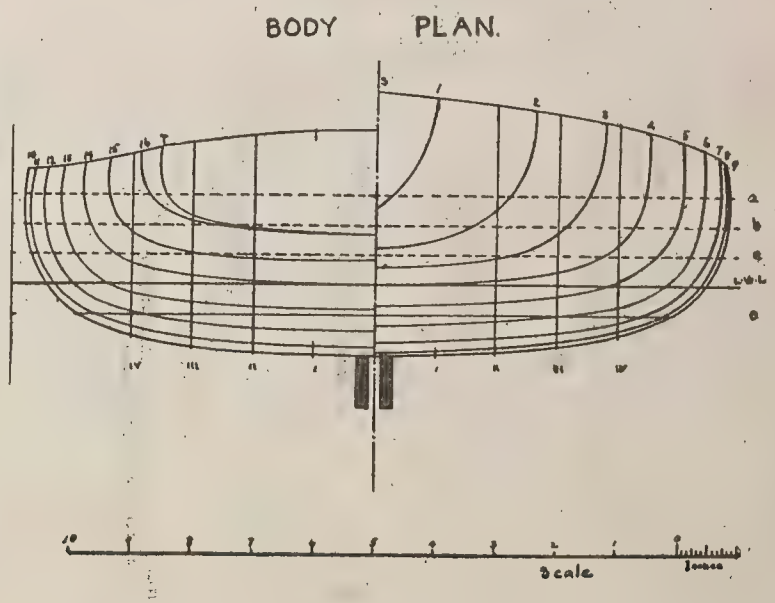
Designs Recently Published in Forest and Stream.

25-footer Flirt, Oct. 13-20.
21-footer Tattoo, Oct. 27.
Minnesota, Nov. 17.
19ft. sailboat, Nov. 24 and Dec. 1.
Cutter Isolde, Dec. 8.
Catboat Lazy Jack, Dec. 15-22.
Raceabout Jolly Roger, Dec. 29.
Bald Eagle II. and ice boat, Jan. 5
25-footer Brigand, Jan. 12.
Canadian ice boat and 14ft. cutter, Jan. 19.
38ft. cruising launch, Jan. 26.









25-FOOT SHOAL DRAFT SLOOP—DESIGNED BY THOMAS CLAPHAM FOR WARREN SOMERS.

Yacht Club Notes.

A meeting was held by the yachtsmen of Atlantic City last week to form a yacht club. The name of the Atlantic City Y. C. was decided upon and temporary officers elected. Its members include the most influential yachtsmen in the city, and a site has been selected for a clubhouse facing Gardner's Basin. A wharf will be built where visiting yachts can tie up without paying wharfage. This courtesy it is expected will prove acceptable to many yacht owners and induce cruising parties to include Atlantic City in their summer itineraries. The clubhouse will be provided with all accommodations, so that visiting yachtsmen can make it their headquarters. The temporary officers of the club are Louis Kuehnle, president, and Emery D. Irelan, secretary.

The Staten Island Y. C. of Richmond Borough held its tenth banquet at the Hotel St. George, New Brighton, on Jan. 19. Over 200 members and their guests were seated at the tables. Commodore C. F. Wiegand presided. The club has a comfortable home at Stapleton and another on the Shrewsbury River at Highlands, N. J. It has a membership of 150, and its fleet is composed of twenty-eight vessels.

At a meeting of the Yale Corinthian Y. C. held on Jan. 17 at New Haven the following officers were elected for the coming year: Commodore, Clarkson Potter, 1901, of St. Louis, Mo.; vice-commodore, O. T. McClung, 1902, of Chicago; rear commodore, E. I. Low, 1902, of Brooklyn; secretary, R. H. J. Giddard, Jr., 1902, of Providence, R. I.; treasurer, J. B. Thomas, Jr., 1903, of New York. The club received a letter from the Harvard Y. C. inviting Yale to participate in an intercollegiate race. It is proposed to limit the size of the boats to 20ft. waterline and to hold the race at some neutral point, such as Newport, at the time of the New York Y. C. cruise. The proposition is to open the race to all colleges. The letter says a number of men interested in yachting have offered to present a small sum toward a perpetual challenge trophy, with the understanding that the boats competing for it shall be **owned** and managed by college members.

YACHTING NEWS NOTES.

The record of the yacht Ailsa, recently purchased by Mr. H. S. Redmond, N. Y. Y. C., has been tabulated by the Yachtsman as follows:

	Starts.	First Prizes.	Other Prizes.	Value.
As a Cutter.				
1895	41	12	3	£2,362
1896	64	20	14	2,020
1897	18	8	1	1,080
As a Yawl.				
1898	34	14	4	970
Total	157	54	22	£6,432

The yacht Roamer, owned by Mr. H. C. Roome, N. Y. Y. C., arrived at Miami, Fla., on Jan. 26.

Mr. J. Campbell Smith, of Bayshore, L. I., has offered a $500 cup for a series of races by the sloops of the Penataquit Corinthian Y. C. The boats must be sailed by a member of the club and the winner of the series will be awarded the cup.

Mr. William Cagger, of Brooklyn, who died on Jan. 17, was the secretary of the Brooklyn Y. C. for nearly twenty years.

The Gas Engine and Power Co. and Seabury & Co., of Morris Heights, have contracted with a Boston yachtsman for the construction of a steam yacht from designs made by Mr. Arthur Binney. She will be 86ft. over all, 78ft. on the waterline and 12ft. beam. Her hull will be of wood and will be double planked. She will have a saloon forward; also one aft, and a stateroom for the owner. There will be a dining room in the deck house. The machinery will consist of a Seabury triple-expansion engine with cylinders 7in. 11½in. and 17½in. in diameter by 10in. stroke and a water-tube boiler. The speed of the yacht will be twelve knots an hour.

The steam yacht Atalanta, purchased from George J. Gould by Venezuela, and now being converted in the Erie Basin into a warship, has been rechristened Restaurador, which is Spanish for Restorer. This name was selected by President Castro of Venezuela. The followers of Gen. Castro in his revolution against President Andrade were known as the "army of restoration."

Rifle Range and Gallery.

Fixtures.

Feb. 3, 10, 12, 17 and 24.—New York.—Prize shoot, West Side Rifle Club range, 523 West Fifty-seventh street.
Feb. 11-12.—Jersey City, N. J.—Cottage Rifle Club's sixth annual prize and bullseye shoot, 517 Westside avenue.
Feb. 22.—Marion Place, Jersey City, N. J.—Hudson Rifle Club's annual team match; open to all rifle clubs.
July 14-23.—San Francisco, Cal.—National Schuetzenbund of North America's annual tournament in Shell Mound Park. Off-hand, 200yds.
Aug. 6-7.—Taftsville, Conn.—South New England Schuetzenbund's annual festival and prize shoot.

Cincinnati Rifle Association.

Cincinnati, O.—The following scores were made in regular competition by members of the Cincinnati Rifle Association, at Four-Mile House, Reading road, Jan. 20. Conditions: 200yds., off-hand, at the standard target. Strickmeier was declared champion for the day with a score of 88. A strong, gusty wind from 3 to 5 o'clock blew all day, making it difficult to roll up big scores:

Strickmeier	10	7	9	9	9	9	10	9	7	9—88
	10	8	7	8	8	10	9	8	7	7—82
	6	10	7	10	7	8	7	10	8	8—81

On Monday of next week the Metropolitan Shooting Club will meet in Conlin's gallery, 513 Sixth avenue, New York, for the purpose of electing officers.

Trapshooting.

Fixtures.

Jan. 31.—Danbury, Conn.—Tournament and team shoot of the Danbury Gun Club. W. G. Olmstead, Sec'y.
Jan. 31.—Walcott, N. Y.—Winter target tournament of the Catchpole Gun Club. E. A. Wadsworth, Sec'y.
Jan. 30-Feb. 1.—Dayton, O.—R. O. Heikes' target tournament; added money.
Feb. 6-7.—Cincinnati.—Cincinnati Gun Club's sparrow tournament. Chas. F. Dreihs, Sec'y.
Feb. 10.—New York.—All-day target shoot of the Richmond Gun Club at Silver Lake Park, Staten Island. A. A. Schoverling, Capt.
Feb. 13-15.—Indianapolis, Ind.—Grand Central Handicap tournament of the Limited Gun Club. Bert. B. Adams, Sec'y.
Feb. 15-16.—New Orleans, La.—First annual Mardi Gras tournament of the City Park Gun Club, under the auspices of the Peters Cartridge Co. Percy S. Benedict, Sec'y, Denegree Building.
Feb. 18-23.—Hot Springs, Ark.—Tournament of the Hot Springs Gun Club; four days targets, two days live pigeons; $1,000 added. C. E. De Long, Sec'y.
Feb. 22.—Harrisburg, Pa.—Washington's Birthday live bird and target shoot of the Harrisburg Shooting Association.
Feb. 22.—Albany, N. Y.—Annual midwinter target tournament the Forester Gun Club. H. H. Valentine, Mgr.
Feb. 22-23.—Colorado Springs, Colo.—Colorado State Fish and Game Protective Association's thirteenth tournament, under the auspices of the Colorado Springs Gun Club.
Feb. 22-23.—Altoona, Pa.—Altoona Rod and Gun Club's target tournament. G. G. Zeth, Sec'y.
March 2.—New York.—Two-week Roof Garden tournament of the National Sportsmen's Association. Capt. J. A. H. Dressel, Sec'y.
March 18-19.—Ashville, N. C.—The Peters Cartridge Company's two days' target tournament.
March 21.—Newell, Ia.—Newell Gun Club's target and live-bird shoot. Henry G. Hall, Sec'y.
April 9-12.—Baltimore, Md.—Eighth annual spring tournament of the Baltimore Shooting Association; two days targets, $100 per day added; two days live birds, $500 guaranteed. H. P. Collins, Sec'y.
April 16-18.—Leavenworth, Kan.—Annual tournament of the Kansas State Sportsmen's Association.
April 18.—Newell, Ia.—Newell Gun Club's target shoot. Henry G. Hall, Sec'y.
May 7-10.—Tournament of the New Jersey State Sportsmen's Association. C. W. Feigenspan, Sec'y.
May 7-10.—Lincoln, Neb.—Twenty-fifth annual tournament of the Nebraska State Sportsmen's Association, under the auspices of the Lincoln Gun Club. W. D. Bain, Sec'y.
May 14-17.—Allentown, Pa.—State shoot of Pennsylvania State Sportsmen's Association. C. F. Kamlich, Cor. Sec'y.
May 15-17.—Newell, Ia.—Newell Gun Club's annual tournament; targets and live birds. Henry G. Hall, Sec'y.
May 21-25.—Springfield, Ill.—Twenty-seventh annual tournament and convention of the Illinois State Sportsmen's Association. Chas. T. Stickle, Sec'y.
May 30.—Auburn, Me.—Annual shoot of the Auburn Gun Club.
June 5-7.—Circleville, O.—Under auspices of the Pickaway Rod and Gun Club, annual tournament of the Ohio Trapshooters' League. G. R. Haswell, Sec'y.
June 11-13.—Sioux City, Ia.—Seventh annual amateur tournament of the Soo Gun Club. W. F. Duncan, Sec'y.
June 17-20.—Warm Springs, Ga.—Southern Interstate tournament; two days targets, two days live birds. Chas. L. Davis.
June —.—Columbus, Wis.—Tournament of the Trapshooters' League of Wisconsin. First week in June.
July 23.—Dexter Park, Brooklyn, L. I.—Annual clambake and handicap merchandise shoot at targets. Eugene Doenick, Sec'y.
Newark, N. J.—South Side Gun Club target shoot every Saturday afternoon.
Chicago, Ill.—Garfield Gun Club's live-bird trophy shoots, first and third Saturdays of each month. Grounds, West Monroe street and Fifty-second avenue.

CONTESTS AT INTERSTATE PARK.

Interstate Park, Queens, L. I.—Two miles beyond Jamaica, on L. I. R. R. Trains direct to grounds. Completely appointed shooting grounds always ready for matches, club shoots or private practice. Café and hotel accommodations.
Feb. 12.—Interstate Park.—John Wright's prize (Francotte gun) shoot; 15 live birds, $12.50 entrance, birds included; handicaps 25 to 33yds.
April 1-5.—Interstate Park, Queens, L. I.—The Interstate Association's ninth annual Grand American Handicap Tournament at Live Birds.
June —.—Interstate Park, Queens, L. I.—Forty-third annual tournament of the New York State Association for the Protection of Fish and Game.
Monthly contest for the Dewar trophy till June, 1902; handicap; 25 live birds; $5 entrance. First contest took place June 20, 1900.
Interstate Park, Queens, L. I.—Weekly shoot of the New Utrecht Gun Club—Saturdays.

INTERSTATE ASSOCIATION CONTESTS.

Elmer E. Shaner, Manager.

April 1-5.—Interstate Park, Queens, L. I.—The Interstate Association's ninth annual Grand American Handicap tournament at live birds. Edward Banks, Sec'y-Treas., 318 Broadway, New York.
May 8-10.—Memphis, Tenn.—The Interstate Association's tournament, under the auspices of the Memphis Gun Club.
June 19-21.—Cleveland, O.—The Interstate Association's tournament under the auspices of the Cleveland Gun Club.
July 1-2.—Sherbrooke, P. Q., Can.—The Interstate Association's tournament under the auspices of the Sherbrooke Gun Club. C. H. Foss, Sec'y.
July 23-26.—Interstate Park, Queens, L. I.—The Interstate Association's second Grand American Handicap target tournament; $1,000 added money. Edward Banks, Sec'y-Treas., 318 Broadway, New York.
Aug. 7-9.—Providence, R. I.—The Interstate Association's tournament under the auspices of the Providence Gun Club. R. C. Root, Sec'y.

DRIVERS AND TWISTERS.

Club secretaries are invited to send their scores for publication in these columns, also any news notes they may care to have printed. Ties on all events are considered as divided unless otherwise reported. Mail all such matter to Forest and Stream Publishing Company, 346 Broadway, New York.

The new ruling passed by the board of governors of the Carteret Gun Club is as follows: "Professional pigeon shooters are ineligible to membership in the Carteret Gun Club. Any member of the club who enters a pigeon shooting match for money or prizes in competition with professional shooters shall be requested to resign from the club, the request to be signed by six governors after proof to their satisfaction has been furnished to them that the member has rendered himself liable to such request." The definition of a professional as promulgated by the board is as follows: "A professional shooter is one who as employee or principal shoots in the interest of any dealer in guns, ammunition or sportsman's supplies of any kind, or who shoots for the purpose of advertising such wares, or who makes a business or practice of shooting public matches for money or prizes, or for any purpose whatsoever." While the ruling would seem to be far-reaching in scope and action, it will be noted that there is quite a liberal saving clause to it, namely, "after proof to their satisfaction has been furnished to them," etc.

The following clipping concerns the progress of the Keystone Shooting League, of Philadelphia: "The Keystone Shooting League did themselves proud Saturday afternoon, Jan. 26, the occasion being the opening of their new grounds. These grounds are directly back of their present beautiful grounds at Holmesburg Junction. It was less than a week ago when work was first commenced to put this addition in shape, but despite this fact the grounds were in readiness for the shooters yesterday. All that remains to do yet is to put in the new traps, erect a small shelter for the men, and the new grounds will be a worthy rival to the old ones. Yesterday was an exceedingly hard day to make a just comparison, but at that there was no dissatisfaction expressed by the shooters, and all declared there is a great improvement. The shooters now face the east, shooting toward the river. This gives the birds a free flight, and does not handicap the men. The new grounds are connected with the club house by a long board walk, which leads to the score."

From an exchange we take the following excerpt, which refers to one of Philadelphia's greatest trapshooters: "Mr. Leonard Finletter, who is well known to sportsmen everywhere as a member of the Riverton Gun Club, the Philadelphia Gun Club, and the Keystone Shooting League, and who is conceded to be one of the best field and trap shots in Pennsylvania, has been having a royal time at the shooting preserves of the Bolsa Chico Gun Club, Pasadena, Cal. Mr. Finletter was invited to visit the Bolsa Chico Gun Club preserves shortly after his arrival in Pasadena, by Count Von Schmidt. This is an honor only accorded to sportsmen of established reputation, and Mr. Finletter proved his ability by bagging forty-five ducks. His splendid marksmanship in knocking down left or right-quarterers, and low drivers, aroused the liveliest kind of enthusiastic praise."

The complete list of the Interstate Association's trapshooting tournaments to date is as follows: The ninth annual Grand American Handicap tournament at live birds and the second Grand American Handicap tournament at targets, April 1 and June 23, respectively, at Interstate Park, Queens, L. I.; June 19-21, target tournament at Cleveland, O., under the auspices of the Cleveland Gun Club; May 8-10, target tournament at Memphis, Tenn., under the auspices of the Memphis Gun Club; July 1-2, target tournament at Sherbrooke, P. Q., Can., under the auspices of the Sherbrooke Gun Club; target tournament at Providence, R. I., under the auspices of the Providence Gun Club. Mr. Elmer E. Shaner, the manager of the Association, will manage all these tournaments.

The Tunkhannock, Pa., Rod and Gun Club announces a club shoot to be held on Feb. 14 at Triton Park, the programme containing five events at live birds and five at targets. The live-bird and target events alternate. The latter are: One at 15, one at 10 pairs, one at 10 (walking), one at 10 pairs (walking), each $1 entrance, and one at 25 targets, $2. The live-bird events are: Two at 7 birds, each $3 entrance; two at 5 birds, each $2 entrance; one at 10 birds, $5. The shoot will commence at 12:30. All events are sweepstakes. The targets will be thrown from a magautrap. Purses divided 50, 30 and 20, after the price of birds and targets is deducted. For further particulars address Chas. Graham, Frank Cleveland or Spencer D. Reed, Tunkhannock, Pa.

The programme of the Pahquioque Rod and Gun Club, Danbury, Conn., to be held on Jan. 31, commencing at 10 o'clock, has ten events, of which five are at 10 targets, 50 cents entrance; four at 15 targets, 75 cents and $1 entrance, and one at 20 targets, $1 entrance, $5 added. The programme will be repeated if time permits. After the fifth event there will be a match shoot between teams of New Haven and Danbury, 250 targets each, $25 a side. Magautrap. All events at unknown angles. Any one may shoot for targets only. Targets 2 cents.

Mr. John S. Wright, manager of the Brooklyn Gun Club, announces that he has arranged a live-bird shoot of special interest to the knights of the shotgun. It is an event at 15 live birds, $12.50 entrance, birds included, handicaps 25 to 33yds., at Interstate Park, Queens, L. I., Feb. 12, for a beautiful Francotte gun, with English trunk case and equipments complete, donated by Mr. George A. Barker, of Baldwins, L. I. The gun can be seen in the store of Messrs. Von Lengerke & Detmold, 318 Broadway, New York.

The Pennsylvania State Sportsmen's Association has issued a circular, as follows: "The shoot of the twentieth century—Pennsylvania State Sportsmen's Association, at Allentown, Pa., May 14, 15, 16 and 17. An attractive programme. State and open events. There will be more added moneys at this shoot than at any shoot in the history of the Pennsylvania State Sportsmen's Association. Come! We will take care of you! For further information address C. F. Kramlich, Secrtary, Allentown, Pa."

Mr. W. G. Olmstead, secretary of the Danbury Gun Club, of Danbury, Conn., writes us as follows: "Our first shoot will take place Thursday, Jan. 31. We will have a match shoot, $25 per side, between Danbury and New Haven, 500 clay birds. The programme for the day will be ten events, with a total of 130 targets, with a total entrance fee of $6.75. One event, the eighth, will be 20 targets, $1 entrance, and $5 added money. Our club is new, but satrts off with over fifty members."

The two matches shot by Mr. Chas. Steffens at Dexter Park Friday of last week resulted in a win and a tie. One was with "Job Lott," 100 live birds each, 30yds. rise, which Mr. Steffens won by a score of 91 to 88. The other was with Mr. G. E. Loeble, who stood at 28yds., Mr. Steffens at 30. Each shot at 50 birds, and tied on 41.

Mr. C. W. Billings, president of the Emerald Gun Club, left for Florida last week, taking his family with him. He will reside there during the spring, fall and winter months each year hereafter, and in the North during the summer time. He will be much missed by his many friends in the North during his long absence.

Mr. Harvey McMurchy, debonair and wholesome as usual, was a visitor in the gun colony last week—Thursday. He tarried but a short time in New York, being pressed with many business cares. He hopes, however, to so arrange matters that he will be able to participate in the Grand American Handicap next April.

Mr. J. A. R. Elliott is still suffering from a badly sprained thumb, the result of an attempt to fend off an individual on Broadway who seemed to think he was a horse responding to a fire alarm and therefore had the right of way over all traffic. Up to date there has been no public manifestation on the part of Mr. Brewer to accept Mr. Elliott's shooting propositions. A bluff is all right up to the time it is called.

The Herron Hill Gun Club, of Pittsburg, Pa., has arranged three 25-bird shoots, to take place respectively on Feb. 2 and 16 and March 16. On each intervening Saturday there will be a shoot at 15 live birds. At a recent shoot at 25 live birds this club arranged its handicaps as follows: Twenty-five-yard men shot at 29 birds; 26 and 27yd. men shot at 28 birds; 28yd. men shot at 27 birds; 30yd. men shot at 25 birds.

Mr. G. G. Zeth writes us as follows: "At a meeting of the Altoona, Pa., Rod and Gun Club held Jan. 21 the following officers were elected for the ensuing year: President, R. A. McNaught; Vice-President, G. T. Bell; Secretary, George G. Zeth; Treasurer, R. H. Fay; Captain, John F. Killitts; Members of Executive Board, W. W. Wilson and William E. Bell."

The B. T. Lyons Gun Club, of Gloucester City, Pa., held its annual meeting Jan. 26 and elected officers for the ensuing year as follows: President, Benjamin Storms; Vice-President, Thomas Goan; Secretary, George Van Fossen; Treasurer, Samuel Burns; Trustees, B. T. Lyons, Winfield Yates, Charles Peterson; Sergeant-at-Arms, John Firlein.

Paste it in your hat that the programmes of the great shooting event, the Grand American Handicap, will be ready for distribution on Feb. 20. Send in your entry, or your application for a programme, to Mr. Edward Banks, secretary-treasurer Interstate Association, 318 Broadway, New York.

Mr. Henry G. Hall, secretary of the Newell Gun Club, Newell, Ia., announces that his club has claimed dates for three shoots, namely, March 21, at targets and live birds; April 18, at targets; May 15-17, inclusive, the club's annual tournament at targets and live birds.

On Thursday of last week the Governing Shooting Committee held a meeting and adopted a constitution and by-laws. It was carried that hereafter the regular meetings will be held on the first Thursday of each month, at 320 Broadway.

The Richmond Gun Club, whose grounds are at Silver Lake Park, Staten Island, announces an all-day shoot at targets Feb. 12, commencing at 10 o'clock. All are welcome. A. A. Schoverling, Captain, P. O. Box 475, New York.

Mr. W. P. Markle, of the Markle Shot & Lead Works, St. Loius, Mo., was a visitor in New York last week. He made a visit to Interstate Park, and expressed praise for the complete equipment of the grounds.

The Altoona Rod and Gun Club, of Altoona, Pa., has fixed upon Feb. 22-23 for its target tournament. The secretary is Mr. G. G. Zeth, Altoona, Pa. The programme will be announced in the near future.

Mr. Bert B. Adams, secretary of the Limited Gun Club, Indianapolis, Ind., informs us that his club will hold its Grand Central handicap tournament on Feb. 13 to 15.

At Richmond, Va., on Monday of last week, Capt. A. W. du Bray and Mr. Franklin Stearns, Jr., shot a match at 50 pigeons, 30yds. rise, and 50yds. boundary, which resulted in a tie on 45.

Mr. E. A. Wadsworth, secretary of the Catchpole Gun Club, Walcott, N. Y., announces a target tournament for his club on Thursday, Jan. 31.

Trap at Hot Springs.

HOT SPRINGS, Ark., Jan. 20.—*Editor Forest and Stream:* Bob Price, the undenied, undisputed champion squad hustler of the United States and Porto Rico, is going to give a shoot at Hot Springs on Feb. 18, to run a week.

I blew into the Springs last night from Texas to take a bath, and the first man I met was Bob, and this is what he said: "Say, tell all them shooters to come down here next month. They need boiling out, anyhow. See what it does to Capt. Elliott. He trains here every winter, and then goes up and takes their coin away from them, just like they were children. If Charlie Budd and Tom Marshall and Fred Gilbert would stay down here for six months and bring E. S. Rice with them, they might be able to beat him, but that ain't what I was getting at. We—that's me, see? nobody else—are going to give a $1,000 added money, run four days, targets, ten events a day—three 20-bird and seven 5-bird events; Rose system, four moneys, and $25 added to each event. Ain't that all right? Will we have a crowd? Well, I guess we will. The amateur will get 25 cents each time he shoots of the 90 per cent. man's money, and $50 added besides.

"Then we—that's me again—will have the Hot Springs Handicap, 25 birds, $15, birds extra, high guns, one money for every two guns—ain't that right?—and lots of other events.

"There will be a couple of good boxing matches that week, and a ball at the Arlington on Tuesday evening and one at the Eastman on Saturday. Charley Budd has promised to come and bring his dress suit case.

"The boys from Texas and Tennessee will be here to learn how to shoot. Bill Norman, of Greenville, learned well enough in one day to win the Hot Springs handicap two years ago, and, by the way, this shoot is a permanent thing. The Whittington Park management is back of the tournament, and will give a big shoot every year. It is calculated to draw shooters from the North just about the right time, and no more delightful trip could be undertaken than this one to Hot Springs."

That's what Bob Price said to me before I could get a word in edgeways, and he means every word of it.

Programmes out next week. Write to him for one.

HERBERT TAYLOR.

ON LONG ISLAND.

Carteret Gun Club.

The conditions governing the Carteret Gun Club's amateur championship of 1901 are as follows:

One hundred birds, entrance $100; money to be divided, 40, 25, 15, 10, and 10 per cent. to the club. All shooters to stand at 30yds. On each day each contestant will be allowed one bye bird. In case there be twelve or more entries the following rules shall apply:

1. The shooter who misses 10 birds by the time the 50th round is finished, and thereby becomes tenth in place or lower, shall drop out without privilege of re-entry.
2. The shooter who misses 16 birds by the time the 75th round is finished, and thereby becomes eighth in place or lower, shall drop out without privilege of re-entry.
3. From the 75th round up to the finish the referee shall retire (with privilege) those shooters who, in his opinion, have no chance of sharing in the moneys.

Entries will be received up to the first round on the day of the shoot.

The referee shall continue the first day's shooting as long as, in his estimation, the light holds good or as may be desirable to facilitate completing the event.

The executive committee of the club reserves to itself the right of refusing entries.

The William Payne Thompson cup, value $400, will be presented by the club to the winner of the championship.

Shooting will begin at 9:30 A. M. Take train leaving foot East Thirty-fourth street at 8:30 A. M. for Mineola, where vehicles will be in waiting to convey you to the club grounds.

Welch Defeats Money.

Jan. 22.—In the second contest between Mr. R. A. Welch and Harold Money, on the grounds of the Carteret Gun Club to-day, the former won, with quite a margin to spare. The conditions were such as to make a most trying test of skill. A high 7 o'clock wind, which would be in a direction from the shooter to about No. 4 or 5 trap, made very swift drivers, and the narrow 30yd. boundary made very quick shooting essential if good results were to be obtained. Each contestant stood at 30yds. The match was for $500 a side. Mr. Walker Breese Smith was referee.

In the former contest, under the same conditions, they tied on 89.

The birds were an exceptionally good lot. Under the exceptional conditions, 88 was a high score.

R A Welch	22*22122*2112020120222122—20

Medicus Gun Club.

Interstate Park, L. I., Jan. 22.—The anniversary shoot of the Medicus Gun Club, held at Interstate Park to-day, was well attended. The weather conditions were fairly favorable, though there was a good stiff wind blowing.

The main event was the 15-live-bird match, the Medicus Handicap, $10 entrance, birds extra. Dr. John P. Kay and Dr. McManus divided first, the former losing his first bird dead out, the latter losing his last, yet their scores being high at that. Koegel shot out Packard in the tie for second, while Van Allen did the like for Thompson in the tie for third. The scores:

Dr McManus, 27	112112221222110—14
J P Kay, 29	*112222222122222—14
H C Koegel, 30	222222222002122—13
R L Packard, 28	1201220221222222—13
S M Van Allen, 30	222222022202211*—12

	000*200222020200	— 6—18

New Utrecht Gun Club.

Interstate Park, Queens, L. I., Jan. 26.—The weather was cold and windy. The scores:

No. 1, 7 birds, club prize. No. 2, same as No. 1:

W F Sykes, 28	2**1*1*—3	1220w
T W Morfey, 30	02*2**2—3	222*222—6
Dr Wynn, 29	2022110—5	02121*2—5
J A Bennett, 28	2220222—6	2122110—6
Jack, 28	2222212—7	211212*—6
R R Street, 28	1001220—4	2121120—6
T M Chapman, 28	.....	2121021—6
Ramapo, 28	.....	2112012—6
Van Allen, 30	.....	0*1*10*—2

Chapman won the shoot-off:

Shoot-off for January cup:

T Chapman, 28	1222222222—10	A Hegeman, 29	1211222101— 9
J Bennett, 28	2220*12021— 7	Ex Ray, 28	2221121012— 9
Jack, 28	2222222221—10	J Gaughen, 29	2222222222—10

Miss-and-out for cup: Chapman and Jack lost their first birds dead out, while Gaughen killed and won.

Twenty-eight-yard men, two misses; 29yd. men, one.

Dupont Park Medal Shoot.

ST. LOUIS, Mo., Jan. 27.—There were thirty-six entries in the open handicap shoot for the Dupont Park medal here to-day, and a more enthusiastic crowd and a more pleasant day at the traps could not be wished for.

The weather was rather cold, but clear, and the birds were unusually good. The winner turned up in Mr. Fred Fink, of St. Louis, who grassed 15 straight to land the prize. The full scores follow:

J Bowman, 28	2222022222— 9	Selzer, 29	*212112**2— 7
F Arvis, 28	2112112*12— 9	C Cummings, 28	2222121202— 9

Sandberg, 28	1212020222— 8	Payeur, 28	1222112121—10

In the shoot-off Fred Fink won, killing 5 more straight.

Following this event was a race at 25 birds between Ed Prendergast, holder, and Dute "Cabanne," challenger, for the Alex Mermod medal, which represents the local championship at pigeon shooting. The birds in this race were fair, with many first-class, and both men made some brilliant kills. The race was a tie up to the 21st round, each having missed 2, when Prendergast shot a bird on the ground and had to shoot another. This may have disconcerted him, for he missed the substitute bird, which was not a particularly difficult one. Then he also missed his 23d, while Cabanne killed out without further mishap. Both stood at 31yds. The scores follow:

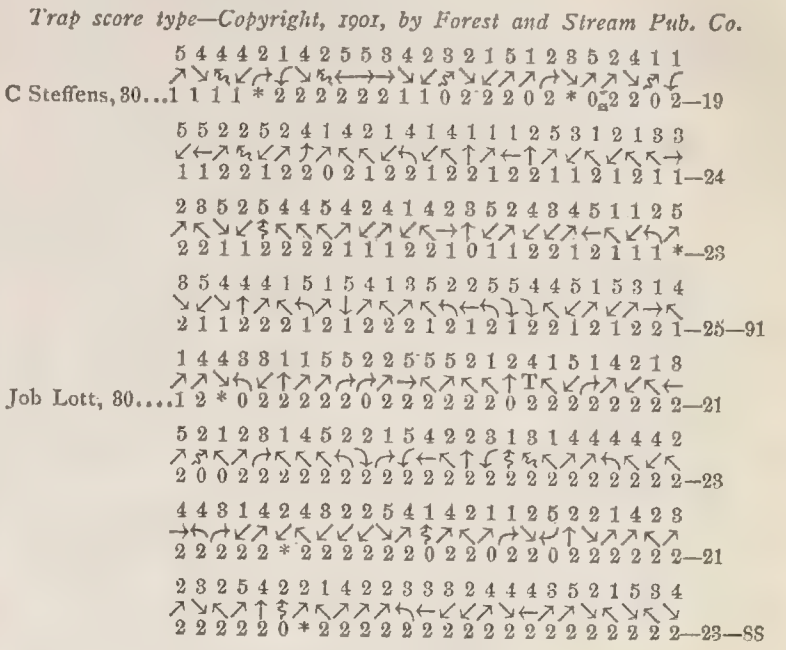
Cabanne	22210122211202122222222—23
Prendergast	02202222222222222222202022—21

At Dexter Park.

Steffens vs. Lott.

Jan. 25.—At Dexter Park, Jan. 25, the 10-bird match between Job Lott and C. Steffens resulted in a victory for the latter by a score of 91 to 88. Mr. T. W. Morfey refereed, and Mr. Johnnie Jones scored. The match began at 12:40 and ended at 2:55. The scores follow:

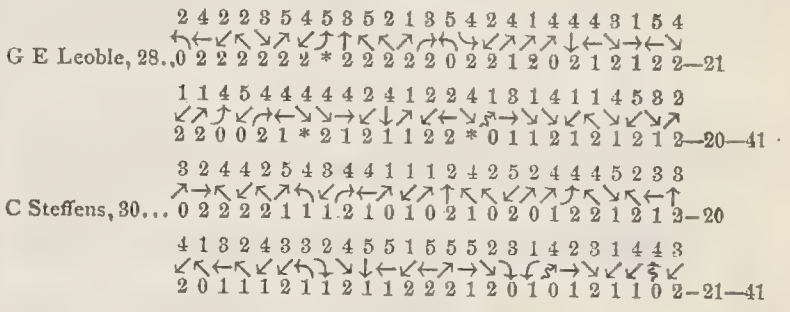
Trap score type—Copyright, 1901, by Forest and Stream Pub. Co.



Leoble and Steffens.

Jan. 25.—The match at 50 live birds between Messrs. Geo. E. Loeble and C. Steffens, the former at 28yds., the latter at 30yds., resulted in a tie on 41. Mr. J. Wellbrock acted as referee, Mr. Johnnie Jones as scorer.

Trap score type—Copyright, 1901, by Forest and Stream Pub. Co.



Florist Gun Club.

PHILADELPHIA, Pa., Jan. 22.—The weather was warm and calm, favoring good scores, at the shoot of the Florist Gun Club to-day. The Eisenlohr prizes are valuable, and are zealously competed for. There was a large attendance. The grounds at Wissinoming had one of the largest crowds ever present.

The conditions are such that the shooting is made as hard and difficult as possible. Each man shoots at 20 singles, expert rule, one man up; 20 singles, unknown angles, and 5 pairs of doubles. The unknown angles and doubles are shot over the magautrap, rapid-firing system. At expert rules S. C. Parsons was the high man, breaking 18. John Burton, who scored 16, made the best run, 10 straight, Parsons making runs of 7 and 9. At unknown angles Mrs. Park and Louis H. Eisenlohr were the high guns, scoring 19, Mrs. Park making a clean run of 15 and Eisenlohr 18. Anderson was the high man at doubles, scoring 9 and missing his last target. With the handicap added to the scores Parsons, Burton, Dr. Smith and Reed tied for first place, each having a total of 50 or over.

The feature of the tourney was the remarkably fine work by Mrs. W. K. Park, who scored 38 out of 50, making a run of 15 straight at unknown angles, and dusting her 16th bird. In expert rule she broke 13, and scored 6 out of 10 at doubles. The scores follow:

	Expert Rule.	Magau-trap.	Pairs.	Broke.	Handi-cap.	Grand Total.
*Umholtz	8	11	4	23	..	23

C. G. B., Capt. O. G. Club.

Hoffmansville Gun Club.

HOFFMANSVILLE, Pa., Jan. 22.—The live-bird shoot to-day here resulted as follows:

J Weiler	11210111211010111—14	Straub	12210110212201121—14
L Schmoyer	01112011101221011—13	Sommers	12210110212122201—14
M Brey	11112201101112121—15	C Kramlich	21221111202122111—16
Schlicher	01101011110122212—13		

L. SCHMOYER.

WESTERN TRAPS.

The Memphis Gun Club, of Memphis, Tenn., is out of house and home. A Northern manufacturing firm has bought its club grounds, and now the club is casting about for new quarters.

E. Hough.

Hartford Building, Chicago, Ill.

Trap at Watson's Park.

Watson's Park, Jan. 22.—The following matches were shot here to-day:

Clark and Haskell vs. Wells and Dennis, 25 birds per man, for birds:

Clark	2200022102120021212221101—18
Wells	1010111212*2221 —12
Dennis	1120120112222221122221112—23
Haskell	002021000101100 — 6

J. M. Healey vs. J. H. Amberg, 50 birds per man, for birds and corn beef and cabbage dinner. The birds were especially selected and most of them the fastest of the fast:

Amberg	22202202102212212*221*022—19
	221*2220122211020*222021*—18—37
Healey	222220222*22*022*22020200—16
	2102220*21121220120*20202—17—33

Same day two sweeps were shot; first at 10 birds, entrance $5; second, 5 birds, entrance $3:

	No. 1.	No. 2.
Barto	1201211221— 9	12222—5
Odell	2112011212— 9	21112—5
A S Kleinman	1111211221—10	22120—4
Steck	2212222221—10	12122—5
Foss	00*02*0110— 3	.....
Healey	22202222*2— 8	20202—3
Amberg	1**2010222— 6	21222—5

Jan. 24.—Three-cornered match, 25 birds each. A strong wind blew across the traps, making the birds nearly all strong left-quarterers. The work of Odell was especially good, he killing 31 out of the last 32 shot at:

M E White	1221222012220021120121*12—20
H Odell	2211102111121211*2220112*—21
A C Paterson	211211*12112*221102200221—20

Ten-bird match:

White	212222120*— 8	Odell	1122211211—10
Paterson	2**2120122— 7		

Miss-and-outs:

White	12*	222112222120
Odell	212	2221112221212111210

Jan. 26.—Five birds, $3, three moneys:

Roll	12222—5	Hunter	01121—4
Martin	22212—5	Nusley	01111—4
Comley	11112—5	Levi	12022—4

National Gun Club.

Milwaukee, Jan. 24.—The National Gun Club, of Milwaukee, has closed its last year's monthly live-bird shoot in a very satisfactory manner to all. You were informed at the beginning of the year as to the conditions under which the shoot would be conducted, and those conditions have been strictly carried out. It was, to my mind, one of the most enjoyable events in live-bird shooting in my experience—not one word to mar the harmony that existed during the entire year.

Twelve shoots took place—one each month—and a member, in order to qualify for a prize, was compelled to shoot in at least eight events. Thirteen members qualified, only one shooting in all of the events of the year, and that one was E. E. Rogers, the president of the club.

There were ten equal prizes given, and were won by the following named members:

	Shot at.	Killed.	Handicap.	Per Cent.
L Collins	100	99	9	99
P Bogart	100	78	20	98
E E Rogers	120	105	7	94 1-2
Dr J L Williamson	90	85	0	94 1-8
A Klapinski	90	77	8	93 5-9
T A Thomas	90	78	6	92 2-3
J P Sherer	110	81	18	91 7-11
G L Deiter	80	71	3	91 3-4
H S Blake	110	90	9	90 9-11
E Gumz	90	62	20	88 8-9

During the year forty-one persons took part in the contest. At the close of the season, after paying all expenses, there was $211 to be divided.

Owing to the interest created by the above shoot, the club saw fit at its annual meeting, held on Jan. 7, to appoint a committee with full power to arrange and conduct during the year another live-bird shoot similar to the one held in 1900. The committee consists of J. Muehl, captain of the club; H. Reed, F. Stuth, A. Klapinski and L. Collins, and the committee has met, handicapped the members and drafted the rules to govern the shoot, a copy of which is subjoined.

Owing to the serious illness of Col. F. C. G. Brandt, lessee of National Park, the first monthly shoot will take place on the 25th inst., on the grounds of the South Side Gun Club, the following shoots to take place on the grounds of the National Gun Club.

At the annual meeting above referred to the following named members were elected as officers of the club for the ensuing year: Ed Silverman, President; J. P. Sherer, Vice-President; L. Collins, Corresponding Secretary; F. Stuth, Financial Secretary; E. Gumz, Treasurer; J. Muehl, Captain; H. Reed, Theo. Thomas, E. E. Rogers, Board of Directors.

Lindley Collins, Sec'y.

Milwaukee, Jan. 15.

At the annual meeting of the National Gun Club, held at National Park on the 7th inst., a resolution was passed authorizing the president to appoint a committee of five for the purpose of arranging a monthly live-bird contest and to fix necessary rules and handicaps to govern same. The committee so appointed have devised and arranged as follows: 1. The contests shall be known as the National Gun Club's Prize Shoots. 2. These prize shoots to be held on the fourth Friday in each month during the year 1901. 3. The score to be 10 live birds in the form of a sweepstake open to all. 4. Entrance fee $2.50. 5. Entrance without interest in sweepstake fee $1.50. 6. Birds deducted at 15 cents each. 7. Sweepstake money divided 40, 30, 20 and 10 per cent. (class shooting). 8. Shooting to commence at 1:30 o'clock P. M. Entries to close at 3 P. M. 9. Sweeps or practice shoots before or after prize shoot may be arranged at pleasure of shooters present. The net profits derived from the sale of birds on the above days will be paid into a club prize fund, to be divided as follows: 5 per cent. of entire amount shall be divided into three equal prizes, to be given for best attendance during the year. (Awarded on high gun system.) The balance shall be divided into ten equal prizes for club members only, which prizes will be awarded at the next annual meeting under the following conditions. (Note.—It is estimated this fund will reach $250.) 10. The distribution of moneys of the prize shoot shall be governed by the high gun system. 11. At the end of the year the standing of each member will be arrived at by taking the percentage of his eight best scores and adding thereto his handicap. 12. To be eligible to prize shoot money a member must participate in at least eight of the twelve shoots. 13. Only one prize shoot score will be allowed any member in any one month, and that on the day and at the time hereinbefore stated. 14. No weight limit is placed on guns. 15. American Association rules for 1899 to govern where they do not conflict with the foregoing. All members have been handicapped to the best of the committee's ability. Copy of handicap will be posted in the club house. These handicaps will not apply on sweepstake moneys.

The Committee.

Boston Gun Club.

Wellington, Jan. 23.—Just twenty-one shooters had enthusiasm enough to participate in the second serial prize shoot of the Boston Gun Club, on their grounds, at Wellington, this afternoon. A notable attendant, and one whose presence we always look forward to, was Mr. Gordon, who is just now recovering from his late illness. The way he snuffed them out at times was a caution to the younger element, who were having quite a gay time all to themselves vainly endeavoring to find out where those birds were, any way. Spencer again held the honors in the prize match, being high, with 21, a no mean score for the day, as the wind carried all the smoke of a far-away steel company's works right on a line with the flight of the targets. Scores below, all shooting from handicap distances:

Events:	1	2	3	4	5	6	7	8	9	10	11	12

Palmer Rod and Gun Club.

Palmer, Mass.—The Massachusetts Amateur Shooting Association held its annual meeting at Palmer, Mass., on the eve of Jan. 22. Officers for the year 1901: President, E. Gibson, of E. Brookfield; Secretary and Treasurer, Dr. S. B. Keith, of Palmer. It was decided for the coming year to hold five team shoots; also to promote the interest in sweepstake shooting. The team shooting is to consist of five teams of five men each, each man to shoot at 25 targets at each shoot. At the end of the season the team breaking the greatest number of targets wins the cup and badges.

The association decided that all sweepstake shooting shall be conducted under a distance handicap system, giving the poorer shooters a chance, which will do much to promote the interest in trapshooting. The Association would like all gun clubs in Massachusetts to join them, that in the future team shoots and sweepsatke shooting can be conducted under defined rules and regulations. Any information can be obtained by addressing Dr. S. B. Keith, secretary.

Secretary.

Norfolk Gun Club.

Portsmouth, Va., Jan. 26.—Herewith find scores of live-bird shoot in Norfolk under the auspices of the Norfolk Gun Club, W. N. White manager. The weather was dark and cloudy, with light rains, which made shooting difficult, though it was lively and interesting. Mr. A. W. du Bray, of Parker Brothers, was again a welcome visitor, and in his usual congenial manner demonstrated what a good gun with a good load will do in "any old weather" by grassing 30 straight, his last bird falling dead out of bounds. Mr. H. P. Collins, of the Dupont Powder Company, and Mr. A. H. Fox, of the Winchester Repeating Arms Company, were also welcome visitors, and never fail to impress the high qualities of their goods on the public, which are becoming very popular in this section. Mr. Stearns, of Richmond, Va., and Mr. Albert, of Newport News, were among the visitors, and entered heartily into the shoot, and very few birds escaped them, although they were on strange grounds. Come again, gentlemen, one and all; you are always welcome.

Practice, 5 birds: Pryor 2, Hazard 4, Dr. Foster 4, Fox 5, Stearns 4, Gallagher 4, Hudgins 1, Hurst 3, Du Bray 5, Agelasto 1, withdrew.

Event No. 1, optional sweep, 5 birds, class shooting, two moneys:

G. P. Grant.

Richmond Pigeon Club.

Richmond, Va., Jan. 26.—The Richmond Pigeon Club had an enjoyable afternoon's work at the traps to-day at Broad street baseball park. No very remarkable shooting was done, but the sport on the whole was well worth witnessing. The fun began with an impromptu match between Capt. du Bray, of Parker gun fame, and Franklin Stearns, of Richmond, at 25 birds, in which the latter defeated Capt. du Bray, who was dead out of form, by 23 to 20. Scores:

A W du Bray, 30	221*22*01222210111111* 12—20
F Stearns, 30	20222220222222222222222222—23

Live-bird shooting is rapidly climbing into general favor with trapshooters in this region, and some of the boys are beginning to study on what they will do with the Grand American Handicap trophy when they bring it back here.

Three handicap sweeps followed the match, in which the following scores were made:

Du Bray, 30	2*021*1*00—4	30..0221*2111*—7	.....
Drummond, 30	22 2222220—9	28..222222222*—9	2*22221222—9
Johnston, 28	2202002222—7	28..1112222012—9	0222020022—6
Stearns, 30	2220222202—8	28..0222220202—7	22202222*2—8
Wood, 28	1102212*22—8	.....	.....

R. F. Banks.

Keystone Shooting League.

Holmesburg Junction, Philadelphia, Pa., Jan. 26.—There was a good attendance at the shoot of the Keystone League. The birds were fast, and the skill of the shooters was tested therefore even harder than on the old grounds. In the club event Snapshot was alone in making a clean score, though Budd had one, save one bird which fell dead out. The scores:

No. 1, 7 birds, sweepstake, $3 entrance, Rose system: Snapshot 7, Baltz 7, Van Loon 6, Budd 6, Henry 6, Darby 5, Russell 5, Morris 4, Vandegrift, Brewer and Rosystem withdrew.

No. 2, club handicap shoot, 10 birds, optional sweeps: I. W. Budd (30) 9, J. Anderson (30) 8, J. Brewer (29) 7, H. Henry (30) 7, Snapshot (30) 10, Dr. Darby (29) 8, W. Morris (29) 9, A. A. Felix (30) 9, A. Baltz (28) 4, W. F. Leedom (28) 6, J. Vandegrift (30) 7, E. Russell (29) 8, C. E. Geikler (29) 9, W. Hauff (28) 7, F. W. Van Loon (30) 8, C. Fitzgerald (28) withdrew.

No. 3, 7 birds, sweepstake, Rose system: Vandegrift 6, Budd 7, Baltz 5, Henry 7, Snapshot 7, Brewer 4, Darby 4, Geikler 5, Hauff 4, Rosystem 7.

No. 4, miss-and-out, $1 entrance: Henry 5, Rosystem 5, Darby 4, Budd 2, Van Loon 1, Snapshot 1, Morris 0.

PUBLISHERS' DEPARTMENT.

California.

THIRTY-FIVE DAYS' TOUR VIA PENNSYLVANIA RAILROAD.

The Pennsylvania Railroad Company has arranged for a special personally-conducted tour through California, to leave New York and Philadelphia on Feb. 14, by the "Golden Gate Special," composed exclusively of Pullman parlor-smoking, dining, drawing-room sleeping, compartment, and observation cars, returning by March 20. This special train will be run over the entire route. The best hotels will be used where extended stops are made, but the train will be at the constant command of the party.

Round-trip tickets, covering all necessary expenses, $450 from all points on Pennsylvania Railroad, except Pittsburg, from which point the rate will be $445.

For further information apply to ticket agents; Tourist Agent, 1196 Broadway, New York; 4 Court street, Brooklyn; 789 Broad street, Newark, N. J.; B. Courlaender, Jr., Passenger Agent Baltimore District, Baltimore, Md.; Colin Studds, Passenger Agent Southeastern District, Washington, D. C.; Thos. E. Watt, Passenger Agent Western District, Pittsburg, Pa.; or address Geo. W. Boyd, Assistant General Passenger Agent, Philadelphia.—*Adv.*

The salmon angling excursion advertised by the St. Lawrence Steamship Co., Limited, appears to offer an exceptional chance to salmon anglers who feel able only to spend a moderate sum of money on their outing. The rivers mentioned are among the best in Canada, but are inaccessible and can be reached only by some special means of transportation. Anglers wishing a short trip at a moderate cost would do well to correspond with the advertisers.—*Adv.*

The Great Bristol Automatic Fish Hook, advertisement of which appears in another column, is a double hook, automatic in setting and hooking, which, the manufacturers claim, will catch more fish with less bait than any other hook on the market, while the disagreeable feature of torn and bleeding fish, so common in double hooks, is missing in this one.—*Adv.*

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

COPYRIGHT, 1901, BY FOREST AND STREAM PUBLISHING CO.

TERMS, $4 A YEAR. 10 CTS. A COPY. SIX MONTHS, $2.

NEW YORK, SATURDAY, FEBRUARY 9, 1901.

VOL. LVI.—No. 6. No. 346 BROADWAY, NEW YORK

The FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. The editors invite communications on the subjects to which its pages are devoted. Anonymous communications will not be regarded. While it is intended to give wide latitude in discussion of current topics, the editors are not responsible for the views of correspondents.

Subscriptions may begin at any time. Terms: For single copies, $4 per year, $2 for six months. For club rates and full particulars respecting subscriptions, see prospectus on page iii.

REPORT OF THE U. S. FORESTER.

THE report of the Division of Forestry for the fiscal year ending June 30, 1900, possesses especial interest as showing how great is the public desire for instruction in methods by which utility and value of the wood lands can be increased. In striking contrast to the public apathy of a few years ago, there exists at the present time an interest in forest matters in the United States which is widespread, effective and intelligent. Congress has not kept up with this change in the public sentiment, and while the appropriations of the Division have been somewhat increased, they are not nearly sufficient to enable it to comply with any considerable portion of the demands made upon it. Something of the change in sentiment, and of the magnitude of the problems that confront the Division, may be gathered from the fact that in the year 1898-1899 applications were made for working plans for forests covering 1,513,592 acres, while at the end of the succeeding year these applications covered an area of 51,192,714 acres. Meantime the working force of the Division had grown from sixty-one to one hundred and twenty-three individuals. It is thus obvious that what is now holding back public forestry of the United States is not the lack of a wish of the people to have forest matters receive attention, but a lack of comprehension on the part of Congress of the public feeling on the subject.

The most wholesale demands on the Division for assistance come from the Secretary of the Interior, who requests working plans for the management of the timber on the national forest reserves and for a study of various matters within their boundaries, so that he may be in a position to administer these reserves intelligently and wisely. To investigate these forest reserves and to present practical plans for their care and working would, as Mr. Pinchot observed, "absorb the whole present force of this Division for many years," and of course cannot be done at present. Next in importance is the application made by the Forest, Fish and Game Commission of New York to prepare working plans for the forest reserves of that State. The area is a million and a quarter acres, and even to do this would severely tax the resources of the Division. Besides these requests for assistance there have come from many sections of the treeless West applications from farmers for information as to the best methods of tree planting, and for the study required to make the experience of planting in past years available for future guidance. All these and many other matters are pressing upon the Division, which is hampered by lack of force, lack of office room and lack of money.

During the past year applications were received for working plans for more than 48,000,000 acres. More than 2,000,000 acres were examined, working plans were begun for 1,325,000 acres, plans were completed for 179,000 acres and 54,000 acres were put under management. A beginning was made of drawing up working plans for the management of the Black Hills Forest Reserve. Planting plans were prepared for fifty-nine land owners in eleven States, and a study of the effect of forest cover on the flow of streams was begun in southern California. This is the first study of the kind ever attempted, and promises results of extreme interest. It is being made on lands of the Arrowhead Reservoir Company, which for eight years has been making careful observations of precipitation, run off, evaporation and temperature, all of which observations it has turned over to the Division.

The preliminary study made of the drainage basin which furnishes the water supply to the city of Johnstown, Pa.—city of flood—together with the plans and recommendations with regard to it, has already been noticed in the newspapers.

Besides these important operations carried on, special investigations have been made on other subjects not less important. Commercial trees have been studied in the East, the West and the South, and reports on certain important species completed. The study of forest fires has been continued and much material gathered which awaits publication. Studies have been made in forest history, and a great amount of material gathered which will ultimately appear.

For the ensuing year no special changes of plans are looked for. Matters already in hand will be carried forward as speedily and as far as the resources—in men and money—of the Division will permit.

In view of the radical change of sentiment about forestry matters which has taken place in the past few years, of the money value of its products and of its general importance to the country, it may be confidently expected that Congress will speedily increase the appropriation for the Division of Forestry to an amount in some degree commensurate with the importance of the work and with the insistent demand for it which is coming from the people at large.

THE NORTH AMERICAN ASSOCIATION.

WE invite careful reading of the report of the North American Fish and Game Protective Association's convention in Montreal last week. As we have previously said of this organization, it is composed of a membership which compels respect and inspires great confidence in the ultimate accomplishment of its purposes. Those who are most prominent in the movement are persons who have long been identified with actual work in the field of fish and game protection. The newly elected president, Mr. John W. Titcomb, of Vermont, was the founder of the Vermont Fish and Game League, and as Fish Commissioner of his State has made an enviable record. And so of others active in promoting the Association; they are persons who because of their experience and authority in these matters have influence in their respective States and Provinces. One feels that we have here in an association for united effort something more substantial than the ineffective and inconsequential resolution-adopting convention which has become so familiar.

We are of the opinion that the Association will do well to restrict itself to present limitations as to geographical scope. A group of States and Provinces with definite territory to work within will accomplish much more than one which attempts to cover the entire country. That has been one mistake with the so-called national movements. This continent is entirely too large for any one body of sportsmen to control. The rule is that a geographical section may be covered efficiently, but with the whole continent to consider effort is wasted. Mr. C. E. E. Ussher's proposition to promote the formation of allied associations of other groups of States and Provinces is most excellent, and the good offices of the North American Association in this direction should have cordial welcome.

DANGEROUS WILD ANIMALS.

THE editorial on the dangers which threaten the outdoor dweller from attacks by wild animals, and the correspondence which that editorial has called out, have awakened a widespread interest, which may very well result in something quite useful.

Wild animals are not all alike, and it is, of course, impossible always to tell what they will do. To every rule there are exceptions, and the best that can be done is to strike the general average. As there is great difference in the physical characteristics of animals within a species, some being larger or smaller or swifter or slower than the average, so there will be differences in temperament, some being bolder, more timid or more ferocious than others. It is impossible therefore to predicate with certainty just what an individual of any species will do, but if we had facts enough it would be possible to tell what an animal of a given species would be likely to do under certain conditions.

We are all of us likely to generalize from our own limited experience—an unsafe thing to do. Many of our older readers will recall that in their pot hook days they labored painfully to reproduce a line in their copy books which read *humanum est errare,* which they did not then know means it is very easy to make blunders. This is nowhere more readily seen than in matters connected with natural history, about which even to-day so little is known that people who see something that is new to themselves are likely to imagine that they have made some great discovery.

We hope, therefore, to hear more on this subject from men of experience. Facts are what are needed to reach a conclusion on this matter and not opinions. Yet a man may well enough express his opinion as to the motives that govern the actions of a particular animal if he will give his reasons for these opinions.

BIRDS AND FRUIT.

AMONG the bills amendatory of the game laws now before the New York Legislature is Senate Bill No. 43, introduced by Mr. Brackett. It provides that Section 78 of the present law, which deals with the protection of certain wild birds, shall be amended by addition of these words, "Nor does it apply to farmers and fruit growers while defending their crops from the ravages of birds." In other words, protection is removed from all song and insectivorous birds, so far as farmers and fruit growers are concerned.

It certainly seems an extraordinary thing that at a time when the interest in bird protection is so great, when the general Government, most State governments, institutions of learning and the presses of many publishers are doing all they can to educate the public and to demonstrate that birds are useful and not harmful, a bill such as this should be introduced into the Legislature of the Empire State. The amount of fruit destroyed by the birds protected by Section 78 is so inconsiderable as not to be worth thinking about, while the vast numbers of noxious insects destroyed by these same birds would, if undisturbed and allowed to propagate their kind, cause damage amounting to many hundreds of thousands of dollars annually. Most farmers and fruit growers know this and look upon the birds as allies. As for those who do not know it, the law may well restrain them.

NEW YORK FISH COMMISSION.

THE bill to reorganize the New York Fish Commission has been reported by the Senate Committee in a form modified from the original, in a way which is said to have the approval of Governor Odell. It provides for a single commissioner of forests, fisheries and game, to be appointed by the Governor, and to receive a salary of $5,000. From 1901 to 1903 he is to have two advisory or consulting commissioners, appointed by the Governor, who will hold office for two years only; after that term the single commissioner will serve indefinitely. The work of the department is divided into four branches, comprising the fish, the game, the shellfish and the forest, and the commissioner will appoint a head for each.

This is to put the work of fishculture, game protection and forest conservation on a business basis. It is to give New York the single-headed commission the FOREST AND STREAM has so long urged.

The office thus created is one of great importance and responsibility, and there is every reason for confidence that Governor Odell will appoint to it a person qualified to discharge it. There is material in the present board: the succession to the place of such a man as President Wadsworth or Commissioner Middleton would be regarded with satisfaction by those who are concerned to see this branch of the State's service efficiently administered.

Come now, men and brethren, let us reason together. Is it worth while, just because a shooter shoots more game than we think is fitting, to launch out in unbridled invective upon him and call him bad names? Is conformity to an ill-defined and fluctuating standard of game shooting of such transcendent moment that in the rebuke of its transgression we must say good-by to the observance of good breeding and common decency in our speech to or respecting our fellow men? Can intemperance in game killing be reformed only by intemperance of speech? Is the "game hog" to be turned from his ways only by the unparliamentary vocabulary of a strenuous blackguard? We do not believe it. But if the promotion of game protection does depend upon publicly shouting bad names, most of us are in the position of the good old Quaker of the story, who, when he was spattered by mud in the street, called the street gamin to him and said, "I will give thee a penny to swear for me."

The Sportsman Tourist.

Now and Then.

In the beginning of this new century we are wont to review the past history of our country with satisfaction and to congratulate ourselves upon the wonderful improvements wrought by our civilization since the time when the only Americans were the "noble red men." Along some lines, however, it appears that our boasted civilization has caused no advancement, and that we have deteriorated from rather than improved upon the standards established by the aborigines. In support of this view I offer as evidence and for comparison the records of two separate occurrences, one of the present day and the other of more than a century ago.

In the telegraphic columns of one of the current daily newspapers there appeared recently the following item:

"TOUGH TRAMP IN WOODS.

"Maine Game Warden Nearly Succumbs to Cold and Hunger.

"Caribou, Me., Jan. 27.—Game Warden ——— has just reached here after a terrible journey of two weeks in the dense forests of northern Maine. He left here for Chamberlain Lake with 2,000 landlocked salmon, and having liberated the small fry went to a lumber camp on the Upper Allegash. From there he started through the forests for a camp on the St. John River.

"When twenty-two miles in the woods he was taken sick, and he started to return. He lost one of his mittens, and kept his hands warm by shifting the remaining one from one hand to the other. For thirty-six hours he trudged through the woods without food. Constantly growing weaker, he was so near to lying down for the last time that he began to mark the trees along his trail that he might be followed, and thought of making his will on a piece of birch bark. When about to give up he came in sight of the lumber camp, and it took him four hours to cover the last three miles. He lay in bed three days at the camp, and finally reached here Wednesday night."

Now, after the story of this "terrible journey," let me refer to an account of a somewhat similar incident which is narrated in Hearne's "Journey from Prince of Wales Fort in Hudson's Bay to the Northern Ocean," published in London in 1795. Samuel Hearne was the Hudson's Bay Company factor at Fort Prince of Wales near the present Churchill Factory, on the west shore of Hudson's Bay, and at the request of the committee of the company he undertook a two years' journey, under the guidance of the Indians, and without any white companion, through the Barren Grounds to the Coppermine River, which he was the first white man to discover. On his return trip he visited the Athabasca country, and under the date of January 1772 he makes note of the following circumstances:

"On Jan. 11, as some of my companions were hunting, they saw the track of a strange snowshoe, which they followed; and at a considerable distance came to a little hut, where they discovered a young woman sitting alone. As they found that she understood their language, they brought her with them to the tents. On examination, she proved to be one of the Western Dog-ribbed Indians who had been taken prisoner by the Athapuscow (Athabasca) Indians in the summer of 1770; and in the following summer, when the Indians that took her prisoner were near this part, she had eloped from them with an intent to return to her own country, but the distance being so great, and 'having, after she was taken prisoner,' been carried in a canoe the whole way, the turnings and windings of the rivers and lakes were so numerous that she forgot the track; so she built the hut in which we found her, to protect her from the weather during the winter, and here she resided from the first setting in of the fall.

"From her account of the moons past since her elopement it appeared that she had been near seven months without seeing a human face, during all of which time she had supported herself very well by snaring partridges, rabbits and squirrels; she had also killed two or three beaver and some porcupines. That she did not seem to have been in want is evident, as she had a small stock of provisions by her when she was discovered, and was in good health and condition, and I think one of the finest women of a real Indian that I have seen in any part of North America.

"The methods practiced by this poor creature to procure a livelihood were truly admirable, and were the great proofs that necessity is the real mother of invention. When the few deer sinews that she had an opportunity of taking with her were all expended in making snares and sewing her clothing she had nothing to supply their place but the sinews of the rabbits' legs and feet; these she twisted together for that purpose with great dexterity, and success. The rabbits, etc., which she caught in those snares not only furnished her with a comfortable subsistence, but of the skins she made a suit of neat and warm clothing for the winter. It is scarcely possible to conceive that a person in her forlorn situation could be so composed as to be capable of contriving or executing anything that was not absolutely necessary to her existence; but there were sufficient proofs that she had extended her care much further, as all her clothing, besides being calculated for real service, showed great taste and exhibited no little variety of ornament. The materials, though rude, were very curiously wrought, and so judiciously placed as to make the whole of her garb have a very pleasing though rather romantic appearance. Her leisure hours from hunting had been employed in twisting the inner rind or bark of willows into small lines, like net twine, of which she had some hundred fathoms by her. With this she intended to make a fishing net as soon as the spring advanvced. It is of the inner bark of willows, twisted in this manner, that the Dog-ribbed Indians make their fishing nets, and they are much preferable to those made by the Northern Indians.

"Five or six inches of an iron hoop made into a knife and the shank of an arrow head of iron, which served as an awl, were all the metals this poor woman had with her when she eloped; and with these implements she had made herself complete snowshoes and several other useful articles.

"The method of making a fire was equally singular and curious, having no other materials for that purpose than two hard sulphurous stones. These, by long friction and hard knocking, produced a few sparks, which at length communicated to some touchwood; but as this method was attended with great trouble, and not always with success, she did not suffer her fire to go out all the winter. Hence we may conclude that she had no idea of producing fire by friction in the manner practiced by the Eskimos and many other uncivilized nations, because if she had the above-mentioned precaution would have been unnecessary.

"When the Athapuscow Indians took the above Dog-ribbed Indian woman prisoner they, according to the universal custom of those savages, surprised her and her party in the night, and killed every soul in the tent except herself and three other young women. Among those whom they killed were her father, mother and husband. Her young child, four or five months old, she concealed in a bundle of clothing and took with her undiscovered in the night. But when she arrived at the place where the Athapuscow Indians had left their wives (which was not far distant) they began to examine her bundle, and finding the child, one of the women took it from her and killed it on the spot.

"This last piece of barbarity gave her such a disgust to those Indians that, notwithstanding the man who took care of her treated her in every respect as his wife, and was, she said, remarkably kind to and even fond of her, so far was she from being able to reconcile herself to any of the tribe that she rather chose to expose herself to misery and want than to live in ease and affluence among persons who had so cruelly murdered her infant. The poor woman's relation of this shocking story, which she delivered in a very affecting manner, only excited laughter among the savages of my party.

"In a conversation with this woman soon afterward she told us that her country lies so far to the westward that she had never seen iron or any other kind of metal till she was taken prisoner. Though her tribe had frequently heard of the useful materials which the nations or tribes to the east of them were supplied with from the English, so far were they from drawing nearer to be in the way of trading for iron work, etc., that they were obliged to retreat further back to avoid the Athapuscow Indians, who made surprising slaughter among them both in winter and summer."

Comparison of the foregoing cases seems to warrant the conclusion that when thrown entirely upon their own resources in the wilderness the influences of civilization have tended to decrease rather than to increase the ability of its creatures to successfully maintain existence and that in this respect the twentieth century civilized man is far behind the eighteenth century savage.

To the sportsman for whom the Northland has any fascination this old journal of Hearne's will well repay a perusal. It is unfortunately now rather a rare book. If some enterprising publisher would issue a modern reprint of this interesting and instructive old work it would prove a valuable addition to the library of many a sportsman.

Chauncey P. Williams.

Albany, N. Y., Jan. 31.

An Heroic Adventure.

When we had come to anchor in Trinity Bay and all the sails were safely stowed, the Captain of our yacht proposed we should go ashore and see the celebrated Comeau *fils*.

Bob, my companion, asked, "Celebrated for what?"

"Oh! for several things," replied the Captain. "He is a most extraordinary man in his many acquirements and knowledge. Born and brought up on this coast, he has passed all his life here, with the exception of the three years his father was able to send him to school, but those three years he made use of to lay the foundation of a wonderful store of practical knowledge. His schooling, as I have said, was but the foundation; by reading and observation he has added to it in a marvelous way.

"From his early training and the life of every one on the coast, it would go without saying that he knows how to shoot, but he is more than a good shot, he is a "deadly" shot. Anything he aims his gun at that is within shooting distance is dead. As a salmon fisher, no crack angler who visits these rivers can hope to compete with him.

"As a linguist he can speak, read and write in French, English, Latin and Indian; besides this, he can talk rapidly in the dumb alphabet. He holds the position of telegraph operator at Trinity, also of postmaster and fishery overseer, and besides, when anything goes wrong with the line for two hundred miles east or west, the department immediately wires him to go and fix them up.

"He has more than a fair knowledge of medicine for one who derived all his insight from reading alone. Last summer there was an epidemic of measles all along the coast, among both whites and Indians. Here, with a population of 150, two-thirds of whom were down, Comeau, who attended them, did not lose one patient, while at Bersimis, where the department sent a full-fledged M. D., there were thirty-nine burials out of a population of 450.

"You may be sure the poor people all along the coast love him."

So the boat was lowered away, and the Captain, Bob and I were rowed ashore to see this paragon. From the outside look of the place I could see the man was one of good taste and orderly. The knock at the door was answered by Comeau himself. The Captain was personally acquainted with him and introduced us before we entered. I must say I was disappointed. One always is when he has pictured a person in his mind's eye and finds that in reality he is quite a different kind of person.

I had looked for Comeau to be a large man and a boisterous one from his position of superiority over others. On the contrary, I found him below the medium, a quiet, low-voiced man, reserved almost to shyness. I saw at once he was a great observer, one who would make deductions from specks invisible to ordinary people; or, in other words, he could put two and two together and dovetail them better than most men.

We were ushered into a large, clean, airy room, in the middle of which sat a very good looking lady in a roomy rocker, with a child on each knee. If Comeau himself is reserved and not inclined to talk, his wife can do enough for both. She excused herself for not rising when her husband introduced us. Nodding down at her babies, she said, "You see I am fixed." One could see she is a proud mother—they are twins; this she told us before we were well seated, and she further informed us that they were the only twins on the Labrador. So she is celebrated also.

When we got fairly settled in Comeau's den, the conversation naturally drifted into hunting and fishing. Bob made some inquiries about the pools on the Trinity. To make his explanations clear, Comeau pulled out a drawer of photographic views of the river. In rummaging these over, he cast aside a gold medal. "Excuse me," I said, reaching over and taking up the medal. On it I read engraved:

"Presented to N. A. Comeau by the R. H. S. for bravery in saving life."

Upon my asking him to recount the circumstances, he blushed and looked quite confused, and said: "Oh! it was nothing worth speaking of, but I suppose people talked so much about it that they gave me that token. It was nothing more than any man would have done," and this was all we could get from him unless we had carried persistency to an ungentlemanly degree.

After having spent a very pleasant hour, we returned on board, and the Captain told us the story that the hero himself would not:

Two years before, one day in January, Comeau arrived home from the back country to find that two men had that day while seal hunting off shore been driven off the coast toward the ice pack in the gulf. One of the men was Comeau's own brother-in-law, and the other a half-breed. In spite of the supplications of his wife and the persuasions of the other individuals of the place, Comeau set about preparations to follow them out to sea. He asked no one to accompany him.

The wind all the afternoon had been steadily off shore and was now moderately calm. He took with him some restoratives, provisions, a lantern, a couple of blankets, his rifle and ammunition and what else useful he could think of in his hurry. The ice pack was then about ten miles off the land, and he reasoned the men must be on the ice, if large and strong enough, or in among it if in small cakes, the latter being much more dangerous.

From Trinity to Matane in a direct line the distance is forty-five miles, and to push out in a frail, wooden canoe alone and the darkness coming on in the black gulf in mid-winter required a brave man with extraordinary nerve to dare it, and this Comeau did.

Three minutes after pushing out from the beach, canoe and man were swallowed up in the darkness. The next the people of Trinity heard of him was a telegraphic message on the second day after. It read: "Matane. All three alive. Joseph, hands frozen; Simon, both feet frozen badly."

This message was to his family, but the Matane people sent a much longer one to the Government, giving the facts, describing the hardships these men had come through, and a special train was sent down with the best surgeon from Quebec. On the surgeon's arrival at Matane a consultation was held with the county practitioner, when it was decided that the man Joseph would have to lose two fingers on each hand and Simon both feet.

The amputation was successfully carried out next day, and shortly after, when Comeau saw both men well on to recovery, he started for his home, not, however, by the way he had come, but up to Quebec by the south shore and down the north shore from Quebec, a distance of nearly 700 miles. The last hundred he made on snowshoes.

The Captain told us that the description of this very venturesome trip he had heard from Comeau's own brother as the elder one had described it in the heart of his own family. He had reached the ice pack, to the best of his judgment, about fifteen miles from the land, and had remained on his oars and hallooed once or twice without receiving an answer. He suddenly bethought himself of the lantern. This he lit and lashed to the blade of one of his oars, and erected it aloft. Immediately a faint cry was heard to the eastward, and he lowered his light and pulled away in the direction whence the call appeared to come. After rowing for a short time the lantern was waved above again, and this time an answering shout came from close at hand.

The two poor fellows were some distance in the pack, and had got on the largest cake they could find. They were sitting there helpless, holding on each by one hand to the rough surface of the ice, and with the other to their canoe to keep it from being washed off.

By the aid of the lantern held aloft, Comeau saw there was a much larger cake of ice some distance further in the pack. To this they made their way with laborious trouble. Pushing one canoe as far ahead among the ice as possible, they would all three get into this, shove the other in advance in the same way, and so repeating the process till they reached the solid field. Once safely on this, for the meantime, secure place, food was partaken of and daylight waited for.

Soon, however, the intense cold began to make itself felt, and drowsiness was fast taking hold of the two men, and their great wish was to be left alone and allowed to sleep. This Comeau knew if indulged meant death, and it took all his efforts to keep them awake and moving about. Once while attending to the half-breed, his brother-in-law dropped down and was fast asleep in an instant. Comeau boxed him, kicked him, without having the desired effect of rousing him from his stupor. At last he bethought him of what an old Indian had done to him under somewhat similar circumstances. He caught the man's nose between the thumb and finger and tweaked it severely. This brought him to his feet and mad to fight.

Day was now breaking, and they could see the south shore at a computed distance of ten miles. Comeau also saw that the ice pack was drifting steadily east, and this,

if they remained on the ice, would carry them past Cap Chat, the most northern point of the south coast, and this meant death to a certainty.

A rapid train of thought went through Comeau's brain. He decided that if saved they were to be, it must be by passing over that ten miles of moving, grinding ice. He forced some food on the others and gave each a small dram of spirits; how much rather would he have given them tea or coffee. But even if he had had it, water was wanting to make it. They abandoned the roll of blankets, which had been of no use to them, and started, using the canoes see-saw fashion as they had done the night before. They left the cake of ice upon which they had passed the night at 8 A. M. and only got ashore at the extreme point of Cap Chat at daylight next morning. At times they would come across narrow lanes of water, but these lanes always ran at right angles to the direction in which they were going. Several times, when stepping upon what was considered a strong piece of ice, one of the party would be immersed in the cold, cruel water, and be rescued with great trouble and danger to the others.

What a picture of heartfelt prayer offering it must have been, to have seen those men kneeling on the ice-bound shore, pouring out their thanks to the ever-watchful Almighty who had brought them safely through such dangers.

Bob, who had taken down the Captain's narrative in shorthand, gave me his notes, and I give the story of adventure and heorism to the public.

Comeau is well known by most of the members of the Forest and Stream clubs of New York and Montreal.

MARTIN HUNTER.

One Hundred and Twenty-five Years Ago.

As a voice from the distant past and yet of present interest is the following narrative of a member of the Continental army who accompanied Benedict Arnold through the Maine wilderness in his disastrous campaign against Quebec during the fall and winter of 1775.

When the main body of the army arrived at Fort Western at Cushnoc, now Augusta, the writer and eight others were detailed under command of Archibald Steele to proceed in advance of the main column for the purpose of correctly ascertaining and marking the paths (by felling small trees, blazing, and otherwise) which were used by the Indians at the numerous carrying-places in the wilderness, toward the head waters of the Dead River, and also to ascertain the distance and nature of the route over the height of land (now the Boundary Mountains) to the head waters of the Chaudière River (that portion of the river now known as Arnold River), which flows in a northerly direction to the St. Lawrence River at a point nearly opposite to Quebec.

Two birch-bark canoes were provided; and two guides, celebrated for the management of such water craft and who knew the river as high up as the great carrying-place, were also found. These were Jeremiah Getchell, a very respectable man, and John Horne, an Irishman who had grown gray in this cold climate.

This small party, unconscious of danger, and animated by the hope of applause from their country, set forward from Fort Western in their light barks, at the rate of fifteen to twenty and, in good water, twenty-five miles per day. These canoes are so light that a person of common strength may carry one of the smallest kind, such as ours were, many hundred yards without halting. Yet they will bear a great burden and swim nearly gunwale deep; an admirable description of them is given by Hearne in his journey to the Coppermine River.

Steele's canoe bore five men with their arms and baggage, which last was, indeed, light in quantity and quality—one barrel of pork, one bag of meal and two hundredweight of biscuit. The other canoe carried seven men, their arms and baggage and a due proportion of provisions.

On the evening of the 23d of September our party arrived at Fort Halifax, situated on the point formed by a junction of the Sebasticook and Kennebec rivers. Here our commander, Steele, was accosted by a Capt. Harrison or Huddlestone inviting him and the company to his house. The invitation was gladly accepted, as the accommodation at the fort, which consisted of old blockhouses and a stockade in a ruinous state, did not admit of much comfort; besides, it was inhabited, as our friend, the captain, said, by a rank tory. Here, for the first time, the application of the American term tory was defined to me by the captain. Its European definition was well known before.

Another interesting conversation on the part of the captain struck my mind as a great curiosity in natural history and well deserving commendation. He observed that he had immigrated to the place he then resided at about thirty years before, most probably with his parents, for he did not then appear much beyond forty. That at that period the common deer which now inhabits our more southern climate was the only animal of the deer kind which they knew, unless it was the elk; and them but partially. In a short space of time the moose deer appeared in small numbers, but increased annually afterward, and as the one species became more numerous the other diminished; so that the kind of deer first spoken of, at the time of this information, according to the captain, was totally driven from that quarter. The moose deer reigned the master of the forest.

This anecdote, if true, might in such minds as those of Buffon or De Pauw give occasion to systems of natural history totally inconsistent with the laws of nature; still, there may be something in it; animals, like human beings, whether forced by necessity or from choice, do migrate. Many instances might be given of this circumstance of the animal economy, in various parts of the world. The above relation is the only instance which has come to my knowledge where one species has expelled another of the same genus. If the fact be true, it is either effected by a species of warfare or some peculiarity in the appearance of the one kind, and of horror or perhaps disgust in the other; we know the rock goat (steinbock of the Germans and boquetin of the French) formerly inhabited the low hills of southern France and of the Pyrenees; they have been driven hence by some peculiar cause, for they are now confined to the tops of the highest mountains in Europe.

It is true it has been frequently advanced by men of respectability and information in Pennsylvania that the gray fox, which is indigenous in the United States and all North America, has been driven from the Atlantic sea coast into the interior by the red fox from Europe, but we have no sufficient data to warrant this assertion. The truth probably is that as the gray fox is a dull and slow animal, compared with the sprightliness, rapidity and cunning of the red fox, the first has been thinned by the huntsmen and gradually receded from the sea coast to the forest, where, from his habits, he is more secure.

The cunning and the prowess of the latter has enabled him to maintain his station among the farms, in spite of the swiftness and powerful scent of the dogs. But that which puts this assertion out of view is that the red fox is indigenous throughout North America. He and the gray fox are found in the highest latitudes, but there their skins are changed into more beautiful furs than those of ours by the effects of climate.

Another notion has been started within these twenty years past of the fox squirrel expelling the large gray squirrel; but it is fallacious. GEO. MCALEER.

WORCESTER, Mass.

As Seen Between the Lines.

THIS time it is the mention of dough birds that starts the trouble. Not that I am loaded down with knowledge of them or their habits, for I am not, but rather something in the reminiscent vein suggested by some reference to dough birds in Mr. Hough's department.

It was in 1871. Another kid and I were in camp on the Loup River, a few miles below the Pawnee Indian village at Genoa, Neb. One day there came drifting our way, as a tumble weed or other matter carried by the wind, without apparent volition of its own, an Indian boy about our own age with a stringless bow at his back. It was lazy time in April and the Indian stopped to talk awhile. As we lay on the grass in the sun, feeling languid and growing fast, a flock of plover (as we supposed) came whistling overhead. As they passed the Indian gave a shrill whistle in imitation of their call and turned them. After a circle or two the birds lit down on a strip of prairie that had been burned over near by.

We were not hunting to any great extent, but just loafin' round with each other, though each of us had a double-barrel shotgun. An examination of our ammunition supply showed only two charges of powder. As both of us wanted a shot, we loaded one barrel of each gun and sallied forth. The birds rose out of range, and, bunching as they rose, made a short circle and passed within thirty yards of us. As they went by we emptied our guns into the bunch and picked up twenty-four dead and wounded birds. They were dough birds, though we did not know it at the time.

We invited the Indian lad to stay for dinner, and out of our choicest fishing lines made a string for his bow. We then stuck a stick in the ground and a potato on the stick about twenty yards from the shanty. The Indian shot at it and missed and he and I walked out to where the arrow fell, about twenty yards further on. Picking up the arrow, the Indian turned and again shot at the potato, which was now between us and the shanty. At the same instant my partner thrust his head out of the door, stooping low over the threshhold to pick up something from the ground just outside. The arrow struck the potato on one side and, glancing, started straight for the head. To hit the head the arrow must pass very close to the corner of the shanty, as it only protruded a few inches through the door. There was a brief instant of suspense, though brief as it was it was long enough to turn that full-blood Indian into a chalk-colored quarter-blood, and then the arrow quivered in the corner of the shanty, having failed to pass by the narrow margin of half an inch, and burying its steel head an inch and a half in the cottonwood log. Had the arrow passed the corner my partner's head would have been its sure reception. The Indian looked at me and I looked at him and then we pulled the arrow out as if nothing had happened, and Will never knew how near he came to being wiped out by a redskin.

I saw several flocks of dough birds in Nebraska that spring, and in 1876 I shot a few in Kansas; also a few in '82. That is the last one I ever saw, though I have often been on the plover grounds of Kansas, Nebraska and the Dakotas.

Man and Wild Animals.

Another thing that has caused me to read between the lines is the discussions that have been going on concerning man's fear of wild animals. It always makes me nervous to read the fake stories concerning adventures with wild animals. I don't believe any wild animal will attack a man, but when attacked there are circumstances under which even a rabbit will fight. To refute the popular notion of the ferocity of wild animals one of your correspondents goes to the other extreme and tells of a man who followed a wounded panther into its den and the animal refused to fight him. He says the story is true, and I can't help but think it is, but as neither man nor beast could have been in his right mind, the fact has no value in determining the status of animal nature. A coyote will fight a man without hesitation when cornered; so will a wildcat. I have tried both. Get between an otter and the stream and it will fight without a moment's hesitation. Yet any of these animals would starve to death rather than face a man. Truth is a small point on which it seems hard to balance; we generally lop this way or that.

Here is a story I just read of a trapper who had been all season in catching two wolves. During this time he dare not stay out at all late in the evening, for fear of being treed by wolves. But they were so very clever he could not get them. Why did not that trapper load himself down with cartridges and get treed by wolves? He might have got fifty in one night. Many a man has doubtless been treed by his imagination, but by wolves, never! And if he were, a single discharge of a gun would scatter them for good.

Here is another by a man who has taken upon himself the special task of educating the public concerning wild animals. A man is out trapping wolves and after setting two traps at one bait he proceeds leisurely to get into one and then the other. Held thus from two ways it is impossible for him to get out. The wolves soon locate him and are about to eat him up, but his faithful dog comes to the rescue, and after killing a couple of wolves brings the trap wrench that his master may free himself. As a dog-story this is very good. The dear fellows will often fight to the death for their friends, and thus far it is true to nature; but as a wolf story it is simply rot. In trapping wolves I seldom got one the first night, and it seemed as if they would not come near as long as bait or trap retained the scent of man. Had I known it and baited my trap with a man I might have caught a dozen in place of waiting several days for a nibble. With such stuff as this filling books, papers and magazines, and even crowding into our natural histories and sportsman's journals, is it any wonder that the mass of people, who never see wild animals except in cages, have erroneous ideas concerning them?

I want my stories of the supernatural to deal with ghosts and goblins only, with trademark blown in the bottle so there can be no mistake. E. P. JAQUES

ELMO, Kan., Jan. 28.

Incidentals.

To most sportsmen the chief charm of their outings is largely made up of incidentals. Go where you may, wherever sportsmen gather—be it in well appointed club or afar in the country store of some obscure hamlet where they lounge about the glowing stove—you will find the conversation composed mostly of these small happenings as here and there one gives his experience.

In your own case, though you may grow talkative at times, you cannot always put your feelings in proper words.

Who shall tell of the pleasure he feels over the comfortable chuckle and click of the cartridges in his pockets as they rub and jostle each other while he swings along through the stubble? What a thrill one has, when, after jumping from the wagon and inserting a couple of shells, he hears that unctuous little snap of the breech that tells of a well cared for gun. A little sound, a trifle, yet it makes him "feel good," and he paces confidently toward the stanchly pointing dog, fully prepared to "count coup" on the first upward rush of the brown covey just ahead.

A long interval of business cares has passed, and at last you stand again among the debris of your old blind. Ben is splashing the decoys into place some twenty yards away, while you set to work to make your cover shipshape. In a moment you uncover an old empty water-soaked and powder-stained cartridge case. The brass base gives you a feeble gleam of recognition as you take it in hand. Beneath the iridescence of its tarnish you read the legend, "U. M. C. Co. No. 12. Smokeless." "Yes, one of my old ones," you mentally exclaim, and toss it into the water, where it subsides with a sullen "plup"! Is that all? That battered case paints you a mental picture that is full of reminiscence—a picture of this very spot, when once before you sat here and cut down the darting wildfowl. The magic still lurking in that bit of clouded brass has set you aglow, and the time seems all too long before you have everything to rights and are ready for business.

Have you ever stood to leeward of some old gunning shanty at night, far out on the lonely beach? In the brilliant moonlight the shadow of the old house rests like a blot of ink in sharp contrast with the gleaming stillness that spreads around. Beyond the sand dunes a restless surf is booming, while now and again the fitful wind drives a spurt of sand against your boot legs with a faint sound of scurrying. You seem to be all eyes, all ears. The breeze is "purring" all about—now here, now there, whispering mysteriously as it goes. The heavens are filled with gems whose sparkle is subdued in the wondrous splendor of the moonlight. The North Star, cold and calculating as ever, floats in space, oblivious of the never weary pointers of the Dipper, while away in the southeast lordly Sirius is poised below Orion. Can you put in words the surge of thought that comes to you as you stand there? Is it to be wondered at that wildfowl should migrate under such conditions?

Again, who shall tell the angler's feeling, when, after supper, he wanders out to finish his last pipeful before turning in? He has reached the haven whither his thoughts have led him during many weeks. The snug cottage, perchance his old homestead, nestles among its trees on the hillside, seemingly unchanged since his last visit. All about him is the witchery of the spring night. That damp, earthy smell, spiced with a fragrance subtle yet so strong that it has lingered through life in his memory, comes to him as in the years long past. Frogs are piping just as they have always piped in spring time. Down among the lilypads something is rattling like a pair of castanets, and his boyhood wonder as to what it can be is at once upon him as strongly as when he first heard it in the long ago. "Qua!" says a night heron overhead in the silence, and a delicious little tremor makes goose flesh run along his spine. He saunters under the tree where the turkeys are roosting. Sure enough they hear him, or see him—who knows which? At all events the familiar "Quit! quit!" tells him he is discovered. Never in al his life has he been able to fool those turkeys. That same mist is stealing along the creek. Softly, quietly, it is working and floating in cottony folds; there is no wind, yet it is never still.

To-morrow on his way to his favorite stream he will listen for the bluebird's call—that pastoral note that speaks so directly to his heart. Mayhap he will hear the little voice in the sky, and then you will find him listening again and again as it falls to him, softly, indescribably suggestive of gentleness.

WILMOT TOWNSEND.

The FOREST AND STREAM is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday and as much earlier as practicable

Natural History.

Dangerous Wild Animals and Other Matters.

I have just been reading the article by S. E. Filkins in Forest and Stream of Dec. 28, and cannot see that he has made out a very good case. I did not understand the editorial Mr. Filkins refers to as saying that wild animals always fled from man, but as meaning that a human being was at all times safe from unprovoked attack. I honestly believe that there has never been the time in North America when a man might not have walked from ocean to ocean with no other weapon than a stick and have been as safe from attack by wild animals as he would be in the center of New York city, provided, of course, that he did not go out of his way looking for trouble.

The fear of wild animals which most people possess comes from stories told to them as children, re-enforced as they grow older by newspaper yarns.

When a youngster, in company with several other boys I once came suddenly on a big timber wolf in thick brush. For many years I firmly believed that nothing but a determined front kept that wolf from devouring the whole crowd of us at once, but now I know that the wolf was much the worse scared, and was only putting up a bluff until it got a chance to bolt.

I have seen several grizzlies that would not get out of the trail for me, just because I did not have a gun; and I know of one case where a she cinnamon bear with cubs charged an observer who got too close. But personally I never saw a she bear—black, cinnamon or grizzly—that wouldn't bolt and leave her cubs at the first sign of danger. I have caught several cubs under such circumstances, and had them squeal like little pigs, but never had the old bear come close enough to get a shot, though I have had them come back and roar and growl, but they took mighty good care to keep out of sight in the brush.

However, I once knew a man who got mauled by a she grizzly after catching the cub, but it was in open ground, and when he saw the old bear coming back he foolishly started to run, with the natural result that the big brute ran after him, slapped him a couple of times and took the cub away.

Again, bears will often come into a camp, but it is only after something to eat, and if let alone they will not bother any one.

As for the cougars, they are more backward about attacking a person than is a bear. I knew a fellow who had a cougar land on his back one night as he was coming along a deer trail, the cougar evidently mistaking him for a deer. But when he yelled—as almost any one would under such circumstances—the animal let go and departed in a hurry, quite as much scared as the man, and it is needless to say that he was scared plenty.

When I first got together a pack of dogs for cougar hunting the oldtime hunters and trappers were full of the most awful stories about the ferocity of the cougar, and especially about a big red variety that lived high up in the mountains and could kill dogs just as fast as they could get hold of them. Just as soon as I got the dogs trained I went after the big red ones, and, behold! they were just like any other cougar, and did not kill dogs any faster than the average.

The truth of the matter is, any four fighting dogs will kill any cougar in twenty minutes, hardly getting scratched themselves. I never had a dog killed by a cougar, though two of my old dogs (Hector and Brig) have been in over a hundred rough-and-tumble fights with them.

Several years ago a couple of us were photographing cougars, using dogs to tree or bring the game to bay. I had two half-bred staghound and collies and two full-blooded foxhounds. The trees were all scrubby juniper and piñon, not over 15 feet high, and before we could get any photographs I had to leave the two staghounds at home, as when the dogs got a cougar treed one of the foxhounds would crawl up among the branches, jump the cougar out, and Hector would nail him, and when we got up we would have a dead cougar. The foxhounds alone would not close in on a cougar. Hector's way of catching a cougar was to make a quartering dash from behind, grab the cougar by the tail and turn him end over end. Before the brute would get its breath the other dogs would have it stretched, and that was the end.

A cougar can move like lightening for a hundred yards or so, but after that loses its wind, and any fast dog can catch one.

I think that Mr. Filkins has overestimated the length of his cougar a little. I have measured a great many, and never saw but three that ran over 7 feet 6 inches from end of nose to tip of tail, the tail always being within an inch of one-third the total length of the animal. One of these three was 7 feet 9 inches, one 7 feet 8 inches, and one 8 feet 4 inches. This last was by far the largest cougar I ever saw or heard of. One often hears of cougars 9, 10 or 11 feet long, but when the story is run down it is always the hide that has been measured after having been taken off. The hide will always be from two to three feet longer than the animal. The average size of a full-grown male cougar is 7½ feet from tip to tip, one-third being tail, 30 inches high at the shoulder, and such a beast will weigh from 135 to 160 pounds, as I have weighed several. The one that measured 8 feet 4 inches must have weighed nearly 200 pounds, but I was unable to weigh it. When one remembers that 10 feet 6 inches is a pretty good size for a tiger, it is easy to see that a 10-foot cougar would be quite a good-sized animal.

Really the most dangerous game we have in the West is a mule deer buck, and when wounded and cornered it will fight like a fiend. The only dog I ever had killed by a wild animal was horned through the heart by a spike buck, and I have made more than one quick jump to get away with a mad buck close behind, not to mention several rough-and-tumbles wherein I lost most of my raiment—these last luckily being with the deer with their horns still in the velvet, or I might not now be spinning this yarn.

Wm. Wells.

Wells, Wyo.

[Mr. Wells' letter is extremely interesting, and touches on a number of points that are not generally understood. It is the more valuable as coming from a man of wide experience, much of whose mature life has been devoted largely to hunting.

For many years we have been looking for an authentic case of an attack on a human being by the wolf in America, but we confess that only one such case has ever become known to us. This attack was made without any reason on a girl eighteen years old by a wolf puppy which was barely full grown, and its oddness places it outside of the category of ordinary stories of attacks by wolves on human beings, in which hunger is the motive which prompts the supposed onslaught.

The girl who was injured was the daughter of the widely known Jim Baker, one of the few oldtime trappers who lived up to recent times, and the occurrence took place near his ranch on Snake River, in the northwest corner of Colorado. The girl, then (in 1881) eighteen years old, was on her way to drive in some milk cows at dusk one evening. As she approached them she saw sitting on the hillside just above the trail a gray wolf, at which she shouted, and when it did not move she picked up a stone and threw it at it. The animal snarled, and when she threw the stone, promptly came jumping down the hill, threw her down and tore her arms and legs badly. Her screams brought her brother, who was near at hand and had his gun, and he killed the wolf. Newspaper stories of attacks on persons by wolves are extremely common, but in almost all cases, if an effort is made to trace them to their source, they prove to be without the slightest foundation in fact. A long chapter on "Wolves and Wolf Nature" is published in the Boone and Crockett Club's third volume, "Trail and Campfire."

We will recall an incident which happened many years ago on the plains, when two Indians chased an old grizzly bear and her two well-grown cubs for a long distance. The mother apparently felt no interest whatever in the cubs, but ran away as fast as she could, and kept on running. One after another of the cubs was overtaken and killed, and then, their horses having given out, one of the Indians continued the pursuit of the old bear on foot, and at last drove her into a water hole, where he killed her.

Some years ago not very far from the eastern borders of the National Park a case occurred where a cougar sprang on a man. The man was hunting mule deer near Clark's Fork, following a game trail which passed along a steep hillside where there were cliffs and broken rocks and occasional patches of quaking aspen. It was winter and cold weather, and the hunter wore stout hunting clothing. As the man turned the point of a little grove of aspens the cougar sprang on him from a rock above the trail, landing on his back and catching him with its jaws by the shoulder. As the man fell the gun flew out of his hands to some distance. The animal lay on him on the ground, and, as a curious example of how people notice trifling things even in times of great stress, the hunter said that as he fell he could feel the cougar's whiskers tickling his face, and as the animal lay on him could hear it purr. The man was quick-witted, and as he lay on the ground, reached round and got hold of his skinning knife, with which he stabbed the cougar three times as it lay on him, and it died there without struggling. Somewhat dazed, the man rose to his feet, picked up his gun, and returning to camp got some other men, who went back with him and skinned the lion. Of course no one saw the occurrence, but the condition of the man's clothing and shoulder and of the dead cougar made it clear that things had happened just as he said. The cougar was undoubtedly lying in wait above the trail for a deer—or, for the matter of that, for a rabbit—and when the man suddenly appeard sprang on him, believing that the moving object was a deer.

A friend in Montana, who formerly used two little 30-pound dogs in hunting cougars, has told us that he has frequently seen one of these overtake a cougar, seize the tip of its tail in its teeth and then putting out all four feet in the snow brace back and try to hold the cougar. He added that when the cat turned about to strike at the dog it did so slowly and clumsily, so that the dog had abundant time to get out of the way.

The size of cougars is constantly overestimated, and we fancy they are quite as often under 7 as over 7 feet in length when measured in the flesh. We think that it was Mr. John Fannin, Curator of the Provincial Museum of British Columbia, who for many years had a standing reward out for a cougar that would measure 8 feet in the flesh—and they have big cougars in British Columbia, too. We believe that the reward was never claimed; at all events it had not been claimed two or three years ago. Of course, in comparison with the lion or the tiger, the cougar is a small animal, and the tiger is much larger than the lion.

We are disposed to agree with Mr. Wells that the most dangerous game in the West is the deer, but, as it happens, we have not known the mule deer in this respect. The whitetail deer, however, is always a dangerous animal when wounded, and at least one case has come to our knowledge where a wounded buck, surprised, attacked and killed an old man. This was in Nebraska, many years ago, but the occurrence was entirely authentic and is undoubted.

Cases where hunters have incautiously advanced to cut the throat of a wounded deer, and have been then attacked and badly cut up by the swiftly flying feet or hurt by the horns, have been too frequent to require especial mention.

Any one who has ever been forced to be at grapples with a crazy dog knows how hard such an animal is to hold, provided it is not desired to kill it, and we know of a man who, getting hold of a wounded antelope in the effort to cut its throat, would have been delighted to let go and call it quits if he had dared to do so.]

Winter Birds on Staten Island.

Princes Bay, Staten Island, N. Y., Jan. 29.—Bluebirds have been with us all winter. A flock of wild geese was seen last week going north over Staten Island. Robins are thick around here in the cedars; but what their fate will be in the next four weeks is hard to say. February is hard on our feathered friends. ***

English Woodcock.

I notice in your issues of Dec. 22, 1900, and Jan. 5, 1901, the notes by Jay Beebe and Didymus on the possible occurrence of the European species *Scolopax rusticola* in Michigan and New Jersey. The Michigan specimen is described as being similar to our bird in all respects except size. As the coloration of plumage is very different in the American and European species, this would at once dissipate any chance of its being other than an extra large *Philohela minor*. It is unfortunate, however, that the specimen was not preserved. As to the New Jersey bird seen, but not captured, twenty years ago, it would be dangerous to speculate as to its being so rare a bird as the European species is in America. Didymus speaks of the bird in question appearing to be "Twice as large as a legitimate member had any right to be," but how often, under certain conditions of light and atmosphere, does a woodcock, snipe or even a duck appear to be half again as large as it really is, particularly when it "gets up"!

The English woodcock, while only a very rare straggler to this country, is included in the list of our birds. If I mistake not, only three instances of its capture have been recorded. The late George N. Lawrence included it in his "Catalogue of Birds Observed on New York, Long and Staten Islands, and the Adjacent Parts of New Jersey," published in the "Annals of the Lyceum of Natural History of New York," Vol. VIII., April, 1866, and writes: "I have had an example of this species for some years, which was sent me by Mr. Wm. Galbraith, accompanied with the following note, dated Dec. 6, 1859: 'A poultry dealer in Washington Market informed me that he had seen in the market a strange bird, which in his opinion was an overgrown woodcock. I went to see it, and found it to be a true European woodcock; it is badly shot, part of the bill and skull being carried away; it is fresh and otherwise in good order; the person I got it from said that he bought it with a lot of quail on board the Shrewsbury boat. I thought it an occurrence in our line worthy of notice.' It was doubtless killed near Shrewsbury, N. J., and apparently with coarse shot. It was, however, in good condition, and after taking off its skin I had the body cooked, and was able to partake of a dish not usual in America. It probably came by the way of Iceland and Greenland, a route by which other European species occasionally reach us."

In Lewis' "American Sportsman," Philadelphia, 1871, page 169, he has in a footnote as follows: "G. D. Wetherell, Esq., informs us, a few days since, that a gentleman sent him, a year or two ago, a woodcock that weighed 14 ounces, which was shot in New Jersey, and it was his intention to have it mounted, but, owing to the negligence of the party who brought the bird it was too far gone before he received it."

There is, of course, an open question as to the proper identity of this specimen. In a valuable paper, "The Distribution and Migrations of North American Birds," by the late Prof. Spencer F. Baird, published in the American Journal of Science and Arts, Vol. XLI., May, 1866, he gives a list of twenty-seven species belonging to the European fauna which had been found up to that date in Iceland, Greenland and North America. The one species accredited to Newfoundland was the English woodcock. Should any sportsman kill a woodcock of sufficiently large size to cause any suspicion as to its not being our American bird, he will, I trust, have it preserved at once and forwarded to some institution for identification. However, the probabilities are that the next European bird which is taken in our country will be found in one of the Atlantic States, and not in the interior.

Abinism in the Red-Tailed Hawk.

(Buteo borcalis.)

In Forest and Stream of Dec. 29, 1900, I note the record of an albino specimen at the taxidermist store of F. Sauter, New York. This bird is described as pure white, except for four reddish-brown tail feathers. This reminds me of a specimen of this same species which I saw in April, 1879. It was the property of Mr. C. J. Maynard, Newtonville, Mass. The bird, though much soiled, had been pure white with the exception of a few central tail feathers, which retained the normal cinnamon color. A pure white specimen was in the collection of the late Dr. P. R. Hoy, of Racine, Wis., in 1881. Another was in possession of Mr. Emory C. Greenwood, of Ipswich, Mass., in March, 1880; and still another pure white one was killed on the Hoboken marshes, N. J., over twenty years ago. Mr. Geo. A. Boardman, of Calais, Maine, has among his fine collection of albinos a pure white buteo, probably of the red-tailed species. It would be very interesting if all sportsmen would record the capture of any specimens which they may take showing any albinistic traces. This freak of nature is liable to occur in any bird, but is much more frequent in some families than in others. It is not at all unusual among the ducks and game birds.

Chicago, Jan. 7.

The Linnaean Society of New York.

Regular meetings of the Society will be held in the American Museum of Natural History, Seventy-seventh street and Eighth avenue, on Tuesday evenings, Feb. 12 and 26, at 8 o'clock, and public lectures will be given at the same place on Thursday evenings, Feb. 21 and 28, at 8 o'clock.

Feb. 12—R. L. Ditmars. "Collecting Snakes in South Carolina." Illustrated with specimens.

Feb. 21—Public lecture. C. L. Bristol. "The Sea Gardens of Bermuda." Illustrated with lantern slides.

Feb. 28—Public lecture. C. Hart Merriam. "A Naturalist on the Coast of Alaska." Illustrated with a series of lantern slides.

Walter W. Granger,
Secretary American Museum of Natural History.

The Forest and Stream is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday and as much earlier as practicable.

Game Bag and Gun.

Proprietors of shooting resorts will find it profitable to advertise them in FOREST AND STREAM.

Notice.

All communications intended for FOREST AND STREAM should always be addressed to the Forest and Stream Publishing Co., and not to any individual connected with the paper.

A February Afternoon.

THE man with a gun had been shut in by bad weather for some weeks, when there came a "February thaw." On Saturday the sun shone clear and bright, and even warm, and its light was reflected with dazzling brilliancy by the snow that covered the ground. The ponds were still frozen, but South Coon River was almost free from ice, and the man with a gun knew that there must be ducks; so, after an early dinner, he struck out through the North Coon timber, intending to go down that stream to where South Coon joined it.

North Coon was deeper water—a more sluggish current—and ran through the timber, so it was some days later than South Coon in thawing, but there was a little open water in one of the long reaches, and five or six hundred yards down the stream our man saw some ducks sitting on the ice at the edge of some open water. The bank of the stream was ten or twelve feet high, and the ground level, so our man made a detour and walked rapidly along till he judged he was opposite the ducks, then began a sneak toward the river bank, stooping lower and lower as he neared the river, and as he got still closer he lay down and wormed himself along the ground like a snake, till he got so near the edge of the bank that he raised his head slowly and just a little, and saw not 30 yards away six mallards sitting on the ice in a compact bunch, and one other mallard sitting alone four feet to one side of the others. He had taken the precaution to poke the muzzle over the edge of the bank in advance of his taking a look, and it was pointing very nearly at the bunch of mallards. Quiet and slow as the sneak had been, it was not so quiet but that the ducks were alarmed, and when he looked over the bank every neck stood straight up. In one more second every duck would be on the wing and the chance for a dandy pot-shot lost. The thing to do was to shoot quickly and bag the bunch of six, and he felt that he could do it, and do it before they flew. He just considered himself sure of six mallards. He instantly covered the bunch all right and pressed the trigger, but just as he pulled the lone duck that sat to one side started to fly, and he instinctively threw the gun toward it as he pulled—and not a duck was hit. The instant the gun swerved toward the lone duck he knew that everything was spoiled, but it was too late to help it, and quick as lightning he determined to get even with that lone duck, and springing to his feet he gave it the second barrel with such an effective aim that there was scarcely an unbroken bone left in its body. Then he looked after the vanishing birds and quoted "Of all sad words." He also said other "words" which at the time seemed appropriate to the occasion. Then he put fresh shells in the gun and went down the river to where the ice was still solid, and crossing over, came back and got the dead duck. He wasn't taking much interest just them in the glorious sunshine and the bracing air nor the dozen or so of little birds that were singing around him, nor any of the many evidences that winter was broken, for the time, at least.

Tramping another mile through the woods, he came to the mouth of South Coon, and there was a sight that made him forget everything but what he saw. A hundred yards above the mouth of South Coon was a sandbar, perhaps 40 feet in diameter. It was so closely packed with mallards that there seemed to be no room for any more. They were a hundred yards away, and there was no chance to get nearer, as the banks on either side were low. He studied a while about what he should do and finally put shells loaded with 00 shot in the gun, held 2 feet above the raft of ducks, fired the first barrel as they sat on the sandbar, and the other when they were a few feet high. Every duck went away apparently unhurt, but when they had got some hundred yards away one tumbled headlong to the ground. The shooter stood on the bank and carefully took his bearings so he could locate the place where the duck fell after he had crossed the river, and then looked at the river itself to see where he could wade it, and he then saw, almost at his feet, a broken-winged mallard drake drifting with the current. Another shot wilted him, and then the shooter hurried down the stream to a shalow place where he knew he could cross, and wading to the middle of the stream waited till the dead bird drifted to him. Then he crossed and walked up the river bank to where he could get the bearings that would locate the dead bird. It had fallen in a patch of thick weeds, all just alike. Not finding it when he reached the spot where he thought it had fallen, he tied his handkerchief to a big weed to mark the spot, and then began to circle around it, making each succeeding circle wider than the previous one. In this manner he was sure to hunt the ground thoroughly and to hunt it but once. A few circles discovered the duck, which would in all probability never have been found by the ordinary aimless, haphazard way of hunting for a dead bird.

In marking a bird that falls at a distance, always stand still till you have marked the spot by some object beyond where the bird fell, and the further the object is beyond the better. If there can be two objects in line beyond it is still better. Having aligned the spot, walk straight along the line till you have gone two or three rods further than where you thought the bird fell, and right there you will probably find it. If, from the nature of the ground, a detour has to be made to reach the place, be sure to take bearings that will enable you to place yourself upon the line again after making the detour. If the bird is not found by walking along the line, mark the spot where you thought it fell and continue the search either by circling round the marked spot or by walking back and forth on parallel lines. To many people hunting for a dead bird in thick cover is a nuisance and the bird is seldom found, but if the search is carried on as described above, the bird is almost certain to be found if it is not entirely hidden from sight. Practiced in this way, the certainty of finding makes the search a pleasure instead of an annoyance, and one soon takes pride in his skill in finding dead birds. If the bird is only winged and the cover amounts to anything it is hardly worth while to take any trouble looking for it, as it will be entirely hidden, but the experienced shooter seldom fails to note whether the bird is killed or only winged.

The shooter now went to the woods that bordered the stream and hid the three ducks, as he was sure to return that way, and there was no need to carry them. He had just finished this, when there came a mallard drake, flying rather low, but too far to one side. The shooter got behind a big tree and gave a few quacks, which brought the drake circling in to an easy shot for the man and a quick death for the duck.

Proceeding up the river, the man with a gun cautiously approached a bend where there was a high bank and peeped over, expecting to find the ducks, if there were any there, on the further side in the shallow water. There were none in sight, and he started for the next bend, but had only taken a few steps, when out from under the high bank, right at the man's feet, came a mallard splashing the water and quacking with terror. The man was startled almost as much as the duck, and missed with the first barrel before the duck was 30 feet away. Then he puled himself together and made sure of a kill with the second. The second snapped.

The man sat down on a log. After cooling off a little he left himself sitting on the log and stood up in front of himself, and pointing a finger of scorn at himself sitting on the log, he said, "I used to think maybe you would get over being a natural born fool some time, but I am discouraged about it. I really am. It is reasonable to expect that you would have a pretty rank wire edge on you when you first started out to-day, as you haven't had a gun in your hands for weeks till this afternoon; but if losing those six mallards wasn't enough to take it out of you, you are a hopeless case. You ought to be sent home and your gun given to a man it wouldn't be ashamed to be seen with. Now you will just put two empty shells in the gun, and the next time a duck flies you will see how easy you would have killed it if the gun had been loaded."

The empty shells were put in and the search for skulking ducks proceeded. Presently another skulking mallard flushed and offered an easy shot, and when the man snapped his empty shells at it he saw how easy—how very easy—it was to kill a duck rising in close range, and although he did not get this one, it showed him how to get the next one—and he got it and several others without a miss.

The setting sun found him with a heavy bag and miles between him and home, but he trudged cheerfully along till he came to the place where he had waded across South Coon, and found the melting snow had raised the river till he could not wade it, so he had to go around by the bridge, which made it two miles further, at which he grumbled somewhat, but finally pulled into town in fair shape an hour after dark.

O. H. HAMPTON.

Talks to Boys.—XI.

I HAVE talked to you more or less about your dog, taking it for granted that you would have one; since, after a boy has really learned to shoot, he wants to secure game birds, and will not be satisfied merely with killing the little birds that very small boys pursue. Not much can be done in shooting woodcock, quail, ruffed grouse or prairie chickens without a dog—what is commonly called a bird dog; that is to say, either a pointer or a setter. Such dogs, as you all of you know, range over the ground before the shooter, covering much more territory than he could cover. Their keen scent enables them to detect where the birds are, or where they have been, and the well trained dog carefully following up the scent of the running bevy, approaches them, and as the scent grows stronger and he thus learns that the birds are near at hand, he stops and so notifies his master that the birds are close by.

In some parts of the world, spaniels are used. They work very close to the gun, and do not stop when they smell the bird, but press forward the faster, trying to reach it. They give tongue, however, and thus warn the man that the birds are near, and as they are so close to the shooter, he is likely to have a shot when the birds rise. The trained pointer or setter, stopping when the scent becomes strong, usually waits until the shooter is close to him, and then either is urged forward to get closer to the birds and so starts them from the ground, or else the man with the gun walks ahead of the pointing dog, and himself causes them to take wing.

You probably know that the act of pointing is natural to dogs, and to many wild animals which are hunters of living things. I have more than once seen a wolf point a bird or small animal on the prairie, when he did not know exactly where it was. The pointing of the bird dog is merely this same effort to find game, which man makes use of in the domestic dog, which now hunts for its owner instead of for itself. Often when you see your dog point, you will also see—if you are far enough in front of him to do so—his eyes roll about as he seeks to discover by sight just what is the position of the bird that he smells so strongly, the warm scent of which makes his nostrils twitch as he stands there motionless. Sometimes a young dog, whose education has not been carried quite far enough, will see a bird on the ground before him, and after discovering it will plunge forward and catch it in his jaws, but an old dog, who understands his duty and the work the gun is likely to perform toward capturing the bird, will stand perfectly staunch and steady, even though he may plainly see the bird crouching before him.

I do not intend to try to teach you how to educate your dog for field work. Many books have been written about this, in which the best methods are set forth for training the dog to perform all the different operations required to make him serviceable to the sportsman. But I do wish to give you a few suggestions with regard to the way in which you should treat your dog so that you may make of him a confident, cheerful friend and companion, instead of a nervous, uncertain, cringing servant. The higher your dog's spirit and courage, and the greater his confidence in you, the more comfort you will derive from association with him, and the better the work he will do for you. Above all things avoid making him fear you. Sometimes you may have to punish him, but never do this unless you are positive that he understands what he has done that is wrong, and why you are correcting him. Then, when you have punished him, he must understand, and you must feel, that the error that he has committed is wiped out and forgotten, and that you are just as good comrades and friends as you were before he made his blunder or willfully offended.

I shall not advise you to get either a pointer or a setter; you will have to make up your mind about that, and it really does not make much difference which you get. Each breed has certain things to commend it. The pointer is more easily trained than the setter, but remembers better what it has been taught, and requires less work at the beginning of each shooting season than the setter, before settling down to the business of hunting. The pointer also is thought to be better for a country where burrs are plentiful, and also for a country where there is lack of water, its fine light coat enabling it to endure warm weather more easily than the setter. On the other hand, for winter work, especially where there is much retrieving to be done from the water, the heavy coat of the setter makes it less susceptible to cold. In a country where briers and thorns are troublesome, and there is much work to be done in thickets, the setter's coat again protects it. Setters are thought to be more affectionate than pointers, but this is not necessarily a point in their favor, since, from this very cause, they are likely to make friends with strangers and follow them off, to the owner's great discomfort. If you know of any friend or neighbor that has a working setter or pointer, whose performances in the field are satisfactory, and you can in any way obtain a puppy from this animal, I advise you to secure it and to try to make the most of it.

When you have secured a puppy there are two or three things that you must try to remember in connection with the little animal for whom you have taken the responsibility. You must remember, in the first place, that it is like any other young creature, full of spirits, utterly without sense of responsibility, thinking only about itself and entirely determined, so far as it thinks ahead at all, to do those things which seem pleasant to it. It is your business now to undertake its education. You must begin by making it fond of you, and that means that you must treat it kindly, must play with it more or less, must try to feed it yourself and to make it look to you for all the things that make life pleasant for it. Very patiently, but very firmly, you must instruct it, little by little, in good manners; must teach it that some things may be done, and that other things are under no circumstances permitted. You must remember that this little animal has no knowledge of the English language, and that when you give it a command it at first has no idea what you are talking about, and that your words to it are merely so many meaningless sounds. One of your first duties therefore is to teach it what these sounds are intended to convey, and this lesson is to be taught only by enforcing obedience to the command as soon as uttered. Thus, if you try to teach your dog to charge, which means to lie down, whenever you use this word to him in the tone which you intend to have obeyed place your hands on him and gently force him to lie down on his belly with his legs all under him and his head flat on the ground between his paws. If you do this frequently, he will very soon connect the word "Charge" with the act of lying down in the posture named, and it will be but a short time before the word will be enough. If after he has learned to charge there is slowness or hesitation about obeying, you can then push him down sharply and quickly, but you must be absolutely convinced in your own mind that he thoroughly comprehends what he ought to do when he hears this word. It is easy to confuse and bewilder a puppy, and it is much better to let his education go slowly and to be sure that he understands what is wanted of him, than to run the risk of confusing him by trying to hurry matters.

All puppies have the qualities peculiar to extreme youth. They are affectionate and want to place their paws on people and to try to lick their faces. In the same way, because they are puppies, and because they are getting their new teeth, they are eager to be constantly chewing things. Puppies should not be permitted to get into the habit of putting their paws against people. It is a perfectly natural act, but once established it is a difficult habit to break up when the dog grows older, and when it may become an actual nuisance to people who do not care to be caressed in this way. Constantly pushing the dog down with the accompaniment of the word "Down"—spoken sharply, if the puppy imagines that he is being played with—will serve after a time to put an end to these demonstrations of affection, and it is certainly much pleasanter to see a young dog come and stand close to his master's leg, wagging his tail and looking up, as if to ask for petting, than it is to see a great lumbering animal throw himself against the body of the person whom he desires to caress.

If you get your puppy quite young, and if you can procure for him a couple of balls to play with, it will save you some expense and a great deal of household criticism. A soft ball is a useful plaything for the dog, and can also be employed, if he is a natural retriever, in teaching him to fetch and carry. But he should not be allowed to play with it alone nor to gnaw it, for if this is permitted he will soon destroy it. For that purpose a wooden ball, rather larger than he can manage, as for example a small croquet ball, is best. With this he can occupy himself while chained to his kennel, and it will help him to pass many an hour of confinement that would otherwise be weary.

I advise you if possible to keep your puppy in a small yard or large pen most of the time, and not on chain. This is an important matter. A puppy wishes to be on the go all the time, and frets and worries on a chain far more than a larger dog would. Moreover keeping a puppy on chain often results in making him bow-legged or out at the elbows, from the fact that he spends much of his time lying down. The worry and annoyance of being confined on a short chain may have a bad effect on his temper, and may make the matter of training

him more difficult than it would otherwise be. If possible, therefore, have a pen made for him, and line it with wire netting, which will keep him from being tempted to try to gnaw his way out in some idle moment when he cannot think of any other mischief to do.

If you are employed and spend much of your time at school or at some other occupation, the puppy should be confined during this time. When you are free, you will do well to have him with you as much as you possibly can; to walk with him and to talk and play with him, strengthening in every way the affection which he already feels for you, and increasing his confidence in you. But when you must be separated from him, do not permit him to run wild or to associate with other boys, or to any great extent with the other members of the family. You must teach him to regard you as his master; as the person from whom he takes orders and whom he must obey. Nothing is worse for a puppy than to have all the different members of the family at liberty to give him orders, or to shout at him, if they think he is doing something that he ought not to do.

When you have secured your puppy, therefore, keep him with you as much as you can, even though he may be very small and as yet quite devoid of sense. For the first few months of his life, it is better, if practicable, to keep him in a pen rather than chained to a kennel; but by the time he is six months old, you can make a kennel for him and keep him chained to that when you are not about. Or what is better still, you can stretch between two trees or two posts on the lawn or in the back yard, a section of telegraph wire as long as may be required, and putting over this a ring which will run freely on it, you can chain the dog to that and give him some measure of freedom, so that he can run backward and forward over the length of the wire.

The first thing you must teach your dog is to perform certain simple acts of obedience, to understand that "Here" or "Come here" means that he must come close up to you and stop; that "Charge" means that he must lie down, that "Heel" means that he must come around behind you and walk in your footsteps with his head just behind your right leg; that "Hold up" means that when he is at a charge he must rise to his feet. These things are all simple, but the work of teaching them to a puppy, so that he will mind, and mind instantly, takes a great deal of patience—perhaps more than most boys have.

One reason, I think, why boys—men too—lose patience with the dog that they have to handle, is, that they constantly forget that the dog does not understand what they mean when they speak to it. They comprehend perfectly what it is that they wish done, and they take it for granted that the dog also understands the command and that he disobeys either through obstinacy or heedlessness. As a matter of fact, this is seldom the case. Sometimes dogs are headstrong and obstinate, and wilfully disobey, but this is very rarely true of a puppy, and if he fails to mind, that very failure is pretty good evidence that he does not understand what is demanded of him.

Do not, therefore, treat him as if he were familiar with the English language and were obstinate. If you saw a grown up person give a command to a baby unable to talk, and then, because it did not yield instant obedience to the orders given it, saw the person beat or cuff the little child, you would certainly think such action very cruel and very unreasonable. The case of your pup is not unlike this, and I hope that you will never act in this way toward your dog, and so prove yourself cruel and unreasonable, or at best exceedingly thoughtless. I do not think that you will do so, for I believe that you have good common sense, and when the truth has been pointed out to you, that you will comprehend it and act sensibly about it.

You must understand, also, that a puppy, like any other young animal, lacks powers of concentration. It easily gets tired if kept too long doing one thing. Therefore, when you are trying to school your dog, do not make his lessons long. If they are long continued, he will become tired, his attention will wander, and you will find your efforts wasted. It will be much better for you to give him very short lessons, interrupted by a spell of play or rest, during which he is permitted to trot about and investigate all sorts of matters for himself. You must try to make him interested in his work, and to make him enjoy it as a brief change from the constant games of romp which you will have with him. But if you continue his lessons long enough to fatigue him, he will acquire a distaste for them, and will be likely to come to dread them and to avoid and shirk the work.

Although you wish him to enjoy his work, yet you must make him understand, little by little, that this is work and something very different from his ordinary games. Therefore, when you give him a command that you wish to have obeyed, use toward him a different tone from the caressing and jolly one that you employ when he is at play; he will soon come to recognize the difference, and if you are treating him with judgment, when you speak to him in what might be called your business tones, he will at once fix his attention on you and try to understand what it is that you wish him to do. If he does not respond, but seems to want to continue his play, take him by the collar, shake him a little and distract his thoughts from the matter that is occupying his attention. You must understand that when you give your dog an order, you must make him mind; if this should take some little time—several minutes, for example—it would be better for you to stop the lesson then, rather than to run the risk of tiring him.

You will find that it is not difficult to make him charge, and after he has learned to obey the word you may accompany the order by the lifting of your right hand, holding it a little above your shoulder, the fingers closed and pointed upward and the palm directed forward. After a short time he will recognize that signal, and will drop when he sees the motion made, even though the word "Charge" is not spoken. You should practice him constantly at this, and often, when he is at a distance from you, romping through the fields, whistle or call to him so that he will look up at you, and then raising your hand, see if he drops. Again, make him "charge" at your feet, and then walk away from him, keeping him down as you go. At first, of course, he will spring to his feet and lumber after you as soon as you walk away, but you must take him back, make him charge in the same spot, and then perhaps back off from him, using the spoken word and the gesture sign to keep him down. When you have gone some distance from him, if he remains quiet, call to him "Hold up" or make the gesture, which is merely to throw the hand up in the air, and he will spring to his feet and come toward you. You will find the work extremely interesting, and will be gratified, I am sure, to see rapid progress made by the puppy.

W. G. De Groot.

North American Association.

The second annual meeting of the North American Fish and Game Protective Association in Montreal on Jan. 30 and 31 brought together a large representation from Canada and the United States. The president, Hon. S. N. Parent, Quebec, occupied the chair, and among others present were E. T. D. Chambers, Quebec; W. J. Cleghorn, Montreal; A. Irving, New York; J. D. Deacon, Pembroke; H. R. Charlton, Montreal; L. O. Armstrong, Montreal; S. T. Bastedo, Toronto; J. McCombie, Temiscamingue; E. N. Cusson, Montreal; Joseph Brunet, Notre Dame des Neiges; Commissioners Wm. H. Shurtleff, of New Hampshire, and Charles E. Oak, of Maine; L. V. Laporte, Montreal; D. G. Smith, fishery commissioner for New Brunswick; Gen. F. G. Butterfield, Vermont; Chas. F. Burhans, New York; Charles A. Bramble, Montreal; E. T. Bradley, secretary Vermont Fish and Game League; Nelson O. Tiffany, president Society for Study of Song Birds, Fish and Game, Buffalo, N. Y.; L. B. Knight, St. John, N. B., Chief Gun Commissioner for New Brunswick; J. P. Oak, Skowhegan, Me.; Joseph Riendeau, Montreal; C. E. Britton, Gananoque; Jos. Rocheford, Valleyfield; J. Warren Pond, Albany, N. Y.; Arthur Dudemaine, Montreal; David Millar, of Lockport, N. Y., and R. P. Grant, of Clayton, N. Y., representing the New York Forest, Fish and Game League; L. Z. Joncas, Quebec; Rene Dupont, Quebec; C. Rankine, Mattawa; N. Wentworth, Hudson, N. H.; A. H. Harris, Quebec, Southern and Rutland railroads; J. W. McGranty, Buckington, Vt.; Martin F. Allen, Vermont; G. A. Farmer, Montreal; Robert E. Plumb, Detroit; Thos. E. Brainerd, Montreal; Isaac H. Stearns, Montreal; E. Tinsley, Toronto; H. J. Kearney, Papineauville; L. E. Carufel, Montreal; Dr. T. A. Brisson, Montreal; Achille Bergeron, M. L. A.; J. M. E. Bentley, traveling agent C. V. R. R., St. Albans, Vt.; Andrew C. Cornwall, Alexandria Bay, N. Y.; W. H. Thompson, Alexandria Bay, N. Y., secretary Anglers' Association of St. Lawrence River; E. A. Davis, Bethel, Vt.; Commissioner John W. Titcomb, St. Johnsbury, Vt.; Dr. T. J. Finnie, Montreal Fish and Game Association.

The President's Address.

The president in opening the meeting referred to the death of the Queen, and then went on to say:

"I heartily welcome you to this annual meeting of the North American Fish and Game Protective Association, and it is a pleasure to me to be able to congratulate you upon the increased interest manifested in its work and objects, as shown by the large attendance here present. When I had the honor, a year ago, of being called to preside over the convention at which this association was formed, I briefly set forth the reasons which had actuated me in inviting a number of you to meet me here in the Government offices, and to discuss the means to be adopted for the better protection of our fish and game.

"The great and increasing value of these important assets of our different States and Provinces is well known to all of us, and I was happy to see so many of you agreed with me that by banding ourselves together in an association of this kind we could be of much mutual assistance and support, especially in the neighborhood of our respective frontiers.

"The past year has necessarily been one of organization and discussion. The proceedings of the convention of Feb. 2 last, and of the two committees of the association which met in this city last month, attracted a large measure of public attention. They were reported at length in many newspapers of the United States as well as Canada. It was a pleasure for me to undertake the printing and distribution of the minutes of our last meeting, and we all in this Province appreciate the honor you have done us in selecting the city of Montreal for the preseent meeting.

"Two of the most important of your committees met here on Dec. 13 and 14, 1900, and the result of their deliberations will be shortly laid before you. It is essential, before everything else, that the foundations of every useful association should be laid upon a firm and lasting basis, and therefore the draft of a proposed constitution and by-laws for the permanent organization of the North American Fish and Game Protective Association, as framed by the committee named for that purpose, is ready for your consideration.

"When the association has decided upon its constitution and by-laws, the way will be plain for the enrollment of members, and for the election of officers, and for the prosecution of the good work for which we associated ourselves together.

"In this latter connection, I am glad to be able to state that your committee upon the possibilities of harmonizing the laws of the different Provinces and border States will present a carefully considered report at the present meeting.

"I should like to be with you throughout the profitable discussion that, no doubt, will follow the presentation of the reports referred to. Unfortunately for me, the stern dictates of duty have otherwise decreed, and the new and enlarged responsibilities which have fallen upon my shoulders since we last met together necessitate, I regret to say, my immediate withdrawal from the present meeting.

"I am reluctantly compelled to place in your hands my resignation of the office of president of this association, with which you were good enough to honor me a year ago, and to ask you to appoint a provisional chairman, in order that I may attend a meeting of the Executive Council of the Province. You may rest assured, gentlemen, that I shall always prize very highly the memory of the fact that I have been the first president of this association, and I can assure you I shall always be happy to second your efforts, so far as may be compatible with the proper performance of my public duties.

"The North American Fish and Game Protective Association comes into active existence in the early part of this opening year of the new century, and I sincerely wish for it prolonged existence, prosperity and usefulness, the beneficial effects of which will, I hope, go on increasing, and bear good fruit throughout the centuries that are yet to be born."

Hon. W. H. Shurtleff, speaking for the Americans present, paid a warm and sympathetic tribute to the memory of the Queen.

Hon. Mr. Parent then took leave of the meeting, and Mr. L. Z. Joncas was elected provisional chairman.

The report submitted by the Constitution Committee was adopted. These officers were elected:

President—J. W. Titcomb, St. Johnsbury, Vt.

Secretary-Treasurer—L. Z. Joncas, Quebec.

Vice-Presidents—Maine, Hon. H. O. Stanley, Dixfield; Massachusetts, John Fottler, Jr., Boston; New Brunswick, Hon. A. T. Dunn, St. John; New Hampshire, Hon. Nat. Wentworth, Hudson Centre; New York, C. H. Wilson, Glass Falls; Nova Scotia, Hon. J. W. Longley; Ontario, Hon. F. R. Latchford, Toronto; Quebec, Dr. T. C. Brainerd, Montreal; Vermont, Gen. F. G. Butterfield, Derby Line.

Executive Committee—Maine, Hon. L. T. Carlton, Winthrop; Massacusetts, F. S. Hodges, Boston; Michigan, Henry Russell, Detroit; New Brunswick, D. G. Smith, Chatham; New Hampshire, Hon. W. H. Shurtleff; New York, Hon. David Miller, Lockport; Ontario, S. T. Bastedo, Toronto; Quebec, C. E. E. Ussher, Montreal.

Membership Committee—E. T. D. Chambers, Quebec; Dr. W. H. Drummond, Montreal; Gen. W. W. Henry, United States Consul, Quebec.

Auditing Committee—L. O. Armstrong, Montreal; W. J. Cleghorn, Montreal.

It was decided to recommend to the Executive Committee that Hon. Mr. Parent be made the first honorary member of the association, with the rank of Honorary President.

Report of Committee on Laws.

The report of the committee on the possibilities of harmonizing the fish and game laws of the Provinces and States was submitted, and its recommendations were considered seriatim, those that were dealt with being passed in the following form:

"That the open season for moose, caribou and red deer in all the border States and Provinces should generally be from Sept. 15 to Nov. 30, inclusive, but that for certain sections of a Province or State, where moose are decreasing, it may be desirable to make partial or entirely close seasons; that it is recognized that in northern districts a longer season for caribou is desirable, though great care should be observed in extending it beyond that for moose; and that in districts where red deer are few in number it is desirable that the open season be further restricted. Where, however, in the opinion of the State or Provincial officials having charge of the preservation of moose, caribou or deer, a still shorter open season is desirable than is herein mentioned, the association approve of such restrictions, but within the limits above mentioned.

"That the numbers of moose, caribou and deer killed by one hunter during a single season be limited to one bull moose, one caribou and two deer, and that hunters do all in their power to protect calves and females of such game, and that the pursuing of moose, caribou and deer with dogs be prohibited.

"That spring shooting or killing of game birds be abolished.

"That the close season for beaver should be extended until 1905 in all the States and border Provinces.

"That the open season be from Sept. 15 to Dec. 15 for all species of grouse, with the exception of ptarmigan, for woodcock, snipe and duck of all kinds, including swans and geese, rail, plover and other birds known as shore birds or waders."

In the evening President Titcomb gave a very interesting illustrated talk on fishculture.

Second Day.

When the association reassembled Thursday morning, President Titcomb in the chair, consideration of the report of the committee on the possibilities of harmonizing the fish and game laws of the Provinces and States was continued.

The following recommendations contained in the report were adopted without discussion:

"That every State and Province should adopt laws limiting the number of game birds that may be killed by each hunter per day, and the number, weight and size of game fish which may be caught by each angler.

"That a permanent protective law be urged against the destruction of insectivorous birds and other birds useful to agriculture.

"That the exportation of speckled or brook trout be totally prohibited, save with the exception of fish caught by any tourist or summer visitor, the total weight of such fish not to exceed thirty pounds net, and limited to the lawful catch of two days' angling."

The following was also agreed to, an amendment by Mr. R. P. Grant to substitute June 9 for July 1 being lost: "That in all the waters dividing the States and Provinces the open season for black bass shall be from July 1 to Jan. 1."

The next recommendation read: "That all net fishing be prohibited in Lake Champlain, in the spring of the year, in New York, Vermont and the Province of Quebec."

In the course of the discussion Mr. L. Z. Joncas said that the department at Quebec had decided to prohibit any summer fishing in Lake St. Francis, and the advisableness of doing the same with Lake St. Peter was being considered.

Mr. J. M. E. Bentley spoke against the pernicious practice of commercial fishing, which he spoke of as wholesale slaughter, and expressed the opinion that the only way to stop it was by harmonizing the laws.

The committee's recommendation was concurred in, as was also the following, without discussion, after which

an adjournment took place for luncheon: "That the pursuing, shooting at or killing of any of the animals or birds specified in the foregoing recommendations should be entirely prohibited at all other times than those specified in such recommendations."

Tag and Coupon System.

In the afternoon the following recommendation was agreed to without discussion:

"That the tag and coupon system in use in Ontario and Michigan be adopted by all the Provinces and States, and that marketmen, game dealers, buyers, sellers and tanners of deer, moose and caribou skins, and proprietors of hunting camps be duly licensed, if such a system can be legally so arranged, by the chief game authorities of the States and Provinces, to whom they shall periodically report."

The next recommendation read:

"That the possession, sale and exportation of all game birds and animals should be prohibited after the expiry of fifteen days after the close of the open season for the birds or animals, as the case may be, in each State or Province in which taken or killed, each article to be accompanied by a coupon from a license authorizing the killing or capture of the same in such State or Province."

Mr. N. E. Cormier thought that the recommendation went a little too far, as it interfered with the rights of the individual. It might happen that a person legally obtained game during the open season, but did not desire to eat it until later, and yet, under this recommendation, it would be unlawful for him to have it in his possession more than fifteen days after the close season came in. There should be a clause in the law to protect the private individual who wished to store game in cold storage for his own use.

Mr. C. E. Oak expressed the opinion that game, if lawfully obtained, could be held until the day of judgment by a person, if he wished to do so. The transportation and sale of it was a different matter altogether.

Mr. D. G. Smith remarked that many high authorities held that such a law was *ultra vires*. That was a question, however, which he did not want to raise, and he thought they had better let the law stand as it is.

Mr. J. McCombie did not think that the law was meant for the private individual at all, but for the pot-hunter and game dealer.

Mr. S. T. Bastedo said that the Ontario law had worked admirably. It provided for the game dealer and the private individual, and there had been no bother in connection with it.

The committee's recommendation was adopted.

After the following had been concurred in, the committee's report was adopted *en bloc*:

"That a bounty sufficient to insure the trapping of wolves should be offered in Quebec, Ontario and New Brunswick, where these pests are sufficiently numerous to be a detriment to the game supply, and that the minimum amount of such bounty should be fifteen dollars."

Extend Association's Work.

It was moved by Mr. C. E. E. Ussher, seconded by Mr. C. E. Oak:

"Whereas, The results, so far, show that the federation of the fish and game interests of the eastern border States and Provinces, which at present constitute the North American Fish and Game Protective Association, has accomplished and will do excellent work in the directions set forth in the constitution of this association; and

"Whereas, Although we desire to further the objects of this association by the accession of all the western border States and Provinces, we believe the long distances separating them, and necessitating many miles of travel to attend meetings, will prevent the practicable operating of an association embracing all the border States and Provinces from the Atlantic to the Pacific; and

"Whereas, It is our belief that the objects for which this association was formed can be furthered by the formation, as soon as it can be arranged conveniently, of such other groups or federations of the fish and game interests of the border States and Provinces as may be suitable, with an extension of the same idea, at such later date as it may be feasible, to cover all North America with such federations; and

"Whereas, It is desirable, if such federations be formed, that those which are contiguous should keep in touch to the extent at least of sending one or more delegates to each other's annual meetings; therefore, be it

"Resolved, That the secretary of this association is hereby instructed to send, as soon as printed, a copy of this preamble and resolution, together with a copy of the printed proceedings of this meeting and the constitution and by-laws, to the chief game and fish authorities of Minnesota, Manitoba, North Dakota, Montana, Idaho, British Columbia and Washington, and the Northwest Territories, of Alberta, Assiniboia and Saskatchewan, as a respectful suggestion from this association for their earnest consideration."

This was unanimously adopted.

On the recommendation of the Committee on Nominations, Senator Power, of Halifax, was apointed Nova Scotia's representative on the Executive Committee, and Mr. E. A. Davis, of Bethel, was put upon the same committee to represent Vermont, in place of Mr. J. W. Titcomb, who had been elected president.

It was moved by Mr. Smiley, seconded by Dr. Drummond, and unanimously agreed to: "That this association draw the attention of the Department of the Interior of the Dominion of Canada to the fact that large numbers of moose and caribou are being destroyed in Yukon Territory, and request that some protective measures be adopted or put in force in that region."

The Lacey Bill.

Mr. C. E. Oak remarked that the most important and far-reaching legislation which has been enacted in the United tSates for many years was what was known as the Lacey bill, which passed Congress last May. The object of the bill was to prevent the shipping of fish or game from one State to another, contrary to the laws of the State from which it was shipped. The Lacey bill, however, was not international, and, therefore, he moved to the effect that the association favor the amendment of the Lacey bill in such form as to prohibit, under penalty of forfeiture of goods and of imprisonment of offenders, the bringing into the United States of any fish or game, furs, or fur-bearing animals that had been killed or had in possession in violation of the laws of the State or country in which the same had been killed, or in which any such fish or game should be unlawfully had in possession under or by the laws of the State into which any such fish or game be brought into the United States. That the president transmit a copy of the resolution to the Hon. Mr. Lacey with the request that he make such efforts as he can to carry the resolution into effect; and that Canadian legislators be urged to enact similar laws, with the above amendments.

This was seconded by Mr. C. E. E. Ussher and unanimously carried.

Mr. C. H. Wilson referred to the subject of spring shooting, and said that the State of New York seemed to be, with one exception, the principal aggressor in the matter. He contended that if spring shooting was abolished there would soon be a very large quantity of marsh ducks in the State of New York.

Mr. Parker said that spring shooting had been abolished for some years in Ontario, and with very beneficial results. There was no doubt that spring shooting had done more to decrease the number of waterfowl than all other causes put together. If anything could be done to stop spring shooting, there would be fair and reasonable shooting for all time to come, in the fall. It was the bounden duty of every true sportsman to bring all pressure possible to bear to have this miserable and barbarous practice abolished.

Abolish Spring Shooting.

On the motion of Mr. N. E. Cormier, seconded by Dr. Drummond, it was agreed that, as the general laws of the adjoining States and Provinces, except those of New York and Quebec, prohibited spring shooting of waterfowl, and as it was desirable that such shooting should be prohibited by the laws of all the adjoining States and Provinces, the association petition the legislators of the State of New York and the Province of Quebec to enact a law which will prohibit spring shooting of waterfowl in that State and Province.

Mr. C. E. Oak made mention of the fact that some associations lent themselves as advertising mediums, and after expressing the hope that the North American Fish and Game Protective Association would ever keep clear of this, he moved: "That it is the sense of this association that it should in no respect serve as an advertising medium for any sportsman's resort, sporting goods, railroad or steamboat lines, or anything else in the way of merchandise or transportation."

This was seconded by Mr. Ussher and unanimously adopted.

The president reported, on behalf of the Executive Committee, that they recommend that the next annual meeting be held in Vermont, the selection of the place being left in the hands of the president.

This was agreed to, after a little discussion.

Dr. Drummond called attention to the fact that at the last meeting a resolution was adopted for transmission to the different Legislatures, but which had not yet been forwarded, objecting to the remission by State officials or governments of fines imposed on offenders against the game laws, or suspension of sentence, for any reason, political or otherwise.

The motion was reaffirmed, and the permanent officials were requested to send copies thereof to the different governments.

This concluded the business of the meeting.

Pheasants on Vancouver Island.

PEOPLE in the United States are rather given to believing that in game protection, the handling of Indians and some other matters the Dominion of Canada is much more effcient than our State or Federal Government. In some matters this belief may have foundation in fact, but, whether true or not, the Canadian Provincial Government certainly have their troubles in regard to game protection, and there are in Canada, as in the United States, men whose savage and selfish instincts lead them to violate the game laws and thus to take a most unfair advantage of their fellow men, who may be just as keen sportsmen, but are more law-abiding.

The following from the Cumberland (B. C.) News tells of the ruthless destruction of pheasants in the central part of Vancouver Island, and calls for action by the authorities. The News preaches good doctrine:

Many and loud are the complaints of law-abiding sportsmen of the flagrant breaking of the game laws in our district, especially regarding pheasants. It is authoritatively asserted that these birds, not only cocks, but hens also, are being brought into town every day by men who pretend to call themselves sportsmen. In this respect the law is thrice broken. Pheasants of both sexes are by law protected at present. Hens are protected at all times, and it is now the close season for all these birds.

This protection is all on paper. The pot-hunter, who is far lower in instinct than the savage, goes fearlessly on his murderous way, slaying the helpless birds which by all written and moral laws he should protect. The savage will kill a bird when hunger and food necessity compels him. The pot-hunter—let us call him the avicide—kills at all times, and no wonder need be felt if he kills the hen pheasant or the grouse while sitting on her nest. Indeed, that will probably be what he will do, for then he will not be risking a miss at a flying bird. It should be borne in mind that these birds were brought here, kept and fed, and then turned loose to breed, at a good deal of expense and a large amount of trouble, and those who wantonly kill them now are not only breaking the law of the land but are ruthlessly destroying the fruits of the labors of a few who were disinterested enough to go to the trouble and expense to provide a source of sport to all. It is the intention of some of the last mentioned class to subscribe funds to introduce the Virginia quail into the neighborhood of our town, which bird, besides being the leading gallinaceous game bird of America, is also, instead of being destructive, of great benefit to agriculture, being a destroyer of insects of all kinds. All who are interested will voluntarily bind themselves to protect these birds for a term of years, irrespective of any law, and will promise to promptly inform and bring to justice any person found destroying them. One sometimes hears a complaint that some farmers will not allow shooting on their places. We say that the farmer who does so is worthy of the highest commendation, and we are in a position to assert positively that this stand was taken by some of the leading farmers of the district because the ubiquitous pot-hunter would follow the pheasants right to the doors of the barnyards, without as much as "by your leave," when those same farmers had all summer long been caring for a brood of the birds for the pleasure of having them about, and we further say that we are willing to wager that we personally can obtain permission from any farmer in the district to shoot over his place in season, and in moderation. And so can any true sportsman—which means one who can ask permission, and, which gained, can shoot moderately, not murderously. Meanwhile in the case of the pheasants being killed, the police should take a hand.

CHICAGO AND THE WEST.

All About the National Parks.

Feb. 1.—Dr. C. P. Ambler, of Asheville, N. C., secretary of the Appalachian National Park Association, writes under date of Jan. 25 as below regarding the very flattering success which seems to be attending the movement for a big reserve of lands in that beautiful region of the South, which ought always to remain dear to American hearts and be kept pure for American eyes, since it was the home and starting place of the American life which later broke over the Appalachians to build the West:

"We are still pushing the Appalachian National Park movement. I inclose you a copy of the special message from the President to the Senate and House pertaining to our movement, and also a letter from the Secretary of Agriculture to the President regarding the same. You will find that both the President and Secretary recommend an appropriation for the purpose of establishing a national forest reserve in the Southern Appalachians, and upon their recommendation our Senators and Congressmen have introduced a bill praying for an appropriation of five million dollars into the Senate and House.

"The success which we have met up to this time, and I must say that such indorsement from the President and the Secretary of Agriculture are good indorsements, has been secured, first, by everlastingly sticking at it, and second, by organizing and laying plans and then following them out to the letter. As you know, we organized about two years ago, and the work from that time to this has been pursued along lines which were then agreed upon. We believe we are going to win."

The message from President McKinley reads thus:

"To the Senate and House of Representatives:

"I transmit herewith, for the information of the Congress, a letter from the Secretary of Agriculture, in which he presents a preliminary report of investigations upon the forests of the southern Appalachian Mountain region. Upon the basis of the facts established by this investigation, the Secretary of Agriculture recommends the purchase of land for a national forest reserve in western North Carolina, eastern Tennessee and adjacent States. I commend to the favorable consideration of the Congress the reasons upon which the recommendation rests.

"WILLIAM MCKINLEY."

As to the region in question, its fitness for the purpose of a national reserve is unquestioned. "Where," asks the writer of some of its descriptions, "can you find such rare natural beauty as in western North Carolina and eastern Tennessee, or, more definitely speaking, in the Great Smoky Mountains, the Balsam Mountains, and the Black and Craggy mountains? Here are the most beautiful as well as the highest mountains east of the lofty Western ranges; forty-three mountains of over 6 000 feet in altitude, as well as a great number of inferior height, all clothed with virgin forests and intersected by deep valleys, abounding in brooks, rivers and waterfalls, combine to make this region one of unsurpassed attractiveness."

A New Mexican Park.

And now comes yet another movement for a national park, this time from New Mexico, and like all the other enterprises of similar nature which have been coming up, of great merit and desirability. It is likely that few parts of the country are less generally known than the far Southwest, and to have some of it kept unchanged, as it has been for centuries in the slow sun of that ancient region, is something to be hoped. The bill introduced calls this a cliff dwellers' park, and the Washington dispatches have this regarding it:

"At the urgent request of the Secretary of the Interior and the Commissioner of the General Land Office bills have been introduced in the House and Senate, and favorably reported from the Public Lands Committees, setting aside 153,620 acres of land in the Territory of New Mexico as a public park, to be known as the Cliff Dwellers' National Park. The object is to preserve the prehistoric caves and ruins and other works and relics which abound in this reservation, which are looked upon by scientists as of the greatest value to the scientific world.

"Special Agent James D. Mankin, of the Land Office, in a report to the Land Office, says:

"'The country is a plateau varying from 6,000 feet in altitude on the east to 9 000 feet on the west. It is evidently of volcanic origin.

"'The district is noted chiefly for the remains of prehistoric civilization with which it is covered.'"

There is this to be said in favor of the New Mexican park, that it contains nothing which the Hon. Thomas Shevlin, of Minneapolis, wants. Were this not the case it might be well for the Government at Washington to consult with the Hon. Thomas before taking any further hasty steps in this matter.

The Minnesota National Park.

And this is the last from Washington about the Minnesota National Park, which is so near and dear to all dwellers of the Northwest:

"The bill proposed by Representative Eddy, modifying the Nelson law, will probably be introduced Jan. 30. Mr. Eddy and T. B. Walker, of Minneapolis, and Manager

McCormick, representing the Weyerhaeuser interests, had a conference over the matter to-night. The two latter were at the Indian Office to-day in conference with the officials. The Eddy bill is approved by the Indian Commissioner, and it will at once be submitted to Secretary Hitchcock. It provides, first, for the sale of the timber on the reservations, the lands to be reserved for agricultural purposes; second, the timber is to be sold in tracts large enough to justify the erection of mills on the reservation, and third, the system of estimating is abolished, and the pine is to be sold on the bank."

Thus it may be seen that we are very apt to have a park up in Minnesota, after the lumbermen have reduced it to a condition bordering upon the cloistered quiet of an Aztec cliff dwellers' cemetery. It is our great and abiding consolation that we shall not be debarred from going up there and gazing at the stumps of the trees which have gone to keep the wolf from the door of the Hon. Thomas Shevlin and his very good friends who help him divide his trains at the right place when he is helping entertain guests on a Congressional trip.

Last from the Park.

Feb. 2.—The news from Washington on Jan. 30, in regard to the Minnesota Park, states that Secretary Hitchcock has approved the Eddy bill and its amendments to the Nelson law. It is thought that mills will be erected on the reservations and their pine will be cut, and that the passage of the bill creating a national park will be permanently blocked. There is a rumor out that the backers of the park enterprise will combine with those interested in like projects in other parts of the country. It is believed that the Eddy bill will probably pass. The attitude of Mr. Eddy himself toward the park has been clear all along. He does not want the park, but does want to see the lumber interests advanced.

Weights of Canada Quail.

A pleasant letter from W. B. Wells, of Chatham, Ont., takes up the question of weights of quail, and it would seem that the belt for big quail belongs across the border. I always thought these Canada birds the largest of their species I have ever seen, but a 9½-ounce bird is surely a stunner. Mr. Wells writes:

"Last December when quail shooting from a little inn not more than two miles from the shore of Lake St. Clair I saw some quail weighed. These weights were taken to decide a small bet as to the weight of a cock and hen. Another shooter said he had one that would beat either, which it did. The hen went 7½ ounces, the cock 8 ounces, and the other cock 9 ounces. When these were being weighed on the grocer's scales next door, I got them to take in a dozen—not picked birds—and they went 5¾ pounds. These birds were quite strong and fast, as I found out. The friend with whom I shot was down a few days before I got there and was a little tired, and as it was blowing half a gale all the time, he soon acknowledged that he was outclassed. While I was fresh, I did fairly well, but after a couple of days I was no better, and so we ended up with the birds on top. Duck shooting has been below the average with us the past year. Canvasbacks, both on Lake St. Clair and at Rond Eau, on Lake Erie, were unusually plentiful. Quail were not so plentiful in Kent, but in Essex the county to the west, were more plentiful than last season, and no one can tell the reason."

Can't Lose Them.

Gratiot county, Mich., has paid $11,000 in three years as sparrow bounties, and the birds seem to enjoy it, being apparently more numerous than ever. Mr. Lorenzo Tabor, of Adrian, Mich., some years ago thought it would be a good thing to import a few pairs of these nice little English birds to Michigan. It was nice—for the sparrows. You can't lose them now.

Illinois Fish Law.

Chicago, Ill., Feb. 2.—Dr. S. P. Bartlett, who is to have charge of the fish exhibit at the Chicago Sportsmen's Show, has been obliged to absent himself from Chicago and to be on hand at Springfield, because he is having his regular season of dread lest somebody tinker with the fish laws. There is no doubt that a pretty strong attempt will be made to effect some changes. The amateur fishermen say that the present law is in the interest of the market fishermen, who are seining everything out of the rivers. Dr. Bartlett and Mr. Cohen think that it may be well to prohibit seines from April 15 to Aug. 1, and their bill will introduce that measure, as well as a clause prohibiting the use of hook and line within 400 feet of any dam between April 15 and Aug. 1. The real battle in regard to the game laws is not yet fully on, but the usual number of new measures, freaks and otherwise, are duly on hand.

Aim of the Illinois Association.

Hon. James R. B. Van Cleave, of Springfield, president of the Illinois State Sportsmen's Association, in a personal letter just at hand, goes on to say that the Association does not intend to confine itself purely to trapshooting matters. "Our aim," says he, "is to aid and encourage the propagation and preservation of game and game fishes, our annual tournament being only a pleasant but secondary matter of importance. Help us along these lines all you can."

If the Illinois State Sportsmen's Association wishes to do something practical in the way of preserving the game of Illinois and the West, it has three things ahead of it which it might try to do: First, to put Illinois at the head of the line of those States which will not permit game to be sold within their borders. Second, to try to get the State of Missouri to prohibit the export of game. Third, to try to get the State of Nebraska to prohibit the export of game. Lock up the sources of supply and cut off the demand for this Western game, and the sportsmen will get a chance for a little shooting. Otherwise all of our State associations are going to become trapshooting associations and nothing more. The game will never be properly preserved under the system of protection now in vogue, and our laws are persistently and steadily violated.

Mr. N. P. Riley, of this city, one of our well-known bass fishermen, is visiting Florida this winter. He has been at Tallahassee for some time, and since he could find no bait to suit him he telegraphed back to Chicago to his old fishing crony, W. H. English, for some live frogs. Four dozen frogs were sent to him, and at last accounts he was doing business with the big black bass. Florida must be a poor sort of place if it can't raise frogs.

Mr. Fred M. Stephenson, of Menominee, Mich., president of the Gaylord Club, of that region, and a very prominent sportsman, is in Chicago for a short time to-day.

Live Sheep and Goats.

Matters are going on swimmingly with the first Sportsmen's Show ever held in Chicago, and the time of any doubt is past regarding the success of the enterprise. Chicago does not do things by halves, and this show will break the record of first appearances. Large numbers of the wild animals which will be shown at the Coliseum are now coming into the city and will be taken care of by Cy De Vry, who used to handle the animals at Lincoln Park. A very large number of foreign ducks, imported from Europe, reached Chicago this week via Boston. We are also promised some good specimens of the Scotch red deer. There are several good specimens of live muscallunge and of live ouananiche, now waiting for the curtain to rise. Yesterday a telegram was received from our old friend, Jack Monroe, of the Blackfoot Reservation, Mont., who sets a price on wild sheep and wild goats which he has in hand, and it is thought that arrangements will be closed by which these animals will be secured and shown at the exposition. Mr. J. H. Morrison, of the same reservation, has been out in the mountains for several days on a similar quest. Maybe you can rope a wild goat and bring him here to Chicago and show him alive, but on the face of things this looks a little bit hard to do.

The scheme of decoration for the Coliseum has been submitted by the artists, Mr. W. L. Wells and Mr. H. G. Maratta. There will be liberal use made of the old Roman idea oak leaf garlands and wreaths, as well as the customary evergreen effects. The list of exhibitors is now nearly full, and the class of attractions is of very high order at this writing, with more and good ones steadily coming in. Among other things to be shown here will be the Palmer collection of heads and horns from Davenport, Ia., with full exhibits from Kaempfer, Periolat and other taxidermists and dealers, to say nothing of the collections of amateur sportsmen all over the West.

The Sportsmen's Year.

The holiday season seems to be the only time when American business men catch their breath and take the liberty of doing any thinking about the pleasanter side of life. It seems to be a growing custom among sportsmen to remember each other at that season with little gifts of things prized by sportsmen. A friend writes me that two of his friends have made him a Christmas present of a splendid salmon rod, with reel and line. Another sends to him a book which tells about the out of doors. What is the result? My friend lays aside his savage business air, sits down and thaws out a little, and eke indites a letter to a friend, which shows that a business man may have a long memory and a soft spot in his heart:

"I can look back to so many of our hunting and fishing trips," he says, "and so many incidents that still give me pleasure, that I am often reminded that really the best time comes after you get home. I can remember down along the dusty shores at the Long X crossing how you used to lie abed mornnigs and then corral the oversupply of sugar. I can remember the time Dan Seib went out to shoot the deer at moonlight, and we tried to fool him by hanging an overcoat up in the bushes, and tied a string to it so as to pull it and make him think it was a bear. I can recall when old Bob Schultz got the buck fever and could not shoot a deer that came right up the bank in his face; and I shall never forget the night that you got lost down on the Magpie, and the tramp in the morning looking for you and the welcome sight of yourself coming along on Paddock's faithful old horse. Do you remember the first trip when you were just getting over typhoid fever, and espied the badger, and nearly killed yourself running after it and shooting him with fine shot? And the day we nearly lost our lives chasing the wounded canvasback over on Lake Isabel in the little tin boat, and what shooting we had? Now that I have started, I could keep up a string of these reminiscences, I verily believe, all day. Last, but not least, is that fishing trip on the North Branch of the Au Sable. Was there ever a more enjoyable day than the three of us, my brother Ed, you and I, put in together? How the trout did take the fly, and how nearly used up I was that night when we reached the car!

"These things live in a man's memory and make him younger again, and also make him wish he still was young and could never grow old. The book you have sent me is magnificent. It recalls a lot of my Arizona and New Mexico trips: the cactus standing tall and straight 20 or 30 feet high, the running partridge, then the grouse, the cold north wind and the snow, and my old favorite, the ruffed grouse, on which I have had such fine shooting here at home this fall. Indeed, what a lot of good times we can have all over again!"

The Infernal Regions.

Even paraphrased, the foregoing sub head is not altogether pleasant to contemplate. Yet it came about this way: A friend and I were walking down the street the other day, in one of those lowering, black, sooty fogs which can be seen nowhere but in this benighted town, where dirt is dominant. We smelled a scent of pitch and burning pine. Then all at once, as we turned around the corner, we saw a long line of shallow fires that stretched across the street. (The street-car men were thawing out the track.) From these fires the smoke arose to join the other smoke in an air so dense that you could hardly see 20 feet ahead. It was a scene which, taken in conjunction with the rattlings and bangings and shoutings of the place, seemed weird and impressive enough.

"I have always thought," said my friend meditatively, "that Chicago was situated close to the infernal regions. I see that the latter locality is just coming through."

And, provided that one were under life sentence, and had to live in a big city from day to day, and never see any country cleaner and greener, any sky any sweeter, provided that he could hear nothing more restful than the nerve-jarring clamor of the city, what indeed would life be for him but a section of the infernal regions?

We need the out-of-doors. Every year American life becomes more urgent and high-keyed. More and more men go down in the harness as though struck by lightning. Sometimes I watch the big chains which carry the elevators up and down in the building where I office. Once in a while we read of one of these chains breaking. The experts say that iron sometimes gets crystallized, and hence snaps. It is the peculiarity of business life nowadays that it crystallizes men. Once in a while they snap. They surely do not snap so often or so suddenly if once in a while they get out of this pandemonium of the town and into the sweet air, and on the sweet earth which God meant all men should enjoy.

This is my sermon at the beginning of the year, and I am going to try to practice a little of my own preaching before the year is out. What's the fun of living if you are dead?

Hartford Building, Chicago, Ill.

American Wildfowl and How to Take Them.—XXII.

BY GEORGE BIRD GRINNELL.

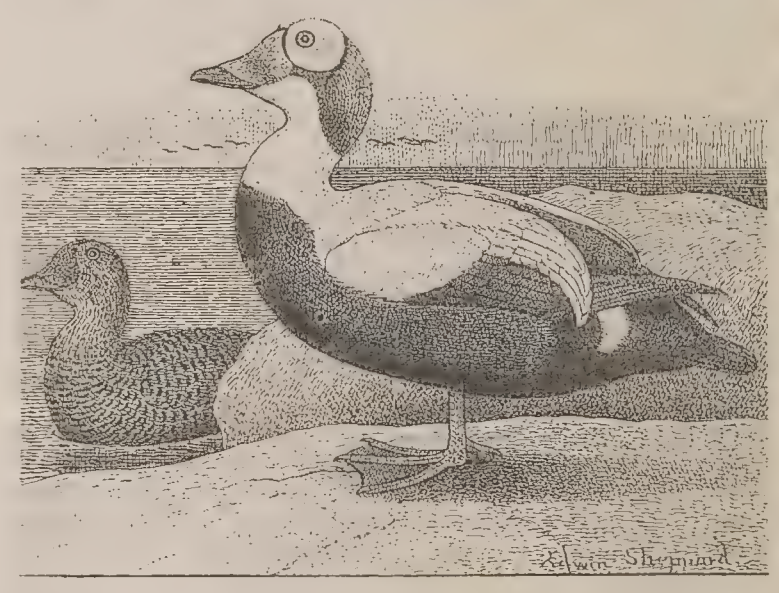
[*Continued from page 87.*]

Spectacled Eider.

Arctonetta fischeri (Brandt).

In the adult male the space immediately about the eye is silky white, bordered by a line of velvety black, before and behind. The feathers between the eye and the bill are stiff, and extend over the bill almost to the nostril. At the base of the bill they are white, changing to dark green, which grows paler toward the black bar before the eye. Crown and back of the head, running down a little way on the neck, pale olive green. Beneath the space around the eye a strip extends back to meet the olive green, which is deep dull green. The head and neck, except as stated, are white. All the lower parts, including the upper breast, are pale leaden gray; while the whole back and wing, except the greater wing coverts, the tertiaries and a patch on each side of the rump, are yellowish white. The bill is orange, deepest along the edge, and pale on the nail. The eyes are pale blue or bluish white. The feet and legs are yellowish.

In the adult female the head generally is buffy, streaked with dusky. A strip of brown runs from the bill before the eye to the top of the head. The throat is very little streaked or spotted. The general upper parts are tawny, barred with black. The belly and the region under the tail is grayish brown. The length is about twenty or twenty-two inches.



SPECTACLED EIDER.

The spectacled eider is another Alaskan bird of which not very much is known. It is a dweller in the far North, its range seeming to extend only from the mouth of the Kuskokwim River to Point Barrow, where it breeds. Another observer, however, gives it as occurring much further to the south, and says that it breeds among the Aleutian Islands, where it is a resident, although shy. The nest is built in the grass not far from the water, and the eggs are from five to nine in number. Mr. Nelson who has spent so much time in Alaska, and is very familiar with this bird, sounds a note of warning about it, saying that it might readily be so reduced as to become very rare. It is an extremely local bird, and with a narrow breeding range, and with the attacks continually made on it for food by the Eskimo it has every prospect of becoming scarce.

It is to be noted that the autumn plumage of male and female in this species are very nearly alike—dark brown with black mottling—and that the breeding dress does not appear to be assumed until toward spring.

It is said that the flight of this bird is unusually swift—much more so than that of most other eiders—and that they usually fly low over the water.

The Common Eider.

Somateria mollissima (Linn.).

The adult male of the common eider duck has the crown deep black, split behind in the middle line by a strip of white or greenish white, and reaching forward from the eye to the bill. The upper part of the back of the neck and the feathers back of the ears are pale green. The rest of the head and neck, with the forebreast, back, scapulars, wing coverts, tertiary feathers and sides of rump, white, often tinged with yellow or creamy buff. The breast is sometimes pink-tinted. The other under parts, the greater wing coverts, secondaries, middle of rump and upper tail covert, black; quills of the wing and tail, brownish black; bill, dull orange yellow; legs and feet, orange.

The adult female is generally of a reddish brown color, mostly barred with black, but the head and neck

are merely narrowly streaked with black. The crown of the head is darkest. The under parts are a grayish rather than reddish brown, with darker bars. The tips of the secondaries are white, forming two bars across the wing. Length about twenty-two inches.

The eider duck inhabits the northern shores of both coasts of the Atlantic. In winter it is found in more or less abundance along the New England coast, and I have seen it killed as far south as Long Island Sound.

The eider breeds in Labrador, and to the northward, and in many parts of Europe is almost a domestic bird.

COMMON EIDER.

The down, which is plucked from the breast of the female for the lining of the nest, is a valuable article of commerce, and in an earlier chapter something has been said about the way these birds are protected and their down secured in Norway and Iceland.

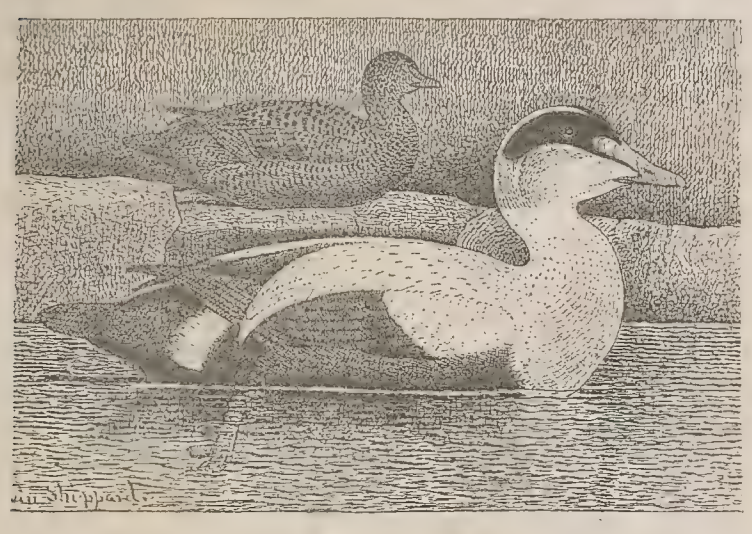
When seen along the coast of southern New England the eider is often found associated with the scoters, there commonly known as coots, and when killed it is usually shot out of flocks of these birds.

Mr. Gordon Trumbull notes as names of this bird, and of the next, the terms sea duck and drake, shoal duck, Isles of Shoals duck, wamp (this being of Indian origin, probably from wompi, white).

American Eider.

Somateria dresseri (SHARPE).

In this species the colors of both sexes are precisely like those of the preceding. The differences between the two lie chiefly in the manner in which the feathers of the front of the head meet the naked portions of the bill. In these eiders, on either side of the forehead a branch of the naked skin of the bill runs up into the feathers, which border it above and below. In the case of the common eider these branches are narrow and run up nearly to a point, but in the American form they are broad and terminate abruptly and bluntly. In the common eider, therefore, the feather patches running down into the angles between the naked skin are broad, while in the American eider they are narrow. There is also some difference in the shape of the bills in the two species, that of the common eider appearing slightly straighter



AMERICAN EIDER.

and more slender, while in the American bird the upper outline of the bill in profile is slightly concave. Slight as are the differences between the two, they appear to be constant and to be of specific value.

The American eider is the commoner of the two along the American coast. It is said to be found in winter along the Atlantic as far south as the Delaware River, but this perhaps only in winters of unusual severity. The American eider sometimes goes inland, and has been taken on the Great Lakes and in adjacent States, but there it is only an accidental straggler.

Its breeding grounds are in Labrador and from there to the Bay of Fundy. The nest is on the ground, very often on small islands, at a little distance from the mainland, and is formed of moss, weeds and twigs. Often it is under the shelter of some little low-growing evergreen, or in the open ground, behind the shelter of a rock. The eggs are few in number, only six, and are usually deposited on the soft layer of down with which the nest is lined. When the mother leaves the nest she covers the eggs with this down. The young are dark mouse color when first hatched and are at once expert in swimming and diving. As soon as the females begin to sit, the males leave them and assemble in flocks in the open water. The eggs are said to be of two colors—one a pale greenish olive, the other much browner; the paler egg is sometimes spotted and splashed with darker.

The eiders are deep sea feeders, and subsist chiefly on small shellfish, which they bring up from the bottom, often at great depths. They gather together in large flocks, and when they rise on the wing do so gradually, running and flapping along over the water for some distance, much after the manner of the scoters. In fact, in many of their ways these birds remind us much of scoters.

As might be inferred from their food, eiders are not desirable table birds, the flesh being usually fishy and very rank.

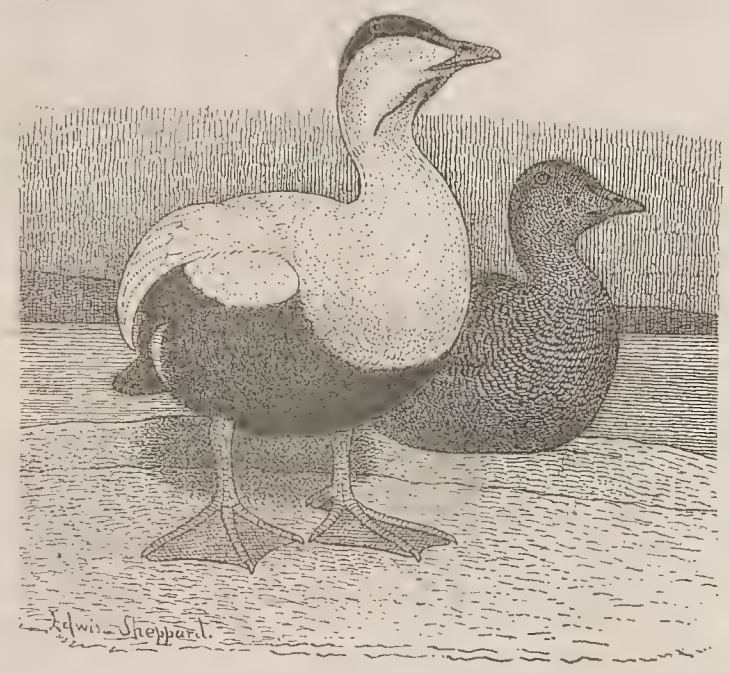
The Pacific Eider.

Somateria v-nigra (GRAY).

The plumage of the adult male is extremely like that of the two preceding species, though the bird is somewhat larger, with a broader and deeper bill. The black of the crown extends forward in the white strip beneath the forehead branch of the bill, but does not reach as far forward as the nostril. In the male there is a large V-shaped black mark on the throat, as in the king eider, but in this species the V-shaped mark is longer and narrower than in the king duck. The color of the bill is deep orange, almost orange red, fading toward the tip, which is yellowish white. The legs and feet are brownish orange.

The female is pale brown on the head and neck, darkest on the crown, streaked everywhere with blackish. The upper parts are reddish, barred with black. The length is about twenty-two inches.

This eider is the common Pacific coast form found in the North Pacific, Bering Sea and on the coast of Siberia. It is scarcely, or not at all, known south of Alaska. In the Arctic Ocean it is found as far east as the Coppermine River. It breeds throughout much of this range, not only in Alaska, but on the shores of the Arctic Ocean. The nests are variously placed, sometimes at quite a distance from the water; at others, close to it, and sometimes on little islands in the sea. They are always built on the ground, and are usually abundantly provided with down. In Alaska the breeding ground is often in the marsh and sometimes the place chosen is close to human habitation. The male is reported as assisting in building the nest and as constantly associating with the female during the time of incubation, though he himself takes no share in that labor. The



PACIFIC EIDER.

food of this eider is mussels and shellfish generally, which it brings up from the deep water.

When the young are hatched, early in July, the old birds begin to moult. The natives pursue the ducks in their canoes, striking at them with their spears. It is said that they do not kill many. Like the other eiders already spoken of, the fall plumage of the male is closely like that of the female, and we are told that the young males only attain their full adult breeding dress at the commencement of the third year. The Pacific eider is a large and handsome duck, weighing from four to six pounds. It is said to be loath to fly in stormy weather and to avoid rough water, resorting to the beach during wind storms or else taking to sheltered bays and inlets, where the water is quiet.

King Eider.

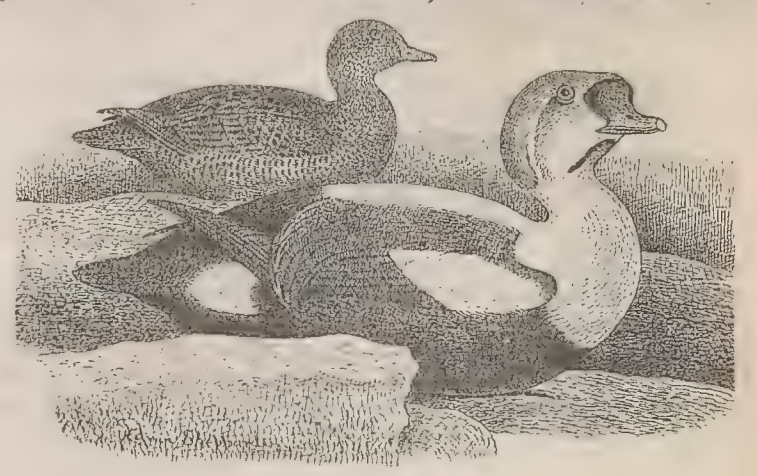
Somateria spectabilis (LINN.).

In the adult male the feathers about the base of the bill, a small spot below and behind the eye, and a large V-shaped mark on the throat, black. The whole top and back of the head, running down to the nape of the neck, pearl gray or bluish white, darkest below, where it sometimes changes almost to black. The sides of the head, running back from the bill below, pearl gray, and a patch over the ear sea green, fading into white above and behind. The rest of the head, neck, middle of the back, most of the wing and a patch on either side of the rump, white; the breast, deep buff or cream color. The greater wing coverts, scapulars, or shoulder feathers, and primaries, brownish black. The scapulars and tertiary feathers are falcate or sickle-shaped, bending downard over the primaries. The hinder portion of the back, rump, upper tail coverts and under parts, black; the tail is brownish black. Except in the breeding season, the bill is shaped much as in the ordinary eider duck, but in spring there is a large square soft swelling on the bill extending down nearly to the nostrils. The feathering in the median line extends down further on the top of the bill than it does on the sides, in this respect differing markedly from any of the other eiders. The bill is reddish orange, and the legs and feet similar, but slightly paler. The length is about twenty-three inches.

The adult female has the plumage buff or tawny, streaked on head, chin and throat with darker, the streaking being most abundant on the top of the head. The breast and sides are somewhat paler, with black bars across the feathers. The back and shoulder feathers are blackish brown, tipped with yellowish. The wing feathers are mainly black or blackish brown, the greater coverts and secondaries being tipped with white, to form two narrow bars across the wing. The tertiaries are reddish on the outer webs. The rump and upper tail coverts are tawny, barred with black; tail, black; breast and belly, blackish brown; under tail coverts, reddish, barred with black. The bill is greenish gray, and the feet yellowish.

Like some of the other eiders, this is a bird of circumpolar distribution, and is found in both continents. It appears to be everywhere much less abundant than other birds of the genus, and is found chiefly in the far North, although it sometimes occurs on the New England coast. It has been found in Long Island Sound and on the New Jersey coast, as well as on one or more of the Great Lakes and on some of the far inland rivers. It appears to be nowhere a very abundant species, but is found in the Arctic Sea on both coasts of America, and is not uncommon in Alaska. All the Arctic expeditions report seeing it and many have found its nest. It is resident in Greenland, and it is said that it occasionally breeds as far to the southward as the Bay of Fundy.

Mr. Charles Linden reports it as having been taken on a number of occasions on Lake Erie, and Mr. Nelson gives it as a visitor to Lake Michigan and to other parts of Illinois and Wisconsin; while the Smithsonian



KING EIDER.

Institution possesses specimens shot on Lake Erie and others secured on the Illinois River.

In Alaska Mr. Dall has found it, though not south of the Bering Sea. It occurs, however, in the Bering Sea, on both the American and Asiatic coasts, not far south of Bering Straits.

The king eider breeds far to the northward. Its nest is entirely simple, merely a hollow in the ground, in which pale green eggs are deposited, over which the female bird commonly places a layer of down.

From what has been said of its range, it will be seen that the king eider is not likely to come within the reach of the gunner, except as a very rare straggler. It is one of the most beautiful ducks, and the male, if killed, can at once be recognized. This species feeds chiefly on shellfish of various descriptions, and as may be imagined is not a desirable bird for the table.

Two Maine Propositions.

BOSTON, Feb. 2.—Two or three very interesting questions are now before the law makers at Augusta, Me. The proposition to require all sportsmen from outside the State to take out a license either to hunt or fish within its borders has been up for discussion, and has come before the Committee on Fisheries and Game, or is about to come. It will be remembered that this same measure failed of a passage two years ago and was referred to the next Legislature. I have sound reason to believe that one of the Commissioners at least is in favor of this measure, while one is opposed to it, tactily, if no more. It is very sure that if the Commission is in favor of taxing sportsmen from out of the State, it will be done. The farmers are already jealous of what is being done for the sporting interests; are fighting for reduced taxation, and will only be too glad to get some of the revenue out of "city sports," as they term visiting hunters and fishermen.

Another very important measure is the repeal of the September deer law. Numerous petitions have been handed in, and the matter has gained some headway. Guide Mathison, of Rangeley, who, it will be remembered, was the first to object to and at empt to resist the guide license law, is out with a newspaper article in favor of the repeal of both the September law and the guide license law. His article has been published in the most influential papers of the State. He sets forth that out of the several millions of dollars that the Commissioners' report shows to have come into the State through her fish and game, the guides get less than $50 each for the whole year. This conclusion he arrived at by dividing the sum the Commissioners' report shows to have been paid to the guides by the number of licensed guides shown in the same report. He says that the guides are poor men generally, and that it is not right to make them buy licenses once a year. He declares that the September law is bound to destroy the deer, unless repealed. Some aid he will get from the lumber landowners, who don't want the hunters in their woods in September, while petitions come from all parts of the State asking that the law be repealed. It will be remembered that the Megantic Club has requested the Maine Commissioners to forbid all September deer shooting on the lands of their preserve. A number of men of great influence in fish and game matters are decidedly opposed to the September license law, but it is hardly possible that their influence will prevail. The revenue that such licenses bring in stands in the way of repeal, while the Commissioners favor its retention.

SPECIAL.

Rhode Island Game.

REPRESENTATIVE ANTHONY, of Portsmouth, has introduced in the House an amendment to shorten the open season on quail, making it from Nov. 1 to Jan. 1, instead of from Oct. 15. The open season on partridges would be shortened to the same extent, while the season on woodcock would be lengthened for fourteen days, or from Oct. 1 to Jan. 1, instead of from Oct. 15, as at present. The open season on grass plover would be from August to April, and on black duck from September to March. On wood duck the open season would be from September to March, and on teal from Sept. 1 to March 1.

The Providence Journal of Jan. 23 reports: A deer was seen on Monday near Oakland. The deer, a doe, traveled across Sweet's pasture, going over the fences easily, and disappeared in the large woods of the Elisha Mathewson estate. The doe was followed into the woods by Charles Lapham and Gilbert Smith. She was found there quietly browsing, and did not appear to be very timid. She was not molested, as the neighbors all know of the heavy penalty attached for the shooting or killing of a deer. The animal was thought to be about a year old,

Massachusetts Deer.

Representative Hunt has introduced a bill reading "Any person may kill a dog found chasing or hunting a deer." Special.

Sea and River Fishing.

Notice.

All communications intended for Forest and Stream should always be addressed to the Forest and Stream Publishing Co., and not to any individual connected with the paper.

Proprietors of fishing resorts will find it profitable to advertise them in Forest and Stream.

A Day on the Pine.

Early in May of the present year I found myself in Cadillac, Mich., possessed of a few days' leisure and a strongly developed desire to fish. I met in the course of my wanderings one D. E. McIntyre (there is but one), a brother attorney, and having it upon good authority that he was a thirty-third-degree fishing fiend, I attempted to coax him forth to fish, but he only cocked his head and gazed at a weather vane across the street and declared that the wind was wrong. Entreaty and threats were of no avail. I promised to have the wind blow from any quarter that he desired, but to no purpose. I fear that he even doubted my ability to control the matter. But as business had to be suspended in his office during my stay, and I showed no disposition to depart, he finally decided to take me out, and said, "I'll tell you what I'll do—if you will agree to return with me to-morrow night (and leave town as soon thereafter as possible), I will drive with you to Hoxieville to-night and we will fish the Pine to-morrow." I think that at the time he intended to take me out and abandon me—like the babes in the wood—and only neglected it because of the change in the wind.

We started about 5 o'clock, and only those who have driven through the northern part of Michigan can appreciate the beauties and the drawbacks incident to that drive.

One of the horses chartered for the occasion was a pacer, the other a trotter. It took some time to discover this, though, as they both walked alike and seemed to prefer that gate.

The drive was about twenty-two miles, the first part through a barren stretch of sand dotted with the decaying stumps of giant pines, long since gone to fatten the financial rating of some long-headed investor. We wended a devious way up sharp rises and across swamps, through stretches of tamarack and across preserves of timber, principally hardwood. We passed many farmhouses during the latter part of the drive, and I noted that the stock all trod softly, probably from an instinctive fear of breaking through the thin soil.

Our journey ended at the home of a Teutonic gentleman bearing the name of Conrad Green, under whose roof we spent the night. We left a request to be called at 4 A. M., but the call was not necessary, as Green had some sort of a predatory excursion planned that necessitated his arising at 2 A. M., and his cat-like tread, coupled with his "German-American" directions to his wife re breakfast preparations and other details preparatory to departure, foreclosed further attemps at sleep. My legal friend is prepared to make affidavit (I heard him swear some myself) that our landlord wears flatirons on his feet and speaks four different dialects, mixed.

Green having "banished sleep," I sneaked forth in quest of fish as soon as I was able to see; and as a stream about three feet in width meandered through the village and I saw no sign forbidding, I commenced fishing at once within the corporate limits. I succeeded in catching six trout in a very short time, but was so discouraged by my companion's cries of "murder" every time I landed one that I was compelled to desist, fearing that he might arouse the police. Now I am prepared to concede that they were not record trout—that is, not for their large size—but I resent the imputation that they were wards of the village and hand-painted chub.

While we were eating breakfast, the man arrived whom we had engaged to take us to the "rollway," where we were to commence fishing, and he informed us that one of his horses had been so seriously injured by barb wire that it would be impossible for him to take us as agreed. I saw the injured horse, and the wounds were so severe that it was scarcely possible to believe that they were inflicted by barb wire. I am strongly in favor of legislation that will make it a misdemeanor, accompanied by heavy penalty, for any one to put up barb wire in fencing highway or line. The injury already caused by its careless use is almost incalculable.

As there were three other families in the vilage, we roused them all in turn and finally secured a team and wagon to take us to the "rollway."

Our driver was "from Indiana," and we had to "show him," as he was a recent arrival and did not know the road. Brother McIntyre, however, was well acquainted with it, and he was appointed a steering committee, and the start was finally made, with prospects as glorious as was the morning. The country through which we drove had much hardwood still standing, and did not present the forlorn appearance of the denuded and desolate pine country.

After driving about six miles (the advertised distance to the river was but four) and discovering no traces of the river my mind began to be harassed by doubts anent the reliability of our guide, and after invoicing the land marks he decided that we had taken the wrong road and that he did not know just where "we were at," which, being interpreted, meant that we were lost, all of which was a cheerful prospect for us. We did, however, strike the river, about five miles above our original destination, after wanderings in the wilderness, details of which would make the adventures of Moses and his followers look like a barnstorming trip. The harrowing part of the experience from my point of view lay in the fact that my companion laid the onus of the whole thing on me, charging first that I talked so much that he became bewildered, and second that I was a Jonah, anyway, with first option on more hard luck than would disorganize a half-dozen well planned fishing excursions.

Our outfit was a trifle behind schedule time when we reached the river, but we "limbered up" and commenced operations.

The Pine is a beautiful stream, with a current like a tail race. It wends its devious way through a wilderness of green, guarded in many places by towering banks, that made convenient "rollways," and at all points by well defined banks. It flows at times dimpling over deep pools, again swiftly over gravel or sandy flats, and again swirls and eddies in foaming rapids. It is the natural home of the trout, and he who wades must be sure of foot and avoid the clay bottoms as he would submerged ice.

Neither habitation nor sign of man, save marks of ravages in harvested pine, greeted us during the day. Bird and animal life also seemed lacking, the distant drumming of the grouse and occasional spoor of deer being its only evidence. My companion chanced upon a sleeping fawn and endeavored to catch it. His intentions were of the kindest, but were evidently misunderstood by the fawn. He (I refer to the fawn) was hitting nothing but the high places when last seen, and may be running yet.

We gathered about fifty trout, of which my companion, fishing consistenly with the fly, caught a majority. I must confess that I took an occasional sneak around a bend and "plunked"—didn't dare do it in presence of Brother McIntyre for fear of losing caste as a sportsman.

The mosquitoes bit a trifle better than the fish, but fortunately they did not swallow all that they chewed, or this tale had not been written.

Our driver was at the appointed place on time, and we soon reached Hoxieville and were started with our mixed-gaited team for Cadillas. The drive was long and tedious, but midnight found us at its end. I was tired, sleepy and, as Uncle Remus would say, "plum frazzled out," but I shall always recall that occasion as a red-letter day, and I could wish a brother angler no better fortune than a day on the Pine with as good a companion as I had. The only way it could be bettered would be by increasing the days and decreasing the mosquitoes. Counselor.

Jonesville, Mich.

Fishing Up and Down the Potomac.

Sunday Angling.

Prime, in his charming sketch book, "I Go a-Fishing," in the chapter on "What flies to cast on a Sunday," says, "The man is unworthy to call himself a wise man who wets a line on Sunday," and in the same paragraph ranks his Sundays as "chiefest among the enjoyments of the forest."

Nearly all who have written on the subject have been scornful or at least positive in their denunciation of this desecration, and the reason is plain enough; it is a thankless task to apologize for offending one's neighbors, and the Sunday angler is grateful enough if he can escape by the back door to the woods, unseen, without advertising his disgrace by rushing into print, his whole purpose being solitude.

There are local ordinances at various points along the Potomac River against Sunday angling—generally a State law for a single county, a singularly popular method of local option legislation in some parts of the South, where a member may get the credit of being "patron" for a law, as it is called in Virginia, without encountering the opposition of the rest of the State. The result is a patchwork of county laws, not the combined wisdom of a legislative body, but a blind conesnt to the prejudices of a community or the whim of an individual. For instance, one may travel across half a dozen counties and find as many different game laws, differing not only in dates of close seasons, but in the life included in the protective statutes—and no man knows all of Virginia's game laws.

It has been said of Coke—perhaps of others—that he declared he would not furnish an opinion upon the common law without consulting the text books, nor venture one on statute law until he had read the morning newspaper. So the wandering sportsman along the Potomac is by no means sure of his status till he has consulted a local attorney, and even then gets no insurance for his retainer. Where laws are found when enforced to bring more embarrassment or loss to the public than ignoring them, public sentiment usually acquiesces in their tacit repeal, and custom glosses open defiance till their existence is forgotten.

Occasionally now an officious citizen hales an innocent angler before the local magistrate with an unholy zeal; but for every such case may be found a thousand where gentle villagers have borne with silent dignity the outrage of public quiet, and even private right by noisy picnickers whose only claim to be called anglers is that they carry rods.

It is interesting to note the difference with which Sunday is regarded in the country and in the cities. McMasters, in his "History of the United States" (Vol. II., p. 566), writing of the period about a centry ago, shows when liberalization or demoralization regarding a devotional day first set in in the original Puritan colony: "Pious men complained that the war had been a great demoralizer. * * * The treaty of peace had not been signed, the enemy were still in the land, when delegates to the General Court of Massachusetts boldly said the Sabbath was too long. Country members demanded a Sabbath of thirty-six hours; town members would give but eighteen, and had their way. * * *

"'What,' the sober-minded cried out, 'is to become of this nation? Before the war nobody swore, nobody used cards. Now every lad is proficient in swearing and knows much of cards. Then, apprentices and young folks kept the Sabbath, and till after sundown never left their homes but to go to meeting. Now they go out more on the Sabbath than on any other day in the week. Now the barber shops are open, and men of fashion must needs be shaved on the Lord's day. They ride on horseback; they take their pleasure in chaises and hacks.' * * * Levity, profaneness, idle amusements and Sabbath breaking increased in all the towns with fearful rapidity."

Before the war, in parts of this Southern country, when the proprietor might go any day of the week and the slave only on Saturday afternoon or Sunday, the risk of a fisherman finding his favorite perch occupied or his string surpassed by a hand on the other side of the stream, if he indulged on that day, led to a fixed rule among the gentry never to go to the stream on that day, and what the gentry did was of course the fashion. In 1850, in a criticism of the books of Forrester ond Browne in the old Whig Review (Vol. II., page 32), in a little sketch, the writer, P. P., says, "The day was Sunday, and Joe, though far from a bigot, was a very aristocrat in his feelings, and had put a decided veto upon taking with us any tackle for fishing. He was not, he said, 'Sot up about Sunday, but huntin' and fishin' on that day was clear nigger and went ag'in him,' so we dropped the subject."

When Kit North reviewed Sir Humphrey Davy's "Salmonia" in 1828 (Blackwood, Vol. XXIV., page 271), he asked, "Do gentlemen of England angle on Sunday? No. You may see a cockney or other cit, the round-faced, pot-bellied, happy little father of a numerous family with knee breeches and buckles in his shoes, on a punt, or on a promontory, beetling three or four feet above the raging billows of a canal, pulling out an occasional 'animal' somewhat more like a fish than a fowl, to the infant delight of the progeny, with bags of worms and papers of paste swarming at his feet. Such a cockney or other cit you may see angling, and angling blamelessly, too, on a Sunday. But London physicians and presidents of royal societies and members for counties do not angle on Sunday in England, and were they to be met on the King's highway on their progress to the river, creeled and rodded and booted, while all honest and decent people were going to church, the first magistrate they met would commit them as audacious vagabonds to the treadmill."

This little skit does scant credit to Kit's wit or accuracy, but a single word saves it from the charge of ill nature, "blamelessly." But still the habit grew, for a quarter of a century later Angus B. Reach, in some random remarks on English and Scotch angling, said, in Sharpe's London Magazine (Vol. XVIII., page 149), "He who in the early Sunday morning ascends a second-class carriage on the Great Western Railway, or for that matter one or two other railways, will be tolerably sure to find himself amongst a community of the gentle craft. They are of all ages, from old men Izaak Waltons to Izaak Walton's grandchildren if he had any, and of different ranks of society—grades which seem, however, to be all bound together by the magic of the tinpot and the lob worm."

And still the habit grew, for in 1884, in the volume on "Practical Lessons in the Gentle Craft" of the Fisheries Exhibition literature (page 444), occurs the following: "It is, however, at the London, Brighton & South Coast Railway station and that at Liverpool street on the Great Eastern line that the most extraordinary sight in connection with the coarse fisherman of London is to be seen on every Sunday morning. It may be that mention of the day selected may offend the 'unco guid' section of polite society, but it must be remembered as a setoff that nine out of every ten of the great crowd gathered round the booking office window are recruits from the still greater host of workers with bone, muscle, thew and sinew, to whom loss of time during the working hours of the week means not only loss of bread, but perhaps the loss of some small delicacy to a sick and ailing child. Thus it would seem particularly hard to attempt restraint upon such men in the gratification of their simple pleasures, nor is it by any means certain that they do not imbibe far more real good through their vigil by the river side than if they had donned the carefully saved suit of go-to-meeting broadcloth and dozed drowsily and drouthily over a drawling doctrinal dissertation delivered by a divine of the 'Stiggins' type. Rest assured, if there be a sick baby, the little one is rarely forgotten, and smoke-grimed daddy, all the better and healthier in soul and body for his twelve hours' rest from the roaring forge, gathers her or him, as the case may be, a bonny bundle of wild blossoms, which he takes with him as the topmost layer of the cargo in his roach basket."

Our gentle friend Red Spinner found a favorite diversion in watching the antics of the town fishermen turned loose for a Sunday on the streams and in his "Waterside Sketches" (1885, page 38), said, "I was stopping at Henley, and, although I never actually indulge in my favorite amusement on Sunday, conscientious scruples do not prevent my watching with the keenest sort of interest any sort of rod work that comes under my notice on the day of rest. The first train on Sunday morning would bring down scores of rods, and most amusing it was to watch the anglers disperse along the riverside. * * * One morning I saw a dozen young fellows racing as if for dear life toward the meadows, foaming with rage at a dapper little French polisher who outstripped them all."

A pious friend was found one Sunday by the side of a rapid stream which had washed under the roots of a great plane tree that leaned far over the deep pool and darkened it with a shadow, dividing his attention between a bob and a book. Taken to task for violating his principles in this graceless way he said, "Sit down. If this is your favorite spot it will help nothing for me to go away, for the true angler, like the true lover, wants to be first or not at all. You see the majority of mankind are too lazy to think, and so swallow their opinions and their prejudices ready made. Sunday was made for man; it was made for me; it was made for rest. When men spent their lives in the fields and on the waters as shepherds or fishermen, their day of rest was bath and shade and quiet and thought and the sociability of a congregation and a forgetting the things of their week's life, and such a day meant renewed health, strength and a breathing spell that made the burdens of the morrow lighter. If Sunday were made now by the same people who made it first they would drive the outdoor men to shelter on the Sabbath, as they did then, and they would make it the duty of the sedentary to fly to the woods. What rest for a man who lives at a desk six days in the week can he find in a day spent as he spends his other six, in a day of quiet under a roof? Give him a day of pure air in the groves, 'God's first temples,' close to nature, which he is in danger of forgetting; give him life and set his soul to singing the music of the woods and waters or you will condemn him to misery here and maybe wreck a soul

hereafter. See what I am reading? He who has never read this Book under the greenwood trees has missed something of its beauties, of its grandeur, of its message to humanity. I am not a Catholic, but I have sympathy with a religion whose light before the altar is always burning and whose church door is always open. The religion that depends on Sunday for its salvation is not broad enough for me, though Sunday rightly spent may fill one's life with thankfulness and hope for many a long day. But we are too prone in our reverence for the inspired Word to translate it so literally as to lose its message. How long has the six days of creation stood between science and religion? The hog is here declared unclean, but without bacon the world would suffer today, and so the law is unheeded, and this Christian country raises a hog for every man and woman in it.

"Then in all ages man has resisted restraint, and none more innocently, perhaps, than the angler, who asks for nothing more than to be permitted to reach some solitude, where, disturbing none, he may himself be undisturbed. It seems not much to ask of society, but ever since there has been a society there have been spasmodic efforts to curb this gypsy tendency, and there are localities not much disturbed by outside influences where even Sunday golf would be frowned on. But in every large city, with its cosmopolitan tendencies and confined lives, there is a liberality in that regard bound to spring from such conditions. Then, too, a city need hardly concern itself about the angler, for his sins are principally beyond their jurisdiction, and his one idea is to get as far as possible from the madding crowd. Of course the wealthy need no recreation then, for theirs may be taken any time; the man who can spend a month in the woods may well rest on Sundays. It is for him who has no other day to spare from slavish routine, for it is not only the man with the hoe whose lights are in danger of blowing out with toil. It is no Christian spirit that would deny to the starving lover of nature his one day alone under green arches by wimpling streams, and whose fault will hardly be discovered if some detective, recking not his own rede, have not wandered from the beaten path of strict observance.

"Excuse me—I have a bite. * * * There, he is off. Well, so am I. We have spoiled each other's day, and this is the real threat to Sunday angling—that it is getting to be the one day when there is no spot upon the waterside undisturbed. Five miles down this stream, below the falls, are two hundred and fifty men with rods, and thirty miles from town. Good-by."

HENRY TALBOTT.

The Log of a Bicycle Fishing Trip.—III.

Through the Mountains of Virginia and West Virginia. Edited from the Diary of Mr. George N. Beall by the Commodore, F. R. Webb.

(*Continued from page* 90.)

WEDNESDAY dawned bright and fair, and early morning found me on the road. Much to my surprise, I found the dirt road down the valley—for I leave the pike here—not much the worse for yesterday's rain, and in fairly good shape; so much so that by noon I had easily finished the familiar part of the road, and found myself climbing up Jack Mountain and into new territory. Near the top I got caught in the edge of a shower, and hastily unlimbered my waterproofs and put them on, only to as quickly take them off again, as I felt the hot sun on my head and shoulders. I had to work my way down the other side of the mountain slowly, for the road was slippery and soft; and finally I was compelled to dismount and lead my machine, for the whole country seemed to be afloat; the storm had evidently been heavy down this way. Fortunately, I was not far from my destination, Sinnett's on the Black Thorn, where I proposed to stop for a day's fishing. Arrangements for my stay were soon completed, but I got no fishing this evening, as the rain had swollen and muddied the stream beyond the fishing stage; so after dinner with the family, having nothing better to do, I sought a cool nook in the old barn, where, free from the frolicsome and inquisitive fly, I slept out most of the long afternoon. The people here are Germans, and live in a primitive, old-fashioned way, but everything is clean and fresh. Quite early in the evening I was taken to a big upper room containing three beds, which were piled, here and there, high with spare blankets, female wearing apparel, etc. Mine host, after lighting me up so that I might get my bearings, disappeared with the glim, leaving me to grope my way into bed in the dark the best I could.

Next morning early I shouldered my rod and wended my way up through the meadow, intent on the trout. It was on this stream I made a great catch several years ago, and it was not without some fair degree of hope that I sallied forth this morning. The water proved to be quite cloudy, notwithstanding my afternoon's wait, and I was doomed to disappointment, for by 11 o'clock I had fished carefully a mile and a half of the stream and had only seven fish to show for my work. These, however, were of good size and looked well in my creel. I succeeded, though, in working up a good appetite for dinner, and did the same sufficient justice to please the generous host of mine. Having by this time grown better acquainted, I ventured to make myself a little more at home and risk my afternoon nap on my downy couch up stairs. The air was cool and pleasant, and by squelching an occasional fly, which sought too close an acquaintance with my sunburned nose, I enjoyed a luxurious siesta. With limbs and hope refreshed, I took another turn on the stream before supper, and reeled in four more beauties, one of which was at least 12in. long. The trout is an ideal fish, and his capture is one of the blissful moments of a fisherman's experience. The farm hands, busy in the harvest fields, had slipped in for their suppers and set out to work again until dark. A hard, pushing drive they have of it, from dawn until dark at this season of the year, as every moment must count.

In the evening I surprised the folks somewhat by scraping out a few tunes on the old three-stringed "fiddle" which hangs on the wall. The night being cool, a small blaze was started in the gigantic fireplace, which occupies pretty much all one side of the large room, and as the shadows flicker around the room—for there was no other light save the wavering firelight—I could easily imagine myself in some cottage in a far-off clime. Everything was so quaint and old-fashioned—the high mantelpiece, the pipe box in the corner of the fireplace, the three-cornered cupboard in one corner of the room, with its little diamond-shaped panes of glass and the old blue china shining within; the festoons of herbs and tobacco hanging from the smoke blackened rafters overhead, and the quaint old people with their heavy shoes and homemade garments—giving a general air of antiquity to the scene. I could have lingered until late to enjoy the novel experience, but, feeling that all were tired after the long, hard day's work, I thought best to efface myself, and, biding good-night to all, I sought my room, where opening my curtains wide I sought my couch by the light of the moon.

Early next morning I oiled up my machine and began to climb Jack Mountain again, toward Sugar Grove, with intent to stop at Kiser's, a few miles below, on the South Fork of the Potomac, where I proposed tackling the bass for a change. My brake hand grew weary long before I reached the valley on the other side, and a cool, shady turn of the road invited me to stop for awhile and rest. I found a house close by, and the pretty blue-eyed maiden who showed me to the spring wonders yet, no doubt, at my inordinate thirst; but I was drinking in the beauty of the modest little mountain violet, and lingered longer because I might longer linger. I had a great many questions to ask about things I was already familiar with, and the maid finally took a gigantic "tumble" and I fear what good impression I had succeeded in making was swept away. At Sugar Grove I got on the outside of my two letters in short order, but, in the language of the poet, "the letter that I longed for never came." Pocketing my disappointment along with my two letters, I savagely pushed the pedals and went jouncing along over the rough river road, somewhat to the relief of my feelings. Hearing that there were some Staunton people camped "below," I kept a lookout for their tents, but found that they had literally pulled up stakes and left.

Reaching Kiser's, I crossed the rough river bed with my machine under my arm, and surprised the natives in the topmost branches of the cherry trees down by the lane. I carelessly turned my head until the female portion of the assaulting party had landed on terra firma, and in the meantime interviewed the "old man" in regard to my stopping a day or two. He replied that he "couldn't jes' 'zackly tell, for as how as the boys ar runnin' the farm now," but, on remaining until dinner time, I had no trouble in convincing the "boys" that I was harmless and had no ulterior designs. My visit in the neighborhood last year with the Staunton Greenbrier Club fortunately paved the way, for I was quickly remembered and made welcome and in due time installed in the spare room. A harvest dinner of pork and fresh string beans and a big, hot cherry pie, washed down with plenty of cream, made me feel like a youth again.

I presently walked leisurely up the stream, and threshed the pools with the seductive fly, to the end that I scored seven nice bass and had a royal afternoon's sport.

Next morning, when all was quiet after breakfast, and the "hands" had disappeared fieldward, I leisurely packed my "horse," as the most of the people I meet call my bicycle, and hied me away down the road along the river bank in search of fresh fishing grounds, or waters, rather. The morning was bright, and as I climbed the outlying stretches of slate hills an occasional glimpse of the river far below made my rod hand itch to be with the bass. The merry spin of a wheel over an unfamiliar road is interesting, and was doubly so to me on this occasion, because my eyes took in more than the pebbles immediately beneath my tires, and were gladdened with new and strange scenery on every side; and throughout the mountain regions of the Virginias there is much to be seen that is very beautiful and interesting. A wayfaring man told me to stop at the mill; and as I pulled up behind a load of hay, the driver, seeing the beads of perspiration on my brow, invited me to join him at the miller's cottage in a social glass of ice water. This seductive beverage I had not tasted since leaving home, and as the cooling draft gurgled and sizzled down my parched throat I quite felt the enjoyments of home again.

After some deliberation on my part, I decided to stay with Mr. Hoover, the miller, for the remainder of the day and try the fishing here. I found the morning's sport quite good, and scored seven nice bass. The afternoon's sport was not so good, because, fishing below the mill, I approached too near the village of Brandywine, and local sports had somewhat depopulated the stream. Just before dinner, as I was quietly casting my fly in a likely looking pool out of which I had just taken two bass, I noticed two fair country maidens approaching this same pool from the land side, with their arms full of some sort of mysterious feminine apparel. Being heavily sunbonneted, they did not observe me, but kept up a ringing string of small talk and chaff about some culinary operation about to be gone through with presently. I had some idea of the proceedings which were about to follow, and was undecided whether to shriek out in terror or stand my ground like a brave man, and duck under if matters came to a focus. My embarrassment was growing painful when I saw the party deposit the mysterious-looking bundle on the bank, and one—evidently the advance guard—approach the river edge to reconnoiter, and report if any dreaded men persons were in sight. She made a long and careful survey of the down-river stretch, and reported "all clear." She turned, and her eyes rested on my manly proportions and handsome features, half submerged and not 30 feet away! Well! The expression which spread over her face was a study! With a shriek of dismay, with one accord, they grabbed their mysterious belongings and decamped down the river as fast as their feet would carry them. I was the innocent cause of trouble in the bathroom!

The FOREST AND STREAM is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday and as much earlier as practicable.

ANGLING NOTES.

Mounted Fish.

THE reports of the Forest, Fish and Game Commission have referred to a collection of mounted fish that the Commission was preparing. I do not now recall the language, but it was understood that fish were being collected and mounted to show the people of the State the kinds of fish that the waters produced or that the Commission propagated. This collection, if it can be so dignified, as it is far from complete, has been kept until lately at one of the hatchery stations, but has recently been moved to the offices of the Commission in the Capitol at Albany, and steps have been taken to complete it to a certain point, which will include the common food and game fishes, but it is not the intention to include rare fishes which are of interest only to the ichthyologist. At present the case contains brown, rainbow and lake trout, mascalonge, pike, pickerel, pike-perch, shad, yellow perch, white bass, cisco, and there my memory fails me. Mr. Denton mounted the fishes and now has in hand the brook trout, the large and the small mouth black bass and St. Lawrence River mascalonge—for the mascalonge now in the case is from Chautauqua Lake. All the fishes propagated by the State will be included in the collection. The specimens are not stuffed. The skins are removed, and dried over a form and then they are colored, as in life, by the artist.

Young Shad in a Reservoir.

The shad hatching station of the New York Commission is located on the Hudson River just above Catskill, and the water for the hatchery is taken from the Catskill reservoir after it is pumped from the river. In fact, the pumping station is situated only a few feet from the hatchery. When the young shad are hatched they are taken in cans and the men row out into the streams and put them in the water. To-day I was talking with Chief Fire Warden Emmons, who had just been at Catskill, and he told me that he was going to surprise me. I replied if it was about fish I had ceased years ago to be surprised at anything reported of fish. He had called upon Wm. Kortz, of Catskill, and learned of him that great schools of small fish had been discovered in the Catskill reservoir, where they were previously unknown. One of the men employed at the shad station lives at Catskill, and he was called in consultation, and the fish were found to be young shad of this year's hatching. I say this year's hatching, as they were from three to four inches in length. How did young shad get into the village reservoir? Simply by being pumped into it from the river. Undoubtedly the fry had come within the influence of the suction of the supply pipe and had been drawn into it and then up into the pond above and there they had grown to a fair size, as large, in fact, as if they had remained in the river. Now the question is how to get them out. The reservoir is frozen over, but next spring the State will probably make an effort to rescue the young shad and put them where they will do some good in the way of supplying food. The difficulty to overcome is that shad are so delicate that they cannot be handled from the time they are born until they are finally taken in nets for market without injuring their scales. It is doubtful if they can be netted without causing injury that will destroy them, but I doubt if the Catskill people desire to have their reservoir given over to the shad as a place of habitation, and they will consent to have the State try and remove them.

A. N. CHENEY.

Fishing on the Florida Gulf Coast.

TAMPA, Fla., Feb. 1.—Trout and redfish are running and some good catches have been made. Miss Marion Newman, the little daughter of Mr. Walter George Newman, of New York, has distinguished herself by capturing with rod and reel a 15-pound garfish. Duck shooting is good.

The Kennel.

Fixtures.

BENCH SHOWS.

Feb. 19-22.—New York.—Westminster Kennel Club's twenty-fifth annual show. James Mortimer, Supt.

March 6-9.—Pittsburg, Pa.—Duquesne Kennel Club's annual bench show. F. S. Stedman, Sec'y.

March 13-16.—Chicago.—Mascoutah Kennel Club's eleventh annual show. John L. Lincoln, Sec'y.

FIELD TRIALS.

February (First Week).—Grand Junction, Tenn.—Championship Field Trial Association's annual trials. W. B. Stafford, Sec'y.

Duquesne Kennel Club.

THE annual meeting of Duquesne Kennel Club, of western Pennsylvania, was held at their club rooms Jan. 28. The following officers were elected: President, J. B. Vandergrift; Vice-President, J. A. Davison; Secretary, F. S. Stedman; Treasurer, S. M. McElroy; Solicitor, J. D. McKennan; Delegate to A. K. C., G. M. Carnochan; Club Veterinarian, Dr. J. S. Lacock.

Arrangements were perfected for their third annual bench show, to take place March 6, 7, 8 and 9, entries for which will close Saturday, Feb. 23. The following judges have been selected, all of whom have accepted: Bull terriers, Mr. J. Lorillard Arden; pointers and fox hounds, Major J. M. Taylor; English, Irish and Gordon setters, Mr. W. S. Bell; bloodhounds, mastiffs, Great Danes, deerhounds, Russian wolfhounds, greyhounds, Chesapeake Bay dogs, sporting spaniels, bull dogs, Airedale terriers, French bull dogs, Scottish terriers, Pomeranians, toy spaniels and Italian greyhounds, Mr. Chas. H. Mason; St. Bernards, collies, old English sheep dogs, poodles, Boston terriers, beagles, dachshunds, fox terriers, Irish terriers, Black and Tan terriers, Skye terriers, Welsh terriers, Yorkshire terriers, toy terriers, pugs and miscellaneous, Mr. James Mortimer.

There will be a great many new specials, many of them to be won outright at this show. Among these is one (valued at $100) for the best exhibit of six dogs of one breed, which should create a good deal of interest,

E. M. Oldham will act as superintendent.

Premium lists will be ready about Feb. 10. All applications should be sent to F. S. Stedman, Secretary, Lewis Building, Pittsburg, Pa.

Irish Setter Club.

BOYDTON, Va., Feb. 2.—*Editor Forest and Stream:* The annual meeting of the Irish Setter Club of America will be held at the Madison Square Garden, New York, on Friday, Feb. 22, at 7:30 P. M.

GEO. H. THOMSON, Sec'y.

Points and Flushes.

Mr. H. H. Hunnewell, Jr., secretary of the American Fox Terrier Club, has sent out notices to the club members that the annual meeting of the club will be held at 55 Liberty street, at 11 o'clock, Feb. 18, in the office of the American Kennel Club. The executive board of the club will hold a meeting immediately after the annual meeting.

Yachting.

Notice.

All communications intended for FOREST AND STREAM should always be addressed to the Forest and Stream Publishing Co., and not to any individual connected with the paper.

"Modern Cruising Yachts: Their Design and Construction."

The following lecture was delivered at the Yachtsmen's Club on Wednesday evening, Jan. 23, by Mr. Clinton H. Crane, of the figrm of Tams, Lemoine & Crane. Mr. Crane's ability as a designer is well known, and being so thoroughly conversant with his subject he had no difficulty in holding the closest attention of his audience. Stereopticon views and blackboard sketches were liberally used.

You may be surprised that I should begin my talk to-night by making the statement that it is not generally known just what a cruising yacht is, and I feel sure that there are many here who will disagree with me at once. But I do make this statement as a fact, for to most people a cruiser means a yacht, however unsuitable in model, arrangement or construction, which, because she has proved too slow for racing, has been fitted inside with more or less cruising accommodations, and has had her rig reduced, and therefore is henceforward called and believed to be a cruising yacht, or only a "cruiser," a term which, under these circumstances, naturally carries a good deal of a slur with it.

This leads up to the statement that in the ordinary acceptance of the term any slow boat, either steam or sail, is supposed to be a cruiser. That this is a most mistaken point of view I shall endeavor to show to you this evening, for a real cruiser is as distinct from a racer as a torpedo boat is from an armored cruiser or ocean liner. Model, rig and arrangement must all be different, and it is under these three heads that I shall discuss the subject.

A modern cruiser is and must be a cruiser from the beginning—every bit of her, from keel to truck, should be designed and proportioned with that one end and aim in view. The model of a cruiser is and ought to be entirely different from that of a racer, a boat which must be designed for speed, regardless of everything else. That this has not been always the case we all know, for Iroquois, Ariel and Lasca, and others as well known, once racers, are to-day splendid types of cruising vessels; but when they were built the speed to be gained from extreme forms and light construction was not thoroughly understood. When I say that a modern racing boat is not a good sea boat, and that from the exigencies of her design necessarily cannot be a good sea boat, I know that I am again at variance with accepted ideas. She is—and no one can deny it—fast in an ordinary seaway. By seaway I mean such a sea as a 25 or 30 knot breeze will kick up on Long Island Sound. But put this same racing boat on the North Atlantic in a real gale of wind and there will not be a happy man aboard of her. With reduced sail she will roll so hard and bring up so sharply at the end of each roll that if she does not lose her sticks she may consider herself lucky. As she goes ahead into the heavy sea her bow will strike every coming wave with a crash which makes sleep impossible, and which causes every one on board to wonder if the next crash will be her last.

It is a matter of fact that in some of these modern boats, which, due to their age, are now considered cruisers, the crew are unable to sleep in the forecastle when the boat is under way in even a summer sea on Long Island Sound.

How different is the motion of the real ocean-going cruising yacht! She rolls deeply, perhaps, but the end of each roll is so easy that it is hard to say when the motion changes from one direction to the other. As she lifts and swings over the seas there is no shock—the feeling is more like a cradle—and when she goes down into the hollow of a sea it is not with a sickening drop, to bring up with a crash, but with a smooth and easy sweeping motion.

To thoroughly understand the reason for this great difference we must inquire into the causes which govern the motion of a vessel among waves.

In the first place all the motions of a vessel in a seaway, however complex, may be resolved into two sets, namely, rolling and pitching, which I will treat separately in the order named.

There are three elements in each case which control these motions: (1) The shape of the hull, (2) stability of the vessel, (3) the distribution of weights of the whole vessel (hull, spars and ballast).

How the shape of the hull acts in rolling is very obvious. A vessel with a perfectly round section once started rolling would swing back and forth like a rocking chair, with little or no resistance from the water, while one of a V-shape and having a keel would be very much impeded in rolling by the disturbance it would make in the water. Witness the very round sections of ocean steamers which have been greatly helped by the addition of bilge keels.

The effect of stability is not so clear until we see the truth of the statement that the greater the stability or stiffness of a vessel in still water, other things being equal, the harder she will roll among waves.

Now, suppose a vessel heeled over by some external force, either the wind or the roll of a sea. Suddenly remove the force which has heeled her. A stiff vessel will naturally return to a vertical more suddenly than one which is not so stiff, and having returned to a vertical she will carry past with more force, to be brought up again with more of a jerk than the vessel which is not so stiff.

To make it clear how the distribution of weight can affect rolling I must emphasize the fact that no body having considerable weight can be set in motion instantaneously, nor can it be stopped instantaneonsly, and the harder it is to start the motion, the harder it is to stop it.

Suppose a vessel in the trough of the sea, the port side being to windward. As the crest of a wave rises on the port side of the ship (the hollow now being on the starboard side), it is evident that the port side will tend to be raised and the starboard side to be lowered. It is also evident that the amount the port side will be lifted depends on the height of the wave, but also partly on the difficulty which the wave experiences in starting the roll and partly on the period of time during which the crest remains on the port side. Witness this walking stick, and suppose the twisting force represented by my hand. It is evident that with the same expenditure of force starting from rest I can twist this light wooden stick much further than I could a bar of iron, and the bar of iron much further than a smaller iron bar of the same length, if its ends were tipped with iron globes like a dumbbell. In the first case, I could not twist the iron so far as the wood in the same time, simply because it was heavier. In the second, I could not twist the dumbbell so far, even though of the same weight as the bar, because of the different distribution of the weight.

Also notice that I can stop the light cane with more of a jerk than I can the iron bar, and the bar than the dumbbell.

We have seen that great stability makes a sharp roll and that weight, and especially weight away from the center, makes it hard to either stop or start a roll with a jerk. A certain amount of stability we must have—enough to carry, and to carry well, our cruising rig; but we have already seen that we can obtain this stability either by greater weight or less lever arm, or by less weight and greater lever arm. As weight helps us in making the roll harder to start and stop with a jerk, it is obviously the element to choose, and we shall see hereafter how advantageous in other ways a large displacement is.

I think I may safely say that the predominating feature of the modern racing boat is the extreme lowness of its center of gravity, and I know that many people believe that this extreme weight on the end of a deep keel actually makes their boat safer. It is true that the modern boat is a safer boat than the old "skimming dish," but let us place our center of gravity low enough to insure safety and non-capsizability, and we are still a very long way from the deep lead mines of the modern racing boat. It is for most people a rather revolutionary thought that the skipper of a sailing vessel prefers to carry his cargo of ore on between decks rather than in the hold, but long before the modern theory of rolling had been evolved shipmasters discovered that a cargo of ore in the hold was a very dangerous thing and apt to whip the masts right out of their vessels, and this actually happened in the case of a ship built in Glasgow and sent from there to Liverpool in tow of a tug. The builders, who were of the "rule of thumb" variety, had piled iron ore in her hold in order to make her more seaworthy. The tug had no sooner gotten her into the Irish Sea than all three masts were carried by the board.

Here is another reason for large displacement in a good sea boat.

If you have ever tried cutting through a sapling with a light knife and then with a very heavy machete you will see the reason of the advantage of displacement or weight (for after all they are the same thing) to a sea boat. When you strike the sapling with the light knife, if you are able to get through it at a single blow, your hand will feel a very decided jar. With the heavier knife, though you strike with no greater force, it goes right through the sapling like butter, and from the feeling in your hand you would hardly know that you had struck a blow at all. It is the same way at sea. A vessel strikes wave after wave in going against a heavy sea. The lighter boat stops, staggering, at a blow that a heavy boats does not feel at all. Weight in a boat is like a heavy fly wheel to an engine, and makes her go smoothly and quietly through a seaway that would throw a lighter boat all off her course.

The short, deep keel of a racer is a most dangerous adjunct to a cruiser, for a vessel with such a keel can neither run well nor heave to well—running, she yaws all around the card, and hove to she will not lie still. Because the keel is short every sea twists her, and because it is deep she cannot gradually slide to leeward, as she should, leaving an oily wake to windward of her to break the coming seas. Constantly forging ahead, she is hard on herself and on all on board.

To the large displacement which we have seen to be desirable from many points of view, we should add generous freeboard in order that our vessel shall be able to heel to a large angle without taking water on deck, and that she shall have plenty of reserve buoyancy fore and aft to lift her over the crests of the waves.

I do not think that I can emphasize sufficiently the fact that a good sea boat is a boat whose motions are always easy in a seaway—that is, she neither starts abruptly nor stops abruptly. This is as true of pitching as it is of rolling.

In order that the bow should lift in going over a sea it is quite obvious that the stern must go down. If the shape of the stern is very flat and round it cannot settle easily and certainly without shock. If it is too sharp it will be driven under water entirely. The same way with the bow. If the bow is too full it will start more quickly, but when it comes down in the hollow of the sea instead of being gradually stopped without shock, it will stop suddenly and with a crash.

Let us review briefly the points which are essential to a cruising model: To roll easily she must have as little stability as possible. Weight or large displacement is a help. She must not have too deep nor too sharp a keel. She should have a generous freeboard. She must have sharp ends, though not too sharp. If we can place our heavy weights far apart we shall make her roll more easily. For instance, a lead keel joined with heavy spars, always provided that by the use of a lead keel we have not unduly increased our stability, will make a vessel roll more easily. We should have no more stability than we actually need to carry thoroughly well the moderate cruising rig which the vessel should have.

Now, we can see how this real latitude helps to a good vessel. As we need and want a large displacement, heavy construction is an advantage rather than otherwise. As we can easily give more than enough stability, heavy spars and rigging (and by spars I mean particularly the fixed spars, such as masts, topmasts and bowsprits) are not only no disadvantage but a direct advantage to the behavior of the vessel, as well as the more obvious advantage due greater strength.

Our large displacement gives us a large inside room, and as we can use lead as ballast the room gained in this way need not be sacrificed to the ballast. Though of large displacement, our vessel need not necessarily be slow, though of course not as fast as a racer.

At more moderate speeds the resistance of a sailing model is due almost entirely to surface friction. This is not a matter of opinion, but a matter of fact, which has been demonstrated by the steam trials of recent auxiliaries.

You may be interested to know that on the steam trial of Aloha at 10 knots speed, 75 per cent. of the total power used was required to overcome the frictional resistance. As 10 knots is in excess of the average sailing, you will see that the large displacement, which does not mean a larger wetted surface, is really no disadvantage to the boat's speed.

Rig should balance on a cruiser as in a racer to gain ease of steering.

In deciding on the rig for our cruising vessel our problem is no longer determined by the vessel's ability to carry sail, but by the ability of her crew to handle it. This is governed first and foremost by the vessel's length over all, for a long bowsprit or a long projection of boom aft of the counter are both evidently undesirable, the latter especially so.

No one sail must be so large as to be unmanageable in any kind of wind or sea. It should, if possible, be of a size capable of being handled, at least hoisted, by half the crew. It is quite usual to wait for reefing until a change of watch, when all hands are on deck, or to reef in an emergency all hands might be called. It is very evident, though, that the speed of the voyage will be greatly hastened if a single watch can set the mainsail.

Suppose our vessel is proceeding under reefed canvas in midwatch at night. If the breeze slackens up and there is every evidence of continued fair weather, no sailing master, and certainly not a yachtsman, would care to call his crew from their sleep to set sail for the few added miles gained on his course, unless he were reefing. It would probably happen, therefore, that the reef would stay in for two or three hours longer, until change of watch. If, however, the sail can be hoisted by a single watch, as soon as it is possible reefs will be shaken out and sail hoisted.

Reefing is one of the hardest jobs that a sailor has to face at sea. The canvas is thick, heavy, and as stiff as iron, especially if it is wet and cold, so that reefing is to be avoided if it is in any way possible.

It is evident that we may entirely avoid reefing if we split up our sail plan into a sufficient number of sails, for taking in a sail really accomplishes the same purpose as reefing.

As the sail is shortened the balance must be preserved, so that a properly designed vessel should have every possible latitude from the time she begins taking in her topsail until she is hove to under a storm trysail.

Various kinds of rigs have been devised with this end in view. Their suitability is largely dependent on the size of the vessel.

In smaller vessels, say up to 40ft., the yawl rig seems to be the most popular. A full-rigged cutter-yawl should handle under jib and jigger, under mainsail and foresail, or under close-reefed mainsail and storm jib. She should heave to under a storm trysail or under jib and jigger. From 40 to 100ft. there is no rig in the world equal in speed and handiness to a two-masted schooner.

A cruising schooner should not be of the sloop-schooner variety, with a tremendous mainsail and only foresail enough to tell the observer that she really is a schooner, but should have a foresail large enough to tack under in moderate weather. The masts should not be set too far forward, and the main boom should not extend more than 5 or 6ft. beyond the end of the counter.

The first sail to be reefed on a schooner should be the mainsail; but a well-designed schooner in a case of necessity should be perfectly manageable under foresail and jib. She should heave to under close-reefed foresail or under fore trysail. Many of the more modern cruising schooners, however, heave to under main trysail and fore staysail. From 100ft. up we have a large choice—either the out and out fore and aft schooner with two or three masts, the fore trysail schooner or the brigantine Vessels of this size should have auxiliary steam power, so that windward ability is no longer a professional consideration, and therefore a certain amount of square canvas is very acceptable.

There are many who claim that a brigantine is actually faster at sea than a fore and aft schooner. Very often in a heavy sea, but a light wind, the fore and after has to take and furl her mainsail because of the dangerous swinging and snapping of the main boom. Any one who has been at sea on a large schooner must be struck by the tremendous strain which the main boom puts on all the gear. On the fore leeward roll it brings up on the sheet with a snap and a jar which shakes the whole counter, and as the vessel swings the other way the boom tackle block jumps, dripping wet, out of the sea, and the whole ship quivers with the strain as the boom is suddenly checked by the tautening of the tackle.

With a square-rigger, however, there is no such trouble. The spars are all held firmly in place, the sails are not disturbed by the pitching and rolling, and in a heavy sea the brig goes quietly about her business, opening up miles of water on her erstwhile faster sister. A brigantine should go to windward with mainsail furled on deck, simply her headsails and square canvas set, and in the strongest weather should heave to on her main staysail.

In considering the general arrangement we for the first time are met with one of the chief regulators of size in a cruising yacht. The owner wishes to provide for the members of his family and a certain number of guests—thus the number of people to be provided for is one of the elements which governs size.

The second element, and one quite as important as the first, is the degree of elaboration with which the owner wishes to carry on his life on board. For instance, the man who is willing to sleep, eat and dress all in one room or main saloon, who is willing to do his own cooking and to do without washing except in salt water, is bringing life on board ship to its very simplest form, and all he really requires is berthing space for himself and for the number of crew he needs to carry.

From this, the most primitive form of life on board a yacht, we may progress through all the stages until we arrive at a Valiant or a Corsair, where the most elaborate form of shore life is accurately reproduced on the water—a separate room for each person on board, with its private bath attached, card rooms and libraries, boudoirs and salons, and three times a day elaborate meals served with the greatest precision and care, just as on shore.

However, a man may wish to live on board between these extreme cases; the two items—number of persons to be provided for, and the style and scale of living proposed—furnish us at once with the basis of size. With the owner's quarters of a given size, and the owner's requirements of a given kind, it is very evident that the size of the ship is pretty well fixed. Officers, crew and servants must first be provided with living quarters and machinery, if there is machinery. The remainder, which must be equal to the amount required originally for the owner, must be subdivided into staterooms, saloons, bathrooms, etc.

The old-fashioned way of designing an arrangement was for the owner to elect the size of vessel which he wanted and then try to get as much accommodation as possible. This is even to-day a governing factor, for the size is a fair measure of the number of crew, as well as of the first cost of the vessel, though we must remember that length alone does not mean size. The problem, however, usually comes very differently. A man has a family of a certain size whom he wishes to provide for in addition to one or more guests. This means a certain definite number of staterooms, bathrooms, etc., for which the architect must provide. His problem then is to produce the smallest possible vessel which will give the required quarters, bearing in mind just how the individual wishes to live.

As a cruiser should be independent of the shore for long periods of time, and as to-day fresh provisions are the only ones considered edible on board a yacht, ample ice boxes or cold storage rooms must be provided, the water supply must be ample, and in the case of a steamer or auxiliary vessel there must be a large provision made for coal. Usually in a vessel of any size the hold can be counted on for the water tanks and wholesale stores and ice from the very beginning. However, if there is to be comfortable living aboard there should be a place provided for every single item of the ship's equipment, from the ship's lamps in the forecastle, to the ball of marline in the lazarette.

Chicago Y. C.

THE Royal Canadian Y. C., of Toronto, Ont., has challenged the Chicago Y. C., of Chicago, for the Canada cup; the challenge has been accepted, and the following agreement drawn up covering the conditions for the match:

CHICAGO, Jan. 9.—Conditions governing the match for Canada cup, to be sailed between yachts representing the Chicago Y. C. and the Royal Canadian Y. C.:

Rules—The racing rules shall be those of the Yacht Racing Union of the Great Lakes, as existing at this date, subject to such additions and variations as are herein provided, and in accordance with the Deed of Gift, dated the 16th day of January, 1897.

Construction—The yachts shall be of wooden construction, in accordance with the scantling tables in the rules above mentioned.

Size of Yacht—The competing yachts shall be in the 35ft. class.

Number of Races—The winner of three out of five races shall be declared the winner of the match.

Dates of Races—The first race shall be sailed on Aug. 10, 1901, and the other races on consecutive days thereafter, until completed, Sundays excepted.

Courses—The races shall be sailed on Lake Michigan, off Chicago, on courses to be hereafter agreed upon.

The first course shall be triangular.

The second course shall be windward or leeward and return. The tug bearing the buoy shall start at the time the preparatory gun is fired.

The third and fifth shall be similar to the first.

The fourth shall be similar to the second.

The triangular races shall be once around an equilateral triangle of twenty-one nautical miles.

The windward or leeward races shall be nine nautical miles to windward or leeward and return.

The triangular courses shall be so sailed that one side of the triangle shall be to windward if possible.

In windward and leeward races all buoys shall be left to starboard, and in triangular races all buoys shall be left to starboard or port, as directed by the judges.

Time—All races shall be started at 11 o'clock A. M.

Any race not sailed in five and three-quarter hours by the winning yacht shall be resailed.

The start may be postponed by the judges:

1st. In case of fog.

2d. If, in their opinion, the space round the starting line is not sufficiently clear at the time appointed for starting.

3d. In case both yachts consent to a postponement.

4th. In case of serious accidents to either yacht, as hereafter provided.

5th. Should such a course appear to them desirable. And is case of postponement the judges shall determine the time for starting, but in no case shall a race be started later than 1 P. M.

A yacht crossing the line before the starting signal is given shall be recalled by five short blasts of the whistle, the hoisting of her national flag, and also by megaphone.

Unfinished Races—An unfinished race shall be resailed until completed.

Accidents—In case of accident to either yacht prior to the preparatory signal, notice thereof shall immediately be signaled to the judges, who shall have power to postpone the race if the accident, in their opinion, is sufficiently serious to warrant such a course; or, if an accident occurs during a race, the yacht to which the accident has happened shall have sufficient time to make repairs before being required to start in the next race.

Scrutineers—Each yacht shall have on board during the races a representative named by her competitor, whose weight shall not exceed 150lbs.

The names of the scrutineers shall be given to the judges not less than twenty-four hours before the first race, and the scrutineers shall report to the judges within six hours after the termination of each race.

Management—The races shall be sailed under the management of three judges, none of whom shall be interested in either yacht. One shall be appointed by each club, and the two so appointed shall select a third on or before the first day of July, 1901, and they shall act as judges and timekeepers and settle all disputes. The decision of a majority shall be final in all matters.

The judges shall be the Regatta Committee referred to in the rules of the Yacht Racing Union of the Great Lakes.

Measurements—The yachts shall be measured by the judges or by a disinterested person appointed by them, and each yacht shall be entitled to have a representative present when measurements are taken.

The yachts shall be measured not less than two days before the first race.

Crews—The crews shall be limited to six men, whose total weight shall not exceed 1,050lbs.

Instructions—Charts of the course and instructions shall be furnished to the competing yachts not later than 9 o'clock on the morning of the race.

Alterations—These conditions may be altered or amended by mutual agreement at any time.

1. All yachts entered for the trial races must be measured by the Canada cup committee of the Chicago Y. C., or some person appointed by them, before the day of the first race.

2. No yacht shall be eligible to contest in the trial races unless it is built in accordance with the rules of the Yacht Racing Union of the Great Lakes and the agreement made between the Royal Canadian Y. C. and the Chicago Y. C.

3. The yacht selected to represent the club shall be the one which in the judgment of the committee shall be the best adapted therefor, and not necessarily the winner of a majority of the trial races. Additional races may be ordered sailed by the committee between such contestants as they may select.

4. All races shall be sailed under the racing rules of the Yacht Racing Union of the Great Lakes.

5. In the event of a race being postponed or ordered resailed, it shall be sailed at as early a date as possible.

6. The trial races will take place in the latter part of July or first part of August, off Chicago, and full particulars will be furnished to the owners of competing yachts on or before July 15, 1901.

7. A suitable prize will be given the winner.

8. All entries for the trial races must be made by the clubs to which the owner of the respective yachts belong. Clubs intending to make entries are requested to notify the secretary, Charles E. Fox, who will furnish them with blanks upon and in accordance with which entries must be made. Entries must be made on or before July 10, 1901.

9. The Chicago Y. C. reserves the right to refuse any entry which may be tendered.

Any additional information regarding details, etc., will be furnished upon application to Charles E. Fox, secretary, 1618 Monadnock Building, Chicago.

JOHN B. BERRYMAN, Chairman.
GEORGE WARRINGTON,
EDWARD ROSING, Committee.
CHARLES E. FOX, Sec'y Chicago Y. C.
CHARLES H. THORNE, Com. Chicago Y. C., ex-officio.

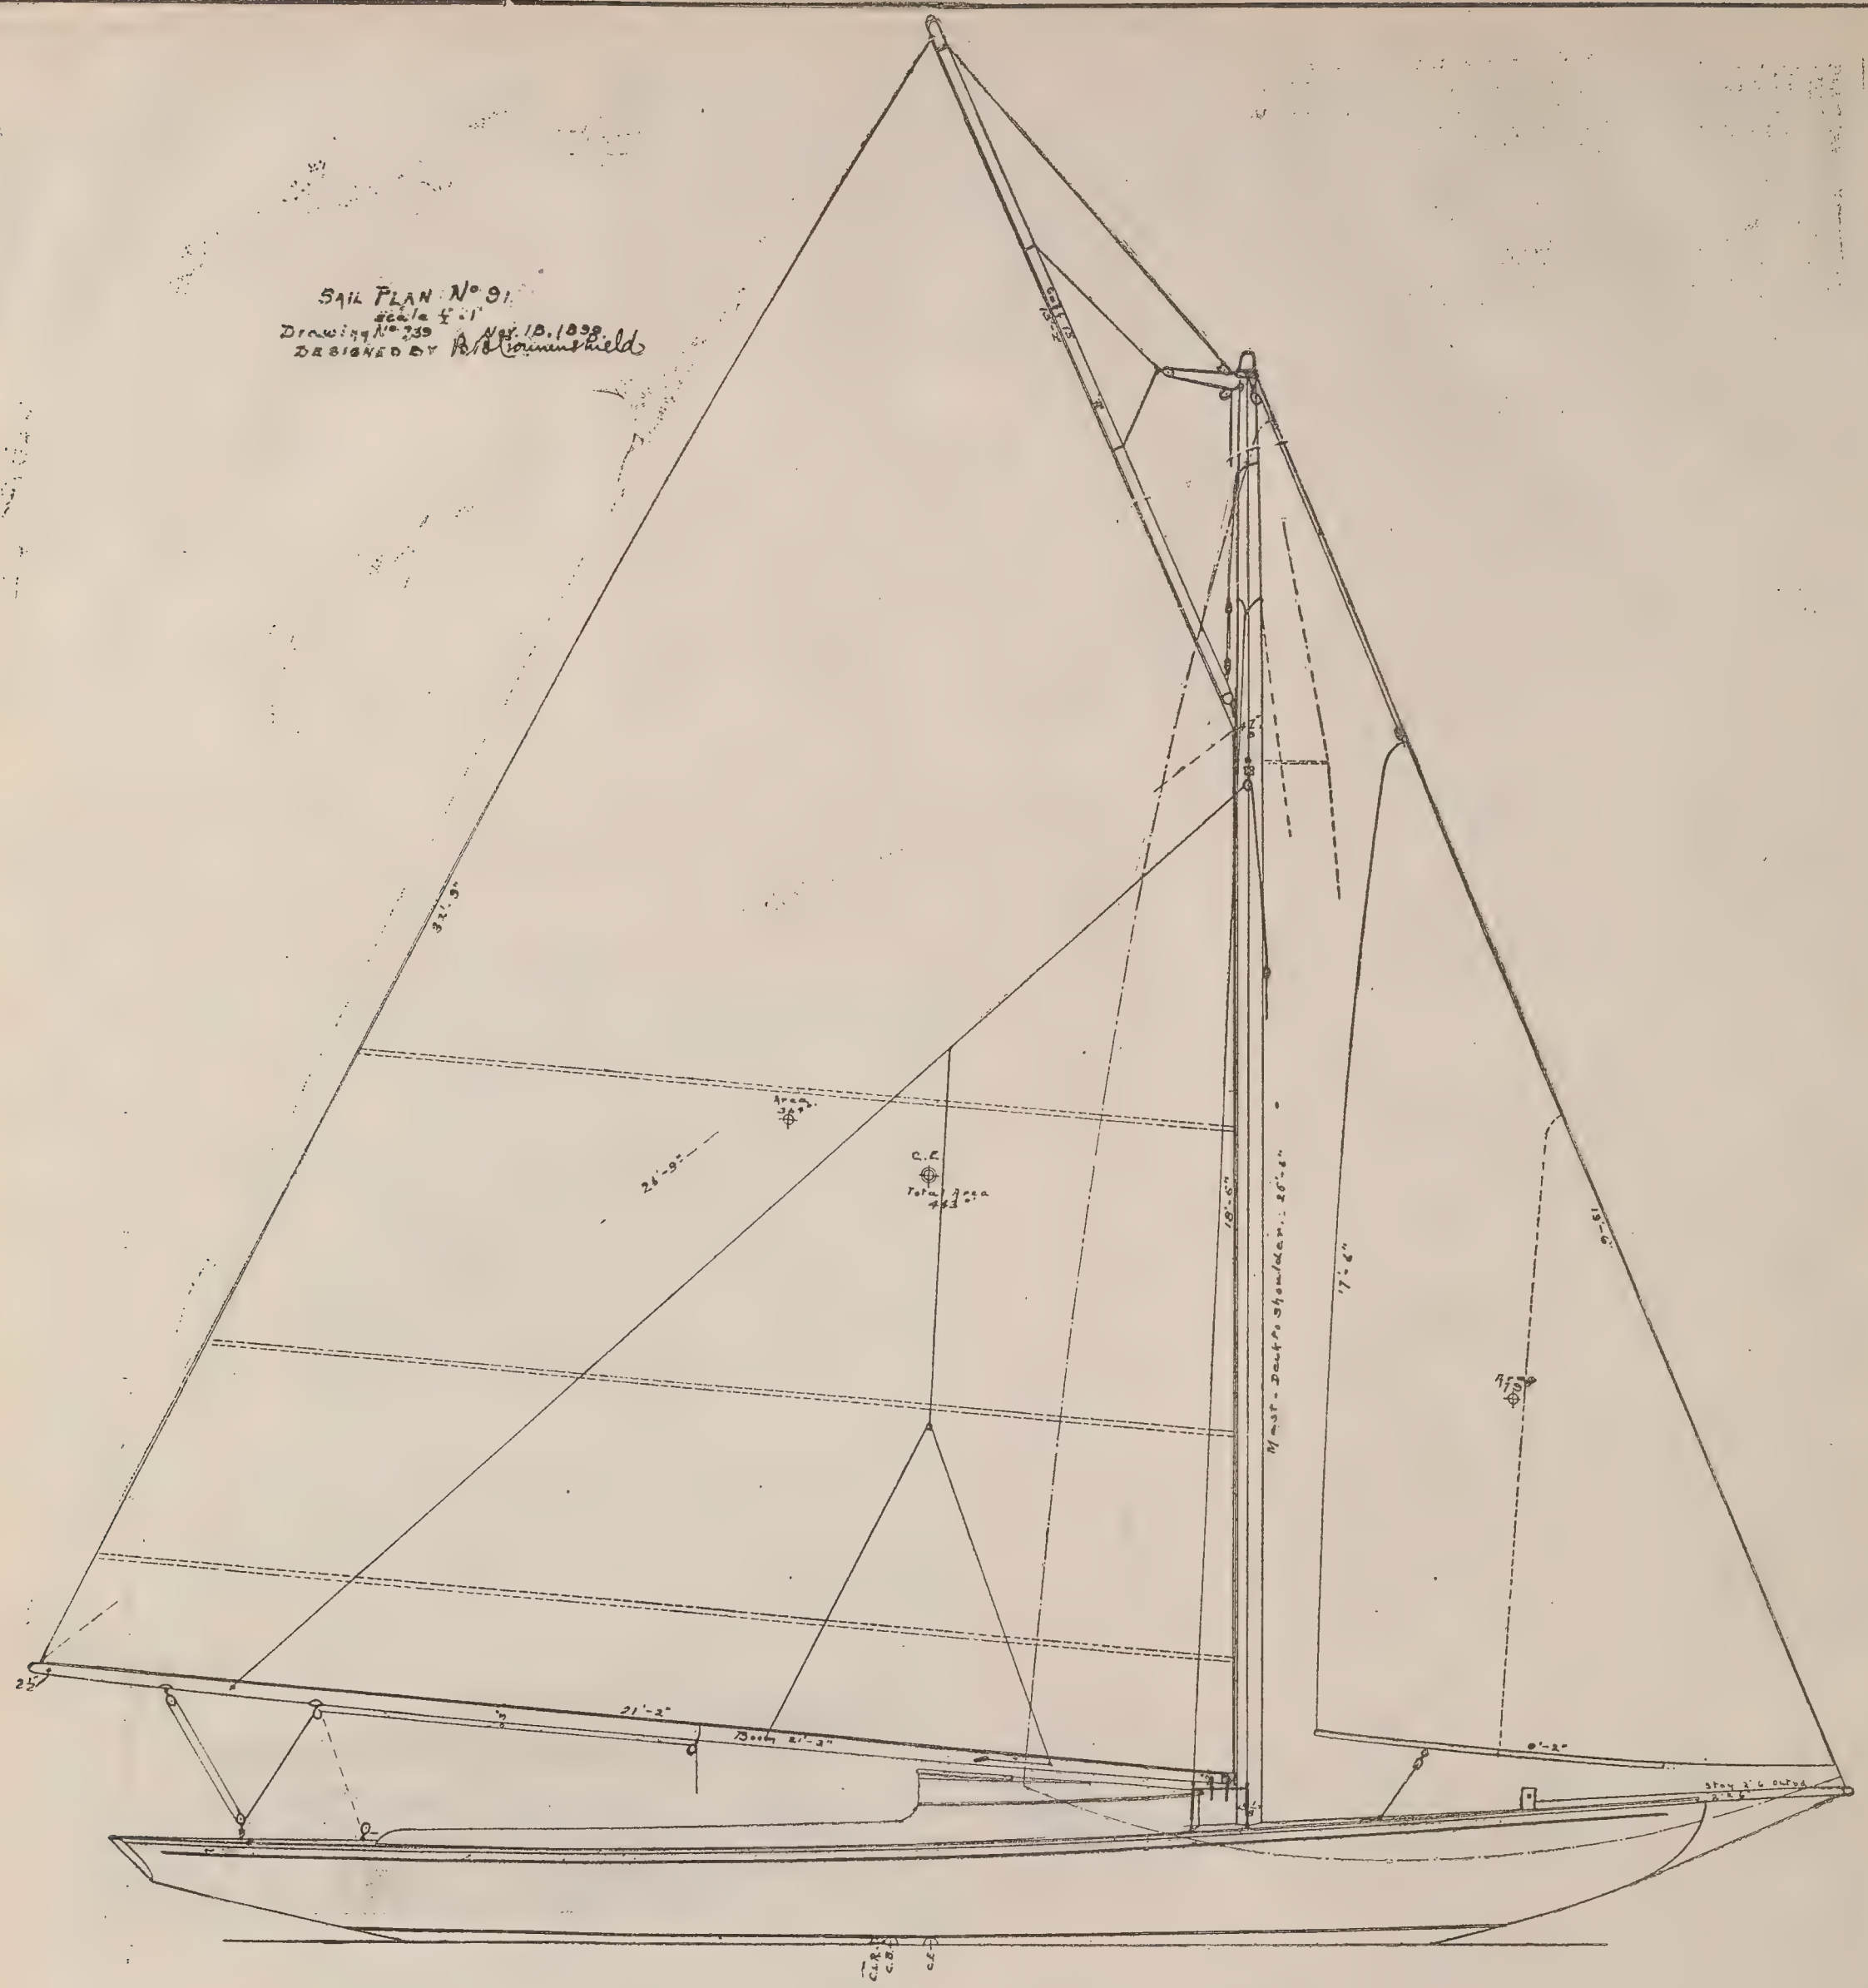
Broncho.

BRONCHO was designed by Mr. B. B. Crowninshield for afternoon sailing around Boston, Hull and Marblehead. The rules of the Massachusetts Y. R. A. for 18ft. waterline knockabouts were followed in the construction, but a larger sail plan was used as the boat was stiff enough to carry it. With one reef taken, the boat complied fully with the rules. As there were no other boats in this class around Boston, Broncho was not raced. The mainsail was made somewhat larger in proportion than usual in boats of this type, and the jib was intended principally for a steering sail. This being so, it was perfectly easy to handle the boat with mainsail alone or with one, two or three reefs tied in. Cleats for the sheets and halyards were put in the most convenient places for the helmsman and the jib was arranged to be handled with either one sheet or with two, so that one person can alone handle the boat comfortably. The cockpit was made watertight with scuppers, thus avoiding the necessity of bailing after every rain or when it was rough and the water had slopped over the rail. In moderate weather cushions were used on the cockpit floor, but when the wind blew hard it was more comfortable to sit on the deck. For ordinary sailing the centerboard was not used at all, but on the runs between Boston and Marblehead it helped considerably. Mr. George M. Piersol, the present owner, bought the boat last August and took her to Marion, on Buzzards Bay, where she was sailed the rest of the season. This winter the boat is to have a cabin house added so that she can be used for short cruises. The former owner, Mr. Frank Tandy, gave George Lawley & Son Corp. an order late in the summer to build a keel boat with a small cabin house for the same class. Mr. Crowninshield made the plans and the work has been completed. Mustang is the name of the new boat. Broncho, with her black topsides and broad gilt stripe, light green bottom and teak deck fittings, makes a very shippy looking craft. She was built by James E. Graves at Marblehead.

BRONCHO.
Designed by B. B. Crowninshield. Photo by Jackson, Marblehead.

Her dimensions are as follows:

Length—	
Over all	28ft.
L.W.L.	18ft.



BRONCHO—SAIL PLAN.

Overhang—		
Bow	4ft.	10 in.
Stern	5ft.	2 in.
Beam—		
Extreme	7ft.	8 in.
L.W.L.	7ft.	1 in.
Freeboard—		
Stem	2ft.	6 in.
Least	1ft.	6½in.
Taffrail	1ft.	9 in.
Draft—		
Extreme	3ft.	
To rabbet	1ft.	2¼in.
Board down	6ft.	5 in.
Displacement	4.350lbs.	
Ballast—		
Outside	1,530lbs.	
Inside	300lbs.	
Total	1,830lbs.	
Ratio of balast to displacement	.33	
Displacement per inch at L.W.L.	516.51lbs.	
Midship Section—Area	7.1 sq. ft.	
L.W.L. Plane—Area	96.8 sq. ft.	
Lateral Plane—		
Area, hull	32.84 sq. ft.	
Area, rudder	5.23 sq. ft.	
Area, centerboard	7. sq. ft.	
Area, total	43.07 sq. ft.	
Maximum girth of hull	11.44 sq. ft.	
Sail Area—		
Mailsail	364 sq. ft.	
Jib	79 sq. ft.	
Total sail area	443 sq. ft.	

The construction plan will be given in a later issue.

Our Boston Letter.

Boston, Feb. 2.—Some doubt has been raised by the yachtsmen in this district as to the judgment used by the owner and the designer of the Boston Cup defender in giving her dimensions to the public. They argue that either Herreschoff or Watson could easily change their designs if anything dangerous were found in the Boston boat. It is quite true that either designer could change his lines, but there are few yachtsmen who believe that either would take the chances of ordering a complete outfit of frames, plating and bracings, which a change in the design would make necessary.

Then, too, it is more than reasonable to suppose that each of the designers has a distinct idea of his own in regard to what he thinks will produce the most speed in a 90-footer, and he would be unwilling to depart from those ideas, even though the plans of another designer looked dangerous. As a matter of fact, the dimensions given out by the Boston designer give but a very remote idea of the actual form of the boat. He has not given the draft of the hull, nor the draft below the rabbet, so that he has not told the public or the other designers just how far he has gone in the matter of reducing dead rise.

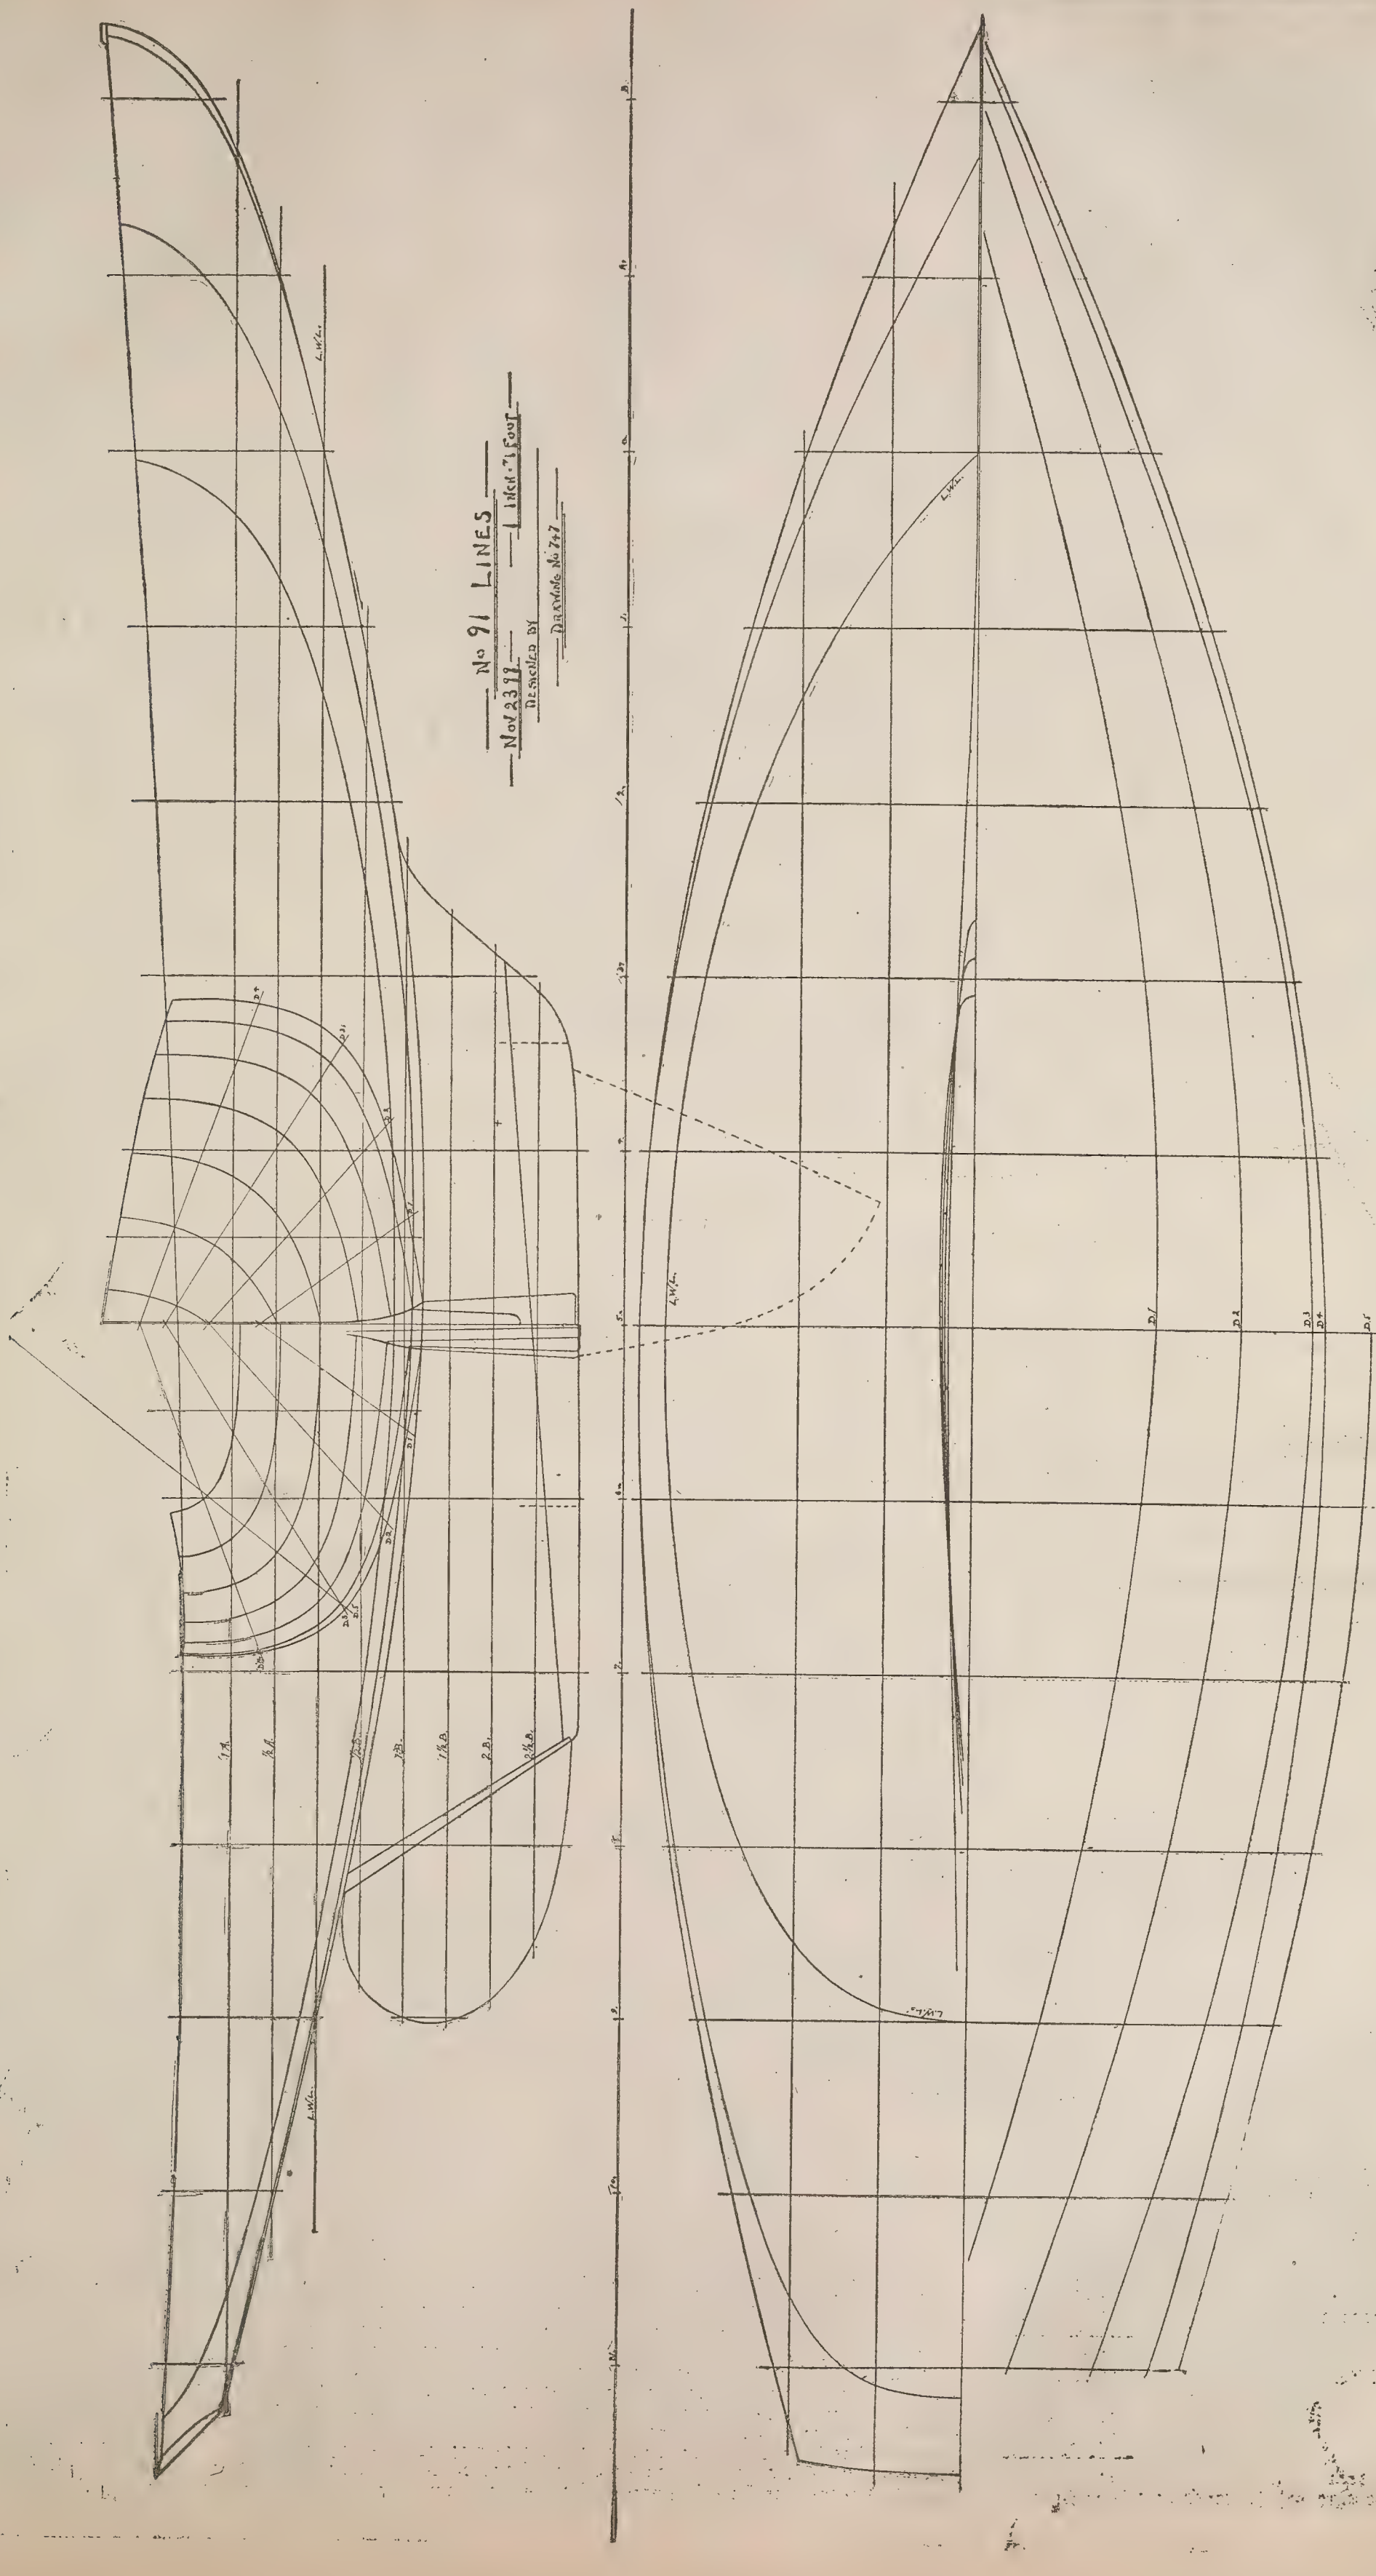
The work of bending frames is going on rapidly at the Atlantic Works, and already more than half of the angle irons have been bent to shape. In the big shed the frame of the keel has been set up. It takes up almost the entire length of the shed. From bow to stern, including the outline of the keel, the lines are as nearly straight as it is possible to make them, and still show beauty in form. In fact, even from these initial disclosures the boat shows herself to be a thorough racer.

A delay has been caused in having the first casting of the bottom of the trough keel spoiled at the Victor Metal Company's works, at East Braintree. The casting came out in such poor shape that it was thought best to run another one. This was done Friday night, and it is expected that the new casting will be ready to be shipped to the Atlantic Works by Monday. The casting was taken out of the sand Saturday and will have plenty of time to cool. The work of cutting off the snags and smoothing it up will be rushed.

Some interesting figures in regard to the construction of the yacht have come to light, which seem to have come from reliable sources. The specifications call for 160 pieces of bulbed steel angles, each of which is cut to the required length for its use on the boat. Frame No. 1 is 2ft. 9in. long, and the longest pair of frames are marked 80. They are each 32ft. 6in. long. Frames numbered 45 and 46 are each just 32ft. in length. There have been ordered 86 deck beams, all of which are bulbed angles. Six are 24ft. 1in. in length, and the shortest is 2ft. 2in. Four U-shaped beams will be used for strengtheners at the mast station.

There have been 126 plates ordered, although the plans call but for 114. The margin is for imperfect plates, or those which may be spoiled in the working. Row A, on each side of the boat, the topsides, will be of nickel steel, there being nine plates on each side. Row B contains 12 bronze plates, and row C the same number. Row D has 10, row E 8, row F 5, row G 4 and H and I 3 each. These are at the bottom of the fin. Some of the plates for the fin have arrived at the Atlantic Works. Holes will be punched in these and afterward reamed out in a few days.

It is with the greatest pleasure that yachtsmen who are devoted to the raceabout type have heard of the decision of the Boston Knockabout Association to offer an intercity cup for a series of races between them. The building and racing of 90-footers does not come within the reach of the average yachtsmen, and neither, for that matter, do the racehouts. But there are many who can afford to build



BRONCHO—DESIGNED BY B. B. CROWNINSHIELD FOR FRANK N. TANDY.

and race the smaller type, which has proved very popular in all waters along the coast.

In Massachusetts the raceabout fever showed distinct signs of dying out, although it is still strong in other districts. The trip of B. B. Crowninshield's Jolly Roger to Buzzards Bay and Long Island Sound last fall awakened interest somewhat in Massachusetts, and a lively interest in the places which she visited. It is the object of the Boston association to revive interest in the class in local waters and to provide a suitable object for the yachtsmen of other districts to enter in general competition.

Representative yachts may compete for the cup from Islesboro, Me., to New York. There are a number of raceabouts in Maine, and great interest is taken in the class there. Islesboro bids fair to become a great yachting center at no distant date. The value of the cup has not been decided upon, and this will greatly depend upon the amount of funds at the disposal of the Executive Committee of the Knockabout Association, but all of the men interested have plenty of means, and will go into their pockets to produce a cup that will be worth going for. As the races will be held after the racing season is practically over, there should be contestants from all of the districts named in the circular. The following is the announcement made by the Boston association:

The Knockabout Associa ion, of Boston, hereby offers a cup to be known as the Intercity Cup for Raceabouts, and declares, as below, the conditions which shall govern competition therefor.

Article 1. Contest to be open to a representative boat from each of the following districts, or from any other district by approval of the Executive Committee: Islesboro, Me., and vicinity; Buzzards Bay, Newport and vicinity; Long Island Sound and Marblehead and vicinity.

Article 2. Races to take place off Marblehead, and to begin on Monday, Sept. 9, 1901, and to continue daily until one boat has won three races. After four races have been sailed, only winners of one race shall be allowed to compete. After six races, only boats which have won two races. The cup is to become the absolute property of the final winner.

Article 3. Races shall be sailed under the rules of the Knockabout Association governing raceabouts and restrictions relating thereto, and under the rules of the Yacht Racing Association of Massachusetts governing sailing regulations.

Article 4. The general conduct of the races shall be in charge of the Executive Committee of the Knockabout Association, and any point not covered by the above rules shall be referred to it and its decision shall be final.

Article 5. Entries must be made to the Executive Committee of the Knockabout Association on or before Sept. 1, 1901.

Article 6. Nothing in this shall prevent any change or modification mutually agreed upon by contestants and satisfactory to the Executive Committee of the Association.

C. F. Adams 2d, Frank Brewster, C. H. W. Foster, Executive Committee. The address of the committee is 8 Congress street, Room 21, Boston.

An interesting dory class has been formed at the Dorchester Y. C., which is expected to afford plenty of good racing for the season. Twelve boats have been ordered from the Mather Boat & Canoe Company, which has just removed its shops from Rowley to Atlantic.

The Chelsea Y. C. has elected the following officers for 1901: Com., W. H. Wedger; Vice-Com., G. R. Stuart; Sec'y, B. M. Brennen; Fin. Sec'y, S. C. Gleason; Treas., A. N. Kinkaid; Meas., T. G. Hughen; Directors, G. R. Stuart, W. A. Young, C. G. Lenfest and W. L. Murphy.

B. B. Crowninshield visited East Boothbay last week and gave the specifications of the 54ft. schooner for W. O. Mayo to Rice Bros. The 46-footer for W. M. Lovering, which is building at this yard, is in frame.

At the annual meeting of the Quincy Y. C. the following officers were elected: Com., E. E. Davis; Vice-Com., J. S. Whiting; Sec'y, H. B. Faxon; Treas., G. W. Jones; Meas., L. C. Embree; Executive Committee, W. P. Barker, H. M. Faxon, G. E. Pfaffman and F. B. Rice; House Committee, H. W. Barker, F. R. Burke, F. F. Crane, William Edwards, C. F. Howe, E. F. Ricker and J. S. Whiting. A special meeting is to be called to consider building a new club house.

Kiley's Marine Agency has sold the schooner Intrepid to E. F. Bowers et al. She will leave New London next week for a cruise to the West Indies.

John B. Killeen.

Yacht Club Notes.

The Board of Trustees of the Larchmont Y. C. has selected the officers to be voted for at the annual meeting in March. The commodore will be Frederick T. Adams, owner of the schooner Sachem. Wilson Marshall has accepted the nomination for vice-commodore. He owns the schooner Atlantic. Rear-Com. James Baird, owner of the sloop Hussar II., will be renominated. William Murray, treasurer, and A. Bryan Alley, secretary, will also be renominated.

The Riverside Y. C., of Riverside, Conn., held its annual meeting and dinner at the Arena. The following officers were elected: Com., George G. Tyson; vice-com., Charles T. Pierce; treas., Charles F. Buxton; sec'y, John G. Porter; meas., T. E. Ferris; trustees (for the term ending Fberuary, 1904), Edwin Binney and Ernest H. Brandt; Regatta Committee, Charles P. Tower, William A. Huffington, Edwin Binney; Membership Committee, Robert Rutter, J. H. McKenna and George E. Marks; Entertainment Committee, Georgqe T. Higgons, James Wight and Philip H. Jones; first surgeon, Dr. H. H. Tyson, Jr.; chaplains, the Rev. George C. Houghton, D. D.; the Rev. Charles F. Boylston and the Rev. Rufus S. Putney.

The annual meeting of the Atlantic Y. C. will be held at the Waldorf-Astoria Feb. 11. The following list of officers to be elected has been prepared by the Nominating Committee: Com., David Banks, schooner Water Witch; vice-com., Robert P. Doremus; rear-com., Henry J. Robert, sloop Ondawa; sec'y, Louis F. Jackson; treas., C. T. Pierce; meas., George Hill; trustees, J. Roger Maxwell, J. Fred Ackerman, Philip G. Sanford, Harrison B. Moore, Spencer Swain and Edwin B. Havens; Regatta Committee, George Hill (chairman), George W. McNulty and A. F. Aldridge; Membership Committee, Spencer Swain (chairman), Henry W. Baird and Frank Sperry; Library Committee, J. M. Foote (chairman), Arthur G. Allen and Jefferson Hogan; Entertainment Committee, Edwin Hollis Low (chairman), Charles J. McDermott and J. H. Hallock; Nominating Committee, J. H. Hallock (chairman), Frank Sperry, Edwin B. Havens, Charles J. McDermott, Georqge D. Provost and Charles E. Schuyler.

YACHTING NEWS NOTES.

Mr. William H. Hand, of New Bedford, Mass., has a large amount of work on hand. Among the orders already placed are the following: An 18-footer, 29ft. over all, for Mr. W. J. Fuller, of Hartford, Conn.; a 23ft. waterline yawl, for Dr. W. C. Lambert, of Wyandotte, Mich.; a 25-footer, 40ft. over all, for Mr. Robert M. Sayre, of New York city; a 25-footer, 41ft. over all, for Mr. J. C. Hartwell, of Providence, R. I.; a 21-footer, 32ft. over all, for Mr. M. W. Daboll, of New York city; an 18-footer, 29ft. over all, for Mr. W. A. Barston, of New York city, and an 18-footer, 29ft. over all, for Mr. Robert Osborn, of Toronto, Canada.

A most interesting pamphlet on "Graphite as a Lubricant" has just been issued by the Jos. Dixon Crucible Co., of Jersey City, N. J., and will repay one for the time spent in reading it. Dixon's graphite has three great virtues, any one of which alone would entitle it to a place in the front rank of machinery supplies, namely, first, as a lubricant for all purposes; second, as a preventive of rust; and, third, as a positive preventive of the destruction of joints when separated. Owners of power boats will find it indispensable in connection with their machinery, and owners of all craft will find the speed of their boats will be increased by application to the hulls.

The President of the United States has awarded a binocular glass to Mr. Joshua Nickerson, master, and a gold medal to Mr. Solomon Bateman, second mate, of the steamship Ethelred, of Glasgow, in recognition of their services in rescuing the shipwrecked crew of the American yacht Aliris on Oct. 17 last. The Board of Trade have received these presents through the Foreign Office to hand over to Messrs. Nickerson and Bateman.

Mr. James S. Watson's auxiliary schooner Genesee proceeded to sea on Feb. 2. She is bound for Naples, where her owner and family will join her and will make an extended cruise in the Mediterranean.

The 86ft. steam yacht recently ordered from the Gas Engine & Power Co. and Charles Seabury & Co., of Morris Heights, to be built from designs made by Mr. Arthur Binney, is for Mr. Guy Norman.

The frame of the keel yacht for Mr. W. B. Foote, designed by Messrs. Gardner & Cox, has been taken apart and shipped from Wood's yard to Lake Champlain, where she will be put together again and finished in time for summer use. The keel for the new sloop designed by Mr. Clinton H. Crane, of Tams, Lemoine & Crane, has been laid. She will be 31ft. 9in. over all, 20ft. 10in. on the waterline, 7ft. 9in. beam and 5ft. 3in. draft. A new centerboard sloop for Dr. Sayre will soon be started at Byle's yard. Her dimensions are 40ft. over all, 25ft. on the waterline and 11ft. 6in. beam. At the Jacob yard the interior fittings of Queen Mab have received a thorough overhauling. Her black topsides have been scraped and a priming coat of white paint put on.

The contracts have been signed and work commenced on a new auxiliary yawl for Mr. E. A. Fairchild. The boat will be from designs made by Mr. H. J. Gielow, by the Townsend & Downey Shipbuilding Co., of Shooter's Island, S. I. Her dimensions are 39ft. over all, 26ft. on the waterline, 11ft. beam and 3ft. 9in. draft. As her owner intends to use the boat solely for cruising, she was rigged as a yawl, and a 4 horse-power gasoline engine will be fitted under the cockpit floor capable of driving her at a speed of five miles an hour, with a tank capacity sufficient to last for one hundred miles. The centerboard is below the cabin floor. She has a good-sized cabin and one stateroom with 5ft. 10in. headroom.

"M. Murli, an Italian yachtsman," says the Yachtsman, Jan. 17, "has bought the first-class cutter Calluna, built in 1893, from Mr. W. Fife's design. She was sold in 1895 to Prince Mehemed Ali Halim. The yacht is at Naples."

"The 65ft. rating cutter Senta," says the Field, Jan. 19, "is ready at White Brothers' yard, Southampton, for her voyage to America, and she will leave as soon as the weather permits."

The Yachtsman says that "Messrs. Westmacott, Stewart & Co., of St. Helen's, I. W., are the builders of the 24-footer which, as mentioned last week, is building for Mr. Howard Gould."

Canoeing.

A. C. A. Rules.

Mr. C. E. Britton, Commodore American Canoe Association, Gananoque, Canada.

Dear Sir: We, the undersigned, think that the changes made in the racing rules for sailing canoes, at the meeting of the Executive Committee in October last, are unwise, for the following reasons:

First.—That they were made against the wishes of all the men who have sustained canoe sailing races for the past ten years, and were passed by those who have not sailed in races at any meet for the same length of time.

Second.—That a space of 6ft. between bulkheads necessitates either weak or very heavy construction, and the rule fixing the cockpit at that length necessitates the rebuilding of nearly every sailing canoe in the A. C. A. fleet.

Third.—That with a self-bailing cockpit a canoe with a space of only 2ft. between bulkheads has no advantage over one with 6ft.

Fourth.—That a sliding deck seat is absolutely necessary for comfort, either in racing or cruising, and that its abolition will make it impossible for any man not an athlete in training to sail a race of over three miles.

Fifth.—That legislation against the fixed rudder is unnecessary, as it gives no advantage over a drop rudder in racing, and is less expensive to make.

Therefore, we ask that you will take a mail vote on the following new racing regulations, which we consider would encourage a more perfect canoe which can be both cruised and raced efficiently.

These are the same regulations that have been used for the last few years, with the following exceptions and additions:

First.—A limit has been put on distance between bulkheads and size of cockpit. (Rule 1, Par. 1.)

Second.—A minimum weight has been placed on decked sailing canoes. (Rule 1, Par. 1.)

Third.—A canoe must use the same suit of sails at a meet with reduced area for decked canoes and increased area for open canoes. (Rule 1, Par. 1.)

Fourth.—A new rule. Rule 2. Classifying the canoes into three classes.

Fifth.—Flags not to be given as prizes, except for the paddling and sailing trophy races. (Rule 6, Par. 1.)

Sixth.—Putting a fixed length and time limit on the record races. (Rule 6, Par. 3.)

Seventh.—Putting a fixed length on the paddling trophy, and adding other fixed races. (Rule 6, Par. 6.)

Eighth.—Allowing all comers to enter the trophy sailing race. (Rule 6, Par. 7.)

Ninth.—Decision of protests of members present at meet to be final. (Rule 10, Par. 2.)

Tenth.—A canoe upsetting in a race debarred from winning prizes. (Rule 13, Par. 2.)

Eleventh.—Allowing old canoes to race at 1901 meet. (Rule 25.)

Most of the above changes are the same as passed at executive meeting in Gananoque on Oct. 20, 1900.

Racing Regulations.

Rule 1.—Definition. A canoe to compete in any race in the American Canoe Association must be sharp at both ends, with no counterstern or transom, and must come within the limits prescribed for its class.

Measurement.—The length shall be taken between perpendiculars at the foreside of the stem and the afterside of the stern. The beam shall be taken at the widest part, wherever found, and shall not include the beading, provided that it does not exceed 1½in. in depth; if the beading exceeds this depth, it shall be measured as part of the beam. The word "beam" shall mean the breadth formed by the fair lines of the boat; and the beam at and near the waterline shall bear a reasonable proportion to the beam at the gunwale. A variation of not over ½in. shall be allowed in excess of the maximum beam in canoes in sailing races, and the same amount in deficiency of minimum beam in canoes in paddling races. The draft shall be measured at the deepest point, wherever found. The depth shall be measured from the inside of the garboard next the keel to the lower side of a straight-edge laid across the gunwales, or to a similar height in a decked canoe. The sail area shall be measured by dividing into triangles in the usual manner, the sail being stretched taut and flat on a level surface.

Dimensions and Limitations.—Sailing. To be eligible to sailing races a canoe must comply with the following limitations: The length shall be limited to a maximum of 16ft. with an accompanying maximum beam of 30in. For each full inch of decrease in length the beam may be increased by ⅛in. The draft shall not exceed 11in.

The minimum distance between bulkheads to be 4ft. 6in. and the minimum cockpit opening to be 3ft. 6in. A canoe with a cockpit, not self-bailing, may carry a movable canvas bag. In all sailing races a canoe must carry a double-blade paddle at least 8ft. long, which may be jointed in the center. The centerboard, when hauled up, must not project below the keel. A canoe without a centerboard may carry a keel 3in. deep outside of the garboards and weighing not more than 36lbs.; a centerboard canoe may carry a keel not exceeding 1¾in. The keelband should not exceed ¼in. in thickness, and shall be included in the measurement of depth or keel. Leeboards may be carried by a canoe not having a centerboard.

The minimum weight of a decked sailing canoe exclusive of centerboard, rudder and steering gear shall be 85lbs. Open canoes shall carry no rudder and no seat projecting beyond the gunwales. A canoe must use the same suit of sails in all sailing and combined races at a meet, exception to be made by the Regatta Committee in case of accident. These sails must be a practicable hoisting and lowering rig of not more than 112 sq. ft. for decked canoes and 60 sq. ft. for open canoes.

Cruising Class.—To be eligible to the "Cruising Canoe" class, a canoe shall comply with the above limitations, and, in addition, shall be fitted with a well not less than 16in. wide for a length of 3ft. 6in.; with a sleeping space of 6ft., of which at least 5ft. shall be clear; and the sails shall be fitted to lower and furl. The Regatta Committee shall have power to rule out any canoe which, in their opinion, does not conform to the spirit of these restrictions.

To be eligible to the paddling races canoes must be within the following limits:

One and Two Men (Single and Tandem).—Maximum length, 16ft.; minimum beam, 30in.; minimum depth, 10in.; minimum weight, 50lbs. A deficiency of weight to an amount not exceeding 5lbs. may be made up by ballast.

Four Men.—Maximum length, 20ft.; minimum beam, 30in.; minimum depth, 12in.; minimum weight, 70lbs.

War Canoes.—Maximum length, 30ft.; minimum beam, 36in.; minimum depth, 17in.; minimum weight, 120lbs.

These limits shall not apply to war canoes built prior to Oct. 1, 1897.

Rule II.—Classification. In all sailing races, except the trophy, dolphin trophy, and novice races, contestants

shall be divided into three classes, seniors, juniors and novices; the seniors to give time allowance to juniors, and double time allowance to novices, and the juniors to give time allowance to novices.

The above time allowance to be decided by the Regatta Committee.

Seniors to be those men who have won sailing races other than the novice races at an A. C. A. meet.

Juniors to be men who have never, with the exception of the novice race, won a sailing race at an A. C. A. meet.

Novices to be those men who have never sailed a canoe previous to Sept. 1 of the preceding year.

Rule III.—None but members of the American Canoe Association, unless upon the invitation of the Regatta Committee, shall be permitted to enter its races, and no canoe shall enter that is not enrolled on the secretary's books, and no member who is in arrears to the association shall compete in any race or claim any prize while such arrears remain unpaid.

No canoe shall be entered at any one meet by more than one man. The "crew" of each canoe shall consist of one man only, unless the programme of the regatta states the contrary. Members must paddle or sail their own canoes.

A canoe which is not owned or used for racing by any other member present shall be deemed to be the canoe of the member bringing it to camp. In double canoe races the owner may associate any other member with himself.

Rule IV.—All entries must be in writing, on the blanks provided, and must be handed in to the Regatta Committee within such time as they may direct.

Rule V.—Every canoe entering, except for an upset race, must have her entry number conspicuously on canoe or man when paddling, and on both sides of mainsail while sailing. The clerk of the course will provide each man, when he makes his entry, with three prints of his number on cloth.

Rule VI.—Prizes shall be given as follows: A first prize in each race, and a second prize in each regular event where more than two finish.

Prizes shall consist of shields or some lasting memento with the event, the letters A. C. A., the year expressed in four figures, the place of the meet and the words "first prize or second prize" expressed thereon. The prizes for any one meet shall be uniform in shape and design. Prizes donated for special races or competitions may be accepted at the discretion of the Regatta Committee. No prizes of money shall be raced for. All prizes not awarded shall be destroyed by the Regatta Committee. Flags shall be given for the paddling and sailing trophy in addition to regular prizes.

Races.—There shall be three record races: No. 1, paddling and sailing combined, three miles, time limit one and one-half hours; No. 2, paddling, one-half mile straight away; No. 3, sailing, four and one-half miles, time limit two and one-half hours. To obtain a place on the record, a contestant must enter and finish in all three record races. None but men who have entered for the record will be allowed to enter in any record races. Only such contestants as finish in all three races will receive a credit number according to position, relative to each other in each race—the highest number given in each race being equal to the number of the contestants, the next one less, and so on; the three numbers given added together give the credit amount of the record.

In the record races each contestant shall use but one canoe.

In case of unavoidable accident which prevents a man from finishing in any one race, the Regatta Committee may, at its discretion, permit such canoe to enter the other two races,, and her marks to be counted for the record; but he shall receive zero for the race which he does not finish.

There shall be a race for the paddling trophy, one mile straight away. The total number of contestants shall be unlimited. There shall be a race for the A. C. A. sailing trophy. Conditions as follows: Sailing canoe, A. C. A. rules, no limit to ballast; time limit, three and one-half hours; distance, nine miles. The dolphin trophy, seven and one-half miles, time limit three hours. The winner in the sailing trophy race to be debarred from this race (as per deed of gift). A sailing race, six miles, time limit two and one-half hours. A one-half mile paddling race, single blade. A one mile paddling race, double blade. A one-half mile tandem paddling race, single blades. A one-half mile tandem paddling race, double blades. A one-half mile fours paddling race, single blades. A one-half mile fours paddling race, double blades. At least one-half of all paddling races shall be straight away.

Accredited representatives of foreign clubs shall be eligible to start in all races.

Rule VII.—The mode of turning stakeboats, and all directions for each race, shall be announced in the programme of the Regatta Committee or posted on the bulletin board one hour before the race is called; and any competitor not knowing the course, or mistaking it, or not following these rules, does so at his own risk. Stakeboats and buoys will be left on the port hand, when not stated distinctly to the contrary. The committee shall have the power to change the direction of the race at any time before the first signal, and shall indicate the same by the flags, according to Rule XIII. The start and finish in all races shall be by the bow.

Rule VIII.—No pilotage or direction from any boat or from the shore shall be allowed, and any one accepting such assistance may be disqualified.

Rule IX.—A canoe touching a buoy or other canoe, unless wrongfully compelled to do so by another canoe, shall be disqualified. In case of a foul, the non-fouling canoe must go over the course, unless disabled beyond the possibility of temporary repair, in order to claim the race; every canoe must stand by its own accidents. If a canoe, in consequence of the violation of any of the rules, shall foul another canoe, or compel another canoe to foul any canoe, buoy or obstruction, or to run aground, she shall be disqualified.

Rule X.—Should the owner of any canoe, duly entered for a race, consider that he has fair ground for complaint against another, he must give notice of same before leaving his boat on the finish of the race, to the Regatta Committee, and must present the same in writing within one hour.

The sum of one dollar shall be deposited with each protest, to be forfeited to the association should the protest not be sustained. The Regatta Committee shall, after hearing such evidence as they may deem necessary, decide the protest. A decision of a majority of the members present shall be final.

No member of either committee shall take part in the decision of any question in which he is interested. In all cases where a protest is lodged on the ground of fouling, evidence of actual contact shall be necessary to substantiate the protest. The Regatta Committee shall, without protest, disqualify any canoe which, to their knowledge, has committed a breach of the rules.

No man shall contest in any race until he has been two days in camp, except in war canoe races, except by special permission of the Regatta Committee.

Paddling Races.

Rule XI.—Paddling races shall be started by the starter asking, "Are you ready?" On receiving no answer, he shall say "Go!" If he considers the start unfair, he may recall the boats, and any canoe refusing to start again shall be distanced.

The combined paddling and sailing race shall be started in the same manner, the word "Go!" being immediately followed by a gun.

Rule XII.—A canoe's own water is the straight course from the station assigned it at starting. Any canoe leaving its own water shall do so at its peril; but if the stern of one canoe is a canoe's length ahead of the bow of another, the former may take the water of the latter, which then becomes its own water, and it shall only leave it at its peril.

Sailing Races.

Rule XIII.—The paddle shall not be used in sailing races, except for steering when the rudder is disabled, or shoving off when aground, afoul of anything, or in extreme danger, as from a passing steamer or from a squall.

In any race a canoe upsetting so that the top of her mast touches the water shall forfeit all claim to the prize, unless, in the judgment of the Regatta Committee, the upset was caused by the canoe being fouled by another boat; in which case the committee must notify the canoe at once.

Rule XIV.—Five minutes before the start a signal will be given and a blue flag hoisted, and four minutes later a second signal will be given and a yellow flag hoisted, and one minute later a third signal will be given to start and an A. C. A. flag hoisted and left up.

Any canoe which crosses to the course side of the starting line prior to the third signal must return above the line and recross it, keeping out of the way of all competing canoes, using the paddle if necessary; but after the third signal the start shall be considered as made, and all canoes on either side of the line shall be amenable to sailing rules. Canoes may take any position for starting, and, prior to the third signal, may be sailed and worked in any manner (outside aid not allowed). A green flag displayed signifies that buoys are to be left to starboard; a red flag means port. The Regatta Committee may vary the manner of starting at their discretion, but all sailing races should be started to windward when practicable, and under a time limit.

Rule XV.—All shiftable ballast, except centerboards, shall be carried with the canoe, and no fixed ballast shall be carried below the keelband. Ballast may be shifted, but no ballast shall be taken in or thrown out during a race.

Rule XVI.—A canoe overtaking another shall keep out of the way of the latter when rounding any buoy or vessel used to mark out the course. If two canoes are not clear of each other when leading canoe is close to and is altering her helm to round the mark, the outside canoe must give the other room to pass clear of the mark, which ever canoe is in danger of fouling. No canoe shall be considered clear of another unless so much ahead as to give free choice to the other on which side she will pass. An overtaking canoe shall not, however, be justified in attempting to establish an overlap and thus force a passage between the leading canoe and the mark after the latter has altered her helm for rounding.

Rule XVII.—Canoes close-hauled on the port tack shall give way to those on starboard tack. In event of collision being imminent, owing to the canoe on the port tack not giving way, the canoe on the starboard tack shall luff and go about, but shall never bear away. A canoe on the port tack compelling a canoe on the starboard tack thus to give way forfeits all claim to the prize.

Rule XVIII.—Canoes going free shall always give way to those close-hauled on either tack.

Rule XIX.—When canoes close-hauled are approaching a shore, buoy, or other obstruction, and are so close that the leewardsmost cannot tack clear of the canoe to the windward of her, and by standing on would be in danger of fouling the obstruction, the canoe to windward shall, on being requested, go about, and the canoe requesting her to do so shall also tack at once.

Rule XX.—Should two or more canoes be approaching a weather shore or any obstruction, and be so close to each other that the weathermost one cannot bear away clear of the one to the leeward of her, and by standing on would be in danger of running aground or fouling the obstruction, then the canoe that is to the leeward shall, on being requested, at once bear away until sufficient room is allowed for the weathermost canoe to clear the obstruction.

Rule XXI.—A canoe may luff as she pleases in order to prevent another from passing her to windward, providing she begins to luff before an overlap has been established. An overlap is established when an overtaking canoe has no longer a free choice on which side she will pass, and continues to exist as long as the leeward canoe, by luffing, or the weather canoe by bearing away, is in danger of fouling. A canoe must never bear away out of her course to prevent the other passing to leeward; the lee side to be considered that on which the leading canoe of the two carries her main boom. The overtaking canoe, if to the leeward, must not luff until she has drawn clear ahead of the canoe she has overtaken.

Rule XXII.—A canoe may anchor during a race, provided the anchor is attached, or weighed on board the canoe during the remainder of the race. A canoe shall not be propelled by rocking or fanning.

Rule XXIII.—A change in these rules desired by any member of the association shall be presented by the Regatta Committee, with their approval or disapproval, to the Executive Committee for final action; notice of such change having been given in the official organs at least two weeks before the vote of the Executive Committee is taken thereon.

Rule XXIV.—In case of temporary vacancies in the Regatta Committee, the other members shall appoint substitutes.

Rule XXV.—A canoe built under the A. C. A. rules prior to Oct. 1, 1900, shall be permitted to enter all races of the 1901 meet.

Rifle Range and Gallery.

The Sportsmen's Show.

We have received the following information concerning the forthcoming Sportsmen's Show at Madison Squire Garden:

The National Rifle Association will this year establish a headquarters for its members at the Sportsmen's Show, in Madison Square Garden, and the display of cups and trophies to be exhibited will be an interesting one to all rifle shots. The space assigned to it is the roomy corner at the end of the promenade over the south tier of the arena boxes, a location commanding an excellent view of the lake, upon an island, in which the Ojibway Indians will conduct their tribal dances and rites each afternoon and evening. The corner will be designed as a reception room and riflemen's den, where all riflemen will be made welcome. Here also Tom Keller, of the Peters Cartridge Company, will hold forthwith the ammunition which his efforts have made famous in the East.

The revolver galleries this year will be under the care of the Colt Patent Firearms Mfg. Company, which is an assurance that revolver shots will find on hand everything that can be desired in high-grade up-to-date target pistols and revolvers, and an inexhaustible supply of ammunition of all popular brands. The galleries themselves will be more roomy and far better arranged than heretofore, with accommodations for a greater number of spectators. The programme of events is still in the hands of the revolver championship committee, but will be announced in due time.

The revolver and pistol championships of the National Sportsmen's Association will of course be the chief events, with such other minor events as the committee may deem most likely to find favor.

The trapshooting contests this year promise to be of greater interest than ever. Fred Gilbert has announced his intention of being on hand, and some pretty work should result when the Iowan, Jack Fanning and Rolla Heikes come together in the continuous record contest and other events. That Fanning's wonderful record of 175 straight breaks last year may be left on the shelf is not regarded as unlikely, with the Californian himself as one of the most likely men of the lot to accomplish the trick. Billy Crosby won the continuous record last year with a total of 1,415 out of 1,500 targets shot at, and will, without question, be a strong factor in the same competition this year.

Trapshooting.

Fixtures.

Feb. 6-7.—Cincinnati.—Cincinnati Gun Club's sparrow tournament. Chas. F. Dreihs, Sec'y.

Feb. 10.—New York.—All-day target shoot of the Richmond Gun Club at Silver Lake Park, Staten Island. A. A. Schoverling, Capt.

Feb. 12.—Sing Sing, N. Y.—Target shoot of Ossining Gun Club. W. P. Hall, Sec'y.

Feb. 13-15.—Indianapolis, Ind.—Grand Central Handicap tournament of the Limited Gun Club. Bert. B. Adams, Sec'y.

Feb. 15-16.—New Orleans, La.—First annual Mardi Gras tournament of the City Park Gun Club, under the auspices of the Peters Cartridge Co. Percy S. Benedict, Sec'y, Denegree Building.

Feb. 18-23.—Hot Springs, Ark.—Tournament of the Hot Springs Gun Club; four days targets, two days live pigeons; $1,000 added. C. E. De Long, Sec'y.

Feb. 22.—Harrisburg, Pa.—Washington's Birthday live bird and target shoot of the Harrisburg Shooting Association.

Feb. 22.—Sing Sing, N. Y.—Target and live bird shoot of the Ossining Gun Club; live bird match at 9 o'clock; live-bird programme at 10 o'clock.

Feb. 22.—Albany, N. Y.—Annual midwinter target tournament the Forester Gun Club. H. H. Valentine, Mgr.

Feb. 22-23.—Colorado Springs, Colo.—Colorado State Fish and Game Protective Association's thirteenth tournament, under the auspices of the Colorado Springs Gun Club.

Feb. 22-23.—Altoona, Pa.—Altoona Rod and Gun Club's target tournament. G. G. Zeth, Sec'y.

March 2.—New York.—Two-week Roof Garden tournament of the National Sportsmen's Association. Capt. J. A. H. Dressel, Sec'y.

March 19-21.—Asheville, N. C.—The Peters Cartridge Company's two days' target tournament. Maj. E. P. McKisseck, Sec'y. John Parker, Mgr.

March 21.—Newell, Ia.—Newell Gun Club's target and live-bird shoot. Henry G. Hall, Sec'y.

CONTESTS AT INTERSTATE PARK.

Interstate Park, Queens, L. I.—Two miles beyond Jamaica, on L. I. R. R. Trains direct to grounds. Completely appointed shooting grounds always ready for matches, club shoots or private practice. Café and hotel accommodations.

Feb. 12.—Interstate Park.—John Wright's prize (Francotte gun) shoot; 15 live birds, $12.50 entrance, birds included; handicaps 25 to 33yds.

Feb. 27.—Interstate Park.—Team race, a New York team vs. a New Jersey team, at 1 o'clock. Sweepstake shooting commences at 10 o'clock.

April 1-5.—Interstate Park, Queens, L. I.—The Interstate Association's ninth annual Grand American Handicap Tournament at Live Birds.

June —.—Interstate Park, Queens, L. I.—Forty-third annual tournament of the New York State Association for the Protection of Fish and Game.

Monthly contest for the Dewar trophy till June, 1902; handicap; 25 live birds; $5 entrance. First contest took place June 20, 1900.

Interstate Park, Queens, L. I.—Weekly shoot of the New Utrecht Gun Club—Saturdays.

INTERSTATE ASSOCIATION CONTESTS.

Elmer E. Shaner, Manager.

April 1-5.—Interstate Park, Queens, L. I.—The Interstate Association's ninth annual Grand American Handicap tournament at live birds. Edward Banks, Sec'y-Treas., 318 Broadway, New York.

May 8-10.—Memphis, Tenn.—The Interstate Association's tournament, under the auspices of the Memphis Gun Club.

June 19-21.—Cleveland, O.—The Interstate Association's tournament under the auspices of the Cleveland Gun Club.

July 1-2.—Sherbrooke, P. Q., Can.—The Interstate Association's tournament under the auspices of the Sherbrooke Gun Club. C. H. Foss, Sec'y.

July 10-11.—Jamestown, N. Y.—The Interstate Association's tournament, under the auspices of the Jamestown Gun Club. Dr. C. Rawson, Sec'y.

July 23-26.—Interstate Park, Queens, L. I.—The Interstate Association's second Grand American Handicap target tournament; $1,000 added money. Edward Banks, Sec'y-Treas., 318 Broadway, New York.

Aug. 7-9.—Providence, R. I.—The Interstate Association's tournament under the auspices of the Providence Gun Club. R. C. Root, Sec'y.

DRIVERS AND TWISTERS.

Club secretaries are invited to send their scores for publication in these columns, also any news notes they may care to have printed. Ties on all events are considered as divided unless otherwise reported. Mail all such matter to Forest and Stream Publishing Company, 346 Broadway, New York.

The programme of the fourth annual national shooting tournament at Hot Springs, Ark., Feb. 18 to 23, under the auspices of the Whittington Park Association, announces the competition open to the world, and $1,000 added. Targets, 3 cents; live birds, 25 cents. Shooting commences at 9 o'clock. Two sets of traps, Sergeant system, will be provided. Ship guns and shells to R. E. Price, Hot Springs, Ark. Contestants who shoot 90 per cent. or better on any day will be required to pay 25 cents extra in each of the ten events of the following day, and further until they fail to reach the 90 per cent. average, when they can re-enter the amateur class. High average, $50—$10, $9, $8, $7, $6, $5 and $5. Trade representatives are barred from this average. High guns will govern the money in the live-bird handicap. Handicaps, 26 to 32yds. Entries for the handicap can be made with R. E. Price, secretary, and must be accompanied with a $5 forfeit. All entries must be made by Feb. 21, after which penalty entries, $5 additional, will be received up to the ending of the second round. Rates of one and one-third fare have been secured in the territory between the Mississippi River and the Rocky Mountains, on the certificate plan. All the extra money contributed by the experts will be divided among all the amateurs who shoot through the regular target programme for the three days, regardless of what average they make.

Mr. A. L. Gilson, of Florida, and J. L. Foraker, of Lake View, shot a 100-live-bird match on the grounds of the Soo Gun Club recently. Each scored 33. The account of this match states that "An attempt to shoot off the tie with 100 live birds again tied the score at 35 each, and the contest finally ended in a 25-clay-target match, in which Foraker won out, breaking 15 out of 25, while Gilson stopped at 13. It was cold and disagreeable, for the spectators. The birds made only a few good flights, and frequently had to be frightened from the ground by a shower of pebbles. In fully half the frames both barrels were fired. Many of the birds fell outside the 50yd. line, and a squad of hunters which waited outside for the misses got more birds than the principals in the match." The birds evidently were of excellent quality, and were accountable for the low scores without any doubt.

The programme of the Limited Gun Club's fourth annual Grand Central Handicap tournament, at Indianapolis, Ind., Feb. 13 to 15 announces the competition open to all. On the first two days the programme is alike, namely, fourteen events, each at targets, $1.50 entrance. Shooting commences at 9:30. All stand at 16yds. Magautrap rules. Targets, 2 cents. Four moneys. On the third day the Grand Central Handicap at 25 live birds, $25 entrance, will commence at 9 o'clock. Four moneys. Handicaps, 26 to 31yds. The handicapping committee has a membership as follows: E. H. Tripp, R. O. Heikes and H. W. Cadwallader. Special rates have been arranged for shooters from Indianapolis to Hot Springs. Bert B. Adams, secretary.

Mr. Edward Banks, secretary-treasurer of the Interstate Association, under date of Jan. 24 writes us as follows: "I take pleasure in informing you that the Interstate Association has been fortunate enough to secure the services of the following gentlemen, who will act as the Handicap Committee for the Grand American Handicap at live birds, 1901: T. A. Divine, Memphis, Tenn.; C. W. Budd, Des Moines, Ia.; J. L. Head, Peru, Ind.; B. Waters, New York city; W. R. Hobart, Newark, N. J.; Will K. Park, Philadelphia, Pa.; Elmer E. Shaner, Pittsburg, Pa. The above committee will meet at the Astor House in this city, Wednesday, March 27, at 10:30 A. M."

The main event of the Riverton Gun Club, Jan. 30, was a 30-bird handicap, for a beautiful silver cup, presented by the president of the Riverton Gun Club, Mr. J. Hazeltine Carstairs. The grounds at East Riverton presented a truly midwinter scene, a heavy snow storm prevailing. White birds in the storm had therefrom many added chances to escape the shooter. On the other hand, the storm seemed to make the birds reluctant to fly. Twenty members participated in the event. At the end of the day Messrs. Sterling and Whitaker were tied, and it was too dark to shoot off the tie.

The programme of the Altoona Rod and Gun Club's tournament, Feb. 22 and 23, provides twelve events for the first day, 10, 15, 20 and 25 targets, entrance 50 cents and $1, 180 targets in all, with a total of $10 entrance. Class shooting. Ten target events, three moneys; 15, four moneys; 20, five moneys; 25, six moneys. On the second day the 100-target handicap, entrance $5, is the programme. Experts and manufacturers' agents may shoot for targets only. Shooting each day begins at 9 o'clock. Ship guns and shells to the secretary, Mr. G. G. Zeth, Altoona, Pa.

The trapshooters who are eligible to compete in the New York-New Jersey team contest must reside respectively within fifty miles of the Jersey City Court House and within fifty miles of the New York City Hall. The New York managers intend to have a team large enough to meet New Jersey, man for man. Under these conditions the New Yorkers have a formidable task, as the shooters who are available are hardly the equal of the New Jersey shooters on form. The new ruling of the Carteret Gun Club probably deprives the New Yorkers of a lot of good material.

The list of entries to the Grand American Handicap has the name of the valiant Admiral A. G. Courtney, formerly known as Colonel Courtney. The trapshooting world will remember that the Admiral was reaching out for the trophy in the G. A. H. shoot-off last year, when an inconsiderate bird, shamming death for a moment, gathered itself and flew thitherward, carrying the Admiral's hopes with it. Second on the list is the name of Mr. C. W. Feigenspan, of Newark, who holds the championship of New Jersey and the esteem of his fellow men.

Under date of Feb. 1 Mr. H. W. Brown, of Binghamton, N. Y., writes us as follows: "Please announce, through your 'Fixture' columns that the Peters Cartridge Company, assisted by the Binghamton Gun Club, will give a target tournament for amateurs at Binghamton, N. Y., April 24 and 25, with $150 in cash added to the purses and a handsome $20 gold watch-charm to high average. We shall endeavor to make this an up-to-date shoot in every respect. Programmes will be ready in about two weeks. John Parker, manager; H. W. Brown, assistant."

The calendar of the Savage Arms Company, Utica, N. Y., for 1901 portrays a most dashing scene of the wilderness, an Indian astride a spirited cayuse, rider and horse gayly caparisoned, the former twisted in the saddle and resolutely firing a Savage rifle with deadly precision at a bear, which is recoiling from the shock. The calendar further calls attention to information concerning the company's manufactures.

Mr. W. P. Hall, secretary, writes us as follows: "Clay bird shoot of the Ossining Gun Club, Sing Sing, N. Y., Feb. 12. Shooting commences at 10:30 A. M. Refreshments served free to shooters. Live and clay bird shoot of the Ossining Gun Club, Sing Sing, N. Y., Feb. 22. Live-bird match to be shot at 9 A. M. Live-bird events start at 10 A. M. Trolley car to grounds. Refreshments served free to shooters."

The second of the series of three matches between teams of the Trenton Shooting Association and the Freehold Gun Club was won by the latter, Jan. 30, by a score of 236 to 222, six men to a team, 50 targets per man. The next contest will take place on the grounds of the Freehold Gun Club within thirty days from the last contest.

In the three days of Heikes' midwinter tournament, Mr. R. O. Heikes was high average with 571 out of 600 targets shot at, an average of .951 per cent. Gilbert was second with .935. Neal was third with .931. Fanning was fourth with .916. On the second day Heikes made a run of 126 consecutive breaks.

In another column we publish in full the programme of the forthcoming Roof Garden tournament, which is to take place from March 2 to 16. It will be found to possess all the elements of keen competition or pleasant diversion, accordingly as the contestant is pleased to arrange it.

At Westbrook, N. J., on Jan. 31, a gun club was formed. Following is a list of the officers elected: President, I. Hasbrouck; Secretary, E. L. Greenin; Treasurer, V. Van Buskirk. The club will be known as the Westwood Gun Club. It contemplates engaging in active trapshooting.

The New York vs. New Jersey team race, twelve to fifteen men on a side, 25 birds per man, is fixed to take place at Interstate Park, Wednesday, Feb. 27. Sweepstakes will be shot, commencing at 10 o'clock. The team race will commence at 1 o'clock—man against man.

Under date of Feb. 2 Mr. Elmer E. Shaner, manager of the Interstate Association, informs us that the Interstate Association will give a tournament at Jamestown, N. Y., July 10 and 11, under the auspices of the Jamestown Gun Club, of which Dr. C. Rawson is secretary.

Under date of Feb. 4 we are informed that the date of the Peters Cartridge Company's tournament at Asheville, N. C., has been changed to March 19, 20 and 21. Maj. E. P. McKisseck, Battery Park Hotel, Asheville, is secretary and John Parker manager.

The match at 100 live birds, arranged to take place at Interstate Park on Feb. 12, between Dr. A. A. Webber and Mr. S. M. Van Allen, has been postponed to Feb. 19 on account of John Wright's prize shoot, which is to be held on Feb. 12.

A trapshooter, hearing that Edward VII. had come very conspicuously to the front in a very short time, said it was strange that he never had heard of him, and further asked: "What is his highest average?"

In a contest for the championship of St. Louis, of which the Mermod trophy is the emblem, D. Cabanne successfully defended his claims against F. Fink, at 25 live birds, by the score of 23 to 18.

Thursday of this week, at 320 Broadway, room 820, there will be a meeting of the Governing Handicap Committee, at 4 o'clock P. M. The matter of handicaps will be given special consideration.

After an extended absence on a business tour in the interests of his company, the Union Metallic Cartridge Company, Mr. J. J. Hallowell will retun East about the middle of the month.

The next shoot of the Hudson Gun Club, of Jersey City, will take place on Feb. 10.

Bernard Waters.

IN NEW JERSEY.

Trenton Shooting Association.

Trenton, N. J., Jan. 30.—The second race of the series of team matches between the Freehold Gun Club and the Trenton Shooting Association was won by the former by the score of 236 to 222 in the midst of a blinding snow storm, on the grounds of the Trenton Shooting Association, to-day. The wind howled and shrieked across the field, sending chunks of snow and stinging sleet into the faces of the shooters, blinding the sight and numbing the hands to such a degree that the men had a difficult time in shooting their strings of 25 up. Only three members of the local team were present, and Messrs. J. R. Taylor, Wm. H. Mickel and Dr. Coates were substituted to fill the vacancies. Hance, of Freehold, and Farlee, the local team, were high guns, with the score of 47 and 46 respectively. Snyder, of the Freehold team, and Mickel and Thomas, of the Trenton Shooting Association team, wear glasses, and their poor showing was due to the collection of snow, which soon turned to water, sticking to their spectacles, making the task of seeing the bluerocks as they whirled through the falling snow a most difficult and trying one. Billy Widmann, who was depended upon to make up any deficiencies that might be made by the rest of his team, was sadly, sadly, sadly out of form, his total out of the 50 reaching 31.

It will be remembered that the first race was won by the Trenton Shooting Association team, on the Freehold Club's grounds, some weeks ago by a margin of 15 targets. To-day the visitors turned the tables, winning by 14. According to agreement, the third race will be shot within thirty days. A coin was flipped, which was correctly called by Freehold, and they named their grounds at the battlefield. Considerable interest attaches to the result of the last trial, as each team has won a race, and both will have their strongest men up for the finish.

The scores in detail follow:

Freehold Gun Club.

Event No. 1 was an optional sweep; No. 2, ditto; ties shot off miss-and-out; Nos. 3, 4, 5, 6, 7, optional cash sweeps; all ties divided; Nos. 8 and 9, cash consolation, with stakes doubled on the second attempt.

Secretary.

Keystone Shooting League.

Philadelphia, Pa., Feb. 2.—There was a large attendance today at the shoot of the Keystone Shooting League, and on this account the two events of the programme consumed the time till darkness supervened. The first event was the challenge trophy, emblematic of the live-bird championship of Philadelphia.

H. Henry was the holder, and there were twenty-four challengers. The conditions were 10 birds per man, 30yds. rise, 50yds. boundary, sweepstake entrance $2.50. H. Henry, J. R. Painter and W. Harrison killed straight, and in the shoot-off of the tie at 3 birds per man Henry won the trophy again by killing straight. Painter lost his last bird and Harrison his second. H. Ridge also killed straight in this event, but did not compete in the tie. The scores:

F B McCoy	0220222222— 8	J R Painter	2212222221—10
F W Van Loon	1012222222— 9	J W Fees	222*021210— 7
F Albury	221*011022— 7	J Vandergrift	2111221202— 9

F M Hobbs	0222222022— 8	D Sanford	2222202222— 9
W J Davis	1202222212— 9	I W Budd	0101221122— 8
H Henry	2222222222—10	M Glendenning	2*21020112— 7
E Russell	0212001*10— 5	Dr Darby	2220220222— 8
W N Stevenson	2220222222— 9	J Bremer	2201222202— 8
A Anderson	22*222220— 7	E C Geikler	2202222222— 9
H Ridge	2221222221—10	W Harrison	1111112112—10
W Wharton	2222222022— 9		

Shoot-off of ties for the trophy, 3 birds per man: Henry 3, Painter 2, Harrison 1.

The regular weekly handicap for the club's handicap championship trophy was the second event, and the conditions were 10 birds per man, sweepstake, $2.50 entrance.

Vandergrift, Cashmore and Sanford killed straight. As points are awarded in this event the ties were not shot off.

As a special feature for the day's shooting the club offered two prizes, to be won by the two men making the best scores in the total of the two events, and Henry, Cashmore, Davis, Van Loon, Vandergrift and Sanford tied with 19 out of 20. In the shoot-off, miss-and-out, Henry won first prize by killing 9 straight. Cashmore killed 8 straight and lost his last bird dead out of bounds. Davis killed 3 and lost his fourth dead over the wire. Van Loon and Vandergrift each killed two and then lost their third out of bounds, while Sanford went out on his second bird. The scores:

McCoy, 30	2222222222—10	Painter, 29	2212100201— 7
Van Loon, 30	1222221212—10	Fees, 28	0200202222— 6

Wharton, 29	*12222022*— 7	Emson, 29	2220212022— 8

Shoot-off of the ties for the special prizes, miss-and-out:

Henry	212221222	Van Loon	22*
Cashmore	22212222*	Vandergrift	21*
Davis	222*	Sanford	20

Catchpole Gun Club.

Wolcott, N. Y., Jan 3.—Herewith please find scores made at our shoot held on Jan. 31. The weather conditions were bad. A heavy wind and blinding snow storm prevailed most of the day, which cut down the attendance and also made the shooting difficult.

The regular programme was abandoned, and a series of mostly 10-target events adopted, one money, high gun taking all. Messrs. Knapp and Knox, of Auburn, N. Y., were the only visiting sportsmen present. These two gentlemen, with our home shooters, kept the traps warm during the whole day.

Events:	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16	17	18	19	20	21

E. A. Wadsworth, Sec'y.

Cabanne—Fink.

St. Louis, Mo., Feb. 3.—Duthiel Cabanne successfully defended his title to the championship of St. Louis at pigeon shooting to-day by defeating Fred Fink for the Mermod trophy. The day was about the worst imaginable, with a mist hanging over and a sloppy snow laying on the ground, while, to add to the shooters' difficulties, the birds were a selected lot of white ones. Cabanne's score of 23 under the conditions was most creditable, while his opponent was also pointing the gun well, but had the misfortune to have 6 fall dead over the bounds. Cabanne stood at 31yds. and Fink at 29. The scores were:

Fink	22*2212111**1221021*1*22*—18
Cabanne	21212122122*1222221212022—23

Following this event was a 10-bird sweep, which was won by Chas. Spencer, with a straight score. The scores were:

Scudder	1111121120— 9	Prendergast	0212201122— 8
Bond	2021221212— 9	Fresch	0121211121— 9
Cabanne	2102220102— 7	Spencer	2222122111—10
Gaines	2222112202— 9		

Ossining Gun Club.

Sing Sing, N. Y., Feb. 2.—The regular weekly shoot of the Ossining Gun Club was fairly well attended. The best shooting of the day was by W. P. Hall, who shot a 90 per cent. gait. The wind conditions were favorable for good scores. Several of the events were matches between members, which livened up the sport:

Events:	1	2	3	4	5	6	7	8	9	10

C. G. B., Capt. O. G. C.

Ambler Gun Club.

Ambler, Pa., Jan. 30.—The snow storm which prevailed to-day made exceedingly difficult weather conditions for the shooters of the Ambler Gun Club, the storm driving into the faces of the shooters as they faced the traps. The scores:

Club shoot, 25 targets: S. McAlonan 9, J. Bradfield 8, Dillon 18, Knight 11, Yarnall 16, M. McAlonan 9, Pfleger 17, Conway 9, Yerkes 18, Johnson 10, Bisbing 17, Parks 8, H. Bradfield 11, Haywood 16, Huber 9, Reid 3. Dillon won out on the shoot-off.

Sweepstakes.—First event, 10 birds up: Haywood 9, Bisbing 9, Dillon 9, Pfleger 9, Yarnall 7, Parks 8.

Second event, 10 birds: Parks 6, Haywood 5, Pfleger 7, Dillon 7, Bisbing 8.

Third event, 10 birds: Bisbing 7, Pfleger 7, Haywood 7, Dillon 5, Yarnall 9, Parks 7.

Fourth event, miss-and-out: Haywood 9, Parks 9, Dillon 8, Bisbing 14, and Pfleger 13.

Take inventory of the good things in this issue of Forest and Stream. *Recall what a fund was given last week. Count on what is to come next week. Was there ever in all the world a more abundant weekly store of sportsmen's reading?*

WESTERN TRAPS.

Intercity Team Race Revived.

CHICAGO, Ill., Feb. 2.—There is at this time a very good chance that the project of a team race between the National Gun Club, of Milwaukee, and the Garden City Gun Club, of Chicago, may be revived, and perhaps brought to a successful issue. Under date of Jan. 29 Mr. E. E. Rogers, chairman of the shooting committee of the National Gun Club, of Milwaukee, wrote to Mr. J. H. Amberg, president of the Garden City Gun Club, in terms which leave every hope that we shall see this team race shot at an early date. Mr. Rogers states that he has been sick, and hence has not taken up the matter as he should have done. He suggests a team of twelve men from the National Gun Club to meet a team of a similar number from the Garden City Gun Club, the race to be shot at the National Gun Club grounds, in Milwaukee, the shooting to be in squads of four, at 15 birds per man, birds at 20 cents, losers to pay for the birds. The visitors will be given a light banquet on the day of the race, and a return race will be shot at Chicago. American Association rules of 1899 to govern, except where such rules may conflict with local ground rules. Members of the National Gun Club from whom the team would be chosen for Milwaukee will be as follows: Messrs. Keifer, Houghton, Vose, Deiter, Klapinski, Burnham, Sherer, Bush, Collins, King, Stuth, Potter, Blake, Rogers, Case, Miexner, Thomas, Reed, Pettit and Silverman. The team for the Garden City Club has not been selected. There are one or two little points besides the above which remain to be adjusted, but at a meeting of the Garden City Gun Club held this morning it was stated by Mr. Levi, secretary of the club, that all these matters would in all likelihood be arranged at an early date, and that the race would probably be shot at Milwaukee on Tuesday, Feb. 12. It is much to be hoped that this contest will be brought off, for when properly conducted these intercity races are promoters of good fellowship. It is even money which city would win, for each club can put up a good team.

In Town.

Mr. W. Fred Quimby, of New York, is in the city this morning and will be in the West for some days. Mr. Quimby is looking younger every minute. He brings to the shooters of this vicinity the very welcome news that Capt. A. W. Money, of the E C & Schultze Gunpowder Co., is recovering nicely from the misfortune to which he was lately subjected at the hands of a New York shooter. It need hardly be added, in view of Capt. Money's reputation as a gentleman and a sportsman, that he has the sympathy and the entire confidence of every sportsman of the West, as well as of the East.

Live Birds.

We are having now good, clear winter weather, splendid for live-bird shooting and a good thing for Garfield and other clubs whose events are now calling them to the traps. It has not been a very memorable winter in Chicago live-bird circles, and it would be a welcome thing if some one would get up a good, stiff pigeon match of the old kind.

Rolla Heikes' Midwinter Shoot.

Jan. 31.—Rolla Heikes and Jack Hallowell are having just a little more fun to-day than anybody else in the wide, wide world. The midwinter target shoot is turning out a hummer, as the scores of the first day show, with their roll of the steadies. Rolla said that he was going to have "an oldtime shoot," and there doesn't exist any room for doubt that he is doing that same at this writing. The balance for the first day shows Pork Chops Neal, of Bloomington, Ind., high gun, 191, with the Pa of the shoot, the Bald Eagle of Dayton, second in the tie with Fred Gilbert, 190. One can imagine the benevolent smile with which Jack Hallowell will hand Pork Chops his envelope at the close of the day's labor. Fanning, Alkire, Trimble, Burnside, Gambell, McDonald, Parker, Courtney, Mackie and a lot others of the regulars are doing business with the birds, and the first day stamps the shoot a winner.

Si Palmer's Invitation Shoot.

You Uncle Si Palmer pulled off another of his enjoyable little invitation shoots at the Ackerman farm, at Glen Ellyn, a pretty suburb west of Chicago, on Jan. 29, having out with him a half dozen of his friends, who had the pleasure of seeing some of the trained farm birds lie them thence to the barn. Eddie Bingham seems to have got the combination better than anybody else, for he stopped 63 out of 66, which is record for that locality. The main event was at 25 birds, and in this W. B. Leffingwell scored 21, J. B. Barto 19, Eddie Bingham 24, S. Palmer 21, J. Bowles 13, Mr. Hicks 15. They then made up a handicap, Bowles and Hicks getting 6 birds extra, and the scores were Bingham 23, Palmer 16, Leffingwell 16, Barto 18, Bowles 22, Hicks 18.

Illinois State Sportsmen's Association.

The officers of the Illinois State Sportsmen's Association are laboring hard to get everything in good shape for the big shoot next May (May 21-25), and there seems to be a very good interest manifested in the coming tournament. Among clubs now enrolled are the following: The Crescent, Audubon, Garfield, Hennepin, Chicago, Garden City, Fearless and West Pullman, of Chicago; Aledo, Blue Island, Clinton, Dixon, Evanston, Elgin, National, Dupont, of Freeport; Farmer City, Geneseo, Grand Crossing, La Grange, Eureka, of Lyons; Long Lake, Douglass, of La Vergne; Sunday and Highland, of Moline, O.; Rainmaker, of Ottawa; Piper City, Peoria and Twin City, of Peoria; Quincy, Trisi County, of Reddicks; Rockford, Rock Island, Maple Leaf, of Sycamore; Sidell, Illinois, of Springfield; Wyoming and Piasa, of Alton.

Crown Point, of Indiana.

Crown Point Gun Club, of Indiana, shot in a high, cold wind Jan. 25, with following results, Youche having high average, 94 per cent.:

Trophy shoot:

Youche	111111111111111—15	Hilebrant	011001111101111—11

As Reported by a Golf Player.

Pigeon shooting as reported by a golf player may be seen below in the story of the Wishininne Club team race, mentioned in these columns some days earlier. A Chicago local sporting paper, with customary accuracy, reports that the teams were Messrs. Clarke and Dennis on one side against Messrs. Wells and Haskell on the other, and that, "while the latter were reported to be the better shots, they failed to show their form." The facts were, as stated in the FOREST AND STREAM that Mr. Clarke and Mr. Haskell were partners, and shot against Mr. Wells and Mr. Dennis. Nobody showed his form especially, except Col. Haskell, to determine whose skill this match was especially arranged. He came out where the wagers put him, and has been very quiet at the meetings of the Wishininnes ever since. But this is what the golf player does by way of getting a trap story, and it is all there, and since you see it in the FOREST AND STREAM, you may feel that the teams are paired off as they shot, and not hitched up wrong. The birds were said by John Watson to be as hard as any he has trapped for a long time. The local paper says, "A fairly good lot, but not up to Watson's standard." Scores à la golf:

Burnside, Jan. 22.—Two-men team match, 50 birds to team, 25 birds to man. Teams—J. V. Clarke and W. H. Haskell against W. L. Wells and Chas. S. Dennis:

First round—Clarke vs. Dennis:

Clarke	2200022102120021212221101—18
Dennis	1120120112222221122221112—23

Second round—Haskell vs. Wells:

Haskell	002021000101100	—6
Wells	101011121202221	—12

Clarke and Haskell here gave up match.

Summary:

Wells and Dennis killed 35, missed 5; total 40.

Clarke and Haskell killed 24, missed 16; total 40.

Wells and Dennis win by 11 up and 10 to play.

Will Be There.

I saw Tom Divine, "dear old Tom Divine," as the boys call him, down at Memphis this past week, and he told me that he was surely going to be on hand for the handicapping work at New York the coming month of March, and that perhaps he might take a hand in the Grand American himself, just to get rid of his money. Tom is not so strong as he should be—has been sick all winter and ought not to be at work—but he is the same cheerful Tom, and it is much to be hoped that this representative Southern shooter can keep his own intention and be at the handicap. It will be worth while to go just to see Tom Divine.

Lincoln, of Illinois.

Lincoln Gun Club, of Illinois, held its tri-weekly trophy contest on the grounds near Dunning this week, with the following scores:

Chase, W. F. Carpenter and E. Aver captured the three class trophies. Scores:

Shoot No. 1: Chase 9, Levey 8, Fraunholz 10, Becker 6, W. F. Carpenter 7, Nyman 5, W. T. Carpenter 6, Aver 6.

Shoot No. 2: Chase 8, Levey 7, Fraunholz 7, Becker 5, W. F. Carpenter 6, Nyman 4, W. T. Carpenter 5, Aver 5.

Shoot No. 3: Chase 9, Levey 9, Fraunholz 9, W. F. Carpenter 7, Becker 6, W. T. Carpenter 5, Nyman 4, Aver 5.

Shoot No. 4, trophy shoot, 25 birds: Chase 23, Levey 18, Fraunholz 19, W. F. Carpenter 20, Becker 12, W. T. Carpenter 13, Nyman 10, Aver 12.

Shoot No. 5, 15-bird sweepstake: Chase 14, Levey 12, Fraunholz 13, W. F. Carpenter 10.

E. HOUGH.

HARTFORD BUILDING, Chicago, Ill.

Garfield Gun Club.

Chicago, Feb. 2.—The inclosed scores were made on our grounds to-day, on the occasion of the ninth trophy shoot of the season. Dr. Shaw carried off the honors of the day by being the only one to go straight in the trophy event. The entire shoot was brought off in a rather sharp snow storm, and it was decidedly chilling and unpleasant weather to be out in. The birds were a fast lot, as the large number of dead outs testify. The attendance was good, considering weather conditions:

	Trophy.	No. 1.	No. 2.
Thomas, 28	21*0211202— 7	102202—4	121012—5

Bowles, 27	11122—5	Robertson, 30	20200—2
Mack, 27	01111—4	Sawyer, 30	22110—4
Antoine, 30	10111—4		

R. O. Heikes' Midwinter Tournament.

DAYTON, O.—The three days' tournament given by Mr. R. O. Heikes, on the grounds of the Buckeye Gun Club, Jan. 30, 31 and Feb. 1, was notable for the excellence of the shooting and the steadiness with which the majority shot through the entire programme. Many of the famous shots of America engaged in the competition.

On the first day Mr. E. A. Neal was high average with .955, breaking 191 targets out of a possible 200. Heikes and Gilbert tied on 190 breaks, each averaging 95 per cent., one-half of one per cent. less than Neal. Tripp was fourth with .945; Rhoads fifth with .935; Fanning was sixth with .935; Sanford .920; Alkire and Burnside .885; Trimble .880; Squier .875.

The programme was alike for each day. The entrance was based on 10 cents per target. To each event $5 was added, except the sixth, which had $10 added. In the 15-target events the money was divided 40, 30, 20 and 10. In the 20 and 25 target events it was divided 30, 25, 20, 15 and 10 per cent. Contestants making 90 per cent. or more the first and second days paid $2 extra entrance for the succeeding day, which formed a fund, which was divided equally among the men shooting through the entire programme who had not averaged on the first or second day 90 per cent. or better.

To the first high gun of the entire programme there was a prize of a silver pitcher; to second, $10; to third, $6; to fourth, $4.

The traps were one set Sergeant system, one magautrap.

The ground was covered with snow, and the glare bothered the boys some, although it was cloudy most of the time.

The first day was quite cold, and Elmer Neal showed the boys how to break them, missing but 9 out of 200, Heikes and Gilbert following with 10 each.

The second day was a very cold one, as the mercury went to 5 degrees below zero at 7 A. M., yet there was an average of twenty men who shot through the programme of 200 targets. Many of the local men did not turn out on this account.

Heikes led the men on the last day by a good margin. He made a run of 126 straight and Fanning, his nearest competitor, made 63, but finished with 15 misses for the day against Heikes' 6. Gilbert and Neal were still having a hot race for second place for the two days, Neal with 25 misses and Gilbert with 26.

Rhoads and Tripp, two important factors in the average race, were obliged to leave on the evening of the second day.

The third day saw Heikes still maintain his lead. Gilbert tied him for the day's average, but the Bald Eagle had beaten him 10 targets in the 600.

Neal shot a sturdy race, but Gilbert overhauled him, and won out by 2 targets for the three days—verily a close race.

Fanning landed in fourth place without any opposition, as no one below him reached 90 per cent.

The shoot was well attended, considering the severe weather.

The manufacturers' agents present were: Fred Gilbert, Winchester, Dupont and Parker; J. R. Hull, Parker Brothers; J. S. Fanning and W. Tramp Irwin, L. & R. Powder Company; Luther Squier, Dupont; Mr. Phellis, Hazard; Mr. Fort, Ballistite; Col. A. G. Courtney and E. D. Fulford, Remington; R. O. Heikes, U. M. C.; J. H. Mackie and John Parker, Peters; J. J. Hallowell, U. M. C.; Ralph Trimble, W. R. A. Company.

The amateurs were of the best, such as E. H. Tripp, Indianapolis, Ind.; E. E. Neal, Bloomfield, Ind.; Guy Burnside, Knoxville, Ill.; R. S. Rhoads, Columbus, O.; Arthur Gambell, Cincinnati, O.; M. C. Sanford, Clyde, O.; Frank Alkire, Woodlyn, O., and W. Scott McDonald, C. Miller, A. Mumma, Dr. Palmer, Dr. Adams and Webb Wempler, of Dayton.

On Saturday the Miami Gun Club invited the visitors remaining over to participate in a 25-live-bird race. There were six visitors who shot, and they filled all the four places. Burnside killed 25 alone, Heikes, Fanning and Gilbert divided on 24, Hallowell scored 23 alone and Hull 21 alone, all of the local shooters falling below these scores:

The scores follow:

Wednesday, Jan. 30, First Day.

Events:	1	2	3	4	5	6	7	8	9	10	11

Programme of Cleveland Gun Club.

THE Cleveland Gun Club, of Cleveland, O., has announced its programme for this year as follows:

Jan. 10 and 31, semi-monthly club shoot at targets, 2 P. M.

Feb. 7, club shoot at live birds, 1:30 P. M.; 14 and 26, semi-monthly club shoot at targets, 2 P. M.; 22, Washington's Birthday prize shoot, 9 A. M.

March 7, club shoot at live birds, 1:30 P. M.; 14 and 28, semi-monthly club shoot at targets, 2 P. M.

April 6, annual smoker. 9 A. M.; 11 and 26, semi-monthly club shoot at targets, 2:30 P. M.; 18, club shoot at live birds, 2 P. M.

May 9, and 30, semi-monthly shoot at targets, 2:30 P. M.; 30, Decoration Day sweepstakes, 9 A. M.

June 10, twenty-first anniversary social shoot, 9 A. M.; 13 and 27, semi-monthly club shoot at targets, 2:30 P. M.; 19, 20 and 21, Interstate shoot (three-day tournament).

July 4, sweepstakes, 9 A. M.; 11 and 26, semi-monthly club shoot at targets, 2:30 P. M.

Aug. 8 and 29, semi-monthly club shoot at targets, 2:30 P. M.

Sept. 2, Labor Day, grand merchandise shoot, 9 A. M.; 12 and 26, semi-monthly club shoot at targets, 2:30 P. M.

Oct. 10 and 31, semi-monthly club shoot at targets, 2 P. M.

Nov. 14 and 28, semi-monthly club shoot at targets, 2 P. M.; 28, Thanksgiving Day sweepstakes, 9 A. M.

Dec. 12 and 26, semi-monthly club shoot at targets, 2, P. M.

Jan. 1, 1902, New Year's Day merchandise shoot, 9 A. M.

Summer Saturday matinees will begin on June 1, 1901, at 3 P. M. Suitable prizes will be awarded in same.

Dates for live-bird shoots during fall season will be posted later. There will be ten valuable prizes, consisting of cups, etc., to be awarded to the ten men getting the greatest number of points during the year of 1901. A shooter to be eligible to win must compete in twenty or more of the regular semi-monthly target shoots. Class shooting to govern awarding of prizes.

A cup will also be given to the shooter—a member of this club—making the first perfect score in any of the regular semi-monthly or Saturday matinee target events. Semi-monthly target events shall consist of 40 targets. The Saturday matinee events shall consist of 50 targets.

H. C. Hirschy Live Bird Trophy.

Under date of Jan. 27 Mr. H. C. Hirschy, Minneapolis, Minn., sends us the following:

Owing to the lack of interest taken by shooters throughout the Northwest in the H. C. Hirschy trophy, emblematic of the championship of Minnesota, Wisconsin, Iowa, North Dakota and South Dakota, it has been deemed advisable to change the rules governing the prize, with the hope of creating greater interest in the contests. Heretofore contests for the trophy have been limited to two men, the holder and challenger. Under the new rules, when the holder is challenged as many shooters as desire may enter the contest, and the purses will be divided under the Rose system, which, as shooters know, is a most fair system for the division of prize money.

The first contest after the adoption of the new rules will take place on the afternoon of Jan. 29, at 2 o'clock, L. E. Parker, of Minneapolis, having challenged Mr. Morrison, the present holder. French and Hirschy, of Minneapolis, have also entered, and other entries are expected. All interested in the sport are invited to attend.

H. C. Hirschy Live Bird Trophy Rules.

Open to shooters who are residents of Minnesota, Iowa, Wisconsin, North Dakota and South Dakota.

The holder of trophy to hold and defend the same, subject to the following rules and conditions:

1. All contests for this trophy shall be shot under American Association rules.

2. All challenge contests shall be shot at 30yds. rise, 25 pigeons each man, $10 entrance, birds extra.

3. The holder of the trophy shall be subject to challenge by the posting of a forfeit of $10 with W. P. Brown, manager of the Intercity Shooting Park, Minneapolis, Minn., for a match; the holder to name the place, date and hour of the shoot. The date to be within fifteen days after the challenge, the holder to deposit $10 with W. P. Brown within five days after challenge or forfeit trophy. The holder shall give the challenger at least ten days notice by filing the same with W. P. Brown, manager of the Intercity Shooting Park, of the time and place of contest, and said W. P. Brown shall forthwith give notice of the time and date of said contest by publishing the same in the daily papers of Minneapolis and St. Paul, and in the various sportsmen's papers, and by personally notifying the challenger. All shooters eligible to contest for the trophy shall be entitled to enter the contest on the same terms as the challenger. Entries, except challenger, will not be required to deposit forfeit. No entry will be taken after first gun in contest has been fired. The holder of the trophy shall deliver the same at place of contest in good condition.

4. Donor reserves the right of asking guarantee for safe return of trophy, and also the right to call in trophy at any time for the purpose of offering it in open competition by paying holder $20. Any eligible gun club within the State of Minnesota, Wisconsin, Iowa, North Dakota or South Dakota may have trophy to offer in open competition by paying holder of trophy $20 and guaranteeing a purse of $200.

5. In open competition contests shall be under handicap conditions.

6. In open competitions the club under whose auspices the shoot is given shall have the right to appoint handicap committee.

7. In the event of the death or removal from the States mentioned of the holder of the trophy at any time before the final contest, the trophy shall revert to H. C. Hirschy, to be again offered in open competition under the rules and conditions herein specified.

8. At the expiration of three years from the date of the first contest the winners of the trophy, either in open competition or by challenge, shall engage in a special 25-bird race, $15 entrance, bird sincluded, for the absolute possession of the trophy, the money to be divided according to the will of the majority of the contestants, and in the event of their being unable to agree on that point the division of such moneys shall be decided by Mr. H. C. Hirschy, the doner. Said contest shall take place at the Intercity Shooting Park, Minneapolis, Minn., or at such other place as the donor may be decide is to the best interest of those eligible to contest.

9. The holder of the trophy shall provide suitable grounds and the best live pigeons obtainable, at a nominal price, not to exceed 25 cents each.

10. The distance between the home of the challenger and the home of the holder will be considered fair and neutral. Should the holder of the trophy, through any mean intention, name a place at a greater distance he will be required, before the contest takes place, to pay to the challenger the excess expenses which he has incurred by failing to name a neutral place.

11. Ties for trophy must be shot off on same day of contest if possible, and shall be at 5 birds, until decided.

12. This trophy shall not be shot for on Sunday.

13. In open competitions the handicaps shall be from 30 to 26yds., $10 entrance, birds extra.

14. In open competitions the moneys shall be divided under the Rose system—four moneys, with ratios of 5, 3, 2, 1.

15. In challenge contests the moneys shall be divided under the Rose system, as follows: 1. In contests with two contestants, one money. 2. In contests with more than two contestants, and not more than five, two moneys, with ratio of 5, 3. 3. In contests with more than five contestants and not more than ten, three moneys, with ratios of 5, 3, 2. 4. In contests with more than ten contestants, four moneys, with ratios of 5, 3, 2, 1.

National Sportsmen's Association Tournament.

In respect to its forthcoming tournament the National Sportsmen's Association have issued a programme as follows:

The Roof Garden Tournament.

The third annual tournament of the National Sportsmen's Association, open to the world, will be held March 2 to 16.

Herewith is presented the National Sportsmen's Association's programme of their third annual target tournament, to be held on the roof of Madison Square Garden, New York, March 2 to 16.

Excepting a few slight changes, it is the same as that which governed the like tournament of last year.

The competition which this programme affords is so comprehensive in its scope as a test of nerve, knowledge and skill, and so highly appreciated by the public at large for its other distinctive meritorious features, that the management deems it well worthy of another trial.

While being simple of arrangement and easily understood by all, it is so devised as to meet the requirements of every class of shooters, whether it be those who desire to test their shooting qualities pleasurably under novel conditions for a few moments only, to compete against the recognized experts in a few events or to compete expert against expert, etc., days in succession in the most exacting and difficult of competitions.

Trophies are provided for the longest runs of consecutive breaks and the highest score of each day in the two events respectively, besides further liberal provision of valuable trophies for the grand aggregates.

To the end that nothing be denied the competitors, in the way of full opportunity to make their best showing, they have the privilege of re-entering as many times as they are pleased to do so.

As in prior tournaments of the National Sportsmen's Association, a magautrap, run by an electric motor, will be used to throw the targets.

In consequence of Wednesdays and Saturdays being matinee days of the Garden Theater, no shooting will take place on the afternoons of those days.

The perfect management, equipment and convenience of the trapshooting competition, its low entry fee (practically for the price of targets only), the high character of the gentlemen sportsmen who patronize it, the world-wide prestige of the National Sportsmen's Association's competitive events, the trophies to be won, and the honors of which they are emblematic, and its high merit as an educational institution, deservedly claim the interest and support of all who compete with the shotgun and all who admire wholesome sport.

Mr. Elmer E. Shaner, manager of the Interstate Association, has again accepted the invitation to manage the Roof Garden tournament, and it will be solely under his management. His assistants have been selected by him with a view to their special fitness for the service required. Thus the perfection of every detail is insured.

Continuous Match—Mondays, Tuesdays, Thursdays and Fridays, 10 A. M. to 12:30 P. M.—Four prizes are donated by the National Sportsmen's Association to the four contestants making the four longest runs of consecutive breaks in this match. No contestant can win more than one of these four prizes.

No run of consecutive breaks made in any other competition will be allowed to count for prizes in the Continuous Match.

All targets will be thrown at unknown angles. Entrance fee 25 cents, in addition to cost of targets at 1½ cents each.

Re-entries are unlimited.

Prizes in the Continuous Match are as follows: To the contestant making the longest run of consecutive breaks will be donated a handsome trophy. To the contestant making the second longest run of consecutive breaks will be donated a gold medal. To the contestant making the third longest run of consecutive breaks will be donated a silver medal. To the contestant making the fourth longest run of consecutive breaks will be donated a bronze medal.

In addition to the above four prizes, the management will donate each day a prize to the contestant making the longest run of consecutive breaks on that day in this match.

Sportsmen's Association Championship—Mondays, Tuesdays, Thursdays and Fridays, 12:30 to 5 P. M.—Wednesdays and Saturdays, 10 A. M. to 1:30 P. M.—Conditions: 100 targets, unknown angles, entrance 50 cents, in addition to cost of targets at 1½ cents each. Re-entries unlimited.

From Saturday, March 2, unti Friday, March 15, inclusive, except Wednesdays and Saturdays, as above mentioned, and Sundays, the traps will be open from 12:30 to 5 P. M. for contestants to qualify for the final round in the Championship contest, which will take place on Saturday, March 16.

The conditions of the final round will be 100 targets per man, unknown angles, entrance price of targets at 1½ cents each.

The contestants who are eligible to compete in the final round of the championship contest are the twenty-five contestants having respectively the twenty-five highest totals made in the previous qualifying rounds shot on any of the preceding days of the tournament.

No contestant can qualify with more than one score, that score being the highest made by him in the qualifying rounds.

As re-entries for the qualifying rounds are unlimited, any contestant can, in respect to them, try to better any record made by him.

The prizes in the Sportsmen's Association Championship are as follows:

To the winner in the final round of the Championship contest will be donated a handsome trophy, emblematic of the Sportsmen's Association Championship. This trophy becomes the property of the winner. To the contestant making the second highest score will be donated a gold medal. To the contestant making the third highest score will be donated a silver medal. To the contestant making the fourth highest score will be donated a bronze medal.

In addition to the above prizes, the management will donate a prize each day to the contestant making the highest score in the qualifying rounds shot that day.

General Average.—A special prize, a handsome gold medal, will be given by the National Sportsmen's Association to the shooter making the best general average for the Sportsmen's Association Championship.

To qualify for this prize the contestant must take part in the comptetition every day, except the first day, Saturday, March 2. His final score for the Sportsmen's Association Championship will be also counted for this average. No re-entry score will be counted for this average. Should a contestant shoot two or more scores of 100 targets each on any one day, his first score on that day shall alone be credited for this average. To the contestant making the second best average under the above conditions will be awarded a silver medal. To the contestant making the third best average under the above conditions will be awarded a bronze medal.

Note.—Any question that may arise, and that is not covered by the above conditions, will be passed upon and decided by the committee.

Intending contestants can ship guns and shells in care of James C. Young, Madison Square Garden, New York city.

ON LONG ISLAND.

John Wright's Shoot.

Interstate Park, L. I., Jan. 29.—Notwithstanding the cold weather a goodly turnout of shooters were in attendance at John Wright's live-bird shoot to-day, at Interstate Park. In the main event, at 15 birds, Mr. J. F. Wellbrock and Dr. Webber scored the limit and divided. The scores follow:

No. 1 was at 5 birds, $3 entrance, birds included:

E Steffens, 27	22211—5	O C Demarest, 27	20122—4
H S Hyde, 26	22222—5	J H Tracy, 27	21012—4
W Hopkins, 29	12222—5	H V Carman, 27	22012—4
S M Van Allen, 30	02222—4	J M Thompson, 29	20221—4
Capt Jack, 28	21120—4	T W Morfey, 31	2*202—3
J H Kroeger, 27	12202—4	J F Wellbrock, 28	02020—2

No. 2 was at 7 birds, $5 entrance, birds includmed:

T W Morfey, 31	2222222—7	J F Wellbrock, 28	0202222—5
S M Van Allen, 30	2202221—6	J H Tracy, 27	21*2101—5
Capt Jack, 28	0222212—6	H V Carman, 27	01221*2—5
J H Kroeger, 27	1121021—6	E Steffens, 27	2202001—4
J M Thompson, 29	2120221—6	O C Demarest, 27	2220020—4
W Hopkins, 29	*122221—6	H S Hyde, 26	2**0101—3

No. 3, at 10 birds, $7 entrance, had handicaps as follows: 27yds., 1 miss as no bird; 26yds., 2 misses as no birds; 25yds., 1 miss as no bird and 1 miss as a kill:

J H Kroeger, 27	11221102122—10	O Demarest, 27	20022202222— 8
S Van Allen, 30	2222222222 —10	E Steffens, 27	22020201121— 8

T R Chapman, 26	020222*2*2*22*210—10

New Utrecht Gun Club.

Interstate Park, L. I., Feb. 2.—Seven contestants scored the limit of 10 in the New Utrecht Gun Club's handicap at Interstate Park to-day. Annie Oakley was one of the contestants, and shot with her usual excellent skill. The scores:

New Utrecht handicap, 10 birds, for club prize:

Sykes, 1 no bird, 1 miss, 29	21*220w
Chapman, 2 no birds, 29	2222222220— 9
Ramapo, 1 no bird, 1 miss, 27	1222212111—10
Losee, 1 no bird, 1 miss, 28	2211211111—10
Street, 1 no bird, 1 miss, 28	2222222222—10
Lincoln, 1 miss, 28	2221212122—10
Capt Jack, 1 miss, 29	2211110w
J H Jack, 1 miss, 29	121222*112— 9
Gaughen, 1 no bird, 29	22202w
Feigenspan, 29	2222222222—10
Rodman, 1 miss, 28	1111211021— 9
Ray, 1 miss, 29	2222222222—10
Hartshorn, 2 misses, 27	2222221211—10

Two 7-bird events, for club prizes: Jack and Annie Oakley divided first and second in No. 1. Feigenspan, Jack and Annie Oakley divided first and second in No. 2.

W F Sykes, 1 no bird, 29	2212222—7	21*1200—4
T R Chapman, 1 no bird, 28	*20w	2122022—6
	No. 1.	No. 2.
Jack, 1 no bird, 29	2222222—7	2222121—7
T W Morfey, scratch, 30	2222222—7	2222200—5
C W Feigenspan, 28	222*w	2222222—7
R R Street, 1 no bird, 28	1222121—7	1*21220—5
Capt Jack, 1 no bird, 30	2221120—6	2220*10—4
Annie Oakley, 1 miss, 28	2121111—7	1111122—7
C M Lincoln, 1 no bird, 28	220202w	2100w
C H Jones, 27	.....	0110002—3
F J Robbins, 28	.....	2101002—4
W Losee, 1 no bird, 28	.....	22*1000—3
Ramapo, 1 miss, 27	.....	2121220—6
Seven birds, club prize. Losee won in the shoot-off:		
Losee, 1 n b, 28	1121212—7	Ramapo, 1 m, 27 1211112—7
Feigenspan, 28	2222222—7	Chapman, 1 n b, 28 0110110—4
J H Jack, 1 n b, 29	2111020—5	Sykes, 1 n b, 29 2021220—5
Rodman, 1 n b, 28	2111221—7	J Gaughen, 28 222202w
Capt Jack, 1 n b, 28	2222121—7	

Crescent Athletic Club.

Bay Ridge, L. I.—The weather was clear and wintry. The main event was the February cup, in competition for which there were three ties. C. A. Sykes broke 25 targets straight, thrown from the magautrap.

February cup, 25 targets, expert traps; 25 targets, magautrap; handicap allowances added:

	—Expert.—		—Magautrap.—		Grand
	Hdcp.	Broke.	Hdcp.	Broke.	Total.
Dr J J Keyes	5	18	.	..	23
L C Hopkins	6	17	5	19	47
C A Sykes	3	19	3	25	47
Dr H L O'Brien	5	17	4	16	42
C G Rasmus	6	12	5	19	42
G Notman	3	18	3	18	42
H M Brigham	2	16	2	21	41
J N Borland	5	11	5	18	39
W W Marshall	6	12	5	15	38
T W Starr	4	9	3	11	27
C J Haddon	6	11	.	..	17

Dr. Keyes won the special prize.

Panel match: Conditions 25 targets, handicap allowances added:

	Hdcp.	Broke.	Total.
Dr J J Keyes	5	18	23
C G Rasmus	6	16	22
J N Borland	5	16	21
H M Brigham	2	18	20
G Notman	3	15	18
Dr H L O'Brien	5	13	18
L C Hopkins	6	11	17
T W Stake	4	9	13
W W Marshall	6	7	13

Sweepstakes, 10 targets, magautrap: Brigham 8, Keyes 7, Borland 6, O'Brien 6, Hopkins 6, Marshall 5, Notman 5, Stake 2.

Sweepstake, 15 targets, expert traps: O'Brien 11, Brigham 10, Hopkins 9, Borland 7.

Sweepstake, same conditions: Notman 12, Brigham 11, Marshall 7, Rasmus 7, Haddon 4.

Sweepstake, 5 pairs, magautrap: Notman 6, Hopkins 5, Brigham 5, Rasmus 4, Keyes 4, Borland 3.

Sweepstake, 15 targets, expert traps: Sykes 11, Rasmus 11, Marshall 9.

Match, 10 targets, magautrap: Notman 8, Notman 7.

The Parkway Gun Club.

Dexter Park, Brooklyn, Jan. 29.—The Parkway Gun Club held a shoot at Dexter Park to-day. There was a good attendance. Each event was $3 entrance, three moneys, Rose system. "Johnnie Jones" acted as scorer. The weather was cold and windy. Following are the scores:

	No. 1.	No. 2.	No. 3.	No. 4.

Boston Gun Club.

Boston, Jan. 30.—Enthusiasm prevailed at the third serial prize shoot of the Boston Gun Club on their grounds at Wellington to-day. A more enjoyable afternoon could not be asked for by the most fastidious. Shooters from Pascoag, Haverhill, Amesbury, Brockton and Lynn favored us with a chance to see how well they handle the "gaspipes"—and they certainly did the trick exceedingly well.

Shepard has been at war with our magautrap for pretty near a year, and came along solely for the purpose of putting to sleep a former first trial which was a little bit disastrous as to the scoring end of it. This time he went home satisfied that it was all right, and a trap that bids fair soon to come into general use when trapshooting clubs find its real advantage. Griffith, of Pascoag, was high in the prize match and did permit but 5 targets of the 30 to float away unscathed. Second place was taken care of by Leroy, Shepard and Spencer, with 23 each.

Scores below. All shooting handicap by distance, except events Nos. 7 to 11, which were 16yds. All events 10 unknown:

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

COPYRIGHT, 1901, BY FOREST AND STREAM PUBLISHING CO.

TERMS, $4 A YEAR. 10 CTS. A COPY. SIX MONTHS, $2.

NEW YORK, SATURDAY, FEBRUARY 16, 1901.

VOL. LVI.—No. 7. No. 346 BROADWAY, NEW YORK

The FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. The editors invite communications on the subjects to which its pages are devoted. Anonymous communications will not be regarded. While it is intended to give wide latitude in discussion of current topics, the editors are not responsible for the views of correspondents.

Subscriptions may begin at any time. Terms: For single copies, $4 per year, $2 for six months. For club rates and full particulars respecting subscriptions, see prospectus on page iii.

MAKE FOREST PRESERVES GAME PRESERVES.

THE continued diminution of North American big game, due to hide hunting, to over-killing by so-called sportsmen, but especially by the continual settling up of the country, has been a subject of concern to far-sighted people for many years. Yet the average sportsman, and even the average big-game hunter, appears to interest himself very little in this diminution. The letter from Mr. Wells, published elsewhere, brings the subject once more to the front, and shows how obvious it is that unless some active steps are taken to move the Government authorities, it will before long be too late to do anything.

Almost by accident, the Western country, where the big-game remnants chiefly exist, is prepared for legislative action which shall set aside game refuges that may exist always, and about whose borders hunting may be had for generations yet to come, provided only that proper steps are taken now.

In this Western country there have been set aside a number of forest reservations extending almost from the southern boundary of the United States to the northern boundary, and covering the greatest variety of country. They include low-lying valleys and towering peaks, forest and prairie, arid desert and water-soaked mountain side. Within the boundaries of these reservations, if properly protected, almost all the large game of North America could flourish forever, just as it used to exist in the old West, before the white man—greedy for dollars—penetrated the unknown fastnesses where it fed.

We have already an example of such a game refuge in the Yellowstone National Park, where the animals, being protected, do well, and in autumn furnish to hunters on the Park borders practically all the big-game hunting that is to be had in the West. For many years the Yellowstone Park has been protected by troops, but for many of these years the only service which the troops performed was to arrest or to drive out persons who violated the regulations established by the Secretary of the Interior. Then, in the year 1894, a law was enacted by Congress which provided an actual form of government for the Park, and substituted something tangible for the vain threats of the Department of the Interior—an official to try offenses, a mode by which offenders should be tried, penalties for killing game or defacing natural wonders and a place where offenders should be confined after conviction. When this had been done, depredations in the National Park ceased.

The Secretary of the Interior has been authorized by Congress to make regulations governing the forest reserves, but such authorization is not enough. Courts have decided that in making these regulations the Secretary of the Interior is usurping legislative functions, while his own are merely executive. What is required now is action by Congress on lines similar to those laid down in the Yellowstone National Park Protective act, which shall apply to all the forest reservations. Such an act must be carefully considered, because there are settlers on many of the forest reservations, and their rights must be carefully safeguarded.

It is time to take this matter up, and before the opening of the next session of Congress to arouse an interest which shall demand the passage of a law protecting the game and the timber on these forest reservations.

By proper protection the National Park and the forest reservations already existing, and those which shall hereafter be set aside, may become not only forest preserves, but game preserves as well. Within their boundaries are to be found to-day every species of large game known to the United States, and if they can be protected all these great and interesting indigenous mammals may be perpetuated in full supply for all time. Unless such protection is afforded certain species of American large game will before long become as nearly extinct as is the buffalo.

It is time that an intelligent effort for the protection of these reserves were made. Make the national forest preserves game preserves as well.

TO KEEP THE GUN OUT.

IN Maine they are talking of a law to forbid the taking of firearms into the woods in the close season.

This is a radical proposition, and would be a novelty for Maine. But it is an old rule in some European countries. There, when the shooting season ends, the gun is laid away, and one may go afield with it only at the risk of paying a penalty. This means that when the shooting season closes it closes.

American sportsmen who have traveled in Brittany and have seen there the absolute confidence manifested by the wildfowl during the close season, ascribe this to the system of keeping the guns at home. The game recognizes the close season, and lives and breeds in security.

We have been for so many generations in this country accustomed to the fullest freedom with gun and rifle that a law like that proposed for Maine would provoke decided opposition. But on second sober thought might we not recognize the justice and utility of such a system? In the Yellowstone National Park the possession of guns is forbidden, except of guns officially sealed by the authorities, and we all know that game protection in the Park is effective. It would not be effective if visitors were permitted indiscriminately to equip themselves with arms and ammunition. In Massachusetts to have firearms in the game cover on Sunday is construed as prima facie evidence of violation of the law against Sunday shooting, and the system has materially simplified the problem of suppressing the Sunday shooter. If shotguns and rifles were absolutely prohibited from the game covers during the close season, the effect upon the game would be most beneficial, and the observance of the close season would be promoted.

In the quail and grouse covers, at least, there can be no excuse for having firearms in close season. A law forbidding the carrying of arms there, and providing a stiff fine for penalty, with the guns to be seized and held pending the payment of the fine, would be a wise and desirable and effective addition to our game code. In a big-game country like Maine the case is somewhat different, for there many men go into the woods before the opening of the season, and without intent to kill game before the season opens, yet who, for convenience, carry their guns for use at the proper time. It might be practicable to develop a system which would give such persons permission to have their guns, while yet shutting out the summer shooters.

To forbid the possession of guns in the woods is only to go a step beyond the existing laws which prohibit the possession of jacklights and of dogs in the deer country.

ABOLISH SPRING SHOOTING.

THERE is a measure now before the New York Legislature to close the wildfowl shooting season for the State at large on March 1 instead of April 30, as now, and for Long Island on March 1 instead of May 1 as now. The change is one which should be made. The spring shooting of wildfowl should be prohibited. It should be forbidden for several good reasons. Among them these:

I. Under existing conditions, with spring shooting permitted, the birds are being destroyed at a faster rate than they breed, and the stock is in consequence steadily diminishing.

II. The present law, while purporting to protect the wild ducks, does not actually give them protection, because the close season which is prescribed is such that it does not go into effect until a large proportion of the birds have passed north. As a matter of fact, under the present law the birds may be pursued and killed as long as they are within the limits of the State.

III. The birds should be protected in the spring, because at that season they are on their way north to their breeding grounds. Game laws are made to protect game in the breeding season. This rule should apply to wildfowl precisely as it does to other game birds and game animals. Wild ducks should be protected in the spring time just as other game birds are protected in the spring, because that is the breeding season.

IV. Now being harassed and pursued by spring shooting, the ducks are driven north and do not remain in any numbers to nest in New York territory; but under other conditions, if given security, several species would tarry within the State and nest here. New York has extensive stretches of marsh lands which are admirably adapted to become again the breeding grounds of vast numbers of wildfowl, as they were formerly before the prevalence of spring shooting drove the birds away. Give the ducks a chance and they will come back to their New York breeding grounds again. This is not theory; it is the actual experience of other States which have adopted a close season in the spring for their wildfowl.

V. The abolition of spring shooting will mean not only the return in the fall of a larger number of birds from the North, but will mean the restoration to New York State of a native supply of birds which will give better shooting in the fall of the year.

VI. The interest of the people at large would be served by the abolition of spring shooting, and these interests should be considered as against the advantage which any limited number of individuals may reap from shooting the birds in the spring. A game law should be framed on the principle of the greatest good to the greatest number. The greatest good of the greatest number demands the abolition of spring shooting.

THEY have started a movement in Ticonderoga, N. Y., which has behind it an excellent idea. In various parts of the country we have been considering legislation as a remedy for the careless shooting of human beings for game, and penalties of various degrees of severity have been advocated to deter the man killer. The Ticonderoga plan is to combine all the users of guns in the neighborhood into a club, the one obligation of which is that each member shall pledge himself never to shoot at anything until he knows certainly what it is. "Always know what you aim at." That is platform plank, constitution and by-laws of the Ticonderoga Club, and human life ought to be more secure wherever the club's influence extends. A voluntary pledge of this nature will be quite as efficient as any possible law making could be. We ought to have Ticonderoga clubs wherever there are shooters who need the restraining influence of a pledge to stay their hands from a heedless shot.

THE increased interest in forestry matters in the United States is shown in a variety of ways. Besides the constantly growing demands on the resources of the Division of Forestry at Washington, there has sprung up an inquiry for the services of trained foresters and persons familiar with forest and game preserves. Such a demand is sure to be supplied before long. While as yet the number of men competent to attend to such matters is not great, there are a few such, and some of our universities, like Yale and Cornell, are training young men, who before long will be able to fill such places. New York city already has one practicing forester, trained in the schools of Germany, in the person of Mr. F. Von Hoffmann, who has established himself in the St. James Building.

We have received the Fourth Annual Report of the Commissioners of Fisheries, Game and Forests of the State of New York, which was the commission preceding the present board. The report is for the year ending Sept. 30, 1898, and is another in the series of superb volumes which have a place by themselves in the official literature of fish and game. The illustrations of birds and fishes colored to the life by Ridgeway and Denton respectively comprise the mallard duck, male and female ring-necked pheasant, upland plover and spruce grouse; shad, weakfish or squeteague, yellow perch, tomcod or frostfish, mackerel, dogfish or bow-fin, eel and lobster; and other colored plates illustrate insects injurious to vegetation. In addition to the reports of the several departments of fishculture, game protection, forestry, etc., the volume contains a number of special papers.

That is a curious condition which is described by Secretary Kalbfus as existing in the Pennsylvania Game Commission. The people who have given into the hands of their appointed representatives the trusteeship of the game interests have a right to look for the intelligent and unselfish safeguarding of those interests. If there is in the present board any member who does not comprehend the responsibility of the office, or who is lukewarm in his support of efforts looking to the better protection of Pennsylvania game, he should give place to some one else.

The Sportsman Tourist.

In Old Virginia.—IX.

The next day was a Longfellow's day—"cold and dark and dreary," with the rain and wind in evidence. Putting on my rain coat and pulling my cap well over my ears, I strolled down to the barn to find some one to smoke and grumble with. The farm manager was not in sight, but two boys were sorting over the now much depleted corn pile in the large crib.

They had worked out a cleared space on the floor and were throwing the good corn in a pile to the front near the door, while the nubbins and defective ears were thrown to one side near the wall.

It was not exciting, but nothing better offering, I climbed in over the pile of good corn and sat down upon an empty nail keg to smoke and feel glad that I did not have to work.

The outlook was gloomy in the extreme, and every living thing in sight seemed in a low barometer condition. Chickens, in the last stage of dejection, with their bodies on a slant that seemed to threaten an entire shifting of the center of gravity to the rear, stood around in every spot that afforded the slightest shelter; the hogs contested, with little animation and much complaining, for a corner of the fence partially sheltered by a spreading tree, while over in the pasture lot stood several young mules close up together with drooping heads, too dejected even to kick one another.

Truly there is much poetry and sentiment in the country, but it is not waterproof.

Turning from the gloomy outlook, I found one of the boys contemplating a half-grown rat that was with difficulty making its way up the post near the far corner of the crib, disturbed by the boys who now had but a few barrels of corn left. Here was sport. Gathing a handful of nubbins, I opened fire on the rat and soon brought it down.

Another showed up, and another, and then, as the corn pile grew less, several ran out at one time, making the fun—such as it was—fast and furious.

I was not the skillful marksman that I had been in the dim and distant past, when, as pitcher for the invincible Modoc Baseball Club, I could put ten balls in succession in a 12-inch circle, and pitch out a game lasting from 1 o'clock until dark, with from sixty to one hundred runs on a side, but I was occasionally throwing true and bagging a rat, and having a great deal more fun in the effort than I had enjoyed while looking out on the dreary landscape.

Finally the boys put up a whole covey of rats, and being well provided with ammunition, I fairly filled the air with missiles, and having exhausted my supply, stooped quickly to the floor to gather more, and found myself right over, with my hands all but on, a big blacksnake that was crawling out of the corn immediately between my feet.

Nearly as thick as my arm, I could only guess at his length, as he was not entirely out of the corn, but I should have believed any one who had called his measure 10 feet. I stand any surprise better than a snake—large or small—and to have this great horrible reptile appear so unexpectedly was awful.

With an involutary exclamation of terror, I turned and flung myself at the door, striking the pile of corn high enough to go over, and head first I pitched out the door, bouncing off of the blocks set for steps, and falling in a heap on the muddy ground at the feet of the surprised farm manager, who was approaching.

Scrambling to my feet, I proceeded to back off a little further from the door, looking carefully for any sign of the snake.

"Do you always come out of a crib that way, or did you fall?" said the surprised manager.

"You go get your gun," said I. "Get it quick as you can; there is the biggest snake in there that ever you saw. Hurry, hurry! He may get away."

"Is it black?" was the irrelevant answer.

"Yes, I believe it was, and an awful big one. Go on quick and get your gun before it escapes."

"Well, I hope it will not escape, as I have had an awful lot of trouble getting it to stay there this long, and have caught it several times and put it back when it was emigrating. It won't hurt you any more than a cat, and is a much better ratter."

With as much indignant scorn as I could throw into my voice, I proceeded to tell him what I thought of any man who would cultivate such pets, and especially without putting up some notices to warn people who had not such vicious tendencies and low taste.

"Well, I am sorry," said he, "but if you knew how annoying the rats get to be you would not blame me for resorting to any method to get rid of them. Come down to the barn, where I have some harness to mend, and we can tell snake stories.

"Funny, isn't it, that no man can ever see a snake without being reminded of one or more narratives that he then and there proceeds to tell to the first auditor he can corral.

"My story dates back to boyhood days, and I have not thought of it for years, until you said snake, and now I am actually suffering under the weight of it."

Comfortably reclining on a pile of sacks, I watched the manager and old Uncle John overhauling the worn harness that had been laid aside as rainy day work, while I listened to the story.

"When a little fellow I lived up on the James River, and spent much time fishing and swimming. One day, while fishing with a companion, we discovered a small snake, which, after a most exciting chase among the loose rock and pebbles of the river bank, escaped under a large flat rock.

"Our united efforts failed to move the rock, and we were reluctantly abandoning the chase, when far up on the steep overhanging bank appeared a friend of ours whom we called Dutchey Pfouts. Dutchey was the son of a German butcher whose slaughter house stood a little way back from the river. He was a kind-hearted young giant, always ready to do anything in his power for us, and now came down at once to our call. The situation explained to him, he assured us that he could move the rock.

"'Yust you git some shticks,' he commanded, 'und ven I dose rock lift oup, fly in und kill him quick before he vas got avay alretty.'

"Arming ourselves and taking positions in front of the rock, we waited in great excitement while our friend settled himself firmly, with a foot on either side of the rock, and grasped its outer edge with his strong hands. Settling back, his great shoulders and bicep muscles standing out with the strain, he tore the rock loose and raised it up a foot or more..

"He could not raise it higher, so leaned over with his face close to the edge, in order that he might see what was under it. At the same moment we boys dropped down on our knees, close up to the stone, to peer under, and an instant later, when our eyes became accustomed to the dim light, we found our three faces within a foot of a mass of snakes, big and little, that looked like enough to fill a tub, and they were beginning to untwist, preparing, as we thought, to resent the disturbance.

"With a simultaneous shriek of terror we boys pitched over backward, and scrambling to our feet turned and sped up the steep bank, feeling that the highest point promised the greatest safety from the pursuit that we felt sure the snakes would make. Dutchey was but an instant behind us. Dropping the rock with a yell that echoed among the hills on the further bank of the river like a steam whistle, he shouted:

"'Run, poys! Run! My ghracious! Dere vas a pushel of schnakes. Dey vill pit you all to bieces, shure. Don't you sthop for dem feesh pole line or nottings. R-r-r-un! R-r-r-un!' And never was a command more literally carried out, for without regarding the path, which wound its way up the steep bank, we went straight up the nearest available point, throwing a perfect stream of loose dirt and sand behind us as we plied hands and feet to the task, not one of us pausing until we reached our friend Dutchey Pfouts' father's slaughter house, a safe distance back from the river bank."

"Marse Gawge," said old Uncle John, as soon as the story was finished, "I ain' nevah tell yo' 'bout de time dat I spicioned dey was a snak' done jump up my breeches leg, is I?"

I had noticed that though much interested in the manager's reminiscence, the old darky was evidently suffering under the burden of his snake story, and was not surprised at his prompt play for next place.

Smallpox, whooping cough or measles is not more contagious than snake stories, as you will notice when you lay this paper down at the end of this article and proceed to tell your wife (if a benedict) or your chum (if a bachelor) your snake story.

"Dat was w'en I was a boy, too—des like de time yo' tell 'bout. Marse John Carrington, he come to see we all, and he bring a boy wid him he call Tom. Tom, he 'bout my size, an' I des 'bout big 'nuf to wait at de table. Marse Wint an' all de folks livin' 'roun' have big to-doin's to make de visitors have a good time, and w'en dey all go 'way, sometimes to spen' de day, Marse Wint he tell me to let de wuk go an' have a good time an' entertain de boy Tom.

"One day, when dey was all gone an' we didn' know des what to do, Tom he say he wisht we had a gun so we could go huntin'. I tol' him dat ole Unc' Zeke had a pow'ful good gun, a muskit dat dey all said was a fine shooter. Tom ast me if I kin borry it, an' I 'low'd I could, caus' Unc' Zeke done gone wid de folks to drive de kerridge, an' mos' likely hadn't locked his cabin doh. Hit was des as I say, an' we soon had de gun an' some caps, but we couldn' fin' no ammernishun. Den it look lak we goin' haf to git 'long widout 'goin' huntin' 'tall an' Tom he seem pow'ful disapp'inted. I 'membah den dat Marse Wint done tol' me to do all I kin to mak' Tom hav' a good time, an' so I des go an' borry some of his powdah an' shot, an' we lit out.

"We went to shootin' at everything in de way of birds we saw, markin' birds, jaybirds, crows, buzzuds an' an ole har', but we didn't kill none of dem. Tom, he say hit 'cause we hadn' load de ole gun big 'nuff, but I say hit caus' we ain't pi'nt hit rite. But Tom, he 'low he know all 'bout guns, an' he say yo' got to load um big if yo' wan' to do good shootin' wid um. Den he des pi'ntedly put in a load dat he say was a shoah killah. A han'ful of powda, a wad of papah mos' big as yo' fis, a han'ful of shot, an' mo papah, 'til de rammer-rod hit stood outen de eend mos' a foot. I 'low he wus rite 'bout it bein' a killah, at one eend or de oddah of de gun—mebby bofe—an' I ax him to 'scuse me when he say hit my nex' shot, an' tol' him he could have it. We went 'long down to de pon' den, to see if we couldn' see a duck, or turkle or som' kin' of game. De grass wus high 'long de aidge of de pon', an' I wen' trompin' 'long in hit tryin' to skeer out somethin'. Now I reckon yo' gentlemens know how foolish dese big longlegged green bullfrogs is, an' how, w'en you' skeer one, he des up an' jumps his level bes' des de way he happen to be headin'? Well, I des happen to step rite ovah one dat was a-pi'ntin' up, an he strai'ten out an' jump rite up my breeches leg 'til his fron' feet go 'bove my knees, an' he stretch down 'til his hin' feet wus on my shoe top.

"He sho wus cole on my laig, an' dey wasn't nothin' to keep him from gitten clos' to me, for my mammy wus washin' my socks. I made shoh hit was a snake, an' a big one, an' des began to hollah as loud as I could hollah, an' jump as high as I could an' kick as fas' as I could.

"Tom, he come runnin' wid de gun, an' he ast me what de matta was, an' I hollah big snake up my breeches laig des fas' as I could say de words. Den Tom, he up wid dat ole gun, loaded wid de big load I was tellin' yo' 'bout an' he hollah:

"'Hol' still; des yo' hol' yo' leg still 'turl I shoot him. Stop yo' jumpin' an kickin' des a minit an' I'll kill him fo' you',' pi'ntin' de gun at me des well as he could wid me a-jumpin' an' kickin' my level bes'.

"Hit skeered me wus den de frog had done, an' I giv' a big kick an' sent de ole frog a-flyin', an' saw him lite all spraddled out in de watah, an' what hit wus, an' dat I wusn't snake bit. But I couldn' stop jumpin' an' I couldn' stop kickin', foh dat fool niggah wid de gun wus des plum crazy an' was tryin' his bes' to git de gun pi'nted at my leg long 'nuff to shoot de snake dat he 'lowed wus up my breeches laig.

"'G'way f'om yere! G'way f'om yere! Ya fool niggah you! Drap dat gun, de snake done gone, de ain' no snake; de snake is de'd,' I kep' hollahin' fas' as I could, but hit ain' no use, he des keep on a runnin' aftah me an' hollahin' foh me to hol' still foh 'low him to shoot de snake. I was des 'bout to giv' out, an' yit I know'd dat he would shoot my laig off ef I stop jumpin' a minit, so I des turn an' jump in de pon', des fah out in de watah as I kin, an' soon as I com' up I hollah des loud as I kin: 'He don' drownded!. He don' drownded! De snake is de'd, des de'd as he kin be,' an' Tom he com' back to his senses an' put de gun down.

"I 'lowed as I come crawlin' out de watah dat I would frail some sense into dat fool boy dat had want to shoot my laig off to kill a snake, but I wus too woh out wid my jumpin' an' kickin' to do hit rite away, an' while I wus gittin' my bref an' restin' some, a jay bud he lite on a tree tol'able close by, an' Tom he sneak up a little an' turn de ole gun loose at him.

"He mite a-killed de bird, an' he mite not, I ain' nevah see de bird aftah de old gun wen' off, I was so lookin' at Tom. She sound, like a big clap of thundah, an' she kick dat boy 'twel a mule would a be'n ashamed of hisself; clean ovah a big ole log an' two piles of rock hit drove him, eend over eend, an' hit peered lik' hit kep' on kickin' him w'en he wus fallin' and bouncin'. Hit bus' him up so I had to tote my hat full of watah and throw on him mos' a dozen times foah he knowed anything, an' his nose bleed mos' an' houah, an' 'sides his tooths bein' mos' all knocked loose. We ain' go huntin' any moah; 'pear like we bofe don' los' our fon'ess foah hit.

"Dinna bell done ring at de house, suh, an' hit stop rainin'."

And so the rainy morning was got through with.

Lewis Hopkins.

A Winter's Evening.

The western sky shows no trace of the sinking sun save a few bars of orange which emit a melancholy gleam amid their somber setting.

The landscape stretches around like a great etching, or study in black and white—with here the tone merging into brown and there into gray—and all pervaded with an indefinable sentiment—a something which the poet only can truly appreciate.

A chill blustering wind is abroad, which seems to increase as the night grows near.

Some chickadees and woodpeckers are calling to one another, and occasionally a bluejay screams wildly.

Overhead the homing crows wing their flight to the woods which loom upon the horizon.

Every now and then a shot rings out, muffled by distance, telling that the sportsman is still afield. And hark! What is that? It is the rich baying of a hound in pursuit of quarry. How musical it sounds and how it echoes among the silent woods! But it soon ceases, as do the intermittent shots.

The light begins to fade and the shadows to deepen over the landscape. Here, where we stand, is a lonely farmhouse by the wayside. It is surrounded by trees, which toss and groan in the evening wind. These are elms, which have a rough, boisterous way of expressing themselves, so to speak. Yonder is a grove of pines, toward which we move. How differently these express themselves. How they whisper or sigh or murmur weirdly, or become, as it were, an echo of the far-off sea. Can we wonder that those who live among pine forests have more lively imaginations, or at least are more given to the creation of myth and legend, than any other people?

We stroll back to the farmhouse. Nobody appears to be about. A few chickens peck along the fences and occasionally a calf utters a solemn "baa!" Where the snow has melted on the roof (under the influence of the midday sun), we see patches of moss or weather-stained tiles. A few icicles hang by the eaves. Against the front door the snow has formed a drift, and the path which leads up to it is untrodden. From under the veranda stalks of withered weeds protrude. The gate hangs half-open upon its hinges. Were it not for the presence of the chickens and a thin smoke which ascends from the chimney, one would be inclined to say that the house was uninhabited. But suddenly we hear a guttural "Gee up!" and turning around we see a man with a pair of oxen yoked to a rude sleigh, which is covered with logs. He passes into the yard of the farmhouse, unyokes his oxen and drives them into the stable. After a while he emerges and procures a pail, with which he proceeds to the cow shed. The cows are milked and we see him bear his smoking burden into the kitchen. Once more he emerges, feeds the calf (whose "baaing" has been becoming very importunate), fodders the cattle, shoos some chickens out of a tree in which they have roosted (how persistent is primitive habit or instinct) and drives them into the fowlhouse, bolts doors, takes a general look around and then retires for good.

While all this has been doing, an odor of frying "scrapple" has begun to float on the evening air, accompanied by snatches of old-time melodies, full of the ineffable sadness of the past. The goodwife is evidently preparing the evening meal and expressing her pleasure at her man's return.

A light is set in the kitchen window, the reflection of which every moment grows brighter and wider. The woods on the horizon have become black as ebony, and the fields can no longer be defined. Everything grows blurred—indistinct.

The chickadees and woodpeckers have ceased calling and the bluejay to scream, but an owl in the pine grove has taken up his mournful burden. After we have listened to this—its dismal uncertain intonations, its gibbering graveyard quality—we can readily understand why the owl has always been such an uncanny bird—such an object of horror even—to the simple-minded or superstitious. Indeed, there are those who lay claim to wisdom who cannot hear it without a shudder.

A succession of sharp sounds causes the owl to cease its lamentations. It is the barking of a fox on the hillside. One by one the nocturnal hunters are coming forth. A warning note from the fowlhouse tells that the fact is not unmarked or unknown there.

It is now so dark that the sky can no longer be seen. No star appears—the thick clouds hanging on the firmament. The light in the farmhouse goes out. For a moment we are blinded, as it were, but becoming used to the new condition, we see around for a few yards the ghostly

snow, rendering, in the old figure of speech, darkness visible.

All has become still in the farmhouse. The occupants have sunk to slumber, lulled by the soughing of the elms above the roof. (Who that has thus been lulled to sleep has not a haunting recollection of it! In the deep silence of the country how solemn and yet how soothing is this soughing of hoary trees!)

With the darkness has come a sense of loneliness and a vague insecurity. Something tells us that man has no business now to be abroad. We take the hint and leave old Nox to his mysterious reign. F. MOONAN.

A New Way to the Pole.

Editor Forest and Stream:

An admirable opportunity now presents itself for some resident of this country to win enduring fame for himself and the nation by equipping a polar expedition with such mechanical means for mastering the ice as the experience of previous explorers has proved to be expedient.

Heretofore too much trust in mere chance, and the resisting power of wooden ships, has been relied on to carry navigators to the high latitudes with the chance of drifting to the Pole. Nansen's voyage in the Fram ought to convince all who are interested in the subject that the plan of pushing into the ice of the Polar Sea and depending on chance to drift the vessel to the Pole and back to open water is so unscientific and unpromising that it ought to be abandoned as a needless risk of life. One of the most important facts established by Nansen's venture is that a ship can be built that will sustain the utmost pressure that the ice of the Arctic Sea imposes on its sides. But a ship held in the ice is absolutely helpless when depending on any means that have thus far been provided for rendering it mobile. The resources of mechanics have not, however, been exhausted in aid of the polar explorer, for the rational scheme of sawing a channel in the ice by steam-driven saws has not been tried. No extraordinary engineering talent is required to contrive comparatively simple and entirely feasible apparatus for use on a steamship by which the ice can be cut with steam power, and a way opened in which the ship carrying the sawing device can be driven through the heaviest ice and propelled to the Pole and back.

The Russian proposal to force an ice-breaking ship to the Pole is as unreasonable, compared with the sawing plan, as it would be to employ men with mauls instead of saws to harvest ice on the Hudson. One man with a saw will make his way through more ice than a hundred men could loosen who tried to break it by the crude method of assault, as it were, with a club. A gang of large circular saws projecting in front of a ship, on arms under control from the vessel, would cut the ice in strips parallel with the ship and enable the latter to break the strips into small cakes and move forward at a steady rate.

The Polar regions appear to be the sole extensive remaining ones which man has to explore. There may be no hope of reaching the South Pole, with our present knowledge, but there is a good prospect of attaining the North, if reasonable means be employed. It would be a creditable achievement, and there are hundreds of Americans who would not miss the money required to defray the cost of the expedition. If this crowning maritime and geographical prize is to be American, no time should be lost in preparing for the voyage, as others might covet the glory. EDMOND REDMOND.

ROCHESTER, N. Y.

The Early Half Century Football.

Editor Forest and Stream:

I have just been reading some copies of the New York Times of ten years ago which describe from various view points the celebrated game of football between the Sophomores and Freshmen of Yale in 1850, when the Freshmen were for the first time in history victorious in two innings out of three. I was a member of that athletic Freshmen class, and am moved to allude to the game here just for the purpose of unearthing some facts which have been overlaid for more than half a century, and which, I may add, involve the origin of the rubber football as well, which same is not of record, I ween.

Up to the year 1846 nothing but a "beef bladder" had ever been used on the campus on either side of the Atlantic, and I recall very readily the pains it required to knead, distend and gradually work it out so as to fit it for field service, and how we blew it up with a quill after it was placed in its leather case and laced up near the top. This was at Hopkins Grammar School in New Haven. Such a ball was necessarily oval in shape, and seldom if ever a sphere. It scaled and wabbled ungracefully whenever it took aerial flight. It was very light, too, and scarcely one-fourth of the weight of a modern football. It was at that school where (Gen.) Alfred Terry and Lester M. Dorman, the man who was selected to "cant" the ball at the memorable Yale game in 1850, obtained their manhood and soldierly training by processes and methods much more merciful and superior to those in vogue at West Point of late years.

It was about the year 1846 that the great evolution in American rubber manufacture took place, and the same genius which conceived the improved rubber overshoes brought out the round rubber football, which was immediately adopted on both sides of the Atlantic as a welcome substitute, its only objection being its weight, though even this permitted of its being kicked to greater distances than the beef bladder. It was cleaner, made no trouble and had more bounce. It was a live ball. It was naturally introduced at New Haven because the Goodyear factory was there. Charles and Robert, sons of the inventor, happened to be among my schoolmates in the early forties. In England it was first introduced at the First Grammar School in Birmingham by the late eminent Rabbi Raphall, who was resident in New York for many years previous to his death, Charles Joselyn being the principal.

The original rubber shoe was a simple envelope of crude material set on a mould of the same shape as the foot of a sock, barely covering the instep. It was of a deep coffee color, and quite translucent when held to the sun, and was usually ornamented with scroll work on the front, as different as possible from the shapely and improved vulcanized footgear which soon superseded it. Down East these overshoes were known as galoshes (Fr. *galoche*), and at the South as *gums*. "Walk in, stranger, and wipe your gums on the mat" was the customary salutation to a caller in wet weather. CHARLES HALLOCK.

Mr. Robinson's Writings.

IT gives one a sad feeling to realize that we shall never see any more of Mr. Robinson's writings. Although I have never had the pleasure of seeing him, an acquaintance by letter for some years has made him seem to me like an old friend. In spite of his great affliction he seldom referred to it, and his last letter, written only a few days before his death, was so bright and cheerful that the news of his death was a great surprise to me. It was always a wonder to me how one who was blind could so accurately describe things he had not seen for years. I know of no writer who was so accurate, even to the smallest detail, in describing anything of which he wrote. When Cooper wrote of Indians, animals and birds, in spite of his fascinating descriptions his writings were full of errors. Even Thoreau was sometimes inaccurate, but I have never seen a single instance where Mr. Robinson made a mistake. I know of no one who can fill his place in his particular line of writing. M. HARDY.

Rapid Transit in the Arctic Circle.

SURVEYOR J. M. BELL, a nephew of Dr. Robt. Bell, chief of the Canadian Geological Survey, who surveyed Great Slave Lake in 1899, was left behind to winter at Fort Resolution, and then to push out to Great Bear Lake in the spring. Evidently he preferred the comforts of civilization at Ottawa, for Dr. Bell writes:

"He returned here about Christmas, having gone over an extraordinary amount of ground for one season, including a survey of Great Bear Lake, part of the Coppermine River and a new route back to Great Slave Lake. The journey from Fort Rae at the head of the 180-mile long northwest area of Great Slave Lake, back to civilization at the close of a big summer's work, was itself quite a feat. He thinks that some parts of the region he was over will be of great value for minerals, but it will require some Yankee enterprise to turn them to account."

C. HALLOCK.

"The Country of the Horse."

THAT was a good little article by Frederick Irland on "The Country of the Horse." There was truly "horse sense" in it. His serving up of the newspaper rubbish about Roosevelt and a dangerous mountain trail was excellent. C. H. AMES.

Natural History.

Panthers in Maine.

MR. C. H. AMES, who started the Maine panther inquiry, sends us the subjoined letter from a correspondent in that State, which describes the killing of one of the species. Mr. Ames writes that he is on the trail (or believes that he is) of another Maine panther.
